Gliding. Difference between the Piloting of Gliders and Motor Airplanes from the Standpoint of the Practical Glider Pilot (Unterschied zwischen der Führung von Segel- und Motorflugzeugen vom Standpunkt des praktischen Segelfliegers), H. Hackmack. Zeit. für Flugtechnik u. Motorluftschiffahrt, vol. 15, no. 1-2, Jan. 26, 1924, pp. 2-3. Offers practical suggestions for motorless flight.

Gliding Flight (Le vol à voile), H. Liurette, Vie Technique & Industrielle, vol. 6, no. 52, Jan. 1924, pp. 234-240, 20 figs. Mechanism of gliding flight; influence of weight on speed; laboratory experience; internal energy of a bird against that of wind.

Gliding Flight against the Wind (Sur le vol à voile contre le vent), A. Rateau. Académie des Sciences—Comptes Rendus, vol. 178, no. 3, Jan. 14, 1924, pp. 280-285, 1 fig. Author demonstrates that Katzmayr effect can be deduced immediately from what is already known of wing characteristics in fixed regular current; formula obtained gives principal laws of Katzmayr effect.

Scientific Principles and Prospects of Motorless Flight (Wissenschaftliche Grundlagen und Aussichten des motorlosen Fluges), A. Pröll. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 22, May 31, 1924, pp. 557-561, 6 figs. General mechanical principles of gliding flight and of static and dynamic soaring flight; constructive peculiarities and performances of soaring planes; applications of soaring flight for scientific and traffic purposes.

See also Soaring.

High-Altitude. High Altitude Flying, P. B. King and Thos. Carroll. U. S. Nat. Advisory Comm. for Aeronautics—Tech. Notes, no. 193, May 1924, 7 pp. Discusses use and abuse of oxygen equipment and its influence upon physical comfort and efficiency of pilot while engaged in flights above 15,000 ft.; suggestions for diet and warm clothing; effect of low temperature on interplane and control wires, and upon control bearing surfaces due to coagulation of lubricant.

Lift and Drag. The Elements of the Lanchester-Prandtl Theory of Aeroplane Lift and Drag. Engineering, vol. 117, nos. 3027, 3028, 3030, 3032, and 3035, Jan. 4, 11, 25, Feb. 8 and 29, 1924, pp. 1-3, 35-37, 100-102, 169-171, and 258-260. 34 figs. Describes development of Lanchester's views into rational and practical theory of airplane by Professor Prandtl.

Measurements. Flight Measurements During the Rhön Glider Competition, 1923 (Die Arbeiten des Messtrupps während des Rhönsegelflug-Wettbewerbs 1923), H. Koschmieder, P. Dubois and Wg. Kaempfert. Zeit. für Flugtechnik u. Motorluftschiffahrt, vol. 15, no. 1-2, Jan. 26, 1924, pp. 3-8, 6 figs. Describes method of measuring path of flight of gliders by observers; determination of vertical wind velocity, and results.

Motorless. See Gliding.

Soaring. The Soaring Flight Question, E. H. Hankin. Instn. Aeronautical Engrs.—Minutes of Proceedings No. 8, 1923, pp. 23-30 and (discussion) 31-38, 1 fig. Explanation of some of reasons why discoveries which appear to combat existing theories meet with opposition.

See also Gliding.

FLOOD CONTROL

Kilbourn, Wis. River Regulation Determined by Hydraulic Experiments. Eng. News-Rec., vol. 93, no. 11, Sept. 11, 1924, pp. 429-431, 4 figs. Bank erosion on Wisconsin river at Kilbourn, Wis., due to flood flow over dam of Southern Wisconsin Power Co., has been overcome by construction of a concrete training wall, location of which was determined largely by experiments made at hydraulic laboratory of Univ. of Wis.

Los Angeles County, Cal. Water Conservation Program for Los Angeles County. Eng. News-Rec., vol. 92, no. 26, June 26, 1924, pp. 1088-1090, 1 fig. A flood control and water conservation program involving a score or more separate engineering projects is now under way in Los Angeles County, Cal., as result of recent election at which bonds for this work totaling $35,300,000 were voted; works contemplated laid out to provide flood protection and storage and replenish underground sources. Outline of general flood control situation and list of works included in recently approved budget.

Louisiana. See DRAINAGE, Louisiana.

Mississippi River. Keeping the Mississippi within Bounds, R. P. Howell. Military Engr., vol. 16, no. 88, July-Aug. 1924, pp. 283-291, 9 figs. How Mississippi delta was formed. Discusses protection from floods by means of artificial dikes of earth, or levees, including progress in levee construction.

Projects, Wichita, Kan. Floods and Flood Protection Projects at Wichita, P. L. Brockway. Eng. News-Rec., vol. 93, no. 21, Nov. 20, 1924, pp. 828-832, 5 figs. Three streams in city complicate problem; four floods and numerous overflows in semi-arid region; channel improvements and dikes; bridges to be rebuilt and raised; rainfall records.

Sacramento River, Cal. Flood Control for Sacramento River, O. G. Stanley and W. M. Coffey. Military Engr., vol. 16, no. 89, Sept.-Oct. 1924, pp. 368-373, 7 figs. Plan for improving navigability, deepening channels and protecting banks of rivers and affording relief from flood; portion of project complete.

Seine River, France. The Flooding of the Seine River in January 1924 and in 1910 (Le crues de la Seine en Janvier 1924 et 1910), A. Bidault des Chaumes. Génie Civil, vol. 84, no. 4, Jan. 26, 1924, pp. 77-82, 11 figs. Describes protective works constructed in Paris and vicinity since 1910, and their effectiveness during recent high-water period.

The Regulation of the River Seine. Engineering, vol. 118, no. 3072, Nov. 14, 1924, pp. 682-684, 3 figs. Remedial measures against floods undertaken between Paris and Rouen.

FLOODS

Control. See FLOOD CONTROL.

Flow Characteristics. Flood Flow Characteristics, C. S. Jarvis. Am. Soc. Civ. Engrs.—Proc., vol. 50, no. 10, Dec. 1924, pp. 1545-1581, 9 figs. Characteristics of flood flow that may have either general or special application are stated, by way of indicating methods of deduction that must be followed; available data that seemed reliable and valuable have been listed and plotted to give visual representation of range of discharge per sq. mi. for maximum recorded floods; method of attack by which problems in several central and western districts have been solved satisfactorily, both as to prevention of floods and protection of property.

Flows, New England Rivers. Flood Flows of New England Rivers, C. H. Pierce. Boston Soc. Civ. Engrs.—Jl., vol. 11, no. 8, Oct. 1924, pp. 327-375, 3 figs. Compilation of data for number of rivers; principal floods of Connecticut River, 1619-1924, from data compiled by late Arthur Watson.

Forestry and. See FORESTRY, Relation to Floods.

Panama Canal. A Great Flood in the Panama Canal, J. J. Morrow. Military Engr., vol. 16, no. 86, Mar.-Apr. 1924, pp. 100-107, 7 figs. Notes on the various utilities attacked, and description of fight against flood.

FLOORS

Areas, Limitations on. See BUILDING CONSTRUCTION, Floor Areas, Limitation of.

Asphalt. See ASPHALT, Natural-Rock.

Concrete Beams as Ceiling. Saving Money by Leaving Concrete Floorbeams as Ceiling, Rob. D. Snodgrass. Eng. News-Rec., vol. 93, no. 16, Oct. 16, 1924, pp. 630-631, 1 fig. Points out that economy and appearance may both be served in concrete buildings by discarding flat-ceiling idea.

Factory. What is the Best Factory Floor Surface? A. B. MacMillan. Contract Rec., vol. 38, nos. 49, 50, 51, and 52, Dec. 3, 10, 17, and 24, 1924, pp. 1188-1190, 1208-1210, 1228-1230, and 1228-1254, 7 figs. Discussion of the various kinds of flooring and advantages, disadvantages and special uses of each.

Girderless Flat-Slab. Modern Designs of Reinforced-Concrete Girderless Flat-Slab Floors (Neuere Ausführungen trägerloser Eisenbetondecken), A. Spilker. Bauingenieur, vol. 5, no. 6, Mar. 31, 1924, pp. 141-145, 7 figs. Gives examples of girderless floors constructed by firm of Schäffer & Co. Duisburg-Bremen.

Modern Examples of Girderless Flat-Slab Floors (Neuere Ausführungen trägerloser Pilzdecken), H. Marcus. Bauingenieur, vol. 5, no. 7, Apr. 15, 1924, pp. 171-177, 15 figs. Report on progress made in application and design of such floors.

Hollow Cinder Block. Heavy Test Loads on Hollow Cinder Block Floor Slabs Cause Slight Permanent Deflection. Concrete, vol. 24, no. 4, Apr. 1924, pp. 135-137, 13 figs. Tests made on test floors poured Dec. 15, 1923, inside of one of the buildings of Indianapolis Switch & Frog Co., at Springfield, Ohio, to determine strength of slabs constructed according to McIlroy fireproof floor system.

Linoleum. See LINOLEUM.

Loads, Swaying-Crowd. Strain of Swaying Crowds on Balcony Measured at Iowa. Eng. News-Rec., vol. 93, no. 6, Aug. 7, 1924, p. 231. Stress measurements in balcony floor at Iowa State College show load effect more than doubled by jumping of excited, cheering students.

Railway Buildings. See RAILWAYS, Buildings, Floors for.

Transparent. Tests on the Resistance of Transparent Floors (Essais de résistance de dalles transparentes). Génie Civil, vol. 84, no. 5, Feb. 2, 1924, pp. 109-110, 3 figs. Results of tests on floors made of glass units with thickness of 10 cm. and max. diam. of 145 mm. set in reinforced concrete; they are said to be as transparent as floors made entirely of glass.

FLOTATION

Agents, Selection of. A Basis for Selecting Flotation Agents, H. E. Fredrick. Eng. & Min. Jl.—Press, vol. 118, no. 1, July 5, 1924, pp. 11-12. Observations in practice indicate that their colloidal condition and electrostatic charges have important bearing on results; two classes of compounds afford ample choice.

Capillary Phenomena. Capillary Phenomena (Ueber kapillare Erscheinungen), K. Schultze. Kolloid-Zeit., vol. 35, no. 2, Aug. 1924, pp. 76-86, 24 figs. General discussion of function of roughness and curvature of surface of solids in capillary phenomena, with especial reference to flotation and filtration processes; attempt is made to classify different types of surface; investigation of more easily reproducible types of capillary openings, and examination of capillary force, movement of liquid in capillaries, and height to which it rises.

Coal-Washing Processes. See COAL WASHING, Flotation Processes.

Copper Ore. Selective Flotation at Nacozari, W. T. MacDonald. Eng. & Min. Jl.-Press, vol. 118, no. 12, Sept. 20, 1924, pp. 445-454, 11 figs. Describes methods developed by Moctezuma Copper Co. at Nacozari, Sonora, Mexico, and results obtained.

Cyanide in. Cyanide in Flotation, W. E. Simpson. Min. Mag., vol. 30, no. 1, Jan. 1924, pp. 24-25. It has been discovered recently at Sullivan lead-zinc mine, British Columbia, that addition of sodium cyanide to an alkaline flotation circuit increases selective action of reagents which separate galena from blende. Details of Sullivan mine and ore.

Electrometer Tests. Electrometer Tests in Flotation, T. M. Bains, Jr. Eng. & Min. Jl.-Press, vol. 117, no. 22, May 31, 1924, pp. 885-886, 3 figs. Simple experiments indicating advisability of further work on electrostatic charges.

Minerals. Capacity of Adsorption and Flotation Capacity of Various Minerals (Ueber Adsorptions- und Flotationsvermögen verschiedener Mineralien), W. Schäfer. Metall u. Erz., vol. 21, no. 17, Sept. 1, 1924, pp. 401-404. Shows that adsorption and flotation capacities do not always go hand in hand, in some minerals they vary inversely.

Oil. Separation of Chemicals and Minerals by Oil Flotation and the Removal of Oil from Chemicals (Ueber Trennung von Chemikalien und Mineralien und Entölung von Chemikalien nach den beim Schwimmaufbereitungsverfahren der Erze gewonnenen Erfahrungen), J. Traube, A. Kieke, O. Bartsch and K. Nishizawa. Chemiker-Zeitung, vol. 48, nos. 109 and 114, Sept. 9 and 20, 1924, pp. 633-634 and 673-674. Shows that ease with which many organic substances are wetted with water depends chiefly on their relative solubility; addition of oily substances to suspensions of these substances causes more or less perfect flotation.

Ores. Flotation of Metallic Ores (La flotation des minerais métalliques, A. Fischbacher. Revue de l'Industrie minérale, no. 94, Nov. 15, 1924, pp. 523-532, 4 figs. Theory of simple and differ-

ential flotation and its practical application to galenas, blende, chalcopyrite, etc.

Notes on Flotation Test Work at Anyox on Granby Ores, A. C. Halferdahl. Can. Inst. Min. & Metallurgy—Bul., no. 150, Oct. 1924, pp. 711-713. Results of laboratory study and experimentation.

Processes. Study of Processes of Flotation (Zur Kenntnis der Schwimmverfahren), E. Berl and W. Pfannmüller. Kolloid Zeit., vol. 34, nos. 6 and 7, June and July 1924, pp. 328-332 and 34-40 and vol. 35, no. 2, Aug. 1924, pp. 106-111. June: Behavior of silicic acid in flotation. July: Behavior of oxides, carbonates, and sulphates. Aug.: Behavior of alumina in process; enrichment of phosphates by flotation.

Selective. Selective Flotation as Applied to Canadian Ores, C. S. Parsons. Min. Jl., vol. 145, nos. 4628 and 4629, May 3, and 10, 1924, pp. 355-356 and 380-381. See also Can. Chem. & Met., vol. 8, no. 8, Aug. 1924, pp. 187-190, and Can. Min. Jl., vol. 45, no. 17, Apr. 25, 1924, pp. 404-407. Reviews in a general way results of investigations conducted in Ore Dressing & Metallurgical Laboratories of Dept. Mines at Ottawa that have particular reference to selective flotation as applied to Canadian ores. Oils used, addition reagents, control of flotation pulp; examples of problems, examples of selective flotation.

The Selective Flotation of the Lower Grade Nickeliferous Pyrrhotite Ores of Ontario, W. B. Timm. Can. Min. Jl., vol. 45, no. 24, June 13, 1924, pp. 577-580. Details of experiments and results obtained.

Surface Reactions in. Surface Reactions in Flotation, A. W. Fahrenwald. Am. Inst. Min. & Met. Engrs.—Trans., no. 1283-M, Jan. 1924, 90 pp., 20 figs. Results of research on theory of flotation that extended over three years. Surface tension elucidated and made basis of oil adsorption determinations; studies condition of small quantities of numerous flotation oils and pure organic substances dissolved or mixed with water; effects of several controlling agents on various mineral suspensions in water; experiments dealing with ion-adsorption, flocculation, and peptization of various mineral suspensions; etc.

Theory of Process. Theory of the Flotation Process (Beitrag zur Theorie des Schaumschwimmverfahrens), O. Bartsch. Kolloidchemische Beihefte, vol. 20, no. 1-5, Oct. 15, 1924, pp. 50-77, 1 fig. Essential condition for flotation is formation of flocculent aggregates of air bubbles and solid particles; it is shown that this action depends on special capillary charges; by electro-endosmotic experiments it was found that gangues and ores, with exception of heavy spar, were negatively charged and that gangues were more negative than ores.

Xanthate, Analysis of. The Analysis of Xanthate, W. S. Calcott, F. L. English and F. B. Downing. Eng. & Min. Jl.-Press, vol. 118, no. 25, Dec. 20, 1924, pp. 980-981. Use of xanthate in concentration of sulphide ores by flotation has now become widespread. Describes a method of analysis and its application. Procedure for qualitative tests and for xanthate determination. Experimental data on use of method.

FLOUR

Milling. Grain Milling, T. Macdonald. S. African Instn. Engrs.—Jl., vol. 23, no. 5, Dec. 1924, pp. 324-328 and (discussion) 328-330. Résumé of history of flour milling. Describes milling of wheat.

FLOUR MILLS

Conveyors. See CONVEYORS, Flour Mills.

Design and Layout. The Construction of Flour Mills and Granaries (Ueber den Bau von Mühlen und Speichern), O. Orlishausen. Fördertechnik u. Frachtverkehr, vol. 17, no. 4, Feb. 21, 1924, pp. 37-41, 6 figs. Suggestions for design and layout of buildings based on years of practical experience.

Diesel-Engine-Driven. America's Largest Diesel-Driven Flour Mill. Oil Engine Power, vol. 2, no. 2, Feb. 1924, pp. 80-84, 4 figs. How Red Star Mill, Wichita, Kan., effected pronounced economies by gradually discarding old steam machinery in favor of modern oil-engine power, which rendered them independent of local electric supply.

Heating, By-Product. See HEATING, Flour-Mill.

Hungary. New Buildings for the Flour Industry of Hungary (Neubauten für die Mühlenindustrie in Ungarn), W. Obrist. Schweizerische Bauzeitung, vol. 84, no. 11, Sept. 13, 1924, pp. 127-131, 10 figs. Details of design and construction of grain silos and flour magazines at Karczag and Selyp.

Rolls. Serrating and Polishing of Cylinders for Flour Mills (Rigatrici e smerigliatrici per cilindri di laminatoi da grano), E. Ascione. Industria, vol. 38, nos. 16, 17, 19, and 20, Aug. 31, Sept. 15, Oct. 15, and Oct. 31, 1924, pp. 437-438, 474-476, 529-530, and 550-554, 23 figs. Discusses serrating of cylinders for crushing mills and polishing of cylinders for grinding mills; correct shape of teeth and how to calculate it; describes Bühler double serrating apparatus; combined serrating and polishing machine of Bühler Brothers, Uzwill.

FLOW IN PIPES

Fluids. See FLOW OF FLUIDS, Pipes.

Gases. See FLOW OF GASES, Pipes.

Steam. See FLOW OF STEAM.

Water. See FLOW OF WATER, Pipes.

Water and Air Simultaneously. Simultaneous Flow of Water and Air in Pipes, L. S. O'Bannon. Am. Soc. Heat. & Vent. Engrs.—Jl., vol. 30, no. 3, Mar. 1924, pp. 225-234, 14 figs. Describes experiments made to find capacity of pipes for carrying water and air simultaneously, within conditions of steady flow; results and methods of running experiments described under four following heads: Flow of water, flow of air, parallel flow of water and air, and counter flow of water and air.

FLOW METERS

Electrically-Operated. The Electrically Operated Flow Meter, R. E. Woolley. Gen. Elec. Rev., vol. 27, no. 3, Mar. 1924, pp. 182-187, 8 figs. Reasons that gave rise to its development; description of complete device, function of its parts, its general principle of operation, and its applications.

Liquids. See FLOW OF LIQUIDS, Liquid Meters.

FLOW OF AIR

Around Cylinders. The "Magnus" Effect. Engineer, vol. 138, no. 3595, Nov. 21, 1924, p. 589, 5 figs. Discusses nature of Magnus effect which is alleged to be employed by A. Flettner for propulsion of his wind-power ship Buckau.

Measurement. See ANEMOMETERS.

Mines. Experiments on the Flow of Air in Mines, D. Penman and J. S. Penman. Min. Inst. of Scotland—Trans., vol. 45, part 3, 1924-25, pp. 60-74 and (discussion) 74-76, 15 figs. See also Instn. Min. Engrs.—Trans., vol. 45, part 2, Nov. 1924, pp. 151-165 and (discussion), 165-167, 15 figs., and (abstract) Iron & Coal Trades Rev., vol. 109, no. 2956, Oct. 24, 1924, pp. 664-665, 3 figs. Conditions and nature of flow of air; factors influencing critical velocity of flow; experiments on flow of air in tubes; experiments at

Wellesley Colliery; and tests of mining laboratory fans.

Pipes. See FLOW IN PIPES; FLOW OF FLUIDS, Pipes; FLOW OF GASES, Pipes.

Resistance to Falling Spheres. The Resistance of Air to Falling Spheres, Rob. G. Lunnon. Lond., Edinburgh, & Dublin Philosophical Mag. & Jl. Sci., vol. 47, no. 277, Jan. 1924, pp. 173-182, 1 fig. Investigates fall of small steel balls in coal-mine shafts and gives results for dry, still air.

Return Lines. See FLOW OF WATER, Return Lines.

FLOW OF FLUIDS

Air. See FLOW OF AIR.

Apparent Mass, Factors of. Some Tables of the Factor of Apparent Additional Mass, M. M. Munk. U. S. Nat. Advisory Comm. for Aeronautics —Tech. Notes, no. 197, July 1924, 7 pp. Collection of tables of factor of apparent mass of immersed solid, published up to present date.

Dynamic Similarity, Principle of. The Principle of Dynamical Similarity, with Special Reference to Model Experiments, A. H. Gibson. Engineering, vol. 117, nos. 3037, 3038, 3039, and 3040, Mar. 14, 21, 28, and Apr. 4, 1924, pp. 325-327, 357-359, 391-393, and 422-423, 6 figs. Discusses application of principles to flow of fluid through pipes, resistance of wholly submerged and partially submerged bodies; model experiments on resistance of ships; resistance of smooth wires and cylinders; estuary model experiments; surge tanks; sea-going qualities of vessels in rough sea; suction of interaction between passing vessels; critical speed and torsional vibration of shafts.

Gases. See FLOW OF GASES.

Pipes. The Pressure Drop in Smooth Pipes and the Coefficient of Flow of Standard Nozzles (Der Druckabfall in glatten Rohren und die Durchflussziffer von Normaldüsen), M. Jakob and S. Erk. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 22, May 31, 1924, pp. 581-584, 7 figs. Law of pressure drop of a flowing liquid in smooth pipe is tested within range of Reynolds values with water and air.

Steam. See FLOW OF STEAM.

Stream Lines. An Electrical Method for Tracing Stream Lines in the Two-Dimensional Motion of a Perfect Fluid, E. F. Relf. Lond., Edinburgh & Dublin Philosophical Mag. & Jl. Sci., vol. 48, 284, Sept. 1924, pp. 535-539, 4 figs. Describes apparatus designed and constructed for use in Aerodynamics Dept. of Nat. Physical Laboratory, for plotting rapidly and accurately stream lines round an obstacle.

Theory. A New Theory of Fluid Flow, A. B. Cox. Franklin Inst.—Jl., vol. 196, no. 6, Dec. 1924, pp. 769-793, 12 figs. Examination of velocity-distribution curves accompanying this paper shows that whether rate of flow is above or below critical, elements of flow at different distances from center line of pipe have different forward velocities, and that these elements must be considered to "slide" or otherwise move relative to one another in this direction; author states there is a force by which molecules of various elements of flow are each enabled to affect speed of others; this phenomenon is cause of characteristic shape of curve of velocity-distribution, and upon it a mathematical proof of logarithmic form of curve can be based. Bibliography.

Viscous Fluids. Theory of the Movement of Fluids Between Journal and Bearing (Beitrag zur Theorie der Flüssigkeitsbewegung zwischen Zapfen und Lager), Geo. Duffing. Zeit. für angewandte Mathematik u. Mechanik, vol. 4, no. 4, Aug. 1924, pp. 296-314, 10 figs. Investigations of two-dimensional problem of viscous fluids; comparison of author's results with those of Reynolds theory.

FLOW OF GASES

Aeration of Jet of Gas. The Entrainment of Air by a Jet of Gas Issuing from a Small Orifice in a Thin Plate, J. S. G. Thomas. Lond., Edinburgh & Dublin Philosophical Mag. & Jl. Sci., vol. 47, no. 281, May 1924, pp. 1048-1056, 4 figs. It is shown that constant value of aeration of jet of gas issuing at different pressures from orifice, as referred to in Technologic Paper no. 193 (1921) of Bur. of Standards, characterizes induction flow system in which induction of air is effected under conditions such that flow of stream of air induced by jet is considerably reduced from its normal value in free air by restricting effective area of induction tube or otherwise.

Energy Conveyed by. The Energy Conveyed by a Flowing Gas and a Thermal Phenomenon Discovered by Martin Knudsen (Ueber die durch strömende Gase transportierte Energie und eine von Martin Knudsen entdeckte thermische Erscheinung), S. Weber. Zeit. für Physik, vol. 24, no. 5-6, June 12, 1924, pp. 267-284, 2 figs. Discusses investigations of Bohr on energy carried by diffusing particles or electrons; Knudsen's experiments in which hydrogen and atmospheric air were forced through tube containing long plug or glass wool, and in stationary state rise of temperature was observed at one end and fall at other end of plug; results are discussed in relation to theory; formula is obtained for total energy received by unit of area perpendicular to flow of gas.

Internal-Combustion Engines. See INTERNAL-COMBUSTION ENGINES, Flow of Gases in.

Measurement. Measuring Flow of Gases, Chas. P. Turner and B. W. Winship. Chem. & Met. Eng., vol. 30, no. 16, Apr. 21, 1924, pp. 633-635, 4 figs. Results of application of mixture method, suggested by salt-solution method for measuring flow of water, show that it is of value in related problems of fluid flow.

Pipes. Flow of Gas or Air in Pipes, Franklin H. Smith. Blast Furnace & Steel Plant, vol. 12, no. 10, Oct. 1924, pp. 448-449 and 451. By using formulas given, both high- and low-pressure flows may be estimated.

Pressure Reduction in Smooth Pipes and Coefficient of Flow for Standard Nozzles (Der Druckabfall in glatten Rohren und die Durchflussziffer von Normaldüsen), M. Jakob and S. Erk. Forschungsarbeiten auf dem Gebiete des Ingenieurwesens, no. 267, 1924, 28 pp., 17 figs. Discusses determination of large quantities of flowing gases or liquids by measuring pressure drop in constriction (venturi tube, etc.), and gives results of experiments.

Theory. The Flow of Compressible Fluids, Treated Dimensionally, W. N. Bond. Physical Soc. Lond.—Proc., vol. 36, part 5, Aug. 15, 1924, pp. 367-378, 5 figs. Theoretical and experimental investigation of variation of pressure, density, temperature and velocity of a gas moving at speeds comparable with that of sound in gas.

FLOW OF LIQUIDS

Calculation. Experimental Determination of Flow Figures of Some Technical Liquids (Experimentelle Bestimmung der Ausflusszahlen einiger technischer Flüssigkeiten), P. Reschke. Zeit. für die gesamte Kälte-Industrie, vol. 31, no. 5, Jan.-June 1924, pp. 53-59, 6 figs. Results of experiments with solutions of magnesium chloride, gas oils and lubricating oils with orifices of 1, 5, 10 and 30 mm.

Cold Liquids. Viscosity and Resistance to Flow of Cold Liquids and Gases (Zähigkeit und Strömungswiderstand von kalten Flüssigkeiten und

Gasen), S. Erk. Zeit. für die gesamte Kälte-Industrie, vol. 31, no. 5, Jan.-June 1924, pp. 49-53, 5 figs. Effect of viscosity on pressure drop in pipe lines; viscosity of gases, liquefied gases, water and salt solutions.

Fluid Friction and Heat Transfer. Fluid Friction and Heat Transference, Thos. B. Morley. Engineer, vol. 137, no. 3570, May 30, 1924, pp. 596-597, 2 figs. Points out that frictional resistance to flow of liquid in pipe and transference of heat between fluid and tube wall are interrelated, and both phenomena are materially influenced by viscosity of fluid; shows how labor of handling mathematical expressions may be obviated by use of nomographic chart.

Liquid Meters. The Bassler Liquid Meter. Engineering, vol. 118, no. 3066, Oct. 3, 1924, pp. 497-498, 4 figs. Instrument is guaranteed to give measurements with error of less than 0.1 per cent over temperature range of 150 deg. fahr., and irrespective of changes in viscosity of fluid or of pulsations and irregularities in rate of flow.

Pipes. See FLOW OF GASES, Pipes.

FLOW OF STEAM

Pipes. Critical Velocity of Steam and Condensate Mixtures in Horizontal, Vertical, and Inclined Pipes, F. C. Houghten and R. L. Lincoln, Am. Soc. Heat. & Vent. Engrs.—Jl., vol. 30, no. 2, Feb. 1924, pp. 153-168, 19 figs. Details of experiments made to obtain a thorough understanding and complete knowledge of factors entering into, and effects taking place when steam is sent through a pipe in which there is a counterflow of condensate. Effect of length and size of pipe and type of entrance, upon critical velocity.

Resistance of Pipe Bends to. How to Figure the Resistance of Pipe Bends to the Flow of Steam, C. H. Day. Heat. & Vent. Mag., vol. 21, no. 7, July 1924, pp. 51-52, 3 figs. Data on four assumed conditions, using standard ells, long-radius ells, minimum radius bends, and bends with radius of ten pipe diameters.

Supersaturation Losses. Losses Due to Supersaturation in the Efflux of Steam (Su le perdite per soprasaturazione nell'efflusso del vapore d'acqua), E. Foà. Industria, vol. 38, no. 9, May 15, 1924, pp. 245-250, 2 figs. Develops formulas for calculating losses and velocity from degree of undercooling of condensation, and variation of undercooling in successive expansion.

Velocity. Flow of Steam and Condensation as Affected by High Pressure, Horizontal Offsets and Valves, L. Ebin and R. L. Lincoln. Am. Soc. Heating & Vent. Engrs.—Jl., vol. 30, no. 6, June 1924, pp. 475-490, 9 figs. Deals with effect of high pressure on maximum velocity, valves on maximum capacity, and of horizontal offsets on maximum velocity.

FLOW OF WATER

Closed Conduits. Hydraulic Efficiency Tests on 43,000-h.p. Unit by the Gibson Method and the Allen Method, W. R. Way. Eng. Jl., vol. 7, no. 10, Oct. 1924, pp. 625-633, 9 figs. Tests carried on under operating conditions; Gibson method for measuring flow of water in closed conduits; test by salt-velocity method for measureemnt in large conduits, developed by Prof. Chas. M. Allen.

Control Apparatus. Modern Water Control Apparatus, F. J. Taylor. Can. Engr., vol. 47, nos. 13 and 14, Sept. 23 and 30, 1924, pp. 349-354 and 371-374, 14 figs. Notes on appliances for control and regulation of large volumes of water in connection with water power, river regulation and irrigation work. Ashford and Stoney sluices; Johnson valve.

Discharge Measurements. Discharge Measurements for the Control Section Weir, J. L. Savage. Eng. News-Rec., vol. 92, no. 20, May 15, 1924, p. 842, 3 figs. Observations check closely theoretical rating curve; results of set of experiments made by Bur. Reclamation upon new type of measuring structure for which name "control section weir" has been proposed.

Groundwater. Geometrical Investigation of the Theory of Movement of Groundwater in Rubble and Water Filtration Through Sand (Geometrische Untersuchung der Theorie der Bewegung des Grundwassers im Gerölle und der Wasserfilterung durch Sand), L. Burmester. Zeit. für angewandte Mathematik u. Mechanik, vol. 4, no. 1, Feb. 1924, pp. 33-52, 28 figs. on supp. plate. Investigation of theory and its practical application.

How Does Groundwater Flow? (Wie fliesst das Grundwasser?), O. Emersleben. Bautechnik, vol. 2, no. 10, Mar. 7, 1924, pp. 73-76, 3 figs. Macroscopic investigation of flow in sand; the filter law; lowering of water level; total flow.

Measurement. Analytical Determination of Flow of Water (Die analytische Ermittlung der Pegelhöhenabflussmenge), A. Haiden. Zeit. des Oesterr. Ingenieur- u. Architekten-Vereines, vol. 76, no. 31-32, Aug. 8, 1924, pp. 280-281, 2 figs. Details of new method for determining flow of water in streams by means of a depth gage in a given time unit, obviating errors due to interpolation.

Automatic Water Measuring Device (Automatischer Wassermengenschreiber), J. Schenker. Schweizerische Bauzeitung, vol. 84, no. 17, Oct. 25, 1924, pp. 211-212, 5 figs. Particulars of a continuous recording water meter built by Stoppani & Co. on principle of a limnograph.

Calibrating Pitot Tubes [Eichung von Staurohren Pitotröhren)], R. Ehrenberg. Oesterreichische Monatsschrift für den Oeffentlichen Baudienst, vol. 5, no. 10, Oct. 1, 1924, pp. 134-137, 4 figs. Particulars of tests with four pitot tubes; calibration for free flow and for pressure piping; develops formulas for calculation.

Methods of Making Flow Tests and Their Value to Water Works Engineers, G. W. Booth. Am. Water Wks. Assn.—Jl., vol. 12, no. 2, Oct. 1924, pp. 157-167, 1 fig. See also Eng. & Contracting (Water Wks.), vol. 62, no. 5, Nov. 12, 1924, pp. 1079-1085, 1 fig. Method of making measurements of discharge of water from hydrants.

New Methods of Calculation in Hydraulics (Neuere Berechnungsmethoden aus dem Gebiete der Hydraulik), E. Meyer-Peter. Schweizerische Bauzeitung, vol. 84, nos. 1 and 2, July 5 and 12, 1924, pp. 1-5 and 15-18, 31 figs. Details of new formula for calculating velocity of flow, coefficient of roughness; artificial water conduit with free water level. Graphical method of determining hydraulic data for design of high-pressure plants.

The Salt Velocity Method of Water Measurement, Chas. M. Allen and Edwin A. Taylor. Mech. Eng., vol. 46, no. 1, Jan. 1924, pp. 13-16 and 51, 7 figs. Describes new method and outlines its theory and development; apparatus and methods of computation used in laboratory and field tests; claims of method for high degree of accuracy and reliability.

See also WATER METER, Open-End Flume.

Open Channels. Calculation of the Flow of Water in a Channel (Bijdrage tot de berekening van den afvoer van zijdelingsche overlaten), O. J. Herz. Waterstaats-Ingenieur, vol. 12, no. 3, Mar. 1924, pp. 59-67, 3 figs. Theory and formulas for calculation of flow of water in a channel from changes of level produced by introduction of a barrier.

Investigation of the Formulas of Van Gauckler-Manning for the Determination of the Flow in Open Channels (Beschouwingen over de exponentieele formule van Gauckler-Manning voor de berekening van buisleidingen en open kanalen),

C. G. J. Vreedenburgh. Waterstaats-Ingenieur, vol. 12, no. 9, Sept. 1924, pp. 255-262, 5 figs. on supp. plates. Derivation of formulas is given and the various occurring coefficients and exponents are determined by test for certain conditions.

The Flow of Water in a By-Pass Channel Provided with Sectional Channels in Connection with Locks (Ueber die Wasserströmung in einem mit Stichkanälen versehenen Umlaufkanal bei Kammerschleusen), B. Schumacher. Zeit. für angewandte Mathematik u. Mechanik, vol. 4, no. 4, Aug. 1924, pp. 292-295, 6 figs. Determination of flow conditions at intersecting points of by-pass and branch channels; or flow in a channel with rectangular junction.

The Influence of Silt on the Velocity of Water Flowing in Open Channels. Indian Eng., vol. 75, nos. 15, 16, 17, 18, 19, and 20, Apr. 12, 19, 26, May 3, 10, and 17, 1924, pp. 206-208, 223-224, 234-235, 249, 262-263, and 276-278, 5 figs. Comments on paper written on this subject by A. B. Buckley, for 1923 Session of Instn. Civil Engrs. A. B. Buckley's theory; data of experimental observations at Baqlavis, Khannaq, and Beleida, all three on the Nile; Buckley-Wilson discharge recorder; account of discussions of paper.

Pipes. Determining Discharge Coefficients for Flow of Water in Short Pipes, O. W. Boston. Chem. & Met. Eng., vol. 30, no. 2, Jan. 14, 1924, pp. 56-59, 5 figs. Short method for determining loss of head for water flowing in pipes which may be readily applied in other cases of fluid flow.

The Flow of Water in Pipes and Channels, F. Heywood. Instn. Civ. Engrs.—Sessional Notices, no. 3, Feb. 1924, pp. 67-68. Attempt to coordinate available data relating to flow of water in conduits with entirely satisfactory results of tests on small-scale experimental pipe lines.

See also FLOW IN PIPES; FLOW OF FLUIDS, Pipes.

Return Lines. Determining Dry Return Proportions, R. V. Frost. Am. Soc. Heating & Vent. Engrs.—Jl., vol. 30, no. 5, May 1924, pp. 359-364, 2 figs. Analysis of factors governing flow of water and air in return lines, showing how they must be taken into account in properly proportioning dry-return capacities.

Rivers. Effect of Ice on Flow of Mississippi River at Keokuk, Iowa, A. Davis. Stone & Webster Jl., vol. 34, no. 4, Apr. 1924, pp. 475-480, 1 fig. Describes ice effect at Keokuk with idea that it may throw light on general problem of flow under ice cover in other locations.

Periodical Variations of the Water Flow in Rivers (De periodiske variasjoner i vasdragenes vandföringer), E. Kraaböl-Jörstad. Teknisk Ukeblad, vol. 71, no. 42, Nov. 7, 1924, pp. 361-364, 2 figs. Discusses statistical information on water flow and atmospheric precipitation for different rivers in Norway. Illustrates relations between water flow and precipitation, and relationship between variations of sun spots and precipitation.

Surface Water Supply of the United States 1919 and 1920, N. C. Grover, O. W. Hartwell, G. C. Stevens, W. E. Hall, W. R. King, and C. G. Paulsen. U. S. Geol. Survey, Water-Supply Paper no. 503, 1924, 254 pp. 5 figs. Records of gaging stations of river basins of Allegheny, Monongahela, Beaver, Tennessee, and others.

Sewer Pipe. See SEWERS, Flow of Water in.

Stream Flow. Stream Flow and Other Hydraulic Problems Solved by Model Experiments, Chas. I. Corp. Wis. Engr., vol. 29, no. 3, Dec. 1924, pp. 45-47, 7 figs. Examples of use of models for solving actual problems and methods for magnifying or transforming results from models to conditions of actual stream or structure.

Stream Gaging. Determination of Stream Flow Per Second in Rivers on the Basis of Surface-Velocity Measurements (Ermittlung der sekundlichen Abflussmengen in natürlichen Flussläufen auf Grund von Oberflächengeschwindigkeitsmessungen), M. Matakiewicz. Oesterreichische Monatsschift für den Oeffentlichen Baudienst, vol. 5, no. 7, July 1, 1924, pp. 98-99, 2 figs. Develops curves for vertical velocities; factor expressing relation between Kutter's coefficient of roughness and local profile head; relation of surface to profile velocity, etc.

Turbulent and Non-Turbulent. The Laws of Industrial Hydraulics (Sur les régimes hydrauliques industriels), C. Camichel and M. Ricaud. Technique Moderne, vol. 16, no. 5, Mar. 1, 1924, pp. 129-137, 30 figs. Author seeks to explain certain characteristics of hydraulic flow, showing existence of turbulent flow independent of form of obstacles; transition from one flow to another has its origin frequently in formation of surfaces of discontinuity; study of surfaces of discontinuity.

Velocity and Roughness Coefficients. Formula of Velocity and Coefficient of Roughness in Streams, Canals and Closed Conduits (Beiträge zur Frage der Geschwindigkeitsformel und der Rauhigkeitszahlen für Ströme, Kanäle und geschlossene Leitungen), A. Strickler. Schweizerische Bauzeitung, vol. 83, no. 24, June 14, 1924, pp. 265-268, 1 fig. Abstract of communication from Swiss Federal Water Supply Dept. Discusses formulation of equation of general validity for loss of energy in uniform turbulent flow.

FLUE-GAS ANALYSIS

Apparatus. Analyzing Combustion Gases in Industrial Furnaces (L'analyse des gaz de combustion dans les foyers industriels), E. Montrichard. Revue Générale de l'Electricité, vol. 16, no. 19, Nov. 8, 1924, pp. 743-748, 6 figs. Discusses flue-gas analysis, conditions and analysis apparatus must fill, and describes some apparatus, including Cambridge, Aci, Bacharach, Positif, etc.

CO Indicator. A New Instrument for the Continuous Indication of Carbon Monoxide in Boiler-Flue Gases, W. O. Andrews. S. African Instn. Engrs.—Jl., vol. 22, no. 10, May 1924, pp. 145-152, and (discussion) 152-153, 3 figs. Instrument devised by author as simple and inexpensive means of indicating, by means of color of liquid, presence or absence of small quantities of combustible carbon gases in flue gas.

CO Meters. Electrical Carbonic Oxide and Hydrogen Meters, E. Zopf. Eng. Progress, vol. 5, no. 5, May 1924, pp. 91-92, 6 figs. Electric apparatus for testing flue gases for their content of combustible components (especially carbonic oxide and hydrogen).

CO_2 Meters. Saving Coal by Control of Exhaust Gases in Boiler Firing (Kohlenersparnis durch Abgasüberwachung von Kesselfeuerungen), M. Moeller, K. Auer and M. U. Büchting. Wärme, vol. 47, nos. 19 and 21, May 9 and 23, 1924, pp. 212-214 and 240-242, 8 figs. Discusses flue-gas analysis, CO_2 meters with traveling grates, CO_2 and CO meters with hand firing; experiments with five tube boiler and hand firing.

CO_2 and CO Recorders. A New Measuring Instrument for the Registration of CO_2 and CO Based on Physical Principles (Ein neues Messgerät zur Registrierung von CO_2 und CO auf physikalischer Grundlage), R. Dunckel. Gas- u. Wasserfach, vol. 67, no. 15, Apr. 12, 1924, pp. 197-199, 3 figs. New double recorder for determination of CO together with CO_2 in flue gases.

CO_2 Recorders and Control Apparatus, J. B. C. Kershaw. Combustion, vol. 10, no. 3, Mar. 1924, pp. 202-205, 3 figs. Describes some new forms of CO_2 recorders and boiler control apparatus now being placed on market in Germany, Great Britain and United States.

Electrically Heated Platinum Tubes Used in CO_2 Recorder. Power Plant Eng., vol. 28, no. 13, July 1, 1924, pp. 729-730, 1 fig. In new recorder made by Uehling Instrument Co., Paterson, N. J., novel scheme is employed to secure motive power for actuating recorder by burning combustible in electrically heated platinum tubes.

New Measuring Device for the Recording of CO_2 and CO Based on Physical Properties, R. Duenckel. Blast Furnace & Steel Plant, vol. 12, no. 9, Sept. 1924, pp. 422 and 426. Working principle is founded on difference in resistance to flow of a gas which exists in a capillary and an ordinary tube. Abstracted from Gas u. Wasserfach, Apr. 12, 1924, pp. 197-199.

Saving of Fuel in Marine Boilers by Flue-Gas Control (Ersparung von Brennstoff bei Schiffskesseln durch Heizgaskontrolle), Schulz. Brennstoff- u. Wärmewirtschaft, vol. 6, no. 12, Nov. 1924, pp. 239-242, 5 figs. Discusses Klagemann devices for recording feedwater, pressure, CO_2, CO, O, air pressure, smoke density, and fuel oil. Design and operation of Ranarex and Siemens & Halske apparatus.

The "Positif" CO_2 Recorder (Analyseur de CO_2 "positif"). Chaleur & Industrie, vol. 5, no. 48, Apr. 1924, pp. 195-197, 5 figs. Describes new and simple apparatus manufactured by Société Anonyme des Appareils de Manutention & Fours Stein, Paris.

Computations. Computations Involving Steam in Boiler Flue Gas, F. C. Evans. Combustion, vol. 10, no. 2, Feb. 1924, pp. 118-119. Discussion of method of finding loss due to moisture in coal and due to water from combustion of hydrogen; illustrated by alignment chart for use in solving equations for the purpose given in proposed Boiler Test Code of A. S. M. E.

Interpretation of. Interpretation of Flue Gas Analysis, F. D. Harger. Combustion, vol. 10, no. 2, Feb. 1924, pp. 115-117, 4 figs. Necessity of complete flue gas analysis as a guide to efficient combustion, end to be obtained being highest possible percentage of CO_2 without formation of CO and other combustible gases. Cautions to be observed in interpreting flue-gas analysis; losses caused by escape unburned of combustible gases and relation of loss to other loss factors.

Scientific Methods. Scientific Flue Gas Analysis, D. Brownlie. Eng. & Boiler House Rev., vol. 38, no. 1, July 1924, pp. 3-5, 2 figs. Gives essential facts regarding true scientific methods necessary for flue-gas analysis.

Testing Apparatus. Improved Method of Analyzing Flue Gases (Verbeterd rookgasonderzoek), S. De Waard. Ingenieur, vol. 39, no. 7, Feb. 16, 1924, 103-105, 2 figs. Describes improved device marketed by P. Beun, Amsterdam. Formulas.

Modern Flue Gas Testing Instruments. Eng. & Boiler House Rev., vol. 38, nos. 1, 3, 4, and 5, July, Sept., Oct., and Nov. 1924, pp. 12-13, 93-95, 155-156, and 209-210, 11 figs. Describes principal features of flue-gas testing instruments at present in use.

FLUE GASES

Temperature, Thermocouples for. See THERMOCOUPLES, Lagless.

FLUIDS

Equation of State. On a proposed Empirical Equation of State for Fluids, S. Lees. Lond., Edinburgh & Dublin Philosophical Mag. & Jl. Sci., vol. 47, no. 278, Feb. 1924, pp. 431-446, 1 fig. Author puts forward a new equation of state.

Flow of. See FLOW OF FLUIDS; FLOW OF WATER.

Measurement. See MEASURING INSTRUMENTS, Fluids.

Pressure Measurement. The Measurement of Pressure, J. L. Hodgson. Inst. Mar. Engrs.—Trans., vol. 36, Dec. 1924, pp. 487-522, and (discussion) 522-563, 51 figs. Methods of pressure measurement; fundamental and secondary methods; notes on use of fluid manometers; Bourdon gage; recording pulsating pressures. Bibliography.

FLUMES

Concrete. Concrete Flumes Solve Tunnel Drainage Problem, M. F. Clements. Ry. Age, vol. 77, no. 5, Aug. 2, 1924, pp. 189-191, 6 figs. Precast construction proves effective in overcoming difficulty from water in stampede tunnel, Washington.

Semi-Circular Wood. Semicircular Wood Flume with Radius of 6 Ft. Eng. News-Rec., vol. 92, no. 15, Apr. 10, 1924, pp. 612-613, 4 figs. Creosoted staves and section giving minimum leakage make for long life; crew assembles 500 ft. per day in renewal of flume along Deschutes River, Ore.

V-Section. Irrigation Flume of V-Section Supplies Oregon Project. Eng. News-Rec., vol. 93, no. 1, July 3, 1924, pp. 9-10, 2 figs. Design of 352-ft. V-shaped flume for Silver Lake irrigation district, a recently constructed project in Lake County, Ore. Its advantages. Wedging system makes nails unnecessary to hold plank in place. Only standard sizes of lumber used.

FLUORSPAR

Mining. How Fluorspar Is Produced, E. C. Reeder. Du Pont Mag., vol. 18, no. 10, Oct. 1924, pp. 2-4, 4 figs. Notes on deposits and mining methods. Almost all domestic production comes from southern Illinois and western Kentucky.

U. S. A. Fluorspar and Cryolite in 1923, H. W. Davis. U. S. Geol. Survey, no. II:4, July 25, 1924, pp. 27-40. Statistics of production of fluorspar in U. S. A. and abroad.

FLUXMETERS

Study of. Theoretical and Experimental Study of the Fluxmeter, G. Darmois and G. Ribaud. Annales de Physique, vol. 1, series 10, Mar.-Apr. 1924, pp. 173-312. Theoretical treatment of modern form of Grassot fluxmeter, in which moving coil is supported on pivots instead of being suspended by cocoon silk fiber; deals also with its use for measurement of time intervals.

FLYING BOATS

Aeromarine. The Aeromarine Metal-Hull Flying Boat. Flight, vol. 15, no. 47, Nov. 22, 1923, pp. 711-713, 12 figs. Commercial biplane; passenger capacity for flights of 7 hr. duration, 5; for flights of 4 hr. duration or under, 7; span, upper wing, 65 ft.; lower wing, 48 ft. 6½ in.; length overall, 32 ft. 10 in.; chord, upper wing, 7 ft.; lower wing, 5 ft. 1 in.; area of upper wing with ailerons, 434 sq. ft.; lower wing, 218 sq. ft.; high speed (at 1700 r.p.m.), 98 m.p.h.; 400-hp. Liberty engine.

The Aeromarine Model EO Sport Flying Boat, B. V. Korvin-Kroukovsky. Aviation, vol. 17, no. 6, Aug. 11, 1924, pp. 858-860, 3 figs. Details of design and construction of three-seater fitted with six-cylinder 70- to 80-hp. Anzani type 6A3 engine, and tractor-type propeller.

All-Metal. See Aeromarine; Rohrbach; Short.

P.5. The "P.5" or Phoenix "Cork" Flying Boat. Flight, vol. 16, no. 11, Mar. 13, 1924, pp. 144-150, 16 figs. Complete description of P.5 flying boat, having two 360-hp. Rolls-Royce Eagle engines and following dimensions: length, 49 ft. 1¾ in.; span, 85 ft. 6 in.; ailerons, 81 sq. ft.; and notes on some other products of English Elec. Co., Ltd.

Rohrbach. A Rohrbach Flying-Boat. Aeroplane, vol. 26, no. 1, Jan. 2, 1924, pp. 18-19, 4

figs. Notes on all-duralumin monoplane of very similar construction to Staaken monoplanes; equipped with two Rolls-Royce Eagle IX type engines and designed to carry 12 persons; span, 95 ft. 3 in.; length, 54 ft. 2 in.

All-Metal Flying Boats for Britain. Flight, vol. 16, no. 29, July 17, 1924, pp. 449-451, 5 figs. Describes Rohrbach RO II, twin-engined flying boat of cantilever-monoplane type; maximum speed, 120 m.p.h.

The Rohrbach Flying Boat (Besuch bei der Rohrbach Metal Aeroplan Co. A/S Kopenhagen), G. Krupp. Zeit. für Flugtechnik u. Motorluftschiffahrt, vol. 15, no. 15-16, Aug. 26, 1924, pp. 165-167, 14 figs. Describes flying boat of large dimensions made entirely of duralumin at airplane factory founded by Rohrbach in Denmark; wing spread is 95 ft.; empty weight, 8359 lb.; boat has two motors carried above wings on struts; speed is 118 mi. per hr.; describes launching operation.

The Rohrbach RO II Twin-Engined Flying Boat. Aviation, vol. 17, no. 14, Oct. 6, 1924, pp. 1084-1085, 2 figs. Describes flying boat built to designs of Paul Rohrbach by Metal Aeroplan A. S. of Copenhagen, Denmark. Span, 95 ft. 8 in.; overall length, 54 ft. 6 in.; weight, empty, 8360 lb., and normal weight, loaded, 13,750 lb.

Shells. The Shells of Flying Boats (Les coques d'hydravions). Bul. Technique du Bureau Veritas, vol. 6, no. 5, May 1924, pp. 81-86, 15 figs. Discusses stresses in shells and floaters and experimental results; types of shells; review of developments during past 12 years.

Short. The Short All-Metal Light Flying Boat. Flight, vol. 16, no. 16, Apr. 17, 1924, pp. 220-223, 4 figs. Built entirely of metal, with exception of wing covering, and material mainly used in construction is duralumin; two 696 c.c. Blackburne engines; length, 24 ft. 8½ in.; span, 36 ft.

Tests. Experiments with Model Flying Boat Hulls. 24th Series Report; Comparison of Longitudinal with Transverse Steps, G. S. Baker and E. M. Keary. Aeronautical Research Committee, no. 893, Aug. 1923, 13 pp. 5 figs. Object of experiments was to test merits or demerits of form having longitudinal instead of transverse steps.

FLYWHEELS

Ammonia-Compressor. See AMMONIA COMPRESSORS, Flywheels.

Design. See INTERNAL-COMBUSTION ENGINES, Flywheel Design, Chart for..

Manufacture. Maxwell Methods in Flywheel Work, F. H. Colvin. Am. Mach., vol. 60, no. 20, May 15, 1924, pp. 729-730, 5 figs. Machine equipment, together with some of tooling fixtures and handling devices; drilling and tapping in multi-spindle machines; balancing machine.

Rolling-Mill Engines. Heavy Flywheels for Rolling-Mill Engines (Schwere Schwungräder für Walzenzugmaschinen), Luck. Maschinenbau, vol. 3, no. 15, May 8, 1924, pp. 525-526, 3 figs. See also Zeit. für die gesamte Giessereipraxis, vol. 45, no. 40, Oct. 5, 1924, pp. 315-316, 3 figs. Based on drawings, best forms and materials for heavy flywheels are discussed.

Stress Determination. The Stresses in a Uniformly Rotating Fly-Wheel, A. J. Sutton Pippard. Instn. Mech. Engrs.—Proc., no. 1, 1924, pp. 25-42, and (discussion) 43-51, 7 figs. Author uses method of analysis founded on certain theorems of Castigliano, which leads to formulas of straightforward and easily applied type; investigation dealing with stresses in ring subjected to system of radially applied forces is given in appendix.

FOGS. See GASES, Mists, Analysis of.

FOREMEN

Mine, Safety Bonus for. See BONUS SYSTEMS, Foremen.

Training. A Training Program for the Foreman, J. K. Novins. Railroad Herald, vol. 28, nos. 2 and 3, Jan. and Feb. 1924, pp. 25-30 and 26-30. Outlining study course; study plan proposed by Federal Board for Vocational Education; choosing text material for foreman conferences.

Some Psychological Aspects of Foremanship Training, F. Cushman. Indus. Mgmt. (N. Y.), vol. 67, no. 3, Mar. 1924, pp. 174-176. Responsibilities of foremen and methods of discharging them.

See also EMPLOYEES, TRAINING OF.

FORESTRY

Fire Statistics. Some Suggestions for Proposed Changes in the Methods of Collecting Forest Fire Statistics, P. W. Stickel. Jl. of Forestry, vol. 22, no. 3, Mar. 1924, pp. 266-274. Discusses importance of forest-fire statistics in relation to question of forest-fire insurance, and suggests some changes in method of collecting such statistics. Bibliography.

Forest Colonization. Forest Colonization in Sweden, H. I. Baldwin. Jl. of Forestry, vol: 22, no. 3, Mar. 1924, pp. 241-257. Character of forest; climate. Primary object of colonization has been development of a settled population of forest workers. Relation between population and intensity of forestry; previous efforts at colonization in state forests; present grants for colonization; general extent and results of colonization. References.

India. Some Results of Research Work in Indian Forestry. Chem. Age (Lond.), vol. 11, no. 278, Oct. 11, 1924, pp. 368-369. Account of research work on Indian timbers, and industrial advantages arising from their successful chemical treatment for various purposes.

North America. The Forests and Timber Supply of North America, R. L. Robinson. Roy. Soc. Arts—Jl., vol. 72, no. 3726, Apr. 18, 1924, pp. 360-361, and (discussion) 367-370. Importance of North American forests; brief survey of main forest regions; trade in timber and primary wood products; forest exploitation; etc.

Reforestation. Reforestation and Timber Conservation, J. W. Blodgett. Mech. Eng., vol. 46. no. 2, Feb. 1924, pp. 59-63 and 72, 7 figs. Nation wide reforestation policy a necessity; regrowth of timber for pulpwood and low-grade material; regrowth of timber suitable for lumber; points out that reforestation for lumber purposes is task for Federal Government; benefits to be derived from Federal reforestation of logged-off lands.

Relation to Floods. The Relation of Forests to Destructive Waters in the Light of Scientific Investigations, D. Y. Lin. Assn. Chinese & Am. Engrs.—Jl., vol. 4, no. 10, Dec. 1923, pp. 1-7, 4 figs. Discusses flood problem from a forestry standpoint. Influence of forests on watersheds, and condition they create with regard to surface run-off, soil erosion, absorptive capacity of soil cover, underground seepage, and stream flow.

Research. Use of Statistical Methods in Forest Research, J. Kittredge, Jr. Jl. of Forestry, vol. 22, no. 3, Mar. 1924, pp. 306-314. Author outlines what seems to him to be most promising statistical methods for use in forest research and gives examples of kinds of problems in which their application might prove useful. References.

United States. The Evolution of Forest Industries in the United States, W. B. Creeley. West. Soc. Engrs.—Jl., vol. 29, no. 1, Jan. 1924, pp. 1-12. Notes on expanding scale of lumber opera-

tions and of timber use; relations of forest industries to timberland; utilization of raw material; transportation costs and lumber prices; situation of paper industry; transportation costs and reforestation; a national forestry policy.

FORGE SHOPS

Germany. Forge Shop of the German Waffen- und Munitionsfabriken, Wittenau near Berlin (Hammerschmiede der Deutschen Waffen- und Munitionsfabriken in Wittenau bei Berlin), O. Leitholf. Praktische Maschinen-Konstrukteur, vol. 57, no. 18, May 20, 1924, pp. 248-250, 8 figs. Design and construction of shop 162 m. long and 30 m. wide for forges and presses.

Time Study in. See TIME STUDY, Forge Shops.

FORGING

Car Buffers. See CARS, Construction Methods.

Coining-Press. See PRESSES, Coining, Forging in.

Collared Shafts. Calculations in Forging a Collared Shaft, C. J. Steen. Forging—Stamping—Heat Treating, vol. 10, no. 1, Jan. 1924, pp. 40-42, 10 figs. Method of calculating size of ingot and forging time; size of press and unit of forging pressure important factors.

Crankshafts, Automobile. See CRANKSHAFTS, Forging.

Drop Forging. See DROP FORGING.

Equipment for. The Modern Forging and Stamping of Steel. Metal Industry (Lond.), vol. 24, nos. 25 and 26, and vol. 25, no. 1, June 20, 27 and July 4, 1924, pp. 605-606, 627-628 and 9-11. Survey of forging and stamping work, from questions of shop equipment and layout to causes of defective stampings and heat treatment considerations.

Hammers. See HAMMERS.

Lids for High Pressures. Manufacture of Forged Lids for High-Pressure Containers (Herstellung geschmiedeter Druckteller), P. Patek. Praktische Maschinen-Konstrukteur, vol. 57, no. 11, Apr. 1, 1924, pp. 146-148, 4 figs. Describes the various stages in formation by means of forging presses, of a forged lid, or cover, such as for closing a cylindrical oil-filled container.

Safety Code for. Safety Code for Forging. Nat. Safety News, vol. 9, no. 6, June 1924, pp. 56-61, 23 figs. Also Forging-Stamping—Heat Treating, vol. 10, no. 8, Aug. 1924, pp. 282-285. Tentative draft formulated under general auspices of Am. Eng. Standards Committee to provide reasonable safety for life, limb, and health. Applies to all power forging hammers and incidental operations in connection therewith, including hot saws.

Swaging. See SWAGING.

FORGINGS

Heavy. The Production of Heavy Forgings. Mech. Eng., vol. 46, no. 5, May 1924, pp. 241-247 and 307, 15 figs. Survey of status of industry in America at present time, together with data helpful to engineer ordering forgings.

Locomotive. See LOCOMOTIVES, Tires and Forgings, Manufacture.

Shock Detection during Treatment. The Clink Detector for Steel Ingots and Forgings. Engineering, vol. 118, no. 3071, Nov. 7, 1924, p. 658, 6 figs. Instrument, when attached to forging during heating and cooling processes, gives autographic record of any shocks or disturbances which may have taken place.

Steel. Recent Developments in Steel Forgings, J. L. Cox. Forging—Stamping—Heat Treating, vol. 10, nos. 1 and 2, Jan. and Feb. 1924, pp. 12-16 and 87-89, 23 figs. Review of developments in line of forging exceptionally large machine parts; forgings often employed to advantage in place of steel castings.

Steel, Brittleness of. Brittleness of Steel Due to Tempering After Being Forged Cold (Om anlöpningssprödhet), G. Wazau. Jernkontorets Annaler, no. 7, 1924, pp. 343-360, 19 figs. Examples where steel parts, which have been drawn after having been worked in cold condition, have become very brittle, and investigation of such breaks by means of etching of sections according to Fry's method.

Steel, Testing of. Proposed Definitions and Specifications for Tests of Iron and Steel Forgings and Steel Castings [Förslag till begreppsbestämningar (nomenklatur) vid provning av metallers draghållfasthet m. m.], J. O. Roos. Jernkontorets Annaler, no. 8, 1924, pp. 404-450, 2 figs. Communication from Government Testing Inst. Gives nomenclature referring to tensile-strength measurements of steel and iron in Swedish, English, French, and German, also test specifications of several countries.

Testing Large. How English Test Big Forgings. Iron Trade Rev., vol. 74, no. 24, June 12, 1924, pp. 1557-1558, 4 figs. Stresses encountered by turbine rotors and other large forgings have led British steelmakers to examine core by means of special optical instrument; defects usually develop along axis.

FOUNDATIONS

Bearing Soils. Resistance Capacity of Bearing Soil and Influence of Cohesion in Earth Pressure and Earth Resistance (Die Widerstandsfähigkeit des Untergrundes und der Einfluss der Kohäsion beim Erddruck und Erdwiderstande), H. Krey. Bautechnik, vol. 2, no. 40, Sept. 16, 1924, pp. 462-474, 19 figs. Calculation of foundation pressure; examination of bearing soil on assumption of plane, circular, and curvilinear sliding surfaces; influence of cohesion; mathematical treatment of cohesion; absence of friction; etc.

Building. Stresses Due to a Loaded Surface When Earth Is Treated as an Elastic Solid, S. D. Carothers. Engineering, vol. 118, nos. 3053 and 3057, July 4 and Aug. 1, 1924, pp. 1-2 and 156-159, 7 figs. Treating earth as elastic solid as means of obtaining stresses in earth foundations; stresses in foundations due to weight of earth and to load on surface.

Caissons. See CAISSONS.

Cofferdams. See COFFERDAMS.

Concrete-Mattress. Using Concrete Mattresses for Foundations. Ry. Age, vol. 77, no. 6, Aug. 9, 1924, pp. 229-233, 11 figs. Pennsylvania adopts this type of construction at new Sharpsburg Engine Terminal near Pittsburgh.

Concrete Piles for. See PILES, Concrete.

Developments. Foundation Development During Fifty Years, D. E. Moran. Eng. News-Rec., vol. 92, no. 16, Apr. 17, 1924, pp. 670-673, 3 figs. Review of developments in foundations for bridges and buildings.

Engine. Engine Foundations in Power Plants, J. D. Wilder. Oil Engine Power, vol. 2, no. 12, Dec. 1924, pp. 629-632, 4 figs. Points out that properly designed base will eliminate any movements of engine and base upon supporting soil or other support; for this work monolithic concrete has been found best; gives table of soil-bearing powers used in computing areas of machinery bases.

Gas-Engine. See GAS ENGINES, Foundations.

Gas Holders. See GAS HOLDERS, Foundations.

Groundwater Level Lowering. Lowering Groundwater Level for Rebuilding the Zurich Cantonal Bank (Die Grundwasserabsenkung beim Neubau der Zürcher Kantonalbank). Schweizerische Bauzeitung, vol. 84, no. 13, Sept. 27, 1924, pp. 152-156, 7 figs. Discusses Siemens-Bauunion system of lowering groundwater level and its application in extension of Bank building.

Machinery. See MACHINERY, Foundations.

Office-Building. See CONCRETE CONSTRUCTION, REINFORCED, Office; Building Substructures.

Piers. See PIERS.

Reinforcement against Mining Subsidence. The Reinforcement of Buildings and Their Foundations against Mining Subsidence, Jos. Eltringham. North of England Inst. Min. & Mech. Engrs. —Trans., vol. 74, part 2, Jan. 1924, pp. 22-33, 11 figs. Methods of arresting subsidence and preventing damage; examples giving result of reinforced-concrete foundations. See also (discussion) in part 3, Mar. 1924, pp. 42-50, 6 figs.

Removing. See BLASTING, Concrete Foundations.

Sinking in Water-Bearing Material. Small Open Caissons Used in Water-Bearing Material. Eng. News-Rec., vol. 93, no. 21, Nov. 20, 1924, pp. 826-827, 2 figs. Method used in sinking foundations of small apartment house in Boston, which involves modifications of method used for First National Bank building of Boston; two types of caissons used; level of water table lowered by pumping; diver used to excavate sumps.

Steam-Turbine. See STEAM TURBINES, Foundations.

Stresses in Rectangular Block. An Extension of the Middle Third Theory, A. C. Vivian. Engineering, vol. 118, no. 3075, Dec. 5, 1924, pp. 763-764, 4 figs. Author seeks to elaborate general equation which, it is claimed, provides easy and safe approximation to actual stresses existing under base of eccentrically loaded rigid rectangular foundation block.

Test Loads. Foundation Test Loads as Affected by Scale, S. D. Carothers. Can. Engr., vol. 47, no. 17, Oct. 21, 1924, pp. 439-442. The narrower the strip, the greater the unit resistance if the stress on horizontal planes is greater than on vertical planes; all widths of strip may give same unit resistance; relation if ground is invariable. From paper presented before Eng. Sec., Int. Mathematical Congress, Toronto.

Tests. See TERMINALS, RAILWAY, Freight.

Timber-Pile. Building a Pile Foundation for a Marsh-Land Factory, R. L. Hart. Eng. News-Rec., vol. 93, no. 6, Aug. 7, 1924, pp. 208-210, 6 figs. Heavy concrete mats and pedestals carried by 200,000 timber piles sunk 10 to 50 ft. through bog to sand-clay bottom of Jersey meadows near Newark for telephone manufacturing plant of West. Elec. Co.

Underpinning. Underpinning Printing Plant for New Deep Foundations. Eng. News-Rec., vol. 93, no. 25, Dec. 18, 1924, pp. 982-985, 6 figs. Large newspaper presses carried by jacks and blocking while wells for concrete piers are sunk 120 ft. through clay to rock, in supporting building which contains printing plant of Chicago Tribune.

FOUNDRIES

Alignment Charts for Use in. See ALIGNMENT CHARTS, Foundry.

American Decrease. Decrease in Foundries Noted. Foundry, vol. 52, no. 20, Oct. 15, 1924, pp. 801-805, 7 figs. Statistics indicate less number of castings plants in operation in 1924 than in 1922.

American vs. European Practice. American Versus European Foundry Practice, H. M. Lane. Iron Age, vol. 113, no. 11, Mar. 13, 1924, pp. 803-804. Comparison based on relative social and economic conditions; light building construction; machine-tool design.

European and American Foundries Compared, H. M. Lane. Foundry Trade Jl., vol. 30, no. 422, Sept. 18, 1924, p. 245. Extract from paper presented to South. Metal Trades Assn.

Apprentices for Training. See APPRENTICES, TRAINING OF, Foundry.

Automobile Castings. Keeping Pace with Auto Output. Foundry, vol. 52, no. 18, Sept. 15, 1924, pp. 718-725, 13 figs. Principal changes that have taken place in plant of Wilson Foundry & Machine Co., Pontiac, Mich., one of the largest foundry plants in world devoted exclusively to production of castings for automobile engines, indicating rapidity of its growth.

The Foundry of the Sunbeam Motor Car Company. Foundry Trade Jl., vol. 29, no. 407, June 5, 1924, pp. 455-459, 11 figs. Particulars of equipment and methods employed.

See also Ford Motor Co.

Brass. See BRASS FOUNDRIES.

Building Design. Study of Foundry Building Design. Iron Age, vol. 114, no. 21, Nov. 20, 1924, pp. 1334-1337, 6 figs. Influence of site selection, building layout, material storage, and methods of operation on better foundry practice.

Car-Wheel. Car Wheel Foundry with Parallel Motions. Iron Age, vol. 114, no. 2, July 10, 1924, pp. 67-70, 6 figs. Describes equipment of Rochester, N. Y., works of Nat. Car Wheel Co. Molding unit for manufacture of chilled-iron car wheels having capacity of 400 wheels in 8 hr. recently placed in operation. Six straight-line conveyors to handle molds, drags, copes and chills, and sand. Continuous molding operations.

Make Wheels and Brakeshoes, P. Dwyer. Foundry, vol. 52, no. 18, Sept. 15, 1924, pp. 707-712, 12 figs. Describes plant of Canada Iron Foundries, Ltd., manufacturing cast-iron chilled wheels for railway cars, brakeshoes, and miscellaneous castings, principally municipal work and pipe fittings. Two foundries draw supplies from same stockyard and are served by metal from a battery of four cupolas charged from a common platform.

Coke for. See COKE, Foundry.

Cost Accounting. A Foundry Cost System. Foundry Trade Jl., vol. 30, no. 417, Aug. 14, 1924, pp. 157-160. Outlines foundry cost accounting system arranged primarily for iron foundries producing castings of varied designs and of wide range in weight, but underlying principles upon which it is based can be rendered applicable to brass, malleable and steel foundries by changing terminology and altering arrangement of cost details to suit conditions prevailing therein.

A System of Foundry Organisation and Cost Recording, M. Nicholls. Foundry Trade Jl., vol. 30, no. 426, Oct. 16, 1924, pp. 324-325. Details of successful organization; examples of forms used.

Cost Finding in a Foundry, W. J. Corbett. Am. Foundrymen's Assn., preprint no. 410, for meeting Oct. 11-16, 1924, 36 pp., 6 figs. Discusses factors justifying a manufacturer in operating a foundry and uses of an effective cost system. Explains necessity for foundry industry to adopt uniform cost finding methods, and shows the great variations in ascertaining casting costs by comparing figures based on methods used in some 80 steel foundries. Outlines a general cost accounting system for a foundry with reference in a general way to main elements of foundry

costs, and describes in detail a job cost system which furnishes necessary data that should be supplied by a good foundry cost system.

Departmental Costs in the Foundry, H. B. May. Am. Foundrymen's Assn., preprint no. 415, for meeting Oct. 11-16, 1924, 13 pp. Also Foundry Trade Jl., vol. 30, 426, Oct. 1924, pp. 333-335. Engineering or departmental costs show profit or loss of each unit, whether unit be job, contract, line of product or operating department. Advocates careful analysis of each department to determine correct basis on which to distribute burden. Discusses departments of a foundry to clarify this idea and to show divisions of foundry costs.

Describes Foundry Cost Plan, Thos. Perkins. Foundry, vol. 52, no. 8, Apr. 15, 1924, pp. 303-306, 2 figs. Methods employed in obtaining cost of production based on expenditures covering raw materials, melting and molding.

Distribute Costs on Each Job, E. C. Boehringer. Foundry, vol. 52, no. 6, Mar. 15, 1924, pp. 207-212, 11 figs. Nugent Steel Castings Co., Chicago, manufacturers of electric-steel castings, make detailed tabulation of expenses including minor materials to each job; how work is routed through shop.

Finds Costs by Uniform Method, R. E. Belt. Iron Trade Rev., vol. 75, no. 10, Sept. 4, 1924, pp. 604-606. Benefits derived from uniformity of methods for determining production costs are shown by bids received on malleable castings before and after system was adopted. Some bids found to be below cost.

German Method of Costing in Foundries. Foundry Trade Jl., vol. 30, no. 430, Nov. 13, 1924, pp. 410-411. Principles of costing in iron foundries; proposes standard basis for arriving at cost of castings. Abstract of monograph issued by German Union of Iron Foundries (Verein deutscher Eisengiessereien).

Why Foundry Costs Vary on Rough Castings, A. Luenberg. Can. Foundryman, vol. 15, no. 3, Mar. 1924, pp. 14-15, 3 figs. Uniform cost-finding method for foundries; individual cost of castings based on actual time prevents confusion in locating leaks.

See also Overhead Charges; Steel, Cost System for.

Cupolas. See CUPOLAS.

Decentralized Control. Organization for Better Foundry Practice. Iron Age, vol. 114, no. 24, Dec. 11, 1924, pp. 1552-1554, 2 figs. One man vs. decentralized control; analysis of business before changing to decentralized control; successful one-man operation and its limitations.

Electric-Furnace Melting. See ELECTRIC FURNACES, Low-Grade Iron and Scrap; Melting.

Electrically Equipped. A Completely Electrified Foundry, E. J. Cipperly. Elec. Wld., vol. 84, no. 11, Sept. 13, 1924, pp. 515-517, 5 figs. Describes plant of Alloy Steel & Metals Co., Los Angeles, Cal., which has been in successful operation for more than a year. Melting, core baking, heat treating, and welding all performed electrically.

Electricity in the Foundry. Elec. Times, vol. 66, no. 1719, Sept. 25, 1924, pp. 360-362, 7 figs. Deals with principal features of interest in new electrically equipped foundry of Laurence, Scott & Co., Norwich.

Equipment. See FOUNDRIES, Equipment.

European Practice. Some Further Reflections on Continental Foundry Methods, A. S. Beech. Foundry Trade Jl., vol. 30, nos. 435 and 436, Dec. 18 and 25, 1924, pp. 515-518 and 537-541, 19 figs. Notes on pattern drawing; double-faced pattern plates; ramming of sands; refers also to what is known in France as "rehausse inferieure," and in Great Britain as down-sand frames; sand considerations and comparisons; sand preparation, milling and disintegrating.

Ford Motor Co., Detroit. Jobbing Foundry of Ford Motor Co., F. L. Prentiss. Iron Age, vol. 113, no. 21, May 22, 1924, pp. 1485-1489, 8 figs. Iron, steel, and non-ferrous departments; blast furnace, cupola, and electrically melted metals used; new steel plant.

General Expenses, Allocation of. The Allocation of General Expenses. Foundry Trade Jl., vol. 30, no. 434, Dec. 11, 1924, p. 504. Belgian Commission appointed to consider manufacturing costs has recommended that overhead expenses should be divided into sectional costs and general expenses, common to all orders, or general cost of administration. Translation of report presented by Belgian Foundrymen's Assn. to Congress of Assn. Technique to Founderie.

Gray-Iron. Foundry Designed for Heaviest Work, F. L. Prentiss. Iron Age, vol. 113, no. 19, May 1, 1924, pp. 1274-1277, 5 figs. Adaptable to light and jobbing work as well; unusually large electric core ovens and pattern-storage facilities.

Studebaker Gray Iron Foundry Largest, G. L. Lacher. Iron Age, vol. 114, no. 14, Oct. 2, 1924, pp. 835-842, 11 figs. Describes foundry just completed by Studebaker Corpn., South Bend, Ind., largest unit foundry in country, measuring 683 ft. by 722 ft., covering 11 acres of ground space, and embracing over 13 acres of floor area. Raw material storage bay entirely covered and inclosed; special sand storage and handling features; provisions for illumination, heating, and ventilation noteworthy.

Tunnels Facilitate Handling of Material in New Foundry, P. Dwyer. Iron Trade Rev., vol. 75, no. 14, Oct. 2, 1924, pp. 879-883 and 897, 11 figs. Also Foundry, vol. 52, no. 20, Oct. 15, 1924, pp. 806-812, 10 figs. Description of new foundry of Studebaker Corpn., at South Bend, Ind., and notes on methods employed. Designed and equipped for a potential melting capacity of 400 tons of gray-iron castings per day.

Hardness Testing in. See HARDNESS, Brinell Ball Testing Method.

Heating. Eliminating Costly Heating in the Foundry, A. L. Green. Can. Foundryman, vol. 15, no. 12, Dec. 1924, pp. 20-21. Advantages of unit-heater installations.

Heavy Machine Parts. Make Heavy Machine Parts, P. Dwyer. Foundry, vol. 52, nos. 5 and 6, Mar. 1 and 15, 1924, pp. 179-184 and 199, and 221-225 and 229, 13 figs. Methods, appliances, floor space and mechanical equipment on huge scale at Farrel Foundry & Machine Co., Ansonia, Conn., required to handle castings for sugar mills, rubber factories, and paper mills.

Ingot Molds. Develop Ingot Mold Foundry, Pat Dwyer. Foundry, vol. 52, no. 4, Feb. 15, 1924, pp. 125-130, 9 figs. Practice at foundry of Vulcan Mold & Iron Co., Latrobe, Pa.; in addition to solid molds made in dry sand and poured vertically, split molds are made in halves in green sand and poured horizontally.

International Coöperation among Foundrymen. A World Outlook for American Foundrymen, H. Cole Estep. Am. Foundrymen's Assn.—preprint no. 413, for meeting Oct. 11-16, 1924, 18 pp., 15 figs. Traces growth and effects of international movement among foundrymen since war; influence of European foundry practice on America and that of American practice on Europe.

Iron. Essentials in Calculations for Iron Foundries (Die Grundzüge der Kalkulation in der Eisengiesserei), J. Schumacher. Giesserei-Zeitung, vol. 21, no. 20, Oct. 15, 1924, pp. 437-441. Discusses cost of remelting and yield of melts, and gives various examples of calculation.

Practical Heat Economics in the Iron Foundry (Praktische Wärmewirtschaft in der Eisengiesserei), Archiv für Wärmewirtschaft, vol. 5, no. 11, Nov. 1924, pp. 212-214, 8 figs. Discusses measuring apparatus, Schürmann furnace using cupola-furnace waste gas for preheating air for blowers, forced-draft firing for drying chamber, etc.

Science in the Iron Foundry, G. S. Bell. Metal Industry (Lond.), vol. 25, no. 26, Dec. 26, 1924, pp. 615-616 and 618 and vol. 26, no. 1, Jan. 2, 1925, pp. 12-13. Practical value of scientific method; interdependence of physics and chemistry and their practical importance; analysis and fracture of pig iron; influence of chemical constituents of cast iron; molding sands; melting practice. (Abstract.) Paper before Lincoln Eng. Soc.

Labor-Saving in. Mechanical Foundry Minimizes Labor, J. E. McDonald. Iron Age, vol. 113, no. 9, Feb. 28, 1924, pp. 633-637, 9 figs. Output per man trebled in new plant of Lavelle Foundry Co., Anderson, Ind., features of which are three stories, gravity flow, controlled conveyors and specialized design. See also description by D. M. Avey in Iron Trade Rev., vol. 74, no. 9, Feb. 28, 1924, pp. 601-606, 10 figs.; and Foundry, vol. 52, no. 5, Mar. 1, 1924, pp. 167-174, 16 figs.

Lighting. See LIGHTING, Foundries.

Locomotive, Costs in. Locomotive Foundry Costs, G. Norman. Ry. Engr., vol. 45, no. 531, Apr. 1924, pp. 138-140, 6 figs. Methods of calculating costs of castings.

London, England. A New London Foundry. Foundry Trade Jl., vol. 30, no. 415, July 31, 1924, pp. 92-97, 9 figs. Describes foundry which has recently been started up at North Woolwich Works of Harland & Wolff, Ltd., laid down expressly to meet requirements of extensive ship-repairing and engineering shops which have recently been erected and equipment of which is now completed.

Malleable-Iron. From Blast Furnace to Malleable Casting, G. L. Lacher. Iron Age, vol. 113, no. 13, Mar. 27, 1924, pp. 921-926, 7 figs. Description of plant of Cadillac Malleable Iron Co., motor-car builder, at Cadillac, Mich.; foundry adjoins charcoal furnace; suspended molding machines, annealing ovens, and buggies for material handling are features.

Iron Supply Governs Location. Foundry, vol. 52, no. 10, May 15, 1924, pp. 389-395, 11 methods. Methods and equipment of Cadillac Malleable Iron Co., Cadillac, Mich., which chose site near source of charcoal-iron production; interplant transportation features, ladles, etc.

Make Malleable on Pacific Coast. Iron Trade Rev., vol. 75, no. 21, Nov. 20, 1924, pp. 1375 1380, 8 figs. Describes new plant of Pac. Malleable Castings Co., at Oakland, Cal., and its notable changes from customary practice; one building houses all departments; practically all handling is done with crane and magnet.

Operates New Malleable Foundry, E. C. Boehringer. Iron Trade Rev., vol. 75, no. 1, July 3, 1924, pp. 29-33, 6 figs. See also Foundry, vol. 52, no. 13, July 1, 1924, pp. 521-526 and 533, 13 figs. Describes plant, including equipment, and practice of Belle City Malleable Iron Co., Racine, Wis.

Pours Iron on Second Floor, E. C. Boehringer. Foundry, vol. 52, no. 12, June 15, 1924, pp. 455-459, 13 figs. Layout and construction of foundry of Tri-Cities Malleable Castings Co., East Moline, Ill.; molds are made and all iron required is melted, poured, and shaken out on upper floor; castings are cleaned and shipped on lower floor.

Reconstructing Plant Under Production, G. L. Lacher. Iron Age, vol. 114, no. 1, July 3, 1924, pp. 5-9, 6 figs. Pulverized-coal air furnaces with water system for disintegrating slag, continuous annealing oven and molding-floor arrangement are features of plant of Belle City Malleable Iron Co., Racine, Wis.

Materials Handling. Improve Shop Transportation, H. R. Simonds. Foundry, vol. 52, no. 23, Dec. 1, 1924, pp. 920-923, 8 figs. Substitution of concrete runways, simplification of department arrangement and adaptation of regularly scheduled tractor trains at Walworth Mfg. Co.'s shop.

Savings from Conveyor and Molding Equipment, Robt. T. Kent. Mgmt. & Administration, vol. 7, no. 2, Feb. 1924, pp. 209-214, 7 figs. How foundry management has cut cost and increased output.

Organization. See INDUSTRIAL ORGANIZATION, Foundry Finishing Department.

Overhead Charges, Allocation of. Space-Factor Rate v. Hour Rate in the Allocation of Overhead Charges. Foundry Trade Jl., vol. 30, no. 427, Oct. 23, 1924, pp. 661-663. Suggestions for correct allocation of overhead charges.

Patterns. See PATTERNS.

Power-Gas Consumption Measurement. The Measurement of Power Gas, F. J. Taylor. Foundry Trade Jl., vol. 29, no. 390, Feb. 7, 1924, pp. 105-109, 9 figs. Measurement of amount of gas used for motive power in foundries. Discusses determination of volume passing through gas main by: (1) Estimation in case of engines, (2) pitot tubes, (3) orifices, (4) venturi tubes, and (5) electro-flow meters.

Practice. See IRON FOUNDING.

Pulverized-Coal-Burning. Adopt Powdered Coal System. Foundry, vol. 52, no. 17, Sept. 1, 1924, pp. 667-670, 6 figs. Experience of malleable-iron foundry of Am. Radiator Co., Buffalo, N. Y., with powdered-coal burning for melting and annealing castings. Advantages claimed as result include neatness and economy and a considerable reduction in cost.

Repair-Ship. See SHIPS, Repair, Foundry Equipment of.

Sand Blasting. Sand Blasting Essential Unit in Modern Foundry. Can. Foundrymen, vol. 15, no. 5, May 1924, pp. 14-17, 7 figs. Abrasive forced against casting will remove burned sand effectively. Sand and steel abrasives to suit every class of work done by special or general-purpose machine.

Sand, Molding. See SAND, MOLDING.

Ship. Foundries on Our Men of War, A. M. Charlton. Foundry, vol. 52, no. 15, Aug. 1, 1924, pp. 584-588, 5 figs. Also Iron Trade Rev., vol. 75, no. 7, Aug. 14, 1924, pp. 416-420, 5 figs. Severe demands placed on battleships in time of war together with long periods ships remain away from home ports necessitate complete foundry and machine-shop equipment aboard.

Soil-Pipe. Remodel Soil Pipe Foundry to Speed Production. Can. Foundryman, vol. 15, no. 8, Aug. 1924, pp. 11-13, 21 and 26, 5 figs. Toronto Hardware Mfg. Co. operate well equipped plant developed from small beginning; transportation facilitated by overhead trolley nearly mile in length; discusses uses of soil pipe, history of plant, making cores and oil and tar.

Steel. Steel Foundry Practice at Schenectady, L. S. Love. Iron Age, vol. 114, no. 14, Oct. 2, 1924, pp. 815-819, 11 figs. Some methods at steel foundry at Schenectady Works of Gen. Elec. Co. Segment patterns and core work extensively used. Chipping and machining lessened by reduction of risers and webs.

See also IRON AND STEEL, Italian Industry.

Steel, Cost System for. Distributing Costs on Each Job, E. H. Boehringer. Iron Trade Rev.,

vol. 74, no. 13, Mar. 27, 1924, pp. 853-857, 12 figs. Describes elaborate, yet not burdensome, cost system developed by Nugent Steel Castings Co., Chicago, Ill., whereby it keeps before it at all times a running and complete picture of all its cost factors; is controlling factor through plant from unloading of steel scrap to shipment of finished casting.

Time Study in. See TIME STUDY, Foundries.

Ventilation. See VENTILATION, Foundries.

FOUNDRY EQUIPMENT

Birmingham Exhibition, England. The International Foundry Trades' Exhibition. Foundry Trade Jl., vol. 29, nos. 409 and 410, June 19 and 26, 1924, pp. 502-508, 525-526, 528 and 530; and 557-542; 24 figs. See also Metal Industry (Lond.), vol. 24, nos. 25 and 26, June 20 and 27, 1924, pp. 599-604 and 622-626, 24 figs. Brief descriptions of exhibits at show at Birmingham, Eng., which cover general foundry plant, foundry requisites, patterns and pattern-making machinery and tools, molding sands, refractories, die-casting plant and laboratory equipment, raw materials, fuel and finished castings of all kinds.

Core and Sand Testing Equipment. Molds, Cores and Molding Sands (Ueber Formen, Kerne und Formsande), L. Treuheit. Giesserei-Zeitung, vol. 20, no. 25, Dec. 1, 1923, pp. 483-492, 30 figs. Strength-testing apparatus for molds and cores; a new decanting apparatus for molding sands; evaluation of molding sands.

Core Boxes. See CORE BOXES.

Exposition. The International Foundry Trades Exhibition at Birmingham. Engineering, vol. 117, no. 3052, June 27, 1924, pp. 824-825, 3 figs. Exhibition at Birmingham, Great Britain, covering entire range of foundry work, especially molding machines, several of which are illustrated and described.

Flasks. Notes on Moulding Boxes, G. Hoffmann. Foundry Trade Jl., vol. 29, no. 391, Feb. 14, 1924, pp. 129-131, 19 figs. Requirements and design of flasks; design of bars; wrought-iron flasks. Translated from Die Giesserei.

Ladles. See LADLES.

Metallurgical Control in. Metallurgical Control in the Iron Foundry, J. A. Holden. Foundry Trade Jl., vol. 30, no. 420, Sept. 4, 1924, pp. 207-208. Deals separately with controlling light and heavy castings.

Milwaukee Exhibition. Innovations Feature Milwaukee Show. Foundry, vol. 52, no. 21, Nov. 1, 1924, pp. 846-852, 14 figs. See also Iron Age, vol. 114, no. 17, Oct. 23, 1924, pp. 1063-1064 and 1103; and Iron Trade Rev., vol. 75, no. 16, Oct. 16, 1924, pp. 1028-1032, 6 figs. Details of exhibition of foundry equipment and supplies, including molding machines, sand handling and preparation machinery, pneumatic tools, etc.; new principle of molding-machine operation; new electrical equipment; crucibles, etc.

Molding Machines. See MOLDING MACHINES.

Molds. See MOLDS.

Pneumatic. See COMPRESSED AIR, Foundry Equipment.

Pneumatic Tools. Inereasing Foundry Output With Compressed Air, R. C. Skerrett. Can. Foundryman, vol. 15, no. 2, Feb. 1924, pp. 22-27, 18 figs. How compressed air and pneumatic tools make it possible for foundryman to do more and better work than would be possible without these modern aids.

Sand-Handling and Mixing. Equipment Speeds Output. Foundry, vol. 52, no. 24, Dec. 15, 1924, pp. 971-977, 17 figs. Continuous system, in use at foundry of Wilson Bros., Pontiac, Mich., involves mechanical equipment for handling sand, molds, iron and castings, resulting in increased production from decreased floor space in auto shop.

Standardization. Standardizing Pattern and Flask Equipment. Can. Foundryman, vol. 15, no. 10, Oct. 1924, pp. 44-45. Progress of work of joint committee. Eight national organizations unite to investigate pattern making and marketing, pattern plates and mounting, as well as flask sizes and other details.

Steel Foundry. Organization and Practice in a Steel Foundry Finishing Department, C. W. Heywood. Am. Foundrymen's Assn.—preprint no. 422, for meeting Oct. 11-16, 1924, 11 pp. Believes gang system produces most satisfactory results from standpoint of both output and costs. Where gang system is not feasible, another successful plan is to employ a pace maker. Layout of equipment has a great deal to do with best routing and these two features are discussed in detail.

Principles in Cast Iron Flask Design, H. Cohen. Iron Age, vol. 113, no. 16, Apr. 17, 1924, pp. 1137-1140, 7 figs. Applictaion to jarring-machine work on gray iron; general rules as to bars; core weights and supports; internal strains.

FOUNDRY PRACTICE. See FOUNDRIES; IRON FOUNDING; MOLDING METHODS.

FRAMING

Calculation. Calculation of Straight-Member Work with Fixed Corners (Die Berechnung der Geradstabwerke mit unverschieblichen Eckpunkten), P. Diem. Beton u. Eisen, vol. 23, nos. 1, 2, and 3, Jan. 5, 20, and Feb. 5, 1924, pp. 8-11, 18-20, and 29-32, 24 figs. Discusses calculation of framework of straight members, distribution of corner moments on several members, and determination of corner moments in members under load.

The Calculation of Skeleton Frameworks (Zur Berechnung räumlicher Rahmenwerke), E. Reisinger. Bauingenieur, vol. 5, nos. 1, 2, and 3, Jan. 15, 31, and Feb. 15, 1924, pp. 5-9, 28-32, and 57-59, 17 figs. Calculation of deformations of skeleton bars by means of an equation; its use for calculation of wedge-shaped skeleton frame.

Reinforced-Concrete, Moments of Inertia. Moments of Inertia in Reinforced-Concrete Frames (Trägheitsmomente bei Eisenbetonrahmen), Schnidtmann. Beton u. Eisen, vol. 23, no. 7, Apr. 5, 1924, pp. 75-77, 1 fig. Calculation of symmetrical straight double-hinged frames with uniformly distributed perpendicular cross-bar load.

Rigid, Elastic Behavior of. Effect of Rigidity of Fixing on Elastic Behavior of Frames (L'Influenza della rigidita degli incastri nel comportamento elastico di un telaio), G. M. Pugno. Ingegneria, vol. 3, no. 11, Nov. 1, 1924, pp. 374-384, 30 figs. Details of a convenient and rapid method for calculating elasticity, with examples.

Statics. Graphic Statics of Compound Framework (Zur graphischen Statik zusammengesetzter Fachwerke), T. Pöschl. Bauingenieur, vol. 5, no. 12, June 30, 1924, pp. 376-378, 5 figs. Discusses graphic determination of stresses in bars of compound; statically determinate framework by double shear method.

FREIGHT HANDLING

Car Loadings, Seasonal Indexes. Movement of the Product of Agriculture, W. L. Crum. Ry. Age, vol. 77, no. 16, Oct. 18, 1924, pp. 703-706, 5 figs. Study shows possible amplification of information on car loadings prepared by car-service division.

Containers, Demountable. Container Units in Motor Truck Freight Service. Ry. Rev., vol. 74, no. 14, Apr. 5, 1924, pp. 656-658, 4 figs. How Detroit United Ry. has developed new equipment to establish auxiliary motor-truck service, consisting of demountable unit container equipment.

L. C. L. Freight. Delivering Less-Than-Carload Freight by Motor Truck, R. D. Sangster. Soc. Automotive Engrs.—Jl., vol. 14, no. 4, Apr. 1924. pp. 415-421. Outline of practical working of St. Louis system, demonstrating regard in which it is held by both shipper and carrier; adaptability of system to store-door delivery; advantages of off-track freight stations; Harlan plan for Manhattan Island.

Departure in Handling Less than Carload Freight, F. F. Ford. Ry. Rev., vol. 74, no. 8, Feb. 23, 1924, pp. 320-321. Description of new method which reduces overtime, loss, and damage, and conserves equipment.

How English Cartage Practice Prevents Terminal Congestion, F. C. Horner. N. Y. Railroad Club—Proc., vol. 34, no. 3, Feb. 1924, pp. 7212-7222 and (discussion) 7222-7225. Description of English system of collection and delivery of l.c.l. freight.

Monorail Overhead Carrying System. Relieving Railway Terminal Freight Congestion, J. L. Miller. Can. Machy., vol. 32, no. 12, Sept. 18, 1924, pp. 34-36, 2 figs. In author's opinion, overhead carrying system of monorail type offers greatest degree of flexibility and economy in handling goods in freight sheds.

Perishable Freight. Transportation of Perishable Freight, G. H. Nelson. West. Soc. Engrs.—Jl., vol. 29, no. 1, Jan. 1924, pp. 23-27. Describes traffic and way it is handled.

Small-Consignment Commodity Distribution. Economical Freight Delivery, Jas. Paterson. New York R. R. Club—Proc., vol. 34, no. 8, Sept. 19, 1924, pp. 7334-7344, 5 figs. Small-consignment commodity distribution in London, Eng., and its environs.

Transhipment. Handling Transhipments at Crewe, L. M. S. Ry. Gaz., vol. 41, no. 2, July 11, 1924, pp. 44-48, 11 figs. About 24,000 packages are unloaded, sorted and reloaded every 18 hr. at Crewe transhipment shed, enabling approximately 85 per cent of traffic to be reloaded direct to destination, and effecting considerable saving in car use. Describes layout and arrangement of transhipment shed.

FREQUENCY

Lack of Unification in Japan. The Japanese Frequency Dilemma, M. Fukuda. Elec. Wld., vol. 83, no. 8, Feb. 23, 1924, pp. 380-382, 2 figs. Interconnection and superpower plans in Japan complicated by mixture of equipment rated at 25, 40, 50, and 60 cycles in different systems.

Resonant. The Determination of Resonant Frequencies and Decay Factors, E. Mallett. Instn. Elec. Engrs.—Jl., vol. 62, no. 330, June 1924, pp. 517-525, 14 figs. Shows how circle can be derived from ordinary resonance curve by simple graphical construction, and how from derived circle and original resonance curve a straight line can be drawn from which resonance frequency and damping are at once determined; constructions developed are explained by their application to telephone-receiver impedances and to electric circuits.

FREQUENCY CHANGERS

Bridge Arrangement. Frequency Changing Device, S. Chiba. Elecn., vol. 93, no. 2427, Nov. 21, 1924, pp. 576-577, 11 figs. Notes on principle of bridge arrangements.

Problems. Frequency Changers, K. Lubowsky. Electrician, vol. 93, nos. 2421 and 2422, Oct. 10, and 17, 1924, pp. 404-405 and 436-437, 4 figs. Oct. 10: Various systems employed; control problems; load distribution. Oct. 17: Methods of control; need for careful examination.

Set. A 35,000 KW Synchronous Frequency Changer Set, M. W. Smith. Elec. Jl., vol. 21, no. 7, July 1924, pp. 343-346, 4 figs. See also Am. Inst. Elec. Engrs.—Jl., vol. 43, no. 8, Aug. 1924, p. 709, 1 fig. Describes set of Brooklyn Edison Co. consisting of 35,000 kw. 11,400 volt, 3-phase, 25-cycle synchronous generator and 47, 500 hp., 3-phase, 60-cycle, 13,800 volt synchronous motor.

Static Transformers as. See TRANSFORMERS, Static.

FRICTION

Sliding Contacts. An Investigation of the Friction between Sliding Surfaces, with Special Reference to the Effects Produced by Electric Currents Passing Across Such Surfaces, H. Monteagle Barlow. Instn. Elec. Engrs.—Jl., vol. 62, no. 326, Feb. 1924, pp. 133-159, 33 figs. Describes experiments designed to elucidate these processes, based on which attempt is made to build up comprehensive theory of their action. Bibliography.

FRICTION GEARING

Fieux System. Fieux System of Friction Gearing and Its Application to Railway Motor Cars as Automatic Gearing [Le conjoncteur-disjoncteur à friction (Systéme Fieux), son application aux véhicules automoteurs comme embrayage automatique], J. Fieux. Société d'Encouragement pour l'Industrie Nationale—Bul., vol. 136, no. 3, Mar. 1924, pp. 279-287, 8 fig. Properties and action of Fieux make-and-break friction gear, and examples of application to railway motor cars.

Slip. Experiments on the Friction of Solid Bodies (Versuche über die Reibung fester Körper), Zeit. für angewandte Mathematik u. Mechanik, vol. 4, no. 1, Feb. 1924, pp. 1-32. Investigation of slip of driving disk in excess of distance corresponding to its actual revolution; deals with changes in surfaces and their influence on friction values, and progress of slip at different speeds, with normal and peripheral forces; deformations of disks as cause of slip; gives coefficients of friction for various combinations of metals, wood and leather.

Uses. Transmission by Means of Friction Wheels (Les transmissions par galets de friction). Génie Civil, vol. 84, no. 23, June 7, 1924, pp. 549-551, 6 figs. Use of friction wheels and disks; transmission efficiency; coefficient of friction, etc.

FUEL ECONOMY

Boiler Plants. See BOILER PLANTS, Fuel Economy.

Bonus System. See BONUS SYSTEMS, Fuel Saving.

Chemical Plants. See CHEMICAL PLANTS, Fuel Economy.

Coal Mines. Low-Grade and Waste Fuels for Steam-Raising, J. B. C. Kershaw. Colliery Eng., vol. 1, no. 10, Dec. 1924, pp. 453-455, 7 figs. Describes plants suitable for utilizing refuse fuels in England and in other countries.

Furnace Operation. Conserving Our Industrial Fuels, G. R. Brandon. Iron Trade Rev., vol. 75, no. 13, Sept. 25, 1924, pp. 799-801. Great economies available to users of furnaces through efficient installation and operation. Some methods whereby considerable saving may be accomplished.

Glass Plants. See GLASS MANUFACTURE, Fuel Economy in.

High Temperature and. Fuel Economy and the Measurement of High Temperatures, R. Hadfield.

Iron & Coal Trades Rev., vol. 109, no. 2946, Aug. 15, 1924, pp. 273-274. Discusses steam boilers, forge furnaces and furnaces for heat treatment of steel, temperature measurement in furnace, flame temperature and furnace efficiency, regenerators and recuperators, heat transmission and heat balance in furnaces and melting furnaces. (Abstract.) Paper read before World Power Conference.

Home Heating. The Fuel Situation of the Home, S. S. Wyer. Engrs. & Eng., vol. 41, no. 12, Dec. 1924, pp. 309-313 and (discussion) 313-317, 3 figs. Author shows that electric house heating is not within realm of practical; therefore future problem must be solved, first, by more rational attitude towards anthracite use; secondly, by appreciation that coke can be used to replace anthracite; thirdly, by wider and more extensive use of manufactured gas.

Metallurgical Works. Works Problems and Methods in Fuel Economy, R. Hadfield. Iron & Coal Trades Rev., vol. 108, no. 2938, June 20, 1924, pp. 1066-1067. Certain problems met with in practice and some methods by which they may be attached; general considerations regarding heat balance, furnace efficiency; importance of high-temperature research, use of pyrometers, and temperature colors. Abstract of paper read before Iron & Steel Sec., Empire Min. & Met. Congress.

National Problems of United States. Fuel as a National Problem, H. O. Loebell. Engrs. & Eng., vol. 41, no. 11, Nov. 1924, pp. 288-290. Analysis of present situation in United States shows that there is no system or standardization or even logic in manner in which various fuel resources are being consumed; need of centralization in fuel production and distribution; future cost of gas; economy in fuel, railways, and mines.

Practical Aspects. Some Practical Aspects of Fuel Economy, C. W. Mitman. Smithsonian Instn. (Wash.) Miscellaneous Collections, vol. 76, no. 1, June 2, 1923, 19 pp., 2 figs. Extent to which average consumer may reasonably expect to profit from available data. Discusses quality of coal, furnace control, and furnace installation, the three important factors in furnace operation.

Railways. Heat Economy and Railway Service, Landsberg. Eng. Progress, vol. 5, no. 9, Sept. 1924, pp. 170-172. Points out that German state railways consume 9 to 12 per cent of total German coal production; economic efficiency of locomotives; influence of load; other fuel consumers.

Personnel in Fuel Economy, U. L. Richards. Railroad Herald, vol. 28, no. 2, Jan. 1924, pp. 31-32. See also Ry. & Locomotive Eng., vol. 37, no. 1, Jan. 1924, pp. 7-12. Education and selection of employees. Extract from prize-winning paper in Int. Ry. Fuel Assn. contest.

See also RAILWAY OPERATION, Fuel Economy.

Rubber Preparation. Fuel Conservation in Connection with the Preparation of Rubber, B. J. Eaton. India-Rubber Jl., vol. 68, no. 11, Sept. 13, 1924, pp. 15-17. Deals with producer's and buyer's point of view; manufacturer's requirements; elimination of fuel in preparation of rubber; substitution of fuels other than wood; preparation of other types of raw rubber.

Steel Works. Works Problems and Methods in Fuel Economy, R. Hadfield. Iron & Coal Trades Rev., vol. 108, no. 2938, June 20, 1924, pp. 1066-1067. Discusses problems in practice and methods to attack them; heat treatment and reheating furnaces, gas-fired furnaces; regeneration and recuperation, melting efficiency, etc. Abstract of paper read before Iron & Steel Sec., Empire Min. & Met. Congress.

Temperature Measurement, Importance of. Fuel Economy and the Measurement of High Temperatures, R. Hadfield. Foundry Trade Jl., vol. 30, no. 419, Aug. 28, 1924, pp. 179-181. Survey of fields where pyrometry has enabled accurate heat balances to be obtained, including steam boilers, forge furnaces, furnaces for heat treatment of steel, and open-hearth furnaces. Temperature measurement in France; flame temperature and furnace efficiency; regenerators and recuperators. Abstract of paper read before First World Power Conference.

Works Problems and Methods. Works Problems and Methods in Fuel Economy, R. Hadfield. Colliery Guardian, vol. 128, nos. 3314 and 3315, July 4 and 11, 1924, pp. 22 and 92-93. Shows how far rapid approximate methods can be made use of in controlling fuel utilization. Abstract of paper read before Empire Min. & Met. Congress.

FUELS

Anthracite Substitutes for Domestic Use. Fuels Available for Domestic Use as Substitutes for Anthracite Coal, R. Kudlich. Engrs. & Eng., vol. 41, no. 4, Apr. 1924, pp. 100-104. Discusses steam sizes of anthracite, Virginia and Arkansas anthracite, bituminous coal, semi-bituminous coal, medium and high voltage bituminous coal, coke, petroleum coke, liquid fuel, and gaseous fuel.

Bagasse. See BAGASSE.

Blast-Furnace Gas. See BLAST-FURNACE GAS.

Briquet and Ovoid, Manufacture. Briquette and Ovoid Fuels. Colliery Engr., vol. 1, no. 3, May 1924, p. 116. Survey of methods employed in manufacturing patent fuels.

Canadian Problems. Report of Institute Fuel Committee. Eng. Jl., vol. 7, no. 11, Nov. 1924, pp. 678-682, 2 figs. Summary of conclusions, introduction, review of preliminary activities, submitted by Fuel Committee of Eng. Inst. Can.

The Fuel Problem, Chas. Camsell. Eng. Jl., vol. 7, no. 4, Apr. 1924, pp. 186-190. Also Combustion, vol. 11, no. 1, July 1924, pp. 46-50. Review of fuel situation in Canada, problems, and progress towards solution; substitutes for anthracite.

Canadian Resources. The Fuel Resources of Canada and Their Utilization for the Production of Power and Other Purposes, B. F. Haanel. Eng. Jl., vol. 7, no. 7, July 1924, pp. 361-382, 15 figs. Fuel resources; production, consumption, imports and exports; preparation of solid fuels for industrial and other uses; value of Canadian solid fuels for steam raising and production of a power and industrial gas; carbonization of peat, oil shales, and lower grade coals and relation of carbonization of coals to production of power.

Carbon Determination in. Determination of Carbon in Organic Substances and Fuels by Oxidation with a Mixture of Sulphuric and Chromic Acids (Dosage du carbone dans les substances organiques et les combustibles par oxydation sulfo-chromique), D. Florentin. Chimie & Industrie, vol. 11, no. 5, May 1924, pp. 875-879. Points out that digestion of organic substances or of fuels with mixtures of chromic and sulphuric acids invariably yields low results unless catalyst is present; most efficient catalyst is mercuric sulphate, but even in presence of this substance a small amount of CO is evolved, although organic compounds in general yield only CO_2.

Carbonization. Carbonization of Fuel (Zur Vergasung der Brennstoffe), Von Hofrat and H. von Jüptner. Feuerungstechnik, vol. 13, nos. 3 and 4, Nov. 1 and 15, 1924, pp. 21-24 and 35-41, 11 figs. Discusses degasification or dry distilla-

FUELS

tion, by means of free oxygen, steam, half-gas or Dowson gas, blast-furnace gas, and metal oxides along, and their reactions.

Chemical Composition. Chemical Bases of Fuel Utilization (Die chemischen Grundlagen der Brennstoffverwertung), W. Franckenstein. Zeit. für Technische Physik, vol. 5, no. 7, 1924, pp. 293-299. Discusses fuel analysis, determination of calorific value, volatiles, tar, etc.; distillation of coal and lignite, production of tar, liquid and gaseous fuel.

Coal. See COAL; PULVERIZED COAL.

Coke. See COKE.

Colloidal. Experimental Preparation of Colloidal Fuel, A. V. Sapoznikow and M. N. Kalinin. Petroleum & Oil-Shale Industry, vol. 5, no. 11-12, Nov.-Dec. 1923, pp. 652-654. (In Russian.)

Combined-Water Content in Solid. Content of Combined Water in Solid Fuels (Over het gebonden watergehalte van vaste brandstoffen), D. J. W. Kreulen. Chemisch Weekblad, vol. 21, no. 15, Apr. 12, 1924, pp. 174-176, 1 fig. Determination of dehydration curves of peat, lignite, and some 20 coals of recent formation; combined water can be detected by hygroscopic nature of dried fuel; those fuels which contain only colloidally held water are not hydroscopic when dried.

Combustion. An Investigation of the Maximum Temperatures and Pressures Attainable in the Combustion of Gaseous and Liquid Fuels, G. A. Goodenough and G. T. Felbeck. Univ. of Ill.—Bull., no. 139, Mar. 1924, 158 pp., 27 figs. Résumé of important laws of gas mixtures; general theory of chemical equilibrium, and derivation of equilibrium equations for various reactions; develops energy equation, and shows method of solving system of equations for maximum temperature; comparisons and applications of theory.

How Much Work Can Be Obtained from a Pound of Fuel?, L. S. Marks. Power, vol. 60, no. 14, Sept. 30, 1924, pp. 536-539, 5 figs. Ranking cycle obsolescent as efficiency basis; new standard needed; proposed method based on step-by-step application of "Second Law"; Rankine comparison misleading in case of regenerative cycles and of steam-mercury plants.

Equivalent Fuel Values. See HEAT, Equivalent Values Produced by Fuels.

Factory Refuse. Generation of Power with Factory Refuse, F. Johnstone-Taylor. Power Plant Eng., vol. 28, no. 6, Mar. 15, 1924, pp. 326-328, 3 figs. Wood wastes and other refuse used for generating steam and producer gas; description of suction gas producer; operating results; gas storage, boiler firing by gas.

French Colonies. French Colonial Fuels (Combustibles et carburants coloniaux), R. Fouque. Génie Civil, vol. 85, nos. 14 and 15, Oct. 4 and 11, 1924, pp. 296-298 and 315-318. Study of fuel resources, both liquid and solid, of the French colonies; findings apply to tropical countries generally; of the French colonies, only Madagascar possesses crude oil deposits of importance; liquid fuels or substitutes must therefore be supplied by vegetation products of various kinds; gives list of plants that furnish oil, and describes engines capable of burning these oils.

Furnace Residue. Investigation of Furnace Residue of Anthracite (Zur Kenntnis und zur Untersuchung der Feuerungsrückstände von Steinkohlen), E. Donath. Berg- u. Hüttenmännisches Jahrbuch, vol. 71, no. 4, 1923, pp. 24-27. Describes modification of method for preparation of residue according to which ferrous oxide and sulphur compounds and, in fact, main part of mineral substances are dissolved away.

Gaseous. Fuel of the Future. What Shall It Be?, I. Ginsberg. Am. Gas Jl., vol. 121, nos. 20, 24, and 28, Oct. 18, Nov. 15, and Dec. 13, 1924, pp. 1081-1082 and 1095-1098; 1173-1174 and 1189-1190; 1261-1262 and 1275-1277. Oct. 18: Value of gas as a fuel and its calorific power. Nov. 15 and Dec. 13: Heat treatment of metals; general details of process.

Theoretical Comparative Study of the Principal Gaseous Fuels from Viewpoints of Lighting and of Power Generation (Etude théorique comparée des principaux combustibles gazeux aux points de vue de l'éclairage et de la force motrice), H. Pariselle. Chimie & Industrie, vol. 11, no. 4, Apr. 1924, pp. 651-656. Calculation of combustion temperatures, and conclusions to be drawn therefrom; evaluation of power developed in engine by gaseous fuel.

See also Liquid; GAS, Fuel.

Heating Value. Calorimetric Determination of Heating Value of Solid Fuels (Die kalorimetrische Bestimmung des Heizwertes fester Brennstoffe), Kraftmaschine, vol. 21, no. 21, Nov. 10, 1924, pp. 226-228. Describes calorimeter used and its application, moisture content, hydrogen content, etc.

Direct Determination of Heating Value of Solid and Liquid Fuels (Détermination directe du Pouvoir calorifique des combustibles solides ou liquides), Ch. de la Condamine. Chaleur & Industrie, vol. 5, no. 46, Feb. 1924, pp. 85-91, 2 figs. Describes method and apparatus used; numerical example. Bibliography.

Heating Values and Composition of Fuels (Heizwerte und Zusammensetzung von Brennstoffen). Zeit. des Bayerischen Revisions-Vereins, vol. 28, nos. 1-2 and 3-4, Jan. 31 and Feb. 29, 1924, pp. 1 and 23-24. Investigation of fuels during 1923 in chemical laboratory of Bayerischer Revisions-Verein, including anthracite, brown coal and lignite, briquets, coke, peat, wood, liquid fuels, etc.

Relative Heating Value of Fuels, R. O. Wynne-Roberts. Can. Engr., vol. 47, no. 27, Dec. 30, 1924, pp. 643-644. Important factors to be considered when comparing value of fuels. Kitchen and furnace tests.

Ignition Temperature, Determination of. New German Instrument Determines Ignition Temperature. Automotive Industries, vol. 50, no. 1, Jan. 3, 1924, p. 6, 1 fig. Details of Krupp electric stove for determining ignition temperature of fuels.

Lignite. See LIGNITE.

Lignite Briquets as. See LIGNITE, Briquetting.

Lignite Char. Tests of Lignite Char as Reduction Fuel in the Smelting of Zinc Ores, B. M. O'Harra. U. S. Bur. Mines—Reports of Investigations, no. 2575, Feb. 1924, 7 pp. Analysis and characterictics of and experiments made with "char," the fuel produced by a simple carbonizing oven devised by Bur. of Mines which is essentially a vertical shaft with means for supplying raw lignite at top and discharging carbonized lignite at lower end. From Zinc Inst. Bul., Jan. 1924.

Lignite and Bituminous Mixtures. Burning Mixtures of Lignite and Bituminous, A. Canfield. Power Plant Eng., vol. 28, no. 9, May 1, 1924, pp. 476-477, 4 figs. Experiments carried out at power plant of State Mill & Elevator, Grand Forks, N. Dak., during past six months to determine most economical ratio of lignite to be burned with Eastern bituminous.

Liquid and Gaseous. Burning Liquid and Gaseous Fuels. Power Plant Eng., vol. 28, no. 11, June 1, 1924, pp. 586-587, 1 fig. Experience with burners, furnace design and air preheaters. (Abstract.) Report of Prime Movers Committee of N. E. L. A.

Locomotive. See LOCOMOTIVES, Fuels.

Oil. See OIL FUEL.

Oil and Coal, U. S. Resources. Fuel Oil and Coal Resources of the U. S., Chas. E. Bowles. Oil & Gas Jl., vol. 23, no. 26-A, Nov. 20, 1924, pp. 21, 136-137 and 140. Comparison of markets and supplies, differentiating industries and uses where competition between them is possible.

Peat. See PEAT.

Producer Gas. See PRODUCER GAS.

Pulpwood Bark. Utilization of Pulpwood Bark for Fuel, J. D. Rue and E. P. Gleason. Paper Trade Jl., vol. 78, no. 16, Apr. 17, 1924, pp. 40-50, 10 figs. Final report of Sub-Committee on Utilization of Bark, Committee on Waste of Technical Assn. Pulp & Paper Industry, dealing with possible methods of utilization, present practice in barking, bark presses, and furnaces for burning bark.

Pulverized Coal. See PULVERIZED COAL.

Recovery from Ash. See COAL, Recovery from Ashes.

Refuse. Power Production from Town's Refuse, D. Wilson. Power Engr., vol. 19, no. 224, Nov. 1924, pp. 417 and 426, 1 fig. Review of present-day achievements.

The Refuse Fuel Question. Eng. & Boiler House Rev., vol. 37, no. 9, Apr. 1924, pp. 331-332, 2 figs. Heating value and general qualities of some of the fuels available in boiler plants.

See also REFUSE DISPOSAL, Destructors.

Relative Value. Relative Value of Fuels, R. O. Wynne-Roberts. Am. Gas Jl., vol. 121, no. 9, Aug. 30, 1924, pp. 791-792 and 806. Discusses heat service, waste incurred in use of all fuels, relative value of gas and other fuels, efficiency of gas of different qualities, etc.

Research. The Work of the Fuel Research Board, C. H. Lander. Inst. Min. Engrs.—Trans., vol. 64, part 5, Feb. 1924, pp. 243-253 and (discussion) 253-261. Also Colliery Guardian, vol. 127, no. 3291, Jan. 25, 1924, pp. 213-214; and Iron & Coal Trades Rev., vol. 108, no. 2916, Jan. 18, 1924, pp. 87-88. Physical and chemical survey of national coal resources; carbonization of coal; H. M. fuel research station; low-temperature and high-temperature carbonization; etc.

Russian, Cost of. Comparative Cost Difference of Solid and Liquid Mineral Fuels (Russian), G. Grigoryan. Oil Bul. of Soviet Industry, vol. 2, no. 12, June 15, 1924, pp. 2-5. Discussion of comparative costs for Russia of use of solid and liquid fuels under assumption that plants are already equipped for use of liquid fuel and vice versa.

Sawmill Waste. Drying of Sawmill Waste in Nordström's Drying Tower (Torkning av sågverksavfall i Nordströms torktorn), E. Spetz. Teknisk Tidskrift, vol. 54, no. 10, Mar. 8, 1924, pp. 17-22 (Kemi), 6 figs. Drying towers with artificial circulation of hot air will increase value of sawmill waste as fuel and effect savings of over 25 per cent in fuel consumption. Figures from detailed investigation.

Sewage Sludge. Sewage Sludge as a Source of Heat. Contract Rec. & Eng. Rev., vol. 38, no. 20, May 15, 1924, pp. 478-479. Experiments carried out in England by burning sludge direct in a furnace and by utilizing gas made by carbonizing it; special furnace is solution.

Smokeless. Maclaurin Process for Making Smokeless Fuel, E. K. Scott. Power Engr., vol. 19, no. 223, Oct. 1924, pp. 389-390, 2 figs. Principles and details of process.

See also COAL, Carbonization.

Solid, Chemical Constitution. Modern Theories on the Chemical Constitution of Solid Fuels (Les théories modernes sur la constitution chimique des combustibles solides), E. Audibert and A. Raineau. Chimie & Industrie, vol. 11, nos. 2 and 3, Feb. and Mar. 1924, pp. 229-247 and 434-448, 1 fig. See also Revue de l'industrie Minérale, no. 78, Mar. 15, 1924, pp. 127-171, 1 fig. Review of works on this subject during recent years: Constituents of higher plants; carbon hydrates; natural state, properties and constitution of lignines; humic acids; conversion from plant to humic acid and from humic acid to humic substances; investigations tend to confirm existing lack of knowledge on subject of chemical constitution of solid fuels.

Solid, Test Code for. Test Code for Solid Fuels. Mech. Eng., vol. 46, no. 9, Sept. 1924, pp. 558-562, 5 figs. Preliminary draft of a code in series of nineteen being formulated by A. S. M. E. Committee on Power Test Codes.

Storage Houses. Design Features of a Large Concrete Fuel House, E. L. Crowe. Eng. & Contracting (Bldgs.), vol. 62, no. 4, Oct. 22, 1924, pp. 929-933, 5 figs. A 750,000-cu. ft. structure for holding sawdust and wood-refuse fuel for 3000-hp. border installation at mill of Crossett Lumber Co., Crossett, Ark.

Technology. Notes on Recent Developments in Fuel Technology, R. Wigginton. Fuel, vol. 3, no. 10, Oct. 1924, pp. 343-345. Utilization of coal in America; steam accumulator; pulverized fuel; cracking of oils; purification of coal gas; atomic energy as source of power; coking power of coal.

FULLERS' EARTH

Properties and Uses. See OIL INDUSTRY, Fullers' Earth in.

Utilization. Marketing of Fullers' Earth, A. B. Parsons. Eng. & Min. Jl.—Press, vol. 118, no. 20, Nov. 15, 1924, pp. 771-773. A clay invaluable in bleaching of mineral and edible oils. Analyses; production; methods of utilization; characteristics of an earth used for breaching edible oils.

FUMES

Protection Against. See DUST, Protection Against.

FURFURAL

Corncobs, from. Furfural from Corncobs, G. H. Mains and F. B. LaForge. Indus. & Eng. Chem., vol. 16, no. 4, Apr. 1924, pp. 356-359, 1 fig. Economic aspect of furfural production.

FURNACES

Annealing. See FURNACES, ANNEALING.

Crucible High-Temperature Solid-Fuel. A High Temperature Fuel Furnace for Crucibles, Wm. Mason. Chem. Eng. & Min. Rev., vol. 17, no. 194, Nov. 5, 1924, pp. 55-57, 7 figs. Details of solid-fuel high-temperature furnace for melting alloys.

Cupolas. See CUPOLAS.

Enameling. See FURNACES, ENAMELING.

Forging. See FURNACES, FORGING.

Gas. See FURNACES, GAS.

Heat Transfer Caused by Radiation of Gases. Heat Transfer in Furnaces as Caused by Radiation of Gases. Fuels & Furnaces, vol. 2, no. 7, July 1924, pp. 675-678, 2 figs. Equations presented which more or less upset modern theory of heat transfer and re-establish truth of older theories.

Heat-Treating. See FURNACES, HEAT-TREATING.

Heating. See FURNACES, HEATING.

Industrial. See FURNACES, INDUSTRIAL.

Metallurgical. See FURNACES, METALLURGICAL.

Open-Hearth. See OPEN-HEARTH FURNACES.

Recuperator. The Chapman-Stein Recuperator, W. C. Buell, Jr. Iron & Steel Engr., vol. 1, no. 6, June 1924, pp. 327-332 and (discussion) 333-339, 12 figs. Describes number of installations in use of this type which is said to have best succeeded in eliminating two main troubles, leakage and breakage.

Roasting. See FURNACES, ROASTING.

Temperature Control. See TEMPERATURE CONTROL.

FURNACES, ANNEALING

Electric. See ELECTRIC FURNACES, Annealing.

Fisher. New Annealing Equipment for Strip Steel. Iron Age, vol. 114, no. 15, Oct. 9, 1924, pp. 907-909, 5 figs. Notes on new annealing equipment of Worcester Pressed Steel Co., Worcester, Mass. Electric mule on rack for charging; ample combustion space in furnaces; arrangement for cooling boxes and quick charging of furnaces.

Steel Wire. Furnaces for Wire Annealing. Fuels & Furnaces, vol. 2, no. 3, Mar. 1924, pp. 245-246, 4 figs. Coal-fired pot furnaces for black and bright annealing and recuperative furnaces of German design.

FURNACES, ENAMELING

Electric. Continuous Conveyor Type Electric Enameling Furnace. West. Machy. Wld., vol. 15, no. 10, Oct. 1924, pp. 351-352, 1 fig. Describes furnace developed by C. C. Armstrong of Armstrong Mfg. Co., Huntington, W. Va., for enameling comparatively flat pieces whereby opening and closing of charging doors is eliminated through medium of a conveyor which carries work through furnace from charging end and discharges it at opposite end. Heating chamber is 9 ft. 8 in. long, 30 in. tall, and 32 in. wide.

Electricity vs. Oil Heating. Electricity Versus Oil for Heating Iron Enameling Furnaces, H. A. Mulvaney. Jl. of Elec., vol. 52, no. 12, June 15, 1924, pp. 487-490, 6 figs. Description of application of electricity to manufacturing with resultant improvement in product, reduced spoilage, and decreased cost of production.

Gas-Fired, Heat Balance of. The Heat Balance of a Gas Fired Enameling Furnace, L. E. Biemiller. Gas Age-Rec., vol. 53, no. 18, May 3, 1924, pp. 621-622 and 626, 2 figs. Thermal analysis of operating results of furnace which has been in operation in Baltimore, Md., for several years.

FURNACES, FORGING

Heat Economy. Heat Economy of Coal Fired Rolling and Forging Furnaces. Fuels & Furnaces, vol. 2, no. 2, Feb. 1924, pp. 119-121. Heat distribution, economy and coal consumption of various types of furnaces with brick recuperators, cast-iron recuperators, and waste-heat boilers.

FURNACES, GAS

Specific Heat of Combustion Products. Specific Heats of Products of Combustion from Gas Furnaces, L. E. Biemiller. Gas Age-Rec., vol. 53, no. 14, Apr. 5, 1924, pp. 423-425, 1 fig. Determination of specific-heat values; review of previous work on the subject, and calculations.

FURNACES, HEAT-TREATING

American Types. The Heat Treatment of Metals (Die Wärmebehandlung der Metalle), Geo. Schlesinger. Werkstattstechnik, vol. 18, no. 23, Dec. 1, 1924. Account of exhibits relating to heat treatment of metals at Machine Tool Exhibition in New Haven and Boston; tendencies in design of furnaces.

Continuous. Continuous Furnaces Prove Advantageous In Heat Treating Automobile Parts, E. C. Cook. Fuels & Furnaces, vol. 2, no. 4, Apr. 1924, pp. 341-346, 8 figs. Notes on furnaces used for annealing, hardening, quenching and tempering at plant of Chevrolet Motor Ohio Co., at Toledo, Ohio.

Continuous Heat-treating Furnaces, H. M. Groff. Machy. (N. Y.), vol. 31, no. 1, Sept. 1924, pp. 10-12, 3 figs. Describes small furnace of bench type for hardening and tempering round wire or flat stock of the smaller sizes, and a furnace for handling individual parts. Both may be gas or electrically heated.

Heat Treating at the Chevrolet Plant. Iron Age, vol. 114, no. 3, July 17, 1924, pp. 129-131, 2 figs. Describes conveyor-type continuous heat-treating furnace of new design recently made in axle and gear plant of Chevrolet Motor Co., Detroit, and its operation. Is a combination continuous hardening and drawing furnace of a double-deck type and a unique feature is that drawing furnace is located above hardening furnace and is fired by waste heat from latter.

Heat-Treating Furnaces of Continuous Type, G. L. Lacher. Iron Age, vol. 113, no. 15, Apr. 10, 1924, pp. 1067-1072, 10 figs. Quality treating in quantity; unique conveyor systems at new steel-treating plant of Hupp Co.; Brinell testing of every axle.

Electric. Electric Furnaces, With Special Reference to the Heat Treatment of Steel, L. W. Wild. Eng. Production, vol. 7, no. 136, Jan. 1924, pp. 20-23, 11 figs. Discusses hardening, normalizing, annealing, tempering, and carburizing, and suitable furnaces.

See also ELECTRIC FURNACES, Heat-Treating.

Gas- vs. Oil-Fired Hardening. Gas vs. Oil Firing for Hardening Plants (Gas- oder Oelfeuerung für Härteanlagen), Fr. Messinger. Wärme, vol. 11, no. 2, Jan. 11, 1924, pp. 15-16, 5 figs. Reconstruction of salt-bath hardening furnace by changing from oil to gas firing; hardening and maintenance of temperature; reduction of size of annealing chamber underneath crucible with gas firing; arrangement of burner; positive regulation of gas-air mixture; results with regard to time required for starting fire, hourly rate of fuel consumption, and quantity of heat consumed; efficiency.

Recuperative. Heat-Treating Furnaces Using Recuperation, P. J. Nutting. Iron Age, vol. 113, no. 16, Apr. 17, 1924, pp. 1156-1157, 2 figs. Effect of preheating air, using coal, oil, or other fuels; applications to annealing and carburizing.

FURNACES, HEATING

[See also FURNACES, REVERBERATORY.]

Continuous Pair. Pair Heating, Wm. C. Buell, Jr. Blast Furnace & Steel Plant, vol. 12, nos. 2, 3, and 4, Feb., Mar., and Apr. 1924, pp. 122-123, 159-160, and 180-182, 3 figs. Résumé of conditions surrounding present practice in heating sheet bars; describes heating furnace of new design and employing two-stage combustion; analysis of heating costs.

Oil-Burning. Furnace Installation for Heating Nickel, Geo. Ellerton, Jr. Iron Age, vol. 114, no. 25, Dec. 18, 1924, pp. 1595-1597, 4 figs. Double-chamber oil-fired units for heating slabs for rolling and for annealing, installed in plant of Am. Nickel Corpn., Clearfield, Pa.; automatic control provided.

Oil- and Gas-Heated. Recuperation for Oil and Gas Heated Furnaces, A. E. Walden. Gas Age-Rec., vol. 53, no. 4, Jan. 26, 1924, pp. 97-98 and 122, 3 figs. Design of industrial heating furnaces for increased economy in operation.

Pulverized-Coal Firing. See PULVERIZED COAL, Forging and Rolling-Mill Furnaces; Heating Furnaces.

Rail-Heating. Rails Heated for Rerolling in Stoker Fired Furnaces, Elmer C. Cook. Fuels & Furnaces, vol. 2, no. 1, Jan. 1924, pp. 27-29, 1 fig. Continuous furnaces at Sweet's Steel Co. used in recovery of old rails.

Regenerative. Atomizing Agents for Fuel Oil in Regenerative Furnaces, G. H. Heine. Fuels & Furnaces, vol. 2, no. 7, July 1924, pp. 650-652, 1 fig. Gives results of series of experiments made to determine proper oil atomizing agent for regenerative reheating furnaces of Stevens type.

New Furnaces Serve Forge Press. Iron Trade Rev., vol. 75, no. 25, Dec. 18, 1924, pp. 1648-1650, 3 figs. Unit completed by A. Finkly & Sons Co., Chicago, forging manufacturer, is equipped with five oil-fired, regenerative-type heating furnaces and 1000-ton steam-hydraulic press; finishing department is included.

The Investigation of a Regenerative Ingot-Heating Furnace (Die Untersuchung eines Regenerativ-Stossofens), G. Neumann. Stahl u. Eisen, vol. 44, no. 50, Dec. 11, 1924, pp. 1611-1619, 7 figs. Investigation of furnace with blast-furnace-gas heating and cold charge; influence of ingot-heating curve; defects shown by investigation; influence of radiation of surrounding wall surfaces on temperature measurement with ordinary pyrometers.

Reheating. Operation Costs of Reheating Furnaces Reduced, H. L. Read. Iron Age, vol. 113, no. 26, June 26, 1924, pp. 1864-1865, 2 figs. Installation of burners for coke-oven gas in which air proportion is maintained automatically.

Sheet and Pair. Modern Sheet and Pair Furnaces Described, A. W. Peters. Fuels & Furnaces, vol. 2, no. 3, Mar. 1924, pp. 227-230, 2 figs. Well-insulated one-valve control furnaces effect saving of 43 per cent in gas consumption over old furnaces and secure uniform and controllable furnace atmosphere.

FURNACES, HOT-AIR

Anthracite or Bituminous Coal with. Performance of a Warm-Air Furnace with Anthracite and Bituminous Coal, A. P. Kratz. Am. Soc. Heating & Vent. Engrs.—Jl., vol. 30, no. 5, May 1924, pp. 383-389, 5 figs. Account of tests to compare performance of same furnace operating with anthracite and bituminous coal, and to determine effect of use of slotted firepot on operation with bituminous coal.

Gas-Fired. Gas as Fuel for Warm-Air Furnaces, Thos. Newton. Sheet Metal Worker, vol. 15, no. 21, Nov. 7, 1924, pp. 783 and 810, 2 figs. Brief explanation of what is being done in England in way of gas heating.

Making Progress With the Hot Air Furnace. Gas Age-Rec., vol. 53, no. 15, Apr. 12, 1924, pp. 473-474, 5 figs. Particulars of furnace developed by Rochester Gas & Elec. Corpn., entirely automatic, being equipped with a humidostat as well as a thermostat; heat loss to chimney is low, as gases pass off at 170 deg. fahr. as against 300 to 500 deg. fahr. in coal-fired furnaces.

FURNACES, INDUSTRIAL

Ceramic, Temperature Measurement. Temperature Measurement in the Ceramic Industry (Temperaturmessungen in der Keramik), F. Linke. Tonindustrie-Zeitung, vol. 48, no. 84, Oct. 18, 1924, pp. 941-944, 16 figs. Deals with Seger cones, thermoelectric pyrometers, ardometers, Holborn-Kurlbaum pyrometers, etc.

Coal-Dust Firing. See COAL DUST, Firing with.

Combustion Devices. Combustion Devices for Gaseous Fuels, W. Trinks. Fuels & Furnaces, vol. 2, nos. 10, 11, and 12, Oct., Nov., and Dec. 1924, pp. 1035-1038, 1157-1160, and 1249-1252, 31 figs. Classification and description of types mixing gas and air inside furnace. Burners which induce air from atmosphere with varying degrees of premixing. Burners which work with complete mixing of gas and air before mixture enters furnace proper.

Electricity, Use in. Furnaces and Heat Sources, E. F. Collins. Fuels & Furnaces, vol. 2, no. 5, May 1924 pp. 479-483. Reasons for wider and more general adoption of electric heat in past few years. Some fundamental considerations which determine when electric heat should be used.

Gas-Fired. Gas-Furnace Installations, Hems. Gas Jl., vol. 166, no. 3182, May 7, 1924, pp. 400-403, 1 fig. Different types of furnaces and industrial apparatus which manufacturers of a city demand, including oven and muffle furnaces, furnaces for melting, tube manufacture, sugar boiling, cyanide hardening, etc.

Modern Industrial Gas Furnaces (Ueber moderne Industriegasfeuerungen und deren Einführung), W. Zedler. Gas- u. Wasserfach, vol. 67, no. 40, Oct. 4, 1924, pp. 596-598. Advantages of gas firing and its applications; Pharos system of gas firing, and possibility of precision firing.

Heat Loss from Walls. See HEAT TRANSMISSION, Problems.

Insulation, High-Temperature. High Temperature Insulation. Iron Trade Rev., vol. 76, no. 2, Jan. 8, 1925, pp. 151-153, 2 figs. Statement of fundamentals in problem of reducing heat losses from industrial furnaces; includes table showing effect of insulating various thicknesses of walls at different temperatures; determining rate of conduction. Abstracted from lecture for educational purposes by Celite Products Co., Chicago.

Recuperation. Recuperation—Design Requirements, E. R. Posnack. Combustion, vol. 10, no. 6, June 1924, pp. 439-440. Features of design which should be incorporated to eliminate objections usually raised to use of recuperators.

Recuperation—Its Advantage, E. R. Posnack. Combustion, vol. 10, no. 5, May 1924, pp. 362-363. Advantages of recuperation in industrial furnaces.

Tunnel. Use of Tunnel Furnaces in the Fireproof Industry (Die Verwendung von Tunnelöfen in der feuerfesten Industrie), W. Pohl. Tonindustrie-Zeitung, vol. 48, nos. 85 and 86, Oct. 22 and 25, 1924, pp. 958-960 and 971-973, 2 figs. Design, construction, and operation of tunnel furnaces for burning brick and similar goods.

Waste-Heat Recovery. See WASTE HEAT, Industrial Furnaces.

FURNACES, METALLURGICAL

Aluminum-Melting. Aluminum and Aluminum-Alloy Melting Furnaces, R. J. Anderson. Am. Foundrymen's Assn.—Preprint for meeting June 5-9, 1924, 44 pp., 14 figs. Reviews work undertaken by U. S. Bur. Mines to decrease metal and fuel losses in melting aluminum and its light alloys. All of the types of furnaces used in United States for rolling-mill practice, foundry practice, for die casting and permanent mold practice, and for smelting and refining are mentioned. Detailed information and descriptions of pit, stationary and tilting crucible, stationary and tilting iron pot, open flame, reverberatory, and

electric furnaces. Factors governing selection and operation of furnaces. Information regarding melting temperatures. Selected bibliography in which many articles pertaining to aluminum alloy melting furnaces are listed.

Melting Aluminum for Rolling into Sheet, J. A. Lange. Am. Foundrymen's Assn.—Preprint for meeting June 5-9, 1924, 11 pp., 1 fig. Tests were conducted on melting pots, and tilting reverberatory, and two types of combination revolving and tilting reverberatory furnaces, to determine most suitable type of furnace for melting aluminum for sheet rolling. One giving best results was a combination revolving and tilting reverberatory units having capacity of 1000 lb. of aluminum. Describes melting practice employed with this furnace, and gives comparative data for all four units.

Economic Heating of. Economy of Heat in the Design and Operation of Metallurgical Furnaces (Erzielung hoher Wirtschaftlichkeit von Feuerungen), K. Huffelmann. Stahl u. Eisen, vol. 44, no. 47, Nov. 20, 1924, pp. 1488-1491. Discusses main conditions for economical heating of furnaces.

Electric. See ELECTRIC FURNACES, Metallurgical.

Fuel Economy in. See FUEL ECONOMY, Metallurgical Works.

High-Temperature. Tungsten Tube Furnace for Very High Temperatures (Wolframrohrofen für sehr hohe Temperaturen), W. Fehse. Zeit für technische Physik, vol. 5, no. 10, 1924, pp. 473-475, 3 figs. Design, construction and operation of an electric tube furnace for temperatures up to 3300 deg.

Oil-Fired Melting. Use Oil in Malleable Furnace, B. R. Mayne and C. Joseph. Foundry, vol. 52, no. 12, June 15, 1924, pp. 472-475, 5 figs. New method installed when costs become prohibitive; use same construction as was employed in coal-fired furnace; oil consumption considered low.

Operation. The Time Factor in Metallurgy. Chem. Age (Lond.), vol. 11, no. 286, Dec. 6, 1924, pp. 41-42. Comments on some recently published figures of average times for "fettling" and "charging" steel furnaces, giving figures applying to a particular works.

Producer-Gas-Fired. European Producer Practice, C. H. S. Tupholme. Blast Furnace & Steel Plant, vol. 12, no. 9, Sept. 1924, pp. 401-406, 11 figs. Why producer-gas-fired furnaces are popular in Europe. Describes some European furnaces and gives details of producer-gas plants employed for supplying furnaces.

Pulverized-Coal-Fired. Operation Tests of Pulverized-Coal-Fired Ingot Heating Furnaces (Betriebsuntersuchungen an kohlenstaubbeheizten Blockwärmöfen), A. Weyel. Stahl u. Eisen, vol. 44, no. 33, Aug. 14, 1924, pp. 977-979, 1 fig. Details of plant, results of tests, determination of temperature, draft and exhaust gas, efficiency and fuel consumption.

Waste-Gas Utilization. The Utilization of Exhaust Gas in Metallurgical Furnaces (Ueber Abgasausnutzung bei metallurgischen Oefen), O. Brandt. Giesserei-Zeitung, vol. 21, no. 3, Feb. 1, 1924, pp. 46-50, 5 figs. The use of exhaust gases for the production of hot air, hot water and steam through air heaters, water preheaters and waste boilers.

Zinc. Rôle of Carbonic Anhydride in the Gases of a Zinc Furnace (Du rôle de l'anhydride carbonique dans les gaz des fours à zinc), P. Pierron. Annales de l'Energie, vol. 4, no. 3, May-June 1924, pp. 86-93. Discusses equilibrium zinc oxide, carbon and gases derived from them, and carbonic anhydride hitherto neglected.

FURNACES, REVERBERATORY

Iron and Steel. Reverberatory Furnaces for Heating Iron and Steel, W. Mason. Metal Industry (Lond.), vol. 24, no. 8, Feb. 22, 1924, pp. 177-178, 4 figs. Chief practical details of design, control, and repair of ordinary reverberatory furnace, and principal faults in operation.

FURNACES, ROASTING

Types. Mechanical Roasting Furnaces (Ueber mechanische Röstöfen), B. Schapira. Feuerungstechnik, vol. 13, no. 6, Dec. 15, 1924, pp. 57-61, 8 figs. Design and operation of Humboldt, Herkules, Wagner, Lurgi, and other furnaces for roasting fine pyrites.

Zinc. A New Roasting Furnace for Zinc Flotation Concentrate, Chas. H. Fulton and J. Burns Read. Am. Inst. Min. & Met. Engrs.—Trans., no. 1362-D, Oct. 1924, 22 pp., 7 figs. Experiments carried on at Case School of Applied Science, together with their results; their success led to design of larger furnace herein described.

FURNITURE

Metal. See METAL FURNITURE.

Steel, Manufacture of. Manufacturing Welded Steel Bedroom Furniture. Acetylene Jl., vol. 25, no. 9, Mar. 1924, pp. 429-432, 6 figs. Manufacture of bedroom furniture at plant of Simmons Co., Kenosha, Wis.; importance of oxy-acetylene process for welding and brazing.

FURS

Identification. Identification of Furs, Microscopic Study of Animal Coats (L'identification des fourrures, étude microscopique des poils), C. Genot. Chimie & Industrie, vol. 12, no. 1, July 1924, pp. 31-48, 34 figs. Discusses means for distinguishing furs from imitations, microscopic examination of coat of principal fur animals.

FUSAIN. See COAL, Fusain, Analyses of.

FUSES

Electric. See ELECTRIC FUSES.

G

GAGES

[See also MEASURING INSTRUMENTS; Length; Precision.]

Angle. See Sine-Bar.

Checking System. Systematic Gage-Checking as a Requisite of Precise Measurement, Jos. Lannen. Soc. Automotive Engrs.—Jl., vol. 14, no. 4, Apr. 1924, pp. 407-408. Methods employed in creating and maintaining gage-checking system, and statement in reference to equipment used and good results attained.

Construction. Application of Interference of Light in the Construction of Gages (Die Anwendung der Interferenz des Lichtes im Lehrenbau), G. Berndt. Deutsche Optische Wochenschrift, vol. 10, nos. 22 and 23, June 1 and 8, 1924, pp. 265-269, and 282-285, 12 figs. Discusses use of light waves as constant length measure and application of its property of interference for testing accuracy of gages; particulars of Kösters interferometer.

End Bars and Slip. End Measuring-bars and Slip Gauges, A. J. C. Brookes. Machy. (Lond.),

vol. 25, no. 634, Nov. 20, 1924, pp. 244-249, 3 figs. How to check them; recommendations.

Hydrostatic. How to Compensate for Temperature Effects on Hydrostatic Gages, J. P. Nikonow. Automotive Industries, vol. 50, no. 18, May 1, 1924, pp. 964-966, 3 figs. Fluctuations in atmospheric temperature change volume of entrapped air and thus vary readings; practical method of balancing this factor is worked out.

Inspection. See MEASURING INSTRUMENTS, Precision.

Micro. See MACHINERY, Manufacture, Size Control in.

Micrometers. See MICROMETERS.

Optical. Hilger Optical Gauges. Engineering, 137, no. 3027, Jan. 4, 1924, p. 10, 3 figs. Designed during war for testing cylindrical tubes of eyepieces of telescopes which are made in standard dimensions.

Ordnance-Dept. Problems. Gage Problems of the Ordnance Department, C. C. Williams. Am. Mach., vol. 60, no. 22, May 29, 1924, pp. 791-793, 1 fig. Safeguarding gages on hand; studying allowances and tolerances; multiplicity of gages needed.

Precision Measurement with. Fine Measurement, J. E. Sears. Machy. (Lond.), vol. 24, nos. 607, 609, and 610, May 15, 29, and June 5, 1924, pp. 209-212, 266-271, and 299-303, 22 figs. Deals with precision measurement in its relation to mechanical work; methods by which control of standard gages is effected in laboratory; recent development in methods of precision measurement.

Pressure. A Study of Pfund's Pressure Gage, R. T. Cox. Optical Soc. Am.—Jl., vol. 9, no. 5, Nov. 1924, pp. 569-582, 4 figs. Details of experiments made with Pfund's combination of McLeod and Pirani pressure gages with a number of gases.

Modern Recording Pressure Gauges. Eng. Progress, vol. 5, no. 2, Feb. 1924, pp. 26-27, 4 figs. Design of recording instruments which permit control of constancy of pressure by means of graph produced by apparatus during certain interval of time.

The Theory of A Bourdon Tube Pressure Gauge and An Improvement in Its Mechanism, C. Sunatani. Tôhoku Imperial Univ.—Technology Reports, vol. 4, no. 2, 1924, pp. 19-60, 20 figs. Considers that displacement of free end of Bourdon tube should be proportional to pressure in tube and be very nearly a straight line motion, and proves this mathematically and experimentally; offers simple formula for determination of direction of displacement; strength of a Bourdon tube.

Sine-Bar. A Sine-bar Angle Gauge for Commutator Work, Wm. Crosier. Machy. (Lond.), vol. 23, no. 598, Mar. 13, 1924, pp. 767-768, 5 figs. Sine-bar angle gage designed by author for motor commutators.

The Sine Bar as a Universal Planing Gage, R. H. Rausch. Mech. Eng., vol. 46, no. 6, June 1924, pp. 345-348, 15 figs. Details of accurate system of gaging for use where large pieces are machined at comparatively long intervals; use of sine bar as templet for setting planer head and tools; formulas.

Special. Special Gages (Sonderlehren), E. Schuchardt. Maschinenbau, vol. 3, no. 9, Feb. 14, 1924, pp. 240-244, 32 figs. Points out that in addition to standard gages for standard parts as accepted by German Industrial Standards Committee, there are special gages for special parts; author seeks to develop standard guides for special gages adhering strictly to gage system.

Steels for. Progress of Gage Steel Investigation. Am. Mach., vol. 61, no. 16, Oct. 16, 1924, pp. 607-608. Abstract of progress report on service-wear and lapping-wear tests for gage steels, conducted by Gage Steel Committee of Bur. of Standards.

Research Reveals Properties of Steels Used for Gages. Automotive Industries, vol. 50, no. 14, Apr. 3, 1924, pp. 759-760. Investigations carried on at Bur. of Standards throw light on wear characteristics of different steels, hardened and unhardened; relative changes in size on hardening in oil and water; factors which affect time changes in gages.

Types. Standard Gages for Inside and Outside Diameters (Günstigste Lage der Stützpunkte bei Zeigerlehren für Innen- und Aussendurchmesser-Messungen), M. Bartholdy. Maschinenbau, vol. 3, no. 27, Nov. 13, 1924, pp. 1023-1025, 9 figs. Notes on various types of machine-shop gages.

GALVANIZING

Electrogalvanizing. The Electro-Galvanising of Sheets, S. Cowper-Coles. Metal Industry (Lond.), vol. 25, no. 17, Oct. 24, 1924, pp. 393-394, 5 figs. Points out why electrogalvanized sheets do not compete seriously with hot galvanized sheets; accounts of certain processes of electrogalvanizing sheets, with desiderata for success.

Fluxing. A Study of Fluxing in Galvanising, H. Bablik. Metal Industry (Lond.), vol. 24, no. 23, June 6, 1924, pp. 541-543. Author describes tests carried out to determine mechanism of salammoniac as a fluxing agent, from which he draws conclusions to guide in efficient control of a galvanizing bath.

Hot, Weight of Coating in. Factors Influencing Weight of Galvanised Coatings, H. Bablik. Metal Industry (Lond.), vol. 25, no. 5, Aug. 1, 1924, pp. 97-99. Gives results of some tests carried out to determine influence of various factors, such as bath temperature, time of immersion, sheet thickness, bath composition and class of material galvanized, on weight of zinc coating obtained in hot galvanizing.

Kettles. Varying Behavior of Kettles for Galvanizing (Ueber das verschiedentliche Verhalten der Verzinnungskessel), B. Haas. Zeit. für die Gesamte Giessereipraxis, vol. 45, no. 22, May 31, 1924, pp. 61-62 (Metall). Discusses attack of kettles by tin bath and fire, effect of tin oxide, etc.

Processes. Galvanizing Process (Das "Neuverzinken"), H. Bablik. Stahl u. Eisen, vol. 44, no. 9, Feb. 28, 1924, pp. 223-225, 1 fig. Process which originated in Czechoslovakia and is now extensively employed in Austria; iron is dipped in liquid zinc, and resulting coatings consist of several layers of zinc of different composition; advantages; cost figures.

The Story of Galvanizing Products, F. R. Otte. Sheet Metal Worker, vol. 15, no. 4, Mar. 14, 1924, pp. 109-113, 3 figs. Equipment, materials and processes employed in coating sheet metal ware, as well as other metal products.

Sheet Iron. Quantity of Zinc Absorbed in Hot Zincing (Die Höhe der Zinkaufnahme beim Feuerverzinken), H. Bablik. Stahl u. Eisen, vol. 44, no. 44, Oct. 30, 1924, pp. 1370-1371. Discusses tests to determine effect of time of dipping, temperature of zinc bath, thickness of sheet iron, chemical composition of zinc bath, and kind of iron to be coated on zinc absorption.

Sherardizing. See SHERARDIZING.

Testing Galvanized Iron. Methods of Testing Galvanized Iron, S. Cowper-Coles. Engineering, vol. 118, no. 3077, Dec. 19, 1924, p. 825, 1 fig. Brief discussion of test methods and apparatus.

Wire. Galvanizing (Étude sur la Galvanisation), A. Knepper. Usine, vol. 33, no. 24, June 14, 1924, pp. 19-23, 2 figs. Discusses thickness of zinc coat for hot galvanizing and exposure to

weather; hot galvanizing and interior use; electrolytic galvanizing and exposure to weather; and electrolytic galvanizing for interior use. Develops formulas for calculation.

Improved Process for Galvanizing Wire, J. L. Schueler. Min. & Metallurgy, vol. 5, no. 216, Dec. 1924, pp. 580-581. Describes process invented by J. L. Herman, consisting essentially in heat treating coating immediately after leaving spelter bath and without wiping.

Zinc-Coating Testing Method. The Preece Test for Zinc Coated Materials, W. M. Peirce. Iron Age, vol. 114, no. 4, July 24, 1924, pp. 199-201, 2 figs. Recent investigation shows its unreliability as to weight of zinc. Stripping and weighing test held to be most reliable index of quality.

GALVANOMETERS

Ballistic. On Methods of Varying the Sensitiveness of Ballistic Galvanometers, M. Masius. Physical Rev., vol. 23, no. 5, May 1924, pp. 649-654. Methods of changing sensitivity of ballistic galvanometers in a definite ratio by adding series resistance.

Einthoven. The Einthoven String Galvanometer, A Theoretical and Experimental Study, H. B. Williams. Optical Soc. of America—Jl., vol. 9, no. 2, Aug. 1924, pp. 129-174, 6 figs. Discusses mathematical theory, including steady continuous current, equilibrium, equations of motion, partial vibrations of string, etc.

Sensitivity Regulator for Vibration. A Sensitivity Regulator for Zero Instruments (Vibration Galvanometers) (Ein Empfindlichkeitsregler für Nullinstrumente), H. Schering and G. Reichardt. Archiv für Elektrotechnik, vol. 12, no. 6-12, Feb. 29, 1924, pp. 493-497, 2 figs. Describes new method and instrument for measurement of a.c. bridge.

Zeiss. A New Galvanometer (Ein neues Galvanometer), W. Villiger. Praktische Maschinen-Konstrukteur, vol. 57, no. 42, Nov. 4, 1924, pp. 571-572, 6 figs. Design and construction of a galvanometer entirely insensible to concussion and giving extremely accurate measurements.

GARAGES

CO Poisoning in. See CARBON MONOXIDE, Poisoning.

Construction. New Large-Scale Garage (Eine neue Massengarage), H. Luckhardt. Motorwagen, vol. 27, no. 23, Aug. 20, 1924, pp. 411-413, 6 figs. Details of patented arrangement in which stalls are placed at angle of 45 deg. instead of 90 deg., giving greater accommodation.

Problem of Garage Construction (Das Problem des Kraftwagenhauses), F. Pistor. Wirtschaftsmotor, vol. 6, no. 7-8, Aug. 25, 1924, pp. 1-6, 6 figs. Details of Pistor system of construction in which garage is a multiple-story roundhouse with drive-in-car stall and drive-out in a continuous curve; no elevators.

Germany. Large-Scale Garage Buildings (Das Gross-Garagenhaus). Automobil-Rundschau, vol. 23, no. 7, July 1, 1924, pp. 91-93, 3 figs. Combination of garage, workshops, and hotel, with capacity of over 1000 automobiles, using individual driveway for each floor as more expeditious than elevators.

GARBAGE DISPOSAL

England. Up-To-Date Refuse Collection. Motor Transport (Lond.), vol. 39, no. 1010, July 7, 1924, pp. 37-39, 5 figs. Recent experiences illustrating time, money, and labor saving possibilities of modern motor-transport equipment.

Indianapolis, Ind. Indianapolis Developments in Garbage Reduction, E. W. McCullough. Mun. & County Eng., vol. 66, no. 3, Mar. 1924, pp. 125-128. Also Eng. & Contracting (Water Works), vol. 62, no. 2, Aug. 13, 1924, pp. 357-359. Garbage dewatered in trailers used for collection; description of new garbage reduction plant; new tankage excellent for feeding.

Methods. New Process of Garbage Disposal at Lebanon, Pa., C. R. Fox and Wm. S. Davis. Eng. News-Rec., vol. 92, no. 20, May 15, 1924, p. 857. After being ground in bone mill, material will be sent two miles through sewer to Imhoff tanks.

Notes on Garbage Disposal Methods in Pacific Coast Cities. Eng. News-Rec., vol. 93, no. 15, Oct. 9, 1924, pp. 591-592. Résumé of methods used in San Francisco, Sacramento, Los Angeles, Spokane, Portland, and Seattle. Some sell garbage, others pay for disposal; fills, destructors and hog farms all in use.

Refuse and Garbage Disposal (Beitrag zur Kehricht- und Müllbeseitigung), A. Reich. Städtereinigung, vol. 16, nos. 5, 6, 13, and 14, Mar. 1, 15, July 1, and 15, 1924, pp. 34-38, 45-46, 104-107, and 113-114, 12 figs. Discussion of processes and plants. Describes incinerating plant in Altona, built according to Herbetz system; Uhde system for irregular refuse of considerable water content; and Dörr system. Types of furnaces.

The Disposal of Municipal Refuse, S. A. Greeley. Eng. & Contracting (Water Works), vol. 62, no. 4, Oct. 8, 1924, pp. 813-816. Reviews recent practice in dealing with garbage and rubbish, including how refuse is classified, garbage reduction, Cobwell process, hog feeding, disposal by incineration, Beccari process, and comparison of methods.

Statistics. Garbage Collection Statistics. Pub. Wks., vol. 55, no. 12, Dec. 1924, pp. 380-383. Compiled from information furnished by officials of 200 cities.

GARNET

Mining and Concentrating. Mining, Concentrating, and Marketing Garnet, F. E. Wormser. Eng. & Min. Jl.-Press, vol. 118, no. 14, Oct. 4, 1924, pp. 525-531, 14 figs. Operations of North River Garnet Co. in Adirondack Mountains, largest producer in world.

GAS

Acetylene. See ACETYLENE.

Analysis. See GAS ANALYSIS.

Benzol-Content Determination. Determining the Benzol Content of Gas by Means of Activated Charcoal, A. Schmolke. Gas Engr., vol. 40, no. 582, Oct. 1924, pp. 219-220. Particulars of method employed by German chemists. From Gas u. Wasserfach.

Blast-Furnace. See BLAST-FURNACE GAS.

Burners. See GAS BURNERS.

Census of Manufactures. Manufactured Gas. U. S. Bur. Census, 1924, 35 pp. Census of manufactures, covering operations of manufacturing establishments during 1921.

Cleaning. See GAS CLEANING.

Coal. See COAL GAS.

Coke. See COKE, Sandwich Firing System.

Coke-Oven. See COKE-OVEN GAS.

Consumption, Effects of Inerts on. The Influence of Inerts in the Practical Uses of Gas, W. Bertelsmann. Gas Jl., vol. 168, no. 3212, Dec. 3, 1924, pp. 643-644. Details of tests made to determine practical effects of inerts on everyday gas consumption. Extracts from paper in Gas u. Wasserfach, Oct. 11, 1924.

Distribution. See GAS DISTRIBUTION.

Engines. See GAS ENGINES.

Fuel. Rational Use of Gaseous Fuels (Utilisation rationnelle des combustible gazeux), L. Fourmanoir. Arts et Métiers, vol. 77, no. 48, July 1924, pp. 241-251, 14 figs. Discusses combustion and its temperature, ignition and propagation, calorific power, burners and their requirements, industrial applications in various types of furnaces.

Gases. See GASES.

Heating-Value Computations. Gas Calorific Value Computations, W. A. Tookey. Gas Wld., vol. 81, no. 2093, Aug. 30, 1924, pp. 297-299. Gives tables for fundamental values for heats of combustion, combustion values of constituent gases; discusses net and gross calorific values, gas-engine mixture and Tookey factor.

Heating with. See HEATING, GAS.

Incombustible Ingredients, Effect of. Influence of Incombustible Ingredients on Practical Use of Illuminating Gas (Ueber den Einfluss der unverbrennlichen Bestandteile auf die praktische Brauchbarkeit des Leuchtgases), w. Bertelsmann and E. Ott. Gas- u. Wasserfach, vol. 67, nos. 41 and 43, Oct. 11 and 25, 1924, pp. 609-612 and 641-642. Results of tests with various pure and mixed gases to determine effect of incombustible matter on lighting and heating efficiency. Discusses Swiss standpoint as compared with German.

Industrial. New Methods of Producing Gas for Industrial Operations, R. Maclaurin. Ceramic Soc.—Trans., vol. 23, part 2, 1923-1924, pp. 121-144, 5 figs. Discusses chemical reactions in making gas; (1) heating bituminous coal to above 400 deg. cent. in absence of oxygen; (2) reaction of air with heated carbon, Siemens producer gas; (3) steam contacting with highly heated carbon, water gas reaction, and their combinations.

Manufacture. See GAS MANUFACTURE.

Meters. See GAS METERS.

Mixed Natural and Artificial. Natural to Manufactured Gas, F. L. Pringle. Gas Industry, vol. 18, no. 6, June 1924, pp. 203-208. States that there are two ways of dealing with rapidly diminishing supply of natural gas in United States, viz., abandonment of natural gas supply or conservation of remaining natural gas for mixing with artificial gas.

Mixtures, Organic Vapors in. Determination of Organic Vapors in Gas Mixtures, Especially Benzol in Coal Gas or Coke-Oven Gas, by Means of Active Charcoal (Die Bestimmung organischer Dampfe in Gasgemischen mittels aktiver Kohle, insbesondere die Benzolbestimmung in Leucht- oder Kokereigas), F. Fischer and C. Zerbe. Zeit. für angewandte Chemie, vol. 37, no. 28, July 10, 1924, p. 483. Authors give explanation which accounts for irregularities previously observed and not found by Berl and Wachendorff.

Natural. See NATURAL GAS.

Producer. See PRODUCER GAS.

Producers. See GAS PRODUCERS.

Purification. See PRECIPITATION, Electrical.

Quality. Effect of Variation in Quality on Use of Gas, L. W. Ready. Gas Age-Rec., vol. 53, no. 14, Apr. 5, 1924, pp. 419-421. Results of tests made under various conditions and with various standards in California.

Rate Making. Valuation for Rate Making, J. A. Emery. Gas Industry, vol. 18, no. 6, June 1924, pp. 195-199. Presents from engineering angle problems involved in valuation for rate-making purposes.

Reforming Process. Reformed Gas in Southern California Plants, H. L. Masser. Gas Age-Rec., vol. 54, no. 5, Aug. 2, 1924, pp. 143-146, 4 figs. Details on cracking of ethane.

Sulphur Compounds Removal. The Removal of Sulphur Compounds from Gas. Gas Engr., vol. 40, no. 582, Oct. 1924, pp. 212-213. Outlines some of the more recent processes which have been successful, including Koppers' liquid purification system.

Testing. General Notification of the Gas Referees. Gas World, vol. 80, no. 2060, Jan. 12, 1924, pp. 26-28. Provisions, as revised to Dec. 1923, covering recording calorimeters, testing place and access thereto, times of testing, representation of undertakings at testings, testing pressure of gas, and testing for calorific value.

Thermal Quality and Value. Relations of Thermal Quality to Value of Fuel Gases, C. F. Carrier. Chem. & Met. Eng., vol. 31, no. 17, Oct. 27, 1924, pp. 656-657. When used in efficient appliances value per B.t.u. is practically independent of kind of gas burned.

Use as Fuel. When Can Industry Afford to Use Gas as a Fuel? A. Duckham. Chem. & Met. Eng., vol. 31, no. 11, Sept. 15, 1924, pp. 417-418. A consideration of cost of raw coal and of manufactured gas with relation to their use in industry. Abstract from paper read at World Power Conference, Lond.

Vacuum Cleaning Machines, Use for. A New Use for Gas, B. C. Joy. Gas Jl., vol. 166, no. 3184, May 21, 1924, pp. 535-536. Possibilities of its employment for vacuum cleaning.

Water. See WATER GAS.

GAS ANALYSIS

Bone-Wheeler Apparatus. The Bone-Wheeler Gas Analysis Apparatus, C. S. W. Grice and W. Payman. Fuel, vol. 3, no. 7, July 1924, pp. 236-249, 7 figs. Describes apparatus and gives details of analysis of certain typical gaseous mixtures.

Burette for. Gas Analysis (Beitrag zur Gasanalyse), W. Moldenhauer. Zeit. für angewandte Chemie, vol. 37, no. 26, June 23, 1924, pp. 424-425, 3 figs. Describes gas burette which carries two short capillary tubes and is so bored that communication can be established between these or between one of the tubes and interior of burette.

Hydrogen and Methane in Producer Gas. Gas Analysis, H. Nielsen. Fuel, vol. 3, no. 6, June 1924, pp. 204-205, 1 fig. Determination of hydrogen and methane in producer gas.

Micro-Analysis. A New Method of Micro-gas Analysis, L. Reeve. Chem. Soc.—Jl., vol. 125 Sept. 1924, pp. 1946-1956, 1 fig. Account of methods adopted for measurement and analysis of gas mixtures consisting of CO_2, CO, hydrogen, and formaldehyde; suggests method for direct analysis of any oxygen present.

Morin Apparatus. An Automatic Gas Sampler Consisting of Reversed Flasks (Note sur un appareil autocapteur de gaz à flacons renverses), A. Dessemond. Revue de l'Industrie Minérale, no. 94, Nov. 15, 1924, pp. 533-538, 1 fig. Describes Morin apparatus based on principle of flasks in reversed position filled with water gradually emptying, gas taking place of water.

Orsat Apparatus. The Technical Analysis of High-Quality Gases with the Orsat Apparatus (Die technische Analyse von hochwertigen Gasen mit dem Orsatapparat), W. Stöckmann. Stahl u. Eisen, vol. 44, no. 6, Feb. 7, 1924, pp. 153-154. Describes method for joint combustion of methane and hydrogen with pure oxygen.

Thermal-Conductivity Method. Rapid Analysis of Gases. Chem. Age (N. Y.), vol. 32, no. 1, Jan. 1924, pp. 34-35, 2 figs. Notes on thermal-conductivity method of analysis, and description of gas analyser.

GAS APPLIANCES

Cookers. Standard Method of Testing Gas Cookers. Gas Jl., vol. 167, no. 3190, July 2, 1924, pp. 130-148, 13 figs. See also Gas Wld., vol. 80, no. 2084, June 28, 1924, pp. 651-664, 7 figs. Thirteenth (special) report of Gas Investigation Committee. Concludes that tests to ascertain information should be carried out on cooker-ovens: Normal maximum consumption, factor of safety, temperature-maintenance consumption and suitability for cooking.

Design. The Design of Gas Appliances, K. Bunte. Am. Gas. Jl., vol. 121, no. 26, Nov. 29, 1924, pp. 1221-1222 and 1235-1236. Principles upon which efficient gas appliances should be designed. Abstracted translation from Gas u. Wasserfach.

Germany. Experiences With Gas Consuming Apparatus (Ueber Erfahrungen an Gasverbrauchsapparaten), A. Köhl. Gas- u. Wasserfach, vol. 67, no. 37, Sept. 13, 1924, pp. 545-550, 17 figs. Discusses burner construction for gas mantles, cooking, etc.; damages to meters and gas apparatus found in Munich residences and factories; describes various effects of war regulations.

GAS BURNERS

Aeration and Injection. Aeration and Air Injection. Gas Jl., vol. 167, no. 3190, July 2, 1924, pp. 91-105, 15 figs. See also Gas Wld., vol. 80, no. 2084, June 28, 1924, pp. 621-633, 12 figs. Eleventh report of Research Sub-Committee of Gas Investigation Committee of Instn. Gas Engrs. Examination made of aeration accompanying use of gas in several typical burners, ring burners and those of gas-fire, aeration of burners, including principal data regarding burners for tests, effects upon aeration when burners are lighted, experiments with hot burners, pressures in burner bodies, aeration tests with gas-fire and specific gravity of gases.

GAS CLEANING

[See also GAS MANUFACTURE, Tar Removal.]

Blast-Furnace Gas. See BLAST-FURNACE GAS, Cleaning.

Electrical. Electric Gas Filters (Elektrofilter-Gasreinigung), C. Hahn. Siemens-Zeit., vol. 4, no. 1, Jan. 1924, pp. 6-14, 6 figs. Discusses use of dust precipitation by high-voltage current; system seems to adapt itself to any kind of dust, regardless of chemical nature; carbon, cement, blast-furnace gas, dust from tumbling barrels, all are precipitated by static action of direct current; electrodes may be made of iron for dry gas, galvanized for wet gases and lead-coated for acid fumes; synchronous motor-driven mechanical rectifiers are recommended to change 50,000-volt to 100,000-volt alternating into direct current; on average 1½ kw. cleans 1 cu. in. of gases per sec.

Latest Results in Electric Gas Purification (Neuere Ergebnisse mit der elektrischen Gasreinigung), R. Durrer. Berichte der Fachausschüsse des Vereins deutscher Eisenhüttenleute (Hochofenausschuss), no. 65, May 10, 1924, 6 pp., 9 figs. Describes electric plant of Dillinger works constructed by Elektrische Gasreinigungs A. G. on basis of their own and Zschocke patents, showing effective operation.

GAS DISTRIBUTION

East Prussia. Central Gas Supply in East Prussia (Ueber zentrale Gasversorgung in Ostpreussen), Kobbert. Gas- u. Wasserfach, vol. 67, no. 43, Oct. 25, 1924, pp. 642-646, 1 fig. Discusses long-distance gas supply for lighting and heating, competition with electric central stations, reduction of cost of production, and adjusting price of gas to operating conditions of customers.

High-and-Low Pressure. An Interesting Example of High-and-Low Pressure Gas Distribution, O. R. Allgeier. Compressed Air Mag., vol. 29, no. 10, Oct. 1924, pp. 1021-1024, 8 figs. Describes installation by St. Louis County Gas Co. of new water-gas and gas-compressing machinery; feature of plant is use of waste-heat boilers in conjunction with electric power.

Comparative Costs of H. P. and L. P. Gas Distribution, R. S. Fuller. Gas Age-Rec., vol. 54, no. 19, Nov. 8, 1924, pp. 665-670 and 674, 15 figs.

Long-Distance. Long-Distance Transmission of Gas (Transport du gaz à grande distance par refoulement), A. Grebel and H. Bouron. Technique Moderne, vol. 16, no. 5, Mar. 1, 1924, pp. 143-149, 11 figs. Calculation of size of pipe required for transmission of gas, and considerations determining extent to which compression should be affected; construction and relative merits of various types of pumps and compressors are compared, and typical layout for transmission station is illustrated; curves showing annual cost of transmission as function of pipe diam.; and trend of costs as function of increasing output during term of years.

Mains. See GAS MAINS.

Meters. See GAS METERS.

Patents. Gas Distribution. Abridgments of Specifications, (Lond.), Class 54, Period 1916-20, 38 pp. Patents for inventions, including gas holders, mains, pipes, meters, etc.

GAS ENGINES

Blast-Furnace Plant. New Gas-Engine Plant of the Illinois Steel Company. Power, vol. 59, no. 15, Apr. 8, 1924, pp. 552-557, 7 figs. Plant contains four blast-furnace twin-tandem gas-engine units, each rated at 3300 kw., but with overload capacity exceeding 25 per cent; with these engines thermal efficiency increases with load; average economy maintained in practice approximates 24 per cent.

Combustion in. Combustion Process in Gas and Oil Engines (Der Verbrennungsvorgang in Gas- und Oelmaschinen), R. Schöttler. Wärme, vol. 47, nos. 35, 36, 37, 38, and 39, Aug. 29, Sept. 5, 12, 19, and 26, 1924, pp. 403-405, 416-420, 430-434, 442-445, and 455-456, 15 figs. Experiments by Otto, Deutz, Hopkinson, Meyer, etc.; carburetor oil engines; use of cooling water; tetralin and other fuels; hot-bulb engines; constant-pressure engines; process of combustion; flue-gas analysis.

Compression in. Experiments on Compression in Gas Engines (Etude expérimentale de la compression dans les moteurs à gaz), A. Jadot. Revue Universelle des Mines, vol. 4, nos. 2 and 3, Oct. 15 and Nov. 1, 1924, pp. 62-88 and 122-148, 20 figs. Discusses phenomena produced during period of compression, determining gas mixture in cylinder; measurement of leakages; research on law of variation of leakages; influence of leakages on final pressure of compression; effect of cylinder walls; theoretical laws of compression; investigation of law of compression by means of indicator diagrams; effect of compression on efficiency of engine; full-load and no-load compression.

Construction. Faulty Power Plants (Die kranke Kraftanlage). Kraft-maschine, vol. 21, nos. 12 and 13, June 25 and July 10, 1924, pp. 117-119 and 129-130, 21 figs. Discusses advanced ignition in 120-hp. engine, and arrangement of piston cooling for correction; describes various trial constructions and satisfactory solution:

cracks in cylinder heads and how to deal with them.

Crankshafts. See CRANKSHAFTS, Gas-Engine.

Exhaust-Gas Utilization. Waste Exhaust-Gas and Its Utilization, V. L. Maleev. Oil Engine Power, vol. 2, no. 1, Jan. 1924, pp. 18-20, 2 figs. Details of tests carried out in connection with 160-b.hp. gas engine in shops of West. Mach. Co., Los Angeles.

Farm. See FARM MACHINERY, Gas and Oil Engines.

Foundations. Foundations for Gas Engines. Power Engr., vol. 19, no. 217, Apr. 1924, pp. 125-127, 8 figs. Design and construction of foundations suitable for internal-combustion engines, and particularly gas plants.

Fuel-Mixing Process in. Mixing Process in Gas and Oil Engines (Der Mischungsvorgang in Gas- und Oelmaschinen), R. Schöttler. Wärme, vol. 47, nos. 22, 23, 24, and 25, May 30, June 6, 13, and 20, 1924, pp. 249-254, 265-269, 277-280, and 292-293, 35 figs. Discusses process of combustion, mixing of gas and air in 2- and 4-stroke gas engines, excess air and optimum mixtures. Mixing of liquid fuel; carburetors; hot-bulb engines; Diesel engines; etc.

Germany. Large Gas Engines in German Power Economy, P. R. Meyer. Engineering, vol. 118, no. 3055, July 18, 1924, pp. 105-106, 2 figs; and (in German) in Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 52, Dec. 27, 1924, pp. 1336-1340, 13 figs. Types of two- and four-cycle gas engines used; total output and capacity; waste-heat recuperation; pressure hot cooling and evaporation cooling; financial economy of gas engines; fields of application.

Heat Loss in. Heat Loss in Gas Engines, W. T. David. Instn. Mech. Engrs.—Proc., no. 5, 1924, pp. 763-779 and (discussion) 779-821, 10 figs. and (abstract) in Engineering, vol. 118, no. 3070, Oct. 31, 1924, pp. 629-630, 10 figs. Results of series of measurements of radiation loss and of conduction loss during explosion and subsequent cooling of inflammable mixtures of coal gas and air contained in closed vessel; results emphasize marked influence of temperature on heat loss from working fluid both by conduction and radiation, and that radiation loss per unit area of wall surface increases greatly with cylinder dimensions.

Ignition. Ignition Equipment for a 7,500-H.P. Gas Engine. Engineering, vol. 117, no. 3039, Mar. 28, 1924, pp. 394-395, 4 figs. Set of equipment supplied by Lodge Bros. & Co. for gas engine; details of contact maker, igniter, timing unit and sparking plug.

See also IGNITION, Gas and Oil Engines.

Large. Large Gas Engines (Grossgasmaschinen), H. Dubbel. Praktische Maschinen-Konstrukteur, vol. 57, no. 35, Sept. 16, 1924, pp. 477-481, 15 figs. Review of present conditions of large gas engines, four-stroke and two-stroke.

Missing Pressure in. The Missing Pressure in Gas Engines, W. T. David. Instn. Mech. Engrs.—Proc., no. 5, 1924, pp. 741-762, 8 figs. and (discussion) 779-821, 6 figs.; also (abstract) in Engineering, vol. 118, no. 3070, Oct. 31, 1924, pp. 623-624, 7 figs.; and Engineer, vol. 138, no. 3592, Oct. 31, 1924, pp. 491-492. Discussion drawn from closed-vessel experiments in regard to causes responsible for missing pressure; estimated ideal pressures in closed vessel; application of results of closed-vessel experiments to gas engine; reason for low combustion factors realized in gas engines and effect of after-burning upon efficiency.

Performance. Gas-engine Performance, F. Johnstone-Taylor. Mech. Wld., vol. 75, no. 1941, Mar. 14, 1924, pp. 161-162, 1 fig. Importance of mixture strength, and method of estimation.

Starting and Starters. Gas Engine Starting and Starters, E. Pagett. Southern Engr., vol. 41, no. 3, May 1924, pp. 58-60, 7 figs. Explanation of various kinds of gas-engine starters and some of the difficulties encountered in starting an engine.

Steel Works. The Gas Engine in the Steel Industry, A. C. Danks. Mech. Eng., vol. 46, no. 8, Aug. 1924, pp. 450-460 and (discussion) 460-462 and 501, 22 figs. First 4-cycle installation; methods of governing; effect of entering temperatures of gas and air; piston troubles and design; operating costs; engine tests, etc.

Temperature Distribution and Losses. Temperature Distribution and Losses during Combustion in Gas Engines (Die Temperaturverteilung sowie die Verluste während der Verbrennung bei Gasmotoren), Schmolke. Wärme, vol. 47, no. 15, Apr. 11, 1924, pp. 151-154, 1 fig. Method of determining temperature distribution in walls of Diesel engine under change of load, and explanation of heavy heat losses during combustion.

Tests. Gas-engine Trials, N. Harwood. Mech. World, vol. 75, no. 1935, Feb. 1, 1924, p. 65, 3 figs. Describes trials undertaken with object of investigating whether clearance space in a gas engine is wholly or partly filled every suction stroke.

Vertical. Browett-Lindley 150-H.P. Four-Cylinder Vertical as Engine. Engineering, vol. 118, n. 3077, Dec. 19, 1924, pp. 847-848, 3 figs. Example of gas engine working on 4-stroke cycle, which is of enclosed vertical type and has well-designed lubrication system.

Vertical Gas Engines (Les moteurs à gaz verticaux), J. Brunswick. Technique Moderne, vol. 16, no. 1, Jan. 1, 1924, pp. 7-10, 12 figs. Describes various types manufactured in different countries.

GAS HOLDERS

Capacity Measurement. Process for Testing Apparatus for Measuring Cubic Content (Ueber ein Verfahren zur Prüfung von Kubizierapparaten), W. Block and W. Dziobek. Gas- u. Wasserfach, vol. 67, no. 28, July 12, 1924, pp. 403-406. Describes new method for finding cubic content of gas holders by means of water instead of air, giving greater accuracy.

Corrosion. The Corrosion of Gasholders, C. A. Schnerr. Gas Engr., vol. 40, no. 577, May 1924, pp. 101-102. Causes of internal corrosion. Analysis of deposit.

Foundations. Foundations for Gas Holders, A. Hiley. Gas Engr., vol. 40, no. 582, Oct. 1924, pp. 214-216, 11 figs. Describes Vibro concrete pile foundations, as used for 78-ft. diameter piling recently completed for Aberystwyth Gas Co., Wales.

Oxy-Acetylene Welding. Gas Holder Seams Welded by Oxy-Acetylene Torch, G. O. Carter. Gas Age-Rec., vol. 53, no. 3, Jan. 19, 1924, pp. 69-72, 8 figs. Describes work on a 50,000 cu. ft. holder.

Spiral-Guided. Notes on a Spiral-Guided Holder and Ferro-Concrete Tank, L. R. Hislop. Gas Jl., vol. 166, no. 3178, Apr. 9, 1924, pp. 105-110 and (discussion) 110-111, 9 figs. See also Gas Wld., vol. 80, no. 2073, Apr. 12, 1924, pp. 328-333 and (discussion) 333-334, 9 figs. Description and construction data of 2¼ million cu. ft. capacity holder, and tank 172 ft. 6 in. inside diam. 28 ft. extreme depth below ground line, and 15 ft. above ground line, erected as part thereof, in Dundee, Scotland.

Spiral, Pressure on Roller Axles. Pressure on Roller Axles of Spirally Guided Gas holders, R. J. Milbourne. Gas Jl., vol. 165, no. 3174, Mar. 12, 1924, pp. 636-637, 5 figs. Points out that variable factors make it impossible entirely to determine stresses upon purely theoretical grounds, and calculated result must be qualified by special knowledge based upon observation and experience.

GAS INDUSTRY

France. Report of the Commission on Distribution (Rapport de la Commission de Distribution), C. d'Aubenton. Journal des Usines à Gaz., vol. 48, no. 17, Sept. 5, 1924, pp. 281-291, 9 figs. Reviews gas developments, especially in Paris.

GAS MAINS

Corrosion. Deposition and Corrosion in Gas Mains, H. Wynne. Gas Wld., vol. 80, no. 2075, Apr. 26, 1924, pp. 387-389. Napthalene deposits; remedies for naphthalene troubles; methods used at Burton-upon-Trent, Eng.; corrosion of mains and its prevention. Abstract of paper read before Midland Jr. Gas Assn.

Internal Corrosion and Deposits in Gas Mains, W. V. Watson. Gas Age-Rec., vol. 54, no. 16, Oct. 18, 1924, pp. 557-560, 4 figs. Extent of corrosion and deposits in San Diago, Cal., gas distribution system. Necessity of devising some method to reduce oxygen content to lowest possible limit and to eliminate last final traces of hydrogen sulphide in gas, the two impurities which appear to cause most damage to the system.

Soil Corrosion of Gas Distributing Systems, H. S. Christopher. Gas Age-Rec., vol. 54, no. 18, Nov. 1, 1924, pp. 633-638, 3 figs. Cause of corrosion and theories; various kinds of protection; paints containing oils unsuitable; steel pipe versus wrought-iron pipe.

Destruction by Lightning. Lightning Destroys a New 20-Inch Gas Main. Gas Age-Rec., vol. 54, no. 9, Aug. 30, 1924, pp. 289-291, 6 figs. Describes accidental breakage of large cast-iron main in Worcester, Mass.

Gas Temperatures in. Gas Temperatures in Long Underground Mains, F. M. Reiter. Gas Age-Rec., vol. 54, no. 8, Aug. 23, 1924, pp. 245-246, 1 fig. Data obtained from tests and observations on relative temperatures of gas and ground adjacent to main, and drops in temperature and pressure in large main for great distances.

Locating by Radio. Locating Gas Pipes by Radio, B. R. Carney. Gas Age-Rec., vol. 54, no. 23, Dec. 6, 1924, pp. 795-796 and 800, 6 figs. Principles of electric pipe finder and its use in locating old piping for which no records are available.

Natural-Gas, Louisiana-Texas. Constructing the World's Longest and Largest Welded Gas Main, Rob. G. Skerrett. Compressed Air Mag., vol. 29, no. 12, Dec. 1924, pp. 1089-1093, 14 figs. What is being done to draw natural gas from wells in Louisiana and to deliver it at point of consumption in Texas.

Rubber as Jointing Material. Further Experiences in Connection with Rubber as a Jointing Material for Gas-Mains, W. Hole. Gas Jl., vol. 166, no. 3189, June 25, 1924, pp. 899-901, 5 figs. Tests carried out to prove that suitably prepared rubber is practically immune from deleterious action by either coal gas or gaseous liquor.

Trenching Equipment. Trenching Machines are an Essential Equipment, A. G. Ford. Gas Age-Rec., vol. 54, no. 11, Sept. 13, 1924, pp. 359-362, 2 figs. Describes Barber Greene trenching machines which have been used for short and long main extensions, for uncovering pipe that it may be reclaimed, for digging services and for digging pipe line trench.

Welded Steel. Welded Steel Gas Main Data from Portland, Oregon, R. M. McCalley. Gas Age-Rec., vol. 54, nos. 13 and 14, Sept. 27 and Oct. 4, 1924, pp. 425-428 and 463-465, 15 figs. Results of author's experience; expansion and other stresses; heat treatment; methods used in installation of large-diameter lines; testing of joints.

GAS MANUFACTURE

Ammonia Concentrators, Operation. Operation of Ammonia Concentrators in Small Gas Plants, J. R. Wohrley Am. Gas Assn. Monthly, vol. 6, no. 3, Mar. 1924, pp. 185-191, 4 figs. Analytical survey of economic factors governing installation and operation of necessary equipment for profitable disposition of ammonia.

Ammonia Distillation, Spent Liquor Treatment. Treatment of Effluent Spent Liquors from the Distillation of Ammoniacal Liquor. Gas Jl., vol. 167, nos. 3192, 3194, and 3196, July 16, 30, and Aug. 13, 1924, pp. 324-325, 451-452, and 586-587, 6 figs. Gives results of experimental filter erected to test efficiency of coke packing under conditions varied with respect to rate of flow and strength of liquor feed. Discusses horizontal and vertical retort systems.

Backrun System. Backrun System at Worcester, E. H. Bauer. Gas Age-Rec., vol. 53, no. 7, Feb. 16, 1924, pp. 191-194 and 200. See also (abstract) Am. Gas Jl., vol. 120, no. 8, Feb. 23, 1924, pp. 177-181. Data from tests made from use of this type of apparatus; backrun proves profitable.

Benzol Recovery. See BENZOL, Recovery.

Carbon Monoxide Removal. The Removal of Carbon Monoxide from Water Gas and Coal Gas. Gas Engr., vol. 40, no. 579, July 1924, pp. 147-149. Discusses production of non-poisonous gas by elimination of CO; conversion of water gas to methane rich gas; replacement of CO in ordinary straight coal gas; results of experiments.

Clarification-Plant Sludge. Illuminating Gas From the Sludge of Clarification Plant (Leuchtgas aus dem Klärschlamm von Abwässer-Kläranlagen), G. Strassburger. Gesundheits-Ingenieur, vol. 47, no. 39, Sept. 27, 1924, pp. 453-454. Production of methane from sludge and artificial aiding of digesting process for the purpose.

Coal Carbonization. See COAL, Carbonization.

Coal-Coke Mixture as Generator Fuel. Coal-Coke Mixture for Generator Fuel, J. M. Williamson. Am. Gas Jl., vol. 121, no. 8, Aug. 23, 1924, pp. 769-770 and 785. Details of large-scale operations with the mixed fuel.

Coal Distillation. See COAL, Distillation.

Coke Gasification. See COKE, Gasification.

Corrosion Problems. Combating Corrosion in Gas Manufacture. Chem. & Met. Eng., vol. 31, no. 2, July 14, 1924, pp. 47-50, 4 figs. Survey of problems of corrosion met with in gas-making industry. Paper is confined to industries where fuel gas is major product.

Developments. Recent Developments in the Artificial Gas Industry, F. W. Sperr, Jr. West. Soc. Engrs.—Jl., vol. 29, no. 8, Aug. 1924, pp. 327-338, 3 figs. Describes improvements for greater efficiency; discusses monster plants of high efficiency at mine mouth and pipe transmission of gas.

Different Grades. The Production of Different Grades of Gas. Gas Wld., vol. 81, no. 2094, Sept. 6, 1924, pp. 240-246. See also Gas Jl., vol. 167, no. 3200, Sept. 10, 1924, pp. 816-821. Discusses horizontal retorts, steaming in continuous vertical retorts, summary of results from steaming verti-

cals, precautions to be observed, flow of steam through nozzles, blue water gas, carbureted water gas, yields of different grades by different methods, complete gasification, distribution of different grades of gas, etc.

Double-Gas Process. Strache Double Gas Process for Complete Gasification, E. Blau. Gas Age-Rec., vol. 53, no. 5, Feb. 2, 1924, pp. 129-130 and 146, 2 figs. Complete gasification of coal in a single installation in which volatilization and gasification of residual coke both occur; description of generator for obtaining this double gas. Translated from German.

Gas-Oven Plant. Gas Oven Plant Erected at Utica, New York, J. E. Cooper. Gas Age-Rec., vol. 14, no. 15, Oct. 11, 1924, pp. 495-499, 8 figs. Plant consists of battery of 21 Koppers cross-regenerative combination coke and gas ovens, 3 Koppers producers together with complete by-product recovery apparatus, liquid purification and coal and coke-handling plants.

Gas Producers. The Production of Gas in the Generator, E. Terres and J. Schierenbeck. Am. Gas Jl., vol. 121, no. 29, Dec. 20, 1924, pp. 1285-1286 and 1297-1300, 4 figs Describes experimental work and results obtained in attempt to explain mechanism of gas process as it takes place in gas generator. Abstracted translation from Gas- u. Wasserfach.

Great Britain. Notes on Recent Developments of Gas Manufacture in Great Britain, T. Goulden. Gas Jl., vol. 167, no 3192, July 16, 1924, pp. 327-330. Calorific value basis; report of Fuel Research Board; Gas Regulation Act; vertical retorting; waste-heat boilers; fuel conservation in water-gas plants; complete gasification; low-temperature carbonization.

Iron Carbonyls in. Iron Carbonyls: Their Physical and Chemical Properties, A. C. Fieldner. Am. Gas Assn. Monthly, vol. 6, no. 7, July 1924, pp. 439-446. General discussion of metallic carbonyls, action of carbon monoxide on iron and presence and occurrence of iron carbonyls in gas-works practice. Bibliography. Pub. by permission U. S. Bur. Mines.

Naphthalene Removal. Naphthalene and Its Prevention, W. P. Lupton. Gas World, vol. 80, no. 2063, Feb. 2, 1924, pp. 84-87, 1 fig. See also Gas Jl., vol. 165, no. 3168, Jan. 30, 1924, pp. 262-265, 1 fig. Causes of naphthalene deposition; discusses methods for lowering naphthalene content of gas.

Producers. See GAS PRODUCERS.

Purification. The Purification of Gas, R. A. Weston. Gas Wld., vol. 81, no. 2100, Oct. 18, 1924, pp. 398-401 and (discussion) 401-402, 3 figs. See also Gas Jl., vol. 168, no. 3205, Oct. 15, 1924, pp. 169-172 and (discussion) 172-174, 4 figs. Reviews the various phases of purification process in light of recent experience with gas produced in vertical retorts (with 8 per cent of steaming) at Norwich, Eng., and also deals with methods of purification of gas from horizontal retorts at Norwich and elsewhere.

Retorts. Description of a New Horizontal Setting. Gas Jl., vol. 167, no. 3191, July 9, 1924, pp. 257-258, 1 fig. Describes plant of Robert Dempster & Son, Ltd., Elland, England; features make it unusually flexible and capable of meeting future contingencies in event of more widespread use of smokeless fuel.

Five Years Operation of a Vertical Retort Gas Plant, M. H. Frank. Gas Age-Rec., vol 54, nos. 11 and 12, Sept. 13 and 20, 1924, pp. 355-356 and 364, and 397-400, 10 figs. Gives outline and discusses results obtained from 5½ years' operation of vertical-retort gas plant comprised of two benches of nine retorts each operating under normal and abnormal conditions as experienced before, during, and after war period; describes plant and conditions under which it operates; gives details of operation and results which have been obtained. Abstract of paper read before Mich. Gas Assn.

Gas-Generating Retorts (Gaserzeugungsöfen), A. Wilhelm. Gas- u. Wasserfach, vol. 67, no. 14, Apr. 5, 1924, pp. 177-178. Choice of retort system for medium-sized and small works.

Gas-Generating Retorts (Gaserzeugungsöfen), K. Bunte. Gas- u. Wasserfach, vol 67, nos. 9 and 10, Mar. 1 and 8, 1924, pp. 101-103 and 119-121 and (discussion) 121-122. Agreements on form of guarantees; guarantee in percentage of heating value of coal.

Notes on the Working of the Glover-West Vertical Retorts at Foleshill Gas-Works, C. F. Tooby. Gas Jl., vol. 168, no. 3213, Dec. 10, 1924, pp. 715-719 (includes discussion), 7 figs. Working results of vertical retorts at Foleshill Gas Works, Coventry corporation, England. Results of tests on condensation. Gives charts and tables.

Refractory Materials and the Design of Retort Settings, V. E. Harston. Gas Wld., vol. 80, no. 2078, May 17, 1924, pp. 444-449 (includes discussion), 1 fig. See also Gas Jl., vol. 166, no. 3184, May 21, 1924, pp. 530-535, 5 figs. Behavior of different clays, requirements of a retort setting, design of settings, section of retort, constructional details of a retort bench, producers and generators, segmented retorts, etc.

Vertical Retorts at Clichy Gasworks, M. H. Laedlein. Gas Wld., vol. 81, no. 2090, Aug. 9, 1924, pp. 137-138, 1 fig. Discusses effects of steaming, yields of coke, tar and ammonia, fuel account, and firing by producer gas. Translated from paper read before Société Technique de l'Industrie du Gaz en France.

Tar Removal. The Removal of Tar from Gases by the Cottrell Electrical Precipitation Processes, N. W. Sultzer and C. W. Hedberg. Am. Gas Assn. Monthly, vol. 6, no. 12, Dec. 1924, pp. 759-766, 5 figs. Brief summary of commercial application of Cottrell processes, and discussion on use of Cottrell processes for removing tar and the less volatile oils from combustible gases.

Vertical Retorts. See BOILERS, Waste-Heat.

Water Gas. See WATER GAS, Manufacture.

GAS METERS

Carbonic-Acid Corrosion. The Influence of Carbonic Acid in Gas Meters (Die Wirkung der Kohlensäure im Gasmesser), W. Leybold. Gas- u. Wasserfach, vol. 67, no. 13, Mar. 29, 1924, pp. 168-170. Result of investigation of corrosion in a number of gas meters in a large German city; it seemed apparent that, under influence of the carbonic acid of the gas, the iron became detached from gas-meter plate.

Gummy Deposits. Gummy Deposits in Gas Meters, Ralph L. Brown. Am. Gas Jl. (daily edition), vol. 121, no. 17, Oct. 15, 1924, pp. 1012-1015. Report of various phases of investigation on occurrence, cause, and prevention.

Principles. Fundamental Principles of Gas Meters and Indicators (Principes fondamentaux des Compteurs et Indicateurs de Débits gazeux), A. Grebel. Chaleur & Industrie, vol. 5, no. 54, Oct. 1924, pp. 517-519, 7 figs. Discusses meters indicating and totalling gas flow, rotary and clock types. Shows that all are based on measurement of volume.

Sigma. The Sigma Gas Meter, M. Chamon. Gas Wld., vol. 81, no. 2090, Aug. 9, 1924, pp. 138-139, 4 figs. Describes new gas meter which uses metal in measuring parts and has constant level of liquid; liquid must be not water but some

non-oxidizing unfreezable oil such as would create lubricating atmosphere. Translated from paper read before Société Technique de l'Industrie du Gaz en France.

Thomas. The Thomas Gas Meter. Engineering, vol. 118, no. 3057, Aug. 1, 1924, pp. 182-183, 5 figs. Details of gas meter recording automatically in terms of cubic feet at standard pressure of 30 in. of mercury and saturated temperature of 60 deg. fahr., exhibited at Wembley Exposition by Cambridge Instrument Co., Lond., based on fact that specific heat for all gases occurring in practice is very nearly constant.

GAS PRODUCERS

British and American. Notes on Gas-Producer Practice, J. D. Troup. Iron & Coal Trades Rev., vol. 108, nos. 2929 and 2930, Apr. 18 and 25, 1924, pp. 631-632 and 678-679, 4 figs. British and American practice.

Coke. Experiments with Gas Producers (Untersuchungen an Koksgeneratoren), E. Terres and J. Schierenbeck. Gas-und Wasserfach, vol. 67, nos. 19, 20, 21, 22, and 23, May 10, 17. 24, 31 and June 7, 1924, pp. 257-263, 279-282, 296-299, 311-314, and 325-327, 11 figs. Discusses experiments carried out with gas producers to replace empirical data by exact experimental data and to study effect of constructional changes on processes under consideration. Discusses experimental arrangements, results with flat grates and inclined grates, composition of gas, etc.

Developments. Modern Developments in Gas-Producing Plant, F. H. Beebe. Gas Engr., vol. 40, no. 580, Aug. 1924, pp. 172-174, 5 figs. Discusses reduction of back pressure, shorter cycle operation, automatic chargers, fuel feed to generators, waste-heat boilers, and purification process.

Double-Grate. A New Method for Improvement of Gas Furnaces Directly Connected with Gas Producer (Ein neuer Weg zur Verbesserung der mit dem Generator in unmittelbarer Verbindung stehenden Gasfeuerungen), J. Hudler. Gas- u. Wasserfach, vol. 67, no. 2, Jan. 12, 1924, pp. 16-18, 2 figs. Describes patented double-grate producer which has a second combustion hearth directly over step grate, and points out its economic advantages.

Gasification in. Gasification of Fuels in Gas Producers (Die Generatorvergasung der Brennstoffe), H. Koschmieder. Brennstoff u. Wärmewirtschaft, vol. 6, nos. 8 and 9, Aug. and Sept. 1924, pp. 169-174 and 196-201, 2 figs. Discusses combustion process in gas producers, clinker, water gas, CO_2 gas, reactions, composition of products, heat balance, etc.; operating results obtained from a Rombach producer.

Large-Scale Power Generation, Application to. The Gas Producer as Applied to Large-Scale Power Generation, A. H. Lymn. Iron & Coal Trades Rev., vol. 109, no. 2941, July 11, 1924, pp. 58-59. Describes various methods of applying gas-producer plants to generation of power on large scale and shows economics of different systems as compared with each other and with most modern direct-fired steam practice. Abstract of paper read before World Power Conference.

Lignite-Briquet. Lignite-Briquette Producers (Braunkohlenbrikett-Generatoren), Motor u. Auto, vol. 21, no. 5, Mar. 10, 1924, pp. 38-39, 2 figs. Description of lignite suction-gas plant, consisting of generator, evaporator, scrubber, and gas-collecting vats.

Revolving-Grate Gas-Producer Plants Burning Lignite Briquets (Mit rheinischen Braunkohlenbriketts beschickte Drehrostgaserzeuger-Anlagen), H. Becker. Feuerungstechnik, vol. 12, no. 24, Sept. 15, 1924, pp. 203-210, 2 figs. Discusses lignite briquets, revolving grates, operation of gas producers, tar recovery and gas scrubbing. Results obtained with lignite briquet firing.

Operation. Gas Producer Operation (Ueber den Generatorbetrieb), H. Strache. Sparwirtschaft, no. 13-14, July 1924, pp. 61-64 (GW). Discusses temperature, CO_2 and CO content, ash removal, coal storage, mixed-fuel firing, primary tar production, etc.

Portable. A Portable Power Generator Using Gas Made From Local Fuel, S. D. Ware. Min. Mag., vol. 30, no. 5, May 1924, pp. 275-277, 3 figs. Describes new type of power generator specially useful in mining and transport abroad, having three features, viz., portability, low fuel costs, and low capital cost.

Practice. Gas Producer Practice, W. Dyrssen. Blast Furnace & Steel Plant, vol. 12, nos. 3 and 6, Mar. and June 1924, pp. 161-165 and 271-273, Mar.: Temperature of gas; blast temperature and steam consumption; use of oxygen in gas producers; influence of rate of gasification; instruments required for controlling and supervising operation of producers; preheating of blast; other cooling mediums than steam in producers. June: Savings possible by use of waste gases in place of steam for cooling fire zone; modern types of gas producers.

Pressure. Control of Pressure Gas Producers, W. P. Chandler, Jr. Iron & Steel Engr., vol. 1, no. 6, June 1924, pp. 289-293 and (discussion) 293-299, 4 figs. For metallurgical furnaces in steel mills; discusses main factors influencing producer operation and means for obtaining greatest return for given size of gas producer and from coal charged.

Regulation. Tests on Regulation of Gas Producers and Open-Hearth Furnaces (Versuche zur Einregelung von Gaserzeuger und Siemens-Martin-Oefen), Geo. Bulle. Stahl u. Eisen, vol. 44, no. 15, Apr. 10, 1924, pp. 397-403, 6 figs. Summary of measurements carried out on 7 producer plants and 3 open-hearth works; determination of influence of varying steam consumption, load and treatment on producers; tests on open-hearth furnaces to ascertain correct quantity of air and best mixing conditions of coke-oven and producer gas; description of necessary measuring equipment.

Sawdust. Sawdust as a Fuel for Gas Production, H. Dormand. Power, vol. 59, no. 22, May 27, 1924, pp. 862-863, 2 figs. Design of suction-gas producer which will successfully gasify sawdust and like refuse, working automatically, without poking or interfering with combustion, producing good and clean power gases, without any dust or partly carbonized fuel being drawn off the gases.

Slagging. The Slagging Producer in Steel Works, K. Huessener. Iron & Steel Engr., vol. 1, nos. 9 and 10, Sept. and Oct. 1924, pp. 457-464 and 561-563 (discussion), 3 figs. History, description, uses, and advantages.

Suction. See FUELS, Factory Refuse.

Test Code for. Test Code for Gas Producers. Mech. Eng., vol. 46, no. 12, Dec. 1924, pp. 910-915. Tentative draft of code in series of 19 being formulated by A. S. M. E. Committee on Power Test Codes.

Unburned Gases, Utilization. Using Unburned Gases of Coke-Oven Generators (Ausnutzung unverbrannter Gase von Einzelgeneratoren in Verkokungsöfen), E. W. Stürmer. Brennstoff- und Wärmewirtschaft, vol. 6, no. 10, Oct. 1924, pp. 212-215. Gives examples and cost data of adding water gas to coal gas by new patent process showing considerable economy, especially for smaller gas works.

GAS TURBINES

Automobiles. The Gas Turbine, Its Use for Automobiles and Airships (La turbine à gaz, son utilisation en automobilisme et en aéronautique). Technique Automobile et Aérienne, vol. 15, no. 125, 1924, pp. 33-37, 2 figs. Discusses their efficiency, variation of power, weight per hp.; cycles of constant-volume combustion and constant-pressure combustion; comparison with steam turbines.

Development. History of the Progress of Gas and Oil Turbines (Die Arbeit an der Gas- und Oelturbine), W. Gentsch. Brennstoff- und Wärmewirtschaft, vol. 6, nos. 2, 3, and 4, Feb., Mar., and Apr. 1924, pp. 28-35, 48-55, and 71-79, 18 figs. Various attempts to solve problem of economical internal-combustion turbine are recorded and described, including Brown, Boveri, Schneider, Westinghouse, Stodola, General Electric, Francke, Rateau, Nash Eng. Co., etc.

The Gas Turbine, F. Dollin. Instn. Mech. Engrs.—Proc., vol. 2, no. 6, 1923, pp. 1121-1135, 2 figs. Account of most noteworthy attempts to produce efficient and reliable gas turbine; summary of results obtained and indication of possible future developments. (Abridged.)

See also POWER, Development.

Holzwarth. Development of Gas and Oil Turbines. Iron Age, vol. 114, nos. 21 and 22, Nov. 20 and 27, 1924, pp. 1329-1333 and 1407-1409, 13 figs. Nov. 20: Use of intermittent impulses found to give results where continuous impulse method failed; unit developed by Holzwarth for steel-works use. Nov. 27: Test data showing efficiencies obtained; estimated capital and operation costs; study of charted efficiency curves.

The Holzwarth Gas Turbine. Power Engr., vol. 19, no. 217, Apr. 1924, pp. 140-142, 6 figs. Chronicle of progress actually made with this design.

The Internal-Combustion Turbine (La turbine à combustion interne), A. Stouvenot and P. Troy. Nature (Paris), no. 2634, Sept. 27, 1924, pp. 203-206, 1 fig. Design and operation of a 5000-kw. Holzwarth turbine, with eight explosion chambers.

Problems of. The Gas Turbine, H. Campbell. Inst. Mar. Engrs.—Trans., vol. 35, Apr. 1924, pp. 684-694 and (discussion) 694-701, 5 figs. Review of what is known about gas turbines up to date. Difficulties which have been experienced in dealing with gas turbines both theoretically and practically. Points out that a new material has to be found to stand high temperatures.

Stauber. New Methods of Energy Generation—Stauber Gas Turbine, Löffler. Mech. Eng., vol. 46, no. 5, May 1924, pp. 284-285, 1 fig. Discusses various new paths sought and partly opened up in domain of power generation, and describes construction of Stauber turbine being experimentally operated by German Gen. Elec. Co. in Berlin. Translated from Zeit. des Vereines deutscher Ingenieure, Feb. 23, 1924, pp. 161-169.

Technical Aspects. Some Technical Aspects of the Internal-Combustion Turbine. Power Engr., vol. 19, no. 216, Mar. 1924, pp. 107-109, 1 fig. Survey of present knowledge and practice.

Waste-Heat-Recovery. Gas Turbines for Waste Heat Recovery. Colliery Engr., vol. 1, no. 2, Apr. 1924, pp. 96-98, 4 figs. German developments and their possible applications to conditions in Great Britain.

GAS WORKS

Coal-Gas Plant. Coal-Gas Plant at the Great Western Railway Works, Swindon. Engineering, vol. 117, nos. 3032, 3034, 3037, and 3040, Feb. 8, 22, Mar. 14, and Apr. 4, 1924, pp. 164-169, 228-229, 328-330, and 421-422, 92 figs. partly on supp. plates. Describes plant installed for supplying works with coal gas for lighting and for use in numerous gas-fired furnaces required for heat treatment of steel and other heating processes; consists of installation of continuous vertical retorts on Dempster-Toogood system.

Coke Handling. See COKE, Quenching; COKE HANDLING.

Electric Drive. Electric Drive in Gas Works (Elektrische Sonderantriebe in Gaswerken), R. Germershausen. Gas- u. Wasserfach, vol. 67, no. 36, Sept. 6, 1924, pp. 535-539, 6 figs. Regulations for electric drive in dangerous places; electric drive in condensation and tool shops; group drive of washers and other apparatus; application of d.c. and a.c. and their effect on choice of apparatus.

Experimental Coal-Gas Plant. Inauguration of Experimental Coal-Gas Plant at Leeds University, Gas Jl., vol. 166, no. 3177, Apr. 2, 1924, pp. 27-29, 8 figs. Describes plant designed for carbonization of coal on a scale greater than is possible in laboratory apparatus, and recovery and measurement of usual products.

Foundations. See CONCRETE CONSTRUCTION, REINFORCED, Gas Works.

France. 47th Congress of the Technical Society of the Gas Industry in France (International Congress, Paris, June 24-28, 1924) [47th Congrès de la Société Technique de l'Industrie du gaz en France (Congrès international, Paris, 24-28 juin 1924).] Génie Civil, vol. 85, nos. 2, 3, and 4, July 12, 19, and 26, 1924, pp. 39-43, 65-71, and 93-96, 36 figs. Details of vertical retort furnace for continuous distillation, Woodall-Duckham system, Sigma gas meter, Thomas gas meter, production of coal distillation by-products at Gennevilliers, research on phenol and cresol, gas generators, etc.

"La Villette" Works of the Société du Gaz de Paris. Gas. Jl., vol. 167, no. 3197, Aug. 20, 1924, pp. 639-641, 5 figs. Describes "La Villette" plant as group of works covering more than 81 acres in northeastern district of Paris; coal handling; chamber ovens; water gas; storage and distribution; power stations and experimental station.

Furnaces. Gas Works Furnaces (Gaserzeugungsöfen), M. Schallenberg. Gas- u. Wasserfach, vol. 67, no. 11, Mar. 15, 1924, pp. 133-136, 10 figs. Discusses furnaces for large gas works, process of cokification, fundamentals in selection of furnace system, low-temperature carbonization, etc.

Progress in the Field of Coal Gas Furnaces (Neuerungen auf dem Gebiete der Steinkohlen-Gaserzeugungsöfen), Glaubitz. Gas- u. Wasserfach, vol. 67, no. 36, Sept. 6, 1924, pp. 533-535. Development of furnaces for gas generation; selection of furnace; vertical chamber furnaces of 300,000 cu. m. daily capacity; furnace materials; describes Pintsch-Otto vertical furnace, its construction, operation and advantages of heating with central generators.

Gas Holders. See GAS HOLDERS.

Gennevilliers, France. Control of Inclined Chamber Benches at the Gennevilliers Gasworks, M. A. Bazille. Gas Wld., vol. 81, no. 2102, Nov. 1, 1924, pp. 448-450, 3 figs. Most modern inclined chamber benches are in use, with Siemens producers back to back, and Lachomette recuperators for heating secondary air.

Kiel, Germany. Peculiarities of the Kiel Gas Works as Coke Oven Plant (Eigentümlichkeiten des Kieler Gaswerks als Kokereibetrieb und des Kieler Tarifs), Elvers. Gas- u. Wasserfach, vol. 67, no. 46, Nov. 15, 1924, pp. 692-694, 3 figs. Discusses gas-works operations in which by-product recovery plays a large part; gas rates and their determination.

Landy, France. The Landy Works of the Société du Gaz de Paris. Gas Jl., vol. 166, no.

3188, June 18, 1924, pp. 836-839, 4 figs. Describes coal-handling plant, carbonization plant, central power station, liquor treatment and sulphate plant, etc.

Liverpool, England. The Construction of New Coal-Gas Works at Garston, R. E. Gibson. Gas Jl., vol. 167, no. 3190, July 2, 1924, pp. 170-179 and (discussion) 179-182, 15 figs. See also Gas Wld., vol. 80, no. 2084, June 28, 1924, pp. 693-702, 12 figs. Describes Garston Gas Works and deals with reasons for adoption of various kinds of plant and different forms of construction; gives particulars as to results obtained.

Lubrication. Some Notes on the Lubrication of Gas Works Plant, W. T. Kenshole. Gas. Jl., vol. 165, no. 3172, Feb. 27, 1924, pp. 490-491, 1 fig. Also Gas Engr., vol. 40, no. 575, Mar. 1924, pp. 51-52 and Gas World, vol. 80, no. 2067, Mar. 1, 1924, pp. 176-179. Discusses lubrication of engines and machinery.

Management. Economic Problems of Gas, Water and Electricity Works (Wirtschaftliche Aufgaben der Gas-, Wasser- und Elektrizitätswerke), M. Permien. Gas- u. Wasserfach, vol. 67, no. 42, Oct. 18, 1924, pp. 625-627. Lays stress on increased recovery of by-products of good quality; waste heat utilization; improved apparatus for gas consumption; etc.

Energy Supply for Municipal Gas, Water and Electricity Works (Beispiele für Formen der Energiebeschaffung bei Städt. Gas-, Wasser- und Elektrizitätswerken), G. Franke. Gas- u. Wasserfach, vol. 67, no. 49, Dec. 6, 1924, pp. 737-739, 1 fig. Describes operation of Delmenhorst gas, electricity and water works; manner of making best use of materials and of waste heat, without impairing independence of individual works.

Naphthalene Removal. See NAPHTHALENE, Washers.

Operation-Efficiency Measurement. Operation Efficiency Measurement in Coal Gas Works, C. H. Dahl. Gas Age-Rec., vol. 53, no. 8, Feb. 23, 1924, pp. 219-221. Example of evaluating operation efficiency through monthly records of weighted standard scores.

Plant Flexibility. Buffalo Plant for the Iroquois Corporation Described, J. S. DeHart, Jr. Gas Age-Rec., vol. 54, no. 9, Aug. 30, 1924, pp. 283-286, 5 figs. Describes operation of new plant of Isbell-Porter Co., Newark, N. J., consisting of a Woodall-Duckham coal gas installation and blue water gas plant, arranged to operate as one unit when necessary to completely gasify 250 tons of coal a day. Will have capacity for 2,500,000 cu. ft. straight coal gas of 580 B.t.u. per cu. ft., which may be increased by steaming retorts to 5,000,000 cu. ft. of 435 B.t.u. per cu. ft., and blue gas auxiliary plant will bring total capacity of plant to 10,000,000 cu. ft. of 365 B.t.u. per cu. ft. From paper read before Can. Gas Assn.

Refractories for. See REFRACTORIES, Gas-House.

Retorts. See GAS MANUFACTURE, Retorts.

Spark Formation in. See ELECTRIC SPARKS, Formation.

GASES

Absorption. Comparative Absorption Rates for Various Gases, W. G. Whitman and D. S. Davis. Indus. & Eng. Chem., vol. 16, no. 12, Dec. 1924, pp. 1233-1236, 9 figs. Experimental study of absorption through free surface of liquid when liquid is stirred.

Effect of Gas Velocity and Temperature on Rate of Absorption, R. T. Haslam, R. L. Hershey and R. H. Keen. Indus. & Eng. Chem., vol. 16, no. 12, Dec. 1924, pp. 1224-1230, 12 figs. Research conducted in effort to discover whether two-film theory of absorption of gas in liquid would quantitatively describe rate of absorption in given system under varying conditions.

Mechanism of Absorption of Moderately Soluble Gases in Water, H. G. Becker. Indus. & Eng. Chem., vol. 16, no. 12, Dec. 1924, pp. 1220-1224, 4 figs. When liquid is mixed and when it is not mixed.

Principles of Gas Absorption, W. K. Lewis and W. G. Whitman. Indus. & Eng. Chem., vol. 16, no 12, Dec. 1924, pp. 1215-1220, 3 figs. Outlines certain of more fundamental conceptions developed from available data and from general laws of reactions between two phases. Bibliography.

See also LIQUIDS, Absorption of Gases by.

Analysis of, Thermal-Conductivity, Method for. Thermal-Conductivity Method for the Analysis of Gases, P. E. Palmer and E. R. Weaver. U. S. Bur. Standards—Technologic Papers no. 249, Jan. 7, 1924, 100 pp., 40 figs. By a comparison of resistance of two electrically-heated wires surrounded, respectively, by gas for analysis and a reference gas, a determination is possible of concentration of certain constituents in a wide variety of gas mixtures of importance in industry and research. Results of an investigation with this method.

Behavior in Contact with Glass Surfaces. The Behaviour of Gases in Contact with Glass Surfaces, D. H. Bangham and F. P. Burt. Roy. Soc. —Proc., vol. 105, no. A732, Apr. 1, 1924, pp. 481-488, 3 figs. Experiments with CO_2; table giving sorption values obtained at stated times; desorption experiment.

Brownian Movements in. Brownian Movements of the Same Particles under Different Gas Pressures (Die Brownsche Bewegung desselben Probekörpers bei verschiedenen Gasdrucken), S. Landman. Zeit. für Physik, vol. 27, no. 4, Sept. 12, 1924, pp. 237-247, 2 figs. Drops of oil between horizontal plates of a condenser were raised by application of electric field and permitted to fall while under observation through microscope; this could be done again and again and at same time pressure of gas could be changed, or even different gas substituted for first; it appears, therefore, that with diminishing pressure Brownian movements increase in liveliness.

Cathode Fall in Mixtures. Calculation of Normal Cathode Falls in Gas Mixtures (Die Berechnung des normalen Kathodenfalles in Gasgemischen), A. Günther-Schulze. Zeit. für Physik, vol. 21, no. 1, 1924, pp. 50-59, 6 figs. Attempt is made to calculate normal cathode fall in gas mixtures; table is given showing close accord between calculated and measured values of normal cathode fall in Hg-Ar mixtures, using graphite cathode; mixtures of rare gases with other gases are also considered; results are shown by series of graphs.

Chemical Combination. Recombination of Gaseous Ions, the Chemical Combination of Gases, and Monomolecular Reactions, J. J. Thomson. Lond., Edinburgh, & Dublin Philosophical Mag. & Jl. Sci., vol. 47, no. 278, Feb. 1924, pp. 337-378, 2 figs. Results of investigations; expression is found for rate of combination of electron and positive ion; monomolecular reactions are regarded as due to accumulation of thermal energy in particular molecules until these have sufficient energy to dissociate or evaporate.

Cohesion Pressure. Cohesion Pressure (Betrachtungen über den Kohäsionsdruck), A. Brandt. Annalen der Physik, vol. 73, no. 5-6, Feb. 1924, pp. 415-425, 1 fig. Calculations based on Amagat's experimental data and Van der Waals' equation; it is suggested that CO_2 shows evidence of progressive association, as pressure is increased and temperature is lowered.

Combustion, Dewpoint Temperature of. The Dewpoint Temperature of Gases from Combustion,

J. N. Waite. Elec. Rev., vol. 94, nos. 2429 and 2430, June 13 and 20, 1924, pp. 954-956 and 994-996, 6 figs. Method of calculating dewpoint temperature for gases resulting for a given fuel, fuel taken being a medium grade bituminous coal having a medium hydrogen and moisture content. Effect of change of fuel analysis on dewpoint temperature of resultant gases of combustion. Curves and tables.

Combustion at High Pressure. Gaseous Combustion at High Pressures, Wm. A. Bone, D. M. Newitt and D. T. A. Townend. Roy. Soc.—Proc., vol. 105, no. A732, Apr. 1, 1924, pp. 406-433, 6 figs. Influence of varying initial pressures upon rate of pressure development and activation of nitrogen in carbon monoxide-air explosions.

Combustion of. The Combustion of Gases [Die Verbrennung von gasförmigen Brennstoffen (Generatorgas)], A. Dosch. Sprechsaal, vol. 57, nos. 14, 15, and 16, Apr. 3, 14, and 17, 1924, pp. 147-149, 157-159, and 171-173, 5 figs. Processes of combustion of various gases analyzed and explained. Quantities of air required for combustion of various gas mixtures computed and illustrated with aid of several examples.

Committee Report. Report of the Committee on Gases, H. E. Newell. Safety Eng., vol. 48, no. 1, July 1924, pp. 32-38. Including emergency gas shut-off valves, acetylene equipment, refrigeration equipment, gas systems for house lighting and cooking and internal combustion engines.

Compressibility to High Pressures. The Compressibility of Five Gases to High Pressures, P. W. Bridgman. Am. Acad. Arts & Sciences—Proc., vol. 59, no. 8, Jan. 1924, pp. 173-211, 5 figs. Results of measurements of compressibility of hydrogen, helium, ammonia, nitrogen, and argon, to pressures varying from 12,000 to 15,000 kg. per. sq. cm. References.

Critical Constants. A Review of the Critical Constants of Various Gases, S. F. Pickering. Jl. Physical Chem., vol. 28, no. 2, Feb. 1924, pp. 97-124. Review of literature on the subject, in which an attempt has been made to include all available data on the more common gases and, as far as possible, to select what appear to be best values.

Critical Pressure Ratio. The Critical Pressure-Ratio for Gases as affected by Variable Specific Heat. W. J. Walker. Lond., Edinburgh, & Dublin Philosophical Mag. & Jl. Sci., vol. 48, no. 286, Oct. 1924, pp. 703-707, 1 fig. Critical pressure ratio determining maximum discharge conditions under variable specific-heat conditions is deduced.

Cylinders, Safe Handling of. Rules for the Safe Handling of Gas Cylinders. Am. Mach., vol. 60, no. 12, Mar. 20, 1924, p. 424. Rules prepared by Gas Products Assn., Chicago, for handling of cylinders containing compressed oxygen, hydrogen, and acetylene.

Density Determination. Determination of the Density of a Gas (Zur Bestimmung der Gasdichte), F. Politzer. Zeit. für angewandte Chemie, vol. 37, no. 27, June 25, 1924, pp. 459-461, 3 figs. Describes method which depends on direct manometric weighing of column of gas and which is particularly rapid and accurate for technical use; details and operation of apparatus.

See also INTERFEROMETERS, Measurement of Density of Gases.

Diffusion. Gaseous Diffusion. Sci. & Art of Min., vol. 34, no. 19, Mar. 29, 1924, pp. 276-277, 1 fig. Discusses phenomenon of diffusion, important because diffusion of mine gases into air-current, and vice versa, is continually taking place.

Dust Removal. Separating Dust from Gases with Dust, Geo. B. Cramp. Chem. & Met. Eng., vol. 30, no. 10, Mar. 10, 1924, pp. 400-401, 2 figs. System primarily developed by author for blast-furnace gases, but which should be effective and useful elsewhere, employs dust from gas as filtering medium for filtering out more dust.

Electric Discharges in. Studies of Electric Discharges in Gases at Low Pressures, I. Langmuir and H. Mott-Smith, Jr. Gen. Elec. Rev., vol. 27, nos. 7, 8, 9, 11, and 12, July, Aug., Sept., Nov., and Dec., 1924, pp. 449-455, 538-548, 616-623, 762-771, and 810-820, 14 figs. Study of phenomena of gaseous discharges, such as those of mercury-arc rectifier. By new methods of using collecting electrodes, quantitative measurements of many of the fundamental factors of gaseous discharges have been made possible. Theory of plane, cylindrical and spherical collectors, with retarding and accelerating fields. Typical experimental data with plane, cylindrical, and spherical collectors, and general discussion of these results and their interpretation.

Entropy and Chemical Constants. Absolute Entropy and the Chemical Constants of Polyatomic Gases (Absolute Entropie und chemische Konstanten mehratomiger Gase), J. K. Syrkin. Zeit. für Physik, vol. 24, no. 5-6, June 12, 1924, pp. 355-365. Author attempts to obtain expressions for entropy and chemical constant of polyatomic gases; comparison between results of calculation and experimental values; order of magnitude of results is same. Mathematical paper.

Equilibrium Constants, Calculation. The Calculation of Gaseous Equilibrium Constants, S. W. Saunders. Jl. Physical Chem., vol. 28, no. 11, Nov. 1924, pp. 1151-1166. Analysis of existing data on molecular heats of gases, heats of reaction, chemical and equilibrium constants for well-known reactions involving carbon, hydrogen, oxygen, and nitrogen.

Explosive Gas-Air Mixtures. Investigations of Combustible Gas- and Steam-Air Mixtures (Untersuchungen an explosiblen Gas- und Dampf-Luft-Gemischen), E. Berl and H. Fischer. Zeit. für Elektrochemie, vol. 30, no. 1, Jan. 1924, pp. 29-36, 3 figs. Determination according to new method of explosion limits of mixtures of air with carbon monoxide, hydrogen, methane, acetylene, ethylene, alcohol, aceton, ether, benzol and gasoline at atmospheric pressure and room temperature; influence of temperature on explosive range at 100, 200, and 300 deg. cent.; influence of subpressure on system, carbon monoxide-air. Bibliography.

Filling and Refilling Containers. Auxiliary Apparatus for Handling of Vacuum and Gas (Hilfsapparate für Vakuum- und Gasarbeiten), E. Brüche. Zeit. für technische Physik, vol. 5, no. 4, 1924, pp. 141-143, 3 figs. Describes two auxiliary apparatus, one for filling of gas in vacuum, and other for filling up gas under barometric pressure from one container to another.

Flame Propagation. See FLAME PROPAGATION.

Flames. See FLAME.

Flow of. See FLOW OF GASES.

Flowing, Heat Measurement of. Measurement of Large Quantities of Heat in Turbulent Streams of Gases (Ueber die Messung grosser Wärmemengen in turbulenten Gasströmen), A. Schack. Zeit. für Angewandte Mathematik u. Mechanik, vol. 4, no. 3, June 1924, pp. 249-254. Discusses measurement of quantity of heat (in Kcal) in liquids or gases passing through pipe lines and its mathematical treatment.

Gas. See GAS.

Heat Connection in. See HEAT TRANSMISSION, Problems.

High and Low Vacua. Properties of Gases in High and Low Vacua, E. Rutherford. Engineering, vol. 117, nos. 3037, 3038, 3039, and 3440, Mar. 14, 21, 28, and Apr. 4, 1924, pp. 330, 365-366, 387, and 429, 10 figs. Abstracts of course

of lectures delivered before Roy. Instn. Mar. 14: History of production of vacua from original experiments of Torricelli in 1643 up to and including introduction of Gaede molecular pump in 1912. Mar. 21: Latest type of pump originated by Gaede; how measure of speed of pump could be framed on scientific lines. Mar. 28 and Apr. 4: Methods of measuring very low pressures.

Ignition. The Ignition of Gases. Chem. Soc.—Jl., vol. 125, Sept. 1924, pp. 1858-1875, 3 figs. Ignition by Impulsive Electrical Discharge. Mixtures of Paraffins with Air, by R. V. Wheeler; Ignition by a Heated Surface. Mixtures of the Paraffins with Air, by R. V. Wheeler and W. Mason.

See also IGNITION.

Isothermal Lines. Isothermal Lines of Some Gases up to 400 Deg. and Their Significance for Gas Thermometer (Ueber die Isothermen einiger Gase bis 400 deg. und ihre Bedeutung für Gasthermometer), L. Holborn and J. Otto. Zeit. für Physik, vol. 23, no. 1-2, Apr. 12, 1924, pp. 77-94, 2 figs. Measurement of isothermal lines up to pressure of 100 atmos. especially for gases of importance in gas thermoticity, i.e. nitrogen, oxygen, hydrogen, argon, helium, and neo-helium.

Kinetic Theory. Historical Origins and Fundamental Concepts of the Kinetic Theory of Gases (Origini storiche e concetti fondamentali della teoria cinetica dei gas), Giovanni Polvani. Nuovo Cimento, vol. 1, no. 1, Jan.-April 1924, pp. 1-48. Well-documented thesis on subject.

Magnetic Susceptibility of. The Magnetic Susceptibility of Helium, Neon, Argon, and Nitrogen, L. G. Hector. Physical Rev., vol. 24, no. 4, Oct. 1924, pp. 418-425, 2 figs. Results obtained for volume susceptibilities at 20 deg. cent. and 760 mm. pressure for helium, neon, argon and nitrogen are -0.780, -2.77, -7.52, and -4.91, respectively, all times 10^{-10}; they are probably accurate to within 2 per cent. These results are of order of magnitude required by Pauli's modification of Langevin theory of diamagnetism and also agree with values predicted by Joos from electron arrangements.

Mists, Analysis of. Quantitative Analysis of Mists and Fogs, Especially Acid Mists, H. C. Weber. Indus. & Eng. Chem., vol. 16, no. 12, Dec. 1924, pp. 1239-1242, 7 figs. Describes methods that author has found successful for determination of mists, especially sulphuric-acid mists, in plant.

Monatomic, Quantum Theory of. The Quantum Theory of Monatomic Perfect Gases (Zur Quantentheorie der einatomigen idealen Gase), G. Schay. Zeit. für Physik, vol. 25, no. 1, June 24, 1924, pp. 37-41. Attempts to develop theory of degeneration of a gas which is free from objection attaching to previous attempts; develops formula from which entropy, energy, atomic heat, and pressure are deduced; it is shown that region in which degeneration takes place is infinitely small, which does not agree with previous theories of degeneration; essentially this requires that gas atoms may be considered as mass points, whose extent of mutual influence can be neglected.

Phosgene in Mixtures. Determination of Phosgene in Gas Mixtures (Ueber die Bestimmung von Phosgen in Gasgemischen), G. Bredig and A. von Goldberger. Gas- u. Wasserfach, vol. 67, no. 33, Aug. 16, 1924, pp. 490-491. Describes new method of determination.

Radiation from. The Radiation from Combustible Gases and Its Practical Determination (Ueber die Strahlung der Feuergase und ihre praktische Berechnung), A. Schack. Zeit. für technische Physik, vol. 5, no. 6, 1924, pp. 267-278, 1 fig. Experimental results show that radiation from certain gaseous bodies approximately increases with temperature in accordance with Planck's radiation law; devises method for estimation of radiation from gaseous bodies; with help of known measurements of absorption spectra and total absorption of CO_2 and water vapor, formulas are deduced for calculation of radiation from gaseous bodies containing CO_2 and aqueous vapor.

Rarefied, Electric Discharge in. Discharge at High Frequency in Rarefied Gases (Sur le décharge à haute fréquence dans les gaz raréfiés), G. Gutton, S. K. Mitra and V. Ylostalo. Jl. de Physique et le Radium, vol. 4, no. 11, Nov. 1923, pp. 420-428, 6 figs. Authors have made series of measurements at constant frequency and variable pressure and plotted corresponding curves, which, at constant frequency, indicate, in function of pressure, difference of effective potential under which tubes become luminous; results of experiments with tubes with inside and outside electrodes.

Specific Heat. Measurement of Specific Heat C_v of Gases by Means of the Differential Method (Die Messung der spezifischen Wärme C_v von Gasen mittels der Differentialmethods), M. Trautz and K. Hebbel. Annalen der Physik, vol. 74, no. 12, 1924, pp. 285-324, 13 figs. Discusses principles of differential method and describes apparatus used.

Temperature Gradient. On the Temperature Gradient in Gases at Various Pressures, W. Mandell and J. West. Physical Soc. Lond.—Proc., vol. 37, no. 206, Dec. 15, 1924, pp. 20-41 (includes discussion), 11 figs. Gives curves indicating these gradients at various pressures and other relations; among other features, they show quite definitely existence in contact with vessel walls, at low pressures, of very large "temperature jumps."

Theory. Theory of Gases and Equation of State (Théorie des gaz et equation d'état), J. Duclaux. Journal de Physique et le Radium, vol. 5, no. 11, Nov. 1924, pp. 331-337. Discusses theory of real gases and develops equation of state which at constant temperature reduces to that of Van der Waal and at various temperatures to that of Leduc.

Velocity of Sound in. On the Velocity of Sound in Gases and Vapours, and the Ratio of the Specific Heats, H. B. Dixon and G. Greenwood. Roy. Soc.—Proc., vol. 105, no. A730, Feb. 1, 1924, pp. 199-220, 4 figs. Experiments made in continuation of those carried out by Dixon, Campbell and Parker on velocity of sound in gases at high temperatures; object was to determine velocity of sound in vapors of low-boiling inflammable liquids.

GASOLINE

Analysis. Analysis of Some United States Gasolines, A. C. Zimmerman. U. S. Air Service Information Circular, vol. 5, no. 465, May 1, 1924, 5 pp. Details of tests made to determine approximately content of aromatics, naphthene, and paraffin hydrocarbons of United States gasoline from various sources.

Catalytic Production Method. Petrol Production by the Catalytic Method. Petroleum Times, vol. 11, no. 261, Jan. 5, 1924, p. 16. Describes development of Sabatier-Mailhe catalytic method of obtaining light oils from heavier fractions of crude petroleum, including kerosene fraction.

Cracked, Coloring Matter of. The Volatile Yellow Coloring Matter in Cracked Gasolines, B. T. Brooks and H. O. Parker. Indus. & Eng. Chem., vol. 16, no. 6, June 1924, pp. 587-588. Writers believe that this matter is due to presence of hydrocarbons containing conjugated unsaturated groups.

Cracking Processes. The Manufacture of Gasoline by the Cracking of Heavier Oils, C. M. John-

son. Mech. Eng., vol. 46, no. 12, Dec. 1924, pp. 879-885. Principles of cracking; classification and comparison of various processes employed, their relative advantages and disadvantages; describes 12 processes in commercial use in United States, giving dimensions of apparatus as well as data on temperatures and pressures employed, quantities of raw-oil charges, percentages of gasoline obtained, etc.

Developments. The Present Position of Gasolene, J. E. Hackford. Oil Eng. & Finance, vol. 5, nos. 103 and 104, Nov. and Dec. 1924, pp. 628-630, and 680 and 682-683. Review of United States, German, British, and Russian patents.

Distillation Test. The Distillation Test of Gasoline, W. G. Clark. Natural Gas, vol. 5, no. 1, Jan. 1924, pp. 22 and 61. How actual making of test is accomplished; gasoline specifications.

Heat Exchangers. Modern Heat Exchange Equipment, Geo. A. Burrell. Chem. & Met. Eng., vol. 30, no. 11, Mar. 17, 1924, pp. 436-439, 2 figs. Petroleum and natural-gas gasoline plant practice discussed as illustration of heat-exchanger design and operation.

Natural-Gas. Application of Refrigeration Processes to the Production of Natural Gasoline, E. F. Burton. Refrig. Eng., vol. 11, no. 3, Sept. 1924, pp. 83-90, 8 figs. Notes based upon experience and observation of author and information obtained through publications of Bur. of Mines and other publications; author believes that more attention should be given to utilization of waste residue gas for production of low temperatures through expander, and that further investigation be made of possibilities of using more volatile parts of plant product, especially propane, for cooling gases.

Comparative Tests of Scrubbing Natural Gas (Vergleichende Versuche zur Erdgaswaschung), G. Weissenberger. Petroleum, vol. 20, no. 33, Nov. 20, 1924, pp. 1817-1825, 2 figs. Discusses tests made at Boryslaw in gasoline recovery as to superiority of Bregeat process and gives absorption figures.

Composition of Natural Gas Gasoline, R. P. Anderson and A. M. Erskine. Indus. & Eng. Chem., vol. 16, no. 3, Mar. 1924, pp. 263-267, 5 figs. Study of chemical composition of natural-gas gasoline by separating constituents by fractional distillation in sufficiently pure state to make possible their identification.

Natural-Gas Gasoline in 1922, G. B. Richardson. U. S. Geol. Surv., no. II:30, Apr. 24, 1924, pp. 347-351. United States production statistics.

On the Composition of Gasoline from Natural Gas, V. Tvercyn. Petroleum & Oil-Shale Industry, vol. 5, no. 9, Sept. 1923, pp. 256-257. Investigation of gasoline obtained from natural gas. (In Russian, with brief extract in English.)

Past, Present and Future of Natural Gasoline Industry, H. J. Struth. Oil Trade Jl., vol. 15, no. 4, Apr. 1924, pp. 68, 70, and 96, 3 figs.

Savings Effected By Use Of Stabilizer In Natural Gasoline Plants, L. F. Bayer. Nat. Petroleum News, vol. 16, no. 18, Apr. 30, 1924, pp. 24-29, 4 figs. Account of results obtained by a licensee, Tidal Refining Co., Tulsa, Okla., by using process on a large commercial scale.

The Gasoline Extraction Process, F. A. McLean. Can. Min. Jl., vol. 45, no. 4, Jan. 25, 1924, pp. 98-99, 1 fig. Description of method and equipment required for extracting gasoline from natural gas.

Quality Determination. Factors Entering Into Good Gasoline, C. A. Wendt. Oil & Gas Jl., vol. 23, no. 14, Mar. 6, 1924, pp. 92 and 137, 2 figs. Ways of determining if grade is best from standpoint of automobile owner. Study of distillation curves is good way.

Refrigerant, Use as. See REFRIGERANTS, Natural-Gas Gasoline.

Storage. See LIQUIDS, Inflammable, Storage of.

Surveys, United States. Tenth Semi-Annual Motor Gasoline Survey, N. F. LeJeune and B. A. Landry. U. S. Bur. Mines—Reports of Investigations, no. 2636, Sept. 1924, 11 pp., 1 fig. Results of survey to determine changes in characteristics of motor gasoline being sold in United States, and comparison with previous surveys made.

Vapor-Phase Refining. Vapor Phase Refining of Gasoline, D. M. Liddell. Chem. & Met. Eng., vol. 31, no. 25, Dec. 22, 1924, pp. 975-976, 3 figs. First large-scale plant to use gray catalytic process shows interesting results as compared with sulphuric-acid refining.

GASOLINE ENGINES

[See also AIRPLANE ENGINES; AUTOMOBILE ENGINES.]

Air Consumption and Power. Air Consumption and Power of Petrol Engines, H. Moss. Engineering, vol. 117, no. 3042, Apr. 18, 1924, pp. 507-509, 5 figs. Relationship of air consumption to brake horsepower in internal-combustion engines; road and flight tests. (Abstract.) Paper read before Instn. Mech. Engrs.

Radiotelegraph Equipment. A Petrol Engine for Wireless Telegraph Equipment. Engineering, vol. 117, no. 3029, Jan. 18, 1924, p. 76, 5 figs. Describes small engines constructed by J. W. Brooke & Co.

Two-Cycle. Two-Cycle Gasoline Engines (Il motore a benzina a due tempi), Pasquale Borracci. Industria, vol. 38, no. 1, Jan. 15, 1924, pp. 7-11, 4 figs. Discusses their advantages in relation to their possible application in automotive work.

Water Condensation from Exhaust-Gas. Heat Transfer in the Condensation of Water from Engine Exhaust Gas, Rob. F. Kohr and L. Butler. Indus. & Eng. Chem., vol. 16, no. 9, Sept. 1924, pp. 885-889, 8 figs. Describes apparatus devised by Bur. of Standards for condensing large part of water contained in exhaust, thus making it possible continually to compensate during flight of gas-filled airships for weight of fuel burned.

GASOMETERS. See GAS HOLDERS.

GEAR CUTTING

Bevel Gears. Gear Machining (Zahnräderbearbeitung), G. Olah. Werkstattstechnik, vol. 18, no. 5, Mar. 1, 1924, pp. 121-134, 44 figs. Describes different methods and machines for producing bevel gears.

The Cutting of Bevel Gears on the Universal Milling Machine (Das Fräsen von Kegelrädern auf der Universalfräsmaschine), M. Raudnitz. Werkstattstechnik, vol. 18, no. 5, Mar. 1, 1924, pp. 135-141, 24 figs. Development of method, based on theoretical investigaion of a bevel-gear tooth face, according to which bevel gears can be generated on universal milling machine with side-milling cutter, without aid of special devices, and more nearly approaching theoretically correct form.

The Cutting of Bevel Gears with Profile Cutters (Schneiden von Kegelrädern mit Formfräsern). Werkstattstechnik, vol. 18, no. 5, Mar. 1, 1924, pp. 156-158, 7 figs. Adjustment of cutter and bevel-gear rings; cutting of gear segments and of double-angle bevel gears. See also articles entitled Rough Turning of Bevel Gears (Schruppen von Kegelrädern), pp. 158-161, 11 figs.; and Cutting of Spiral Bevel Gears with Worm Hobs (Fräsen von Spiralkegelrädern mit Schneckenfräsern), pp. 161-167, 16 figs.

Helical Gears. A New Double Helical Gear Generator. Engineer, vol. 138, no. 3590, Oct. 17,

1924, pp. 445-447, 9 figs. Improved machine for cutting double helical gear wheels by generating process, designed and built by D. Brown & Sons.

Herringbone Gears. Machining Large Herringbone Gears, H. Campbell. Am. Mach., vol. 60, no. 17, Apr. 24, 1924, pp. 625-628, 12 figs. Manufacture of gears of unusual size for reduction units by Falk Corpn., Milwaukee, Wis.; hobbing gears 16 ft. in diam.; grinding in teeth and balancing; hob making and grinding.

Hobbing Machines. See HOBBING MACHINES.

Instrument Gears. Cutting Instrument Gears. Machy. (Lond.), vol. 24, nos. 604 and 609, Apr. 24 and May 29, 1924, pp. 103-107 and 273-274, 17 figs. Apr. 24: Production of small gears by means of hand-operated and automatic machines of formed-cutter and hobbing types. May 29: Application of hobbing process and production of small pinions in rod form.

Machines. Machines for Generating Gears (Maschinen zur Bearbeitung von Zahnrädern), P. Stephan. Werkstattstechnik, vol. 18, no. 23, Dec. 1, 1924, pp. 696-701, 20 figs. Slotting machine for use in automobile factories; small automatic gear-milling machines.

Processes. Bases and Recent Progress in Gear Cutting (Grundlagen und neuere Fortschritte der Zahnrädererzeugung), K. Kutzbach. Zeit. des Vereines deutscher Ingenieure, vol. 68, nos. 36 and 41, Sept. 6 and Oct. 11, 1924, pp. 913-920, and 1075-1081, 74 figs. Discusses various kinds of gears, teeth- and gear-cutting apparatus of different makes; grinding processes.

Projector for Cutter Forming. Using an Optical Projector for Cutter Forming, R. Grant. Machy. (N Y.), vol. 31, no. 3, Nov. 1924, pp. 200-201, 3 figs. Procedure followed in duplicating established tooth form with aid of projector.

Quality Testing. Quality Testing in the Manufacture of Gears (Güteprüfung bei der Zahnradherstellung), Frommer. Werkstattstechnik, vol. 18, no. 6, Mar. 15, 1924, pp. 176-178, 6 figs. Arrangements for investigation of helicoidal cutter of cutting machine and finished wheel; profile-testing machines; testing of pitch and trueness; investigation of condition of cutting machine.

Racks. Rack Cutting. Machy. (Lond.), vol. 24, no. 608, May 22, 1924, pp. 235-237, 5 figs. Practice in cutting racks on machines designed for this work.

Spur Gears. Spur-Gear Machining (Stirnräderbearbeitung), Barth. Werkstattstechnik, vol. 18, no. 4, Feb. 15, 1924, pp. 75-98, 119 figs. Describes different methods and machines for producing spur gears.

Sykes Generator. Gear Shaping, with Particular Reference to the "Sykes" Generating System, O. H. Medcalfe. Eng. Production, vol. 7, no. 147, Dec. 1924, pp. 349-352, 6 figs. and (discussion), vol. 8, no. 148, Jan. 1925, pp. 22-24, 1 fig. Deals principally with straight spur, single, double helical, and internal gears connecting parallel shafts; describes Sykes double helical gear generating machine S.D.H.12.

Truck Drive. Machining Gears for an Electric-Truck Driving Mechanism, F. H. Colvin. Am. Mach., vol. 61, no. 14, Oct. 2, 1924, pp. 535-537, 11 figs. Describes machining of gears for drive of trucks built by Commercial Truck Co., Philadelphia, Pa. Special tools for undercutting; fixtures for hardening bore of gear; overcoming distortion in large internal gears.

GEARS

Annular. Annular Gearing, Its Design and Application, P. H. Bruant. Am. Mach., vol. 60, no. 4, Jan. 24, 1924, pp. 125-128, 6 figs. Principle and method of operation; action of gear teeth; points on design of annular gear sets; constructions employed to give uniform speed.

Automobile. See Quiet; AUTOMOBILES, Transmissions.

Bevel. See Spiral Bevel.

Bevel, Testing. See JIGS, Bevel-Gear-Testing.

Blanks, Heat Treating. See STEEL, HEAT TREATMENT OF, Gear Blanks.

British Industry. Development of British Gear Industry, W. E. Sykes. Iron Age, vol. 113, no. 20, May 15, 1924, pp. 1419-1420. Specialist group studying to improve product and extend field of gear applications; status of technical and shop practice. (Abstract.) Address before Am. Gear Mfrs.' Assn.

Calculation. Charts for Gear Calculation. F. H. Towler. Machy. (Lond.), vol. 24, no. 622, Aug. 28, 1924, pp. 678-679, 3 charts on supp. plate. Gives charts relating to machine-cut straight-toothed spur and double helical gearing, also pitch-line velocity chart. Constructed on logarithmic principle.

Super-accuracy in Gear Ratios, T. M. Lowthian and W. Owen. Engineer, vol. 137, no. 3555, Feb. 15, 1924, pp. 164-166. Describes simple method of calculating gear ratios.

The Calculation of Gears for Machine-Tool Construction (Zahnradberechnung für den Werkzeugmaschinenbau), A. Eberwein. Maschinenbau, vol. 3, no. 11, Mar. 13, 1924, pp. 359-361, 4 figs. Formulas are derived for calculation of machine-tool gears, making use of modulus method.

The Coplanar Movement of a Plane Whose Velocity is Given (Die komplane Bewegung einer Ebene, deren Geschwindigkeitszustand gegeben ist), H. Alt. Zeit. für Angewandte Mathematik u. Mechanik, vol. 4, no. 3, June 1924, pp. 243-249, 11 figs. Treats question of how a plane must move if its state of velocity is given. Applicable to gear construction, where a member in its movement has to comply with a specified state of velocity.

See also Design.

Cases. Molds Large Iron Gear Cases, P. Dwyer. Foundry, vol. 52, no. 16, Aug. 15, 1924, pp. 623-627 and 652, 10 figs. Detailed description of molding practice involved in production of these large shells in which bulk is out of all proportion to weight.

Chucking. Better Ways of Chucking Gears for Grinding. Can. Machy., vol. 31, no. 1, Jan. 3, 1924, pp. 21-23, 14 figs. Every care must be taken in selection of material, preparation of blanks, setting and cutting on machine, heat treatment and bore grinding operation.

Cutting. See GEAR CUTTING.

Design. A Design Chart for Industrial Gears, T. F. Stacey. Am. Mach., vol. 61, no. 17, Oct. 23, 1924, pp. 643-644, 1 fig. Presents chart which permits selection of proper gear without any mathematical calculations.

A New Chart for the Design of Spur Gears, H. E. Merritt. Machy. (Lond.), vol. 23, no. 588, Jan. 3, 1924, pp. 457-458, 4 figs. Chart includes all variables introduced in gear-design calculations, and being composed of straight lines throughout, gives results of great degree of accuracy; will cover all possible dimensions, speeds, and stresses met with in practice.

Gear Designing Tables, L. S. Burbank. Machy. (N. Y.), vol. 31, no. 2, Oct. 1924, pp. 141-143. Gives four tables which provide a simple and direct method of determining relation between pitch and power-transmitting capacity of either spur gearing or bevel gearing.

Gears. Maschinenbau, vol. 3, no. 7, Jan. 10, 1924. Contains following articles: High-Grade Spur-Wheel Gear (Hochwertige Stirnradgetriebe

mit Pfeilverzahnung), E. Meyer, pp. 159-163, 7 figs.; Use of Gears in the Reconstruction of Power Plants (Verwendung von Zahnradgetrieben bei Umbauten von Kraftanlagen), H. Klein, pp. 163-166, 8 figs.; Determination of Duration of Contact in Spur Gears (Bestimmung der Eingriffsdauer bei Stirnrädern), J. Dalchau, pp. 166-168, 5 figs.; Aspects for the Design of Friction Gears (Einige Gesichtspunkte für die Konstruktion von Reibungstgetrieben), G. Sacks, pp. 168-175, 30 figs.; Differential Gear (Differentialgetriebe), C. v. Dobbeler, pp. 175-177, 4 figs.

See also Calculation.

Differential. Methods of Machine Tool Design, A. L. De Leeuw. Am. Mach., vol. 60, no. 17, Apr. 24, 1924, pp. 621-624, 5 figs. Differential gearing finds its principal machine-tool application in feed mechanism; differential indexing mechanisms.

Double Helical. Proper Profile of Miller for Double Helical Spur-Gear (Das richtige Profil des Fingerfräsers für Kammwalzen), B. Szöke. Werkstattstechnik, vol. 18, no. 16, Aug. 15, 1924, pp. 417-421, 18 figs. Discusses calculation of theoretically correct construction, and approximations deduced from it, correcting a general error in profile.

Epicyclic. Epicyclic Gears, F. W. and G. H. Lanchester. Instn. Mech. Engrs.—Proc., no. 4, July 1924, pp. 605-631, 17 figs. Notes on function of gear box; epicyclic gear as developed on Lanchester car; definite characteristics of gear boxes; actuating mechanism of epicyclic gear; permissible load carried by teeth and bearings.

Epicyclic Spur-Gear Trains, J. Cryer. Mech. Wld., vol. 76, no. 1969, Sept. 26, 1924, pp. 194-196, 12 figs. Résumé of principles and consideration of applications for ship propulsion and other purposes.

Friction. See FRICTION GEARING.

Gear Sets, Specifications. American Stock Gear-set Specifications. Motor Transport (N. Y.), vol. 29, no. 12, Jan. 15, 1924, p. 421. Specifications of different makes for passenger cars, buses, trucks, and tractors.

Grinding Machines. See GRINDING MACHINES, Gear.

Helical. Helical Gear Problems Simplified, O. M. Burkhardt. Am. Mach., vol. 61, no. 14, Oct. 2, 1924, pp. 529-530. Method of calculation which will render graphical solutions far more accurate than before.

High-Grade Helical Spur Wheel Gears, E. Meyer. Eng. Progress, vol. 5, no. 6, June 1924, pp. 113-117, 7 figs. Cutting teeth; materials; tooth load and velocity; angle of pitch and pitch of teeth; bearings of pinion shaft; toothed wheel gears for vertical shafts; ratio of gearing and output; assembly; lubrication; efficiency; silent running; life and use.

Interference Between Helical Gears on Parallel Shafts, J. B. Arnold. Machy. (N. Y.), vol. 30, no. 7, Mar. 1924, pp. 538-540, 3 figs. Formulas are deduced for redesigning a helical ring gear and pinion to meet requirements of fixed ratio and center distance.

The Graphical Solution of Helical Gear Problems, F. Szabo. Am. Mach., vol. 60, no. 11, Mar. 13, 1924, pp. 391-394, 11 figs. Method for investigating characteristics of helical gearing; approximate solution to problem easily obtainable; trial calculations eliminated; method adapted to all conditions.

See also Double Helical.

Hob Tooth Form. Hob Tooth Form, H. E. Merritt. Machy. (Lond.), vol. 24, no. 613, June 26, 1924, pp. 391-395, 4 figs. Shows that a hob can produce teeth which are mathematically exact involute teeth (neglecting effect of gashes in hob) and examines necessary axial section which hob teeth must have in order to achieve this result.

Involute. Degree of Irregularity of Involute Spur Gears (Ungleichförmigkeitsgrad von Evolventenstirnrädern), C. Miklósy. Werkstattstechnik, vol. 18, no. 6, Mar. 15, 1924, pp. 173-175, 3 figs. Author traces by calculation the irregular course of involute gears and describes method of determining series of cutters for a given degree of irregularity.

Interference in Involute Spur Gears, H. E. Merritt. Machy. (Lond.), vols. 24 and 25, nos. 626, 630, and 631, Sept. 25, Oct. 23, and 30, 1924, pp. 813-815, 97-99, and 145-149, 20 figs. Deals with true involute gears produced by a generating process, devoting attention primarily to those gears generated by a cutter of rack form.

Involute Gear Teeth. Automobile Engr., vol. 14, no. 192, Aug. 1924, pp. 237-242, 8 figs. Notes on interference, undercutting, and conditions of contact in spur gears.

Limiting Cases in Involute Spur Gearing, A. B. Cox. Mech. Eng., vol. 46, no. 11, Nov. 1924, pp. 683-691 and (discussion) 691-692, 15 figs. Derives formulas by means of which it is possible to determine smallest number of teeth that involute spur gear can have and yet be a perfect gear; discusses three sets of limiting cases; presents new polar formula for involute which, it is believed, will serve as valuable tool for further analysis of gearing.

Lubrication. Gearing and Gear Lubricants, A. F. Brewer. Indus. Mgmt. (N. Y.), vol. 68, no. 1, July, 1924, pp. 18-24, 10 figs. Specialized needs of various types of modern gears.

Maag. Speed Reduction in Power Transmission. Colliery Guardian, vol. 128, no. 3337, Dec. 12, 1924, pp. 1500-1501, 7 figs. Some applications of Maag gears in South Wales.

Machining. Machining Change-Gears, A. Clegg. Mech. World, vol. 74, nos. 1925 and 1928, Nov. 28 and Dec. 14, 1923, and vol. 75, no. 1931, Jan. 4, 1924, pp. 318-319, 366-367, and 2-3, 7 figs. Notes on machining change-gear blanks. Deals with handling, chucking, boring, turning, cutting speeds and feeds for both turning and boring, number of cuts that can proceed simultaneously, etc.

Manufacturers' Problems. The Gear Manufacturer Needed, L. G. Hewins. Am. Mach., vol. 60, no. 20, May 15, 1924, pp. 743-746. Three classes of gear users and their needs; gear manufacturers in four classes; need of analysis of customers' requirements and for planning production.

Marine. A Basis for the Explanation of Marine Gearing Troubles, Wm. Sellar. Inst. Mar. Engrs.—Trans., vol. 35, Feb. 1924, pp. 525-570, 63 figs. It is shown that as gears become more accurately cut the more likely will twist and bending of pinion be counted as responsible for troubles that may arise, and author advises designers to look further into subject of bending and twisting of pinion.

Measuring Machines. The Wickman Gear Measuring Machine. Eng. Production, vol. 7, no. 146, Nov. 1924, pp. 317-318, 4 figs. Details of unit for routine testing.

Micarta Silent. Silent Gears for Machine Tools, T. C. Roantree. Machy. (N. Y.), vol. 30, no. 5, Jan. 1924, pp. 363-364, 2 figs. Properties of Micarta gears and applications in machine-tool field.

Noises, Causes and Remedies. Noisy Timing Gears—Causes and Remedies, C. M. Aldrich. Machy. (N. Y.), vol. 31, no. 2, Oct. 1924, pp. 116-121, 4 figs. Fundamental causes of noises in hobbed helical gears, and suggestions for prevent-

ing objectionable noise without resorting to expensive finishing operations.

See also Quiet.

Non-Metallic. Laboratory Tests of Non-Metallic Gears, H. R. Moyer. Am. Mach., vol. 60, no. 14, Apr. 3, 1924, pp. 505-507, 4 figs. Work done to determine strength and endurance; evolution of testing equipment; tests for vibration and effect of oil; reproducing service conditions.

See also Micarta.

Patterns, Metal. See PATTERNS, Metal Gear Patterns.

Pinions, Dynamic Stresses in Rotating. Mathematical Theory of Dynamic Stresses in Rotating Gear Pinions, P. Heymans. Mech. Eng., vol. 46, no. 10, Oct. 1924, pp. 583-587 and (discussion) 587-589, 3 figs. Theoretical study of dynamic stresses in rotating gear pinions developed in course of investigation by photoelastic method of stresses in gear pinions undertaken by Research Laboratories and Ry. Motor Eng. Dept. of Gen. Elec. Co., Schenectady, N. Y., conducted at Mass. Inst. Technology. Shows that in all disturbed elastic media a force applied cyclically along any closed contour results in oscillatory deformations and corresponding dynamic stresses. Likewise in rotating gear pinions a torque acting on perfectly formed and spaced gear teeth sets up similar dynamic stresses.

Planetarium. Projecting Planetarium of the German Museum at Munich (Das Projektions-Planetarium des Deutschen Museums in München), W. Bauersfeld. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 31, Aug. 2, 1924, pp. 793-797, 13 figs. Details of gearing of planetarium made by Zeiss in Jena situated at center of hemisphere and representing motion of heavenly bodies in sense of Ptolemy by system of projecting apparatus.

Planetary. Planetary Gearing, F. DeR. Furman. Machy. (N. Y.), vol. 30, no. 12, and vol. 31, nos. 1, 2, 3, and 4, Aug., Sept., Oct., Nov. and Dec. 1924, pp. 938-941, 6-9, 95-98, 175-178, and 311-314, 22 figs. See also Machy. (Lond.), vols. 24 and 25, nos. 623, 625, 629, and 634, Sept. 4, 18, Oct. 16, and Nov. 20, 1924, pp. 705-708, 802-805, 65-68, and 233-236, 17 figs. Complete treatise on simplified solutions of various planetary-gear problems, including reliable graphical method of checking calculations. Sept.: Review of principles; racks as driving and fixed members; double planet wheels; multiplying and reversing actions. Oct.: Combinations in which arm for planet wheels is keyed to driving shaft; methods of solution when planet wheel arm is an idler. Nov.: Analysis of planet-wheel motion. Dec.: Effects of using different pitches for different pairs of mating gears.

See also HOISTS, Planetary Gearing for.

Quiet, Production of. Quiet Gears and Their Production. Soc. Automotive Engrs.—Jl., vol. 14, no. 5, May 1924, pp. 545-557, 14 figs. Symposium regarding advantages of various production methods adopted by several leading automobile companies for reducing noise of gears and results obtained by use of these methods, containing following papers: Some Sidelights on the Gear Problem, W. R. Griswold; Need of Grinding Carburized and Hardened Gears, O. H. Schafer; Oil-Treated Steel and Ground Gears, L. A. Danse; Polishing and Burnishing of Gear Teeth, R. E. Linn; Checking Tooth-Forms by the Comparator, W. G. Hildorf; and Importance of Accuracy of Tooth-Form, A. H. Frauenthal.

Reduction. See REDUCTION GEARS.

Reversing, Tooth Position for. Calculation of Tooth Position for Spur-Wheel Reversing Gear (Berechnung der Räderstellung für Stirnräderwendegetriebe), K. Hoecken. Maschinenbau, vol. 3, no. 8, Jan. 24, 1924, pp. 197-200, 4 figs. For reversing gear with axially movable and disengageable change wheels, position of teeth when changing is calculated which is necessary to permit the engagement of teeth.

Rotary. Rotary Gear for Driving Machine Tools and Hoists (Kapselgetriebe für den Antrieb von Werkzeugmaschinen und Hebezeugen), O. Keller. Maschinenbau, vol. 3, no. 18, June 26, 1924, pp. 653-655, 7 figs. Details of construction and action of new hydraulic rotary gears with continuous change of ratio and reversing.

Spiral. Chart for Designing Spiral Gears, T. C. Campbell. Machy. (N. Y.), vol. 30, no. 6, Feb. 1924, pp. 460-462. See also Machy. (Lond.), vol. 25, no. 633, Nov. 13, 1924, pp. 214-216, 1 fig. Chart shows at glance all possible gear combinations that may be used, together with number of teeth and approximate spiral angles of all gears of any combination that may be selected.

Spiral Gearing: Measurement of Shaft and Tooth Angles, H. E. Merritt. Mech. World, vol. 76, no. 1976, Nov. 14, 1924, p. 306, 3 figs. Describes method which involves algebraic summation of angles; results show that spiral angle is angle between teeth and axis, and is positive if right-hand, and negative if left-hand; sum of spiral angles is always equal to shaft angle.

Spiral Bevel. Spiral Bevel Gears. Machy. (Lond.), vol. 24, no. 605, May 1, 1924, pp. 138-141, 6 figs. Deals with type produced on Gleason principle in which, owing to spiral effect, tooth thickness cannot be measured on outer circumference as can be done in case of straight-tooth bevel gears, but should be measured across normal section of tooth.

The Application of Spiral Bevel Gears, F. E. McMullen. Am. Mach., vol. 60, no. 20, May 15, 1924, pp. 721-722. Paper presented before Am. Gear Mfrs. Assn.

Tooth Bearing Control for Spiral Bevel Gears, Chas. H. Logue. Am. Mach., vol. 60, no. 15, Apr. 10, 1924, pp. 549-553, 9 figs. Importance of position of bearing along teeth; measurement of blacklash by "pinion inclination"; "pinion intersection"; design and operation of suitable testing machine.

Spur. Standardized Roller for Checking Spur Gears, W. H. Folds. Machy. (Lond.), vol. 23, no. 598, Mar. 13, 1924, pp. 765-767, 3 figs. Writer proposed to standardize, to some extent, roller-check method by use of tables of factors, which makes it possible to use any size roller that will form contact on tooth faces or flanks, and from given diameter of roller overall measurement over roller as it is located in teeth of gear can be calculated.

The Strength of Spur Gears. Automobile Engr., vol. 14, no. 193, Sept. 1924, pp. 262-264, 6 figs. Gives method of accurately estimating stresses involved.

See also Design; Helical; Involute.

Standardization. Further Advances in Gear Standardization. Iron Age, vol. 113, no. 19, May 8, 1924, pp. 1365-1367. Stub tooth standard adopted at Am. Gear Mfrs.' Assn. meeting; progress of other committees.

Proposed Standardization of Gearing. Machy. (N. Y.), vol. 30, no. 5, Jan. 1924, pp. 374-377, 6 figs. Abstract of report before Am. Gear Mfrs.' Assn.

Steel, Heat Treatment of. Heat-Treatment of Steel Gears, J. K. Wood. Am. Mach., vol. 61, no. 15, Oct. 9, 1924, pp. 567-570. Discussion of factors in manufacture of steel gears and proper heat treatment methods for various steels.

Strength of. See Spur.

Stresses in, Photoelastic Analysis. See ELECTRIC MOTORS, Railway; PHOTOELASTICITY, Gear Stresses, Analysis of.

Teeth, Enveloping. "Enveloping" Gear Teeth. Engineering, vol. 117, no. 3035, Feb. 29, 1924, pp. 257-258, 4 figs. Refers to type of tooth which, after exhaustive comparative tests, has been definitely adopted by Vickers Ltd., as Vickers, Bostock & Bramley "enveloping" gear teeth; gives results of tests.

Teeth, Evolution of. Historical Notes on Gear Teeth, L. D. Burlingame. Machy. (N. Y.), vol. 30, no. 7, Mar. 1924, pp. 529-534, 10 figs. Evolution of gear teeth from crude beginnings and early equipment for cutting.

Teeth, Repairing. Repairing a Broken Gear Tooth by Means of Studs, G. H. Radebaugh. Coal Age, vol. 26, no. 11, Sept. 11, 1924, pp. 359-362, 17 figs. Several ways available for repairing broken teeth. Studding is simplest. An accurate templet is necessary to which inserted studs must be fitted.

Teeth, Shape of. Effect of Shape of Tooth on Quality of Gears (Der Einfluss der Zahnform auf die Güte der Verzahnung), G. Olah. Werkstafts-technik, vol. 18, nos. 16 and 17, Aug. 15 and Sept. 1, 1924, pp. 424-427 and 456-461, 25 figs. Proposed standardization of curves of teeth; conditions gearings must fulfill; comparison of different kinds of involute teeth in order to find most favorable shape.

Form of Gear Teeth (Zahnformfragen), G. Karrass. Praktische Maschinen-Konstrukteur, vol. 57, no. 36, Sept. 23, 1924, pp. 489-492, 5 figs. Discusses cycloid and involute teeth and proposes a larger angle of pitch than the 15 deg. used hitherto.

The Influence of Shape of Tooth on Quality of Gearing (Der Einfluss der Zahnform auf die Güte der Verzahnung), G. Olah. Werkstattstechnik, vol. 18, nos. 24, Dec. 15, 1924, pp. 740-743, 7 figs. Contributions to problem of standardization of tooth curves.

Testing. Gear Testing. British Machine Tool Eng., vol. 3, no. 28, July-Aug. 1924, pp. 81-83, 12 figs. Gives methods of testing teeth of gear wheels, illustrating and describing a number of gear-testing jigs.

Gear Testing and Special Production (Zahnräderprüfung und Sonderherstellung), A. Steinle. Werkstattstechnik, vol. 18, no. 6, Mar. 15, 1924, pp. 169-173, 22 figs. Optical testing methods and instruments.

Gear-Tooth Testing, Jos Horner. Engineering, vol. 118, nos. 3073 and 3077, Nov. 21 and Dec. 29, 1924, pp. 696-698 and 821-823, 21 figs. Discusses methods and machines.

Testing and Adjusting Spiral Bevel Gear Drives for Automobiles. Am. Mach., vol. 61, no. 22, Nov. 27, 1924, pp. 848-849, 14 figs. Printed by permission of The Gleason Works, Rochester, N. Y.

Universal Gear Testing Machine, F. Johnstone-Taylor. Machy. (N. Y.), vol. 31, no. 4, Dec. 1924, pp. 289-291, 7 figs. Machine developed by Nat. Phys. Laboratory of Great Britain which may be used for any kind of gear and for recording errors in running of meshed gears.

Tooth-Section Generator. An Improved Photomechanical Tooth-section Generator, H. E. Merritt. Machy. (Lond.), vol. 24, no. 625, Sept. 18, 1924, pp. 777-779, 6 figs. Describes improved form of apparatus for obtaining a large-scale profile of any generated gear-tooth section by a photographic process. Gives a tooth section in white on a black ground.

Transmission. The Schwartzkopf-Huwiler Gear (Das Schwartzkopf-Huwiler-Getriebe). Schweizerische Bauzeitung, vol. 84, no. 25, Dec. 20, 1924, pp. 300-302, 6 figs. A hydraulic transmission gear consisting of pump and motor, single- or double-acting, enabling starting machine tools with motor at full speed.

Types. Various Forms of Gears and Their Uses, G. H. Radebaugh. Coal Age, vol. 26, no. 4, July 24, 1924, pp. 125-126, 20 figs. Spur gears with shafts parallel; bevel gears with shafts at angles but in one plane; worm gears with shafts at right angles but in different planes.

Variable-Speed. A New Variable Speed Gear, O. Keller. Engineer, vol. 137, no. 3558, Mar. 7, 1924, p. 262, 6 figs. Describes Schneider variable-speed gear, new form designed for quick reversal with infiinite range of speed gradation from rest up to full speed in either direction. Translated from Schweiz. Bauzeitung.

Worm. A New Enveloping Worm Gear. Machy. (Lond.), vol. 23, no. 599, Mar. 20, 1924, pp. 819-820, 4 figs. Describes form of worm gear with very high load-carrying capacity, which is extension of principle of straight-line generation to include its application to production of Hindley-type worm tow hich term "enveloping" gear has been applied.

Worm Gears and Windlasses, H. S. Howard. Am. Soc. Nav. Engrs.—Jl., vol. 36, no. 1, Feb. 1924, pp. 18-29. Conclusions and decisions as to future heavy-duty worm gears which may be built: worm gear which was investigated was in windlass of battleship Tennessee.

GELATIN

Amphoteric Character of. The Amphoteric Character of Gelatine and Its Bearing on Certain Electrochemical Phenomena, P. K. Frolich. Am. Electrochem. Soc.—Advance Paper no. 11, for meeting Oct. 2-4, 1924, pp. 153-169, 2 figs. Shows that electrochemical reactions involving gelatin (glue) are readily explained in light of modern knowledge of physical chemistry of proteins. Discusses mechanism of copper deposition from acid electrolytes containing gelatin, and suggests an explanation to account for effect of gelatin as an addition agent in electrodeposition.

Manufacture. The Technology of Gelatin, F. R. Johnson. Armour Engr., vol. 15, no. 2, Jan. 1924, pp. 49-51 and 70, 4 figs. Complete description of manufacture of gelatin.

GEOLOGY

Groundwaters. Notes on Groundwaters, G. F. Loughlin. Economic Geology, vol. 19, no. 1, Jan.-Feb. 1924, pp. 62-71, 2 figs. Deals with (1) deviation from general relation between groundwater surface and land surface; (2) lower limits of groundwater; (3) changes in groundwater level during tertiary and quaternary time; and (4) chemical work of groundwaters.

Isostacy, Theory of. See ISOSTACY.

Tasmania. An Outline of the Economic Geology of Tasmania, L. Hills. Australasian Inst. Min. & Met.—Proc., no. 52, Dec. 31, 1923, pp. 129-147, 1 fig. Discusses ore deposits, their geologic distribution; coal and oil shale; relation of economic geology to hydroelectric power resources.

Venezuela. Geological Excursions in Venezuela (Excursiones Geológicas en Venezuela), E. Cortese. Revista del Colegio de Ingenieros de Venezuela, vol. 2, no. 18, June 1924, pp. 83-91, 1 fig. Details of Carúpano and its surroundings, La Guaira, Catia, Caracas; ore seams, coal formation, etc.

GEOPHONES. See MINE SIGNALING, Geophones; WATER WORKS, Geophones, Use of.

GEOPHYSICS. See MINING, Geophysics in.

GERMANIUM

Atomic Weight of. A Revision of the Atomic Weight of Germanium. The Analysis of Germanium Tetrachloride, G. P. Baxter and W. C. Cooper, Jr. Am. Acad. Arts & Sci.—Proc., vol. 59, no. 10, May 1924, pp. 235-255, 3 figs. Describes method for purification of germanium tetrachloride from arsenic trichloride by fractional distillation in exhausted vessels. Atomic weight of germanium has been found to be 72.60 by analysis of germanium tetrachloride.

GIRDERS

Bending Line, Determination. Graphic Determination of the Bending Line of Members under Compression Based on a Hydrostatic Comparison (Zeichnerische Ermittlung der Biegungslinie gedrückter Stäbe auf Grund eines hydrostatischen Gleichnisses), L. Kulka. Bauingenieur, vol. 5, ons. 5 and 6, Mar. 15 and 31, 1924, pp. 116-121 and 145-149, 12 figs. Method for graphically determining elastic line of solid-web girders under compression.

Calculation. Graphic Tables for Rapid Calculation of Statically Indeterminate Plain Girders and Frames (Graphische Hilfstafeln zur schnellen Berechnung statisch unbestimmter vollwandiger Träger und Rahmen), G. Worch. Beton u. Eison, vol. 23, nos. 16 and 17, Aug. 20 and Sept. 5, 1924, pp. 223-226 and 235-236, 14 figs. Discusses use of alignment charts for intermediary calculations and gives diagrams for calculating influence lines. Numerical examples.

Second Paper on the Calculation of Girders (Second mémoire sur le calcul des colonnes), L. Lemaire. Revue Universelle des Mines, vol. 3, nos. 3, 4, 5, and 6, and vol. 4, nos. 1 and 2, Aug. 1, 15, Sept. 1, 15, Oct. 1 and 15, 1924, pp. 122-142, 193-212, 258-284, 307-323, 17-33, and 89-96, 69 figs. First paper in Annales des Travaux Publics de Belgique, series 2, vol. 22, nos. 1 to 6, 1921, and vol. 23, nos. 1 to 3, 1922. Detailed calculation of wind pressure on walls, etc., in different systems of building construction. Gives numerical tables.

Deflection. Determination of Deflection of Girders of Variable Cross Section (Bestimmung der Durchbiegung von Trägern veränderlichen Querschnitts), Saller. Bauingenieur, vol. 5, no. 20, Oct. 25, 1924, pp. 651-654, 4 figs. Discusses solution of deflection equations by analytical and graphic-analytical methods. From Russian, Technika i Ekonomika, no. 10, 1923.

Deflection-Testing Instrument. The Metrocline. Engineering, vol. 97, no. 3034, Feb. 22, 1924, p. 237, 4 figs. Instrument for ascertaining deflection of bridge girders consists of two main parts, base and deflection rod which slides in vertical pillar standing on base.

Hooks for Lifting. Tests of Some Girder Hooks, H. L. Whittemore and Am. H. Stang. U. S. Bur. Standards—Technologic Paper, no. 260, June 28, 1924, pp. 305-325, 13 figs. Results of tests to determine safety of mild-steel hooks having rectangular cross-sections, used for lifting steel girders.

Latticed. Calculation in the Tracing of Metal Frames (Utilisation du calcul dans le traçage en charpente métallique), A. Bussod. Arts et Métiers, vol. 77, no. 45, June 1924, pp. 227-236, 14 figs. Describes new method in which actual size paper patterns are used and shows its application in girder poles.

Double-Hinged Lattice Frames with Straight Parallel Flanges (Zweigelenk-Fachwerkrahmen mit geraden, parallelen Gurtungen), H. Buchenau. Bautechnik, vol. 2, no. 32, July 25, 1924, pp. 357-359, 3 figs. Simplified calculation of such statically indeterminate wood frames.

Latticed Girders (Gegliederte Knickstäbe), D. Rühl. Bauingenieur, vol. 5, no. 20, Oct. 25, 1924, pp. 671-675, 2 figs. Calculation and structural development of latticed girders. Discusses buckling strength and loads, and shows good agreement between theory and practice.

Latticed Girders Without Diagonal Rods (Poutres à treillis sans diagonales), P. Thomas. Revue Universelle des Mines, vol. 4, no. 4, Nov. 15, 1924, pp. 209-216, 8 figs. Discusses calculation of Vierendeel girders and endeavors to establish simpler formulas and greater degree of accuracy in calculation.

New Type of Wood Joint Using Disk Dowels (Neue Holzverbindung durch Krallenscheibendübel), T. Gesteschi. Deutsche Bauzeitung, vol. 58, no. 42, May 24, 1924, pp. 81-86, 11 figs. Discusses Metzke and Greim method of connection by new kind of dowel; results of tests of latticed girders thus constructed.

Shear, Effect of Taper on. The Effect of Slight Taper on Shear in a Girder, L. N. G. Filon. Engineering, vol. 118, no. 3076, Dec. 12, 1924, p. 789, 2 figs. Results of author's calculations show that taper, even slight, may seriously disturb the de Saint-Venant parabolic distribution of shear over section, although Euler-Bernouilli formula for normal stress remains a good approximation; presents formula which provides simple and easily applied correction to shear over any region in which there exists uniform taper.

Ship. See SHIP DESIGN, Girders.

Transverse Oscillations. Theory of Transverse Oscillations in Girders and Its Relation to Live-Load and Impact Allowances, Chas. E. Inglis. Engineering, vol. 117, no. 3038, Mar. 21, 1924, pp. 378-380. Notes on phenomena attending behavior of girders under influence of dynamical loads. Abstract.) Paper read before Instn. Civ. Engrs.

GLASS

Alkali-Lime. Durability of Alkali-Lime Glass (Ueberblick über die Haltbarkeit der Alkali-Kalk-Gläser), G. Keppeler. Sprechsaal, vol. 57, no. 48, Nov. 27, 1924, pp. 617-622, figs. Reviews various investigations and gives tabular data as to composition, etc., of durable sodium-silicate glasses (for windows and mirrors), alkali-lime-silicate glasses, and alkali-silicate glasses of various durabilities. Graphs of composition of hydrolytic and other glasses.

Alumina, Influence of. Further Investigations of the Influence of Alumina on the Properties of Glass, Violet Dimbleby, S. English, F. W. Hodkin and W. E. S. Turner. Soc. Glass Technology—Jl., vol. 8, no. 31, Sept. 1924, pp. 173-181. Fusibility of glasses containing alumina; observations on melting and working of glasses; physical properties.

Analysis of Raw Materials. Analytical Methods in the Glass Industry, A. Lecrenier. Chem. Trade Jl. & Chem. Engr., vol. 75, no. 1949, Sept. 26, 1924, pp. 363-364. Information relating to laboratory practice at Val-St.-Lambert glass works; estimation of iron in sand; soda and potash products; slaked lime and limestone; estimation of iron and copper in lead oxide; analysis of lead-free glass and of lead-containing glass. Translated from Le Verre.

Colloids in. Colloids in Glass, A. Silverman. Am. Ceramic Soc.—Jl., vol. 7, no. 11, Nov. 1924, pp. 795-802. Discussion of the various elements and compounds found in a colloidal state in glass. Theories and experimental evidence are furnished to account for formation and destruction of colloidal state.

Electrical Conductivity. Correlation Between Crack Development in Glass While Conducting

Electricity and the Chemical Composition of the Glass, E. E. Schumacher. Am. Chem. Soc.—Jl., vol. 46, no. 8, Aug. 1924, pp. 1772-1777, 2 figs. Results of experiments show that tendency to crack increases with increasing alkali content of glass and with increasing electric conductivity.

Electrical Conductivity and Transition Points of Glasses (Ueber die elektrische Leitfähigkeit und Umwandlungspunkte von Gläsern), H. Schönborn. Zeit. für Physik, vol. 22, no. 5, Mar. 28, 1924, pp. 305-316, 5 figs. Variations in electrical resistance of 12 glasses measured over "critical zone" or "annealing range." Law of Hinrichsen and Rasch found to hold, even above softening point, but constants change suddenly at upper and lower limits of critical zone.

Glazing, Specifications for. United States Government Master Specification for Flat Glass for Glazing Purposes. U. S. Bur. Standards—Circular no. 164, June 4, 1924, 12 pp. See also Glass Indus., vol. 5, no. 7, July 1924, pp. 129-132 and Glass Workers, vol. 43, no. 34, May 24, 1924, pp. 11, 20, 22-24, 26, and 29. Specifications adopted Apr. 1, 1924, covering glass for glazing purposes, polished plate glass, clear window glass, wire glass, etc.

Grinding. Glass Grinding at Fisher Body Corporation, E. C. Hughes. Automotive Mfr., vol. 66, no. 9, Dec. 1924, pp. 18-19 and 29, 4 figs. Methods and equipment used in preparation of closed-car body windows; how edges are ground.

Hydration. Hydration of Natural and Artificial Glasses (Ueber die Hydration natürlicher und künstlicher Gläser), G. Schott and G. Linck. Kolloid-Zeit., vol. 34, no. 2, Feb. 1924, pp. 113-116, 5 figs. Measurements of rate at which obsidian, pitchstone, and artificial glasses take up water when finely powdered substances are heated with water at about 250 deg. and 35 atmos. pressure; results suggest that process of taking up water is not usually one of chemical combination, but of inhibition by a gel.

Molten, Electrical Conductivity of. The Electrical Conductivity of Sodium Chloride in Molten Glass, W. J. Sutton and A. Silverman. Am. Ceramic Soc.—Jl., vol. 7, no. 2, Feb. 1924, pp. 86-104, 4 figs. Results of investigation undertaken primarily to show that sodium chloride ionizes in molten glass as it does in aqueous solution, and also when pure salt is heated to temperatures at or above its melting point. Bibliography.

Optical. Optical Glass: A Strategic Raw Material, H. K. Rutherford. Army Ordnance, vol. 5, no. 25, July-Aug. 1924, pp. 423-426 and 481. Discusses source of supply, domestic manufacturing facilities, conservation and strategic importance.

Organic. Pollopas—Organic Glass. A New Synthetic Colloid, F. Pollak and K. Ripper. Chem. Age (N. Y.), vol. 32, no. 10, Oct. 1924, pp. 409-412. New condensation product of urea and formaldehyde recently evolved by authors; material closely resembles rock crystal, flint glass or lead glass in appearance, but with remarkable difference that it can be cut and worked ont a lathe; soluble intermediate products obtained are called Shellan solution; colloid-chemical investigation; further developments; properties of new colloid material; Shellan solutions which may be employed as lacquers and adhesives.

Physical Properties. The Physical Properties of Glasses (Die physikalischen Eigenschaften der Gläser), F. Eckert. Jahrbuch der Radioaktivität u. Elektronik, vol. 20, no. 2-3, Feb. 14, 1924, pp. 93-275, 24 figs. Optical properties; electric, mechanical and thermal properties. Classified bibliography.

Surface Irregularities Determination, Instrument for. The Umbrascope, C. D. Spencer and A. E. Badger. Glass Indus., vol. 5, no. 7, July 1924, pp. 119-121, 6 figs. Describes instrument for determination of surface irregularities of transparent, light wall, glass containers.

Titania, Influence of. Some Observations on the Influence of Titania on the Properties of Glass, A. R. Sheen and W. E. S. Turner. Soc. Glass Technology—Jl., vol. 8, no. 31, Sept. 1924, pp. 187-205, 8 figs. Preliminary experiments on fusibility of mixtures containing titania; colors of titania-containing glasses; preparation and composition of glasses studied; analysis of glasses; influence of titania on annealing temperature; its influence on dispersion.

Viscosity. The Effect of Composition on the Viscosity of Glass, S. English. Soc. Glass Technology—Jl., vol. 8, no. 31, Sept. 1924, pp. 205-248 and (discussion) 248-251, 11 figs. Investigation of series of glasses at temperatures extending up to 1400 deg.

GLASS MANUFACTURE

Automobile Plate Glass. River Rouge Automobile Plate Glass Factory, J. W. Robinson. Eng. News-Rec., vol. 93, no. 10, Sept. 4, 1924, pp. 376-379, 7 figs. Describes glass works recntly constructed for Ford Motor Co. Has annual capacity of 10,000,000 sq. ft. of automobile glass. Solid walls and roof of steel sash and wire glass dictated by lighting and ventilation requirements. Conveyors make operations mechanical.

The Manufacture of Plate Glass for Automobile Uses, J. H. Fox. Soc. Automotive Engrs.—Jl., vol. 15, no. 5, Nov. 1924, pp. 449-455. History of glass making; manufacturing polished plate glass; melting pots; pot furnaces; batch materials; casting the metal; annealing the plates; examination and cutting of rough plates; grinding and polishing; continuous process for making polished plate glass; quality desired in automobile glass; thickness specifications; salvage of waste glass.

The River Rouge Plate Glass Plant of the Ford Motor Company, F. J. Huntley. Glass Indus., vol. 5, no. 7, July 1924, pp. 122-124, 4 figs. Describes new factory in operation.

Calculations. Principles of Glass Making, R. R. Shively. Ceramist, vol. 4, no. 4, July 1924, pp. 237-243. Simple classification of raw materials used in glass making, including method of calculating amount of one material necessary to replace chemically any other.

Colored Glass. Colored Glasses in Hollow Glass Works, C. Duvivier. Glass Industry, vol. 5, no. 12, Dec. 1924, pp. 229-231. Deals with blue, green, violet, yellow, dichroic and red glass.

The Production of High Grade Colorless Glass in Tank Furnaces, G. O. Smith. Glass Industry, vol. 5, no. 1, Jan. 1924, pp. 1-2. Deals with use of selenium as a decolorizer for flint glass in tanks, discussing factors which are important in ascertaining amount necessary under different conditions.

Combustion Problems. See COMBUSTION, Problems.

Containers, Specifications for. Specifications in the Glass Industry, with Special Reference to Soda-Lime Glasses for Glass Containers, W. E. S. Turner. Soc. Glass Technology—Jl., vol. 8, no. 29, Mar. 1924, pp. 3-12 and (discussion) 12-30. Suggestions for specification for glass manufacturers. Discusses essentials which each type of container should possess, essentials which are not obvious to purchaser, and therefore require that they shall be laid down by technical workers.

Devitrification. Devitrification Phenomena in Practice in Glass-Factory Operation (Ueber die Entglasungsercheinungen in der Praxis der Glashütten-Betriebe), J. Knoblauch. Sprechsaal, vol. 57, no. 21, May 23, 1924, pp. 234-240, 16 figs.;

also (translation) in Glass Industry, vol. 5, nos. 11 and 12, Nov. and Dec. 1924, pp. 206-210 and 232-233, 11 figs. Discusses devitrification phenomena caused by temperature variations and illustrates devitrified structures produced in actual practice under influence of temperature in glass mass in furnace.

Engineering Problems. The Past and Future of Glass Technology (Glastechnik in Vergangenheit und Zukunft), H. Schulz. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 21, May 24, 1924, pp. 505-508. Influence of modern chemistry, progress in firing and finishing; modern glass engineering based on physico-chemical principles; future problems.

Flat Glass. Flat Glass, A. E. Fowle. Glass Industry, vol. 5, no. 6, June 1924, pp. 99-104, 2 figs. Early history of flat glass; development of flat glass in America; hand process; Colburn developments; Libbey-Owens process; etc.

Fuel Economy in. Fuel Economy, H. W. Seldon. Ceramist, vol. 5, no. 2, Nov. 1924, pp. 105-117. Discusses fuel economy in glass plants. Summary of operating instructions with explanation of each illustrating important points to be recognized and established; pyrometers and other instruments; fuel combustion; kinds of fuel and burning; gas producers.

Furnace Refractories. See REFRACTORIES, Glass-Furnace.

Furnaces. Calculation of Stacks for Glass Furnaces (Schornsteinberechnungen für Glasschmelzöfen), O. Maetz. Sprechsaal, vol. 57, no. 21, May 23, 1924, pp. 243-249, 5 figs. Determination of dimensions on exact precalculation, gives graphs for draft at given heights, utility of waste gases.

Design of a 14-Pot Recuperative Glass Furnace, E. W. Koering. Glass Industry, vol. 5, no. 6, June 1924, pp. 105-109, 3 figs. A common method of designing a recuperative glass furnace.

Thermotechnical Investigation of Glass Furnaces (Wärmetechnische Untersuchungen am Glassofen), G. Gehlhoff, O. Ricklefs and W. Schreiber. Zeit. für Technische Physik, vol. 5, no. 6, 1924, pp. 278-287, 4 figs. Efficiency of open Siemens furnace with step grate referred to maximum heating value is 65 per cent in firing brown coal. Determination of heat balance.

Fused Silica Glassware. The Manufacture and Uses of Fused Silica Glasswares. Ceramist, vol. 4, no. 1, Apr. 1924, pp. 36-43. Manufacture of opaque and of transparent silica wares; comparison of properties of fused silica and hard porcelain.

Gas, Use of. Using Gas in the Glass Industry (Die Gasverwendung in der Glasindustrie), K. Otto. Gas- u. Wasserfach, vol. 67, nos. 50 and 51, Dec. 13 and 20, 1924, pp. 753-755 and 772-775, 10 figs. Development of glass industry due to use of gas; gas-fired regenerative furnaces; production of generator gas for furnaces; application of gas in production processes of various glass articles.

Glassware Temperatures Determination. Determination of Glassware Temperatures, J. Voorhies. Fuels & Furnaces, vol. 2, no. 7, July 1924, pp. 679-681. Describes method offering means by which temperature of glassware, bottles, etc., leaving mold may be obtained with fair degree of accuracy.

Laboratory Analyzing Methods. Methods of Analysis of the Laboratory of the Crystal Glass Works at Val-Saint-Lambert, A. Lecrenier. Glass Industry, vol. 5, no. 10, Oct. 1924, pp. 187-189. Description of methods which have been used for about 15 years in laboratory of crystal glass works of Val-St.-Lambert, Belgium, for analysis of sand, soda ash, potash, limestone, lead, glass, nitrate of potash, nitrate of soda, manganese, and hydrofluoric acid. Translated from Verre, vol. 4, June 1924, pp. 125-129.

Optical Glass. Production and Properties of Optical Glass (Herstellung und Eigenschaften des optischen Glases), F. Weidert. Praktische Maschinen-Konstrukteur, vol. 57, nos. 26 and 30, July 15 and Aug. 12, 1924, pp. 375-379, and 425-428, 9 figs. Development of Sendlinger optical glass works, main points in judging optical glass, details of production, chemical and physical properties of optical glass; ceramic, chemical, fusion and physical laboratories and their work.

Plate Glass. See Automobile Plate Glass.

Pot Clays. See CLAY PRODUCTS, Glass-House Pots.

Principles. Principles of Glass Making, R. R. Shively. Ceramist, vol. 4, nos. 5 and 6, Aug. and Sept. 1924, pp. 287-293 and 371-374. Aug.: Recent glass developments, their cause and effect. Sept.: Use of selenium in glass.

Pyrometers, Use in. See PYROMETERS, Glass Furnaces.

Sheet-Glass Drawing, Fourcalt Process. The Fourcalt Process of Drawing Sheet Glass at Clarksburg. Glass Industry, vol. 5, no. 4, Apr. 1924, pp. 59-68, 18 figs. Description of process and new plant of Am. Sheet Glass Co. at Clarksburg, W. Va.

Tank Operation. Operating Glass Tanks, B. Schieldrop. Fuels & Furnaces, vol. 2, nos. 3, 4, and 5, Mar., Apr., and May, 1924, pp. 261-264, 367-369, and 467-469, 6 figs. Regenerators, ports and reversing valves; radiation losses.

Thermos Bottles. Examination and Evaluation of Thermos Bottles [Prüfung und Bewertung von Isolierflaschen (Wärmeschutzflaschen)], M. Jakob. Gesundheits-Ingenieur, vol. 47, no. 30, July 26, 1924, pp. 321-323, 3 figs. Discusses methods for determining efficiency of thermos bottles and gives formulas for purpose.

Thermotechnical Measurements. Thermotechnical Measurement in Glass Factories (Vom wärmetechnischen Messwesen in Glashütten), H. Maurach. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 21, May 24, 1924, pp. 520-524, 15 figs. Practical experiences and improvements; temperature-measuring instruments for temperatures above 1000 deg. cent.; gas-pressure measurements and regulators; gas investigations and automatic gas testers.

Tubes. Mechanical Drawing of Tubes (Mechanisches Röhrenziehen), H. Thiene. Sprechsaal, vol. 57, no. 21, May 23, 1924, pp. 250-251, 7 figs. Discusses German patent 384,796 and Austrian patents 89,670 and 89,671, describing simple process for mechanical drawing of glass tubes, owned by Libbey Glass Co., Toledo.

Wire Glass. The Manufacture of Wire Glass (Die maschinelle Herstellung von Drahtglas), R. Simon. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 21, May 24, 1924, pp. 509-514, 28 figs. Historical development of manufacturing processes; special constructions of rolling devices; plates, rolling out between rolls; wire glass; advantages and disadvantages of Appert and Shuman processes; special constructions of rolling devices; rolling tables and machines; universal glass-rolling machine; future prospects.

GLASS WORKS

Materials Handling in. See MATERIALS HANDLING, Glass Plants.

GLIDERS. See AIRPLANES, Gliders.

GLUES

Adhesive Power. Adhesive Power of Glue and Gelatin (Ueber die Klebkraft von Leim und Gela-

tine), O. Gerngross and H. A. Brecht. Zeit. für angewandte Chemie, vol. 37, no. 43, Oct. 23, 1924, pp. 847-848, 1 fig. States that adhesive power of gelatins is much higher than that of technical glues of same concentration. Results of tests of glues and gelatins.

Manufacture. Value of Systematic Examination in Glue Manufacture (Ueber den Wert systematischer Untersuchungen in der Leimfabrikation), E. Sauer. Chemiker-Zeitung, vol. 48, nos. 83 and 86, July 10 and 17, 1924, pp. 473-475 and 500-501. Discusses properties of leather and bone glues, viscosity measurement, effect of heat and steam under pressure on glue solutions, etc., and gives results of tests.

GLYCERINE

Use in Hydraulic Machinery. See HYDRAULIC MACHINERY, Glycerine, Use in.

GOLD

Deposits. See GOLD DEPOSITS.

Metallurgy. See GOLD METALLURGY.

Mines. See GOLD MINES.

Mining. See GOLD MINING.

Production, Canada. Canada as a Gold Producer, L. D. Huntoon. Min. & Metallurgy, vol. 5, no. 211, July 1924, pp. 315-322, 8 figs. World's gold production. Analysis of Canada's gold production. Railroad building keeping up with prospectors.

Soldering. See SOLDERING, Gold and Silver.

GOLD DEPOSITS

Austria. Goldfield of the Eastern Alps (Das Goldfeld der Ostalpen und seine Bedeutung für die Gegenwart), R. Canaval. Berg- u. Hüttenmännisches Jahrbuch, vol. 72, no. 2, 1924, pp. 25-48. Details of gold fields of Masse, Bohemia, and central Alps between meridians of Zell and Ziller.

British Columbia. Hillsbar Gold Claims, Yale District, B. C., C. E. Cairnes. Can. Dept. Mines, Geol. Survey, no. 2031, summary report, 1924, part A, pp. 81A-83A. There are eight claims in two parallel and adjoining rows of four claims each; rocks represented include slate, granodiorite, and occasional porphyritic dykes.

California. The Gold Ores of Grass Valley, California, E. Howe. Economic Geology, vol. 19, no. 7, Nov. 1924, pp. 595-619 and (discussion) 619-622, 4 figs. Evidence is presented that leads to conclusions that quartz veins were formed by replacement; it is shown that introduction of gold followed fracturing of quartz due to slight movements on vein fissures and that occurrence of ore in shoots is to be attributed largely to this mechanical cause.

Dutch Guiana. The Goldfield of Dutch Guiana, B. W. Holman. Min. Mag., vol. 30, no. 2, Feb. 1924, pp. 85-89, 5 figs. Description of goldfields, and method of testing deposits.

Idaho. Geology and Gold Resources of North Central Idaho, F. A. Thomson and S. M. Ballard. Idaho Bur. Mines of Geology—Bul., no. 7, 1924, 127 pp., 53 figs. Geography, physiography, and geology; rocks of area; dikes and veins; minerals and ore deposits; lode mining districts and typical properties.

Nova Scotia. Nova Scotian Geology, S. Brunton. Can. Min. Jl., vol. 45, no. 29, July 18, 1924, pp. 689-693, 15 figs. See also Min. Mag., vol. 31, no. 6, Dec. 1924, pp. 339-342, 1 fig. Discusses gold field geology and advocates more scientific methods of investigation hitherto neglected as basis of future research and development.

Ontario. Notes on the Geology and Ore Occurrences of the Porcupine Goldfield, R. C. Feilding. Instn. Min. & Metallurgy—Bul., nos. 232, 234, and 251, Jan., Mar., and June, 1924, 20 pp., 8 pp., and 17 pp., 2 figs.

Quebec. Extension of the Porcupine Gold Belt Into Quebec, D. G. H. Wright and W. E. Segsworth. Eng. & Min. Jl.-Press, vol. 117, no. 19, May 10, 1924, pp. 763-764, 1 fig. Geology of Quebec extension of northern or Porcupine gold belt, a district which seems to warrant intensive prospecting.

The Arntfield Prospect. Can. Min. Jl., vol. 45, no. 19, May 9, 1924, pp. 449-450, 2 figs. Discovery, development, financing, and description of gold property in northwestern Quebec.

The Goldfields of North-Western Quebec, S. Brunton. Min. Mag., vol. 31, no. 2, Aug. 1924, pp. 137-146, 7 figs. General account of a new gold region in Canada which is at present attracting much attention, including geology, properties developed, legislation, travel routes, health regulations and official surveys.

Queensland, Australia. Report on Thanes Creek and Talgai Goldfields, Warwick, J. H. Reid. Queensland Govt. Min. Jl., vol. 25, no. 293, Oct. 1924, pp. 365-366. Present conditions; prospects of field.

Siberia. The New Gold-Bearing Districts of East Siberia, V. Obruchev. Russian Min. Jl., vol. 100, nos. 1, 2, and 3, Jan., Feb., and Mar. 1924, pp. 2-7, 162-169, and 283-291, 2 figs. (In Russian.)

The Selemdja Alluvial Gold Deposits, Amur Province, Eastern Siberia, G. T. Eve. Min. Mag., vol. 31, no. 4, Oct. 1924, pp. 201-205, 2 figs. Account of gold deposits on Selemdja River and its tributaries, chief center of gold mining in Amur Province, with notes of past and present scales of operation.

South Africa. The Leeuwpoort Gold Area. S. African Jl. of Industries, vol. 7, no. 4, Apr. 1924, pp. 211-218. Report made to Minister of Mines and Industries on gold values and possibilities of mining development in area lying immediately to east of farm Leeuwpoort, South Africa.

GOLD METALLURGY

Anodic Oxidation. Anodic Gold Oxidation (Ueber anodische Goldoxydation), F. Jirsa and H. Jelinek. Zeit. für Elektrochemie, vol. 30, no. 6, June 1924, pp. 286-289, 2 figs. By means of equilibria in solubility of auric hydroxide in sulphuric acid of varying concentrations, determination is made of solubility product of this hydroxide; describes method followed.

Chlorination. Electro-Cyanide Mill of the Oatman United. Ariz. Min. Jl., vol. 8, no. 12, Nov. 15, 1924, pp. 3-4, 2 figs. Describes Sill and Sill method of recovering values by electrocyanide, chlorination process which is being installed at new mill of Oatman United Gold Min. Co.

Concentration. The Concentration of Gold-Copper Ores by Froth Flotation at Tul Mi Chung. The Seoul Mining Company, Korea, R. J. Lemmon. Instn. Min. & Met.—Bul., no. 235, Apr. 1924, 37 pp., 5 figs. Further contributed remarks on this paper.

Cyanidation. A Research to Determine the Size of the Gold Particles in the Witwatersrand Banket Ore and Their Rate of Solution in Cyanide, K. L. Graham and F. Wartenweiler. Chem., Met. & Min. Soc. S. Africa—Jl., vol. 24, no. 12, June 1924, pp. 285-291 and (discussion) 291-292, 6 figs. See also Instn. Min. & Met.—Bul., no. 239, Aug. 1924, 8 pp. 7 figs., partly on supp. plates. Results of research; it is concluded that particles of gold are irregular in shape with generally rounded contours, and that in grinding

process employed, they are reduced in size in accordance with extent of grinding and completeness of means of classification which continually returns the oversize for further comminution.

Calcined Dolomite as a Substitute for Lime in the Recovery of Gold and Silver by the Cyanide Process, E. S. Leaver, C. W. Davis and J. A. Woolf. U. S. Bur. Mines—Reports of Investigations, no. 2648, Oct. 1924, 7 pp. See also Pit & Quarry, vol. 9, no. 4, Nov. 15, 1924, pp. 95-98. Results of experiments to determine value of calcined dolomite as substitute for lime in cyaniding gold and silver ores; it is concluded that calcined dolomite should not be purchased for this purpose without thorough investigation as to its action on ore to be treated and its effect on all operations connected with plant practice.

Continuous Vacuum Filters in Cyaniding, B. D. Kelly. Eng. & Min. Jl.-Press, vol. 118, no. 15, Oct. 11, 1924, pp. 569-573, 5 figs. Success of filtration of decantation tailings at Hollinger inspires further work; series filtration now used at Argonaut (Ont.); flow sheets suggested.

"Protective Alkalinity," and the Use of Alkali, in Cyanidation, J. R. H. Robertson. Instn. Min. & Metallurgy—Bul., no. 242, Nov. 1924, 23 pp. Results of experience in treatment and testing of materials bearing gold and silver.

Cyanide Solutions, Dissolved Oxygen Determination. Determination of Dissolved Oxygen in Cyanide Solutions, A. J. Weinig and M. W. Bowen. Am. Inst. Min. & Met. Engrs.—Trans., Advance paper no. 1361-M, Sept. 1924, 9 pp., 4 figs. Describes method which is a modification of Schutzenberger's whereby solution in titrations and standards are protected from atmosphere by a layer of kerosene. Indigo-disulphonate is indicator and sodium hydrosulphite standard.

Ore Treatment. Mining and Milling Rich Gold Ore on Chichagof Island (Alaska), H. N. Baumann, Jr. Eng. & Min. Jl.-Press, vol. 117, no. 22, May 31, 1924, pp. 876-879, 5 figs. Company operating deposit recovered gold, free but finely divided, by amalgamation and flotation concentration. Shut down in July 1923, mine recently has been reopened.

Treatment of Gold-bearing Quartz of the Kolar Gold Field, R. H. Kendall and A. F. Hosking. Instn. Min. & Metallurgy—Bul., no. 242, Nov. 1924, 39 pp., 19 figs. Practice now in vogue at Mysore, Champion Reef, Ooregum, Nundydroog, and Balaghat mines, as regards treatment of current ore and in re-treatment of accumulated tailings.

Recovery from Pyrrhotite-Containing Ores. The Recovery of Gold and Silver From Ore Containing Pyrrhotite, W. H. Goodchild and F. L. Wilder. Min. Mag., vol. 31, nos. 1, 4, and 5, July, Oct. and Nov. 1924, pp. 18-21, 208-211, and 285-288. July: Hidden dangers of pyrrhotite group of minerals as they affect gold and silver mining. Oct.: Various means whereby difficulties may be successfully surmounted. Nov.: Seven principal points to be considered in extracting precious metals from pyrrhotite-bearing ore.

South Africa. Gold Metallurgy in the Union of South Africa, H. A. White. So. African Eng., vol. 35, nos. 6 and 7, June 30 and July 31, 1924, pp. 113-114 and 146-147. Account of present position and future prospects; practice in crusher-house and sorting plant, mill, tube mills, and plate-house, cyanide works, slime plant and floating gold leaf.

Washing Auriferous Gravel. Practical and Theoretical Study of the Washing of Auriferous Gravel in Mining District of Kilo-Moto (Belgian Congo) (Etude pratique et théorique du lavage des gravures aurifères, etc.), R. Anthoine, M. Gomrée and R. de Lannoy. Revue Universelle des Mines, vol. 67, no. 1, Jan. 1, 1924, pp. 19-37, 12 figs. Results of prolonged investigation at Uélé mines.

GOLD MINES

Africa. The Shamva Gold Mine, J. M. Maclaren. Min. Mag., vol. 31, no. 6, Dec. 1924, pp. 329-339, 6 figs. Report on geology of Shamva gold mine, Rhodesia, made for Gold Fields Rhodesian Development Co., Ltd.

Australia. Sons of Gwalia Gold Mine, W. A. Chem. Eng. & Min. Rev., vol. 16, no. 183, Dec. 5, 1923, pp. 95-97. History of mine, surface equipment, and ore treatment.

The Ortona Gold Mines, O. M. Williams. Queensland Govt. Min. Jl., vol. 25, no. 286, Mar. 15, 1924, pp. 87-88. Geology, and work in progress.

British Columbia. The Windpass Gold Mine, Chu Chua, B. C., W. L. Uglow. Can. Min. Jl., vol. 45, no. 2, Jan. 11, 1924, pp. 47-49, 4 figs. Location, topography, history, geology, and description of Windpass vein.

Germany. Gold Mining in Germany, S. P. Grosse. Eng. & Min. Jl.-Press, vol. 117, no. 19, May 10, 1924, p. 765. Old properties in Bavaria reopened by Fichtelgold Co.

Japan. Geology of the Sadi Gold Mine, in Japan, H. Nishihara. Eng. & Min. Jl.-Press, vol. 118, no. 4, July 26, 1924, pp. 137-138, 3 figs. Gives geology of mine.

Manitoba. The Bingo Mine. Can. Min. Jl., vol. 45, no. 40, Oct. 3, 1924, pp. 981-983. Details of development work, mill, and tests of mine situated in Northern Manitoba.

Ontario. Electric Load at McIntyre-Porcupine Mines, A. R. Webster. Can. Min. Jl., vol. 45, no. 7, Feb. 15, 1924, pp. 151-153, 1 fig. Power required, and description of electric equipment.

Quebec. Developments in the Quebec Gold Belt, W. M. Goodwin. Can. Inst. Min. & Metallurgy—Bul., no. 143, Mar. 1924, pp. 188-198, 3 figs. Gold mining and agriculture; general geology; gold occurrences; principal properties now being developed.

Noranda Mines. Can. Min. Jl., vol. 45, no. 19, May 9, 1924, pp. 455-458, 4 figs. First annual report of this exploration company, describing Horne and Chadbourne gold properties in northwestern Quebec.

The Rouyn-Boischatel Gold Area. Can. Min. Jl., vol. 45, no. 15, Apr. 11, 1924, pp. 346-348, 3 figs. Notes on operating properties in gold district of northwestern Quebec.

The Rouyn Gold Area, W. M. Goodwin. Can. Min. Jl., vol. 45, no. 43, Oct 24, 1924, pp. 1049-1052, 5 figs. In northwestern Quebec. Account of preparations for winter work, transportation facilities, administration of Quebec mining act, and features that are an integral part of development of any mining district.

Rhodesia. The Shamva Mines, Rhodesia, C. E. Parsons. Instn. Min. & Met.—Bul., no. 234, Mar. 1924, 10 pp., 2 figs. on supp. plates. See also (discussion) no. 235, Apr. 1924, 3 pp. Brief description of deposit: data on mining practice, tramming, ore treatment, sampling, working expenses, prospecting, etc.

Venezuela. The Goldfields of El Callao. Min. Jl., vol. 146, no. 4639, July 19, 1924, pp. 589-590. Revival due to promising discoveries enabling mines to be opened up with good results. Details of geology and present operations.

GOLD MINING

Alaska. Estimation of Ore Reserves and Mining Methods in Alaska Juneau Mine, P. R. Bradley. Am. Inst. Min. & Met. Engrs.—Trans., no.

1329-M, Mar. 1924, 19 pp., 2 figs. Brief history of mining and milling operations in Juneau gold belt, and description of geology of district, followed by discussion of problem of sampling gold ores, and mining methods used.

Australia. Gold Mining at Brookfield, C. C. Morton. Queensland Govt. Min. Jl., vol. 25, no. 288, May 15, 1924, pp. 169-172, 1 fig. Gives geology and general description of mine.

Colorado. Mining Methods of the Telluride District, C. N. Bell. Am. Inst. Min. & Met. Engrs.—Trans., no. 1295-M, Feb. 1924, 15 pp., 2 figs., also (abstract) Min. & Metallurgy, vol. 5, no. 206, Feb. 1924, pp. 91-93, 2 figs. Geology of district in southwestern Colorado, and methods employed, including filled stope, shrinkage stope, timbering, hoisting, etc.; power, sorting, explosive, labor, and other costs.

Dredges. See DREDGES, Diesel-Electric; DREDGING, Gold.

Nevada. Mining Methods at Gold Hill, Nevada, G. J. Young. Eng. & Min. Jl.-Press, vol. 117, no. 23, June 7, 1924, pp. 916-921, 11 figs. Description of United Comstock's underground operations.

Siberia. Methods of Gold Mining in Eastern Siberia, A. P. Sviridoff. Eng. & Min. Jl.-Press, vol. 118, no. 7, Aug. 16, 1924, pp. 251-258, 9 figs. Gives methods and cost of prospecting and working mines in gold-mining districts of Eastern Siberia.

South Africa. How Gold Mining on the Rand Has Made History, O. Letcher. Compressed Air Mag., vol. 29, no. 10, Oct. 1924, pp. 1030-1033, 9 figs. Points out that present rate of output of greatest gold field and largest mining camp amounts to 55 per cent of world's current production; methods employed.

GOVERNORS

High-Speed Steam Engines. The Governing of High-Speed Steam Engines. Power Engr., vol. 19, no. 214, Jan. 1924, pp. 25-27, 3 figs. Notes advocating expansion or cut-off governors, stating case according to experience of W. Sisson & Co.

Hydraulic-Turbine. See HYDRAULIC TURBINES, Governors.

Speed-Responsive, Test Code for. Test Code for Speed-Responsive Governors. Mech. Eng., vol. 46, no. 11, Nov. 1924, pp. 713-716, 1 fig. Preliminary draft of special supplementary code formulated by A. S. M. E. committee on Power Test Codes.

Steam-Engine. See STEAM ENGINES, Governors.

Steam Haulage Engines. The Governors of Steam Haulage Engines (Die Fahrtregler der Dampffördermaschinen), H. Hoffmann. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 47, Nov. 22, 1924, pp. 1214-1218, 10 figs. Supplementary to author's previous article published in same journal, vol. 66, 1922 (see reference in Eng. Index 1922, p. 313); discusses flow regulation and describes operation and construction of Iversen governor in particular.

GRAIN ELEVATORS

Explosions. Dust Explosions in Grain Elevators, D. J. Price. Wld. Ports, vol. 12, no. 6, Apr. 1924, pp. 47-72 and (discussion) 72-78, 6 figs. Discusses causes of explosions in grain elevators and some methods of control and prevention. Value of educational work.

Mechanical and Pneumatic. Mechanical and Pneumatic Grain Elevators (Mechanische und pneumatische Elevatoren für Getreide), Mangold. Fördertechnik u. Frachtverkehr, vol. 17, no. 4, Feb. 21, 1924, pp. 41-45, 11 figs. Describes different types of both systems and makes suggestions for choice of system.

Pneumatic Grain Elevators, W. Cramp and A. Priestley. Engineer, vol. 137, nos. 3550, 3551, 3552, and 3553, Jan. 11, 18, 25, and Feb. 1, 1924, pp. 34-36, 64-65, 89-90, and 112-113, 7 figs. Results of investigation at University of Manchester; suggests rational basis for future design. Jan. 11: Force exerted by air on grain and resulting velocities; grain velocity and air pressure. Jan. 18: Work on pneumatic conveyor and other work done by air; experimental plant used in tests of vertical pneumatic elevator. Jan. 25: Friction of grain on pipe; nozzles. Feb. 1: General method for design of plants; use of auxiliary air inlet in nozzles; application of formulas to other materials and media and to problem of horizontal conveyors.

Unloading and Milling Plant. Granary in Harbor of Flensburg, Germany (Der Speicherbau am Freihafen in Flensburg), G. Luther. Fördertechnik u. Frachtverkehr, vol. 17, no. 4, Feb. 21, 1924, pp. 52-56, 9 figs. Describes new building for unloading and milling of grain, with details of layout and mechanical equipment.

GRAIN HANDLING

Car Dumper for. Grain Elevator Operation with Automatic Box Car Unloader. Ry. Rev., vol. 75, no. 19, Nov. 8, 1924, pp. 732-737, 6 figs. Installation of new dumping device at Port Arthur, Can. Nat. Rys., effects large savings in costs of unloading grain from box cars.

Lake Terminal. Terminal Operation at Ft. William, Ontario. Ry. Rev., vol. 75, no. 23, Dec. 6, 1924, pp. 901-907, 6 figs. Methods employed by Can. Nat. Rys. in handling grain traffic large in volume and seasonal in character at lake terminal.

Railway Transportation. Moving the Crop, Canadian Pacific Railway, E. D. Cottrell. Ry. Rev., vol. 75, no. 19, Nov. 8, 1924, pp. 697-700, 5 figs. Method of handling grain through Winnipeg and North Transcona during rush season.

GRANDSTANDS

Concrete. See CONCRETE CONSTRUCTION, REINFORCED, Grandstands.

Seating Area, Design of. The Design of Seating Areas for Visibility, A. B. Randall. Am. Architect & Architectural Rev., vol. 125, no. 2446, May 21, 1924, pp. 487-493, 8 figs. A mathematical method of section design.

GRANITES

France. Granites of the Vosges Mountains (Les granits des Vosges), M. Darras. Revue des Materiaux de Construction et de Travaux Publics, no. 179, Aug. 1924, pp. 57M-62M, 8 figs. Describes operations of quarrying, sawing, polishing, etc., of granites, equipment used, monumental work, etc.

Norwegian Industry. The Granite Industry. Norwegian Trade Rev., no. 5, 1924, pp. 65-69, 4 figs. Norwegian stone quarrying early times. Origin and growth of granite industry. Present position and prospects.

Quarrying. See QUARRYING, Granite.

GRAPHITE

Artificial. Effect of Heat and Vacuum on Artificial Graphite (Action de la chaleur et du vide sur le graphite artificiel), P. Lebeau and M. Picon. Académie des Sciences—Comptes rendus des séances, vol. 179, no. 4, July 28, 1924, pp. 264-266. Heated in vacuum volatilization of carbon occurs at 2300 deg. and at 2400 deg. becomes rapid enough to render graphite tube useless.

Bavaria. Graphite Mining in Bavaria (Neues vom niederbayerischen Graphitbergbau), W. Landgraeber. Metall u. Erz, vol. 21, no. 24, 2nd Dec. no., 1924, pp. 582-584. Discusses recent geologic views of deposits, mining operations, impurities, production of commercial graphite by enriching with C up to 99 per cent, electrochemical production in airtight furnaces, etc.

Crystal Structure. Crystal Structure of Graphite (Ueber die Kristallstruktur des Graphits), O. Hassel and H. Mark. Zeit. für Physik, vol. 25, no. 4-6, Aug. 4, 1924, pp. 317-337, 5 figs. By combination of several X-ray interference methods structure of graphite crystals was examined and determined.

Density. Density of Graphite (Ueber die Dichte des Graphits), E. Ryschkewitsch and E. Köstermann. Zeit. für Elektrochemie, vol. 30, no. 2, Feb. 1924, pp. 86-88. Density of graphite after fusing and solidifying is 2.232 ± 0.0013 at 16 deg.

German. Graphite (Graphit), E. Herm. Bergbau, vol. 37, no. 18, Sept. 4, 1924, pp. 514-517. Occurrence of graphite in various countries and Germany. Production and uses of German graphite.

Industrial Uses. Graphite and Its Industrial Uses (Le graphite et ses emplois dans l'industrie), G. Mesnard. Génie Civil, vol. 84, nos. 6 and 7, Feb. 9 and 16, 1924, pp. 138-139 and 161-164, 6 figs. Study of natural graphite, its properties, geographical occurrences, mining, and uses.

Marketing. Marketing of Graphite, Charles Pettinos. Eng. & Min. Jl.-Press, vol. 117, no. 26, June 28, 1924, pp. 1036-1038, 3 figs. Principal sources are Ceylon and Madagascar; domestic supplies negligible.

Metallic Carbon Modification. Graphite as a Metallic Modification of Carbon (Graphit als metallische Kohlenstoffmodifikation), E. Ryschkewitsch. Chemiker-Zeitung, vol. 48, no. 25, Feb. 27, 1924, p. 101. Points out great similarity in physical properties between graphite and metals in its opacity, luster, power of reflecting light without selective absorption, electrical and thermal conductivity; it is insoluble in any solvent, except molten metals, without undergoing chemical change; like metals, its atom contains free electrons which confer on it its thermal and electrical conductivity.

Production. Graphite (Graphit). Bergbau, vol. 37, nos. 19 and 20, Sept. 18 and Oct. 2, 1924, pp. 535-538 and 564-568. Applications; methods of enriching raw products to 60-90 per cent C; flotation of ores; electrothermic process; graphite in Germany, Austria and Bavaria.

Graphite in 1923, J. Middleton. U. S. Geol. Survey (Mineral Resources of U. S.), no. II:12, Oct. 17, 1924, pp. 91-97. Production; exports and imports; prices; world's production.

Resistance. See CARBON, Resistance.

GRAVEL PLANTS

Field Conveyors. Gravel Plant with Unusual Field Conveyor, G. M. Earnshaw. Rock Products, vol. 27, no. 16, Aug. 9, 1924, pp. 32-34, 8 figs. Plant of Garaux Bros., Canton, Ohio, uses pivoting conveyors in steel frames to bring in material from shovel.

GRAVITATION

Einstein Theory. A Stationary Cosmology in the Light of Einstein's Gravitation Theory (Ueber eine stationäre Kosmologie im Sinne der Einsteinschen Gravitationstheorie), K. Lanczos. Zeit. für Physik, vol. 21, no. 2, Jan. 30, 1924, pp. 73-110, 4 figs. Points out that for cosmological equations the only stationary solution is the Einstein cylindrical universal; discusses new solution which is compatible with original field equations and with which aprioristic relation between mass and cosmological constants need not be assumed.

Newton's Third Law. Gravitation and Newton's Third Law (La gravitation et le principe de l'égalité de l'action et de la réaction), G. Maneff. Académie des Sciences—Comptes Rendus, vol. 178, no. 26, June 23, 1924, pp. 2159-2961. Author seeks to determine consequence of generalization of Newton's third law to apply to energy as well as to inertia of matter; result of Michelson-Morley experiment, together with Lorentz contraction in length and dilatation in time, appear as consequences of inertia of energy; classical relativity principle would therefore be inapplicable to ordinary mechanics; author shows analytically that when approaching gravitational center, speed of light would decrease proportionally to its rate of approach.

GRAVITY

Practical Application. Study of Gravity and Its Practical Applications (L'Etude de la pesanteur et ses applications pratiques), H. Vigneron. Nature (Paris), no. 2623, July 12, 1924, pp. 24-28, 6 figs. Discusses Cavendish and Eotvös balances, their principle and application.

GREASES

Kinds and Uses. The Kinds and Specialized Uses of Grease, F. A. Hobb. Oil News, vol. 12, no. 1, Jan. 1924, pp. 14-15. Account of grades and individual merits of greases.

GREENHOUSES

Heating. See HEATING, HOT-WATER, Greenhouses.

GRINDING

Automobile Parts. How Nash Motor Parts Are Ground, E. C. Boehringer. Abrasive Industry, vol. 5, no. 4, Apr. 1924, pp. 90-92 and 97, 7 figs. Grinding operations and equipment used at plants of Nash Motors Co., Milwaukee and Kenosha, Wis.

Regrinding of Automobile Parts, F. B. Jacobs. Abrasive Industry, vol. 5, no. 12, Dec. 1924, pp. 296-299, 9 figs. Cylinders are finished to standard oversizes and fitted with new pistons, rings and wrist pins; inspection an important item.

Reo Parts Ground Accurately, F. B. Jacobs. Abrasive Industry, vol. 5, nos. 7 and 8, July and Aug. 1924, pp. 163-167 and 193-197, 19 figs. Grinding methods at plant of Reo Motor Co., Lansing, Mich. Each manufacturing department has its own grinding equipment. Automatic machines used extensively for finishing various units.

Centerless. The New Centerless Method of Grinding, G. W. Binns. West. Machy. Wld., vol. 15, no. 10, Oct. 1924, pp. 335-336, 4 figs. Range and class of work being handled successfully on centerless grinders, an innovation within last few years which has revolutionized art of grinding cylindrical work.

Chatter Marks. Chatter Marks on Ground Surfaces, D. K. Cole. Machy. (Lond.), vol. 24, no. 620, Aug. 14, 1924, pp. 621-622. Their causes and remedies.

Face. Face Grinding From the Rough as a Time Saver, E. Sheldon. Am. Mach., vol. 61, no. 2, July 10, 1924, pp. 43-47, 10 figs. Tells on what kind of work face grinder should be used and points out its economies.

Fine, Theory of. Researches on the Theory of Fine Grinding, G. Martin, C. E. Blyth and H. Tongue. Ceramic Soc.—Trans., vol. 23, part 2, 1923-1924, pp. 61-109, 48 figs. Results of experiments to elucidate law governing connection between number of particles and their diameters in grinding crushed sand.

Glass. See GLASS, Grinding.

Machine-Tool Parts. Grinding Operations Expedite Manufacture of Machine Tools, W. E. Groene. Abrasive Industry, vol. 5, no. 8, Aug. 1924, pp. 189-192, 6 figs. Describes grinding operations carried on at plant of R. K. LeBlond Machine Tool Co., Cincinnati.

Machines. See GRINDING MACHINES.

Methods. Grinding Shop Practice Described, F. B. Jacobs. Abrasive Industry, vol. 5, no. 5, May 1924, pp. 111-115, 11 figs. Methods followed at shops of L. Lawrence Co., Detroit, Mich. Worn cylinders reground and new pistons fitted; large crankshafts refinished by regrinding; broken units welded.

Motor-Truck Parts. Precision Grinding Operations Finish White Motor Trucks, F. B. Jacobs. Abrasive Industry, vol. 5, nos. 2, 3, and 4, Feb. Mar., and Apr. 1924, pp. 29-33, 60-64, and 98-101, 29 figs. Description of grinding methods followed at plant of White Motor Co., Cleveland, Ohio.

Regrinding Practice. Regrinding Methods Outlined, B. K. Price. Abrasive Industry, vol. 5, no. 9, Sept. 1924, pp. 226-230, 7 figs. Practice at plant of Houpert Machine Co., Long Island City, N. Y., in regrinding cylinders.

Rolls. See ROLLS, Grinding.

Textile Castings. Grinding Braiding Machine Parts Rapidly and Accurately, H. R. Simonds. Abrasive Industry, vol. 5, no. 9, Sept. 1924, pp. 221-224, 7 figs. Account of abrasive operations pursued in finishing textile castings.

Wheel Forming Fixtures. Simplifying Form Grinding in Machine Shops, A. R. Noble. Can. Machy., vol. 31, no. 1, Jan. 3, 1924, pp. 33 and 46, 4 figs. Description of wheel forming fixtures which have been successfully employed for various classes of work.

Wood Pulp. A Permanent Grinder for the Production of Wood Pulp for the Manufacture of Paper. Eng. Progress, vol. 5, no. 8, Aug. 1924, pp. 157-159, 6 figs. Describes method and practical design of grinder and results achieved in practice; grinding stone may be driven either electrically, hydraulically, or by some other power.

GRINDING MACHINES

Centerless. The Centerless Method of Grinding, Geo. W. Binns. Ry. Mech. Engr., vol. 98, no. 12, Dec. 1924, pp. 758-759, 3 figs. Method of producing cylindrical surfaces with no control of center of rotation.

Cylindrical. Logarithmic Diagram for Determining Machining Time for Cylindrical Grinding Machines (Logarithmisches Diagramm zur Maschinenzeitbestimmung von Rundschleifmaschinen), G. Ganz. Werkstattstechnik, vol. 18, no. 17, Sept. 1, 1924, pp. 461-463, 5 figs. Calculation of time for piece work by means of a diagram; reversing of machines and its effect on time of grinding; etc.

New Cylindrical Grinding Machine Will Load, Grind and Eject Parts Automatically. Automotive Industries, vol. 51, no. 23, Dec. 4, 1924, pp. 973-974, 2 figs. New Arter machine parts are loaded into turret mechanically or by hand, moved to grinding position by indexing, ground by straight infeed of wheel and then ejected.

Disk. The Use of Fixtures in Disk-Grinding, H. Campbell. Am. Mach., vol. 60, no. 21, May 22, 1924, pp. 759-761, 9 figs. Grinding production determined largely by types of fixture used; recently developed work holders; grinding piston rings automatically; better work and higher production with less labor.

Electrically Driven. Electrically-driven Grinding Machines. Machy. (Lond.), vol. 24, no. 610, June 5, 1924, pp. 312-315, 8 figs. New range of self-contained grinding units by B. R. Rowland & Co., Reddish, England.

Gear. A Full-Automatic Gear Grinder with Adjustable Involute Control. West. Machy. World, vol. 15, no. 1, Jan. 1924, pp. 31-33, 6 figs. Describes machine used in manufacture of ground involute gears, built by Fellows Gear Shaper Co., Springfield, Vt.

A New Full-Automatic Gear Grinder. Eng. Production, vol. 7, no. 137, Feb. 1924, pp. 41-43, 6 figs. Details of involute gear grinder placed on market by Fellows Gear Shaper Co., Springfield, Vt.

High-Traverse. New Landis Grinder Has Stationary Head. Automotive Industries, vol. 50, no. 19, May 8, 1924, p. 1017, 2 figs. Designed to meet demand for oversize precision grinding with long-lived speed production; number of pieces ground per dressing of wheel said to offset higher initial cost.

Internal. European Abrasive Equipment, B. Schapira. Abrasive Industry, vol. 5, no. 1, Jan. 1924, pp. 24-25, 5 figs. Describes horizontal and vertical spindle internal grinders.

Internal Grinding Attachment. Machy. (Lond.), vol. 24, no. 610, June 5, 1924, p. 297, 2 figs. Attachment developed by Kershaw Internal Grinder Co., Manchester, more particularly for garage use in regrinding of worn automobile cylinder bores.

Internal and External Grinding Machines. Machy. (Lond.), vol. 24, no. 617, July 24, 1924, pp. 521-526, 8 figs. Designed by Holroyd & Co., Ltd., Milnrow, for grinding large steel tubes.

Productive Internal Grinding. Brit. Machine Tool Eng., vol. 3, no. 26, Mar.-Apr. 1924, pp. 30-32, 5 figs. Describes internal-grinding machine made by Churchill Machine Tool Co., adapted to suit special piece of work; main features and operation.

Plunge-Cut. Plunge-Cut Grinder. Iron Age, vol. 114, no. 19, Nov. 6, 1924, p. 1199, 2 figs. See also Machy. (N. Y.), vol. 31, no. 3, Nov. 1924, pp. 229-230, 3 figs. Wide-wheel, in-feed machine with reciprocating spindle adapted to production work; placed on market by Cincinnati Grinder Co.

Rail-Joint. See RAILS, Joint-Grinding Machine.

Railway Shops. English Development of Railroad Grinding Equipment, W. F. Sandmann. Am. Mach., vol. 61, no. 16, Oct. 16, 1924, pp. 601-602, 7 figs. Discusses use of grinding machines in railway shops; types of machines for grinding locomotive parts.

Rock-Drill. Rock Drill Maintenance. British Machine Tool Eng., vol. 3, no. 28, July-Aug. 1924, pp. 91-94, 8 figs. Economy to be obtained by use of precision grinding machines. Describes Churchill No. 1 and Universal grinding machines.

Spindles. Internal Grinding Machine Spindles. Machy. (Lond.), vol. 25, no. 639, Dec. 25, 1924, pp. 404-407, 11 figs. Describes types of spindles and methods of using them.

Surface. Feed Arrangement in Diskus Surface Grinding Machines (Die Werkstückbewegung bei Diskus-Flächenschleifmaschinen), C. Krug. Werkstattstechnik, vol. 18, no. 17, Sept. 1, 1924, pp. 452-455, 7 figs. Discusses uniform and irregular movement of work table; arrangement of inclined planes with oil feed; hydraulic drive with automatic control.

Swing-Frame, Portable and Hand. Swing-Frame, Portable and Hand Grinding Machines. Am. Mach., vol. 61, no. 17, Oct. 23, 1924, pp. 645-648, 6 figs. Early swing frames; greater freedom of movement needed; electric motor and solid wheel aid in development.

GRINDING MILLS

Ball and Pebble Mills. Design and Operation of Ball and Pebble Mills, E. W. Lawler. Chem.

& Met. Eng., vol. 30, no. 13, Mar. 31, 1924, pp. 517-518. Practical notes on factors affecting operation on non-continuous ball or pebble mills.

Cost of Equipment for. Crushing and Grinding Costs, T. Fuwa. Chem. & Met. Eng., vol. 31, no. 7, Aug. 18, 1924, pp. 268-271, 6 figs. Analysis of cost of various types of equipment for disintegrating materials and their installation and operation.

Rotary Mills. Rubber Lining for Rotary Grinding Mills, R. B. Donnelly. Rock Products, vol. 27, no. 20, Oct. 4, 1924, pp. 60-62, 6 figs. Experiments which show lessened wear and increased grinding efficiency.

GRINDING WHEELS. See ABRASIVE WHEELS.

GROUND WATERS. See GEOLOGY, Groundwaters.

GUN METAL

Admiralty. Some Experiments on the Influence of Casting Temperature and Mass on the Physical Properties of Admiralty Gun-Metal, F. W. Rowe. Inst. of Metals—Advance Paper no. 12, for meeting Sept. 8-11, 1924, 5 pp., 6 figs. Describes experiments selected from a large number as being typical results obtained in everyday works practice, and made under ordinary works conditions, without any special precautions to insure exceptional purity of metal or abnormal test results.

GUNITE

Mine-Timber Coating. See MINE TIMBERING, Preservation.

Protection for Steel Structures. Gunite Protection for Steel Structures, P. Gillespie and P. J. Culliton. Can. Engr., vol. 47, nos. 18 and 19, Oct. 28 and Nov. 4, 1924, pp. 451-454 and 473-476, 7 figs. Experiments at Leaside, Ont., with two 42-ft. steel plate girders covered with gunite to ascertain cause of superficial cracks on bridges at Hamilton. Conclusions favor employment of guniting process.

GUNNERY

Naval, Motion Study in. See MOTION STUDY, Naval Gunnery.

GUNS

Erosion of. Improvements in Gun-Construction and Allied Problems, T. Tanimura. Tokyo Imperial Univ., Faculty of Eng.—Jl., vol. 13, no. 4, Mar. 1923, pp. 103-175, 10 figs. Concludes that as gun erosion cannot be remedied at present, gun construction rendering relining easy should be studied; inner surface of bore of relined guns is always subjected to stress beyond elastic limit; proposes improved construction on these lines.

GUTTA PERCHA

Preparation and Properties. Gutta-Percha: Its Preparation and General Properties, C. W. H. Howson. India-Rubber Jl., vol. 68, nos. 20 and 21, Nov. 15 and 22, 1924, pp. 9-14 and 15-17. See also Rubber Age, vol. 5, no. 10, Dec. 1924. pp. 512-520, and (discussion) 520-523. Geographical distribution, methods of collection, methods of extraction from leaves, cleaning and hardening processes; balata, and method of collecting it; coagulation of balata latex; chemical analysis of crude gutta-percha and balata; chemical composition; physical and chemical properties; effect of temperature, etc.

GYPSUM

Analysis. Analysis of Gypsum and Gypsum Products, F. C. Welch. Indus. & Eng. Chem., vol. 16, no. 3, Mar. 1924, pp. 238-241, 3 figs. Samples of raw gypsum were analyzed for gypsum and anhydrite according to present recommended method of analyses and checked by microscopic analysis; method was found to be unsatisfactory, and method is here recommended which enables chemist to determine percentages of constituents present in their mixtures.

Comparison of Methods of Analysis of Gypsum, P. P. Budnikoff. Am. Ceramic Soc.—Jl., vol. 7, no. 11, Nov. 1924, pp. 817-820. Results of experimental test of different analytical methods proposed for evaluation of gypsum.

Canada. Gypsum Situation in Canada. Can. Min. Jl., vol. 45, no. 37, Sept. 12, 1924, pp. 908-909. Résumé of conditions.

Manufacture. Gypsum from the Industrial Point of View (Le gypse au point de vue industriel), J. Dautrebande. Revue Industrielle, vol. 54, no. 2185, Dec. 1924, pp. 401-408, 8 figs. Chemical analysis, and composition; method of manufacture, and kilns, crushers, etc., used; layout of modern manufacturing plant of Société Dalbouze Brachet & Co.

Mining and Refining. Modern Methods and Processes of Mining and Refining Gypsum, A. W. Tyler. Rock Products, vol. 27, nos. 12, 14, 18, and 20, June 14, July 12, Sept. 6, and Oct. 4, 1924, pp. 27-32, 48-51, 43-46, and 44-47, 46 figs. June 14: Review of size and growth of gypsum products industry of United States. Winning of raw gypsum rock from earth by mining and quarrying. July 12: Crushing, rock storage, drying. Sept. 6: Screening, air separating, grinding, calcining. Oct. 4: Calcining.

Working Big Gypsum Deposit in Montana. Pit and Quarry, vol. 8, no. 8, May 1924, pp. 92-94, 6 figs. Mining operations of Northwest Gypsum Products Co. at its deposits near Lewiston.

Persia. The Gypsum Deposits of Southwestern Persia, J. V. Harrison. Economic Geology, vol. 19, no. 3, Apr.-May 1924, pp. 259-274, 2 figs. Field observations on occurrence of gypsum in southwestern Persia, with special reference to light they throw upon origin of deposits of this mineral. Bibliography.

Production, 1924. Gypsum in 1923, K. W. Cottrell. U. S. Geol. Survey (Mineral Resources of U. S.), no. II:7, Sept. 27, 1924, pp. 63-68. Production; imports and exports; manufacturers of gypsum plaster.

Properties and Manufacture. Gypsum—An Important Building Material, V. G. Marani. Contract Rec., vol. 38, no. 51, Dec. 17, 1924, pp. 1235-1237. Nature, properties, manufacture and use of gypsum and its commercial products. Economics of the material.

Temperature and Pressure Effects. Effects of Temperature and Pressure on Gypsum and Anhydrite, Marie Farnsworth. U. S. Bur. Mines—Report of Investigations, no. 2654, Nov. 1924, 3 pp. Facts established by tests bearing on stability relations of gypsum and anhydrite.

GYROSCOPES

Schlick. A Contribution to the Theory of the Schlick Gyroscope (Ein Beitrag zur Theorie des Schlickschen Schiffskreisels), M. Schuler. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 47, Nov. 22, 1924, pp. 1224-1226, 5 figs. It is shown that a Schlick gyroscope is adversely affected by turning of the ship, when changing course or in yawing; the force of yawing is converted by gyroscope into rolling movements, and thus the gyroscope causes rolling instead of having a steadying effect; shows how this defect can be remedied by an alteration in the Schlick gyroscope arrangement.

Ship Stabilizers. See SHIPS, Stabilizers.

Ship Stabilizing. Use of Gyroscopes in Stabilizing Ships (L'emploi du gyroscope pour la stabilisation des navires), G. Malgorn. Vie Tech-

nique et Industrielle, vol. 5, no. 59, Aug. 1924, pp. 304-306, 4 figs. Discusses theory of gyroscope and its application to near ships, giving examples.

Theory. Some Properties of Spherical Curves, with Applications to the Gyroscope, O. D. Kellogg. Am. Mathematical Soc.—Trans., vol. 25, no. 4, Oct. 1923, pp. 501-524, 2 figs. Discusses certain intrinsic properties of spherical curves and applies results to theory of gyroscope; gives further results and formulas in connection with gyroscope problems.

H

HALL EFFECT. See METALS, Hall Effect.

HAMMERS

Drop. A Remarkable Drop Hammer and Its Work. Engineer, vol. 138, no. 3577, July 18, 1924, pp. 86-87, 4 figs. partly on p. 76. Describes drop hammer designed and made by Brett's Patent Lifter Co., Ltd., Coventry, Eng., for Powell-Brett, Ltd., of Midland Works, Coventry, by whom it is being used, among other things, for direct stamping of railway car wheels. Falling weight, 20 tons.

New Type of Drop Hammer for Multiple-Die Stamping. Engineer, vol. 137, no. 3554, Feb. 8, 1924, pp. 154-155, 4 figs. Brett drop hammer fitted specially for multiple-die stamping work.

Pneumatic. Critical Observations on Pneumatic Hammers (Kritische Betrachtungen über Lufthämmer). W. Baron. Werkstatttstechnik, vol. 18, no. 20, Oct. 14, 1924, pp. 565-567, 10 figs. Discusses design and construction, and arrangement of pneumatic operating device.

Economic Study of Forging Practice with Special Regard to Pneumatic Hammers (Wirtschaftlichkeitsstudie des Schmiedebetriebes unter besonderer Berücksichtigung der Schmiedelufthämmer), M. Cyron. Glasers Annalen, vol. 94, nos. 1, 6, 12, and vol. 95, no. 4, Jan. 1, Mar. 15, June 15, and Aug. 15, 1924, pp. 3-11, 65-72, 154-162, and 56-64, 49 figs. Deals with phenomena in connection with iron and steel forging; behavior of steam and pneumatic hammers from economic viewpoint; practical investigations on most important types of pneumatic hammers; two-cylinder hammers, drop hammer for testing, and results of tests of various types of hammers.

New Pneumatic Hammer for Individual Blows (Neuer Lufthammer mit Einzelschlag), E. Preger. Werkstatttstechnik, vol. 18, no. 20, Oct. 14, 1924, pp. 569-575, 18 figs. Discusses conditions for effective individual blows and describes a hammer constructed accordingly; 20 per cent greater performance than heaviest repetition blow.

Pneumatic Hammers (Lufthämmer), A. Halse. Werkstatttstechnik, vol. 18, no. 9, May 1, 1924, pp. 251-255, 16 figs. Conditions governing choice of steam or pneumatic hammers; description with test results of Hartmann double-blow pneumatic hammers.

Spring. A New Power Hammer (Ein neuer Krafthammer), L. Kort. Hanomag-Nachrichten, vol. 11, no. 129-130, July-Aug. 1924, pp. 134-138, 7 figs. Design and operation of Kort power hammer, combining advantages of pneumatic hammers and those of present spring hammers.

Steam vs. Air. Steam vs. Air in Forging-Hammer Practice (Dampf oder Luft für den Hammerbertieb), F. Beleke. Maschinenbau, vol. 3, no. 12, Mar. 27, 1924, pp. 389-394, 18 figs. Comparison of economy of steam, pneumatic, and air hammers; points out applications for which each type is most adaptable.

HANGARS

France. The Dirigible Hangar at the Airport of Orly (Les hangars à dirigeables de l'aéroport d'Orly), M. Freyssinet. Société des Ingénieurs Civils de France—Mémoires et Compte Rendu des Travaux, vol. 77, no. 4-6, Apr.-June 1924, pp. 298-313, 17 figs., partly on supp. plate. Discusses theory and design of a hangar to give adequate stability and resistance; choice and tests of materials of construction, as applied in reinforced-concrete hangar at Orly.

Omaha, Neb., Collapse. Omaha Aerial Mail Hangar Wrecked by Gale, R. M. Brown. Eng. News-Rec., vol. 93, no. 5, July 31, 1924, pp. 180-182, 3 figs. Violent gale crushed in end wall and twisted out of position roof trusses of a large steel-framed airplane hangar. Circumstances of wreck and design of structure.

Reinforced-Concrete. Housing a Dirigible in a Reinforced Concrete Hangar. Am. Architect, vol. 126, no. 2458, Nov. 5, 1924, pp. 451-454, 8 figs. Design of two hangars built at Orly, near Juvisy, France; length, 1000 ft.; width, 300 ft.; height, 196 ft.; ends are closed by metal doors swinging outward.

Turkey. Hangar Erection in Iraq, R. Hamilton. Roy. Engrs. Jl., vol. 38, no. 1, Mar. 1924, pp. 13-24, 17 figs. partly on supp. plate. Description of the various types of steel hangar built for Hinaidi aerodrome near Bagdad (Turkey in Asia), methods used, and details regarding time, labor, and personnel.

HARBOR IMPROVEMENTS

New York. The Improvement of New York Harbor, H. N. Babcock. Military Engr., vol. 16, no. 85, Jan.-Feb. 1924, pp. 55-58, 5 figs. Improvement of harbor entrance from 1885 to 1914, including deepening of Gedney's Channel and excavation of Ambrose Channel, and description of dredges.

Paris, France. Harbor Works of the Port of Paris (Les travaux du port de Paris). Bul. Technique du Bur. Veritas, vol. 6, no. 2, Feb. 1924, pp. 21-23, 3 figs. Port of Paris is understood to comprise the various quays, basins, loading and unloading plants on banks of Seine River between Choisy-le-Roi and Gennevilliers, on banks of Marne from Nogent, and on canals Saint-Martin, Saint-Denis, and Ourcq; protection against floods; development of commercial port.

HARBORS

Pollution from Oil, Safety against. The Pollution of Harbors and Canals from Oil (Einiges über Oelbesudelung von Häfen und Kanälen), B. Müller. Schiffbau, vol. 25, no. 13, Apr. 9, 1924, pp. 337-339, 1 fig. Cause of pollution is said to be improper design of storage and tapping arrangements of liquid fuel required for motorships; describes Martini & Hüneke system for prevention of discharge and explosion; through admission of non-oxidizing gases, such as carbonic acid, nitrogen, etc., in tanks, fittings, and pipe lines, there is no possibility of discharge from tanks and pipe lines, nor of ignition or explosion from within.

See also WATER POLLUTION.

HARDNESS

Aluminum Bronze, Heat-Treated. See ALUMINUM BRONZE, Heat-Treated, Hardness of.

Brinell Ball Testing Method. Ball Method of Hardness Testing and Its Importance Today in

the Evaluation of Metallic Materials (La prova di druezza alla sfera e la sua importanza nell'odierno collaudo dei materiali metallici), V. Prever. Ingegneria, vol. 3, no. 1, Jan. 1, 1924, pp. 16-21, 10 figs. partly on supp. plate. Deals with load employed in penetration test and its influence on Brinell number; duration of application of load; influence of diameter of ball employed; ball deformation; and relation between hardness and tensile strength. Results obtained on carbon and alloy steels at research laboratory of Fiat Company in Turin.

Effect of Duration of Load on Ball Pressure Hardness (Ueber den Einfluss der Belastungsdauer auf die Kugeldruckhärte), R. Mailänder. Kruppsche Monatshefte, vol. 5, Oct. 1924, pp. 209-213, 14 figs. Discusses variation in ball test depending on time ball is under load, and describes a new method in which same ball impression is measured at intervals without releasing pressure and using a Martens mirror, and results obtained.

Improvements in the Brinell Test on Hardened Steel, Including a New Method of Producing Hard Steel Balls, A. Hultgren. Iron & Steel Inst.—Advance paper no. 7, for meeting Sept. 1924, 30 pp., 12 figs. partly on supp. plate. Describes a method of producing steel balls considerably harder than those heretofore available, and therefore especially suitable for Brinell tests on hardened steel. Results of Brinell tests on hardened, as well as hardened and tempered steel specimens, to determine magnitude of error in hardness number due to permanent flattening of ball. Results of study by different tests of surface hardness and strength of cold-worked balls, as compared with those of other balls of different make and treatment. Use of etched balls suggested as means of increasing accuracy of measuring Brinell impression on hardened steel. Gives conversion table for Brinell numbers and describes a magnetic ball holder.

On the Indentation Hardness of Metals, K. Honda and K. Takahasi. Iron & Steel Inst.—Advance paper no. 10, for meeting May 1924, 11 pp., 6 figs. Points out that Brinell hardness, when impression is measured during application of load, is quite correct, and much less than that by usual method of measurement; new definition of hardness is given.

The Accurate Determination of the Hardness of Metals. Engineering, vol. 117, no. 3043, Apr. 25, 1924, pp. 518-519, 5 figs. Investigation of Brinell test with object in view of designing method of testing which yields Brinell hardness numerals of thoroughly reliable order, free from irregularities to which Brinell test is exposed when carried out in ordinary way.

The Ball Indentation Hardness Test, S. L. Hoyt. Am. Soc. Steel Treating—Trans., vol. 6, no. 3, Sept. 1924, pp. 396-420, 4 figs. Refers to Meyer's investigation of Brinell's ball indentation hardness test first published in 1908, in which he showed that hardness of metal canont truly be represented by one figure, or, in other words, resistance to penetration varies with degree of penetration of ball; author of present paper discusses Meyer's analysis to throw light on our present methods of hardness testing.

The Value of the Brinell Hardness Test to the Gray-Iron Foundry, I. Jaederstroem. Testing, vol. 1, no. 4, Apr. 1924, pp. 286-289, 2 figs. Results of researches. Main reason for great popularity of Brinell test in investigation of steel is fact that it does not only indicate resistance of material to penetration of another, harder body, but that hardness values thus obtained permit also definite conclusions on tensile strength of steel under investigation.

Brinell Hardness and Tensile Strength. See METALS, Brinell-Tensile Relationship.

Cold Working and. See METALS, Cold Working.

Herbert Pendulum Tester. Comparison of Herbert Pendulum Hardness Tester with Other Hardness Testers, J. O. Keller. Mech. Eng., vol. 46, no. 11a, mid-Nov. issue, 1924, pp. 818-824, 21 figs. Results of tests; data on specimens tested; Herbert pendulum, its action and theory; interpretation of photomicrographs taken on sections.

Investigations on the Herbert Pendulum Hardness Tester, C. Benedicks and V. Christiansen. Iron & Steel Inst.—Advance paper no. 2, for meeting Sept. 1924, 20 pp. 7 figs. Construction and working of this new instrument, which permits use of even very small specimens, and comparison of results with those of Brinell method.

Measuring the Hammer Hardness of Metals by Means of a Herbert Pendulum (Mesure de l'écrouissage des métaux au moyen du pendule Herbert). Bulletin Technique de la Suisse Romande, vol. 50, no. 17, Aug. 16, 1924, pp. 217 and 219, 5 figs. Details of apparatus by means of which hardness is determined as function of permanent and elastic deformation produced by ball.

See also Work Hardening.

Magnetic Tests. A Correlation between the Mechanical Hardness and the Magnetorestrictive Effects of Ferromagnetic Substances, S. R. Williams. Am. Soc. Steel Treating—Trans., vol. 5, no. 4, Apr. 1924, pp. 362-368, 3 figs. Method of determining physical properties of metals through magnetic means; relative merits of X-ray and magnetic means of determining flaws in metals; Joule effect; discusses experiments wherein endeavor was made to relate magnetostriction and hardness of ferromagnetic substances.

Metal-Products Hardness Testing. The Logical Course of Development of Additional Apparatus for Investigating the Hardness of Metal Products in Works' Practice, H. A. Holz. Testing, vol. 1, nos. 3 and 4, Mar. and Apr. 1924, pp. 247-262, and 308-325, 29 figs. States that logical course of development of additional apparatus for investigating hardness of metals and metal products lies entirely in direction of appliances for application of Brinell test to problems for which this method has not been or could not be applied heretofore. Discusses some of the results established by U. S. Bur. Standards in its investigation of Brinell meter developed by F. H. Schoenfuss.

Numbers. See METALS, Hardness Numbers.

Steel Balls, Magnetic Test. Hardness of Steel Balls by Magnetic Tests, S. R. Williams. Am. Soc. Steel Treating—Trans., vol. 5, no. 5, May 1924, pp. 479-484, 4 figs. Rapid method of determining magnetically hardness of steel balls; with this method it is possible to conduct 100 per cent inspection on balls for hardness, with considerable rapidity; illustrations showing schematic arrangement of author's apparatus, and set-up and graphs of certain tests made upon balls having different degrees of hardness.

Testing. Duration of Load in the Hardness Testing of Soft Metals (Bearing Metals [Die Belastungsdauer bei der Härteprüfung weicher Metalle (Lagermetalle)], P. Lieber. Zeit. für Metallkunde, vol. 16, no. 4, Apr. 1924, pp. 128-131, 5 figs. Hardness determination with different time durations of load; measurement of depth of indentation because of hardness differences inside of different sample pieces; experimental results and conclusions for practical application of ball test.

The Hardness of Metals and Hardness Testing. Mech. Eng., vol. 46, no. 6, June 1924, pp. 360-362. Observations on nature of hardness, together with descriptions of various methods used in testing. Report prepared at request of Special Research Committee on Cutting & Forming of Metals.

See also MICROSCOPES, Reichert-Brinell.

Testing Machines. Hardness Testing, with Special Regard to Dynamic Hardness Testing Machines (Ueber Härteprüfung, mit besonderer Berücksichtigung des Fallhärteprüfers), M. v. Schwarz. Maschinenbau, vol. 3, no. 10, Feb. 28, 1924, pp. 316-319, 5 figs. Describes new type of hardness testing machine developed by author; results of tests showing its useful applications.

Variation with Temperature. Variation of the Hardness of Metals with Temperature (Die Abhängigkeit der Härte von der Temperatur), F. Sauerwald. Zeit. für Metallkunde, vol. 16, no. 8, Aug. 1924, pp. 315-316, 1 fig. Measurements of hardness of tin, aluminum, copper, and antimoney between 10 deg. and their melting points by dynamic method of Wüst and Bardenheuer showed that in all cases hardnes decreases linearly with rise of temperature and that, even just below melting point, each metal possesses considerable hardness.

Work Hardening. Work-Hardening of Metals and the Herbert Tester. Engineer, vol. 137, no. 3558, Mar. 7, 1924, pp. 248-251, 5 figs. Discusses use of pendulum tester (described in Apr. 13, 1923, issue of same journal) for investigation of scale hardness figures; gives list of work-hardening figures of various materials, as determined by E. G. Herbert, inventor of instrument. See also editorial on pp. 257-258.

Work-Hardening of Various Metals, E. G. Herbert. Iron Age, vol. 113, no. 25, June 19, 1924, pp. 1792-1793, 3 figs. Measuring extent of progressive change with Herbert pendulum hardness tester.

HARMONICS

Analyzer for. A New Harmonic Analyzer, K. Noguchi. Denki Gakkwai Zasshi (Jl. Inst. Elec. Engrs. Japan), no. 433, Aug. 1924, pp. 793-799, 4 figs. Describes new type of harmonic analyzer devised by author and gives actual result of analyzing isosceles-triangular wave. (In Japanese.) See also Engineering, vol. 118, no. 3078, Dec. 26. 1924, pp. 876-877, 5 figs.

Electric Transmission Lines. Harmonics in Power Transmission Lines (Les harmoniques dans les réseaux de distribution d'énergie), P. Bunet. Industrie Eléctrique, vol. 33, no. 771, Aug. 10, 1924, pp. 501-506, 6 figs. Discusses successive harmonics of polyphase currents, especially two and three-phase, and establishes formulas for their calculation.

Inharmonic Analysis, Wave Analyzer Applied to. Photomechanical Wave Analyser Applied to Inharmonic Analysis, C. F. Sacia. Optical Soc. Am.—Jl., vol. 9, no. 4, Oct. 1924, pp. 487-494, 6 figs. Following brief review of principles of Fourier analysis, author describes apparatus and method used for obtaining analyses of large number of oscillograms of spoken vowel sounds.

Slot Openings. Harmonics Due to Slot Openings, C. A. M. Weber and F. W. Lee. Am. Inst. Elec. Engrs.—Jl., vol. 43, no. 12, Dec. 1924, pp. 1129-1132, 13 figs. Graphical-analytical exposition of harmonics due to slot openings; applies particularly to field form of rotating field motor such as induction motor.

Transformers. Further Notes on Transformer Third Harmonics with the Star/Star Connection, S. A. Stigant. Elec. Times, vol. 66, no. 1729, Dec. 4, 1924, pp. 657-660, 5 figs.

Predetermination of Overvoltages by the Harmonics Oil-Immersed Transformer Saturation (Predetermination des surtensions par les harmoniques de saturation des transformateurs), P. Bouchert and J. Fallou). Revue Générale de l'Electricité, vol. 15, no. 22, May 31, 1924, pp. 979-988, 9 figs. Method of predetermining harmonics of saturation; points out that magnetic saturation, although it produces overvoltages, has the effect of limiting them; investigation of how these contrary influences adjust themselves when magnetic saturation is progressively increased.

HEALTH

Accidents and. See ACCIDENTS, Industrial.

Eye Injuries. See ACCIDENTS, Eye Injuries.

Eyesight Conservation. Protecting Eyesight of Workers. Iron Trade Rev., vol. 75, no. 9, Aug. 28, 1924, pp. 540-542. First essential is use of goggles. Education important. Cost of eye hazards.

Industrial Health-Service Plan. How Do Employees Use the Hospital Facilities? M. R. Lott. Indus. Management (N. Y.), vol. 67, no. 1, Jan. 1924, pp. 58-62, 5 figs. Summation of health-service work at Sperry Gyroscope Co.

Miners'. See MINERS, Conditions Affecting Health; Diseases; Effect of High Temperature on; Nystagmus.

Nickel Itch. The Treatment of Nickel Itch. Brass Wld., vol. 20, no. 7, July 1924, pp. 240-241. Report of A. E. S. committee giving causes and treatment of this type of eczema.

Physiological Reactions to Air Cooling. Cooling Effect on Human Beings Produced by Various Air Velocities, F. C. Houghten and C. P. Yagloglou. Am. Soc. Heat & Vent. Engrs.—Jl., vol. 30, no. 2, Feb. 1924, pp. 169-184, 13 figs. Study of relation of temperature, humidity, and air motion to human comfort, giving details of tests and results obtained.

Physiological Reactions to High Temperatures. Air-Motion—High Temperatures and Various Humidities—Reaction on Human Beings, W. J. McConnell and C. P. Yagloglou. Am. Soc. Heat. & Vent. Engrs.—Jl., vol. 30, no. 3, Mar. 1924, pp. 199-224, 19 figs. Results of experiments on physiological reactions to high temperatures and humidities, presented with the view of illustrating influence moving air exerts over still air.

Sanitation, Relation to. See SANITATION.

HEAT

Convection in Liquids. See LIQUIDS, Convection of Heat in.

Dissipation from Cylindrical Surfaces. Heat Dissipation from the Surfaces of Pipes and Cylinders in an Air Current, A. H. Gibson, Lond., Edinburgh & Dublin Philosophical Mag. & Jl. Sci., vol. 47, no. 278, Feb. 1924, pp. 324-336, 4 figs. Experiments carried out with view of obtaining data as to rate of heat dissipation from tubular metal surfaces adaptable as oil coolers for aircraft.

Equivalent Values Produced by Fuels. Determination of Equivalent Value of Heat Produced by Electricity and by Coal (Ueber die Bestimmung des Aequivalentes der elektrisch erzeugten Wärme im Vergleich zu der durch Kohle erzeugten Wärme), F. Rutgers. Schweiz. Elektrotechnischer Verein Bul., vol. 15, no. 8, Aug. 1924, pp. 393-409, 8 figs. Discusses difficulties of determination and shows by a large number of examples how equivalents may be obtained and that they vary between wide limits.

Flow, Meter for. See HEAT TRANSMISSION, Heat Flow Meter.

German Code for Temperature Scale. See TEMPERATURE MEASUREMENT, Temperature Scale and Heat Unit.

Insulation. See INSULATION, HEAT.

Pumps. See HEAT PUMPS.

Radiation. Heat Radiation from the Point of View of Industrial Application (Le rayonnement calorifique envisagé du point de vue des applications industrielles), C. Roszak and M. Vernon

Revue de Métallurgie, vol. 21, nos. 8, 9, and 10, Aug., Sept., and Oct. 1924, pp. 435-449, 549-564, and 600-609, 24 figs. Discusses fundamental laws, including those of Kirchhoff, Lambert, and Stefan; practical formulas for calculating radiation, and their application in calculating radiation in boiler furnaces; practical importance of knowledge of laws of radiation.

Radiation of Flue Gases and Its Practical Calculation (Ueber die Bestimmung der wahren Temperature undurchsichtiger diffus reflektierender Körper), M. Pirani. Zeit. für Technische Physik, vol. 5, no. 6, 1924, pp. 266-267. Shows that radiation increases with temperature approximately according to Plank's law of radiation and gives method for its calculation.

Recent Progress in the Study of Heat Radiation (Neuere Erkenntnisse auf dem Debiete der Wärmestrahlung), A. Schack. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 39, Sept. 27, 1924, pp. 1017-1020, 4 figs. Planck's, Kirchoff's, and the Stefan-Boltzmann laws of radiation; heat transmission in furnaces and boilers; radiation of gases; points out necessity of further investigation of radiation of solid surfaces at different temperatures.

Storage. See HEAT STORAGE.

Theory. Walter Nernst's Sixtieth Birthday (Zum 60. Geburtstag von Walther Nernst), M. Schmolke. Wärme, vol. 47, no. 25, June 20, 1924, pp. 287-290. Discusses progress due to Nernst in theory of heat, third heat law and its application, Nernst lamp, etc.

Transmission. See HEAT TRANSMISSION.

Waste, Use of. See WASTE HEAT.

HEAT CONDUCTIVITY.

Metals. See METALS, Heat Conductivity.

HEAT EXCHANGERS. See GASOLINE, Heat Exchangers; HEAT TRANSMISSION, Heat Exchangers.

HEAT PUMPS

Applications. Utilization of the Heat of Low Temperature (Ueber die Nutzbarmachung von Wärme niedriger Temperatur), Ferdinand. Gesundheits-Ingenieur, vol. 47, no. 11, Mar. 15, 1924, pp. 81-82, 9 figs. Describes applications of heat pumps which work on principle of refrigerating machines.

Principle and Applications. The Heat Pump (Die Wärme-Pumpe), K. Schreber. Gesundheits-Ingenieur, vol. 47, nos. 14 and 15, Apr. 5 and 12, 1924, pp. 105-108 and 119-121, 8 figs. Heat pumps are described as plants with which, under use of mechanical work, heat quantities are heated from colder to warmer temperature; deals especially with concentrating plants, in which steam from solution is compressed and then used for heating solution which is to be concentrated; and heating plants in which working value of gases coming from grate is recovered as far as possible and used as work energy and for heating of rooms.

HEAT STORAGE

Accumulators, Calculation of. The Calculation of Solid Heat Accumulators (Die Berechnung fester Wärmespeicher), K. Grütter. Schweiz. Elektrotechnischer Verein—Bul., vol. 15, no. 10, Oct. 1924, pp. 493-510, 8 figs. Calculation of temperatures inside of a plate-shaped homogeneous accumulator of solid material under assumption that heat volume admitted to internal wall and the external temperature are periodically variable; calculation of heat radiated by external surface and of temperature of internal wall; values are used for design calculation of plate-shaped heat accumulators of homogeneous solid material.

Applications in Industry. The Application of Heat Storage in Industry (Verwendbarkeit der Dampfspeicherung in der Industrie), Trautmann. Gesundheits-Ingenieur, vol. 47, no. 16, Apr. 19, 1924, pp. 137-139. Discusses different systems of heat storage, their useful possibilities, and advantages.

Electric. Electric Storage Heating (Elektrische Speicherheizung). Gesundheits-Ingenieur, vol. 47, no. 38, Sept. 16, 1924, pp. 433-434, 1 fig. To make use of current from power house during off-hours for heating, it was used to heat water in a storage boiler between 10 p. m. and 6 a. m., which in turn was used between 6 a. m. and 10 p.m. for heating.

Hot-Water Accumulators. Heat Storage Plants in Connection with Boilers (Die Wärmespeicher in Verbindung mit Dampfkesseln), H. E. Witz. Wärme, vol. 47, no. 9, Feb. 29, 1924, pp. 83-87, 16 figs. Influence of pressure fluctuations and their elimination by use of hot-water accumulators; importance of such accumulators for maximum-pressure boilers.

HEAT TRANSMISSION

Boilers. Heat Transmission in Boilers, Chas. F. Wade. Power Engr., vol. 19, no. 219, June 1924, pp. 224-226, 4 figs. Discussion of principles and suggestions for improvements; deals with "luminous" flames, conduction, gas films, and temperatures.

The Transmission of Heat in Boilers, W. N. Booth. Gas Wld., vol. 80, no. 2071, Mar. 29, 1924, pp. 288-290, 6 figs. See also Gas Jl., vol. 166, no. 3177, Apr. 2, 1924, pp. 36-38, 6 figs. Conditions which affect flow of gas adjacent to a solid surface; conduction and convection; transmission of heat through boiler plates.

Building Materials. Experimental Study of the Transmission of Heat Through Certain Construction Materials (Etude expérimentale de la transmission de la chaleur par quelques matériaux de construction), A. Dumas. Bul. Technique de la Suisse Romande, vol. 49, nos. 23 and 24, Nov. 10 and 24, 1923, pp. 277-280 and 289-295, 11 figs. Results of extended series of tests carried out at Univ. of Lausanne on various wall constructions used in building work and under identical conditions.

Buildings. An Improved Method of Determining the Heat Transfer Through Wall, Floor, and Roof Sections, R. F. Norris, H. H. Germond and C. M. Tuttle. Am. Soc. Heat. & Vent. Engrs.—Jl., vol. 30, no. 2, Feb. 1924, pp. 109-114, 1 fig. Describes method developed in Burgess laboratories and apparatus used.

Measuring Heat Transmission in Building Structures and a Heat Transmission Meter, P. Nicholls. Am. Soc. Heat. & Vent. Engrs.—Jl., vol. 30, no. 1, Jan. 1924, pp. 35-70, 30 figs. Deals with measurement of heat flow through walls, more particularly of existing structures. Outlines principles employed and describes work done at A. S. H.-V. E. research laboratory in attempt to develop a heat transmission meter which will indicate instantaneous flows. Difficulties involved in such measurements and variable factors in building materials that will influence heat-transmission constants. Review of present state of knowledge, future requirements, and indications of probable trend of investigational work.

Condensers, Surface. See CONDENSERS, STEAM, Surface.

Convection. Heat Transfer by Convection, T. S. Taylor. Optical Soc. Am.—Jl., vol. 9, no. 6, Dec. 1924, pp. 693-700. In considering total heat loss when forced convection is involved,

loss by radiation plays rather unimportant part; such is not the case for free convection, therefore exact knowledge of methods of accurately determining surface temperatures and radiation constants would be very helpful.

Evaporators. See Problems.

Firebrick. See FIREBRICK, Heat Transmission through.

Furnace Walls. See Problems.

Heat Exchangers. Economic Features of Heat-Exchanger Design, F. L. Maker and M. W. Thornburg. Mech. Eng., vol. 46, no. 12, Dec. 1924, pp. 891-895, 4 figs. Factors determining economic area of heat exchangers, particularly as applied to oil-refinery operations; graphic methods of analysis which is simpler and more direct than methods generally used.

Heat-Flow Meter. Practical Applications of the Heat Flow Meter, P. Nicholls. Am. Soc. Heat. & Vent. Engrs.—Jl., vol. 30, no. 6, June 1924, pp. 439-451, 8 figs. Results of application of heat flow meter for determining thermal constants of certain building structures.

Internal-Combustion Engines. See INTERNAL-COMBUSTION ENGINES, Heat Transmission from Working Fluid.

Liquids. See LIQUIDS, Heat Transfer.

Metals. See METALS, Heat Transmission in.

Meter for. See Problems.

Pipes. Heat Transfer in Small Pipes, F. C. Blake and W. A. Peters, Jr. Indus. & Eng. Chem., vol. 16, no. 8, Aug. 1924, pp. 845-846, 2 figs. Method developed by authors of measuring water temperature by drawing off portion.

Problems. Heat Transfer Symposium. Indus. & Eng. Chem., vol. 16, no. 5, May 1924. Contains following articles: Heat Transmission from Bare and Insulated Pipes, R. H. Heilman, pp. 451-458, 10 figs.; Heat Transmission in an Inclined Rapid Circulation Type Vacuum Evaporator, D. J. Van Marie, pp. 458-459, 2 figs.; Forced Convection of Heat in Gases and Liquids, Chester W. Rice, pp. 460-467, 4 figs.; Optimum Operating Conditions for Pipe Heating and Cooling Equipment, W. K. Lewis, J. T. Ward, and E. Voss, pp. 467-468; Heat Transfer in Enamel-Lined Apparatus, E. P. Poste, pp. 469-470; Characteristics of Air-Blast Heaters, F. R. Ellis and J. D. White, pp. 471-473, 8 figs.; Studies in Evaporator Design—Effect of Surface Conditions, L. A. Pridgeon and W. L. Badger, pp. 474-478, 3 figs.; Evaporator Scale Formation, W. L. McCabe and C. S. Robinson, pp. 478-479; 3 figs.; The Film Concept of Heat Transmission Applied to a Commercial Water Heater, D. K. Dean, pp. 479-483, 3 figs.; Loss of Heat from Furnace Walls, Rob. Calvert and L. Caldwell, pp. 483-490, 11 figs.; A Heat Transmission Meter, P. Nicholls, pp. 490-493, 3 figs. See also Abstracts of Papers in Chem. & Met. Eng., vol. 30, no. 17, Apr. 28, 1924, pp. 661-665.

Refrigerating System. See REFRIGERATING PLANTS, Heat Transmission in.

Research. Research in Heat Transmission, E. Buckingham. Mech. Eng., vol. 46, no. 7, July 1924, pp. 386-388. Also Refrig. Eng., vol. 11, no. 3, Sept. 1924, pp. 91-94. Conduction, radiation, and convection; conduct of research in heat transmission; employment of dimensional analysis; variables involved in complete mathematical theory of heat transmission; suggestions in regard to planning of research programs.

Steam-Engine Cylinders. See STEAM ENGINES, Cylinders, Heat Transmission in.

Steam Pipes. See also Problems.

Thermal Conductivity. Methods of Measuring Thermal Conductivity in Solids and Liquids, L. R. Ingersoll. Optical Soc. Am.—Jl., vol. 9, no. 4, Oct. 1924, pp. 495-501. Linear-flow, radial-flow and periodic-flow methods.

New Tests on the Thermal Conductivity of Liquids, Insulating Materials and Metals (Nouveaux essais sur la conductibilité calorifique des liquides, matières isolantes et métaux), M. Jakob. Chaleur & Industrie, vol. 5, no. 46, Feb. 1924, pp. 62-65, 3 figs. Shows how to utilize to advantage relations between thermal properties of bodies and their employment in industry.

Walls. Heat Loss through Wall Constructions, A. Kolflaath. Am. Soc. Heat. & Vent. Engrs.—Jl., vol. 30, nos. 9 and 10, Sept. and Oct. 1924, pp. 627-643 and 661-668, 10 figs. Describes experiments carried out at Norway Inst. Technology, Trondhjem, Norway. Develops thermal coefficients from 27 test houses built in an open field, which may be used for other constructions than those tested.

Heat Transmission Through Dwelling House Walls. Am. Architect, vol. 126, no. 2455, Sept. 24, 1924, pp. 299-306, 29 figs. Results of tests on various kinds of wall construction, made by Norwegian Government at Trondhjem, Norway.

See also WALLS, Testing.

Water Flowing Inside Pipes. Heat Transfer for Water Flowing Inside Pipes, W. H. McAdams and T. H. Frost. Refrig. Eng., vol. 10, no. 9, Mar. 1924, pp. 323-332 and (discussion) 332-334, 15 figs. Progress recently made in developing an equation which may be used by designer to predict numerical value of film coefficient of heat transfer between a clean pipe and water which is flowing through it in turbulent motion.

HEATING

Buildings. New Investigations on the Heat Requirement of Buildings and Heat Supply from Sources of Heat (Neue Untersuchungen über den

Wärmebedarf von Gebäuden und die Wärmeabgabe von Heizkörpen), E. Schmidt. Gesundheits-Ingenieur, vol. 47, no. 50, Dec. 13, 1924, pp. 585-590, 8 figs. Discusses heat losses through walls of buildings, temperature distribution in walls, etc., and gives charts for graphic determination.

The Calculation of Thermal Requirements in Buildings by Means of a Graphic Chart, J. N. Victor. Am. Architect, vol. 126, no. 2450, July 16, 1924, pp. 69-71. Chart is adapted to designing of steam, vapor, vacuum, and hot-water systems which employ direct, indirect, or coil radiation and for all temperature differences.

Central, Oil Fuel for. See OIL FUEL, Central Heating with.

China. Heating Situation in China, H. A. Alt. Am. Soc. Heat. & Vent. Engrs.—Jl., vol. 30, nos. 4, 8, and 10, Apr., Aug., and Oct., 9124, pp. 301-306, 589-596, and 669-675. Financial details; Aug.: Engineering side. Oct.: Contracting side.

Churches. Calculation of Heat Requirements of Churches (Die Berechnung des Wärmebedarfes für Kirchen), K. N. Metzkow. Gesundheits-Ingenieur, vol. 47, no. 42, Oct. 18, 1924, pp. 489-490, 4 figs. Discusses Rietschel formula to find quantity of heat required and proposes modification for its application to large churches.

Electric. See HEATING, ELECTRIC.

Flour-Mill. Using By-Products in Flour Mill Heating and Humidifying, E. K. Campbell. Am. Soc. Heat. & Vent. Engrs.—Jl., vol. 30, no. 5, May 1924, pp. 349-358, 4 figs. Describes system installed in mill of Kansas Flour Mills Co., which seems to make available for use in heating a building all of by-product heat except that which is carried out in finished products.

Foundries. See FOUNDRIES, Heating.

Gas. See HEATING, GAS.

Hot-Air. See HEATING, HOT-AIR.

Hot-Water. See HEATING, HOT-WATER.

Oil Burners, Use in. Adapting the Oil Burner to Existing Heating Plants, H. R. Linn. Heat. & Vent. Mag., vol. 21, no. 5, May 1924, pp. 41-43. Notes on common installation and operating faults, with suggestions for overcoming these difficulties.

Steam. See HEATING, STEAM.

HEATING AND VENTILATION

Bank Vaults. Modern Heating and Ventilating Installations for Bank Vaults (Moderne Heizungs- und Lüftungsanlagen für Banktresore), Ortel. Gesundheits-Ingenieur, vol. 47, nos. 9 and 10, Mar. 1 and 8, 1924, pp. 65-68 and 73-76, 9 figs. Discusses correct and incorrect plant designs and describes examples of actual installations, after pointing out technical conditions governing design.

Code. Heating and Ventilating Code. Domestic Eng., vol. 105, no. 12, Dec. 22, 1923, and vol. 106, no. 2, Jan. 12, 1924, pp. 574-576 and 26-28, 2 figs. Condensed form of code of Wisconsin. See also Heat. & Vent. Mag., vol. 21, no. 2, Feb. 1924, pp. 84-87.

Factories. Factory Heating and Ventilation, A. G. King. Domestic Eng. (Chicago), vol. 108, nos, 3, 5, 9, and vol. 109, no. 4, July 19, Aug. 2, 30, and Oct. 25, 1924, pp. 20-23, 21-22 and 51-52, 31-35, and 29-33, 16 figs. For heating factory buildings three general methods are employed; direct heating by pipe coils or radiators, hot-blast heating using heater and fan, or by what is termed "unit heating."

Heat from Human Body, Effect of. Heat Given Up by the Human Body and its Effect on Heating and Ventilating Problems, C. P. Gagloglou. Am. Soc. Heat. & Vent. Engrs.—Jl., vol. 30, no. 8, Aug. 1924, pp. 597-609, 5 figs. Analysis of existing data from technical viewpoint; influence of temperature, humidity, and air movement upon heat loss; influence of mechanical work; effect of body heat on heating and ventilating problems.

Office Buildings. Heating and Ventilating a Modern Office Building. Plumbers' Trade Jl., vol. 76, no. 3, Feb. 1, 1924, pp. 234-238, 8 figs. Description of $60,000 system in new Commercial building, Tulsa, Okla.

Practice. Some Comments on Present Day Heating and Ventilating Practice, W. S. Timmis. Am. Soc. Heat. & Vent. Eng.—Jl., vol. 30, no. 5, May 1924, pp. 395-403, 2 figs. Outlines results of recent investigations in heating and ventilating research.

Radiation Standard Formula for. The Movement Towards a Standard Radiation Formula. Heat. & Vent. Mag., vol. 21, no. 10, Oct. 1924, pp. 49-51, 1 fig. Principal features of rules compiled by Heating & Piping Contractors' Nat. Assn.

Research Work. Research Work for the Institution of Heating and Ventilating Engineers, Its Past, Present and Future, E. Herring. Domestic Eng. (Lond.), vol. 44, no. 7, July 1924, pp. 143-146. Abstract of paper read before Instn. Heat. & Vent. Engrs.

School Buildings. Heating and Ventilating an Up-to-date School Building, T. E. Mason. Plumbers' Trade Jl., vol. 76, no. 6, Mar. 15, 1924, pp. 499-502, and 504, 2 figs. Describes heating and ventilating system of high-school building now being erected in Saranac Lake, N. Y.; ventilating is of central fan system; vapor heating.

Theaters. Modern Ventilating in Theatre Building, M. J. Phillips. Plumbers' Trade Jl., vol. 76, no. 5, Mar. 1, 1924, pp. 406-408 and 455, 7 figs. Description of installation, at Fort Armstrong Theater, Rock Island, Ill., including system for heating in cold weather and cooling in summer months.

See also AIR CONDITIONING, Theaters.

HEATING, ELECTRIC

Advantages and Uses. The Place of Electricity in the General Heating Field, L. P. Hynes. Am. Soc. Heat. & Vent. Engrs.—Jl., vol. 30, no. 1, Jan. 1924, pp. 17-24, 1 fig. Peculiar advantages of electric heat, and practical data for readily determining when and how to use it in solving some of the especially perplexing problems which confront heating engineer.

Apparatus. Electric Heating (Le chauffage électrique), G. Viel. Industrie Electrique, vol. 33, no. 766, May 25, 1925, pp. 185-189. Selection of apparatus to be employed; types of electric heaters and heating apparatus; heating of water for domestic purposes; electric cooking; electric heating of baking furnaces; heating of industrial furnaces and stoves; heating of buildings, apartments, and offices during winter.

Buildings. Electric Heating of Buildings (Elektrische Raumheizung), M. Hottinger. Gesundheits-Ingenieur, vol. 47, nos. 47 and 48, Nov. 22 and 29, 1924, pp. 549-556 and 561-570, 69 figs. Discusses Swiss conditions, and shows that even in great water-power countries general electric house heating is precluded. Details of resistance, electrode and induction heating, and examples of some installations. Electric heating of railway cars.

Central-Station. See CENTRAL STATIONS, Electric Heating, Sale of Current.

Church and Schoolroom. Notes on Electric Heating, Lulofs. Elec. Times, vol. 66, no. 1722, Oct. 16, 1924, pp. 441-445, 12 figs. With special reference to church and schoolroom heating.

Combination Cooking and Heating Oven. Recommendation for Utilization of Electric Energy for Cooking and Heating Purposes (Vorschlag zur Verwertung elektrischer Energie für Koch- und Heizzwecke), E. Boder. Schweiz. Elektrotechnischer Verein—Bul., vol. 15, no. 2, Feb. 1924, pp. 67-70, 4 figs. Investigates possibility of utilizing electric energy for calorific purposes in households and suggests scheme for simultaneous heating and kitchen and adjoining room, by means of electric ccoking and heat-storage oven.

Costs. Costs of Electric Heating, E. F. Collins. Elec. Wld., vol. 84, no. 17, Oct. 25, 1924, pp. 885-886. Basis of comparison from cost standpoint.

Holland. Progress in Application of Electricity for Heating and Domestic Purposes in Amsterdam (Le développement des applications de l'électricité au chauffage et aux usages domestiques à Amsterdam), W. Lulofs. Revue Générale de l'Electricité, vol. 16, no. 19, Nov. 8, 1924, pp. 749-758, 12 figs. Discusses electric pasteurizes for milk, heating of churches and schools, foot-warmers for traffic policemen, electric welding, etc.

Industrial. Electric Heating with Special Reference to Central Stations, E. D. Sibley. Iron & Steel Engr., vol. 1, no. 9, Sept. 1924, pp. 513-515, 1 fig. Shows present development of electric heating.

Electrical Heat in Industry, W. S. Scott. Elec. Wld., vol. 84, no. 25, Dec. 20, 1924, pp. 1307-1309. Basis for bringing conviction of value of its application.

Industrial Buildings. Using Electric Unit Heaters for Industrial Service, L. P. Hynes. Am. Soc. Heat. & Vent. Engrs.—Jl., vol. 30, no. 8, Aug. 1924, pp. 581-587, 3 figs. Presents data which will help determine when and how to use electricity for industrial service.

Joule's Law. Joule's Law of Electric Heating: An Historical Sketch, W. W. Haldane Gee. Engineer, vol. 138, no. 3593, Nov. 7, 1924, pp. 519-520, 1 fig. Details of original experiments which enabled Jas. P. Joule to deduce this law.

Liquids. Electric Heaters for Liquids (Neuerungen an elektrischen Flüssigkeitserhitzern), Donath. Elektrotechnischer Anzeiger, vol. 41, nos. 89, 90-91, and 92, June 3, 5, and 7, 1924, pp. 451-452, 459-460, and 467-468, 8 figs. Discusses apparatus for electrode heating, resistance heating, and heating on induction principle, and describes various German patents.

Reflector Stoves. Distribution of Energy Emitted From a Reflector Electric Stove (Sulla distribuzione della energia emessa dalle stufe elettriche a riflettore), E. Carlevaro. Industria, vol. 38, no. 18, Sept. 30, 1924, pp. 493-498, 5 figs. Discusses energy transmitted in various directions, calculation of efficiency, and determination of losses.

Short and Long Duration. Bases for Solving Practical Heating Questions in Electrotechnics (Grundlagen zur Lösung praktischer Erwärmungsfragen der Elektrotechnik), M. L. Keller. Archiv für Elektrotechnik, vol. 13, no. 4, July 31, 1924, pp. 292-12 figs. Discusses heating equations for short and long duration, temperature diagram by Gut process, determination of overload factor, and course of temperature at continuously changing load.

HEATING, GAS

CO Hazards in. See CARBON MONOXIDE, Hazards from House Heaters.

Cost. Heating Rooms With Gas (Raumheizung mit Gas), K. Blume. Gas- u. Wasserfach, vol. 67, no. 38, Sept. 20, 1924, pp. 561-563, 1 fig. Discusses calculation of gas consumption, time and temperature of heating, comparison with coal, etc.

HEATING, HOT-AIR

Furnaces and Heating Systems. Investigation of Warm-Air Furnaces and Heating Systems, A. C. Willard, A. P. Kratz, V. S. Day. Univ. of Ill., Eng. Experiment Station—Bul., no. 141, May 1924, 149 pp., 91 figs. Details of investigation to determine efficiency and capacity of commercial warm-air furnaces; satisfactory and simple methods for rating furnaces; methods of increasing efficiency and capacity of furnace-heating equipment; heat losses in furnace heating systems; proper sizes and proportions of leaders, stacks, and registers; etc.

See also FURNACES, HOT-AIR.

Heater Selection. Basing Warm Air Heater on Selection on Climatological Condition and Heater Performance Curves, V. S. Day. Am. Soc. Heat. & Vent. Engrs.—Jl., vol. 30, no. 12, Dec. 1924, pp. 753-760, 5 figs. Requirements of a warm-air heater. Importance of climatological temperature conditions in selection of furnace sizes and types. Table showing wide variation in heating-season mean temperatures, coldest-month temperatures, and coldest-liability temperatures for various sections of United States. Graphs showing average annual temperature for Chicago, application of these temperature data on furnace selection problem, and performance for two heaters having same grate diameters.

Houses. Principles of Design in Furnace Heating. Serial article in Sheet Metal Worker, vol. 15, beginning Apr. 11, and ending Dec. 5, 1924, 51 figs. Apr. 11: General outline of procedure to be followed in designing a gravity warm-air heating installation. May 9: Factors affecting determination of leader sizes. June 6: Simplified method of determining leader sizes, based on standard code for regulating installation of warm-air furnaces in residences. July 4, 18, Aug. 15, 29, Sept. 12 and 26: Factors affecting determination of wall stack sizes. Nov. 7: Effect of various insulating coverings for leaders and heat loss therefrom. Nov. 21: Effect of insulation of warm-air leader pipes upon plant operation. Dec. 5: Relation between stack size and temperature drop.

See also HEATING, HOUSE, Hot-Air Unit Heaters.

Plants. A Modern Air Heating Plant (Eine neuartige Luftheizung), O. Redzich. Wärme- u. Kälte-Technik, vol. 26, no. 19, Oct. 1, 1924, pp. 179-180. Construction of a modern heating plant; air-heating apparatus; low-pressure turbo-ventilators; air-conditioning plants; operation of plants.

Return-Air Intakes, Position of. Inside Air Circulation, Benj. F. Burger. Sheet Metal Worker, vol. 15, no. 24, Dec. 19, 1924, pp. 908-909, 3 figs. Its position and bearing upon position of warm-air registers.

Wall Stacks for Gravity Systems. Selecting Wall Stacks Scientifically for Gravity Warm Air Heating Systems, V. S. Day. Am. Soc. Heat. & Vent. Eng.—Jl., vol. 30, no. 5, May 1924, 391-394, 2 figs. Presents curves showing heating effect obtainable at registers for variety of stack areas and register for air temperatures.

Waste-Heat Utilization. Air Heating by Means of Steam, Exhaust Steam or Other Waste Steam with Blower Operation (Luftheizung mit Dampf, Abdampf oder sonstiger Abwärme und mit Ventilatorbetrieb), K. Redzich. Gesundheits-Ingenieur, vol. 47, no. 30, July 26, 1924, pp. 329-330. Discusses air heaters, low-pressure turbo blowers, operation of heating plant by using any kind of waste steam, air-humidifying plant, etc.

HEATING, HOT WATER

Central-Station. Use of Mechanical Devices in Central Hot-Water and Steam Heating Plants

(Emploi d'organes méchaniques dans les installations de chauffage central par l'eau et la vapeur), A. Nessi. Chaleur & Industrie, vol. 5, no. 52, Aug. 1924, pp. 389-396, 9 figs. Discusses use of centrifugal pumps, vacuum pumps, fans, and their operation in connection with heating plants; reduction of fuel consumption.

Circulation. Hot Water Heating With Moderately Accelerated Circulation Without Motor (Warmwasserheizung mit mässig beschleunigtem Umlauf ohne Motor), O. Schmidt. Gesundheits-Ingenieur, vol. 47, no. 31, Aug. 2, 1924, pp. 338-341, 3 figs. Details of Presto system, by Lincke A. G. Zürich, and of author's system, both having moderate circulation of hot water.

Effective Pressures in Systems. Theory of the Effective Pressures in Hot-Water Heating Systems (Theorie des wirksamen Druckes in Warmwasserheizungen), M. Wierz. Gesundheits-Ingenieur, vol. 47, no. 18, May 3, 1924, pp. 159-164, 14 figs. Forces which produce circulation are computed for various types of hot-water heating systems. Investigations are limited to cases where flow has attained constant conditions.

Gravity Systems. A Short, Practical Method of Designing Gravity Water Heating Systems, F. E. Giesecke. Heat. & Vent. Mag., vol. 21, nos. 1, 2, 4, 6, 8 and 10, Jan., Feb., Apr., June, Aug., and Oct., 1924, pp. 41-47, 59-61, 47-51, 45-50, 53-55, and 52-57, 18 figs. Six illustrative problems frequently encountered in practice, and their solutions.

Greenhouses. Hot Water Heating by Forced Circulation, T. N. Thomson. Plumbers Trade Jl., vol. 76, no. 6, Mar. 15, 1924, pp. 492-494, 3 figs. Practical methods for laying out a hot water forced circulation system for large commercial greenhouse with individual automatic temperature regulation for each house.

Hot-Water for Greenhouse Heating, F. J. Elder. Am. Soc. Heat. & Vent. Engrs.—Jl., vol. 30, no. 9, Sept. 1924, pp. 619-626, 11 figs. Discusses temperature requirements, radiation, piping, etc.

Institution Plant. An Institution Hot-Water Plant. Power Engr., vol. 19, no. 215, Feb. 1924, pp. 57-62, 14 figs. Arrangements for warming scattered buildings and wards of average-sized institution for poor, and for supply of hot water for domestic purposes.

Pipe Calculation. Calculation of Pipes for Hot-Water Heating (Rohrbemessung für Warmwasserheizungen. Vergleichende Betrachtungen der verschiedenen Rechnungsweisen), H. Behrens. Gesundheits-Ingenieur, vol. 47, nos. 27 and 28, July 5 and 12, 1924, pp. 285-290 and 297-303, 13 figs. Compares various methods of calculation and finds Brabée's best; applies Brabée's figures in construction of tables for rapid calculation of sizes.

Radiators. See RADIATORS.

Single-Floor. Calculation of Hot-Water Heating by Floors (Die Berechnung der Etagenwarmwasserheizung), M. Wierz. Gesundheits-Ingenieur, vol. 47, no. 32, Aug. 9, 1924, pp. 345-347, 1 fig. Discusses heating of single floors in place of central heating and makes calculations of pressures, piping, etc.

Steam vs. See HEATING, STEAM, Hot-Water vs.

Water in Pipes, Friction of. Effect of Temperature upon the Friction of Water in Pipes, F. E. Giesecke. Am. Soc. Heat. & Vent. Engrs.—Jl., vol. 30, no. 12, Dec. 1924, pp. 747-752, 3 figs. Calculations for determining how friction varies with temperature of water, in connection with calculations relating to water heating.

HEATING, HOUSE

[See also HEATING, ELECTRIC; HEATING, HOT-AIR; HEATING, HOT-WATER; HEATING, STEAM.]

Economic Installations. The Economic Design of House-Heating Installations (Die wirtschaftliche Gestaltung der Raumheizanlagen), P. Beck. Archiv. für Wärmewirtschaft, vol. 5, no. 3, Mar. 1924, pp. 41-45. Comparison of stove and central heating; possibilities for improvement of central heating plants; making use of radiation and pipe losses; reduction of chimney losses; use of low-grade fuel.

Fuel Economy in. See FUEL ECONOMY, Home Heating.

Gas. Practical Notes on House-heating by Gas. Heat. & Vent. Mag., vol. 21, no. 12, Dec. 1924, pp. 43-47, 6 figs. Data compiled by Am. Gas Assn.; includes chart for estimating gas requirements for steam, water and warm-air heating systems, and explains how to use chart; cross-connecting coal and gas boilers; thermostatic control.

Hot-Air Unit Heaters, Gas-Fired. Study of the Unit Hot Air Heater; Its Possibilities as a Gas Fired Space Heating Appliance, H. DeW. Valentine. Gas Age-Rec., vol. 53, no. 15, Apr. 12, 1924, pp. 467-469 and 506, 1 fig. Essentially a diminutive warm-air furnace, made of sheet metal throughout, heating surfaces being so designed as to form air-heating chambers which are contiguous passages which carry flue gases, paths of which are in a counter direction to path of air being heated. Results of series of tests on a unit heater.

Oil. Heating the Small Residence With Oil, C. F. Olmsted. Sheet Metal Worker, vol. 15, no. 6, Apr. 11, 1924, pp. 197-198 and 232. Regulations of Nat. Board of Fire Underwriters for construction and installation of oil-burning equipments for domestic use and for storage and use of oil fuels used in connection therewith as recommended by Nat. Fire Protection Assn.

Oil Burners. Oil Burners for Residential Property, A. C. Carruthers. Safety Eng., vol. 47, no. 2, Feb. 1924, pp. 60-64, 3 figs. Principal data on ten oil burners, for installation in various types of hot-water heaters, steam boilers, and hot-air furnaces, which have received approval of Underwriters' Laboratories. Regulations issued for their construction and use.

Oil-Fired-Boiler Efficiency. Efficiency of the House-Heating Oil-Fired Boiler, J. L. Breese, Jr. Heat. & Vent. Mag., vol. 21, no. 5, May 1924, pp. 51-54. Difficulties which have to be met and overcome in this new field, based upon experiences of an oil-burning boiler manufacturer. From paper read before Am. Assn. Oil Burner Mfrs.

Steam. Plans for Heating a Twelve-Room Residence, T. N. Thomson. Plumbers Trade Jl., vol. 77, no. 1, July 1, 1924, pp. 33, 36-37 and 80, 8 figs. Description of one-pipe low-pressure steam heating system in modern residence. Reliable rules for proportioning radiators, boiler, and piping.

Theory. Scientific Principles in Heating (Wissenschaftliches Denken in der Heizungstechnik), O. Knoblauch. Gesundheits-Ingenieur, vol. 49, no. 47, Dec. 6, 1924, pp. 573-577, 9 figs. Discusses heat transmission and losses, limit layer theory and law of similarity, and laws of thermodynamics.

Vapor. Vapor Heating System For Small Dwellings, T. E. Mason. Plumbers' Trade Jl., vol. 76, no. 4, Feb. 15, 1924, pp. 330-331 and 334, 4 figs. Details of an actual installation in representative building situated in high altitude territory.

HEATING, STEAM

Central. Additional Steam Lines and Plant of the New York Steam Corporation. Power, vol. 60, no. 21, Nov. 18, 1924, pp. 807-808, 2 figs. Steam for both power and heat is distributed at 125-lb. gage, while generation will be at 200 lb., in proposed new steam station; steam in all cases is utilized directly from boilers without power production before entering distributing mains.

Another Central Heating System Turns to Live Steam, L. E. Young. Heat. & Vent. Mag., vol. 21, no. 11, Nov. 1924, pp. 41-44, 6 figs. Details of 1924 construction program of Union Elec. Light & Power Co., St. Louis, Mo., which is substituting high-pressure steam operation from a central plant for isolated and interconnected plant service.

Applying Centralized Control to Steam Heating Systems. Power, vol. 60, no. 11, Sept. 9, 1924, pp. 417-419, 5 figs. How central-station steam was supplied to an office building and what arrangements were made for heating a factory where public-utility power had supplanted that from a private plant.

Central Heating Plant At Grand Rapids. Power, vol. 60, no. 2, July 8, 1924, pp. 42-46, 2 figs. Description of a high-pressure central heating plant in which exhaust steam and steam bled from non-condensing turbo-generator is utilized for stage feedwater heating and for supply to heating mains at three different pressures. Boiler pressure 350 lb. gage, 200 deg. fahr. superheat. Furnace air preheating, low-pressure economizers, venturi stacks.

Central Station Heating Proves Successful, H. A. Woodworth. Power Plant Eng., vol. 28, no. 7, Apr. 1, 1924, pp. 377-380, 3 figs. Discusses factors contributing to successful systems of central-station heating.

Central Station Heating Requirements, H. A. Woodworth. Power Plant Eng., vol. 28, no. 12, June 15, 1924, pp. 658-662, 7 figs. Conservation of fuel due to double use of steam, that is, for electric generation and commercial heating purposes; modern heating system at Grand Rapids, Mich.; modern underground construction.

Distribution and Regulation of Heat in Central Heating Plants (Distribution et Réglage de la Chaleur dans les installations de chauffage central par l'eau et la vapeur), A. Nessi and L. Nisolle. Chaleur & Industrie, vol. 4, no. 44, Dec. 1923, pp. 945-951 and vol. 5, no. 45, Jan. 1924, pp. 27-32, 6 figs. Discusses means and possibilities of improving economic efficiency of central heating stations.

District Steam Heating Proves Economical, H. A. Woodworth. Power Plant Eng., vol. 28, no. 21, Nov. 1, 1924, pp. 1107-1110, 5 figs. System using high-pressure steam in St. Louis business districts shows considerable saving over use of isolated plants.

General Distribution of Heat in Buildings by Means of Central Heating Stations (Repartition générale de la chaleur dans les immeubles au moyen de centrales thermiques), A. Nessi. Société des Ingénieurs Civils de France—Mémoires et Compte Rendu des Traveaux, vol. 77, no. 1-2-3, Jan.-Mar. 1924, pp. 113-142, 12 figs. Discusses efficiency in heat production and distribution, centralized distribution, use of exhaust heat for power purposes, and benefits arising from greater centralization.

Low Pressure Steam for District Heating, H. A. Woodworth. Power Plant Eng., vol. 28, no. 14, July 15, 1924, pp. 763-768, 4 figs. Service to customers insures success. Estimating radiation, advantages of district heating, customer's installations, atmospheric steam heating, and operation of a heating system.

Measuring Quantity of Heat in Central Heating Plants (Wärmemengenmessung bei Zentralheizungsanlagen), M. deGrahl. Archiv für Wärmewirtschaft, vol. 5, no. 6, June 1924, pp. 109-110, 2 figs. Discusses various types of meters for measuring quantity of heat in steam and hot-water heating plants, by Zähler-Heizungsgesellschaft, Siemens & Halske, and Krauser.

Oil Firing in Central Heating Plants (Oilfeuerungen für Zentralheizungen), Gesundheits-Ingenieur, vol. 47, no. 38, Sept. 16, 1924, pp. 439-443, 9 figs. Discusses design of oil burners and oil firing plants for various types of boilers.

Rhenish Lignite Briquets in Central Heating Plants (Das rheinische Braunkohlenbrikett in Zentralheizungen), H. M. Kaspers. Feuerungstechnik, vol. 12, no. 24, Sept. 15, 1924, pp. 210-214, 6 figs. Most important types of boilers for briquet firing and their efficiency.

The Economical Utilization of Heat from Central Station Plants, N. W. Calvert and J. E. Seiter. Am. Soc. Heat. & Vent. Engrs.—Jl., vol. 30, no. 1, Jan. 1924, pp. 1-16, 15 figs. Shutting off of steam at night and during day; thermostatic control; vacuum systems; building details for efficient heating; data on heat consumption; etc.

The Municipal Central Heating Station in Barmen, Germany (Das städtische Fernheizwerk Barmen), Schilling. Gesundheits-Ingenieur, vol. 47, nos. 15 and 17, Apr. 12 and 26, 1924, pp. 115-119 and 145-148, 10 figs. Details of boiler station consisting of 4 water-tube boilers, each having 180 sq. m. heating surface; steam pipe-line distribution system; steam pressure-reduction stations and stations for conversion of steam into hot water; operation of plant; numerous investigations show economy of central-heating system.

The Rise of Steam Flow Meters in Central Station Heating Service, H. Allen. Heat. & Vent. Mag., vol. 21, no. 8, Aug. 1924, pp. 48-52, 8 figs. How practice has developed of selling steam at source of supply, due to additional demand for free steam for cooking and general industrial use.

District. See Central.

Hot-Water vs. Comparative Tests of Heating Systems. Power, vol. 60, no. 20, Nov. 11, 1924, pp. 783-784, 2 figs. Intermediate-type thermostats are said to be superior to positive; automatic control from central point; results of tests to determine practical disadvantages rather than quantitative savings; heating requirements for steam and hot-water systems in two hotels were compared. (Abstract.) Report of Heat Utilization Committee before Nat. District Heating Assn.

Houses. See HEATING, HOUSE, Steam.

Low-Pressure. Low-Pressure Steam Heating (Niederdruckdampfheizung), J. Körting. Gesundheits-Ingenieur, vol. 47, nos. 38 and 39, Sept. 16 and 27, 1924, pp. 444-447 and 454-457, 2 figs. Discusses arrangement of plant in order to secure good results, and gives details of various plants in operation. Results of tests with an experimental plant of Körting A. G.

Metallurgical Plants. Heating Officers and Shops of Metallurgical Plants (Le chauffage des bureaux et ateliers aux usines sidérurgiques), E. Lavandier. Revue Universelle des Mines, vol. 3, no. 1, series 7, July 1, 1924, pp. 6-25, 6 figs. Discusses principal heating systems, their cost and losses, and describes heating arrangements at Differdange plant, using exhaust steam and blast furnace gas.

Oil-Burning System. Oil Burning Equipment, M. Griffith. Plumbers' Trade Jl., vol. 76, no. 4, Feb. 15, 1924, pp. 326-329, 7 figs. Details of storage tanks, apparatus and piping installation for large office building in accordance with requirements of Nat. Board of Fire Underwriters.

Practice. Modern Steam Heating, A. J. Asshe-ton. Domestic Eng. (Lond.), vol. 44, nos. 1 and 2, Jan. and Feb. 1924, pp. 3-10 and 33-35, 12 figs. Discusses decomposition of air impurities and purities; course of convection currents; object of air eliminator; pipe sizes; vapor, mechanical return, and vacuum systems; etc.

Pressure Regulators. Practical Notes on the Use of Pressure Regulators and Pressure-Reducing Valves, T. H. Ireland. Heat. & Vent. Mag., vol. 21, no. 2, Feb. 1924, pp. 50-53, 5 figs. Common errors to avoid in application of these devices, based upon a large experience in the field.

Radiators. See RADIATORS.

Return Lines, Flow in. See FLOW OF WATER, Return Lines.

Superpower vs. District Heating. Super-Power Versus District Heating, H. A. Woodworth. Nat. Engr., vol. 28, no. 12, Dec. 1924, pp. 579-582, 1 fig. Discussion on importance of heating requirements in relation to economical power generation for industrial power and district heating service; factors to be considered in design and counstruction of central-heating system; combined heating and power service most successful.

Systems for Large Cities. Economics of Our National Power and Heating Problem, E. Douglas. Nat. Engr., vol. 28, no. 12, Dec. 1924, pp. 598-601. Heating methods in large industrial plants; development of central-heating systems; heating situation in large American cities; modern methods of heating residence sections in cities; New York's unusual heating system; relation of heating and electrical requirements.

Unit Heaters. The Trend in the Unit Heater Field, A. H. Greene. Heat. & Vent. Mag., vol. 21, no. 3, Mar. 1924, pp. 55-57, 4 figs. Special reference to use of copper and brass radiators as a means of reducing size and weight and increasing efficiency.

Vacuum. Calculation of Vacuum-Steam Pipe Lines by Using Brabbée's Tables (die Berechnung von Vakuum-Dampfrohrleitungen bei Verwendung der Brabbéeschen Tafeln), A. Weindorfer. Gesundheits-Ingenieur, vol. 47, no. 30, July 26, 1924, pp. 324-325, 2 figs. Gives simple method of calculating steam pipe lines for vacuum heating.

Vacuum Steam Heating Plants [Unterdruck-heizungen (Vakuum - Dampfheizungen)], J. Schmidt. Gesundheits-Ingenieur, vol. 47, no. 33, Aug. 16, 1924, pp. 358-362, 2 figs. Describes low-pressure steam-heating plants, comparing them with conventional steam-heating plants; gives table of pipe diameters.

HEAVY-OIL ENGINES. See OIL ENGINES.

HELICOPTERS

Aerodynamics and Construction. An Introduction to the Helicopter. A. Klemin. Mech. Eng., vol. 46, no. 11a, mid-Nov. issue, 1924, pp. 739-751, 15 figs. Review of aerodynamic and construction data thus far available, together with descriptions of number of modern helicopters; difficulties to be met; lines of development open; possible uses.

Developments, 1923. See AERONAUTICS, Developments.

Oehmichen. First Helicopter to Fly a Circular Kilometer. Aviation, vol. 17, no. 7, Aug. 18, 1924, pp. 888-889, 1 fig. Details of apparatus and flight which met test imposed by French Air Service. Translated from Aéronautique.

HELIUM

Canada. Helium in Canada, R. T. Elworthy. Can. Min. Jl., vol. 45, no. 51, Dec. 19, 1924, pp. 1233-1235. Deals with helium versus hydrogen, proved superiority of helium, sources of helium in Canada, and steps required for progress.

Discovery and Properties. Helium, Thos. E. Doubt. Armour Engr., vol. 16, no. 1, Nov. 1924, pp. 8, 31, and 34. Account of its discovery and properties.

Electrical Properties. Electrical Properties of Helium, J. S. Townsend and S. P. McCallum. Lond., Edinburgh, & Dublin Philosophical Mag. & Jl., Sci., vol. 47, no. 279, May 1924, pp. 577-583, 6 figs. Investigation of conductivity of gases, in order to decide by direct experiment whether there are any additional electrons set free from negative electrode by radiation from molecules of gas, using potentials and gas pressures as in parallel plate experiments where current increases with distances between plates in accordance with given formula.

Sources and Extraction Processes. Helium Sources and Extraction Process, R. R. Bottoms. Oil & Gas Jl., vol. 23, no. 26-A, Nov. 20, 1924, pp. 20, 76, 78, and 80. Story of helium as it exists in United States; nature of the natural gas of Canada and in the Old World in respect to its helium content which is smaller than that of United States; shows percentage of helium contained in samples analyzed.

HIGH PRESSURES

Measurement. See MANOMETERS, High-Pressure.

HIGH-SPEED STEEL. See STEEL, HIGH-SPEED.

HIGH VOLTAGES

Corona. See CORONA.

Measurement. Temperature and Pressure Correction Chart for a Sphere Gap, R. H. Marvin. Am. Inst. Elec. Engrs.—Jl., vol. 43, no. 1, Jan. 1924, pp. 34-35, 2 figs. Describes use of straight-line chart when correction has to be made to indicated voltage for variations of either temperature or barometric pressure from standard values.

1,000,000-Volt Testing Station. The 1,000,000-Volt Testing Station of the Hermsdorf-Schomburg Insulator Corpn. in the Freiberg Porcelain Factory [Das 1,000,000 V-Versuchsfeld der Hermsdorf-Schomburg-Isolatoren G. m. b. H. in der Porzallenfabrik Freiberg (Sa.)]. Elektrotechnische Zeit., vol. 45, no. 10, Mar. 6, 1924, pp. 177-180, 12 figs. Describes testing station which is first in Europe generating voltages of 1,000,000-volt alternating current.

Phenomena. High-Voltage Phenomena, F. W. Peek, Jr. Franklin Inst.—Jl., vol. 197, no. 1, Jan. 1924, pp. 1-44, 29 figs. Results of author's research work at voltages up to 1,000,000 volts above ground, 1,500,000 single-phase, and 1,000,000 3-phase 60-cycle root mean square values; corona laws established at lower voltages were checked as well as spark-over values of needle gaps, sphere gaps, line insulators and other typical electrodes.

Research. High Voltage Phenomena, G. Faccioli. West. Soc. Engrs.—Jl., vol. 29, no. 12, Dec. 1924, pp. 431-442, 22 figs. Describes behavior of different circuits under conditions that sometimes occur in operation and explains why unexpected failures have developed. Describes some results obtained in special laboratory equipped to measure time in millionths of a second and dealing with voltages in the millions, which was constructed to study these high-voltage, high-frequency phenomena.

Testing Field for. Million-Volt Testing Field of the Hermsdorf-Schomburg Insulator Co. at the Porcelain Factory of Freiberg in Saxony (Das 1,000,000 V-Versuchsfeld der Hermsdorf-Schom-

burg-Isolatoren-G. m. b. H. in der Porzellanfabrik Freiberg, Sachsen), O. Naumann. Elektrotechnik u. Maschinenbau, vol. 42, no. 26, June 29, 1924, pp. 405-413, 20 figs. Describes testing field, layout and equipment; flashover of various spark gaps, string insulators, etc.

HIGHWAYS

[See also ROADS.]

Banff-Windermere, Can. The Banff-Windermere Highway, J. M. Wardle. Eng. Jl., vol. 7, no. 2, Feb. 1924, pp. 91-94, 7 figs. New highway, opened for traffic on June 30, 1923, extends from town of Banff, Alberta, to Windermere district in Columbia River valley; total length is 93 mi.; construction problems; crowning and ditching.

Black Base. Black Base in New Jersey and Kansas. Public Works, vol. 55, no. 8, Aug. 1924, pp. 248-250, 3 figs. Gives cost and details of construction.

Black Base Highway Construction, H. F. Harris. Can. Engr., vol. 47, no. 6, Aug. 5, 1924, pp. 221-223. 2 figs. Method employed in Mercer County, N. J., for constructing black base pavement; typical analysis of material used; preparatory measurements of road; advantages of method adopted; cost of constructing pavement.

British Columbia. Highway System of British Columbia, P. Philip. Can. Engr., vol. 46, no. 9, Feb. 26, 1924, pp. 269-272, 1 fig. Review of history and development of provincial highways; mileage and location of principal highways in province.

Concrete. 1924 Road Program Involves Large Steel Tonnage, R. T. Mason. Iron Trade Rev., vol. 75, no. 6, Aug. 7, 1924, pp. 349-352, 6 figs. Discusses general favor of concrete roads, increased use of steel reinforcement, details of state programs of construction.

Tentative Conclusions on the Design of Concrete Highways, C. Older. Mun. & County Eng., vol. 66, no. 3, Mar. 1924, pp. 103-111, 9 figs. Developments during 1923 in Illinois highway research work, and their probable bearing upon problem of rural pavement design.

Construction and Design. Consideration in the Design and Construction of Highways, P. Philip. Eng. Jl., vol. 7, no. 9, Sept. 1924, pp. 602-603. Relation of design of Highways and limitations imposed on motors using them.

State Highway Construction in 1923 and 1924. Eng. & Contracting (Roads and Streets), vol. 61, no. 1, Jan. 2, 1924, pp. 36-51. Reports from state officials showing mileage and expenditures in 1923 and proposed mileage and funds available for 1924.

Cost Accounting. Cost Keeping on County Highway Work, A. K. Hay. Eng. & Contracting (Roads & Streets), vol. 61, no. 4, Apr. 2, 1924, pp. 741-745, 9 figs. System used by Ottawa Suburban Roads Commission, Ottawa, Ont.

Highways Cost Accounts, G. Thomas. Surveyor & Mun. & County Engr., vol. 65, nos. 1674, 1676, and 1677, Feb. 15, 29 and Mar. 7, 1924, pp. 209-211, 233-236, and 261-264, 4 figs. Résumé of history of cost accountancy in general with special reference to highways cost accounts. Details of cost allocation, and forms, books and accounts necessary for working of a standard highway costing system which author suggests as being suitable and practicable for highway departments. Diagrams showing inter-relation of the various cost forms and cost accounts, and relations necessary between highways cost accounts system and treasurer's financial accounts.

Development. Points of Interest in Highway Development, E. O. Hathaway. Minnesota Federation of Architectural & Eng. Soc.—Bul., vol. 9, no. 8, Aug. 1924, pp. 11-18. Discusses finances, publicity and education, investigations, design, materials, construction and maintenance, and statistics.

Embankment across Tidal Marsh. Highway Embankment Construction Across Tidal Marsh (Wilmington, Del.), W. W. Mack. Eng., News-Rec., vol. 92, no. 6, Feb. 7, 1924, pp. 233-234, 2 figs. Vertical settlements of 40 ft. recorded; construction simply task of dumping enough material.

France. The Road Question in France (La question des routes en France), M. P. LeGavrian. Revue de l'Ingénieur, Apr. 1924, pp. 39-172, 101 figs. Series of articles on road construction and improvement, covering surfacing and paving by means of agglomerate, bitumen, asphalt, tar macadam, hydraulic binders, etc.; materials, machinery, and apparatus used in road building, and processes of construction.

Future. Highways of the Future (Die Strasse der Zukunft), J. Prix. Verkehrstechnik, vol. 41, no. 44, Oct. 31, 1924, pp. 545-547. Discusses work of the four international congresses on highways; development of motor truck traffic in Europe and America; systematic highway construction, and machinery used.

Jamaica Bay, L. I. The Design and Construction of the Jamaica Bay Boulevard, C. T. Steiner. Mun. Engrs. Jl., vol. 10, 1924, pp. 71-94, 8 figs. See also Mun. & County Eng., vol. 67, no. 1, July 1924, pp. 45-50. Details of design and construction including reinforced-concrete trestle carried on reinforced-concrete piles.

Lighting. See LIGHTING, Highways; Street.

Motor Traffic. Trunk-Highway Motor-Traffic, W. G. Sloan. Soc. Automotive Engrs.—Jl., vol. 15, no. 3, Sept. 1924, pp. 238-245 and (discussion) 245-250, 12 figs. Discusses effect of development of motor-vehicle industry on property values, probable future conditions, improvements at Camden, revenue available for building roads, requirements for satisfactory highways, best wearing surfaces, adjustment of gradients, etc.

New York-San Francisco. The Victory Highway, B. Blow. Good Roads, vol. 66, no. 6, June 1924, pp. 159-160 and 186, 4 figs. National memorial road from New York to San Francisco conceived in honor of those who served in World War.

Nova Scotia. Highway Construction in Nova Scotia, R. W. McColough. Can. Engr., vol. 47, no. 7, Aug. 12, 1924, pp. 229-231, 8 figs. About 14,580 mi. of roads in province create difficult problem owing to conditions prevailing; mileage of different types of road reconstructed; financing road projects; highway maintenance methods.

Quebec, Canada. Status of Provincial Highways, Quebec, J. L. Boulanger. Can. Engr., vol. 46, no. 5, Jan. 29, 1924, pp. 193-195. Review of highway situation in Province of Quebec giving mileage of roads completed and under construction, also summary of work done by Provincial Department of Roads during 1923.

Research. Highway Research in Illinois, C. Older. Am. Soc. Civ. Engrs.—Proc., vol. 50, no. 2, Feb. 1924, pp. 175-217, 26 figs. Describes series of research projects carefully planned to give insight and understanding of unsolved problems of rural pavement design; methods used in investigations, data obtained, and tentative conclusions drawn from these studies.

Proceedings of the Third Annual Meeting of the Advisory Board on Highway Research, Division of Engineering, National Research Council. Nat. Research Council—Bul., vol. 8, no. 43, Mar. 1924, 162 pp., 11 figs. Summary of development and by-laws of Advisory Board; committee reports on

economic theory of highway improvement, structural design of roads, and character and use of road materials; Objectives in Highway Research, Thos. H. MacDonald; Highway Research Work of Am. Assn. of Land Grant Colleges, A. Marston; report of committee on highway finance; Research Program of North Carolina State Highway Commission, Chas. M. Upham; reports of committees on highway-traffic analysis and maintenance.

Some Recent Developments in Highway Research. Eng. News-Rec., vol. 93, no. 24, Dec. 11, 1924, pp. 957-959. Abstracts of reports of committees of Advisory Board on Highway Research, as follows: Objects and methods of Highway Transportation Surveys, G. E. Hamlin; Structural Design of Highway, A. T. Goldbeck; Disk Shear Test for Road Soils, C. M. Strahan.

Safety. Uniform Signs and Regulations Needed to Promote Traffic Safety. Automotive Industries, vol. 51, no. 11, Sept. 11, 1924, pp. 492-494, 2 figs. Defects which should be avoided in road construction. Modern highway design is helping materially to reduce number of accidents. Drivers should be responsible for keeping brakes in good condition, highway official says.

Specifications. Preparation of Highway Specifications, A. S. Macmillan. Can. Engr., vol. 47, no. 3, July 15, 1924, pp. 152-154. Discusses features from contractors viewpoint contained in paper presented at annual convention of Can. Good Roads Assn.; respecting contractor's interests; position of engineer.

Structural Design. Researches on the Structural Design of Highways by the United States Bureau of Public Roads, A. T. Goldbeck. Am. Soc. Civ. Engrs.—Proc., vol. 50, no. 4, Apr. 1924, pp. 453-489, 26 figs. Researches on sub-grade; loads on pavements; stresses in concrete pavements; Pittsburg, Cal.; test road, studies in materials; miscellaneous investigations.

Traffic Accidents. Highway Traffic Accidents, N. M. Isabella. Eng. & Contracting (Roads & Streets), vol. 61, no. 2, Feb. 6, 1924, pp. 291-295. Classification, causes, and preventive measures. See also Highway Engr. & Contractor, vol. 10, no. 2, Feb. 1924, pp. 69-72.

Traffic in California. Highway Traffic in California, L. I. Hewes. Pub. Roads, vol. 5, no. 10, Dec. 1924, pp. 10-15, 5 figs. Applications of traffic counts made by Bur. of Public Roads; comparison of 1920 and 1922 traffic counts; California and Connecticut traffic surveys compared; statistics indicate life of vehicles.

Wisconsin. Wisconsin's New 10,000 Mile State Trunk Highway System, J. T. Donaghey. Mun. & County Eng., vol. 66, no. 3, Mar. 1924, pp. 116-120, 5 figs. Describes maintenance, marking, shape warning signs, traffic service, etc.

HOBBING MACHINES

Bevel-Gear. A New Bevel-Gear Hobbing Machine for Producing Theoretically and Practically Exact Helical Teeth (Eine neue Kegelradhobelmaschine zur Erzeugung theoretisch und praktisch genauer Schraubenverzahnung), F. Theimer. Maschinenbau, vol. 3, no. 18, June 26, 1924, pp. 651, 653, 5 figs. Describes Brandenberger patent which combines rectilinear movement to and fro of plane with simultaneous rotation of wheel round its axis.

Brown & Sharpe. A New Gear Hobbing Machine. Automobile Engr., vol. 14, no. 187, Mar. 1924, p. 75, 1 fig. Describes new Brown & Sharpe spurgear hobber.

Gould & Eberhardt. Gould & Eberhardt No. 72-H Automatic Gear Hobbing Machine. Am. Mach., vol. 60, no. 118, May 1, 1924, pp. 669-670, 2 figs. Adapted for cutting of gears up to 27 in. in diam.

See also Spur-Gear.

Lees-Bradner. Gear Hobbing Machine Specially Designed for Producing Transmission Gears. Automotive Industries, vol. 51, no. 9, Aug. 28, 1924, pp. 402-404, 5 figs. Describes gear generator specially designed for production of automobile transmission gears, developed by Lees-Bradner Co., Cleveland, Ohio. Straddle housing eliminates overhang of work and hob spindle, and adds rigidity of support, which is claimed to increase speed of production, life of hob and number of gears cut for each sharpening.

New Type. New Gear Hobber. Iron Age, vol. 113, no. 5, Jan. 31, 1924, pp. 361-362, 3 figs. Machine for quantity production of spur and helical gears; drive arrangement a feature.

Spline. Sommer & Adams Rotary Spline Hobbing Machine. Machy. (N. Y.), vol. 30, no. 7, Mar. 1924, pp. 555-556, 3 figs. Describes multiple-spindle machine in which eight pieces of work are finished by as many hobs, while practically entire machine, with exception of base, revolved past operator; it is believed same principle can be applied to hobbing of gears.

Spur-Gear. An Interesting Gear Cutting Development. British Machine Tool Eng., vol. 3, no. 27, May-June 1924, pp. 61-62, 1 fig. Describes automatic, super-gear hobbing machine.

New Hobbing Machine Specially Designed to Rough and Finish Gears. Automotive Industries, vol. 50, no. 7, Feb. 14, 1924, pp. 347-348, 3 figs. Machine made by Gould & Eberhardt can be used for production of both spur and helical types in quantities; also adapted to diversified range of work.

HOISTS

Coke. See COKE HANDLING, Hoists.

Electric. An Electric Hoist Controlled by Compressed Air, H. V. Haight. Can. Min. Jl., vol. 45, no. 8, Feb. 22, 1924, pp. 175-180, 8 figs. Particulars of two hoists recently built for use in Porcupine camp; double drum type, the two drums being on one shaft and intended for operating normally in balance; both drums provided with band friction clutches so that either may be operated independently; drive is through single-reduction Falk herringbone gearing; 250-hp. 550-volt 60-cycle slip-ring hoist motor; designed for maximum rope pull of 12,000 lb. and a depth of 2000 ft.

Electric Drives for Mine Hoists, L. A. Umansky. Coal Industry, vol. 7, no. 2, Feb. 1924, pp. 75-82, 13 figs. Economic comparison of various systems in use; induction-motor drive and Ward-Leonard control with flywheel motor generator set.

Large Electric Winders at the Randfontein Central Gold Mining Company, Limited, Chas. Miles and A. W. Stoker. S. African Instn. Engrs.—Jl., vol. 22, no. 6, Jan. 1924, pp. 77-93 and (discussion) 93-94, 22 figs. Details of mechanical and electrical portions; designed to hoist rock load of 10,000 lb. from depth of 3000 ft.; gear is operated by Ward-Leonard system with two main 2500-hp. motors.

Things It Pays to Know About the Operation and Selection of Small Hoists, R. B. Hunter. Indus. Engr., vol. 82, no. 11, Nov. 1924, pp. 527-530 and 554, 12 figs. Operating features of control, brakes, and overtravel protection of different designs.

Hydraulic Drive for. See HYDRAULIC DRIVE.

Mine. Novel Application of Dynamic Braking on Large Slope Hoist, R. W. McNeill. Coal Age, vol. 25, no. 2, Jan. 10, 1924, pp. 35-39, 8 figs. Peculiar requirements of hoisting and lowering speeds under widely differing loads while handling coal, supplies, and men necessitates unusual type

of control; success of installation at Shenandoah, Pa., proves efficacy of plan.

Novel Features of Electric Mine Hoists Recently Installed in Northern Ontario, H. V. Haight. Elec. News, vol. 33, no. 9, May 1, 1924, pp. 52-55, 5 figs. See also Compressed Air Mag., vol. 29, no. 8, Aug. 1924, pp. 965-968. Details of two hoists built for use in Porcupine mining districts; double-drum type; controlled by compressed air; 250-hp. motor used in each case; liquid rheostat found most suitable.

See also Electric.

Mine, Safety Devices for. Present Status of the Question of Safety Devices for Mine Hoists (L'état actuel de la question des parachutes de mines), Alex. Dupret. Annales des Mines de Belgique, vol. 25, no. 1, 1924, pp. 75-146, 12 figs. Extended study as to advisability of their adoption, including descriptions of various clamps and clutches, theory of operation, statistics regarding junctioning of devices; conclusions.

Planetary Gearing for. Planetary Gearing for Hoists (Umlaufräderwerke im Hebezeugbau), G. W. Heinold. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 46, Nov. 15, 1924, pp. 1191-1194, 12 figs. Describes two electric hoists in which the built-in planetary gearing finds varied use as transmission gearing, compensator, as substitute for coupling, and for control; advantages for twin-chain grab operation.

Skip. Effective Skip Hoist Cuts Job Costs. Am. Contractor, vol. 45, no. 32, Aug. 9, 1924, pp. 25-26, 3 figs. Hoist is designed for elevation of form lumber, reinforcing rods, pipe, etc.

Twin-Rope Skip Hoist Works Well, A. Allen and H. F. Hebley. Coal Age, vol. 25, no. 26, June 26, 1924, pp. 935-940, 8 figs. Using two ropes of comparatively small diameter for hoisting coal skips containing eight to eleven tons of coal each in somewhat novel practice adopted at Thermal No. 4 mine of Donk Bros. Coal & Coke Co., Madison County, Ill.

HOOKS

Girder-Lifting. See GIRDERS, Hooks for lifting.

HOSIERY MILLS

Development. See INDUSTRIAL MANAGEMENT, Hosiery Plant.

HOSPITALS. See BUILDINGS, Hospital.

HOT-WATER SUPPLY

Heating Surface of Apparatus. Calculation of Heating Surfaces of Hot-Water Apparatus (Berechnung der Heizflächen der Warmwasserbereitungsapparate), K. Schubart. Gesundheits-Ingenieur, vol. 47, no. 29, July 19, 1924, pp. 311-313. Discusses empirical formulas for hot-water surface calculation, based on Rietschel's work.

HOTELS

Design. Architect and Engineer Unite in Design of Hotel, G. H. Lippert. Eng. News-Rec., vol. 92, no. 19, May 8, 1924, p. 813. New Belmont Hotel at Madison, Wis., has concrete frame, cantilever footings and irregular column spacing; heavy loads of material piled on floors.

Electrification of. Modern Hotel Electrification, K. Parker. Elec. Wld., vol. 84, no. 9, Aug. 30, 1924, pp. 404-410, 15 figs. New Statler Hotel in Buffalo uses more than 2000 hp. in lighting and motor service. General design principles and typical installations of motors, cables, and signal systems.

Purchased Power. See ELECTRIC POWER, Hotel Supply.

HOUSES

Cement-Stucco Finishes. Cement-Stucco Finishes. Concrete & Constructional Eng., vol. 19, no. 1, Jan. 1924, pp. 38-49, 13 figs. Methods of treatment for different cement exterior finishes.

Concrete. Concrete Houses, Part and Present, D. Williams. Cement & Eng. News, vol. 36, no. 1, Jan. 1924, pp. 23-25 and 50, 8 figs. Brief history of progress of concrete houses to date.

Concrete-Brick. Temperature and Moisture Observations on a Concrete Hollow-Brick House (Temperatur- und Feuchtigkeitsbeobachtungen an einem Bau aus Betonhohlsteinen), A. Hummel. Beton u. Eisen, vol. 23, no. 4, Feb. 20, 1924, pp. 43-46, 6 figs. Results of observations carried out for duration of a year show that use of described concrete hollow-brick construction for dwelling houses meets atmospheric requirements of masonry structures with entire satisfaction.

Concrete Masonry. Concrete Masonry House Construction. Cement & Eng. News, vol. 36, no. 1, Jan. 1924, pp. 27-31, 8 figs. Has concrete block walls; standard unit a factor; standard wall sections; construction details of cinder block walls, floors, sills and lintels; and roofing.

Construction. Aspects of Houses in Relation to Wind, Rainfall and Sunshine, N. Lloyd. Roy. Inst. British Architects—Jl., vol. 31, no. 19, Sept. 20, 1924, pp. 633-644, 16 figs. Considers influences of wind, rainfall, and sunshine as affecting that front of a house which is often styled garden front, in which architect strives to place as many as possible of his living rooms and bedrooms. Tables and diagrams.

Pisé Construction. See BUILDING CONSTRUCTION, Pisé.

HOUSING

France. Cheap Housing (Les habitations à bon marché), P. Razous. Génie Civil, vol. 84, nos. 7 and 8, Feb. 16 and 23, pp. 156-159 and 179-183. Status of legislation and construction in France.

Industrial Villages. Bethlehem Park—An Industrial Village. Iron Age, vol. 113, no. 16, Apr. 17, 1924, pp. 1160-1161, 4 figs. 300 houses to be sold to employees on easy terms; attractive layout planned, with gardens, parked boulevard, and playground.

Industrial Village on Sound Basis. Iron Age, vol. 113, no. 1, Jan. 3, 1924, pp. 9-14, 14 figs. Developments of village established by Kinkora Works of John A. Roebling's Sons Co.; houses for employees only; providing activities outside mill; caring for workers' savings; community services.

Plan for Industrial Community of Alcoa, Tennessee, Rob. F. Ewald. Eng. News-Rec., vol. 92, no. 9, Feb. 28, 1924, pp. 364-367, 2 figs. Aluminum and lumber companies occupy central area, with low lands for park areas forming five breaks, seven main thoroughfares and whole street system adjusted to contours.

Miners' Dwellings. Kramer Mine Houses Its Stay-at-Home Employees, A. F. Brosky. Coal Age, vol. 26, no. 14, Oct. 2, 1924, pp. 463-467, 10 figs. Particulars of plans adopted by Northwestern Min. & Exchange Co. for building mining town at its new Kramer operation, Jefferson County, Pa. Only one employee in every four lives at mine; each man requires 4.4 rooms; two-story houses accommodate two men each at cost 32.5 per cent less than bungalow type.

North and South America. Recent Progress in Workmen's Housing in the Americas. Pan American Union—Bul., vol. 58, no. 2, Feb. 1924, pp. 114-160, 49 figs. Review of developments in countries of North, Central, and South America.

Post-War Problem in Europe. Housing as a Post-War Problem in Europe. Int. Labour Rev., vol. 10, no. 3, Sept. 1924, pp. 452-469. Steps taken in countries where shortage was most acute to control use made of existing dwellings; "rationing" of accommodation and its allocation to the homeless in Germany and Austria; housing schemes for revival of building; in spite of great efforts made, it cannot yet be said that post-war housing problem is near solution.

Switzerland. Dwelling Colonies of the Building Society of Federal Employees in Zurich (Die Wohnkolonien der Baugenossenschaft des eidgen. Personals in Zürich). Schweizerische Bauzeitung, vol. 84, nos. 22, 23, and 24, Nov. 29, Dec. 6, and 13, 1924, pp. 261-263, 276-278, and 288-289, 27 figs., partly on supp, plate and pp. 290-291. Describes layout, buildings, school and garden, rents, etc.

Zoning and. Views on Zoning and Housing. Nat. Mun. Rev., vol. 13, no. 5, May 1924, pp. 274-288. Contains following articles: What the Banker Thinks of Zoning, Geo. S. Edie; What One Realtor Thinks of Zoning, J. W. Cree, Jr.; Reducing the Cost of Housing by Eliminating Building Law Requirements, I. H. Woolson; Do We Need Rent Control Laws Permanently? Clara S. Taylor.

HUMIDITY

Measurement. See HYGROMETERS.

Recorder, Direct-Reading. See TELEPHONY, Atmospheric Conditions, Effect of.

HYDRAULIC ACCUMULATORS

Construction and Characteristics. Hydraulic Accumulators, H. S. Cattermole. Mech. Wld., vol. 75, no. 1938, Feb. 22, 1924, pp. 113-114. Characteristics and constructional details.

Design. Hydraulic-Accumulator Installation at the Hartmann Textile Mill at Munster (Alsace) [L'installation d'accumulation d'énergie hydraulique des Manufactures Hartmann, à Munster (Haut-Rhin)]. Génie Civil, vol. 84, no. 2, Jan. 12, 1924, pp. 29-32, 6 figs. Whole plant includes low-pressure hydroelectric station with head of 15 m., and accumulating station with its sets of Sulzer centrifugal pumps and installations for utilization of high pressure.

Switzerland. Examples of Hydraulic Accumulators and Pumps in Switzerland, Italy, and France (Exemples d'installations hydrauliques d'accumulation et de pompage, en Suisse, en Italie et en France). Génie Civil, vol. 84, no. 9, Mar. 1, 1924, pp. 208-210, 5 figs. Describes accumulator plants working principally with Sulzer centrifugal pumps, placed in operation during past few years.

HYDRAULIC CARTRIDGE. See BLASTING, Hydraulic Cartridge.

HYDRAULIC DRIVE

Future Applications. Hydraulic Power and Its Future Applications, F. H. Towler. Machy. (Lond.), vol. 25, no. 632, Nov. 6, 1924, pp. 174-175, 2 figs. Survey of modern practice in use and abuse of hydraulic power; extent and direction of developments.

Schneider. The Schneider Gear for the Drive of Machine Tools and Hoists (Das Schneider-Kapselgetriebe für den Antrieb von Werkzeugmaschinen und Hebezeugen), O. Keller. Schweizerische Bauzeitung, vol. 83, no. 9, Mar. 1, 1924, pp. 100-101, 8 figs. New hydraulic drive patented by H. Schneider, with which any fine adjustment of speed according to material and feed can be made without interfering with operation; advantages of gear, which is a hydraulic change and reversing gear, consisting of two valveless pumps.

HYDRAULIC MACHINERY

Glycerine, Use in. Study on the Use of Glycerine in Hydraulic Machinery (Etude sur l'emploi de la glycérine dans les appareils hydrauliques), F. Mercier. Revue Industrielle, vol. 54, no. 2177, Apr. 1924, pp. 52-57, 4 figs. Translation (in abstract) in Mech. Eng., vol. 46, no. 6, June 1924, p. 353. Study of properties of glycerine and its action on metals, based on experience of 30 years extending over more than 1200 apparatus; author concludes that hydraulic or hydropneumatic apparatus of any kind, making use of glycerine, should be constructed so that in no case glycerine can come in contact with surfaces of different metallic nature.

HYDRAULIC PRESSES

Ram Speed. Ram Speed of Hydraulic Presses, H. S. Cattermole. Mech. Wld., vol. 76, no. 1959, July 18, 1924, p. 37. Discusses required ram speed for given operation, shows relation between press and pump and press and accumulator, and makes calculations.

HYDRAULIC TURBINES

Acceptance Test. Proposal for Uniform Rules for Testing Water-Power Plants, G. Sundby. Engineering, vol. 118, no. 3056, July 25, 1924, pp. 145-147. Discusses diversity in specifications and guarantee tests, and various factors to be considered in formulation of standard tests. Abstract of paper read before World Power Conference.

Bearings and Vibration Conditions. Experience with Bearings and Vibration Conditions of Large Hydroelectric Units, J. Harisberger. Am. Inst. Elec. Engrs.—Jl., vol. 43, no. 5, May 1924, pp. 428-429, 1 fig. Troubles experienced with hydraulic turbines installed at Snoqualmie Falls and White River power stations, and remedies applied.

Calculation. Blade Wheels Operating in a Free Stream (Im offenen Flüssigkeitsstrom arbeitende Flügelräder), E. Moeller. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 26, June 28, 1924, pp. 675-680, 6 figs. Analytical treatment of helical turbine theory for finite number of blades and its application.

Characteristic Curves. The Characteristic Equations of Reaction and Impulse Water Turbines, H. W. Coultas. World Power, vol. 1, no. 5, May 1924, pp. 292-296, 5 figs. Shows how quantities are related and how equations can be obtained for characteristic curves of turbines.

Checking Performance. Checking the Operation of Hydro-Electric Units, Ralph Brown. Power, vol. 59, no. 10, Mar. 4, 1924, pp. 361-363, 4 figs. Detecting lost motion in operating-cylinder mechanism; checking output of unit; causes of reduced capacity; scheduling work when unit is taken out of service for repairs.

Development. Modern Hydraulic Turbines and Cheaper Power, Johnstone-Taylor. Serial article in Power House, beginning Mar. 20 and ending Oct. 20, 1924, 23 figs. Development of modern hydraulic turbine. Mar. 20: Predicts manufacturing concerns of future will locate their plants, in absence of cheap hydroelectric power, in locations where water resources are available. Apr. 5: Types best adapted for high and low heads as well as for small and large units. May 20: Field of Pelton wheel. June 20: Electric practice of today demands governing mechanism capable of insuring close speed regulation. Aug. 5: Function of needle valve in governing Pelton wheel. Aug. 20: Method of protecting penstocks. Sept. 5: Utility of surge tank as a reservoir for sudden load. Sept. 20: Efficiency of hydro-

electric plants. Oct. 5: Factors essential in comparing different types. Oct. 20: High efficiency can only be obtained by operating engineers "humoring" the equipment.

Discharge Losses. Energy Losses of Hydraulic Turbines at Discharge (Energie perdue par les organes de décharge des turbines hydrauliques), J. Calame. Bulletin Technique de la Suisse Romande, vol. 50, nos. 16, 18, and 19, Aug. 2, 30, and Sept. 13, 1924, pp. 197-201, 228-232, and 237-241, 15 figs. Calculation of water losses due to frequent and extreme variation of load; compensating errors of evaluation of water losses; numerical calculation for various plants.

Double-Runner Horizontal. See Raanaasfoss Plant, Norway.

Draft Tubes. A Rational Form of Draft Tube for Water-Turbines, A. Melovich. Engineering, vol. 118, no. 3057, Aug. 1, 1924, p. 153, 2 figs. Discusses two different kinds of draft tubes at Queenston Power Station, Ont., used for comparison of efficiency, and shows that one draft tube does not fulfill conditions for full bore flow, rendering comparison invalid.

Comparative Tests on Experimental Draft-Tubes. Am. Soc. Civ. Engrs.—Proc., vol. 50, nos. 3, 4, and 5, Mar., Apr., and May, 1924, pp. 345-350, 508-525, and 646-652, 11 figs. Discussion of paper by C. M. Allen and I. A. Winter, published in Nov. 1923 issue of Proc.

Draft Tubes for Hydraulic Turbines, J. M. Dymond. Univ. of Toronto Eng. Soc.—Trans. & Year Book, Apr. 1924, pp. 63-81, 10 figs. Functions of draft tubes; past types of draft tubes, and present outstanding types; present-day tendencies; special devices. List of references.

See also Steel Draft-Tube Liners.

Efficiency Tests. Hydraulic Tubine Efficiency, F. Johnstone-Taylor. Power Plant. Eng., vol. 28, no. 8, Apr. 15, 1924, pp. 436-437, 3 figs. Describes method of conducting efficiency tests and gives test results.

Factory. The Control of Power Production, Chas. L. Hubbard. Factory, vol. 32, no. 6, June 1924, pp. 822-825 and 908, 20 figs. Hydraulic turbines as factory power source.

15,000-B.Hp. 15,000 H.P. Water Turbine for the Tata Hydro-Electric Supply Company. English Electric Jl., vol. 2, no. 6, Apr. 1924, pp. 285-293, 8 figs. Description of unit for extension of existing Khopoli Station of Tata Hydroelectric Supply Co., in India; head, 1655 ft.; output, 15,000 b.hp.; speed, 300 r.p.m. Brief reference to geographical situation of Tata power system.

Governor-Pump Operation. Power Supply for Governor Pumps, Ralph Brown. Power, vol. 59, no. 3, Jan. 15, 1924, pp. 92-93, 2 figs. Describes economical system of governor-pump operation.

Governors. Automatic Speed Regulator for Hydraulic Turbines (Regolatore automatico di velocita per turbine idrauliche). Industria, vol. 38, no. 17, Sept. 15, 1924, pp. 476-479, 4 figs. Design and operation of Parenti regulator.

Study of Speed Regulators of Hydraulic Turbines with Regard to Their Influence on Efficiency of Installations (Etude des régulateurs de vitesse des turbines hydrauliques au point de vue de leur influence sur le rendement global des installations), Cayère. Houille Blanche, vol. 23, no. 85-86, Jan.-Feb. 1924, pp. 10-18, 21 figs. Examines three distinct elements of problem: Rôle of governors in maximum distribution of load among the different stations; in maximum utilization of hydraulic energy in plants having no reserve; and in maximum utilization of energy of plants having hydraulic reserve supply.

High-Speed. Extra High-Speed Turbines of the Bell & Cie. Machine Factory, Kriens, Switzerland (Extra-Schnelläufer-Turbinen der A.-G. der Maschinenfabrik von Th. Bell & Cie., Kriens), F. Prásil. Schweizerische Bauzeitung, vol. 83, nos. 1, 2, 3, and 4, Jan. 5, 12, 19, and 26, 1924, pp. 1-5, 22-24, 31-35, and 39-41, 35 figs. Review of development of new design and its installation, and account of tests on models and on turbine constructed for central station in Berne.

High-Speed Hydraulic Turbines (Turbine hydraulique extra-rapide), F. Prasil. Revue Générale de l'Electricité, vol. 16, nos. 7 and 8, Aug. 16 and 23, 1924, pp. 274-280, and 311-321, 35 figs. Discusses tendencies in turbine construction and describes improvements made by Th. Bell & Co., Switzerland, in their type of high-speed turbines; details of tests carried out at Bell shops.

Hydroelectric Equipment. Recent Developments in Hydroelectric Equipment, Wm. W. White. Am. Inst. Elec. Engrs.—Jl., vol. 43, no. 6, June 1924, pp. 519-524, 10 figs. Facts relating to recent developments in hydroelectric machinery, such as that installed at power house at Mitchell Dam, Alabama.

Ice Formation, Prevention of. Preventing Ice Formation on Water Turbines, R. S. Hyatt. Elec. World, vol. 83, no. 8, Feb. 23, 1924, p. 386, 1 fig. Describes what is said to be effective means of heating turbine and preventing adherence of ice.

Impulse. See ELECTRICAL EQUIPMENT, British Empire Exhibition.

Installation System. Hallinger System of Installing Francis Turbines with Horizontal Shafts (Francisturbinen mit liegender Welle nach der Einbauweise von Hallinger), C. Reindl. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 6, Feb. 9, 1924, pp. 119-123, 14 figs. Describes four power plants and two designs for double twin turbines, which are located in machinery house under sheet-metal cover and have high-suction head-water level; arrangement requires little space, is easily installed and controlled.

Installations, Japan. Modern Hydraulic-Turbine Installations in Japan (Neuere Wasserturbinenanlagen in Japan), J. Moser. Schweizerische Bauzeitung, vol. 83, no. 19, May 10, 1924, pp. 224-226, 4 figs. Details of turbines installed by Escher Wyss & Co.

Kaplan. Historical Note on the Kaplan Turbine, J. Kneidl. Engineering, vol. 118, no. 3057, Aug. 1, 1924, p. 183, 1 fig. World Power Conference paper describing new type of water turbine suitable for medium and low heads.

Test Results with Storek-Kaplan Turbines (Versuchsergebnisse von Storek-Kaplanturbinen), H. Mikyska. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 17, Apr. 26, 1924, pp. 416-418, 12 figs. Describes test apparatus and shows with aid of brake curves that Kaplan turbine follows Prof. Camerer's law for increasing size of turbines in certain cases; results of successful tests for elimination of cavitations.

Large, Construction of. Building Hydraulic Turbines of Unusual Size, E. T. Spidy. Am. Mach., vol. 60, no. 10, Mar. 6, 1924, pp. 345-349, 15 figs. Equipment and methods of Dominion Engineering Works near Montreal; layout plate exceptionally large; heavy machine tools of various kinds; taking portable machines to work; balancing rotating parts of great weight.

Large Installations. Two Modern Turbine Installations (Zwei modern Turbinenanlagen), R. Hofmann. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 16, Apr. 19, 1924, pp. 397-400, 12 figs. 14,300-hp. Pelton turbines of the Amsteg hydroelectric plant of the Swiss Federal Ry., and large Francis high-speed turbines of Mauzac hydroelectric plant, France; details of governors, safety arrangements, etc.

Lawaczeck. Large Low Head Water Power Developments, F. Lawaczeck. Engineering, vol. 138,

no. 3064, Sept. 19, 1924, pp. 434-436, 7 figs. Details of design and construction of Lawaczeck turbine, and theory leading to its development. Comparison with Kaplan turbine. Gave an efficiency of 87 per cent when tested at Charlottenburg.

The Lawaczeck Turbine and Related Turbine Problems (Om Lawaczeckturbinen og dermed sammenhaengende turbinproblemer), O. Svala. Teknisk Ukeblad, vol. 71, nos. 38 and 39, Oct. 10 and 16, 1924, pp. 326-328 and 334-336, 13 figs. See also Teknisk Fidskrift, vol. 54, no. 16, Apr. 19, 1924, pp. 39-47 (Mekanik), 21 figs. Explains theory of this design, which enables water turbines with low head to operate at high speeds. Gives diagrams, line drawings, photographs and plans of complete power stations. Results of tests carried and comparison with other turbines.

Low Falls. Hydraulic Turbines for Low Falls, F. Johnstone-Taylor. Power Engr., vol. 19, no. 214, Jan. 1924, pp. 5-7, 4 figs. Describes low-fall Francis turbine; new types of runner; the hydraucone; Banki turbine.

Lubrication. See LUBRICATION, Prime Movers.

Manufacture. Fabricating Hydroelectric Units, H. R. Simonds. Iron Trade Rev., vol. 74, no. 11, Mar. 13, 1924, pp. 732-735, 7 figs. Describes production of heavy castings and steel-plate sections for water-power machinery; new 70,000-hp. turbo-generator under construction by Allis-Chalmers Mfg. Co., Milwaukee.

Machining Massive Parts of the World's Largest Prime Movers, E. J. Armstrong. Mech. Eng., vol. 46, no. 5, May 1924, pp. 263-267, 9 figs. Methods used for machining large cast-steel casings for 70,000-hp. hydraulic turbines installed at Niagara Falls.

Modern Installations. Some 1923 Hydraulic Installations. Elec. News, vol. 33, no. 14, July 15, 1924, pp. 51-53, 5 figs. Hydraulic Power Committee of Nat. Elec. Light Assn. submits report showing types of apparatus installed in certain 1923 developments.

Pelton Wheels. Pelton Wheels Working at Variable Heads (Au sujet des turbines Pelton travaillant sous une hauteur de chute variable), M. deSparre. Académie des Sciences-Comptes rendus des Séances, vol. 178, no. 24, June 10, 1924, pp. 1942-1948. Mathematical determination of head H_0 serving as basis for calculation, so as to make variation of efficiency minimum when head varies between minimum H_1 and maximum H_2.

The Genesis of the Pelton Wheel, A. T. Parsons. Am. Mach., vol. 60, no. 2, Jan. 10, 1924, pp. 61-63, 7 figs. How forty-niner and his need for mining equipment developed machine business in San Francisco; modern methods of building large hydraulic turbines.

Units of Pelton Wheels Under Varying Conditions (Die Einheitsgrössen der Becherturbinen unter wechselnden Bedingungen), G. Karrass. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 35, Aug. 30, 1924, pp. 902-904, 9 figs. Discusses peripheral velocity, friction, hydraulic efficiency, torque, and specific r.p.m., and makes calculations.

Propeller-Type. Propeller-Type Turbines of the Hydroelectric Plant at Wynau, Switzerland. Mech. Eng., vol. 46, no. 11, Nov. 1924, pp. 704-705, 2 figs. Describes use of high-speed propeller-type turbines and gives test data. Translated from Génie Civil, vol. 85, no. 7, Aug. 16.

The Propeller Turbine (Die Propellerturbine), Rob. Dubs. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 48, Nov. 29, 1924, pp. 1243-1246, 14 figs. Describes design of new type of turbine and special feature of this design; gives results of tests and points out its value for economic utilization of low-pressure water powers; developed by Escher, Wyss & Cie, Zürich, Switzerland.

Properties. Characteristics of Hydraulic Turbines with Constant Number of Revolutions and Very Variable Head (Die Eigenschaften der Wasserturbinen bei gleichbleibender Drehzahl und stark veränderlichem Gefälle), R. Dubs. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 34, Aug. 23, 1924, pp. 872-876, 10 figs. Shows, on basis of characteristic braking curves, how these curves may be used for determining properties and efficiency of turbine of constant revaluation and variable head; gives application of results of three braking tests.

Protective Racks. Construction and Upkeep of Racks for the Protection of Hydraulic Turbines (La construction et l'entretien des grilles pour la protection des turbines hydrauliques). Génie Civil, vol. 85, no. 11, Sept. 13, 1924, pp. 225-230, 5 figs. Details of various types of racks, and mechanical rakes for cleaning them, as installed at Wynau and Beznau, Switzerland, and Chevres, France.

Raanaasfoss Plant, Norway. Efficiency Tests of Raanassfoss Turbines, H. Thoresen. Power, vol. 59, no. 15, Apr. 8, 1924, pp. 558-560, 6 figs. Methods of making efficiency tests on two 12,000-hp. double-runner horizontal-shaft hydraulic turbines operating under 40-ft. head; results of tests.

The Turbines at Raanaasfoss Power Station, Norway, H. Thoresen. Engineer, vol. 136, nos. 3551 and 3552, Jan. 18 and 25, 1924, pp. 60-63, and 86-88, 27 figs. partly on supp. plate. Determination of size of units and choice of type of turbine; description of turbines. Jan. 25: Efficiency tests and testing arangements; test results.

The Turbines of the Raanaasfoos Hydroelectric Plant in Norway (Die Turbinen der Raanaasfoss-Wasserkraftanlage, Norwegen), H. Thoresen. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 15, Apr. 12, 1924, pp. 368-376, 25 figs. Details of design of turbines constructed partly by Aktiebolaget Karlstads and partly by J. M. Voith; results of tests.

Turbines in Raanaasfoss Power Station, H. Thoresen. Power, vol. 59, no. 8, Feb. 19, 1924, pp. 278-281, 8 figs. Plant contains six double-runner horizontal-shaft 12,000-hp. turbines operating under head varying from 31 to 46 ft.; turbines are set in open flumes and two different European designs are used.

Racing. Protection of Hydraulic Turbines Against Racing (Protection contre l'emballement des turbines hydrauliques). Houille Blanche, vol. 23, nos. 89-90 and 91-92, May-June and July-Aug. 1924, pp. 65-70 and 111-114, 10 figs. Shows from existing installation efficiency of various protective devices against increase of velocity, and explains their field of application; describes independent and sure protective device against racing, as in steam turbines.

Reaction. The Hydraulic Reaction Turbine, H. B. Taylor, Engineering, vol. 118, no. 3054, July 11, 1924, pp. 71-73. Discusses recent improvements including (1) incorporation of turbine as integral part in power-house construction, (2) division of casing into number of radial sections separated by planes containing turbine axis, (3) adoption of propeller-type turbine of extremely high specific speed, and (4) transformation of draft tube, etc. Abstract of paper read before World Power Conference.

Runners, Design. Hydraulic Turbine Progress, F. J. Taylor. Elec. Times, vol. 65, no. 1703, June 5, 1924, pp. 659-661, 6 figs. Trend of runner design. Increased speeds with lighter runners and lower heads.

Runners, Pitting of. Pitting of Hydraulic-Turbine Runners. Power, vol. 60, no. 1, July 1, 1924,

pp. 31-33, 3 figs. Conclusion is drawn from experience of operating companies that chief factor governing pitting of water wheels is total draft head acting on runner. (Abstract.) Report of N. E. L. A. Hydraulic Power Committee.

Specific Speed. Specific Speed, Its Meaning and Use as Applied to Hydraulic Turbines, R. T. Livingston. Power, vol. 60, no. 23, Dec. 2, 1924, pp. 880-882, 7 figs. Specific speed as guide to classification of hydraulic turbines; effects of change of load and head on specific speed; why high-specific-speed turbines are used on low heads and low-specific-speed runners are used on high heads.

Spiral. Large Spiral Turbines for Omine Hydroelectric Plant in Japan (Grosse Spiralturbinen für das Kraftwerk Omine in Japan), v. Troeltsch. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 15, Apr. 12, 1924, pp. 377-378, 3 figs. Describes spiral turbines with vertical shaft built by J. M. Voith, Heidenheim, Germany.

Steel Draft-Tube Liners. Steel Draft-Tube Liners for Turbines, E. A. Crellin. Elec. Wld., vol. 84, no. 22, Nov. 29, 1924, pp. 1161-1162, 1 fig. 30 per cent saving effected as compared with cost of wood forms; lined tube presents better wearing surface.

Storek-Kaplan. Tests on Storek-Kaplan Hydraulic Turbines, H. Mikyska. Mech. Eng., vol. 46, no. 7, July 1924, pp. 420-421, 3 figs. Tests carried out on turbines of various sizes by firm of Ignaz Storek, licensees for Kaplan turbine.

See also Kaplan.

Switzerland. Some Notable Modern Turbine Installations (Quelques installations remarquables de turbines modernes), R. Hoffmann. Bulletin technique de la Suisse Romande, vol. 50, no. 17, Aug. 16, 1924, pp. 209-214, 7 figs. Details of propeller turbines of Wynan hydroelectric plant, and tests carried out showing their advantages.

Testing. See Efficiency Tests.

Types. Hydraulic Turbines at the Gothenburg Exhibition in 1923 (Die Wasserturbinen auf der Jubiläumsausstellung in Gothenburg 1923), H. Munding. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 15, Apr. 12, 1924, pp. 359-366, 31 figs. Data on structural details and efficiency of Kaplan, Lawaczeck, and Francis turbines, governors with involute pendulum and auxiliary air chamber.

Voith. Progress in Turbine Construction Since the World War (Fortschritte im Turbinenbau nach dem Weltkriege), C. Schmitthenner. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 15, Apr. 12, 1924, pp. 349-358, 31 figs. Describes Voith turbines for small and medium-size heads, including Francis turbines with vertical and with horizontal shafts, and impeller or Kaplan turbines.

HYDRAULICS

Engineering Problems. Practical Hydraulic Engineering Problems, O.C.A. van Lidth de Jeude. Engineer, vol. 137, nos. 3558 and 3560, Mar. 7, and 21, 1924, pp. 260 and 308. Abstracts from lectures delivered before Instn. Civ. Engrs. on brushwood constructions; river improvements in the Netherlands; and harbor engineering abroad.

Experimental River. See RIVERS, Experimental.

Flow Obstruction in Open Channels. The Design of Works on Open Channels, F. V. Elsden. Engineer, vol. 137, no. 3565, Apr. 25, 1924, pp. 440-442, 8 figs. Deals with conservation of head in open channels; application of Bernouilli's theorem to reduce cost of works on open channels; design of inverted siphons, bridges and bridge piers, alignment of piers, shape of abutments, recovery of head, etc.

Flow of Water. See FLOW OF WATER.

HYDROCARBONS

[See also GASOLINE; KEROSENE; PARAFFIN; PETROLEUM.]

Analysis. Combustion of Petroleum Hydrocarbons, C. F. Mabery. Indus. & Eng. Chem., vol. 16, no. 9, Sept. 1924, pp. 911-912, 1 fig. Describes apparatus which eliminates sources of error in present method of hydrocarbon analysis.

Aromatic. Aromatic Hydrocarbons in Burmah Petroleums, H. M. Mulany and E. R. Watson. Chem. & Industry, vol. 43, no. 42, Oct. 17, 1924, pp. 310T-313T. Research undertaken in order to identify more important aromatic hydrocarbons in gasoline and kerosene fractions of Burmah oil; gives main constituents of these hydrocarbons.

Catalytic Decomposition of Naphthenes as a Method of Preparation of Aromatic Hydrocarbons, A. Vinogradov. Petroleum & Oil-Shale Industry, vol. 5, no. 10, Oct. 1923, pp. 484-488. Shows that it is possible to apply dehydrogenation in presence of catalyzers to technical preparation of aromatic hydrocarbons from petroleum. (In Russian, with brief abstract in English.)

Coal Conversion Into. The Conversion of Coal Into Oils, F. Fischer. Colliery Guardian, vol. 128, no. 3315, July 11, 1924, pp. 87-88, 4 figs. See also Iron & Coal Trades Rev., vol. 109, no. 2941, July 11, 1924, p. 57. Only certain constituents of coal can be converted into oils by means of destructive distillation there; theoretically, it is possible entirely to convert coal into hydrocarbons by means of hydrogenation; practically, however, attempts that have been made show that coal is only partly liquefied, rest becoming soluble only; third possibility for conversion of coal into oils is provided by synthesis from gases.

Electrochemical Oxidation. Electrochemical Oxidation of Aromatic Hydrocarbons, F. Fichter. Am. Electrochem. Soc.—Advance paper for meeting Apr. 24-26, 1924, no. 6, pp. 75-95. Carefully studied results of various methods of securing some degree of control of oxidation of organic bodies at anode. Discusses various electrolytes, carriers and effect of different anodes, and different current densities. Conception of anodic reactions is presented.

Gases. Prospects for the Use of Oil Gases for Chemical Purposes, A. F. Dobrianskij. Petroleum & Oil-Shale Industry, vol. 5, no. 9, Sept. 1923, pp. 258-276. Review of foreign patent literature dealing with questions of chemical use of hydrocarbon gases; author considers applicability and advantages of petroleum gas as source of alcohol, glycerol, glycols and acids. (In Russian.)

Iodine Action on. Action of Iodine on Hydrocarbons (De inwerking van jodium op koolwaterstoffen), F. J. Nellensteyn. Chemisch Weekblad, vol. 21, no. 9, Mar. 1, 1924, pp. 103-106. Iodine acts on all hydrocarbons, sometimes in the cold, sometimes at higher temperatures; hydrogen iodide is evolved, with separation of carbon, both solid and in colloidal solution; explains in what ways action of iodine is analogous to that of oxygen.

Oxidation by Ozone. Oxidation of Saturated Hydrocarbons by Ozone (Die Oxydation gesättigter Kohlenwasserstoffe durch Ozon), R. Koetschau and W. Flemming. Zeit. für angewandte Chemie, vol. 37, no. 4, Jan. 24, 1924, pp. 42-44. Saturated cyclic hydrocarbons are attacked by ozone, as is shown by marked increase in their viscosity and refractive index; oxidation is far-reaching and is complicated by apparent partial rupture of ring structure, with liberation of CO_2.

HYDROCHLORIC ACID

Production. See CHLORINE, Hydrochloric Acid from.

Storage and Transport. The Storage and Transport of Hydrochloric Acid, D. M. Newitt. Chem.

Trade Jl., vol. 74, no. 1918, Feb. 22, 1924, pp. 217-219 and (discussion) 219-220. See also Chem. & Industry, vol. 43, no. 8, Feb. 22, 1924, pp. 186-194, 9 figs., and India-Rubber Jl., vol. 67, no. 14, Apr. 5, 1924, pp. 19-23, 7 figs. Use of glass carboys anomalous; limitations of ebonite-lined steel tanks; use of rubber-lined wooden vessels; comparative cost figures.

HYDRODYNAMICS

Application in Aeronautics. See AERONAUTICS, Hydrodynamics, Application in.

HYDROELECTRIC DEVELOPMENTS

[See also WATER POWER.]

Australia. Hume Reservoir for Hydro-Electric Development. Indus. Australian & Min. Standard, vol. 71, no. 1836, Feb. 14, 1924, pp. 242-244. Reports of investigations of possibility of utilizing Hume Reservoir (Australia) for hydroelectric development. Conclusion reached was that Hume Reservoir, with capacity as at present proposed, viz., 1,100,000 acre-ft. would have a potential value for development of hydroelectric power and that increasing of capacity of reservoir would add to that potential value.

Austria. How Far May Latest Developments in Steam Power Production Affect Development of Our Water Power? (Inwieweit können die neuesten Fortschritte in der Dampfkrafterzeugung den Ausbau unserer Wasserkräfte beeinflussen?), F. Brock. Zeit. des Oesterr. Ingenieur- u. Architekten-Vereines, vol. 76, no. 25/26, June 27, 1924, pp. 227-234, 13 figs. Discusses coal in sight and calorific values, steam generation and increasing pressures, hydroelectric developments, and draws comparison in favor of latter.

Statistical, Economic and Legislative Data on Hydroelectric Development in Austria (Statistisches, Wirtschaftliches und Gesetzliches über den Ausbau der österreichischen Wasserkräfte), K. Naehr. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 10, Mar. 8, 1924, pp. 240-242. Fuel and energy consumption in Austria; water power as substitute; developments in recent years; most important enterprises; competition of steam power plants; legislative support for obtaining necessary investment capital.

The Status of Hydroelectric Development in Austria at the End of 1923 (Die Grosswasserkraftverwertung in Oesterreich nach dem Stande Ende Dezember 1923). Elektrotechnik u. Maschinenbau, vol. 42, no. 2, Jan. 13, 1924, pp. 20-23. Statistical data on hydroelectric plants completed and underconstruction, and their output.

Bavaria. Water Power Developments in Bavaria. World Power, vol. 1, no. 2, Feb. 1924, pp. 80-84. Data on power developments of rivers in Bavaria; principal hydroelectric stations; distribution; financial aspect; railway electrification.

Big Creek, California. Progress on the Big Creek Hydro-Electric Project, D. H. Redinger. Compressed Air Mag., vol. 28, no. 12, Dec. 1923, vol. 29, nos. 1, 3, 4, 9, and 10, Jan., Mar., Apr., Sept., and Oct. 1924, pp. 720-724, 747-750, 803-808, 837-842, 989-992, and 1013-1017, 76 figs. Outline of part of undertaking being pushed forward by Southern Cal. Edison Co.; details of work in connection with power houses nos. 1, 2, 3 and 8, Shaver Lake tunnel, dams, etc.

Canada. Hydro-Electric Progress in Canada, 1923. Can. Engr., vol. 46, no. 4, Jan. 22, 1924, pp. 177-178. Review of principal water power developments in Canada; works under construction or actively in prospect; about 255,000 hp. were added during year, bringing total installation to 3,228,000 hp.

Isle Maligne Hydro-Electric Development, J. P. Chapleau. Can. Engr., vol. 46, no. 19, May 6, 1924, pp. 487-489, 5 figs. Large power development being undertaken by Quebec Development Co., on Saguenay River at Isle Maligne station; 12 turbine units will be installed, having a total capacity of 540,000 hp.; details of turbine construction.

Power Developments on St. Maurice River, L. H. Burpee. Can. Engr., vol. 46, no. 22, May 27, 1924, pp. 553-556 and 570, 6 figs. Existing hydroelectric plants on St. Maurice river produce 450,000 hp.; new development at LaGabelle will increase this by 150,000 hp.; power-house construction details.

St. Margaret's Bay Hydro Development. Can. Engr., vol. 47, no. 27, Dec. 30, 1924, pp. 639-642, 6 figs. Nova Scotia Power Commission's first hydroelectric development; supplies Halifax with power; run-off and precipitation data; drainage area of two rivers utilized; two power stations have total output of 10,800 hp.

The Generation of Hydro-Electric Power in Canada, H. G. Acres. Eng. Jl., vol. 7, no. 7, July 1924, pp. 383-420, 65 figs. Progress in Canadian practice in connection with hydraulic power development.

Two Units at World's Largest Power Centre Will Be Ready Next Month, D. Kennedy. Contract Rec., vol. 38, no. 52, Dec. 24, 1924, pp. 1260-1267, 12 figs. Detailed account of work accomplished to date on first of two hydroelectric schemes projected by Quebec Development Co., at Isle Maligne, for harnessing waters of Saguenay River. Total power for this plant 540,000 hp.

Water Power in the Northland. Contract Rec., vol. 38, no. 46, Nov. 12, 1924, pp. 1116-1121, 16 figs. Details of Quinze power development of Northern Can. Power Co.; ultimate capacity 60,000 hp.

See also Manitoba; New Brunswick; Ontario; Quebec.

Carolinas. The Catawba River Development. Elec. World, vol. 83, no. 24, June 14, 1924, pp. 1234-1236, 1 fig. How hydroelectric power is utilized in Carolina to supply large group of textile industries; operating conditions.

Centralization of. The Tendency Toward Centralization of Power Development, W. L. Abbott. Mun. & County Eng., vol. 66, no. 4, Apr. 1924, pp. 165-171, 2 figs. What various states are doing; consolidation of stations; rail transmission of power cheaper than wire transmission; how railway coal freight schedules are made up; etc.

Ceylon. Hydro-Electric Developments in Ceylon. Elec. Times, vol. 65, no. 1706, June 26, 1924, pp. 767-768, 2 figs. Describes general particulars as to factors influencing development of waterpower in Ceylon; proposed scheme of developments which relates to utilization of water of Aberdeen Catchment area dammed up on river Kahelgamu-oya at Glencairn and from Laxapana Catchment area dammed up on river Maskeilya-oya at Kintyre.

The Aberdeen-Laxapana Hydroelectric Scheme, Ceylon. Engineering, vol. 118, no. 3066, Oct. 3, 1924, pp. 473-475, 5 figs. Scheme provides for intake dam and regulating reservoir of 30 million-gal. capacity at Norton Bridge, involving structure about 90 ft. high provided with spillway; pressure tunnel from intake will be 8100 ft. in length and 63 sq. ft. sectional area.

Davis Bridge Project, Vermont. Davis Bridge Power Project to Develop 60,000 Hp., A. C. Eaton. Eng. News-Rec., vol. 92, no. 4, Jan. 24, 1924, pp. 142-146, 8 figs. New England power-system unit to produce 390,000,000 kw-hr. annually on Deerfield River; in 70 mi. 1700 ft. of head are to be utilized; major unit is 200-ft. earth dam, highest on record.

Davis Bridge Development of the New England Power Company. Power, vol. 59, no. 20, May 13, 1924, pp. 776-779, 8 figs. Project on Deerfield River involves earth dam 200 ft. high, storage reservoir of 50,000,000,000 cu. ft. capacity, 13,000-ft. tunnel and three 20,000-hp. units for head varying from 300 to 390 ft.

Economics of. The Economics of Hydro-Electric Development, D. W. Mead. Am. Soc. Civ. Engrs. —Proc., vol. 5, no. 4, Apr. 1924, pp. 417-452, 9 figs. Discusses following factors: Acquisition of suitable legal rights; command of satisfactory power market; suitable physical and hydrological conditions; proper design of works involved; economical construction and financing; rapid and economical development of business; management, operation and maintenance; accurate estimates; factors of economic expediency in consideration of proposed hydroelectric developments; capital costs; annual expenses; calculation of net revenue.

Equipment Selection. Hydro-Electric Development With Special Reference to the Hydraulic Equipment, W. M. White. Boston Soc. Civ. Engrs. —Jl., vol. 11, no. 1, Jan. 1924, pp. 1-16 and (discussion) 16-20, 9 figs. Present general practice governing selection of machinery for various heads.

France. Putting Through a Great Hydro-Electric Project in France. Compressed Air Mag., vol. 29, no. 7, July 1924, pp. 919-922, 13 figs. Details of work in Ossau valley, Pyrenees, for supplying power for electrification of Midi Ry., including reservoir and tunnel work, power-house construction, and equipment.

Fundamental Problems. The Fundamental Problems of Hydroelectric Development, John R. Freeman. Mech. Eng., vol. 46, no. 1, Jan. 1924, pp. 1-10 and (discussion) 10-12, and 39, 2 figs. Notes on change and progress; costs of hydro vs. steam; change of method in solving problems of development; interconnection of power systems; value of water-power site; centralizing vs. scattering industries; education in public relations. Discussion includes following contributions: Study of Hydro-electric Possibilities, J. P. Hogan; Water-Power Costs vs. Steam-Power Costs, Geo. A. Orrok; Interconnection of Power Systems, H. W. Buck.

Georgia. And Now Railway Super Power! Frank L. Butler. Elec. Traction, vol. 20, no. 6, June 1924, pp. 249-252, 6 figs. How Georgia Railway & Power Co. systematically operates its great hydroelectric plants and participates in immense superpower development of Southeast.

Holtwood, Pa. Fifteen Years' Progress in Water-Power Development at Holtwood. Power, vol. 60, no. 14, Sept. 30, 1924, pp. 522-527, 10 figs. Plant of Pennsylvania Water & Power Co., at Holtwood, Pa., on Susquehanna River, first unit of which was put into operation in Oct. 1910, has recently been completed by installation of units 9 and 10, rated at 20,000 hp. under a head of 62 ft. and discharging into spreading draft tubes of special design with a scroll case at lower end similar to that for runner setting. Article based on three papers by N. B. Higgins and R. L. Thomas, F. H. Rogers, and J. W. May and K. D. MacLean, read at Joint meeting of Baltimore Sections of A.I.E.E. and A.S.M.E.

Improvements. Recent Advances in Hydro-Electric Engineering Practice, L. F. Harza. West. Soc. Engrs.—Jl., vol. 29, no. 9, Sept. 1924, pp. 339-349. Brief history of development of principal parts of hydroelectric stations, and advances that have been made in past 20 years; higher speeds, improved draft tubes, better control apparatus, and mechanical refinements are among improvements described.

India. Sutlej River Hydro-Electric Scheme, A. C. deL. Joly de Lotbinière. Roy. Engrs. Jl., vol. 38, no. 2, June 1924, pp. 267-270. Summary of preliminary survey report; available head, 328 ft.; 10 ft. pressure piping, 1.8 miles in length for turbines.

Interdependence of Irrigation and. The Interdependence of Irrigation and Hydroelectric Power, J. D. Galloway. Jl. of Elec., vol. 52, no. 10, May 15, 1924, pp. 351-354, 2 figs. Exposition of relation of these two factors in western development and of use of water for both purposes.

Ireland. The Liffey Power Scheme, R. N. Tweedy. Elec. Rev., vol. 94, nos. 2411 and 2422, Feb. 15 and 22, 1924, pp. 244-245 and 285-287, 2 figs. Discusses scheme developed by Buchi, of Zurich, for Dublin Corpn., which, it is claimed, may be accepted as basis of any scheme which involves complete control of Liffey River.

Italy. A Daring Engineering Feat Succeeds, C. Semenza. Explosives Engr., vol. 2, no. 5, May 1924, pp. 155-162, 14 figs. How Italian engineers solved unusual and difficult problem of connecting an outlet tunnel 65 ft. beneath surface of Lake Santa Croce.

The Italian Hydroelectric Industry, L. Dominian. Trade Information Bul. (Supp. to Commerce Reports), no. 238, June 2, 1924, 17 pp. Data on extent of use of electricity in the various districts of Italy, together with specific information on many of the important hydroelectric power systems of the country.

Manitoba, Can. Great Falls Hydro-Electric Development of the Manitoba Power Company. Power, vol. 59, no. 12, Mar. 18, 1924, pp. 436-442, 12 figs. Complete project will consist of dam nearly mile long and installation of six 28,000-hp. turbines to operate under 56-ft. head, and each will require 5200 cu. ft.-sec. of water at full load; turbines are of propeller type and are largest capacity of this type ever constructed; special features are incorporated in design of draft tubes and scroll cases.

N. E. L. A. Report. Many Developments in Hydroelectric Field. Power Plant Eng., vol. 28, no. 14, July 15, 1924, pp. 759-763, 6 figs. Report of Hydraulic Power Committee of Nat. Elec. Light Assn., giving features of equipment of new projects and problems of operation.

New Brunswick, Can. Musquash Hydro-Electric Development, F. B. Casey. Can. Engr., vol. 46, no. 15, Apr. 8, 1924, pp. 405-409, 7 figs. Development in New Brunswick on Musquash River; three Morgan Smith turbines and C. G. E. generators develop 11,000 hp. for transmission to St. John and surrounding district and Moncton.

N. Y. State Barge Canal. Power Developments in the Barge Canal. Power Plant Eng., vol. 28, no. 17, Sept. 1, 1924, pp. 882-886, 8 figs. Two 8000-hp. water power plants now under construction. Power for lock operations supplied by 32 small plants.

New Zealand. Hydro-Electric Power Development in New Zealand. Elec. Engr., vol. 1, no. 4, July 15, 1924, pp. 123-128, 4 figs. Discusses topographical, historical, program of development, power board schemes under construction, schemes already in operation, electric power boards, etc.

Hydro-Electric Power Development in New Zealand. Elec. Rev., vol. 95, no. 2440, Aug. 29, 1924, pp. 314-316, 5 figs. Describes Mangahao station, one of three large water power sites in scheme submitted to New Zealand Government.

Newfoundland. Hydro-Electric Power Development in Newfoundland. Engineering, vol. 118, no. 3056, July 25, 1924, pp. 125-127, 15 figs. partly on supp. plates. Particulars of hydroelectric scheme being carried out in Humber River district of Newfoundland, where continuous output of 100,000 b.hp. will be utilized in paper mills of Newfoundland Power & Paper Co., Ltd., and for lighting and heating new township of Corner Brook. Work is being carried out by W. G. Armstrong, Whitworth & Co., Ltd., Lond., who

are also manufacturing turbines which will be installed at the site.

Newfoundland Water Power. Times Trade & Eng. Supp., vol. 14, no. 303, Apr. 26, 1924, p. 167, 3 figs. Progress being made in large scheme for production of hydroelectric power and manufacture of paper, known as Humberarm proposition, in western Newfoundland; details of dam, pipe line and power house, and paper mill.

Norway. To Build Three High-Head Power Plants in Norway, E. Svangöe. Eng. News-Rec., vol. 92, no. 3, Jan. 17, 1924, pp. 106-107, 2 figs. Heads up to 3000 ft.; stream flow to be supplemented by storage; many miles of tunnels.

Ontario, Can. Hydro Developments near Campbellford. Can. Engr., vol. 47, no. 18, Oct. 28, 1924, pp. 465-467, 5 figs. Data on power plants at dams No. 8 and No. 9, Trent Valley Canal System of Ontario Hydro-Electric Commission, which are nearing completion; automatic remote supervisory control an outstanding feature; three turbines at each plant.

Hydro-Electric Development for Gold and Silver Mines of Northern Ontario, A. R. Webster. Ontario Dept. Mines—Bul., no. 46, 1923, 23 pp., 20 figs. Describes installations of different power companies and gives amount of turbine capacity connected to generators owned by each, aggregating 64,490 hp.

Power Generation on the Kaministiquia River. Power House, vol. 17, no. 18, Sept. 20, 1924, pp. 19-20, 3 figs. Development at Kakabeka Falls, Ont., operating under 180-ft. head; main source of electricity supply for cities of Port Arthur and Fort William.

Queenston-Chippawa Development of the Hydro-Electric Power Commission of Ontario, F. A. Gaby. Engineering, vol. 118, nos. 3059 and 3060, Aug. 15 and 22, 1924, pp. 220-223 and 255-257, 23 figs. partly on supp. plates. Outline of a number of salient engineering and other features involved in design and construction of Queenston-Chippawa development. Deals with intake, canal, screen house, penstocks, generating and transformer station, turbines, Johnson valves, governers and generators.

Queenston-Chippawa Power Development, F. A. Gaby. Can. Engr., vol. 47, no. 6, Aug. 5, 1924, pp. 209-215, 6 figs. Outstanding features of Ontario Hydroelectric Power Commission's development; will ultimately have capacity of over 550,000 hp.

Power Rates. Power Rates in Hydro Development, Rob. F. Ewald. Elec. World, vol. 84, no. 19, Nov. 8, 1924, pp. 993-995, 1 fig. Economic limits of development of water power are fixed by maximum rates for various periods; computations by means of "energy drawn-down diagrams" explained.

Quebec, Can. Hydro-Electric Power Developments at Shawinigan Falls, Quebec. Power, vol. 59, no. 4, Jan. 22, 1924, pp. 120-124, 9 figs. Describes No. 1 and No. 2 power plants owned and operated by Shawinigan Power & Water Co.; latest addition to plant No. 2 is a 41,000-hp. unit of vertical-shaft arrangement; draft-tube construction; generator designed to operate at 75 per cent power factor.

St. Lawrence River. The Development of the St. Lawrence River for Power and Navigation. Engineering, vol. 118, nos. 3059 and 3060, Aug. 15 and 22, 1924, pp. 239-241 and 271-273, 9 figs. See also Can. Engr., vol. 47, nos. 8 and 9, Aug. 19 and 26, 1924, pp. 253-256 and 265, and 277-283, 11 figs. Considers characteristics of Upper St. Lawrence which have an important bearing on design, construction, and operation of development works. Methods of development. Estimates of cost.

San Francisco, Cal. San Francisco's Hetch Hetchy Water Supply and Power Development, M. M. O'Shaughnessy. Gen. Elec. Rev., vol. 27, no. 2, Feb. 1924, pp. 78-84, 10 figs. Describes development as a whole and explains San Francisco water situation; features of hydroelectric development; describes dam to be known as O'Shaughnessy Dam which, when completed, will be highest in world.

The Hetch Hetchy Water Supply and Power Project, C. W. Geiger. Nat. Engr., vol. 28, no. 3, Mar. 1924, pp. 95-99, 4 figs. Will supply, when completed, 400,000,000 gal. water daily to population of 4,000,000 people in San Francisco and other cities of metropolitan district, and will generate 200,000 hp.; describes O'Shaughnessy dam, and gives construction details of tunnel.

Sardinia. The Tirso Hydro-Electric Scheme. Elec. Rev., vol. 94, no. 2428, June 6, 1924, pp. 925-929, 8 figs. Describes dam, and power house and its equipment; equipped with two double turbines of 6000 b.hp. each, two double turbines of 9000 b.hp. each, and a small auxiliary turbine of 60 b.hp., which provides power for internal uses.

Scandinavia. Water Power in Scandinavia, F. Johnstone-Taylor. Elec. Times, vol. 65, no. 1691, Mar. 13, 1924, pp. 299-301, 7 figs. Brief outline of machinery of hydroelectric stations at Vamma, Herlandsfossen, Raanaafoss, and Nore Falls in Norway, and at Forshuvudforsen, Finspongs, and Untraverket in Sweden, which have been put into operation within last three or four years, to give idea of present-day hydraulic-turbine practice in Northern Europe.

Sicily. A Sicilian Hydro-Electric Installation, J. S. Barnes. Elev. Rev., vol. 94, no. 2411, Feb. 8, 1924, pp. 219-221, 8 figs. Details of Belice hydroelectric scheme near Palermo; main storage reservoir has total capacity of 32,800,000 cu. m., of which 21,000,000 cu. m. may be drawn upon; dam is 133 ft. high, 866 ft. long, and is dry-built of stone; pressure tunnel is 850 m. long; in engine room are four Pelton wheels each of 3500 b.hp. connected directly with four 3-phase alternators.

Skagit River, Washington. Skagit River Hydro-Electric Development, S. G. Roberts. Compressed Air Mag., vol. 29, no. 8, Aug. 1924, pp. 949-954, 18 figs. Project now delivers 55,000 hp. to Seattle and may ultimately produce more than half million hp. for whole of western Washington.

Status, 1923. Status of Hydro-Electric Construction. Elec. World, vol. 83, no. 1, Jan. 5, 1924, pp. 27-29, 1 fig. 29 projects now being constructed under licenses from Federal Power Commission. California leads in number and horsepower of projects now being developed.

Sweden. Swedish Water Power and the Farmer. Elec. World, vol. 83, no. 20, May 17, 1924, pp. 992-998, 14 figs. 40 per cent of tilled land now within reach of electric transmission lines; standardized distribution system employed, which is partly financed by farmers' local coöperative societies.

See also Scandinavia.

Switzerland. Hydroelectric Development and Railway Electrification in Switzerland (Reiseeindrücke über Wasserkraftnutzung und Bahnelektrisierung in der Schweiz), P. Dittes. Elektrotechnik u. Maschinenbau, vol. 42, no. 12, Mar. 23, 1924, pp. 177-189, 21 figs. Describes more important hydroelectric plants and developments in railway electrification, including transmission lines, locomotives, etc.

The Export of Electric Energy and the Development of Water Power in Switzerland (Ausfuhr elektrischer Energie und Ausbau der schweizerischen Wasserkräfte), W. Trüb and E. Stiner. Schweizerische Bauzeitung, vol. 83, no. 13, Mar.

29, 1924, pp. 149-155. Discussion before Zurich Soc. of Engrs. & Architects, dealing with power-plant construction, electricity supply within Switzerland, and export of electric energy.

Tasmania. A Few Notes on the Hydro-Electric Power of Tasmania, C. C. Halkyard. Australasian Inst. Min. & Met.—Proc., no. 52, Dec. 31, 1923, pp. 241-258, 9 figs. Water-power potentialities, application of power commercially, details of Waddamana power plant and main works, canals, pipe lines, transmission lines, substation, etc.

The Great Lake Hydro-Electric Scheme, Tasmania. Engineering, vol. 117, nos. 3038, 3041, 3044, 3045, 3048, and 3051, Mar. 21, Apr. 11, May 2, 9, 30 and June 20, 1924, pp. 355-357, 451-452 and 466, 568-570, 595, 694 and 704, and 792-793, 84 figs. partly on supp. plates. Describes recently completed extension for bringing continuous capacity of scheme up to 58,000 hp.; details of most important features, including reinforced-concrete flume, Ouse River diversion works, multiple-arch dam, substations, etc.

United States, 1923. Hydro-Electric Development Shows Unprecedented Activity. Power, vol. 59, no. 1, Jan. 1, 1924, pp. 12-16, 8 figs. Over 2,000,000 horsepower of new hydroelectric plants and extensions to old installations, in projects of 10,000 hp. and larger, were completed during 1923 or are now under construction in United States.

Waterways. Water Powers on Waterways (Wasserkräfte an Wasserstrassen), Gleichmann. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 47, Nov. 22, 1924, pp. 1209-1213, 9 figs. General rules for construction and operation; relation between power and navigation requirements; weirs, installation of power plants, heads, velocity of flow; limiting the cost of construction and increasing output; Kaplan turbines of the Viereth and Kacklet power plants on the Main and Danube Rivers; economic considerations.

Western United States. Hydroelectric Practices and Equipment on the Pacific Coast, S. Barfoed. Am. Inst. Elec. Engrs.—Jl., vol. 43, no. 7, July 1924, pp. 641-646, 1 fig. Physical features having deciding influence on design and construction of hydroelectric plants.

Survey Shows 1924 Will Be Record Year for Hydroelectric Development. Jl. Electricity, vol. 52, no. 3, Feb. 1, 1924, pp. 96-99, 5 figs., 1 map. Survey of hydroelectric projects under way during 1923 or definitely scheduled for 1924.

HYDROELECTRIC PLANTS

Alabama. Hydroelectric Practises and Equipment of the South, O. G. Thurlow and J. A. Sirnit. Am. Inst. Elec. Engrs.—Jl., vol. 43, no. 8, Aug. 1924, pp. 719-723, 8 figs. Discusses hydraulic power resources of South, design of Alabama Power Co.'s plants, Southern superpower system and advantages of linking up systems.

Assembling Hydraulic Units. Assembling Heavy Hydraulic Units in Plant at Bombay. Eng. News-Rec., vol. 92, no. 8, Feb. 21, 1924, pp. 328-329, 2 figs. Rotors and runners of six 10,000-kva. generating units shrunk on shafts with aid of only native labor.

Austria. The Mechanical and Electrical Equipment of the Partenstein Plant (Austria) (Die maschinellen und elektrischen Einrichtungen und die Stromwirtschaft des Werkes Partenstein), A. Kvetensky. Elektrotechnik u. Maschinenbau, vol. 42, no. 20, May 18, 1924, pp. 309-323, 10 figs. Description of Francis spiral turbines with vertical shaft and their control, generators, transformers, auxiliary machinery, measuring instruments, etc.; distribution system.

The Teigitsch Hydroelectric Plant of the Styrian Water-Power & Electricity Corpn., Austria (Das Teigitschkraftwerk der Steirischen Wasserkraft- und Elektrizitäts-A. G.), W. Hahn. Elektrotechnik u. Maschinenbau, vol. 42, no. 7, Feb. 17, 1924, pp. 89-94, 6 figs. Describes most important features of development, including dam, pressure conduits, reservoir, etc.; power-house equipment; includes three Francis spiral turbines to which generators are direct coupled.

Vienna Builds Remarkable Power Project on Ybbs River, O. Lemberger. Eng. News-Rec., vol. 92, no. 12, Mar. 20, 1924, pp. 494-496, 5 figs. Collapsible weir dam; six miles of tunnels, one siphon and two aqueducts in conduit; unusual type of surge basin; penstock carried on slide bearings, electrical current is transmitted to Vienna over 110,000-volt transmission line 84 mi. long, partly simple 3-phase and partly double 3-phase on steel towers.

Automatic. A 7,300-Kva. Automatic Hydro Station. Elec. World, vol. 83, no. 26, and vol. 84, no. 3, June 28 and July 19, 1924, pp. 1319-1322 and 111-114, 10 figs. Sprite Creek development of Adirondack Power & Light Co. is fully self-operating; design details and method of protection of largest automatic installation; hydroelectric features of development; design details of dam, gates, penstocks, and intakes; cost of station and hydroelectric works in graphic form.

Present Practise in the Auotmatic Operation of Hydroelectric Generating Stations, R. J. Wensley. Am. Inst. Elec. Engrs.—Jl., vol. 43, no. 6, June 1924, pp. 508-513, 3 figs. Various methods of starting and controlling, together with their limitations; sequence of operations in modern automatic switching equipment.

British Columbia. Hydro-Electric Plant, Pacific Mills, Ltd., G. S. Barry. Can. Engr., vol. 46, no. 4, Jan. 22, 1924, pp. 161-162, 3 figs. New unit installed in pulp and paper mill at Ocean Falls, B. C., increases output to 15,000 hp.; consists of a 6300-hp. Pelton wheel direct-connected to a Can. Gen. Elec. generator with exciter.

Power Developments at Stave Falls. Contract Rec., vol. 38, nos. 39, 40, and 41, Sept. 24, Oct. 1 and 8, 1924, pp. 949-953, 979-983 and 999-1003, 34 figs. (partly in no. 42, Oct. 15, p. 1039). Extensive construction program carried out by British Columbia Elec. Ry. Co.; contracting features of important parts of work.

California. Big Creek-San Joaquin Hydroelectric Project, Claude C. Brown. Power Plant Eng., vol. 28, no. 3, Feb. 1, 1924, pp. 167-172, 14 figs. Big Creek No. 3 plant, known as The Electric Giant, has three turbine units and develops total capacity of 105-000 hp. under head of 760 ft.

Largest Hydroelectric Plant in the West Placed in Service. Eng. World, vol. 24, no. 1, Jan. 1924, pp. 19-21, 6 figs. Details of Big Creek No. 3 power plant.

Canada. Building a Hydro-Electric Plant on Saguenay River. Eng. News-Rec., vol. 93, nos. 16, 17, and 18, Oct. 16, 23, and 30, 1924, pp. 616-619, 662-665, and 702-705, 18 figs. Electrically driven construction equipment used entirely on 500,000-hp. operation in Northern Quebec; work lasts through three sub-arctic winters; 35-mi. service railway used. Oct. 16: Developing access and habitation. Oct. 23: Installing plant and power. Oct. 30: Construction progress and methods.

Building Canada's Hydro Electric Power Units, H. P. Armson. Can. Machy., vol. 32, no. 31, July 31, 1924, pp. 19-22, 5 figs. Outline of water-power development in Dominion with details of construction features of plant on Isle Maligne, and shop methods used in building some units at Canadian Allis-Chalmers Co's. Davenport plant in Toronto.

Generating Ontario's Cheapest Electric Power, A. Murphy. Power House, vol. 17, no. 16, Aug.

20, 1924, pp. 19-22, 5 figs. Describes Orillia power plant developing 6400 hp. on Severn River making possible power rate of $11.90 per hp. year per 10-hr. shift.

Unique Features in Island Falls Hydro-Electric Plant on the Abitibi River. Contract Rec., vol. 38, no. 45, Nov. 5, 1924, pp. 1094-1096, 7 figs. See also Elec. News, vol. 33, no. 22, Nov. 15, 1924, pp. 60-62, 7 figs. Ejector gate to compensate for loss of head in flood periods. Distributing cones are encased in cast iron. Reproduces photographs in connection with installation of turbine units which illustrate certain phases of design and construction quite new in hydroelectric field.

Unique Hydro-Electric Power Plant at Winnipeg, A. Murphy. Power House, vol. 17, no. 20, Oct. 20, 1924, pp. 66-68, 3 figs. Explains unique features of hydroelectric plant and central heating system about to be put into operation.

Chile. The Maitenes Hydroelectric Plant (Planta hidro-eléctrica de Maitenes), M. E. Herrera. Instituto de Ingenieros de Chile—Anales, vol. 24, no. 5, May 1924, pp. 291-312, 27 figs. Details of plant 13 km. from junction of Colorado and Maipo rivers, belonging to Chilean Electricity Co.; barrage work, pressure piping, sand catcher, storage basin; power house and equipment, including Pelton wheel of 11,300 hp. at 600 r.p.m. and Westinghouse 3-phase generator of 8125 kw.

Conduits. See CONDUITS.

Dams. See DAMS.

Danube River, Germany. The First Hydro-electric Plant on the Danube River (Das erste Donaukraftwerk), W. Vieser. Zeit. des Oesterr. Ingenieur- u. Architekten-Vereines, vol. 76, no. 11-12, Mar. 21, 1924, pp. 91-94, 6 figs. The Rhine-Main-Danube as waterway for hydroelectric development; canalization of Danube by means of dam at Kachlet near Passau; description of plant, locks, weir, and power house; status of construction work.

Davis Bridge Project, Vt. The Davis Bridge Power Plant Development of the New England Power Company, E. B. Collins and H. R. Wilson. Gen. Elec. Rev., vol. 27, no. 10, Oct. 1924, pp. 665-672, 11 figs. Located at Whitingham, Vt., and consists of two (ultimately three) 20,000-hp. hydroelectric units. Describes diversion tunnel and spillway, intake structure, pressure tunnel, turbines and generators, low-tension switching equipment, high-voltage equipment, transformers, etc.; is enabled to transmit at 66,000 and 110,000 volts simultaneously.

Design. Great Works Hydro-Electric Plant Has Original Design, R. J. Andrus. Elec. Wld., vol. 84, no. 7, Aug. 16, 1924, pp. 305-307, 7 figs. New automatic station constructed by combining dam, bridge, and building parts for triple use; development cost per kilowatt about $284.

Regulating Guaranties for Hydraulic Plants (Reguliergarantien für Wasserkraftanlagen), K. Lubowsky. Elektrotechnische Zeit., vol. 45, no. 39, Sept. 25, 1924, p. 1025. Discusses difficulties in design of plants to reconcile demand for reduction of moments of gyration (reduction of generator mass), with keeping low variation in voltage connected with load fluctuations.

France. Construction of Dam and Works of Chancy-Pougny (La construction de l'usine-barrage de Chancy-Pougny), L. Vennin. Société des Ingénieurs Civils de France—Mémoires et Compte Rendu des Travaux, vol. 77, no. 4-6, Apr.-June 1924, pp. 324-354, 24 figs. partly on supp. plate. Improvement works of Upper Rhône, barrage works at Chancy, water intake, plant equipment, including 9000-hp. turbines and 7000-kva. direct-coupled alternators.

Hydroelectric Generating Plant, at Chancy-Pougny (L'usine génératrice hydroélectrique de Chancy-Pougny), A. Tumerelle. Revue Générale de l'Électricité, vol. 16, no. 2, July 12, 1924, pp. 63-71, 12 figs. Details of design, construction, and equipment of plant of capacity of 35,000 kva. from five 7000-kva. alternators. Voltage of 11,000 raised to 120,000 for transmission to Ecuisses by double three-phase line.

The Chancy-Pougny Hydroelectric Plant on the Upper Rhône (L'usine hydro-électrique de Chancy-Pougny sur le Haut Rhône), C. Dantin. Génie Civil, vol. 85, no. 1, July 5, 1924, pp. 1-10, 13 figs. on supp. plate. Describes new hydroelectric plant at Swiss frontier, general layout, barrage arrangement, concrete work.

The Hydroelectric Plant at Eguzon (France) (L'Usine Hydro-électrique d'Eguzon), G. Laporte. Revue Industrielle, vol. 54, nos. 2174, 2176, 2178, and 2179, Jan., Mar., May, and June, 1924, pp. 447-456, 1-5, 102-105, and 129-141, 34 figs. Details of work under construction for exploitation of Eguzon waterfall; plant with five sets of generators of 12,500 hp. each, located at foot of dam 60 ft. high, feeds three groups of transformers connected to transmission lines of Paris-Orleans railway.

The Hydroelectric Plant of the Société Drac-Romanche at Pont-de-Claix on the Isère River (France) L'usine hydroélectrique Drac-Romanche), P. Dufour. Génie Civil, vol. 84, no. 1, Jan. 5, 1924, pp. 1-8, 17 figs. Development includes dam, 750-m. open canal, 1450-m. reinforced-concrete pressure conduit, 14,000-hp. power plant equipped with six sets of turbo-alternators, and 750-m. tail race; study of connection of conduit with plant.

Generator Sets. Generator Sets in Hydroelectric Plants of the Future (I gruppi generatori nelle centrali idroelettriche del domani), G. Belluzzo. Industria, vol. 38, no. 12, June 30, 1924, pp. 325-327, 1 fig. See also Elettrotecnica, vol. 11, no. 6, June 5, 1924, pp. 376-377, 1 fig. Discusses Francis turbines and proposes coupling them to alternators by means of reduction gears, showing advantages for large heads of water.

Germany. Construction of the Lake Walchensee Power Plant (Vom Bau des Walchenseekraftwerks), Ried. Beton u. Eisen, vol. 23, no. 17, Sept. 5, 1924, pp. 229-233, 14 figs. Details of reinforced-concrete construction work in connection with tunneling, barrage, pressure piping; use of torcrete process.

The East Prussia Works (Das Ostpreussenwerk), O. Jahnke. Elektrotechnische Zeit., vol. 45, no. 41, Oct. 9, 1924, pp. 1073-1076, 11 figs. partly on pp. 1077 and 1078. Particulars of Ostpreussenwerk A. G., supplying current to Province of East Prussia; layout and linking-up of works, description of Friedland works, dams, power house, transmission lines, etc.

Ice Troubles. Combating Ice in European Hydro-Electric Plant. Eng. News-Rec., vol. 93, no. 7, Aug. 14, 1924, pp. 265-266. Abstract of papers read by A. Frey and Arvid Ruths at First World Power Conference, Lond., dealing with methods employed in Norway and Sweden, chief sources of trouble, ice pressure, and effects of regulation. See also Eng. & Contracting (Water Works), vol. 62, no. 4, Oct. 8, 1924, pp. 805-809, and Engineering, vol. 118, no. 3054, July 11, 1924, pp. 73-74, for paper by A. Ruths.

Ice Problems at Hydro-Electric Plants, T. H. Hogg. Can. Engr., vol. 47, no. 20, Nov. 11, 1924, pp. 498-500. Discussion on outline of work of Committee on Ice Problems at Hydroelectric Plants at meeting of A. S. C. E. Formation of frazil and anchor ice and methods of preventing trouble.

Measures Taken in Sweden Against Ict Troubles at Water Power Plants, A. F. Samsioe. Engineering, vol. 138, no. 3065, Sept. 26, 1924, p. 463. Paper, abridged, contributed to World Power Conference.

Italy. The Corfino Hydro-Electric Scheme in Tuscany. Elec. Rev., vol. 95, no. 2435, July 25, 1924, pp. 143-145, 7 figs. Corfino plant forms part of enterprise of Società di Elettricita Ligure Toscana; details of design and construction of plant.

The Hydroelectric Plants of the Italian State Railways at Bardonecchia (Gli impianti idroelettrici di Bardonecchia delle Ferrovie dello Stato), G. Santi. Rivista Tecnica delle Ferrovie Italiane, vol. 25, no. 1, Jan. 15, 1924, pp. 1-19, 27 figs. partly on supp. plates. Particulars of high-head developments in Cottian Alps near Mont Cenis, power from which is to be employed for electric traction.

The Temu Plant of the Adamello General Electric Company in the Camonica Valley (L'impianto del Temù in Valle Camonica della Società Gen. Elettr. dell' Adamello). Elettrotecnica, vol. 11, nos. 29, 30, and 32, Oct. 15, 25, and Nov. 15, 1924, pp. 710-718, 746-752, and 898-900, 30 figs. Details of barrage dam, reservoirs, pressure piping, and machinery, including turbines, alternators, transformers and switchboard arrangements also additional machinery to be installed.

Japan. Modern Japanese Hydro Plant, S. Kinugawa. Elec. Wld., vol. 84, no. 10, Sept. 6, 1924, pp. 454-457, 8 figs. Description of Momoyama station of Daido Elec. Power Co., located on Kiso River. Details of construction, type of equipment used, and operating conditions.

On the Automatic Hydraulic Power Station, M. Fukuda and T. Sato. Denki Gakkwai Zasshi (Jl. Inst. Elec. Engrs. Japan), no. 429, Apr. 1924, pp. 406-426, 15 figs. Construction details of No. 4 Kawakamigawa station, first automatic station in Japan. (In Japanese.)

Jim Falls, Wis. Completing the Jim Falls Hydro-Electric Development, A. J. Hammond. Eng. News-Rec., vol. 92, no. 7, Feb. 14, 1924, pp. 270-272, 6 figs. Time element a controlling feature; method of combating northern winter conditions; importance of careful preliminary studies.

Load Control. Load Control in Automatic Hydro-Electric Generating Stations, R. C. Denny. Power, vol. 59, no. 19, May 6, 1924, pp. 716-717, 3 figs. Float-control method of making load changes; load control where water storage is available.

Low-Head. Low-Head Hydroelectric Plants (Sur les groupes hydro-électriques de basses chutes,) M. Cayère. Société Française des Electriciens—Bul., vol. 4, no. 36, June 1924, pp. 547-558. Discusses difficulties in using fluctuating low heads of water and technical means to meet them.

Low Heads (Note sur l'aménagement des basses chutes d'eau), Ed. Maurein. Arts et Métiers, vol. 77, no. 49, Oct. 1924, pp. 378-382, 8 figs. Discusses types of arrangements for low-head utilization, and makes comparison with high-head arrangements.

Redevelopment Improves Output of Low-Head Power Sites, H. W. Taylor. Eng. News-Rec., vol. 93, no. 19, Nov. 6, 1924, pp. 754-756, 3 figs. Output, which was restricted by unregulated flow, was improved by combining head of two plants; installations based on flow studies; describes new power house on Housatonic River of Smith Paper Co., Lee, Mass.

Mexico. Waterpower Plant of the Alameda Hydroelectric Company (Wasserkraftanlage der Compañia Hidroeléctrica del Rio de la Alameda S. A., Mexico), A. Tracinski. Siemens-Zeit., vol. 4, nos. 8 and 9, Aug. and Sept. 1924, pp. 245-254 and 307-318, 32 figs. General plan and details of barrage work, pressure piping, turbines, generators, transformers, switching plant, El Oliver substation, etc., of plant supplying Mexico City.

Muscle Shoals. See CONCRETE CONSTRUCTION, Muscle Shoals, Power Development.

New York. The Backbone of a Water Power System. Oil Engine Power, vol. 11, no. 4, Apr. 1924, pp. 189-202, 10 figs. Particulars regarding equipment of Honk Falls, High Falls, and Eddyville plants of Honk Falls Power Co., situated on Rondout Creek, N. Y., particularly the Diesel oil engines; three plants generate alternating current which is fed into transmission lines at 33,000 volts.

New Zealand. The Mangahao Power Station. Elec. Times, vol. 65, no. 1706, June 26, 1924, pp 759-761, 5 figs. Further particulars of Mangahao power house. Capacity of plant is 24,000 kva.

Newfoundland. Newfoundland Water Power. Elec. Times, vol. 66, no. 1707, July 3, 1924, pp. 15-16, 5 figs. Details of Humber Arm scheme for power production mainly for "news" paper manufacture; 14-000-b.hp. water turbines, 6000-volt three-phase 50-cycle alternators, 6000- to 60,000-volt step-up three-phase transformers and 66,000-volt switchgear.

The Humberarm Hydro-electric Development in Newfoundland. Engineer, vol. 138, no. 3593, Nov. 7, 1924, pp. 514-517, 17 figs partly on p. 526. Scheme will provide a storage of 30,000,000,000 cu. ft. of water, representing theoretical effective horsepower of 113,000; details of arrangement of dam, intake, canals and pipe line, power house and equipment.

Norway. Hydroelectric Power Station Raanaasfoss (Turbinene ved Raanaasfoss kraftanlaeg), Thoresen. Teknisk Ukeblad, vol. 70, nos. 47 and 48, Nov. 23 and 30, 1923, pp. 402-405 and 414-417, 21 figs. Six turbines of 12,000 hp. each, made by Karlstads Mekaniska Verkstad, and J. M. Voith, Heidenheim.

Hydro-Electric Practice in Norway, H. A. Pulliam. Power, vol. 60, no. 13, Sept. 23, 1924, pp. 494-497, 3 figs. Construction and operating methods used in Norway.

Penstocks. See CONDUITS.

Reconstruction, Spiers Falls, N. Y. Redevelopment of Spiers Falls Hydro-Electric Project, C. Voetsch. Power, vol. 60, no. 25, Dec. 16, 1924, pp. 968-972, 8 figs. Plant on upper Hudson River of Adirondack Power & Light Corpn., which was laid out for ten 5000-hp. horizontal-shaft units, seven of which had been installed, is being rebuilt for 60-cycle service with modern-type 9000-hp. vertical-shaft machines to operate under 80-ft. head; construction problems involved in changing over setting intended for old units to meet conditions of new machines.

Sand-Removal Plants. The Deterioration of Turbines and Automatic Sand-Removal Plants Neues über Turbinen-Abnützungen und automatische Entsandungs-Anlagen), H. Dufour. Schweizerische Bauzeitung, vol. 83, nos. 15 and 17, Apr. 12 and 26, 1924, pp. 169-171, and 196-200, 16 figs. Cites examples to show that turbines, even in low-pressure works, suffer great deterioration from river detritus; and describes recent developments in automatic sand-removal plants.

Scheme of Arrangement. The Arrangement of Hydroelectric Plants of High and Medium Head (Quelques notes sur l'organisation des hautes et moyennes chutes d'eau), E. Maurein. Arts & Métiers, vol. 77, no. 43, Apr. 1924, pp. 126-135, 20 figs. Study of scheme of arrangement whereby

weir pond is eliminated and head race is replaced by supply tunnel driven in mountain.

Small. Small Water Powers. Power Engr., vol. 19, nos. 223 and 225, Oct., Nov., and Dec., 1924, pp. 369-372, and 429-432, and 458-461, 16 figs. Their commercial aspect, development, and modern equipment.

Spain. High-Voltage Power Supply in Spain. Elec. Rev., vol. 95, no. 2438, Aug. 15, 1924, pp. 253-255, 8 figs. Notes on Riegos y Fuerza del Ebro undertaking; equipment of various plants.

Plants of the Hydroelectric Company of Spain (Instalaciones de la Sociedad Hidroeléctrica Española), J. A. Cordon. Ingeniería y Construcción, vol. 2, nos. 22, 23 and 24, Oct., Nov. and Dec. 1924, pp. 433-440, 489-492, and 543-548, 30 figs. Details of plant and equipment at Salto del Molinar on Júcar river, supplying Madrid with power; 66,000-volt transmission for a distance of 254 km. Particulars of Villora power station, and Cortes de Pallás and Batanejo falls.

Salto de Durcal, Granada [Salto de Dúrcal (Granada)], T. Brioso. Revista de Obras Publicas, vol. 72, no. 12, June 15, 1924, pp. 229-230, 3 figs. Details of power house supplying current to Granada Ry., electric equipment, turbines and alternators, storage battery, etc.

Standard Tests. Standard Tests for Hydraulic Power Plants. Instn. Mech. Engrs.—Proc., no. 4, July 1924, pp. 567-587, 1 fig. See also Engineer, vol. 137, no. 3562, Apr. 4, 1924, pp. 354-356, 3 figs. Discussion on draft standard test code for hydraulic power plants drawn up by joint committee of Instn. Civ. Engrs. and Instn. Mech. Engrs.

Storage. Hydroelectric Storage Plants (Hydraulische Hochspeicherkraftwerke), A. Maas. Zeit. des Vereines deutscher Ingenieure, vol. 68, nos. 45 and 46, Nov. 8 and 15, 1924, pp. 1161-1167 and 1195-1199, 29 figs. Discusses different storage possibilities; hydraulic storage plants; describes so-called high-pressure storage system, according to which water volumes from rivers or lakes, which are not used for power purposes, are lifted through pumping plants to natural or artificial basins, and from there are supplied to power plants when required; discusses four examples of hydroelectric storage plants.

The Influence of the Storage of Energy on Power Economics and Profitability of Hydroelectric Plants (Der Einfluss der Energiespeicherung auf die Energiewirtschaft und die Rentabilität von Wasserkraftanlagen), Rob. J. Novotny. Elektrotechnische Zeit., vol. 45, no. 43, Oct. 23, 1924, pp. 1138-1142, 8 figs. Power economics of hydroelectric plants with and without storage of energy; electric accumulators for storage of energy; water storage.

Switzerland. Illsee-Turtmann Power Plant (Die Illsee-Turtmann-Kraftwerke), J. Büchi. Schweizerische Bauzeitung, vol. 84, no. 24, Dec. 13, 1924, pp. 286-287, 5 figs. Describes plant using waters of Turtmann, Ill., and Meretschi rivers; present machinery equipment 20,000 hp.

Proposed Hydroelectric Plant on the Avançon River (Projet d'usine hydro-électrique sur l'Avançon), G. Nicole. Bul. Technique de la Suisse Romande, vol. 50, no. 21, Oct. 11, 1924, pp. 261-264, 5 figs. Describes general layout, barrage dams and reservoirs, pressure conduits, etc.

The Chancy-Pougny Works (Note sur l'usine de Chancy-Pougny). Bulletin Technique de la Suisse Romande, vol. 50, no. 15, July 19, 1924, pp. 185-190, 11 figs. Power house on Rhône on Franco-Swiss border, details of barrage dams and equipment including turbines.

The Lake Lungern Power Plant of the Central Swiss Power Works at Luzern (Das Lungernsee-Kraftwerk der Centralschweizerischen Kraftwerke, Luzern), V. Gelpke. Schweizerische Bauzeitung, vol. 84, nos. 21 and 22, Nov. 22 and 29, 1924, pp. 251-256 and 265-268, 25 figs. Details of water storage, pressure piping and line, and machinery equipment, including 12,000-hp. turbines, and Isodrom velocity control; turbine tests.

Viewpoints on Installation of Buildings with Wäggital Power Station as an Example (Gesichtspunkte zur Bauinstallation mit Beispielen von Bau des Kraftwerks Wäggital), A. Zwygart. Schweizerische Bauzeitung, vol. 84, nos. 7, 8, and 9, Aug. 16, 23, and 30, 1924, pp. 77-82, 99-101, and 110-111, 18 figs. Discusses working out of plans, calling for tenders, specifications, study of details, transportation of material to building site, accommodation for workers, supply of power, excavation work, concrete testing, etc.

Testing. See HYDRAULIC TURBINES, Acceptance Test.

Tidal-Power. See TIDAL POWER, Utilization.

Turbine-Driven Alternators, Load Division. Dividing Load Economically Among Turbine-Driven Alternators, J. D. McAdoo. Power, vol. 60, no. 15, Oct. 7, 1924, pp. 569-571, 2 figs. It is brought out that cost of power delivered depends on many factors besides that of unit capacity. A synchronous condenser, for instance, should not be loaded to full capacity with wattless current, regarding of reactive current carried by generators.

Water Measurement. Water Measurement and Its Relation to the Testing of Hydro Plants, F. Johnstone-Taylor. Elec. Times, vol. 66, no. 1707, July 3, 1924, pp. 5-7, 8 figs. Discusses efficiency of hydroelectric plants, especially turbines, and control of maintenance of efficiency by measuring quantity of water consumed by means of pitot tubes, current meters, weirs, and salt solution methods of which it gives details.

Water Supply. Regulating Flow of Water in Water Power Plants (Ueber die Regelung der Wasserführrung bei Wasserkraftanlagen), F. Kammerer. Zeit. des Bayerischen Revisions-Vereins, vol. 28, no. 20, Oct. 31, 1924, pp. 184-186, 6 figs. Discusses economic arrangement of water supply and apparatus used for regulating; advantages of automatic weirs, and description of new type.

Winter Reconstruction. Winter Reconstruction at the Spier Falls (N. Y.) Power Plant, C. Voetsch. Eng. News-Rec., vol. 93, no. 20, Nov. 13, 1924, pp. 791-795, 6 figs. Old foundations adapted to suit larger units; unwatering part of tailrace is difficult problem; methods and results of winter concreting.

HYDROGEN

Active. Behavior of Active Hydrogen (Das Verhalten von aktivem Wasserstoff), K. F. Bonhoeffer. Zeit. für Physikalische Chemie, vol. 113, no. 3-4, Nov. 8, 1924, pp. 199-219, 1 fig. Active hydrogen produced in long vacuum tubes was found to reduce certain metallic oxides, halides and sulphides; active hydrogen was converted into molecular hydrogen by catalytic action of thin layers of metals or metallic oxides; catalytic activity of metal depends on its previous treatment and corresponds to its hydrogen overvoltage, that is, metals with high overvoltage are poor catalysts; results are best explained on assumption that active hydrogen is monatomic hydrogen.

Electrolytic Production. Electrolytic Production of Hydrogen and Oxygen (Der elektrolytische Wasserstofferzeuger Bauart Holmboe), M. Hanssen. Elektrotechnische Zeit., vol. 45, no. 19, May 8, 1924, pp. 462-463, 3 figs. New electrolytic gas generator, developed by C. F. Holmboe, of Norway, which shows marked improvements over

existing designs; plant with 400 of these cells has been in continuous operation since 1919 without having needed repairs of any kind; yearly average efficiency of 4.8 kw-hr. per cu. m. of hydrogen has been maintained; very high purity of generated gas obtained by use of distilled water in cells.

Notes on a New Hydrogen Cell. Chem. Age (Lond.), vol. 11, no. 264, July 5, 1924, p. 11, 1 fig. Details of Knowles patent column plant specially designed with view to economy in floor space, generating 7200 cu. ft. of hydrogen per hr. in less than one-third of usual area.

Industrial. Hydrogen in Industry (L'hydrogène dans l'Industrie), M. Verneuil. Vie Technique & Industrielle, vol. 5, nos. 58 and 59, July and Aug. 1924, pp. 221-226 and 297-303, 20 figs. Discusses chemistry of hydrogen, its manufacture, processes and apparatus used; decomposition of steam, catalysis, liquefaction, Claude apparatus, etc.

Ionization Potentials. The Ionization Potentials of Hydrogen as Interpreted by Positive Ray Analysis, T. R. Hogness and E. G. Lunn. Nat. Acad. Sciences—Proc., vol. 10, no. 9, Sept. 1924, pp. 308-405, 5 figs. Results of investigation.

Knowles Column Cells. The Knowles Column Cell. Chem. & Industry, vol. 43, no. 5, Feb. 1, 1924, pp. 119-120, 2 figs. Knowles column plant has electrodes of only moderate depth running at low-current density, and yet occupies only fraction of floor area required by any other make of plant.

Line Spectrum. Behavior of Line Spectrum of Hydrogen at Low Temperatures (Ueber das Verhalten des Viellinienspekturms des Wasserstoffs bei tiefen Temperaturen), L. Citron. Annalen der Physik, vol. 73, no. 5-6, Feb. 1924, pp. 470-476. Points out that many-line spectrum of hydrogen is interesting on account of possible inferences as to structure of molecule, and author examines it as produced partly in capillary, partly in positive column of Geissler tube when this was surrounded by liquid air.

Manufacture. Electrolytic Oxygen and Hydrogen. Elec. Rev., vol. 94, no. 2420, Apr. 11, 1924, pp. 572-573, 4 figs. Describes Knowles multipolar column cell, consisting of an electrolyte tank in which are suspended alternately anodes and cathodes, each covered by a gas-collecting bell.

Reversible Reactions. Reversible Reactions of Hydrogen and Carbon Monoxide On Iron Oxides (Étude des réactions reversibles de l'hydrogène et de l'oxyde de carbone sur les oxydes de fer), G. Chaudron. Revue de Métallurgie, vol. 21, no. 8, Aug. 1924, pp. 462-472, 10 figs. Experimental difficulties experienced by different investigators, and results of work done by author.

HYDROGEN-ION CONCENTRATION

Determination. Determination of Hydrogen Ions in Solutions (La détermination des ions hydrogène d'une solution), A. Travers. Chimie & Industrie, vol. 12, no. 2, Aug. 1924, pp. 212-232, 13 figs. Discusses methods for determining pH and their application to pure chemistry.

The Determination of Hydrogen-Ion Concentrations of Acid Solutions by Means of the Glass Electrode (Ueber die Bestimmung der Wasserstoffionenkonzentration saurer Lösungen mit Hilfe der Glaselektrode), A. L. v. Steiger. Zeit. für Elektrochemie, vol. 30, no. 6, June 1924, pp. 259-263. For determination of H-ion concentration of solutions of many organic liquids which, through disturbing factors, cannot be employed with either platinum-hydrogen electrode or with indicators, use is made of glass electrode which was first applied by Haber and Klemensiewics; describes method employed; as a rule results obtained can be reproduced to within about 0.0015 volt; investigation of influence of subjecting glass to treatment by various reagents.

HYDROGEN SULPHIDE

Absorption. Absorption of Hydrogen Sulfide, F. W. Sperr, Jr. Indus. & Eng. Chem., vol. 16, no. 12, Dec. 1924, pp. 1237-1239, 2 figs. Describes process; secondary reactions; tower packing; efficiency of process.

HYDROGENATION

Kinetics of. Kinetics of Hydrogenation, E. J. Lush. Chem. & Industry, vol. 43, no. 11, Mar. 14, 1924, pp. 53T-56T, 4 figs. Measurement of effect of pressure on rate of hydrogenation by determining hydrogen absorbed in given time at various pressures.

Oils. See OILS, Hydrogenation.

HYDROGRAPHY

International Hydrographic Bureau. The International Hydrographic Bureau, Geo. E. Brandt. U. S. Nav. Inst.—Proc., vol. 50, no. 260, Oct. 1924, pp. 1658-1664. Its character, organization, and scope.

HYDROMETERS

Total-Immersion. A Total-Immersion Indicating Hydrometer, A. Pollard. Jl. of Sci. Instruments, vol. 1, nos. 4 and 5, Jan. and Feb. 1924, pp. 97-104 and 129-136, 7 figs. Describes a totally immersed constant weight hydrometer constructed from glass, which indicates density of liquids, and develops its theory.

HYDROPLANES

Lioré-Olivier. See AIRPLANES, Lioré-Olivier.

HYGIENE

[See HEALTH.]

Industrial Accidents and. See ACCIDENTS, Industrial.

HYGROMETERS

Types. Humidity and Its Measurement. Sci. & Art of Min., vol. 34, nos. 22 and 23, May 24 and June 7, 1924, pp. 342-343 and 358-359, 2 figs. Deals with chemical and physical hygrometers of different types.

Hygrometers (Die Feuchtigkeitsmessgeräte), K. Holzhausen. Feuerungstechnik, vol. 12, no. 17, June 1, 1924, pp. 141-144, 10 figs. Describes instruments with empirical calibration; by psychrometric method according to August; for air only, and for air and gases with sensible heat and impurities.

HYSTERESIS

Glow-Discharge Characteristics. The Hysteresis of Glow-Discharge Characteristics (Ueber die Hysteresis der Glimmentladungscharakteristik), R. Seeliger. Jahrbuch der Radioaktivität u. Elektronik, vol. 20, no. 4, Mar. 18, 1924, pp. 353-397, 18 figs. Possible causes of hysteresis: temperature effects, change of gas contents; change of electrodes; free charges; method of experimental investigation; observations on negative hysteresis; impurities and hysteresis; observations on positive hysteresis; review of literature bearing on subject.

Magnetic. Asymmetric Cycles of Magnetic Hysterisis in a Field of Constant Direction (Sui cicli asimmetrici di isteresi magnetica in un campo di direzione costante), M. Paris. Elettrotecnica, vol. 11, no. 16, June 5, 1924, pp. 370-376, 12 figs. Discusses ballistic and other methods of measuring and shows that losses are greater in asymmetric cycles than in symmetric cycles.

I

ICE HOUSES

Construction and Insulation. Construction and Insulation of Ice Storage Houses, A. B. Alexander. Ice & Refrigeration, vol. 67, no. 6, Dec. 1924, pp. 395-397. Points out many important features of construction and states that in many cases meltage of ice is erroneously attributed to poor insulation.

Lawrence, Kan. A Modern Ice Storage House, R. C. Rankin. Ice & Refrigeration, vol. 66, no. 3, Mar. 1924, pp. 241-242, 4 figs. Description of modern reinforced-concrete ice-storage house erected by Griffin Ice Co., Lawrence, Kan.; method of placing reinforcement and pouring concrete; method of applying insulation and insulation finish.

ICE MANUFACTURE

Costs. The Cost of Ice Production. Cold Storage, vol. 27, no. 320, Nov. 20, 1924, pp. 459-461, 1 fig. An investigation of manufacturing expenses. Actual working figures that give British ice makers an all-round costing basis.

Cracked- and Checked-Ice Problems. Solving "Cracked and Checked" Ice Problems, E. Ormsby. Power House, vol. 17, no. 7, Apr. 5, 1924, pp. 28-29 and 41, 3 figs. See also Southern Engr., vol. 41, no. 2, Apr. 1924, pp. 50-52. Outline of some remedies for difficulties confronting power plant engineers as a result of strains produced in freezing.

ICE PLANTS

Australia. Ice-Making and Cold-Storage Plants in Australia and New Zealand. Trade Information Bul. (Supp. to Commerce Repts.), no. 280, Oct. 1924, 33 pp. Particulars of plants, based on replies to questionnaire received from American consular officers.

Birmingham, Ala. Standard Ice Company's New Plant. South Engr., vol. 41, no. 7, Sept. 1924, pp. 44-46, 5 figs. Describes ice plant of Standard Ice Co., Birmingham, Ala., and gives principal equipment.

Charleston, W. Va. Performance of a Modern Ice Plant, C. P. Goree, Jr. Refrig. Wld., vol. 59, no. 5, Apr. 1924, pp. 16-20, 7 figs. See also South. Engr., vol. 41, no. 7, Sept. 1924, pp. 35-39, 5 figs. 100-ton ice-making plant of Diamond Ice & Coal Co., Charleston, W. Va.; complete operating results for June, 1923.

Compound-Ammonia-Compressor. A Compound Ammonia Compressor Ice Plant. South. Engr., vol. 41, no. 7, Sept. 1924, pp. 58-60, 7 figs. Two 30-ton compound compressors, motor driven, are main units of plant; electric energy is purchased and water for ice making is obtained from deep well.

Design. The Essentials of the Modern Ice Plant, C. T. Baker. Ice & Refrigeration, vol. 66, no. 3, Mar. 1924, pp. 243-245. Type of plant, prime mover, compressors, freezing tank, air agitation system, condensers and piping.

Developments. Forty Years Development in Ice and Refrigerating Plants, H. P. Hill. Nat. Engr., vol. 28, no. 10, Oct. 1924, pp. 479-485, 4 figs. Early history of refrigeration and description of early types of machines; recent progress.

Developments in Ice-Making Plants, H. P. Hill. Power Plant Eng., vol. 28, no. 19, Oct. 1, 1924, pp. 1015-1016. Outline of present practice and probable development.

Distilled-Water. Ice Plant Installs Unaflow Engines. Power, vol. 59, no. 25, June 17, 1924, pp. 981-982, 4 figs. Plant at Memphis, Tenn., economizes by purchasing governmental excess machinery; how water is treated; ice-storage facilities.

Electric Drive. The Application of Electric Energy to the Modern Ice Making and Refrigerating Plant, P. Schlingman. Refrig. Eng., vol. 11, no. 5, Nov. 1924, pp. 165-172, 3 figs. Comparison of motor-driven, uniflow-steam-engine-driven, and oil-engine-driven plants, giving production costs, showing that first is most desirable. Inducements made to ice plants by power companies as to service rates. Factors in selection of prime mover for an electrically driven plant.

Equipment. Essentials of a Modern Ice Plant, C. T. Baker. Refrigeration, vol. 34, no. 2, Feb. 1924, pp. 43-47. What modern plant should consist of as regards machinery and equipment.

Essential Factors in. The Modern Ice Plant, C. T. Baker. Refrig. Wld., vol. 59, no. 3, Mar. 1924, pp. 17-19. Essential factors to be considered in building a plant.

Freezing Tanks. Ice Freezing Tank Design, C. Wilkie. Ice & Refrigeration, vol. 67, no. 1, July 1924, pp. 50-55, 13 figs. Points out ways whereby installation of freezing tanks can be safeguarded against errors; influence of harvesting equipment.

Fuels and Prime Movers. Fuels and Prime Movers for Ice Plants, J. P. Greenwood. Ice & Refrigeration, vol. 67, no. 6, Dec. 1924, pp. 389-391, 3 figs. Conditions surrounding plants already built and in operation; presents chart whereby it is easy to tell which fuel is cheaper to use.

Huntingdon, Pa. Modern Ice Making and Icing Station at Huntingdon, Pa. Ice & Refrigeration, vol. 66, no. 4, Apr. 1924, pp. 283-290, 15 figs. Describes ice-making plant and car-icing station of Bolye Ice Co., recently completed; built for supplying ice for Fruit Growers' Express and Pennsylvania R. R. Co.

Improvements. Improvement In Ice Plants, R. C. Doremus. Refrig. World, vol. 59, no. 1, Jan. 1924, pp. 17-20. See also Ice & Refrigeration, vol. 66, no. 1, Jan. 1924, pp. 35-39 and Universal Engr., vol. 39, no. 2, Feb. 1924, pp. 23-28. Deals with water treatment, air treatment, ice making system, harvesting equipment, condensers, water heating, electric drive, ice storage, etc.

Iron and Steel. Periods of Recovery, Temperature, Grain Size, and Force Lines in Repeated-Impact Tests (Erholungspausen, Temperatur, Korngrösse und Kraftwirkungslinien bei der Dauerschlagprobe), E. H. Schulz and W. Prüngel. Berichte der Fachausschüsse des Vereins deutscher Eisenhüttenleute (Werkstoffausschuss), no. 40, Apr. 4, 1924, 7 pp., 12 figs. Shows that periods of recovery of one or more days result in decided increase of final number of blows. Mild steel and wrought iron show a maximum at 175 deg.

Mexico, Central America, and West Indies. Ice-Making and Cold-Storage Plants in Mexico, Central America and West Indies. Trade Information Bul. (Supp. to Commerce Reports), no. 229, May 19, 1924, 66 pp. Information based on replies received from American consular officers throughout world in answer to questionnaires calling for particulars of ice-making and refrigerating installations in their districts.

New York, N. Y. Mammoth Ice Plant Adopts New Methods, V. H. Vandiver and A. S. Taylor. Compressed Air Mag., vol. 29, no. 5, May 1924, pp. 851-856, 18 figs. Describes plant and equipment of Arctic Hygeia Ice Mfg. Co., New York

City; 1000 tons ice per day capacity; electric drive and raw-water system replace steam drive and distilled-water system.

Oil-Engine-Driven. Economy from Oil Engine Power at the Coal Pit's Mouth. Oil Engine Power, vol. 2, no. 7, July 1924, pp. 363-365, 5 figs. Operating at mouth of coal mine and driving Marion County Coal Co.'s, Centralia, Ill., own machinery, three oil engines have been able to produce substantial savings over and above cost of coal-generated power in production of ice and refrigeration.

Ice Plant Changes to Oil Engine Drive. Power Plant Eng., vol. 28, no. 17, Sept. 1, 1924, pp. 910-912, 5 figs. How Pure Water Ice Co. at Waukegan, Ill., reduced operating costs so it readily competes with natural-ice producers.

Ice Plants and the Question of Oil Engine Power, C. T. Baker. Oil Engine Power, vol. 11, no. 4, Apr. 1924, pp. 212 and 217-219, 2 figs. Deals with subject of oil-engine drive for ice plants, discussing cost of installation, maintenance and repair costs, fuel and lubricating costs, method of drive, etc. Extracts from paper read before Ga. Ice Assn.

Oil Engine as a Prime Mover in the Ice Plant, C. T. Baker. Ice & Refrigeration, vol. 66, no. 5, May 1924, pp. 467-469. See also Refrig. Wld., vol. 59, no. 5, Apr. 1924, pp. 13-15. Discusses various features of primary interests to business man, including dependability, maintenance costs, different methods of drive, kind of fuel, etc.

See also Raw-Water.

Operating System. Two Years in an Ice Plant, B. L. Gregory. South. Engr., vol. 41, no. 7, Sept. 1924, pp. 47-52, 7 figs. Gives experiences of engineer in ice plant and what was done to put plant in proper operating condition.

Operation. Ice Plant Operation, C. Wilkie. Refrig. Eng., vol. 11, no. 6, Dec. 1924, pp. 202-205. Deals with operation of ammonia compressor; ice freezing tanks, summary of ice-tank performance; ammonia condensers; thermometers and their location.

Prime Mover, Selection of. Choice of the Prime Mover for an Ice Plant, M. S. Howard. Power, vol. 60, no. 1, Sept. 9, 1924, pp. 403-405, 4 figs. Choice of power affected by local conditions; high fuel costs for steam plant; extra charge for electric current; Diesel-engine fuel costs.

Raw-Water. New Ice Service Co. Plant. Refrig. Wld., vol. 59, no. 6, June 1924, pp. 11-15, 9 figs. Description of 300-ton electrically driven raw-water ice plant on West 40th Street, New York City.

Oil Engine-Driven Raw Water Ice Plant at Mattoon, Ill. Ice & Refrigeration, vol. 66, no. 6, June 1924, pp. 513-517, 8 figs. Description of 30-ton plant of Mattoon Crystal Ice Co.; intended primarily for production of ice for refrigerator car service; 50 per cent of production to be used for requirements of local ice trade.

Raw Water Ice Plant of Miller Ice Co., Chicago Heights, Ill., V. P. Miller. Ice & Refrigeration, vol. 66, no. 3, Mar. 1924, pp. 239-241, 4 figs. Oil-engine-driven 50-ton ice-making plant, which has been remodeled and improved several times; mechanical equipment; vertical compressors belted to oil engines.

Serv-Ice Co. Builds New Electrically Driven Raw Water Ice Plant in Columbus, Ind. Power Plant Eng., vol. 28, no. 14, July 15, 1924, pp. 734-738, 5 figs. Describes new 30-ton compression system ice plant built to supply local retail trade. Unusually clear product is obtained by use of lime and soda softening and high-pressure agitation.

IGNITION

[See also FLAME PROPAGATION.]

Airplane Engines. See FLAME PROPAGATION, Spark Intensity.

Automobile Engines. Electric Ignition Apparatus for Motorcars. Eng. Progress, vol. 5, no. 7, July 1924, pp. 136-137, 3 figs. Discusses locating dynamo in engine flywheel, i.e., engine with flywheel magneto, and gives details of construction and connections.

Magnetos and Coils. Autocar, vol. 53, no. 1511, Oct. 3, 1924, pp. 629-631, 15 figs. Review of ignition appliances likely to be widely used in 1925.

Vacuum Tubes Applied to Engine Ignition. Automotive Industries, vol. 50, no. 24, June 12, 1924, pp. 1287-1289, 4 figs. Automotive application of thermionic valve, patented by Robert Bosch, makes it possible to place ignition system anywhere on car and eliminate mechanical interrupter.

Gas and Oil Engines. Process of Ignition in Gas and Oil Engines (Der Zündungsvorgang in Gas- und Oelmaschinen), R. Schöttler. Wärme, vol. 47, no. 33, Aug. 15, 1924, pp. 381-384, 14 figs. Discusses phenomenon of ignition and its control on basis of experimental work of various scientists.

Gases. See GASES, Ignition.

ILLUMINATING GAS. See COAL GAS.

ILLUMINATION

[See also LIGHTING.]

Rotating Objects. On a Method for the Synchronous and Instantaneous Illumination of Objects Rotating or Vibrating at Very High Speeds, G. E. Bairsto. Physical Soc. Lond.—Proc., vol. 36, part 5, Aug. 15, 1924, pp. 349-354, 3 figs. Describes method capable of giving instantaneous photographic records, and giving a precision of order of half a micro-second; is much more precise and able to give more intense spark than any contact breaker and coil method.

Wall Color Effect. Effect of Color of Walls and Soffits on Resulting Illumination (Effetti del colore delle pareti e dei soffitti sull'illuminazione risultante), L. F. Pello. Elettrotecnica, vol. 11, no. 23-24, Aug. 15-25, 1924, pp. 551-553. Discusses reflective power of various colors; gives table of coefficients of reflection and their application in industrial buildings, schools, etc.

ILLUMINOMETER. See LIGHT, Measuring Instruments.

IMMIGRATION

Continental, in Germany. Continental Immigration in Germany. Int. Labour Rev., vol. 9, no. 1, Jan. 1924, pp. 50-77. Control and compilation of statistics; issue of permits; recruiting and placing of workers; registration procedure; describes system of supervision and gives conclusions from results obtained.

Emigration and, Rights of. The Rights of Emigration and Immigration, P. Fauchille. Int. Labour Rev., vol. 9, no. 3, Mar. 1924, pp. 317-333. Author adopts theory that individual has inalienable natural right to emigrate or immigrate which may not be arbitrarily infringed by state, but admits that individual's right of migration is not absolute, but is limited by state's right of self-preservation.

IMPACT

Metals, Resistance to. See METALS, Impact Resistance.

IMPACT TESTING

Notched-Bar Tests. Measuring Metal's Resistance to Shock, R. G. Waltenberg. Chem. & Met. Eng., vol. 31, no. 17, Oct. 27, 1924, pp. 657-658. Study of impact tests on monel metal and new methods of obtaining figures indicative of toughness of metal tested.

On Notched-Bar Impact Tests, P. Fillunger. Testing, vol. 1, no. 1, Jan. 1924, pp. 23-32, 7 figs. Refers to formula for expressing energy to produce deformation in notched-bar impact specimen, and in order to show that equation is borne out by test results, investigation is made of several notched specimens of identical material but with different eccentricities.

Rounded Bars. Experiments on the Duration of Impacts, Mainly of Bars with Rounded Ends, in Elucidation of the Elastic Theory, J. E. P. Wagstaff. Lond., Edinburgh & Dublin Philosophical Mag. & Jl. of Sci., vol. 48, no. 283, July 1924, pp. 147-158, 2 figs. Discusses duration of collision of two perfectly elastic bars and its form of mathematical relation.

INDEXES

Decimal Classification. The Nature, Purpose and Aim of Decimal Classification (Die Dezimalklassifikation. Ihr Wesen, Zweck und Ziel), E. Fontanellaz. Glasers Annalen, vol. 94, no. 4, Feb. 15, 1924, pp. 44-46. Discusses DK (Dewey) classification system and its advantages for arranging and indexing technical publications.

Management-Information Classification. Information Classification for the Management Adapted from the Dewey Decimal System. Mgmt. & Administration, vol. 7, no. 4, Apr. 1924, pp. 449-464. Presents table which represents consolidation of work of various parties interested; gives concise form standardized methods and accepted practice generally applicable to industrial operation; table of class numbers; subject index for management information.

INDICATORS

Internal-Combustion-Engine. Low Speed Indicator Developed for High Speed Engines. Automotive Industries, vol. 50, no. 6, Feb. 7, 1923, pp. 298-299, 3 figs. Device invented by Budapest scientist traces diagram which is representative of large number of succeeding cycles in power plant; influence of sources of error is greatly reduced; device known as Juhasz indicator has been placed on market by Lehmann & Michels of Hamburg, Germany.

The Juhasz Indicator (Mit dem Juhasz-Indikator), Wa. Ostwald. Allgemeine Automobil-Zeitung, vol. 24, nos. 47 and 48, Nov. 28 and Dec. 6, 1923, pp. 18-19 and 23-24, 4 figs. Describes new indicator which, it is claimed, gives accurate record of phenomena in combustion chamber, suction pipe, and exhaust pipe, even at maximum speeds.

Manograph, for High-Speed Engines. Indicator-Manograph (Indikator-Manograph Otto Schulze). Motor u. Auto, vol. 21, no. 1, Jan. 10, 1924, pp. 5-7, 8 figs. Describes optical indicator manufactured by OSA Apparate Gesellschaft, Frankfort, Germany, which can be used for speeds up to 8000 r.p.m.; diagrams are stated to be not only qualitatively but quantitatively correct, so that actual pressure conditions in cylinder can be determined.

Precision Weak-Spring. A New Precision Type Weak-Spring Indicator, J. Geiger. Oil Engine Power, vol. 2, no. 5, May 1924, pp. 278-279, 9 figs. Advantages of author's new type of engine indicator are illustrated.

INDIGO

History of. Some Pages from the Story of Indigo, W. A. Davis. Chem. & Industry, vol. 43, nos. 11 and 12, Mar. 14 and 21, 1924, pp. 266-268 and 303-307. Importance of industry; natural indigo and decline of its industry; indigo paste; development of business organization in India; introduction of indigo cultivation into Assam in conjunction with tea.

INDUCTANCE COILS

Inductance of, Calculation. Some Notes on Calculating the Inductance of Coils, E. J. Hobbs. Wireless World, vol. 13, nos. 18 and 19, Jan. 30 and Feb. 6, 1924, pp. 572-575 and 598-601, 5 figs. Describes simple method of reducing calculations to a minimum; based on use of powers of ten and is intended to assist in elimination of calculations and trial and error insofar as wavelength, inductance and capacity are concerned.

Lattice. The Inductance of Lattice Coils, J. G. Hart. Wireless Wld., vol. 15, no. 5, Oct. 29, 1924, pp. 133-134, 2 figs. Outlines a rapid method for calculation of inductance of lattice coils which extends graphical method of W. H. Nottage.

Low-Capacity. Low Capacity Inductance Coils, F. H. Haynes. Wireless Wld., vol. 13, no. 20, Feb. 13, 1924, pp. 613-616, 10 figs. Some new coils for short wave reception.

Natural Frequency. On the Measurement of Natural Frequency of an Inductance Coil at Audio-Frequency, H. Nukiyama and K. Kobayashi. Denki Gakkwai Zasshi (Jl. Inst. Elec. Engrs. Japan), no. 429, Apr. 1924, pp. 400-405, 6 figs. Describes experiment in which frequency is determined by standard tuning forks; theory by which natural frequency and self-capacity of primary coil can be obtained by taking balance at two known frequencies is worked out. (In Japanese.)

Polygonal. Inductances of Polygonal Coils, I. Koga. Denki Gakkwai Zasshi (Jl. Inst. Elec. Engrs. Japan), no. 435, Oct. 1924, pp. 954-977, 9 figs. Triangular, hexagonal and octagonal cases are treated with some calculations of mutual inductances between two linear conductors in general, assuming permeability of medium to be always unity throughout space. (In Japanese.)

Self-Inductance and Natural Wave Length. Self Inductance and Natural Wave Length of Single Layer Coils for Radio Use, I. Yamamoto. Denki Gakkwai Zasshi (Jl. Inst. Elec. Engrs. Japan), no. 435, Oct. 1924, pp. 913-919, 4 figs. Gives curves necessary in designing single-layer coils, giving certain self inductances, curve showing total length of wire of coil, curves which determine approximate value of natural resonant wavelength of coil, and curves showing approximate value of equivalent self capacity of coil. (In Japanese.)

Single-Layer. Formulas and Tables for the Calculation and Design of Single-Layer Coils, F. W. Grover. Inst. Radio Engrs.—Proc., vol. 12, no. 2, Apr. 1924, pp. 193-208. Gives set of tables for simple calculation of inductance of single-layer helical and polygonal coils and their design together with full illustrations of their use.

INDUCTION

Electromagnetic. Electromagnetic Induction in a Homogeneous Solid Conducting Sphere Rotating About an Axis Perpendicular to a Uniform Alternating Magnetic Field, A. Marcus. Physical Rev., vol. 24, no. 1, July 1924, pp. 68-78, 2 figs. Discusses mathematical theory; tests theoretical results by measuring layouts including decrement of solid metal ball oscillating about vertical axis in an alternating field produced by long horizontal solenoid.

INDUSTRIAL MANAGEMENT

Advances in. Scientific Management in Other Countries Than the United States, F. B. and Lillian M. Gilbreth. Taylor Soc.—Bul., vol. 9,

no. 3, June 1924, pp. 132-142. Notes based on mass of foreign literature in authors' files; sources of scientific-management information available to other countries; expression of reactions to scientific management in other countries; objections advanced and obstacles encountered; methods advocated and found profitable; summary of present state; recommendations.

American Production Methods. American Production Methods (Amerikanische Gütererzeugung), Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 50, Dec. 13, 1924, pp. 1289-1292. General aspects of American industry; rapid production and turnover; handling workshop materials and utilization of machines; industrial organization; accurate planning of production method, training of employees, etc.; sales methods.

Average Costs, Fallacy of. A Fallacy of Management—That Average Costs Are of Any Value, B. M. Maynard and J. Heywood. Factory, vol. 32, no. 3, Mar. 1924, pp. 330-331 and 366, 1 fig. Discussion based on varied experience with industrial engineering in many plants.

Bonus Systems. See BONUS SYSTEMS.

Branch Plants, Management of. How We Get Uniform Output from Widely Separated Plants, P. W. Litchfield. Factory, vol. 33, no. 1, July 1924, pp. 23-25, 116, 118 and 120-123, 2 figs. How to manage branch plants so that they function as one; how to do it and get a uniform product; how economies of one plant get adopted in others located at distant points.

Budgetary Control. Budgetary Control, W. Carswell. Paper Trade Jl., vol. 79, no. 7, Aug. 14, 1924, pp. 51-54 and 60. Outlines general principles of budgetary control in relation to all principal activities of an enterprise which apply with equal value to any business, whether manufacturing, trading, or merchandising. Discussed under following heads: Advantages to be gained by operating under a budget; preparation of budget; control.

Using the Budget System in Business, L. H. Charles. Can. Mfr., vol. 44, no. 12, Dec. 1924, pp. 23-25. How to apply budget system and use it to secure great benefits of forecasting accurately.

Visualizing Budgetary Control, E. H. Tingley. Mgmt. & Administration, vol. 8, no. 4, Oct. 1924, pp. 383-386, 1 fig. Major benefits of a budget; make-up of chart; steps in planning and compilation of budget.

Budgeting. Applying the Budget System to Railroads, H. Bruere and A. Lazarus. Indus. Mgmt. (N. Y.), vol. 68, no. 1, July 1924, pp. 35-46, 12 figs. Review of present practice and forecast of future possibilities.

Budget Methods of Metal Product Company. Iron Age, vol. 114, no. 15, Oct. 9, 1924, pp. 910-912. Describes budget system of Cleveland Metal Products Co., Cleveland, Ohio. Sales estimated in November for following year and manufacturing program planned. Selling expense, advertising, and administration budgeted.

Budgeting Advertising Expense, J. L. Palmer. Mgmt. & Administration, vol. 8, no. 4, Oct. 1924, pp. 394-395, 3 figs. Develops, by assuming a typical case, a possible method of planning and controlling advertising expenditures.

Elements of Budget Control, D. J. Hutchinson. Pit & Quarry, vol. 8, no. 10, July 1924, pp. 75-78. Procedure in establishing budget system.

Industrial Budget Methods, J. H. Barber. Mgmt. & Administration, vol. 8, nos. 4, 5, and 6, Oct., Nov., and Dec., 1924, pp. 371-376, 479-486, and 589-594, 27 figs. Oct: Explains methods of scientific forecasting and shows results that can be attained. Nov.: Methods of quantitatively analyzing particular cycles (of orders, shipments, collections, etc.) of particular business. Dec.: Forecasting underlying cycles.

Central Stations. Management Charts for Central Stations, H. A. Snow. Elec. Wld., vol. 84, no. 1, July 5, 1924, pp. 12-16, 25 figs. How a series of graphs effectively presented keeps executives posted on utility output, extensions and financial requirements as exemplified by experience of Detroit Edison Company.

Charts. See Gantt Charts; CHARTS.

Coal Mines. The Application of Industrial Engineering to the Coal Mining Industry, J. C. White. Coal Mine Mgmt., vol. 3, no. 12, Dec. 1924, pp. 23-26. Objects of management; value of coördination; basic principles of scientific management.

See also COAL MINES, Underground Management.

Committee Plan. Committees as Aids to Management, A. G. Peter. Indus. Mgmt. (N. Y.), vol. 68, no. 6, Dec. 1924, pp. 362-365. Advantages and disadvantages of this form of executive control.

Control Methods. Efficiency Cards, a Means of Operating Control and Precalculation (Die Leistungskarte, ein Mittel der Betriebskontrolle und der Vorrechnung), M. Krage. Maschinenbau, vol. 3, no. 21, Aug. 14, 1924, pp. 786-790. Efficiency card collects data on material and time consumed in course of production from store cards and time cards; compares operations and actual expenditure in time and materials with estimates given.

Graphic Control in a Small Hosiery Mill, W. E. Haseltine. Mgmt. & Administration, vol. 8, no. 2, Aug. 1924, pp. 161-166, 20 figs. How charts are employed in a small hosiery mill to give control of all factors entering into operation, showing status of work at any time and schedule for its completion.

Cost Accounting. See COST ACCOUNTING.

Cost Control. Control Through Organization and Budgets, Thos. B. Fordham and Ed. H. Tingley. Mgmt. & Administration, vol. 7, nos. 1 and 2, Jan. and Feb. 1924, pp. 57-62 and 205-208. Jan.: Compilation of budget. Feb.: Applying budget to industrial operations.

Cost Control by Budget, Thos. B. Fordham and E. H. Tingley. Mgmt. & Administration, vol. 7, no. 3, Mar. 1924, pp. 291-294, 1 fig. Points out advantages to be gained by budget analysis; operating factory divisions by budget.

How We Keep Costs at Their Proper Level, E. F. Roberts. Factory, vol. 33, no. 5, Nov. 1924, pp. 650-653, 710, 712, 714, and 716, 2 figs. Tells how Packard Motor Car Co. cost-control system, with no red tape and at minimum cost, serves production executive as tool, instead of being merely record of past events.

Increased Yield from Industry (Voksende Udbytte i Industrien), I. Jantzen. Ingeniören, vol. 33, nos. 7 and 8, Feb. 16 and 23, 1924, pp. 73-84 and 85-96, 26 figs. Scientific investigation of economic factors on basis of engineering principles. Gives diagrams illustrating relations of manufacturing cost, price, profit, etc.

Operating Adjustments Under Standard Costs, R. W. Darnell. Mgmt. & Administration, vol. 7, no. 2, Feb. 1924, pp. 183-186. Perpetual inventory as essential element of effective cost control, its function, place in system of standard costs, and its monthly adjustment to meet inevitable discrepancies between standard and actual costs.

Quality Manufacturing at Predetermined Costs, E. F. Roberts. Factory, vol. 33, no. 4, Oct. 1924, pp. 495-497, 544, 548, 552, 556, 560, 564, and 568, 3 figs. Describes how Packard Motor Car Co. established time standards and how workmen

are paid so that variations in time and in cost of labor are kept at minimum; advantages of payment method which is integral part of cost-control system.

Statistical Summary and Abstract. Indus. Mgmt. (N. Y.), vol. 68, no. 4, Oct. 1924, pp. 198-220. Details of practice in cost organization and in executive utilization of cost data obtained from 160 American industrial concerns employing aggregate of 500,000; tabular summary of cost-control practice in 160 plants (on supp. table); relation of timekeeping to cost work in 64 plants; relation of rate setting to cost; relation of cost department to control of materials; procedure with respect to compilation and distribution of overhead; how 57 concerns use cost data to prevent excessive costs; how foremen are brought in touch with cost and expense records; steps taken in 65 plants to reduce material investment; how 30 concerns handle idle facilities; steps taken to analyze and reduce shrinkage of materials; how cost analysis dictates programs of economies; use of employees' suggestion plan and its relation to costs; outstanding ways in which 78 industrial concerns use cost data for executive control. Points embraced in questionnaire which forms basis for summarized data, p. 197.

Cost Information for Department Heads. Supplying Financial and Cost Information, G. M. Pelton. Mgmt. & Administration, vol. 7, no. 2, Feb. 1924, pp. 169-172. Discusses how and to what extent department heads should be supplied with financial and cost information.

Cotton Mills. See COTTON MILLS, Mechanical Engineering and Management.

Definition of. Who Can Hire Management?, H. S. Dennson. Taylor Soc.—Bul., vol. 9, no. 3, June 1924, pp. 101-110. Notes on what is "managing," who manages, and who can best choose managers.

Development. A Decade's Development in Management, H. P. Kendall. Taylor Soc.—Bul., vol. 9, no. 2, Apr. 1924, pp. 55-65. Trends and results of scientific management; developments in manufacturing problems; industrial relations; scientific management and selling.

Drafting Department. Putting the Drafting Room on a Production Basis, W. E. Irish. Indus. Mgmt. (N. Y.), vol. 68, no. 2, Aug. 1924, pp. 121-126, 2 figs. A system which, being based on fundamentals, is flexible enough for wide application.

Elements of Work, Classification of. Classifying the Elements of Work, F. B. Gilbreth and L. M. Gilbreth. Mgmt. & Administration, vol. 8, nos. 2, and 3, Aug. and Sept. 1924, pp. 151-154 and 295-297, 2 figs. Aug.: A complete method of visualizing a classification of all subdivisions and true motion-study elements of the one best way to do work. Sept.: Application of motion study to developing best methods of work.

Employment Management. See EMPLOYMENT MANAGEMENT.

Engineering and Operating Departments, Relation of. The Relation of the Engineering Department to the Operating Department, F. J. Crolius. Engrs.' Soc. West. Pa.—Proc., vol. 40, no. 2, Mar. 1924, pp. 45-52 and (discussion) 53-55. Relates incidents and results accomplished through coördinated engineering investigation; discusses combustion, centrifugal force; etc.

Estimating. Estimating. Engineer, vol. 137, no. 3558, Mar. 7, 1924, pp. 244-246, 5 figs. Deals with requirements of factory employing about 5000 hands, and manufacturing more than one type of product; personnel of department; preparation of estimate; coördination of effort.

See also CONTRACT WORK, Estimating.

Executive Control. Executive Control of Future Results, Wallace Clark. Mgmt. & Administration, vol. 7, no. 2, Feb. 1924, pp. 179-182, 4 figs. Graphical method of company plan and performance.

Executive Function. Management as an Executive Function, J. H. Williams. Taylor Soc.—Bul., vol. 9, no. 2, Apr. 1924, pp. 66-71. Emphasizes modern biology and psychology as essential to development of science of management.

Executives. See EXECUTIVES.

Executives' Clubs. A Comprehensive Plan for Executives' Clubs, S. Van T. Jester. Ry. Mech. Engr., vol. 98, no. 2, Feb. 1924, pp. 79-80. Outline of principles involved and methods followed in Jester plan.

Executives, Duty in. Essentials of Successful Management, W. Attwood. Indus. Management (Lond.), vol. 11, no. 1, Jan. 10, 1924, pp. 11-12, Stresses necessity for industrial executives to follow a well-defined policy in their administration in order to produce a maximum output.

Expense Control. A Method of Expense Control That Paid, M. R. Lott. Indus. Mgmt. (N. Y.), vol. 67, no. 5, May 1924, pp. 284-286, 2 figs. Keeping down cost of improvements; describes method which has proved of great benefit in controlling cost of work of expense nature, where large sums are involved.

Factories. Rational Works Management in Factories, J. A. Davenport and J. Inman Emery. Indus. Mgmt. (Lond.), vol. 11, nos. 1 and 7, Jan. 10 and Apr. 3, 1924, pp. 3-5 and 179-189, 4 figs. Jan. 10: Payment by results. Apr. 3: Systematic departmental coöperation.

Factory Maintenance. Maintenance: Gearing Up Both Plant and Equipment for Low-Cost Production, K. D. Hamilton. Factory, vol. 33, nos. 3, 4, 5, and 6, Sept., Oct., Nov., and Dec. 1924, pp. 332-335, 406, 408, 410 and 412, 1 fig.; 498-501, 570, 572, 574, 576 and 578, 3 figs.; 645-649, 716, 718, 720, 722, 724, 726, and 728, 10 figs.; and 790-794, 820,822, 824, 826, 828, and 830, 13 figs. Sept.: Functions of maintenance department as related to plant and equipment. Oct.: Organization of maintenance department. Nov.: Plant design, construction, and alteration. Dec.: Belts, shafting, and hangers.

Fatigue. See FATIGUE.

Financial Control. Mobilization of Cash Reserves, A. H. Swayne. Mgmt. & Administration, vol. 7, no. 1, Jan. 1924, pp. 21-23. Methods employed by General Motors Co. in releasing funds for use as general working capital; how cash was made more fluid; interest and banking relations; savings in interest.

The Mechanics of Profit-Making, P. Mathewson. Mgmt. & Administration, vol. 7, no. 6, June 1924, pp. 659-661, 5 figs. Graphic plan of analyzing effect of proposed changes, which may be adapted to any business; purpose is to show and emphasize logical relations between departments and various factors that must be taken into account in estimating future operations and profits.

Working Plans to Realize Profits, G. C. Harrison. Mgmt. & Administration, vol. 8, nos. 4, 5, and 6, Oct., Nov., and Dec., 1924, pp. 361-366, 491-495, and 605-610, 9 figs. Oct.: Need for science in industry; scientific management in business; estimating business costs. Nov.: Setting sales quotas. Dec.: Determining profits in advance.

Flow-of-Work Regulation. Effecting Economies by Regulating Work Flow, A. Whitehead. Indus. Mgmt. (Lond.), vol. 11, nos. 2, 4, 7, 10, 15, and 18, Jan. 24, Feb. 21, Apr. 3, May 15, Sept. and Dec. 1924, pp. 35-37, 98-99, 183-185, 263-264, 407-408, and 497-498, 8 figs. How costing reveals production losses. Orders and deliveries of raw materials. Charting for production. Avoiding delay in production. Keeping record of output.

France. Present State of Scientific Management (L'organisation scientifique des entreprises et du travail. Son état actuel.), J. Ottenheimer. Génie Civil, vol. 85, no. 21, Nov. 22, 1924, pp. 468-471. Principles of Taylor system, and application at Berliet works; its extension by Fayol to general administration.

Functions. Management Is Life of Business, C. B. Williams. Iron Trade Rev., vol. 75, no. 22, Nov. 27, 1924, pp. 1434-1437. Interpretation of its functions, in conjunction with ten great rules of conduct; how organization through which it works reflects its spirit.

Gantt Charts. Applying the Gantt Chart in France, S. Héranger. Mgmt. & Administration, vol. 8, no. 3, Sept. 1924, pp. 305-309, 5 figs. Gantt Chart as applied in two establishments of Société Anonyme des Anciens Etablissements Hotchkiss & Cie, one situated at Saint-Denis, producing automobiles, and other at Levallois-Perret, manufacturing Hotchkiss machine gun and machine rifle. Has given management of Société an efficient means of controlling progress of work and has proved beyond question its value as an important factor in increased production.

Germany. Inside a German Factory, C. W. Goerling. Factory, vol. 33, no. 5, Nov. 1924, pp. 642-644, 680 and 684, 1 fig. German management problems based on experiences in a factory in Stuttgart.

Hosiery Plant. The Development of a Modern Hosiery Plant, S. E. Thompson and H. T. Rollins. Mech. Eng., vol. 46, no. 11a, mid-Nov. issue, 1924, pp. 752-764, 13 figs. Development of large hosiery plant in Iowa during 32 years of its existence; discusses production control, personnel service, standardization of methods and incentives, cost control, and marketing.

Idleness Control. The Control of Idleness in Industry, W. L. Conrad. Mech. Eng., vol. 46, no. 7, July 1924, pp. 402-404. Points out that one of chief causes of loss in industry is idleness of plant and personnel, due to lack of orders or to causes within plant itself; accounting system can be made to show not only cost of idleness, but also its causes, and to indicate means of their control.

Inefficient Machinery, Cost of. How Much Are Inefficient Machines Costing You?, K. H. Condit. Am. Mach., vol. 61, no. 12, Sept. 18, 1924, pp. 451-452, 1 fig. Machine equipment sets production limits. Keeping track of cost of inefficient machines. Cost data show when to throw out obsolete equipment.

Information Classification. See INDEXES, Management-Information Classification.

Inspection. See also INSPECTION.

Inspectors' Card Systems. A Card System to Help the Inspector, K. H. Crumrine. Am. Mach., vol. 61, no. 9, Aug. 28, 1924, pp. 349-350, 4 figs. How inspector can be aided by engineering department.

Inventories. See Purchasing.

Job Preparation. Preparing Jobs for Large-Scale Production (Das Aufgebeverfahren im Grossbetrieb), E. Holtzhausen and L. Haack. Maschinenbau, vol. 3, no. 26, Oct. 23, 1924, pp. 981-984, 5 figs. Discusses preparation of drawings, lists and orders, marking of drawings and detail drawings, models, etc., for individual and large-scale production.

Jobbing Orders, Handling. Handling the Jobbing Order, E. W. Leach and J. F. Keeh. Am. Mach., vol. 61, no. 16, Oct. 16, 1924, pp. 603-607, 9 figs. Points out necessity for suitable system in jobbing department; forms and procedure; costs and deliveries; service book.

Lignite Mines. See LIGNITE, Mine Management.

Machine-Building Industries. Management Problems in Machine Building Industries, E. F. Du Brul. Am. Mach., vol. 60, no. 20, May 15, 1924, pp. 717-721, 2 figs. Effect of business cycle on management policies; handicaps under which builder of production equipment must work; profits of fat years must cover losses suffered in lean ones.

Maintenance Division Organization. Organization of Maintenance Division, F. A. Waldron. Mgmt. & Administration, vol. 8, no. 1, July 1924, pp. 39-42, 4 figs. Planning its duties for economy of operation.

Maintenance Work. Analysis of Work and Responsibilities of Maintenance Engineers, D. H. Braymer. Indus. Engr., vol. 82, no. 1, Jan. 1924, pp. 10-16, 8 figs. Discusses scope of maintenance work, with comments by readers on most effective methods of organizations, division of work, and assignment of duties.

Managing Maintenance Work with Economy, T. Clark. Mgmt. & Administration, vol. 8, nos. 2 and 3, Aug. and Sept. 1924, pp. 191-196 and 299-302, 11 figs. Describes application to a construction and maintenance department of a manufacturing plant, of a complete system of planning and routing work, and payment of bonuses based on times determined by accurate time study. Methods of determining and using standard times for repair work.

Materials Purchasing and Control. Extreme Variety Versus Standardization, J. H. Van Deventer. Indus. Mgmt. (N. Y.), vol. 67, no. 2, Feb. 1924, pp. 81-88, 15 figs. Raw-material ordering routine at Schenectady plant of Gen. Elec. Co.

One Master Form Basis of Material Buying and Control System, W. L. Carver. Automotive Industries, vol. 50, no. 15, Apr. 10, 1924, pp. 806-811, 6 figs. Scheme of material purchasing and control at plant of Chandler Motor Car Co. eliminates bookkeeping from purchasing, stock, and production departments.

The Control of Materials, P. M. Atkins. Indus. Mgmt. (N. Y.), vol. 67, no. 5, May 1924, pp. 310-318, 16 figs. Survey of theory and practice; author seeks to develop system of control which will permit most efficient procurement and utilization of material.

Metal-Working Trades. The Mechanical Engineering of Management in the Metal-Working Trades, Robt. T. Kent. Mech. Eng., vol. 46, no. 5, May 1924, pp. 272-273 and 307. Good mechanical engineering is shown to be essential to good management in metal-working trades; engineering preliminaries to time study; engineering in plant; methods and equipment.

Methods and Principles. Scientific Management (Wissenschaftliche Betriebsführung), H. Riessberg. Praktische Maschinen-Konstrukteur, vol. 57, nos. 23, 26, 27, 29, 42, 43, 44, and 45, June 24, July 15, 22, Aug. 5, Nov. 4, 11, 18, and 25, 1924, pp. 317-324, 365-369, 381-384, 405-409, 566-568, 573-576, 592-594, and 609-611, 62 figs. Series of articles discussing various methods of scientific organization and management, taking small railway operation as an example; management of machine-tool park, machine-tool operation, etc.

Shop Management, Fred. W. Taylor. Mech. Eng., vol. 46, no. 11a, mid-Nov. issue, 1924, pp. 806-807. Summary of paper presented in June, 1903, dealing with management; high wages and low labor costs; planning development; functional management and foremanship; objections to usual systems of wage payment; recommended wage system; time study; personnel relations and welfare work.

Motion Study. See MOTION STUDY.

Nature of. Operating Management, a Link Between Technics and Economics (Betriebswirt-

INDUSTRIAL MANAGEMENT

schaftslehre), A. Walther. Schweizerische Bauzeitung, vol. 84, no. 8, Aug. 23, 1924, pp. 94-99. Discusses Betriebswissenschaftslehre as independent science concerned with economic "carrying on" of producing concern and including besides technical and labor management also questions of capital, credit, information and transportation.

Order System. Central Office and Branch Yard Millwork Order System, T. C. Herrington. Wood-Worker, vol. 43, no. 5, July 1924, pp. 42-44, 4 figs. Describes effective but simple millwork order, billing, and scheduling system, which has been developed and is being used by large lumber and millwork concern operating one main plant and four branch yards in Detroit, Mich.

Planning. A Co-ordinated System of Planning, Routing, and Cost Accounting, F. A. Waldron. Mgmt. & Administration, vol. 7, nos. 1, 2, 3, and 4, Jan., Feb., Mar., and Apr. 1924, pp. 39-43, 173-177, 295-297, and 427-430, 34 figs. Jan.: Duties of engineering division. Feb.: Organization of production division. Mar.: Organization of inspection and maintenance. Apr.: Organization of accounting division.

Planning and Production Control. Taylor Soc. —Bul., vol. 9, no. 6, Dec. 1924, pp. 271-283. Committee on industrial planning of Boston Chamber of Commerce presents composite picture of planning methods found effective in Boston's most efficient factories. Organizing for master planning; determination of method of control; definition of production control; its value in industrial management.

Planning System in a Car Manufacturing Plant. Ry. Rev., vol. 74, no. 9, Mar. 1, 1924, pp. 357-365, 15 figs. System of scheduling car-repair work in shops of Ralston Steel Car Co., Columbus, Ohio; exercises complete control of all manufacturing activities.

Planning the Repetitive Manufacture of Automobile Wheels, Wm. B. Ferguson. Mgmt. & Administration, vol. 7, no. 1, Jan. 1924, pp. 31-38, 70 figs. Methods used in quantity production or making of great number of parts of same design with respect to those features which are more or less peculiar to this class of work.

The Problem of Planning and Its Solution (Das Problem der Vorkalkulation und seine Lösung), K. Hegner. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 32, Aug. 9, 1924, pp. 821-824. Object of modern planning system to fix time of production and to improve methods of production; standardizing bases of methods of calculation, etc.

See also Production Planning.

Planning Department. The Planning Department (Das Konstruktionsbüro), H. Menge, A. Eckers, O. Hoffman and L. Voigt. Maschinenbau, vol. 3, no. 19, July 10, 1924, pp. 679-703, 14 figs. Series of articles covering object and importance of planning department; index to drawings; systematic grouping of machine parts on basis of function, etc.; drawing machines, etc.

Plant Layout and Production. Co-Ordinating Plant Layout with Production, C. G. Stoll. Soc. Indus. Engrs.—Bul., vol. 6, no. 12, Dec. 1924, pp. 3-7. Planning plant layout at plant of West. Elec. Co.; production branch; industrial relations; operating, inspection, and clerical branches; development branch.

Prague Congress. Congress on Management Held at Prague. Iron Age, vol. 114, no. 9, Aug. 28, 1924, pp. 500-501. Presentation of American methods for benefit of nations of central Europe. Nature of scientific management, human element in management, budget and production control, education for management, Skoda and Witkowitz works.

Scientific Management at Prague Conference. Mech. Eng., vol. 46, no. 10, Oct. 1924, pp. 624-625. Brief abstracts of papers by American authors presented at First International Management Congress held at Prague, July 20-24, 1924, treating of management problems including industrial relations, budgetary control and education.

Pricing Policy. Pricing Policy in Relation to Financial Control, Donaldson Brown. Mgmt. & Administration, vol. 7, nos. 2, 3, and 4, Feb., Mar., and Apr., 1924, pp. 195-198, 283-286, and 417-422. Outlines method of price analysis which, though resting upon theoretical basis, is wholly practical; theory of pricing of Gen. Motors Corpn.

Principles. The Principles Underlying Good Management, H. Diemer. Indus. Mgmt. (N. Y.), vol. 67, no. 5, May 1924, pp. 280-283. Investigation and standardization; comprehensive planning; preparation; inspection and records; wage incentives; control; mutual confidence and co-operation.

Printed Forms. The Designing of Printed Forms, P. M. Atkins. Indus. Mgmt. (N. Y.), vol. 68, no. 4, Oct. 1924, pp. 235-241, 7 figs. Discusses principal points to be considered in design of forms.

Problems. Problems of Engineering Management. Eng. Production, vol. 7, nos, 142, 143, 144, 145 and 146, July, Aug., Sept., Oct. and Nov., 1924, pp. 199-200, 223-224, 255-256, 309-310, and 335-336, 2 figs. Practical notes on factory administration and executive method. Discusses some incentives to increased production; organizing for work. Oct.: Human factor in industry. Nov.: Standardization and planning.

Production Control. A Workable Production Control Plan for the Small Plant, A. A. Dobson. Factory, vol. 32, no. 5, May 1924, pp. 652-654, 5 figs. Stock file of tickets are printed in addressing machine using metal plates; tickets required in system are store's issue, time ticket, job ticket, move ticket, and work tag.

A Workable Production Control System, E. Davis. Am. Mach., vol. 60, nos. 21, 23, and 25, and vol. 61, no. 1, May 22, June 5, 19, and July 3, 1924, pp. 753-757, 835-838, 911-914, and 7-10, 23 figs. Describes recently developed control system. May 22: Essential features; control based on periodic interdepartmental shipments of predetermined amounts of material. June 5: How production is planned; determination of interdepartmental shipment periods and amounts; production rates determined by department heads; raw-material control. June 19: Plans and procedure for shop orders and shipping schedules; production control board; delayed and advance shipments. July 3: Explains inspection and checking methods and gives advantages of system.

Can the Delivery Problem be Solved? (Ist das Terminproblem lösbar?), H. D. Brasch. Maschinenbau, vol. 3, no. 26, Oct. 23, 1924, pp. 979-981. Discusses difficulties encountered in determining time of delivery in factory production, and gives example of a special case in a medium-sized plant.

Control that Makes Possible Our 30-Day Turn, R. J. Reiser. Factory, vol. 33, no. 6, Dec. 1924, pp. 786-787, 844 and 846, 3 figs. Method of control adopted by manufacturing firm, making woodworking machinery.

Design, Manufacture, and Production Control of a Standard Machine, R. E. Flanders. Mech. Eng., vol. 46, no. 12, Dec. 1924, pp. 873-878, 13 figs. See also Am. Mach., vol. 61, no. 23, Dec. 4, 1924, pp. 881-888, 20 figs. and (abstract) in Iron Trade Rev., vol. 75, no. 24, Dec. 11, 1924, pp. 1573-1578, 9 figs. Describes methods by which difficulties in manufacture and production control were avoided by Jones & Lamson Machine Co.; principles sought to be established were

standardization of product; separate manufacturing equipment and organization for product; departmentalization by product rather than by process; recurrent production schedule; concentration of plant; minimized transportation; visual control of work itself instead of remote control by records; automatic control of inventories; etc.

Enter Order—When Will You Ship? H. S. Riggs. Mgmt. & Administration, vol. 8, no. 6, Dec. 1924, pp. 643-645, 5 figs. Lodge and Shipley methods for controlling production.

Extreme Variety Versus Standardization, J. H. Van Deventer. Indus. Mgmt. (N. Y.), vol. 67, no. 6, June 1924, pp. 343-347, 8 figs. How work has been systemized and how production control is exercised in induction-motor department of Gen. Elec. Co. at Schenectady Works.

Following Up Production in a Three-Stage Process (Terminverfolgung und Arbeitsverteilung im Dreistufen-Verfahren), E. Sachsenberg. Maschinenbau, vol. 3, no. 26, Oct. 23, 1924, pp. 975-979, 9 figs. Details of division and control of quantity production in a galalith pearl factory with samples of work cards used.

How We Maintain a Smooth Flow of Production, E. F. Roberts. Factory, vol. 33, no. 6, Dec. 1924, pp. 794-797, 852, and 854, 2 figs. Tells how Packard Motor Car Co. production executives and foremen work together in using schedule-control board to maintain profitable manufacturing conditions.

Maintaining a Profit with Reduced Prices, E. A. Munschauer. Mgmt. & Administration, vol. 7, no. 4, Apr. 1924, pp. 401-404, 4 figs. How capacity of plant for manufacturing refrigerators was increased 50 per cent and unit costs lowered.

Production Control, Geo. D. Babcock. Taylor Soc.—Bul., vol. 9, no. 6, Dec. 1924, pp. 260-270, 3 figs. See also Am. Mach., vol. 61, no. 25, Dec. 18, 1924, pp. 963-970, 3 figs. Outline of subject of production control in manufacturing, taking up for consideration respectively actual output with given equipment; preplanning; establishment of manufacturing programs; determination of lot sizes; establishment of production schedule; operation analysis; stores systems; dispatching of work; inspection; maintenance; and forms.

Production Control (Die Kontrolle der Produktion), K. Hegner. Maschinenbau, vol. 3, no. 29, Dec. 11, 1924, pp. 1119-1124, 17 figs. Proper use and exploitation of auxiliaries in production control before and during production, especially control of machines and superintendence of workers.

Results of Scientific Management from the Viewpoint of Corporate Control, M. M. Baker. Mgmt. & Administration, vol. 7, no. 6, June 1924, pp. 645-646. Discusses general effect of scientific management upon entire organization of manufacturing institution.

See also Planning.

Production-Costs Reduction. The Reduction of Production Costs, H. Varley. Indus. Mgmt. (Lond.), vol. 11, nos. 2 and 16, Jan. 24 and Oct. 1924, pp. 41, and 437-440, Jan. 24: General observations. Oct.: Cost of machine idleness; justification for new machine; saving of handling time; relative cost of operation; replacing machinery every year.

Production Increase. Increase of Production (Menschenwirtschaft). Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 17, Apr. 26, 1924, pp. 405-413, 30 figs. Discusses increase of production by increasing present efficiency of workmen, by harmonizing their operation with the machinery they employ, and by providing them with intelligent direction and supervising.

No Safe Short Cut to High Production, H. H. Farquhar. Am. Mach., vol. 61, no. 19, Nov. 6, 1924, pp. 727-729. Effect of installing incentive-payment schemes without proper preparation; efforts to increase production must suit local conditions; responsibilities of management and its essential functions.

Production Planning. A Flexible Method of Production Planning for the Job Shop, E. W. Palmer. Factory, vol. 32, no. 3, Mar. 1924, pp. 321-324, 392 and 394, 5 figs. Method devised by author's own organization.

New Methods of Production Planning That Make Heavy Stocks Unnecessary. Factory, vol. 32, no. 4, Apr. 1924, pp. 480-482 and 528, 1 fig. Methods employed in large machine-tool manufacturing plant, in which standardization is stressed; how production budget aids planning.

Production and Sales, Coördination. Coordination of Production with Sales for Oil Companies, E. G. Reynolds. Mgmt. & Administration, vol. 7, no. 1, Jan. 1924, pp. 85-89, 2 figs. Setting production schedule; adjustment of estimated production and sales; interpretation of revised quota; types of records necessary to execute plan; regulation of refinery operations.

Psychological Methods, Application of. What Industrial Psychology Asks of Management, W. V. Bingham. Taylor Soc.—Bul., vol. 9, no. 6, Dec. 1924, pp. 243-248. States that the industrial psychologist asks of management patience, discrimination and research opportunities, as well as reliable criteria, each of which is considered in turn.

Psychology in Industry. Industrial Psychology, H. S. Person. Taylor Soc.—Bul., vol. 9, no. 4, Aug. 1924, pp. 163-171. Discusses psychology as science of nature and causes of conduct and of its control, and problems of psychology in industry.

Psychology, Relation of. The Achievements of Motion Psychology, Frank B. and Lillian M. Gilbreth. Taylor Soc.—Bul., vol. 9, no. 6, Dec. 1924, pp. 259 and 283-285. Review of progress which has actually taken place in correlating psychology and management during past 20 years; summary of actual results in field of industrial psychology.

The Basis of Industrial Psychology, E. Mayo. Taylor Soc.—Bul., vol. 9, no. 6, Dec. 1924, pp. 249-259. Points out that psychology of total situation is basic to psychology of management; methods of psychological inquiry; academic psychology; medical psychology; conclusions from medical investigation; total situation and the individual.

Pulp and Paper Industry. Paper and Pulp Manufacturing, S. E. Thompson and W. E. Freeland. Mgmt. & Administration, vol. 8, no. 4, Oct. 1924, pp. 397-402, 6 figs. Job standardization, wage incentives, and bonus plans of general application.

Purchasing. The Relationship of Purchasing to Inventories, H. N. Stronck. Factory, vol. 32, no. 4, Apr. 1924, pp. 501-503, 606, and 608-609. Notes based upon observations made during examination of manufacturing enterprises of large variety of industries, and in all parts of country.

The Science of Buying Material, P. M. Atkins. Indus. Mgmt. (N. Y.), vol. 67, no. 1, Jan. 1924, pp. 19-23. Notes on purchasing agent's contribution to smooth production flow.

See also Materials Purchasing.

Purchasing Agents. The Qualifications of a Purchasing Agent, C. T. Yates. Taylor Soc.—Bul., vol. 9, no. 5, Oct. 1924, pp. 230-232. How purchasing agent functions and what he contributes in scientifically managed plant.

Quality Measurement. Measurement of the Quality of Product, G. S. Radford. Mech. Eng., vol. 46, no. 9, Sept. 1924, pp. 546-547 (includes discussion). Considers possibility of reducing control of quality and inspection function to a mathematical basis, and concludes that this is neither feasible nor desirable. Sets up standards by which performance of inspection division can be judged.

Rate Setting. Rate Fixing in Engineering Works. Machy. (Lond.), vol. 24, no. 617, July 24, 1924, pp. 516-518, 2 figs. Payment by results and rate-fixing methods; share of production responsibilities by management and labor.

Raw-Material Control. See MATERIALS, Care and Control.

Records. The Works Records Department, W. J. Hiscox. Indus. Mgmt. (Lond.), vol. 11, nos. 1, 3, 6, and 10, Jan. 10, Feb. 7, Mar. 20, and May 15, 1924, pp. 6-7, 67-69, 151-152, and 265-266, 9 figs. Describes its function, dealing with delays, what records should show, stock records and costing, and employment records.

Reorganization Scheme. Reorganisation on Practical Lines. Eng. Production, vol. 7, no. 147, Dec. 1924, pp. 367-368. Describes reorganization scheme adopted by small factory concerned with manufacture of assembled unit upon repetition lines.

Returned Goods in Jobbing Plant. Returned Goods in the Jobbing Plant, E. W. Leach and J. F. Koch. Am. Mach., vol. 61, no. 20, Nov. 13, 1924, pp. 757-759, 3 figs. Points out that returned goods is charge against profits of business; necessary procedure and forms for disposition of returned pieces; how returned goods may be decreased.

Routing. Perspective Routing, P. K. Guillow. Indus. Mgmt. (N. Y.), vol. 68, no. 4, Oct. 1924, pp. 242-243, 4 figs. Time-saving suggestion for intelligent routing of production.

Production, D. Bennett. World Power, vol. 2, no. 12, Dec. 1924, pp. 319-322, 4 figs. Deals with problems to be dealt with by works manager in producing raw materials and details parts at times required for next succeeding operation, and eventually for completion of work in hand on due date originally arranged; traces steps in handling order; example of job production program.

See also Planning.

Sales. An Example of Scientific Marketing Procedure, S. Cowan. Taylor Soc.—Bul., vol. 9, no. 3, June 1924, pp. 143-151, 3 figs. Method of analyzing buying groups and circulation: comparing occupational and income groups; analysis of magazine circulation; circulation by occupational groups. Practical applications.

Analysis of Salesmen's Quotas, A. R. Burnet. Mgmt. & Administration, vol. 8, no. 5, Nov. 1924, pp. 487-490, 3 figs. Equitable determination and visualizing results.

Coördination of Sales and Production, Jos. H. Barber. Taylor Soc.—Bul., vol. 9, no. 3, June 1924, pp. 111-131, 10 figs. How Walworth Mfg. Co. establishes precise sales-production schedules.

Tendencies in Sales Management, S. Cowan. Taylor Soc.—Bul., vol. 9, no. 2, Apr. 1924, pp. 72-85. Consideration of influence of scientific-management attitude of mind on selling and advertising; scientific analysis of marketing problems; scientific planning of sales activities; executive responsibility.

See also Production and Sales.

Salvage Control. Salvage Control by the Inspection Department, A. H. Frauenthal. Am. Mach., vol. 61, no. 24, Dec. 11, 1924, p. 912, 1 fig. Simple and effective method of keeping in touch with scrap losses as affecting both production and accounting departments.

Service Methods. Service, W. L. Wise. Soc. Automotive Engrs.—Jl., vol. 14, no. 3, Mar. 1924, pp. 274-276 and 318. Applications of basic principles of service as developed by Nat. Cash Register Co., Dayton, Ohio, are suggested for promulgation in automotive industry, following statement of methods employed in servicing cash registers.

Shipping Methods. From "Order Received" to Freight-Car Door, J. M. Schappert. Factory, vol. 33, no. 1, July 1924, pp. 45-47 and 141-142, 13 figs. Complete shipping system of Metal Stamping Co.

Shoe Factories. Management Factors in the Shoe Industry, S. E. Thompson and W. E. Freeland. Mgmt. & Administration, vol. 8, no. 1, July 1924, pp. 75-81, 8 figs. Methods which solve marketing and manufacturing problems.

Shop-Cost Reduction. See MACHINE SHOPS, Cost Reduction in.

Simplification. A Bibliography of Articles on Simplification. Factory, vol. 32, no. 3, Mar. 1924, pp. 318-320. Classified list of periodical articles, government reports, and special reports.

Just How Far Does It Pay to Go with Simplification?, F. H. Montgomery. Factory, vol. 32, no. 2, Feb. 1924, pp. 153-156 and 260, 3 figs. President of Knox Hat Co. tells how plan of simplification was carried out in manufacture of soft hats.

Simplified Practice. See U. S. BUREAU OF STANDARDS, Division of Simplified Practice.

Small Factories. Management Difficulties in Small Factories, and Their Solution, H. W. Ross. Indus. Mgmt. (Lond.), vol. 11, nos. 8, 14, and 17. Apr. 17, Aug., and Nov., 1924, pp. 207-208, 377-378, 467-468 and 470. Apr. 17: Common examples. Aug.: Purchase of materials. Nov.: Credit rating.

Profitable Methods for the Small Factory, G. C. Brown. Mgmt. & Administration, vol. 7, nos. 2, 3, 4, 5, and 6, and vol. 8, no. 1, Feb., Mar., Apr., May, June, and July, 1924, pp. 161-167, 305-310, 431-436, 567-572, 689-692, and 53-58, 22 figs. Feb.; Organization of departments and functions. Mar.: Production control in small organization. Apr.: Time study and standardization. May: Wage incentives and profit sharing. June: Distribution of overhead to jobs. July: Recording job costs to show profits.

Statistical Analyses. Analyzing Statements of Operating Results, Geo. S. Cremer and Wm. R. Drachbar. Mgmt. & Administration, vol. 8, no. 5, Nov. 1924, pp. 507-508, 3 figs. Gives some of the uses of deep-cutting statistical analyses.

Mass-Number Investigation, Reliability of Technical Measurements, and Dispersion (Grosszahlforschung, Zuverlässigkeit technischer Messungen und Streuungsmasse), G. Sachs. Stahl u. Eisen, vol. 44, no. 32, Aug. 7, 1924, pp. 941-946, 6 figs. Discusses statistical treatment of investigations and their results; frequency curves of numbers of tests.

Stock Control. Control of Stock in Warehouse, D. C. MacInnes. Iron Age, vol. 114, no. 22, Nov. 27, 1924, pp. 1401-1402, 2 figs. Describes system employed by Canadian firm using sheet metals; perpetual inventory maintained, with frequent checks and annual stock taking.

Stockroom Methods. Extreme Variety Versus Standardization, J. H. Van Deventer. Indus. Mgmt. (N. Y.), vol. 67, no. 3, Mar. 1924, pp. 129-135, 13 figs. Stockroom methods and stock handling at plant of Gen. Elec. Co. at Schenectady.

Stores Accounting. Balance-of-Stores Accounting System, I. D. Murfield. Elec. Wld., vol. 84, no. 2, July 12, 1924, pp. 66-69, 5 figs. Description of a stores accounting system which has resulted in a reduction of amount of money tied up, also a reduction of stock carried. Maximum and minimum stocks to be carried are specified by utility department heads.

Stores Control. See ORDNANCE, Stores Control.

Stores Management. Modern Management and Booking of Stores (Moderne Lagerführung und -rechnung und die Einheitlichkeit der Vordrucke), H. Reisberg. Maschinenbau, vol. 3, no. 26, Oct. 23, 1924, pp. 989-996, 18 figs. Discusses principles of stores management and gives copies of blank forms used.

Step by Step Details for Obtaining Equipment and Supplies for Maintenance, J. E. Housley. Indus. Engr., vol. 82, no. 4, Apr. 1924, pp. 169-173, 6 figs. Routine followed in an industrial plant for procuring supplies, with methods of storing and accounting for material.

Stores Management in Machine Shops and Costs (Materialverwaltung in Maschinenfabriken unter entsprechender Berücksichtigung der Selbstkostenerfassung), F. Strauch. Maschinenbau, vol. 3, no. 20, July 24, 1924, pp. W151-W153. Discusses management with view to cost reduction and economic use of materials, and to keep track of costs of materials.

The Care and Control of Raw Materials. Factory, vol. 33, no. 1, July 1924, pp. 34-35 and 135-136, 1 fig. Practice at plant of Bausch and Lomb Optical Co.

Stores Methods. See RAILWAY SHOPS, Stores Methods.

Suggestion System. A Suggestion System That Works, K. H. Condit. Am. Mach., vol. 60, no. 25, June 19, 1924, pp. 923-925, 4 figs. Description of system used by the Gilbreths; purpose is to secure from men on job suggestions for improvement in manufacturing methods; useful by-products of system.

Superintendents, Elimination of. Work Without Superintendents, H. R. Simonds. Iron Trade Rev., vol. 74, no. 8, Feb. 21, 1924, pp. 548-550, 9 figs. 52 foremen of Massachusetts plant, employing 3000, are responsible only to general manager; experiment with simplified system proves successful.

Taylor System. See Methods and Principles.

Textile Mills. Significant Savings in Textile Mill Operations, N. T. Thomas. Taylor Soc.—Bul., vol. 9, no. 4, Aug. 1924, pp. 172-176. Results of substitution of scientific management for tradition in Jackson Mills.

Time Sheets, Filling in. Costing and Time-booking, F. A. R. Paton. Engineer, vol. 138, no. 3597, Dec. 5, 1924, pp. 633-634. Notes on correct filling in of employee's time sheet.

Time Study. See TIME STUDY.

Tool Systems. A Well-Planned Tool System. Eng. Production, vol. 7, nos. 143 and 144, Aug. and Sept. 1924, pp. 229-232 and 268-271, 26 figs. Details of comprehensive scheme; discusses tool department, stores, depots, receipt, identification and classification, shortages, issue, replacement, etc.

A Tool-crib System, M. L. O'Flaherty. Machy. (N. Y.), vol. 30, no. 6, Feb. 1924, pp. 428-430, 5 figs. Proper tool-crib equipment; total classification; checking out tools for production work.

Tool Division Organization and Management, E. C. Cooley. Machy. (N. Y.), vol. 30, no. 9, May 1924, p. 700. Deals with essential points to be considered in developing tool-division system; system successfully employed in number of shops engaged in interchangeable manufacture; making and upkeep of tools; controlling head.

Tractor Plant. Building Tractors Under Scientific Management, Geo. D. Babcock. Mgmt. & Administration, vol. 7, no. 6, and vol. 8, nos. 1, 2, 3, 4, and 5, June, July, Aug., Sept., Oct., and Nov., 1924, pp. 647-652, 19-26, 141-146, 265-270, 377-382 and 497-502, 32 figs. Methods by which Holt Mfg. Co. has made remarkable production record. June: Resuming production after armistice; personnel problems; form of organization. July: Changes in equipment and product preceding installation of production control. Aug.: Organizing personnel for production. Sept.: Establishing material and parts control. Oct.: Putting orders through shop. Nov.: Executive control; formulating sales policy; operation of shop committee.

Waste Elimination. See WASTE ELIMINATION.

Waste Utilization. See WASTE UTILIZATION.

INDUSTRIAL MOBILIZATION

Planning, Engineer's Role in. See MUNITIONS, Manufacturing, Industrial Mobilization for.

Plans, United States. Plans for Industrial Mobilization, L. W. Moffett. Iron Age, vol. 113, no. 10, Mar. 6, 1924, pp. 707-709, 1 fig. Program of U. S. War Department covers allocations, specifications, contracts, etc.; pledge of Iron & Steel Inst.; emergency reserves; procurement planning; control of labor.

INDUSTRIAL ORGANIZATION

Automobile Manufacturing Plant. Organizing a Great Industrial, C. S. Scott. Mgmt. & Administration, vol. 7, no. 5, May 1924, pp. 523-527, 1 fig. Organization methods of General Motors corporation.

Basic Principles. The Basic Principles of Organization, T. H. Jackson. Military Engr., vol. 16, no. 86, Mar.-Apr. 1924, pp. 95-99. Discusses decentralization, selection of group leaders, policy of command, creation of new groups, appointment of group leaders, specialist command, organizing around leaders, support of group leaders, and excessive overhead.

City Paving Departments. General Organization of City Paving Departments. Engrs. & Eng., vol. 41, nos. 7 and 8, July and Aug., 1924, pp. 194-198 and 215-219. Series of papers relative to administration of city paving departments: Phila., Pa., J. H. Neeson; New York, N. Y., C. M. Pinckney; Baltimore, Md., G. Cobb; Indianapolis, Ind., J. L. Elliott; Waltham, Mass., G. C. Grehm.

Cost Reduction. Organizing a Business for Cost Reduction, J. H. Van Deventer. Indus. Mgmt. (N. Y.), vol. 68, no. 4, Oct. 1924, pp. 193-197. Discusses part that cost department should play in general program of company progress.

Economic Problems. Economic Problems of Industrial Organization, Fred. C. Mills. Mgmt. & Administration, vol. 7, nos. 3, 4, and 5, Mar., Apr., and May, 1924, pp. 337-341, 423-426, and 573-576. Mar.: Industrial system and price system, and connection between them; relation between quantity of goods and quantity of money; control of price movements. Apr.: Factors affecting wages and other shares in product of industry. May: Foreign trade in relation to industry.

Executive Control. Organization for Successful Operation, B. A. Franklin. Mgmt. & Administration, vol. 8, no. 5, Nov. 1924, pp. 513-516. Discusses important requirements to be met, and methods to be followed for upbuilding of smoothly operating and result-getting organization.

Factory, Medium-Size. The Problems of Industrial Organization and Their Solution (Brennende Probleme der Betriebsorganisation und der Weg zu ihrer natürlichen Lösung), Geo. Schlesinger. Schweizerische Bauzeitung, vol. 83, no. 21, May 24, 1924, pp. 243-247, 3 figs. Describes plan, design and equipment of medium-sized factory, employing 150 workmen, constructed and organized by author, as example of economy of scientific organization.

Foundries. Organization and Practice in a Steel Foundry Finishing Department, Chas. W. Heywood. Foundry Trade Jl., vol. 30, no. 426, Oct. 16, 1924, pp. 339-341. Notes on gang system; pace maker; layout of equipment; routing; operations; care of machinery and tools; inspection; cost and wages.

See also FOUNDRIES, Cost Accounting.

Machine Shops. Working Organization of a Machine Shop and Iron Foundry (Betriebsorganisation einer Maschinenfabrik und Eisengiesserei), W. Bischoff. Maschinenbau, vol. 3, no. 13, Apr. 10, 1924, pp. 445-450, 11 figs. Explains inner organization of machine works by means of card system used.

Plan of. Business Organization from a New Viewpoint, E. P. Hyde. Indus. Mgmt. (N. Y.), vol. 68, no. 5, Nov. 1924, pp. 273-280. Plan of organization is suggested for large business engaged in both manufacture and sale of technical commodity, maintaining technical departments for manufacturing and sales development, and conducting other activities auxiliary to business.

Plant-Maintenance Work. Organizing for Plant Maintenance Work, L. A. Blackburn. Soc. Automotive Engrs.—Jl., vol. 15, no. 5, Nov. 1924, pp. 440-444 and 448, 6 figs. Outlines plan of organization for large manufacturing plant; various departments of such organization, including policing of plant, protection against fire, maintaining plant in sanitary condition, removal of waste material, opertion of power plant, inspection and repairing of motors and metering devices, etc.

Production Factors. The Factors of Production, Fred. C. Mills. Mgmt. & Administration, vol. 7, no. 2, Feb. 1924, pp. 215-219. Natural resources, capital, labor supply, and organizing ability are indicated as chief factors of production; author analyzes constituent elements of individual business unit and indicates part played by specialization within unit.

Production Organization. Production Organization. Eng. Production, vol. 7, no. 138, Mar. 1924, pp. 74-77. Reasons for organization and methods to be adopted; the ideal organization; laws governing manufacture; procedure in organizing a new factory.

Vertical Trusts. The Vertical Trust, D. T. Farnham. Indus. Mgmt. (N. Y.), vol. 67, no. 5, May 1924, pp. 257-263, 4 figs. Newer form of industrial combination and what it portends; its advantages and limitations and place in present industrial order.

INDUSTRIAL PLANTS

Construction. Esthetics of Engineering Structures (Ueber die Schönheit der Ingenieurbauten), P. Meyer. Schweizerische Bauzeitung, vol. 84, no. 14, Oct. 4, 1924, pp. 163-165, 7 figs., partly on pp. 166-167. Discusses examples of modern artistic plants, such as Zschornewitz power plant, Buffalo grain silo, and gas holders at Treptow and Reick.

Farms for. Farms for Factories. Factory, vol. 32, no. 4, Apr. 1924, pp. 487-488 and 596. Close relation between agricultural and industrial life in Germany; unusual development that has taken place since war.

Location. Economic Factors in Industrial Plant Location, P. F. Walker. Mgmt. & Administration, vol. 8, nos. 3 and 6, Sept. and Dec. 1924, pp. 259-264 and 637-642, 1 fig. Sept.: Discusses influence of country's growth; development of transportation centers; national industrial system; proposals for remedying conditions; results of modified rate structure; effects of present rate structure; factors which influence location; basis for estimating demands; process of organization; importance of products to location; etc. Dec.: Importance of adequate water supply; distribution cost analysis; shifting of industries.

Machine Shops. See MACHINE SHOPS.

Maintenance. Modern Maintenance of Plant and Equipment, Wm. G. Ziegler. Serial article in Indus. Mgt. (N. Y.), beginning vol. 67, no. 2, Feb. 1924, and ending vol. 68, no. 5, Nov. 1924, 53 figs. The plant plumber, pipefitter and tinsmith, and what they mean to production. Carpentry, masonry, and machine repair. Maintaining efficiency of artificial light. Importance of sanitation maintenance from standpoint of production and labor turnover. Maintenance in power plant. Factory heating system. Equipment and maintenance in plant yard.

Painting. See PAINTING, Industrial Plant Practice.

Power-Cost Control. Organizing to Reduce the Cost of Power, J. P. Jordan. Indus. Mgmt. (N. Y.), vol. 68, no. 6, Dec. 1924, pp. 336-340. Author shows way to mastery of power-cost control by defining and outlining factors involved.

Power Equipment. Present and Future Power Equipment, H. E. Collins. Mgmt. & Administration, vol. 8, no. 6, Dec. 1924, pp. 617-622, 2 figs. Comparison of prime movers, boilers, and requirements in auxiliaries.

Power-Transmission on Losses. Attacking Power Losses in Transmission and Utilization, T. Croft. Indus. Mgmt. (N. Y.), vol. 68, no. 6, Dec. 1924, pp. 349-356, 13 figs. How to find sources of waste and how to eliminate them.

Railway Switching Equipment. Modern Switching Equipment for Factory Railways (Ueber moderne Rangiermittel für Werkbahnen), M. Schultz. Glasers Annalen, vol. 95, no. 3, Aug. 1, 1924, pp. 41-46, 13 figs. Details of locomotive driven by gasoline or benzol, with and without capstan; battery locomotives and tractors and their operation.

Railways. Industrial Transportation Over Definite Lines of Travel, M. W. Potts. Indus. Mgmt. (N. Y.), vol. 68, no. 1, July 1924, pp. 50-57, 10 figs. Summary of advantages and limitations of industrial railway as a means for efficient handling of materials.

Track Curves (Ueber Gleiskurven), S. Kiehne. Bauingenieur, vol. 5, no. 12, June 30, 1924, pp. 364-365, 7 figs. Discusses action of wheels in passing through curve in track, and describes arrangement by which inner wheel flange runs between two rails and outer wheel flange runs on rail; this arrangement is substitute for turntable, application in Kiel Navy Yard.

Reconstruction. Reconstruction of Water Power Plant of the Silk and Cigarette Paper Factory of Schöller & Hösch [Die Neugestaltung der Wasserkraftanlage der Seiden- und Zigarettenpapierfabrik Schöller & Hösch, Gernsbach (Baden)], H. Mess. Bautechnik, vol. 2, nos. 32 and 34, July 25 and Aug. 8, 1924, pp. 353-355 and 373-375, 9 figs. General layout, details of turbines and turbine house; advantages of new construction.

Shipping Department, Gen. Elec. Co. Extreme Variety Versus Standardization, J. H. Van Deventer. Indus. Mgmt. (N. Y.), vol. 67, no. 5,

May 1924, pp. 303-308, 7 figs. Warehousing and shipping electrical products; practice of the shipping department of Gen. Elec. Co., Schenectady, N. Y.

Substations for, Automatic. See SUBSTATIONS, Automatic.

INDUSTRIAL RELATIONS

Coal Mines. Labor Relations in the Fairmont, West Virginia, Bituminous Coal Field, B. Emmet. U. S. Bur. Labor Statistics—Bul., no. 361, July 1924, 86 pp. Number and nativity of miners; wage rates; policies governing labor relations; non-union collective bargaining.

Coöperative Plans. Best Methods for Bringing About Co-operation, J. C. Clark. Ry. Age, vol. 77, no. 26, Dec. 27, 1924, pp. 1175-1177. Points to necessity of selecting best men available and placing them in organization in positions for which they are best qualified through well-organized employment service; providing personal record system which will show complete and unbiased record of each employee's service; and developing each individual unit through educational work.

New Co-operative Developments on the B. & O. Ry. Age, vol. 76, no. 10, Mar. 8, 1924, pp. 543-545. Program of coöperation between federated shop craft unions and management started a year ago now extended to all shops on system; sharing gains; stabilization of employment; ideas from shopmen.

The Philadelphia Rapid Transit Coöperative Plan—a Critical Survey, D. D. Kennedy. Indus. Mgmt. (N. Y.), vol. 68, no. 6, Dec. 1924, pp. 367-372. What analysis of its provisions shows as regards safeguarding of employee's interests; indication of past events concerning operation of plan; possible dangers of plan.

Economic Courses for Employees. Increased Industrial Acquaintanceship. Iron Age, vol. 113, no. 3, Jan. 17, 1924, pp. 211-214, 5 figs. Progress in 1923 in relations with employees at plant of Bridgeport Brass Co., Bridgeport, Conn.; courses in economics to explain business problems; service club; pensions to superannuated employees; group insurance plan.

Employees-Management Coöperation. Coöperation in Industry, S. Rea. Min. Congress Jl., vol. 10, no. 9, Sept. 1924, pp. 421-423. Enlightened industrial management recognizes need for direct negotiation and mutual understanding. Principles underlying Pennsylvania Railroad System plan of employee-management relationship.

See also RAILWAY OPERATION, Employees-Management Coöperation.

Employees' Publications. Coöperation Through Plant Publications, W. R. R. Winans. Iron Age, vol. 113, no. 9, Feb. 28, 1924, pp. 647-649. Basic principles to be considered in planning such publication, and outline of kind and proper handling of items that will keep it sold.

Employers' Associations. Some Tendencies of Employers' Organizations in 1923. Int. Labour Rev., vol. 9, no. 2, Feb. 1924, pp. 208-226. Outstanding tendencies of employers' associations during 12-month period ending in autumn of 1923.

Group Insurance. See INSURANCE, Group.

Improvement. Industrial Relations, Rob. E. Tally. Min. & Metallurgy, vol. 5, no. 214, Oct. 1924, pp. 478-480. Industry created by capital and labor; duties of employer; duties of organization heads and bosses; other factors of influence between employer and employee.

Intra-Plant Relationships. Intra-Plant Relationships and Industrial Leadership, R. H. Booth. Min. & Metallurgy, vol. 5, no. 206, Feb. 1924, pp. 67-71, 4 figs. Describes novel plan for objective presentation of business economics.

Kansas City Rys. Plans. Building Good Employee Relations in Kansas City. Elec. Ry. Jl., vol. 63, no. 2, Jan. 12, 1924, pp. 63-66, 3 figs. Principles and organization plant of employee brotherhood and representation plan which have contributed to present favorable situation in Kansas City; separate committee handles all wage matters; membership in brotherhood entirely voluntary.

Labor Management. What We Think of Industrial Democracy, After 7 Years, W. P. Hapgood. Factory, vol. 33, no. 2, Aug. 1924, pp. 187-189 and 286-290, 2 figs. Experiences of factory council in working its way up through usual worries about wages and hours of work into constructive effort toward bringing business to higher level of efficiency.

Lumber Industry. Industrial Relations in the West Coast Lumber Industry, C. R. Howd. U. S. Bur. Labor Statistics—Bul., no. 349, Dec. 1923, 120 pp., 2 charts. Examination of lumber industry, particularly financial conditions and kind of work men do; technology of industry and demands it makes on employees; hours, rates of wages, and working and living conditions; history of organized or articulate protests of employees and reactions of employers.

Personnel Work. See EMPLOYMENT MANAGEMENT, Service Department.

Progress in. Progress in Industrial Relations, Chas. M. Mills. Iron Age, vol. 113, no. 4, Jan. 24, 1924, pp. 281-283. Important gains made by progressive corporations; employee representation, it is claimed, has accomplished much, but has not been perfected.

Railways. What Railroad Managements Should Do to Secure Co-operation from Their Employees, H. C. Metcalf. Ry. Age, vol. 77, no. 22, Nov. 29, 1924, pp. 982-984. What railway employees think railway management should do; proposals regarding joint relations; demand for personnel program; regularization of employment. See also article by same author entitled, Modern Personnel Administration and Its Application to the Railways, in no. 23, Dec. 6, 1924, pp. 1016-1020, 2 figs.

See also Coöperative Plans.

Welfare Work. See WELFARE WORK.

Works Councils. See EMPLOYEES' REPRESENTATION.

INDUSTRIAL TRUCKS

Combined Passenger and. Railodoks. Elec. Times, vol. 66, no. 1712, Aug. 7, 1924, pp. 159-160, 7 figs. Particulars of vehicle constructed for carrying passengers at British Empire Exhibition; is an electric industrial truck with addition of an inexpensive type of seat and a light canopy; seats are removable when it is desired to return truck to industrial duties.

Efficiency Measurement. Measuring the Efficiency of Shop Trucks, S. M. Lowry. Mgmt. & Administration, vol. 8, no. 3, Sept. 1924, pp. 279-284, 3 figs. Methods used at plant of Westinghouse Elec. & Mfg. Co. at East Pittsburgh, Pa.

Electric. Around the Shop with the "Electric Mule," H. S. Riggs. Machy. (N. Y.), vol. 30, no. 6, Feb. 1924, pp. 438-441, 9 figs. How transporting of materials from one department of plant to another has been speeded up by use of lift trucks and tractors.

Hand-Lift. Multiplied Manpower and Simplified Handling, M. W. Potts. Indus. Mgmt. (N. Y.), vol. 68, no. 4, Oct. 1924, pp. 221-228, 12 figs. Deals with hand lift truck and skid system.

Studies Savings Effected by Trucks. Iron Trade Rev., vol. 74, no. 7, Feb. 14, 1924, pp. 479-481, 4 figs. Possibilities of storage-battery truck service in foundry field investigated by company manufacturing storage-battery trucks.

INERTIA

Moments of. Simple Determination of Moments of Inertia (Einfache Bestimmung von Trägheitsmomenten), Closterhalfen. Maschinenbau, vol. 3, no. 11, Mar. 13, 1924, pp. 361-362, 2 figs. Describes simple method for determination of mass inertia moments.

INJECTORS

Thermal Efficiency. The Thermal Efficiency of an Injector. Sibley Jl. of Eng., vol. 38, no. 1, Jan. 1924, pp. 13-15. Determination of this efficiency.

INLAND WATERWAYS

[See also CANALS; RIVERS; WATERWAYS.]

Diesel-Engined Vessels. See DIESEL ENGINES, Inland-Waterway Vessels.

Transportation. See TRANSPORTATION, St. Lawrence and Hudson Bay Projects.

INSPECTION

Factory. See FACTORIES, Inspection.

Industrial. Inspection. Int. Labour Rev., vol. 10, no. 4, Oct. 1924, pp. 665-685. Factory inspection in Great Britain in 1923. Industrial inspection in Austria in 1922.

Methods. Inspection Methods Symposium. Soc. Automotive Engrs.—Jl., vol. 15, no. 5, Nov. 1924, pp. 437-439 and 466. Gives abstracts of three papers, by A. H. Frauenthal, C. S. Stark, and C. J. Jones, respectively, followed by discussion.

INSTRUMENTS

Design and Construction. Instrument and Apparatus Manufacture and Machine Construction (Feinmechanik und Maschinenbau), O. Richter. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 42, Oct. 18, 1924, pp. 1089-1092, 33 figs. Using as an example the parts of a telephone apparatus, it is shown that construction of instruments and apparatus deviates so widely from machine building that present-day machine-building practice does not suffice for design and construction of such complicated apparatus.

INSULATING MATERIALS, ELECTRIC

Application. Insulating Materials and Their Use in Electro-Technic Industries (Die Isoliermaterialien und ihre Verwendung in der Elektrotechnik), E. J. Staemmler. Elektrotechnische Zeit., special no., Aug. 28, 1924, pp. 11-12. Discusses principal materials and their special uses, including porcelain, marble, slate, asbestos, mica, paper, rubber, caseine products, etc.

Bakelite. See BAKELITE.

Boards and Moldings. Directions for the Study of Non-Ignitable and Self-extinguishing Boards and Mouldings for Electrical Purposes. Instn. Elec. Engrs.—Jl., vol. 63, no. 336, Dec. 1924, pp. 51-59, 11 figs. Definitions and classifications; methods of tests.

Breakdown Strength. Methods and Apparatus for the Determination of Breakdown Strength of Electric Insulating Materials (Methoden und Apparate zur Ermittlung der Durchschlagspannung von flüssigen und von vergiessbaren elektrischen Isolierstoffen), R. Dieterle. Elektrotechnische Zeit., vol. 45, no. 21, May 22, 1924, pp. 513-518, 9 figs. Discusses testing of fluid materials and materials capable of being molded to determine electric breakdown; describes new test apparatus used, and gives conclusions regarding distance between electrodes and properties of electrodes.

Dielectric Hysteresis Losses. On the Theory of Dielectric Hysteresis Loss in Fibrous Insulating Materials, Y. Toriyama. Denki Gakkwai Zasshi (Inst. Elec. Engrs. of Japan—Jl., no. 428, Mar. 1924, pp. 227-235, 6 figs. Discusses leakage in dried fibrous insulating material and losses due to discharge through leakage path in a.c. field. (In Japanese.)

Dielectric Strength. Dielectric Strength of Insulation, V. M. Montsinger. Elec. Wld., vol. 84, no. 14, Oct. 4, 1924, pp. 723-727, 19 figs. Describes determination of influence exerted by time and frequency tests made on individual insulation materials for transformers.

Electrical Machinery. Insulation of Electrical Apparatus, A. P. M. Fleming. Electrician, vol. 92, no. 2402, May 30, 1924, pp. 656-657, 1 fig. Trend of its development; some striking changes; influence of ventilation.

Evaluation. Evaluation of Insulating Materials, L. E. Barringer. Elec. Wld., vol. 84, no. 18, Nov. 1, 1924, pp. 950-952, 10 figs. Difficulty encountered in formulation of tables of properties that can be used for comparisons; uniform testing methods being used that will standardize practice.

Lonarite. See LONARITE.

Mica. Disruptive Strength of Mica for 50-Period Alternating Current (Ueber die Durchschlagsfestigkeit verschiedener Glimmersorten bei 50-periodigem Wechselstrom), F. Grünewald. Ecktrotechnische Zeit., vol. 45, no. 41, Oct. 9, 1924, pp. 1084-1086, 11 figs. Author finds that by expelling air between plate electrodes and tested mica sheet with aniline oil having dielectric constant of 7, very marked differences can be found between various mica qualities; his experience has shown that frequently observed red spots in mica are not detrimental electrically, but black, needle-shaped inclosures usually cause punctures.

Mica and Micanite Insulation, A. A. C. Dickson. Elec. Rev., vol. 94, no. 2423, May 2, 1924, pp. 688-691, 1 fig., and vol. 95, nos. 2439 and 2440, Aug. 22 and 29, 1924, pp. 276-278, and 312-313. May 2: Specifications and their interpretation; essential simple analyses and technical tests of mica to ascertain its suitability for use for which it is required. Aug. 22 and 29: Discusses Brown moulding micanite, flexible micanite, mica cloth and mica paper, mica folium, silk, tubes, vee rings and mica and micanite washers.

Paper, Bakelized. High-Tension Insulating Materials of Hard Paper (Hochspannungs-Isolationen aus Hartpapier), W. Demuth. Elektrotechnische Zeit., vol. 45, no. 25, June 19, 1924, pp. 646-649, 5 figs. Discusses insulating materials of bakelized hard papers from viewpoint of engineer and manufacturer.

Puncture Test. Mathematical Theories of Puncture of Solid Insulating Materials (Mathematische Theorien für den Durchschlag fester Isoliermaterialien), L. Dreyfus. Schweiz. Elektrotechnische Verein Bul., vol. 15, no. 7, July 1924, pp. 321-344, 14 figs. Discusses various explanations of puncture and shows how to resolve analytically and graphically heat transmission problems in plane and cylindrical bodies. Shows application of his method of calculation to construction of internally and externally cooled insulators.

Radiotelegraphic, Dielectric Losses in. Dielectric Losses in Insulating Materials Used in Radio-Telegraphic Construction (Pertes diélectriques dans les isolants utilisés pour la construction

radioélectrique), P. Bouvier. Radioélectricité, vol. 5, no. 51, Jan. 10, 1924, pp. 1-4 (Bul. Technique), 2 figs. Survey of problem of insulation design at radio frequencies, discussion being based on results recorded by Mesny and by Hoch in reports to Union des Syndicats de l'Electricité.

Solid, Breakdown of. Mathematical Theories for the Breakdown of Solid Insulating Materials (Matematiska teorier för genomslaget hos fasta isolationsmaterial), L. Dreyfus. Teknisk Tidskrift, vol. 54, nos. 9, 18, 40, and 44, Mar. 1, May 3, Oct. 4, and Nov. 1, 1924, pp. 54-56, 89-95, 174-178, and 195-199 (Elektroteknik), 25 figs. Extensive discussion of mathematical theory for following method of explaining breakdown of solid insulating material: By conceiving phenomenon as a purely electrical one. This defines breakdown as a dissolution of molecular structure. Dielectric strength is then given in terms of field strength. Discusses different methods of testing insulation materials.

Standardization. The Importance of Standards in the Evaluation of Insulating Materials, L. E. Barringer. Gen. Elec. Rev., vol. 27, no. 11, Nov. 1924, pp. 736-741, 11 figs. Demonstrates great difficulty of evaluating insulating materials from data usually available or furnished by manufactures; ultimate solution of problem is standardization of methods for testing insulating materials.

Testing. Disruptive Field Strength, Initial and Sparking Voltage With Alternating Current of 500 periods per sec (Ueber Durchbruchfeldstärke, Anfangsspannung und Funkenspannung bei Wechselstrom von 500 Per/sec.), F. Müller. Archiv für Elektrotechnik, vol. 13, no. 16, Sept. 30, 1924, pp. 478-506, 22 figs. Determination of disruptive field strength of air, using plane and spherical electrodes; discharge field strength of sphere of conducting and dielectric material; sparking voltage of point electrodes in dependence of distance of electrodes, moisture, temperature and pressure.

Varnish Paper. Directions for the Study of Varnish-Paper and Varnish-Fabric Boards and Tubes. Instn. Elec. Engrs.—Jl., vol. 62, no. 326, Feb. 1924, pp. 160-172, 10 figs. Definitions and classification; methods of test. Report from Brit. Elec. & Allied Industries Research Assn. See also report, entitled, Directions for the Study of Varnished Cotton Cloth (excluding Adhesive Tape), pp. 173-177, 2 figs.

Varnishes, Paints and Compounds. Directions for the Study of Electrical Insulating Varnishes, Paints and Enamel Paints. Instn. Elec. Engrs.—Jl., vol. 62, no. 335, Nov. 1924, pp. 936-940. Report received from Brit. Elec. & Allied Industries Research Assn.

Insulators and Insulating Materials. World Power, vol. 1, no. 3, Mar. 1924, pp. 181-184, 2 figs. Properties which ideal insulator should possess; Ebonestor insulators; insulating varnishes and compounds; testing enamels and varnishes.

See also VARNISHES, Insulating.

INSULATING MATERIALS, HEAT

Pipe Coverings. See PIPE COVERINGS.

INSULATION

Electric. See INSULATION, ELECTRIC.

Heat. See INSULATION, HEAT.

INSULATION, ELECTRIC

Armatures. Gaseous Ionization in Built-up Insulation, J. B. Whitehead. Am. Inst. Elec. Engrs.—Jl., vol. 43, no. 1, Jan. 1924, pp. 19-25, 5 figs. Continuation of tests described in previous paper, extending to wider range of type of armature insulation; results.

High-Voltage. High-Voltage Insulation, J. L. R. Hayden and Chas. P. Steinmetz. Am. Inst. Elec. Engrs.—Jl., vol. 43, no. 1, Jan. 1924, pp. 36-43, 2 figs. Notes on air as dielectric; liquid and solid dielectrics; mechanism of thermal breakdown of dielectric as third-class conductor; mechanism of disruption due to mechanical instability and by chemical deterioration; ionization; time lag of insulation. (Abridged.)

Mica and Micanite. See MICA, Insulation.

INSULATION, HEAT

Air Spaces. The Heat Insulating Capacity of Air Spaces (Die Isolierfähigkeit von Luftschichten nach neueren Forschungen), H. Hamester. Wärme- und Kälte- Technik, vol. 26, no. 8, Apr. 30, 1924, pp. 64-66. Modern investigations covering conduction connection and radiation of heat through air spaces are reported.

Buildings. Insulation and Heating Possibilities in Buildings, Jas. Govan. Eng. Jl., vol. 7, no. 5, May 1924, pp. 231-241, 5 figs. Results of observations and investigations of advantages of proper insulation of buildings.

Diatomaceous-Earth Brick. The Manufacture of an Insulating Brick from Diatomaceous Earth, C. A. Smith. Am. Ceramic Soc.—Jl., vol. 7, no. 1, Jan. 1924, pp. 52-60, 9 figs. Pulverized diatomaceous earth was blended with each of the four clays, Tennessee ball, Bedford shale, Rock Hill, Tionesta, in percentages of 0, 5, 10, 15, 20, 30, 50 clay; dry pressed briquets were made, using 50 to 60 per cent water, and were burned at cones 06, 02, and 2; heat conductivity tests made upon best bodies of series.

Roofs. The Insulation of Roofs to Prevent Heat Loss and Condensation, W. L. Miller. Heat. & Vent. Mag., vol. 21, no. 11, Nov. 1924, pp. 45-49 and 61, 1 fig. With notes showing how to figure this work and savings made possible when effective insulation is applied. Tables giving coefficients and overall resistance of uninsulated roofs (air to air), and thermal internal (not air to air) conductivity and resistance of materials used in roof construction.

Tests. Insulation, G. A. Young and E. F. Burton. Refrig. Eng., vol. 10, no. 9, Mar. 1924, pp. 345-348. Properties of low-temperature insulating materials; types of insulation; unit of heat flow, facilities for insulation tests at Purdue University; Master Car Bldrs.' Assn. and Bur. of Standards model electric calorimeters.

INSULATORS, ELECTRIC

[See also CERAMIC MATERIALS, Dielectric-Constant Determination.]

Combined. Combined Suspended and Catenary Insulators (Kombinierte Hänge-Isolatorenketten), Altmann. Elektro-Jl., vol. 4, no. 8, Aug. 1924, pp. 220-222, 4 figs. New combined insulator by Schwaiger and results of tests carried out.

Condensers. See CONDENSERS, ELECTRIC, Insulating Materials and.

Dielectrics. See DIELECTRICS.

Disk-Type. The V-Type Insulator (Der V-Isolator), W. Weicker. Elektrotechnische Zeit., vol. 45, no. 18, May 1, 1924, pp. 432-434, 6 figs. Describes disk-type chain insulator developed by A. Vaupel, and gives results of tests showing electrical and mechanical behavior of insulator.

Disruptive Strength. Disruptive Strength of Solid Insulators (Der Durchschlag fester Isolatoren), W. Rogowski. Archiv für Elektrotechnik, vol. 13, no. 2, May 31, 1924, pp. 153-174, 12 figs. Discusses recent interpretation of puncture as mere heat phenomenon favored by lack of homogeneity in insulating material (in form of strings) as advanced by Wagner, Steinmetz, and others.

Impact, Arcing and Disruptive Voltage in Insulators (Stossspannung, Ueberschlag und Durchschlag bei Isolatoren), M. Toepler. Elektrotechnische Zeit., vol. 45, no. 40, Oct. 2, 1924, pp. 1045-1050, 9 figs. Discusses tests with impact or shock voltage, effect of capacity and air pressure, and calculation of loads.

Thermo-Electric Equilibrium in Solid Insulators (Über das thermisch-elektrische Gleichgewicht in festen Isolatoren), T. Kármán. Archiv für Elektrotechnik, vol. 13, no. 2, May 31, 1924, pp. 174-180, 2 figs. Discusses disruptive tension of insulators, criticizing Wagner's idea that puncture is heat phenomenon.

High-Tension. Five Years Operating Experience with High-Tension Insulators in the Power Transmission Line Untra-Stockholm (Betriebserfahrungen mit Hochspannungs-Isolatoren an der Kraftleitung Untra-Stockholm nach zirka fünfjährigem Betrieb), K. J. Laurell. Elektro-Journal, vol. 4, no. 3, Mar. 1924, pp. 76-82, 7 figs. Operation of this 100,000-volt line has been very satisfactory, with only three interruptions due to faulty insulators. Inspection of line was carried out partly according to spark gap method, while line was in service, and partly according to resistance method when line was disconnected.

High Voltage Insulators, A. Collins. Electrician, vol. 93, no. 2422, Oct. 17, 1924, pp. 438-439, 3 figs. Draws attention to bearing of time-voltage characteristic upon factor of safety of insulation of electric plant and describes method employed by Micanite & Insulators Co. in carrying out commercial tests on high-voltage insulators.

High-Voltage Pin-Type Insulator (Der Weitschirmisolator, ein neuer Hochspannungs-Freileitungsisolator), W. Weicker. Elektrotechnische Zeit., vol. 45, no. 9, Feb. 28, 1924, p. 155, 3 figs. New insulator of pin type developed by one of leading German porcelain factories for voltages between 6000 and 80,000; insulator model is made up on one, two, or three parts cemented together, number depending on voltage; top part is unusually large in diameter and resembles shallow umbrella; points out advantages of new insulator.

The Application of High-Tension Insulators, T. B. Fleming. Elec. Jl., vol. 21, no. 5, May 1924, pp. 217-218, 2 figs. It is shown that one-half wet flashover of either suspension string or pin-type insulator can be taken as working voltage under average conditions; locality must be studied and graded in order to determine amount of insulation required either below or above base line of one-half flashover; insulation above actual requirements is good practice.

Transmission Lines Mounted on Insulator Chains (Lignes de transmission d'énergie montées sur chaînes d'isolateurs), H. Carpentier. Revue Générale de l'Electricité, vol. 16, nos. 8 and 9, Aug. 23 and 30, 1924, pp. 303-311 and 352-356, 12 figs. Discusses necessity for studying mechanical equilibrium of projected lines; tension of conductors in adjacent spans; rupture of conductors; methods of calculation.

See also Suspension; Uniting Parts with Hemp.

Improvements. Improvements in Insulators, E. Rosenthal. Elec. World, vol. 83, no. 12, Mar. 22, 1924, pp. 575-576, 7 figs. Breakdowns obviated by employing binder which fills all pores and renders cemented joints impervious to moisture.

Liquid. The Theory of Electrostriction in Liquid Insulators (Sur la théorie de l'électrostriction dans les liquides isolants), G. Bruhat and M. Pauthenier. Académie des Sciences—Comptes Rendus, vol. 179, no. 22, Dec. 1, 1924, pp. 1257-1260. Discusses contraction of liquid between two armatures on establishing field and makes calculations of effects of electric field for a given pressure and temperature.

Manufacture. Manufacture of High-Voltage Insulators, M. H. Hunt. Chem. & Met. Eng., vol. 31, no. 19, Nov. 10, 1924, pp. 728-733, 10 figs. Brief exposition on raw material and processes of insulator manufacture, with particular reference to operations at Westinghouse Company's plant at Emergyville, Cal.

The Manufacture, Development and Testing of High-Tension Insulators. Eng. Progress, vol. 5, no. 1, Jan. 1924, pp. 5-8, 10 figs. Manufacturing process; tunnel furnace which is newest type of baking furnace for ceramic industry; testing of insulators.

1,000,000-Volt Testing Room for. The First European Testing Room for Alternating Current of 1 Million Volts Pressure. Eng. Progress, vol. 5, no. 5, May 1924, pp. 93-95, 8 figs. Reasons for building testing room, which is intended to ascertain quality of suspension, pin-type and leading-in insulators, etc.; building and mechanical equipment; transformer plants; erected at porcelain works in Freiberg (Saxony) of Hermsdorf-Schomburg Insulator Co.

Plates. The Influence of Support upon Surface-Resistance Measurements (Der Einfluss der Unterlage bei der Messung des Oberflächenwiderstandes von Isolierplatten), R. Dieterle. Elektrotechnische Zeit., vol. 45, no. 8, Feb. 21, 1924, pp. 132-133, 2 figs. When determining ohmic creepage resistance on surface of insulating plates, nature of support upon which plate rests during test is in certain cases of considerable importance; if insulating material has very large resistance, support has practically no influence, even for very thin plates; for material of lower dielectric strength, measurement made on plate resting on grounded support will give much too high value and will be misleading.

Porcelain. Cementing of Porcelain Insulators (Die Lösung des Kittproblems im Isolatorenbau), E. Rosenthal. Elektrotechnische Zeit., vol. 45, no. 15, Apr. 10, 1924, pp. 333-334, 5 figs. Cementing material has been found which does not expand in setting and which, after accelerated setting process, is non-porous; numerous practical tests have demonstrated that insulators cemented in described way are mechanically stronger than those cemented in accordance with older methods.

Insulators Cemented with Permanit (Permanitgekittete Isolatoren), A. Bültemann. Elektrotechnische Zeit., vol. 45, no. 39, Sept. 25, 1924, pp. 1026-1027. Permanit process is intended to obviate cracking of insulators, which often results from use of ordinary cement; it is said to have worked well in practice, and consists in adding cement to molten pitch, which is then further heated till uniform mixture results; technical examination of results obtained with ordinary cement as compared with Permanit process.

Manufacture of Porcelain Insulators in France (La frabrication en France des isolateurs en porcelaine). Technique Moderne, vol. 16, no. 18, Sept. 15, 1924, pp. 616-619, 4 figs. Discusses raw materials, preparation of porcelain paste, forming, drying, enameling, backing, etc.; control of finished product.

Measuring Current Flow in Porcelain Insulators. Elec. World, vol. 83, no. 6, Feb. 9, 1924, pp. 282-284, 4 figs. Use of thermojunction gives readings of high sensitivity; values checked within limits of accuracy in testing additional units of same type.

Suspension. A New 110,000-Volt Suspension Insulator. Elec. World, vol. 83, no. 24, June 14, 1924, pp. 1229-1230, 3 figs. Single-unit suspension insulator of radical design proposed for high-tension service; details of development and of unit and comments of engineers at A. I. E. E. meeting.

A Suspension Insulator for High-Voltage Systems, D. F. Miner. Elec. Jl., vol. 21, no. 12, Dec.

1924, pp. 560-564, 15 figs. Describes development resulting from work of Prof. H. B. Smith of Worcester Polytechnic Inst.; progress of work and application of insulator.

Combined Suspension Insulator Chains (Kombinierte Hänge-Isolatorenketten), E. Marx. Elektro-Journal, vol. 4, no. 10, Oct. 1924, pp. 280-282, 2 figs. Describes tests of insulator chains consisting of various types of insulators, with Hewlett type at top and motor type at bottom.

Comparative Tests on Suspension Insulators (Essais comparatifs sur des isolateurs de suspension), P. Perrochet and B. Jobin. Schweiz. Elektrotechnischer Verein—Bul. (Assn. Suisse des Electriciens), vol. 15, no. 11, Nov. 1924, pp. 537-550, 2 figs. With view of standardizing one type from the many available suspension-type insulators obtainable in market, Federal Swiss Elec. Soc., in collaboration with Zurich Univ., conducted elaborate tests on large number of insulators; tests comprised dry and wet flashover voltage, puncture voltage under oil, mechanical strength and influence of rapid temperature changes.

Pressed Metal Armatures for Suspension Insulators for Aerial Lines (Freileitungs-Armaturen aus Pressmetall für Hänge-Isolatoren), M. Bucov. Elektrotechnik u. Maschinenbau, vol. 42, no. 31, Aug. 3, 1924, pp. 480-483, 17 figs. Discusses new AEG equipment and its advantages.

Properties of the Motor Insulator (Ueber die Eigenschaften des Motor-Isolators), F. Dahl. Elektrotechnik u. Maschinenbau, vol. 42, no. 23, June 8, 1924, pp. 361-366, 20 figs. Describes new double-hood insulator developed by Motor-Columbus Corpn., Baden, Switzerland, which has given satisfactory results in experiment and practice.

Sphere-Head Chain-Type Insulator (Neuer Hängeisolator mit kittloser Bolzenarmatur), M. Carolus. Elektrischer Betrieb, vol. 22, no. 4, Feb. 24, 1924, pp. 29-31, 11 figs. Differing from designs that contain within hollow part of sphere number of loose pieces which have to be assembled and securely locked in place, this insulator requires only one annular ring in head; button-shaped type of inserted bolt deforms this ring into conical shape, thus preventing removal of bolt from insulator.

Suspension Insulators for Overhead Transmission Lines of Industrial Railways (Hängeisolatoren für Fahrleitungen von Industriebahnen), F. Bielefeld. Elektrotechnische Zeit., vol. 45, no. 1, Jan. 3, 1924, pp. 6-8, 6 figs. Describes two German patented types.

The Development of a Suspension-Type Insulator, H. B. Smith. Am. Inst. Elec. Engrs.—Jl., vol. 43, no. 8, Aug. 1924, pp. 689-696, 27 figs. Outlines conditions under which suspension-type insulator has been developed experimentally for long distance transmission conditions of 110,000- and 220,000-volt power lines.

Testing. Checking Insulator Field Tests in the Laboratory, C. L. Kasson. Elec. Wld., vol. 84, no. 4, July 26, 1924, pp. 167-169, 2 figs. Describes methods of making resistance, flashover, and puncture tests.

Detecting Defective Insulators, C. E. Bennett. Elec. World, vol. 83, no. 15, Apr. 12, 1924, pp. 711-715, 7 figs. Advantages of instrument called aislometer which is used on live lines for locating bad units; results of tests and operating experiences; description of device used.

High-Frequency Testing of Line Insulators (Appareillage pour essais en haute fréquence des isolateurs de lignes à haute tension), Saget. Société Française des Electriciens—Bul., vol. 14, no. 35, May 1924, pp. 367-376, 6 figs. Convenient method of carrying out high-tension tests of porcelain line insulators is by means of apparatus producing trains of high-tension high-frequency oscillations, instead of large and expensive transformer; describes apparatus used and its principles of action, and shows that short trains of oscillations thus produced are more suited to purpose than continuous oscillations.

Insulator Testing Methods and Devices, L. A. Wildman. Elec. Light & Power, vol. 2, no. 11, Nov. 1924, pp. 17-20 and 66, 7 figs. Methods of testing on line; oscillator testing set; bush phase set as means of locating leaky insulators on line; telephonic non-insulated method testing pin-type insulators; buzz-stick method; Aislometer method, etc.

Testing Room of the Manufactures Isalatori Vetro di Acqui Co. (La sala prova della Manifattura Isolatori Vetro di Acqui), G. Arigo. Elettrotecnica, vol. 11, no. 15, May 25, 1924, pp. 344-346, 2 figs. Details of tests of vitreous insulators of Acqui Co., including methods and equipment.

Tests of Insulators in Use (Prova degli isolatori in esercizio col "fioretto acustico"), G. Venturini. Elettrotecnica, vol. 11, no. 3, Jan. 25, 1924, pp. 45-48, 5 figs. Results of tests of insulators on high-tension lines during normal use by means of apparatus ("fioretto acustico") devised by C. Tofani, of Florence.

Trials to Test Insulators by Means of Tension Impulses (Versuche über die Prüfung von Isolatoren mit Spannungsstössen), E. Marx. Elektrotechnische Zeit., vol. 45, no. 25, June 19, 1924, pp. 652-654, 6 figs. Discusses testing by means of impulses, giving suitable connection; effect of impulses on insulators, and of strength of testing voltage on precision of test.

Testing Laboratory. See LABORATORIES, Electric-Insulator Testing.

Testing Station. See HIGH VOLTAGES, 1,000,000-Volt Testing Station.

Theory. See ELECTRICAL CONDUCTORS, Theory.

Tubes, Manufacture. Manufacture of Insulating Tubes for Electric Installations (La fabrication des tubes isolants pour installations électriques). Industries Mécaniques, vol. 7, no. 6, Sept. 1924, pp. 221-228, 17 figs. Details of manufacture of tubes for containing wires carrying current consisting of impregnated paper tube covered by metal tube of steel, lead, aluminum, etc.

Types. See INSULATING MATERIALS, ELECTRIC, Varnishes and Compounds.

Uniting Parts with Hemp. Use of Hemp in Uniting High-Voltage Insulators (Hochspannungsisolatoren zusammengehafter Ausführung), W. Weicker. Elektrotechnische Zeit., special spring no., 1924, pp. 22-23, 5 figs. Old method in which hemp was used in uniting parts has been improved, and its use is recommended; three-part insulators assembled in described way have given good service on lines between 40 and 60 kv.; advantage and economy of insulators assembled in this way is possibility of renewing broken petticoat without scrapping undamaged parts.

Voltage Distribution. Voltage Distribution in Chains of Suspension Isolators (Ueber die Spannungsverteilung an Ketten von Hängeisolatoren), A. Salessky. Archiv für Elektrotechnik, vol. 13, no. 1, Mar. 31, 1924, pp. 58-66, 11 figs. Recommends method of calculating voltage distribution, which gives values which agree well with experimental results and permits calculation of voltage distribution for chains with any number of links of a given insulator type, by aid of two parameters which can be easily calculated.

INSULATORS, HEAT

Brick. A Heat Insulator and Filter Aid. Chem. & Met. Eng., vol. 31, no. 25, Dec. 22, 1924, pp. 972-974, 5 figs. Plant in Whitehills, Cali-

maintained by Celite Products Co., for manufacture of insulating brick and powder used as filter aid, mineral filler and as delicate abrasive.

Heat Losses Through. Heat Losses Through Insulating Materials, R. H. Heilman. Mech. Eng., vol. 46, no. 10, Oct. 1924, pp. 593-602 and (discussion) 602-606, 18 figs. A rational method for their determination by means of conductivity coefficients of materials. Results of 94 tests on commercial pipe coverings and insulating cements conducted at Mellon Inst. Indus. Research of Univ. of Pittsburgh. Describes experimental methods. Discusses from a physical and mathematical standpoint exact character of thermal conductivity and its relation to temperature gradients and differences.

High-Temperature. See FURNACES, INDUSTRIAL, Insulation, High-Temperature.

Slag Wool. Slag Wool as a Building Insulator. Sheet Metal Worker, vol. 15, no. 23, Dec. 5, 1924, pp. 861-862, 2 figs. Results of tests made by Bur. of Standards; recent tests in Norway.

Steam-Pipe. Removable Insulating Covers (Manchons calorifuges amovibles), H. and L. Faron. Revue Industrielle, vol. 54, no. 2181, Aug. 1924, pp. 233-235, 8 figs. Details of patented removable sectional insulation or insulating jackets, their composition, making of joints and advantages.

See also STEAM PIPES, Coverings, Heat Loss Through.

INSURANCE

Accident, Miners'. See ACCIDENTS, Mines and Quarries.

Group. Group Insurance as a Factor in Industrial Relations, Wm. F. Chamberlin. Indus. Mgmt. (N. Y.), vol. 67, no. 3, Mar. 1924, pp. 149-150. Plans of group life insurance which have been found to be practical; formula in use by two or three well-known concerns.

Group Life Insurance on Twenty-seven Railroads. Ry. Age, vol. 76, no. 18, Apr. 5, 1924, pp. 881-883. List of roads on which such insurance is in force; with notes on differences in details.

When Sickness Stops Wages, What? Wm. B. Bailey. Indus. Mgmt. (N. Y.), vol. 67, no. 1, Jan. 1924, pp. 31-33. Survey of 2000 families to whom insurance company paid group accident sickness benefits.

See also Social.

Social. Financial Systems in Social Insurance, J. Ferdinand-Dreyfus. Int. Labour Rev., vol. 10, no. 4, Oct. 1924, pp. 583-606. Insurance against short illnesses; birth and maternity insurances; industrial-accident insurance; old-age insurance; invalidity insurance; life insurance for survivors; unemployment insurance.

Social Insurance in Sweden, E. Liedstrand. Int. Labour Rev., vol. 9, no. 2, Feb. 1924, pp. 177-195. Account of most important provisions of existing legislation; analysis of two schemes drawn up by Social Insurance Commission, one for sickness and maternity insurance, other for public employment exchanges and unemployment funds; statistics for different forms of insurance in recent years.

The Burdens of the German Social Insurance (Die Lasten der deutschen Sozialversicherung), O. Heinemann. Stahl u. Eisen, vol. 44, no. 52, Dec. 25, 1924, pp. 1772-1775. Deals with health insurance, old-age pension, employee insurance, accident and unemployment insurance; state aid to disablement insurance (or old-age pension). Reply to publication of State Labor Department in Reichsarbeitsblatt (State Labor Jl.).

The Financial Resources of Social Insurance, H. Korkisch. Int. Labour Rev., vol. 10, no. 6, Dec. 1924, pp. 909-934. Discusses raising of necessary funds and division of cost between state, employer, and worker, arguments for and against system of uniform contributions or of scales graduated either according to actual earnings or to system of wage classes, and methods of collecting contributions; after examining solutions of problems adopted in laws of different countries, author is of opinion that cost of social insurance is in last analysis borne by production, and that it must therefore be entered as item in costs of production.

Workmen's Compensation and Social Insurance. Monthly Labor Rev., vol. 18, no. 1, Jan. 1924, pp. 157-161. Group-insurance plan of So. Pac. Co.; Franco-Belgian and Franco-Luxemburg conventions relating to social insurance.

Unemployment. See UNEMPLOYMENT INSURANCE.

Workmen's Compensation and. Workmen's Compensation, Health and Accident Insurance in the German State Railway since the Year 1920 (Die Arbeiterpensionskassen, die Krankenkassen und die Unfallversicherung bei der Deutschen Reichsbahn seit dem Jahre 1920), O. Kuhatscheck. Archiv für Eisenbahnwesen, no. 1, Jan.-Feb. 1924, pp. 44-63. Conditions and results of health, accident and invalidity insurance since 1920.

INTEGRATION

Graphic Methods. Graphic Integration Methods (Graphische Integrationsmethoden), C. Runge. Zeit. für Technische Physik, vol. 5, no. 5, 1924, pp. 161-165, 6 figs. Discusses linear and quadratic interpolation, calculation of values of whole functions, graphic integration and differential of curves, graphic integration of linear differential equations of first order.

INTEGRATORS

Diagraph. The Motion Diagraph (Der Fahrdiagraph), Knorr. Organ für die Fortschritte des Eisenbahnwesens, vol. 79, no. 16, Nov. 30, 1924, pp. 353-358, 3 figs. A new type of integrator for integrating general differential equations and solving mechanically numerous important problems, such as determining course of temperature in electric motors.

Mechanical. Carrying Out Technical Integration by Means of a New Mechanical Integrator (Die Ausführung technischer Integrationen auf mechanischem Wege mit einem neuen Integraphen), U. Knorr. Elektrotechnische Zeit., vol. 45, no. 33, Aug. 14, 1924, pp. 869-870, 4 figs. Describes new integrator by means of which mechanical integration of differential equations of higher order is carried out.

INTERCHANGEABLE MANUFACTURE

Automobiles. See AUTOMOBILES, Interchangeable Manufacture.

Maintaining Interchangeability. Maintaining Interchangeability. Am. Mach., vol. 60, no. 10, Mar. 6, 1924, pp. 349-350. Cases that would defeat interchangeability. (Abstract.) Address before Cleveland Eng. Soc.

Munitions. Interchangeable Manufacture and Munitions, E. Buckingham. Army Ordnance, vol. 4, no. 24, May-June 1924, pp. 361-366, 1 fig. Traces briefly progress of a commodity through all stages of its manufacture, from its inception as a mechanical project to final testing that determines its successful completion.

Weighing Machines. Example of Production of Interchangeable Parts (Beispiel für die vorbereitende Arbeit zur Erzeugung austauschbarer Teile), A. Klose. Sparwirtschaft, no. 13-14, July 1924, pp. 65-71 (AWB), 12 figs. Discusses successive processes carried out on predetermined lines, tolerances, marking of parts, etc.

INTERFEROMETERS

Calibrating Standards of Length. Interferometers for Calibrating Standards of Length. Engineering, vol. 118, no. 3066, Oct. 3, 1924, pp. 491-492, 2 figs. Describes apparatus made by Adam Hilger, Ltd., by which accurate standards of length can be originated; apparatus was ordered by Japanese Government because meter has been adopted as sole legal standard of length, and authorities wished to have apparatus by which residual error in existing international standard could be accurately measured, and other standards produced.

Iron-Arc Spectrum Measurements. Interferometer Measurements of the Longer Waves in the Iron Arc Spectrum, W. F. Meggers and C. C. Kiess. U. S. Bur. Standards—Scientific Papers, no. 479, Jan. 5, 1924, pp. 273-280, 1 fig. New values obtained for 161 lines ranging in wavelength from 5534.525 A to 8824.238 A, using international iron arc as a source of secondary standards and cadmium vapor lamps similar to those used in wavelength-meter comparisons for primary standard.

Koesters'. See GAGES, Construction.

Lummer-Gehrcke Parallel-Plate. The Lummer-Gehrcke Parallel Plate Interferometer, F. Simeon. Jl. Sci. Instruments, vol. 1, no. 10, July 1924, pp. 296-304, 3 figs. Gives simple approximate expressions for order of spectrum, separation of consecutive orders, dispersion, and resolving power, together with notes on methods of use, appearances obtained and interpretation of these appearances. Precautions to be observed in order to obtain finest definition. Bibliography.

Measurement of Density of Gases. Density and Diffusion of Gases Measured by Displacement Interferometry, C. Barus. Nat. Acad. Sci.—Proc., vol. 10, no. 4, Apr. 1924, pp. 153-155, 1 fig. Method is said to be very simple and expeditious, and should give results well within one per cent.

INTERNAL-COMBUSTION ENGINES

[See also AIRPLANE ENGINES; AUTOMOBILE ENGINES; DIESEL ENGINES; GAS ENGINES; GASOLINE ENGINES; IGNITION; MOTOR BUSES, Engines; MOTOR TRUCKS, Engines; OIL ENGINES; SEMI-DIESEL ENGINES.]

Applications. Present Applications of Internal-Combustion Engines (Les applications actuelles des moteurs à combustion interne), A. Witz. Technique Moderne, vol. 16, no. 15, Aug. 1, 1924, pp. 501-509, 5 figs. Discusses use of engines up to 100 hp. in small industries, and up to 2300 hp. in medium- and large-scale industries; fuels; types of engines; engines for central stations, for metallurgy, for traction and driving airplanes.

Balancing of Masses. Balancing of Masses in Single-Crank, Single- and Double-Cylinder Internal-Combustion Engines (Massenausgleich bei einkurbeligen ein- und zweizylindrigen Verbrennungsmotoren), H. Schrön. Motorwagen, vol. 27, nos. 8 and 10, Mar. 20 and Apr. 10, 1924, pp. 127-134 and 166-174, 35 figs. Numerical and graphical presentation of paths of center of gravity, free forces and movements exerted by masses, with one cylinder and two cylinders in fork and end-to-end arrangement, when no counterweight is present and when rotating masses are balanced; determination of additional weight for further improvement of weight; numerical examples.

Bearing Pressures. Calculation of Bearing Pressures in High-Speed Explosion Engines (Il calcolo delle pressioni sui cuscinetti nei motori a scoppio a grand velocità), S. R. Treves. Industria, vol. 38, no. 19, Oct. 15, 1924, pp. 521-529, 14 figs. Develops construction of polar diagrams for various types of engines and gives detailed application to Fiat engine as an example.

British Empire Exhibition. Internal Combustion Engines at the British Empire Exposition, J. B. C. Kershaw. Power, vol. 60, no. 5, July 29, 1924, pp. 168-170, 6 figs. Describes different types exhibited.

Internal Combustion Engines Exhibited in the Palace of Engineering (British Empire Exhibition). Engineering, vol. 117, no. 3043, Apr. 25, 1924, pp. 529-534, 21 figs., partly on supp. plate. Details of exhibits.

Catalysis Applied to. Catalysis and the Internal Combustion Engine, E. Sokal. Chem. & Industry, vol. 43, no. 35, Aug. 29, 1924, pp. 283T-284T. Points out that so far catalytic coating called "Katalite" has been used in engines without any change in engine; it is considered possible and even probable that with certain changes, much greater effects could be produced which might have bearing on utilization of low-grade fuels, running of engines at constant-compression pressure, and various other questions of design and operation.

Chemical Structure of Motor Engine, E. Sokal. Oil & Gas Jl., vol. 23, no. 5, June 26, 1924, pp. 88, 126-127 and 130-131. Catalytic coating for surface of cylinder head suggested for counteracting carbon and detonation. Accelerates combustion.

Combustion, Acceleration of. See Catalysis Applied to.

Compressor Engines. Increasing Efficiency of Internal-Combustion Engines (Leistungssteigerung an Verbrennungsmotoren), G. Prayer. Motorwagen, vol. 27, no. 27, Sept. 30, 1924, pp. 483-489, 11 figs. Describes different types of compressor engines, and recent improvements in design.

Constant-Compression. The Essentials of a Successful Constant-Compression Engine, C. E. Sargent. Soc. Automotive Engrs.—Jl., vol. 14, no. 1, Jan. 1924, pp. 5-10, 9 figs. It is shown that constant-compression engines in which throttling is eliminated are feasible; construction permits admission of inert gas at less than full load during first part of induction stroke and of burnable gas during last part; describes new type developed to prove that engine could be designed to maintain constant compression and mean effective pressure commensurate with load.

Cooling. Cooling of Light Internal-Combustion Engines (Zur Kühlung leichter Verbrennungsmotoren), K. R. H. Praetorius. Motorwagen, vol. 27, no. 32, Nov. 20, 1924, pp. 590-602, 25 figs. Design and functioning of Adler, Benz, Bayern, Daimler, Hupp, Ford, Vauxhall, and other cars.

Cooling Water, Utilization of Heat in. Utilization of the Heat in the Cooling Water of Internal Combustion Engines (Die Ausnutzung der im Kühlwasser der Verbrennungsmotoren enthaltenen Wärme). Wärme- und Kälte-Technik, vol. 26, no. 8, Apr. 30, 1924, pp. 63-64, 3 figs. Various combinations of radiators with water jackets of internal-combustion engines are shown.

Crankshafts. See CRANKSHAFTS, Explosion-Engine, Resonance of.

Detonation. Air-Hydrogen Explosions in Closed Vessels, R. W. Fenning. Aeronautical Research Committee (Lond.)—Reports & Memoranda, no. 902, Apr. 1924, 33 pp., 27 figs. on supp. plates. Details of experiments carried out at Nat. Physical Lab. for Aeronautical Research Committee, which form first part of a general investigation of "detonation" and deal with influence on production of "detonation" of mixture strength, initial temperature, initial pressure, turbulence, multiple ignition points, depth of vessel, nature and proportion of diluent, and formation of pockets in explosion vessel.

Relative Effects of Some Nitrogen Compounds upon Detonation in Engines, T. A. Boyd. Indus.

& Eng. Chem., vol. 16, no. 9, Sept. 1924, pp. 893-895, 3 figs. Data shows that, in general, nitrogen compounds which are most effective for suppressing detonations are the primary and secondary amines.

Driving Gear. Features of the Synchro-Balance Driving Gear. Gas & Oil Power, vol. 20, no. 230, Nov. 6, 1924, pp. 27-28, 4 figs. Invention brought out by Blackstone & Co. which makes for lightness and compactness.

Efficiency Standards. Efficiency Standards for Internal Combustion Engines. Engineer, vol. 137, no. 3563, Apr. 11, 1924, p. 394. See also Shipbldg. & Shipg. Rec., vol. 23, no. 15, Apr. 10, 1924, pp. 426-427. Discussion by Committee on Tabulating Results of Heat Engine and Boiler Trials on standards of comparison for thermal efficiency of internal-combustion engines.

Standards of Comparison in Connection with the Thermal Efficiency of Internal Combustion Engines, G. J. Wells. Gas. Jl., vol. 166, no. 3179, Apr. 16, 1924, pp. 172-175, 4 figs. See also Gas Wld., vol. 80, no. 2073, Apr. 12, 1924, pp. 338-339. Traces investigation of subject from commencement of work of original committee appointed by Instn. Civil Engrs. in 1903, to which reference is made to compute ideal efficiency. Standard recommended involves use of air as ideal fluid, together with hypothesis that its specific heat was constant over range of pressures and temperatures involved.

Exhaust-Gas Analysis. Composition of Exhaust Gas of Explosion Motors (Die Abgaszusammensetzung von Explosionsmotoren), M. Moller and M. U. Büchting. Motorwagen, vol. 27, no. 23, Aug. 20, 1924, pp. 400-403, 7 figs. Describes Siemens & Halske CO + H_2 meter and shows that content in unconsumed gases is dependent on load, compression, nozzle position of carbureter, time of ignition and lubrication of engine.

Exhaust Gases, Unburned Fuel in. Ingenious Device Used to Determine Unburned Fuel in Exhaust Gases. Automotive Industries, vol. 51, no. 13, Sept. 25, 1924, pp. 568-569, 5 figs. Describes instrument manufactured by Siemens & Halske Elec. Wks. for determination of percentage of unconsumed fuel gases in flue gases. Based on principle that any fuel gases contained in exhaust gases, if mixed with a suitable proportion of oxygen or air, can be ignited and burned if led past a moderately heated wire of a metal having catalytic properties, such as platinum. From article in Motorwagen by M. Moeller and M. U. Büchting.

Exhaust-Valve Temperatures. Exhaust-Valve and Cylinder-Head Temperatures in High-Speed Petrol Engines, A. H. Gibson and H. W. Baker. Instn. Mech. Engrs.—Proc., vol. 2, no. 6, 1923, pp. 1045-1092 and (discussion) 1093-1119, 31 figs. Investigation shows that, in well-designed overhead-valve engine, either of air- or water-cooled type, under normal conditions of operation, temperature of exhaust valve may be between 600 and 750 deg. cent.; best shape of valve head appears to be one having flat bottom and tulip-shaped top, but as this is impracticable owing to weight, next best is one having tulip-shaped head common in airplane-engine practice; conditions tending to give hot valve also tend to give hot cylinder head.

Factory Power Plants. The Control of Power Production, Chas. L. Hubbard. Factory, vol. 32, no. 4, Apr. 1924, pp. 482-486, 17 figs. Internal-combustion engines as source of factory power.

Flow of Gases in. The Flow of Gases in Two-Cycle Internal-Combustion Engines (Om strömningsförloppet i tvåtaktmotorer), E. Carlberg. Teknisk Tidskrift, vol. 54, no. 38, Sept. 20, 1924, pp. 105-108 (Mekanik), 1 fig. Scavenging of combustion cylinders is investigated by means of gas samples taken from their contents at different points of cycles. These samples are analyzed and efficiency of scavenging is deducted from their chemical composition and from one of the fuel gases. A formula for scavenging efficiency is derived.

Flywheel Design, Chart for. Finding the Flywheel Weight Required by an Internal-Combustion Engine, P. H. Schweitzer. Power, vol. 59, no. 18, Apr. 29, 1924, p. 673, 1 fig. Presents chart for flywheel design including full instructions as to steps to be followed when using chart.

Fuels. Contribution to the Theory of Fuels for Engines (Contribution à la théorie des combustibles pour les moteurs), M. Brutzkus. Société d'Encouragement pour l'Industrie Nationale—Bul., vol. 136, no. 5, May 1924, pp. 397-425, 1 fig. Discusses combustion-engine fuels, including mineral oils, tar oils, gaseous fuel; fuel increasing and decreasing in volume; efficiency of combustion.

Decomposition of Tetraethyl Lead and Its Use in Explosion Engines (Sur la décomposition du plomb tétraéthyle et son application aux moteurs à explosion), P. Jolibois and G. Normand. Académie des Sciences—Comptes rendus des séances, vol. 179, no. 1, July 7, 1924, pp. 27-28. This fuel allows increase of compression and reduces chances of spontaneous explosion of gaseous mixture.

Lignite Distillate, Chas. E. Kerchner. Mech. Eng., vol. 46, no. 9, Sept. 1924, pp. 516-518, 4 figs. Its possibilities as an internal-combustion-engine fuel. Data on tests made with a small Hvid engine operating on lignite oil, as compared with gas oil and kerosene. Shown to be an efficient and likely fuel.

See also Vegetable Oil as Fuel; AUTOMOBILE FUELS.

Gas Distribution in. Determination of Gas Distribution in Internal-Combustion Engines by Gas Analysis, G. W. Jones, W. P. Yant and L. B. Berger. U. S. Bur. Mines—Reports of Investigations, no. 2631, Aug. 1924, 6 pp., 4 figs. on supp. plates. Describes simple portable apparatus for making determination; tests showing results obtained from engine having good distribution, and tests made under road conditions on engine giving poor distribution.

Heat Transmission from Working Fluid. The Rate of Heat Transmission from the Working Fluid in an Internal Combustion Engine, A. H. Gibson. Lond., Edinburgh & Dublin Philosophical Mag. & Jl. Sci., vol. 47, no. 281, May 1924, pp. 883-895. Results from investigations and conclusions.

Heavy-Oil. See DIESEL ENGINES; OIL ENGINES; SEMI-DIESEL ENGINES.

High-Speed Four-Cycle. On Increasing the Size of the Gas Passages in High-Speed Four-Cycle Engines (Dell'ingrandimento delle luci di passagio dei gas nel motore veloce a quattro tempi), P. Tedeschi. Industria, vol. 38, no. 5, Mar. 15, 1924, pp. 133-136, 4 figs. Cylinder and valve arrangement and proportions by means of which area of gas passages is always 50 per cent, power output markedly increased, and efficiency improved.

Hot-Bulb and High-Compression. Hot-Bulb and High Compression Engines in Sweden, G. Dellner. Engineering, vol. 118, no. 3055, July 18, 1924, p. 105. Discusses hot-bulb engines and recent improvements, including new methods of starting, application of ball bearings in main bearings. Ellwe and Polar high compression engines and their operation. Abstract of paper read before World Power Conference.

Indicators for. See INDICATORS, Internal-Combustion-Engine.

Inert Diluents. Inert Diluents, J. F. Alcock. Automobile Engr., vol. 14, no. 190, June 1924, pp. 165-170, 10 figs. Their effect on working fluid of internal-combustion engine.

Internal Losses. How Internal Losses in Power Plants Vary with Speed, P. M. Heldt. Automotive Industries, vol. 50, no. 10, Mar. 6, 1924, pp. 556-558. Determined by "motoring" engine with electric dynamometer; torque representing pumping loss is directly proportional to r.p.m., but frictional loss is independent of that factor.

Lubrication. Lubrication of Internal Combustion Engines, H. B. Warner. Ariz. Min. Jl., vol. 7, no. 18; Feb. 15, 1924, pp. 21-22. Data regarding cycle of operations of internal-combustion engines.

See also STEAM ENGINES, Lubrication.

Marine. Technical and Economic Questions of Oil Firing on Merchant Ships (Technische und wirtschaftliche Fragen der Oelfeuerung in der Handelsschiffahrt), D. B. Schultz. Fördertechnik u. Frachtverkehr, vol. 17, no. 12, June 18, 1924, pp. 166-167. Discusses earliest oil firing for small boats in Germany; modern oil plants including bunkers and tanks, oil consumption per hp-hr., advantages and economy of oil firing.

Mewes. The Mewes Engine, Old and New Types (Der Mewes-Motor in alter und neuer Bauart), R. Mewes. Serial article in Zeit. für Sauerstoff- u. Stickstoff-Industrie, beginning vol. 14, no. 12, Dec. 1922, and continuing through vol. 15, nos. 1, 2, 3, 5, 7, 8, 9, 10, and 11, Jan., Feb., Mar., May, July, Aug., Sept., Oct., and Nov. 1923, and vol. 16, no. 2, Feb. 1924. Construction, operation and efficiency of 1901 type, and new developments added; indicator diagrams; objections raised against Mewes engine; Mewes gas-air-pressure engine, using exhaust gases of explosion and internal-combustion engines mixed with compressed air; advantages of Mewes engine; theory.

Naphthalene. Naphtalene Engines (Les moteurs à naphthaline), C. Anguenot. Société Industrielle de Mulhouse—Bul., vol. 90, no. 1, Jan. 1924, pp. 57-71, 6 figs. Types of engine for burning naphthalene, constructed by Société anonyme des moteurs économiques à naphthaline (A. A. M. E. N.), said to be particularly well adapted to light industry and farming.

Oil Engines. See OIL ENGINES; DIESEL ENGINES; SEMI-DIESEL ENGINES.

Radiation Characteristics. Radiation Characteristics of the Internal-Combustion Engine, Thos. Midgley, Jr., and H. H. McCarty. Soc. Automotive Engrs.—Jl., vol. 14, no. 2, Feb. 1924, pp. 182-185, 7 figs. Presents data showing how radiation varies with changes in character of combustion; it is concluded that radiation produced during internal combustion is function of chemical reaction involved to much greater extent than are merely temperatures of gases, although these play a marked part.

Railway Traction Application. Application of Internal-Combustion Engines to Railway Traction and Ship Propulsion (Application des moteurs à combustion interne à la traction sur voies ferrées et à la propulsion des navires), M. Bochet. Revue Universelle des Transports, vol. 1, nos. 9 and 10, July 1 and 15, 1924, pp. 141 and 155-157, 1 fig. Discusses heavy oil engines with mechanical fuel injection, two and four-stroke.

Residues, Formation of. Formation of Residues in Superheated-Steam Engines and Internal-Combustion Engines and Their Prevention (Die Rückstandsbildung in Heissdampfmaschinen und Verbrennungskraftmaschinen und ihre Verhütung), G. Spettmann. Praktische Maschinen-Konstrukteur, vol. 57, no. 22, June 17, 1924, pp. 309-310. Discusses producer gas and Diesel engines, gas residues and their combination with lubricating oil, complete combustion of fuel, etc.

Scott-Still. See OIL ENGINES, Scott-Still; Solid-Injection.

Seddin Show, Germany. Internal-Combustion Engines at the Seddin Railway Exposition (Der Nutzmotor auf der Eisenbahnausstellung in Seddin), R. C. v. Gorrissen. Wirtschaftsmotor, vol. 6, no. 10, Oct. 25, 1924, pp. 1-2. Brief review of exhibits of internal-combustion engines and their application in railway operation and shop practice.

Steam-Oil. See Scott-Still.

Supercharging. Supercharger Pros and Cons, W. G. Aston. Autocar, vol. 53, no. 1507, Sept. 5, 1924, pp. 413-416, 3 figs. Considers advantages and disadvantages of latest development in internal-combustion engine design; shows supercharger has far wider potentialities and discusses advantages that may accrue from its general adoption.

Synchro-Balance. The Synchro-Balance Internal-Combustion Engine: Empire Exhibition. Engineering, vol. 118, no. 3069, Oct. 24, 1924, p. 593, 4 figs. Describes mechanism employed for transforming reciprocating motion of pistons into rotary motion of crankshaft.

Temperature-Entropy Diagram. A Modified Temperature-Entropy Diagram for a Gaseous Working Substance, G. E. Scholes. Engineering, vol. 118, no. 3059, Aug. 15, 1924, pp. 215-216, 1 fig. Construction of chart. Transference of indicator diagram to Tϕ chart.

Temperature, Influence of Mixture on. Strength of Mixture Has Marked Effect on Engine Temperature, C. B. Dicksee. Automotive Industries, vol. 50, no. 10, Mar. 6, 1924, pp. 566-571, 7 figs. Influence not always realized sufficiently; recent researches show relationship; experiments indicate detonation is function of rate of flame propagation.

Temperature Variation in. A Study on the Periodic Temperature Variation in the Internal Combustion Engine, K. Takémura. Tokyo Imperial University—Jl., vol. 15, no. 3, Sept. 1924, pp. 13-53, 3 figs. Cyclic temperature variation of working fluid in internal-combustion engine; thermal state of ignition ball; movement of heat in cylinder wall.

Tetraethyl Lead, Use in. See Fuels.

Theory of. Contribution to the Theory of Internal-Combustion Engines (Contribution à la théorie des moteurs à combustion interne), M. Brutzkus. Technique Moderne, vol. 16, no. 4, Feb. 15, 1924, pp. 105-112, 7 figs. Rudiments and formulas of theoretical chemistry; combustion in engines and variation of pressure; combustion and variation of temperature; combined action of these three factors; study of fuels employed.

Two-Cycle Double-Acting. A New Two-Cycle Double-Acting Engine (Un nouveau moteur à deux temps et à double effet), R. Mathieu. Outillage, vol. 344, no. 3, Mar. 1924, pp. 17-18, 2 figs. Details of Leroy light explosion-type engine.

Vegetable Oil as Fuel. Increasing Compression in Internal-Combustion Engines (L'augmentation de la compression dans les moteurs à combustion interne), M. G. Lumet. Société des Ingénieurs Civils de France—Mémoires et Compte Rendu des Travaux, vol. 77, no. 4-6, Apr.-June 1924, pp. 365-380. Satisfactory results of tests of six 2- and 4-stroke engines with vegetable oils, carried out jointly by Indus. Research Bur. and Technical Commission of Automobile Club.

INVENTION

Stimulation of Employees. How to Stimulate Invention by Employees, H. A. Toulmin, Jr. Factory, vol. 32, no. 4, Apr. 1924, pp. 490-492, 580,

and 582, 6 figs. Nine methods from experience of five companies.

INVENTIONS

Property in. Inventions by Employees (Zum Kapitel der Angestellten-Erfindungen), J. Aumund. Schweizerische Bauzeitung, vol. 84, nos. 6 and 9, Aug. 9 and 30, 1924, pp. 67-70 and 106-110, 4 figs. Discusses ownership of inventions by employees from employers' and employees' standpoint, laws applicable in various countries, including laws of Switzerland.

IONIZATION

Positive-Ray Analysis. The Application of Positive Ray Analysis to Ionization Problems, H. D. Smyth. Franklin Inst.—Jl., vol. 196, no. 6, Dec. 1924, pp. 795-811, 10 figs. Describes difficulties of combining method for determining ratio of mass to charge of ion with ionizing potential experiments which have been overcome; results obtained by methods developed and their bearings on ionization problems.

IONS

Gaseous. The Constitution of Gaseous Ions, J. J. Nolan. Physical Rev., vol. 24, no. 1, July 1924, pp. 16-30, 4 figs. Discusses mobility in dry and moist air; gives current-voltage curves showing periodic inflections about every 10 volts indicating intervening groups, making some 20 groups of ions with mobilities varying from 2.24 to 1.34.

IRON

Alloys. See IRON ALLOYS.

Analytical Determination. Copper as Reducing Agent in Iron Determinations, J. M. Hendel. Indus. & Eng. Chem., vol. 16, no. 9, Sept. 1924, p. 951. Describes use of copper reductor for determination of iron in presence of vanadium, and of vanadium in steels and other alloys.

Examination of Iron from Konarak, J. N. Friend and W. E. Thorneycroft. Iron & Steel Inst.—Advance Paper, no. 5, for meeting Sept. 1924, 3 pp., 2 figs. on supp. plate. Examination of a specimen of iron beams, used as supports under lintels of doorways and to assist in corbelling-in of roof, from black pagoda at Konarak in Madras Presidency, India.

Annealing, Crystal Growth during. The Production of Large Crystals by Annealing Strained Iron, C. A. Edwards and L. B. Pfeil. Iron & Steel Inst.—Advance Paper, no. 7, for meeting May 1924, 19 pp., 22 figs. Research carried out to determine more definitely conditions under which very large crystals were formed in iron by annealing after plastic deformation.

Behavior in High-Frequency Fields. Characteristics of Iron in High Frequency Rotating Magnetic Fields, L. Tonks. Jl. Optical Soc. Am. & Rev. of Sci. Instruments, vol. 8, no. 2, Feb. 1924, pp. 221-238, 8 figs. Describes investigation of behavior of iron in a high-frequency rotating field, carried out at frequencies from 50,000 to 170,000 cycles per second.

Carbonizing with Oxy-Acetylene Flame. Surface Hardening with Oxy-Acetylene Flame, J. F. Springer. Ry. Mech. Engr., vol. 98, no. 1, Jan. 1924, pp. 36-37. Points out that torch process will mark out for itself field sharply defined and superior to its competitors; limitations of oxy-acetylene carbonizing; main advantages of torch process; experiments on cast steel.

Cast. See CAST IRON.

Castings. See IRON CASTINGS.

Cementation. The Cementation of Iron by Silicon, R. T. Haslam and L. E. Carlsmith. Indus. & Eng. Chem., vol. 16, no. 11, Nov. 1924, pp. 1110-1113, 8 figs. Deals with important variables affecting siliconization of iron, as follows: (1) temperature of cementation, (2) duration of heat, (3) composition of silicon, (4) composition of metal, and (5) atmosphere used in cementation furnace; microscopic and analytical studies of various reaction products, together with consideration of acid resistance of case metal.

See also CEMENTATION, Iron.

Change When Heated. An Assumption as to the Cause of the Change of Body-Centered Alpha-Iron to Face-Centered Gamma-Iron, E. J. Janitsky. Am. Soc. Steel Treating—Trans., vol. 6, no. 6, Dec. 1924, pp. 728-731, 2 figs. Mathematical explanation of causes for change of iron, when heated, from face-centered to body-centered orientation.

Charcoal. Swedish Charcoal Iron, N. Danielsen. Min. & Metallurgy, vol. 5, no. 216, Dec. 1924, pp. 569-572, 7 figs. Manufacturing process, properties, and uses.

Cold Work, Effect of. The Effect of Cold-Work upon the Density of Crystals of α-Iron, H. O'Neill. Iron & Steel Inst.—Advance Paper, no. 13, for meeting May 1924, 12 pp., 4 figs. Tests on Armco iron and on single crystal; results.

Constitution. Constitution of Technical Iron (Zur Konstitution des technischen Eisens), F. Wever. Zeit. für Elektrochemie, vol. 30, no. 7, July 1924, pp. 376-382, 3 figs. Discusses experiments on relation of carbon and various polymorphous modifications of iron; structure of solid solution γ-iron-carbon, structure of α-iron in annealed carbon steels, etc.

Corrosion. The Influence of Emulsoids Upon the Rate of Solution of Iron, J. N. Friend, D. W. Hammond and G. W. Trobridge. Am. Electrochem. Soc.—Advance Paper, no. 14, for meeting Oct. 2-4, 1924, pp. 197-207, 6 figs. A possible method is suggested of treating natural and other waters, to render them less corrosive toward ferrous and non-ferrous metals in practice. Results of experiments on corrosion of iron in lead-acetate solution and in copper-sulphate solution; rate of solution of iron in dilute sulphuric acid.

The Relation of Hydrogen Ion Concentration to the Corrosion of Iron, J. W. Shipley and I. R. McHaffie. Can. Chem. & Metallurgy, vol. 8, no. 5, May 1924, pp. 121-124, 6 figs. Corrosion of iron in contact with graphite; corrosion of iron in absence of oxygen; corrosion of gray cast iron in soil water of pH 7.4 and saturated with oxygen; hydrogen-ion concentration obtained when iron is in contact with water; rate of corrosion of iron in absence of oxygen in solutions of various hydrogen-ion concentrations.

See also CORROSION, Iron and Steel.

Crystallization. Written Discussions of Professor Albert Sauveur's Paper Entitled "Crystallization of Iron and Its Alloys." Am. Soc. Steel Treating—Trans., vol. 5, no. 2, Feb. 1924, pp. 209-222, 2 figs. Includes discussions by O. W. Ellis, E. E. Thum, and N. T. Belaiew, with closure by A. Sauveur.

Density, Determination of. Determination of the Density of Iron and Other Refractory Metals in the Liquid State (Methode pour la détermination de la densité du fer et d'autres métaux réfractaires dans l'état liquide), C. Benedicks. Académie des Sciences—Comptes Rendus, vol. 179, no. 7, Aug. 18, 1924, pp. 389-391, 1 fig. Apparatus employed consists of two U-tubes fitted so that each limb of one tube is connected with corresponding limb of other; mercury is placed in one tube, metal under investigation in other, and connecting spaces are filled with inert gas; when second tube is heated both metals show difference in level between the two limbs of their tubes, inversely proportional to their densities; that of mercury being known, that of other metal may be calculated; results of experiments.

Deposition. Deposition of Iron Containing Carbon in the Electrolysis of Solutions Containing Double Oxalates of Iron (Ueber die Abscheidung kohlenstoffhaltigen Eisens bei der Elektrolyse von Eisendoppeloxalat-Lösungen), W. Sontag. Zeit. für Elektrochemie, vol. 30, no. 7, July 1924, pp. 333-344. Conditions of deposition of iron containing carbon during electrolysis of solutions containing ammonium salts of oxalic acid and other organic acids were determined and some products of reduction identified.

Deposits. See IRON DEPOSITS.

Desulphurization. Use Sodium Flux for Iron. Foundry, vol. 52, no. 24, Dec. 15, 1924, pp. 982-984, 4 figs. Method for purifying and desulphurizing molten iron in cupola furnace and ladle by special flux is tested in Cleveland shop; two sodium salts used.

Deterioration from Rolling Friction. Testing the Deterioration of Iron and Steel from Rolling Friction without Application of Lubricants (Ueber die Prüfung der Abnutzung von Eisen und Stahl bei rollender Reibung ohne Schmiermittel), H. Meyer and F. Nehl. Stahl u. Eisen, vol. 44, no. 17, Apr. 24, 1924, pp. 457-464, 25 figs. Different kinds of deterioration and their testing; wear through rolling friction and its practical importance; method of testing; process of deterioration; testing deterioration of different kinds of hard iron; change in structure through process of deterioration; influence of increased pressure and structure-changing heat treatment; zone of segregation and direction of grain.

Determination of. New Method for the Determination of Iron by Means of Permanganate in the Presence of Hydrochloric Acid (Neues Verfahren zur Bestimmung des Eisens mit Permanganat in salzsaurer Lösung), W. Manchot and F. Oberhauser. Zeit. für anorganische u. allgemeine Chemie, vol. 138, no. 2, Aug. 19, 1924, pp. 189-194. Points out that in presence of hydrochloric acid, titration of solutions of ferrous salts by permanganate results in use of too much permanganate owing to liberation of free chlorine; error may be accurately allowed for by determining amount of free chlorine liberated, by one of two methods which are described.

Direct Production from Ore. The Direct Production of Iron, E. Fornander. Chem. & Met. Eng., vol. 30, nos. 22 and 23, June 2 and 9, 1924, pp. 864-868 and 907-910, 10 figs. Critical review of more important methods used to produce wrought iron from ore.

Electrodeposited. See ELECTRODEPOSITION, Iron.

Electrolytic. Electrolytic Iron, T. W. S. Hutchins. Iron & Coal Trades Rev., vol. 109, no. 2942, July 18, 1924, pp. 117-118. See also World Power, vol. 2, no. 12, Dec. 1924, pp. 339-347, 17 figs. on supp. plate. Discusses processes for commercial production of electrolytic iron in tubes, sheets, etc., i.e. with anodes formed and soluble anodes shaped but insoluble, anodes soluble but unformed. (Abstract.) Paper read before World Power Conference.

Magnetic and Electric Properties of Electrolytic Iron and Its Alloys Melted in Vacuo and Rolled Into Sheet, M. Fukuda. Denki Gakkwai Zasshi (Jl. Inst. Elec. Engrs. Japan), no. 435, Oct. 1924, pp. 978-1007, 8 figs. Results obtained with direct-current testing; measurement of core losses with alternating current and separation of hysteresis and eddy current losses; magnetization with alternating currents. (In English.)

Progress in Electrolytic Iron, D. Belcher. Am. Electrochem. Soc.—Advance Paper, no. 11, for meeting, Apr. 24-26, 1924, pp. 157-172, 1 fig. Summary of progress made in electrodeposition of iron in last 75 years; describes two plants in commercial operation, and gives account of development work on Milford process for hydrometallurgy of iron ores.

The Recrystallization of Electrolytic Iron (Die Rekristallisation des Elektrolyteisens), P. Oberhoffer and W. Oertel. Stahl u. Eisen, vol. 44, no. 20, May 15, 1924, pp. 560-561, 1 fig. Results of investigation at Iron Met. Inst. of Tech. High School of Aachen (Aix-la-Chappelle).

Etching Figures and Twinning. Etching Figures and Twinning in Iron (Aetzfiguren und Zwillingsbildungen in Eisen), K. Harnecker and E. Rassow. Zeit. für Metallkunde, vol. 16, no. 8, Aug. 1924, pp. 312-314, 13 figs. Describes and gives photomicrographic reproductions of effects obtained in specimens of iron.

Fatigue. See IRON AND STEEL, Fatigue.

Hardness, Causes of. Physical Factors Affect Iron, J. H. Hopp. Automotive Industries, vol. 50, no. 1, Jan. 3, 1924, pp. 11-12. Hard castings ascribed to chemical content in many cases are due to causes other than metal; shrinkage alleviated by proper gates and risers. (Abstract.) Paper before Chicago Foundrymen's Club.

Magnetization. The Barkhausen Effect, E. P. T. Tyndall. Physical Rev., vol. 24, no. 4, Oct. 1924, pp. 439-451, 6 figs. Deals with discontinuities in magnetization of iron and other magnetic materials. Describes work undertaken to test hypothesis that phenomenon is due to magnetization of single crystals and to obtain a more detailed picture of it than has yet been presented.

Manufacture, Norway. Manufacture of Iron in Norway. Norwegian Trade Rev., no. 3, 1924, pp. 33-35. Historical review of iron industry in Norway.

Martensite, Nature of. The Nature of Martensite, E. C. Bain. Am. Inst. Min. & Met. Engrs.—Trans., no. 1299-S, Feb. 1924, 11 pp., 4 figs. Study of its formation and structure with facts about its parent substance, austenite.

Mines. See IRON MINES.

Mining. See IRON MINING.

Molten, Specific Gravity of. Method of Determination of the Specific Gravity of Molten Iron and of Other Metals of High Melting Temperature (Metod för bestämning av spec. vikt hos flytande järn och andra svårsmälta metaller), C. Benedicks, D. W. Berlin and G. Phragmén. Jernkontorets Annaler, vol. 108, no. 6, 1924, pp. 308-333, 9 figs. Molten metal is contained in U-shaped tube of very high melting point and difference of levels in two legs of tube is measured by electrical methods; said difference is produced by pressures of inert gas and difference of pressures is measured by means of mercury column. Report from Swedish Metallographical Inst.

Nitrogen in. Nitrogen in Iron, J. K. Smith. Foundry Trade Jl., vol. 29, no. 404, May 15, 1924, pp. 403-405. Possible elements for elimination of nitrogen, vanadium in cast iron, nitrogen in steel, titanium steel, entry of nitrogen, possible explanation of inherent properties, etc.

Oxygen in. Ferrous Alloys Research, W. Rosenhain, F. S. Tritton, E. Hanson and T. E. Rooney. Iron & Steel Inst.—Advance Paper no. 10, for meeting Sept. 1924, 43 pp., 32 figs., partly on supp. plates. Describes research carried out to determine constitution of iron-oxygen alloys, and effect of oxygen and iron on mechanical and physical properties of iron. Discusses estimation of oxygen in pure iron.

Passivity. See METALS, Passivity.

Permeability. On the Measurement of the Complex Permeability of Iron, H. Nukiyama and Y. Shôji. Tôhoku Imperial Univ.—Technology Reports, vol. 4, no. 1, 1924, pp. 21-49, 19 figs. Complex permeability in non-revolving alternating magnetic field; fundamental ellipse; real and

imaginary fundamental ellipse and density of vector power loss; arrangement for measuring apparent complex permeability, and theory concerning measurement of complex permeability. Bibliography.

Pig. See IRON, PIG.

Plastic Deformation. The Plastic Deformation of α- and γ-iron, F. C. Thompson and W. E. W. Millington. Iron & Steel Inst.—Advance Paper, no. 15, for meeting May 1924, 26 pp., 14 figs. Results of investigation.

Production Direct from Ore. See IRON METALLURGY, Direct Production Process.

Red-Shortness. Influence of Sulfur, Oxygen, Copper and Manganese on the Red-Shortness of Iron, J. R. Cain. Am. Electrochem. Soc.—Advance Paper no. 16, for meeting Oct. 2-4, 1924, pp. 233-245, 5 figs. Review of work of previous investigators. Details of investigations made on a series of small experimental ingots, and results obtained.

Salt Solutions, Action on. The Action of Salt Solutions on Iron and Steel in the Presence of Oxygen, U. R. Evans. Chem. & Industry, vol. 43, no. 44, Oct. 31, 1924, pp. 315T-322T, 9 figs. Detailed study of action of drops of solutions of different salts on iron, with special regard to factors which cause some salts to stimulate corrosion and others to reduce it.

Separation of Calcium and. Ferric Oxalate and Its Application to the Separation of Iron and Calcium (Sur l'oxalate ferrique; application à la séparation du fer et du calcium), J. Barlot. Société Chimique de France—Bul., vol. 35-36, no. 8, Aug. 1924, pp. 1026-1030. Ferric oxalate is obtained by slow evaporation of solution of ferric hydroxide in saturated oxalic-acid solution; it is proposed to separate iron and calcium by taking advantage of fact that in presence of ammonium oxalate and acetic acid, double calcium ferric oxalate is quantitatively decomposed into soluble ferric ammonium oxalate and insoluble calcium oxalate.

Spectrum. See SPECTRA, Iron.

Sponge. The Production of Sponge Iron, C. E. Williams, E. P. Barrett and B. M. Larsen. U. S. Bur. Mines—Report of Investigations, no. 2656, Nov. 1924, 14 pp., 7 figs. Use of sponge iron for precipitation of metals and for conversion to iron and steel; tests with small direct-fired rotary kilns; concentration of furnace products.

Steel and. See IRON AND STEEL.

Strain Limit. The Strain Limit of Iron (Die Fliessgrenze des Eisens), A. Nádai. Schweizerische Bauzeitung, vol. 83, nos. 14 and 15, Apr. 5 and 12, pp. 157-160 and 172-175, 42 figs. Results of tensile compression tests with specimens of soft iron.

Sulphur Determination. Apparatus for the Determination of Sulphur in Iron and Steel (Ein neuer Apparat zur Bestimmung von Schwefel in Eisen und Stahl). Chemiker-Zeitung, vol. 48, no. 38, Mar. 27, 1924, pp. 180-181, 1 fig. Describes compact apparatus which requires no supporting stand and consists simply of two pieces of strong glassware; device consists of vessel shaped like outer case of Liebig condenser, but with upper outlet only, connected to absorption apparatus; through axis of this vessel is fitted trapping device which prevents water in vessel from running back into flask and at same time efficiently removes hydrogen chloride from evolved gases.

Determine Sulphur Content in Iron, L. J. Wise and L. H. Rudesill. Foundry, vol. 52, no. 9, May 1, 1924, pp. 347-348. Points out inaccuracy of evolution method when sulphur content is over 0.10 per cent, and gives results of new method tried by author.

New Analytical Measuring Method for the Determination of Sulphur in Iron and Steel (Neues massanalytisches Verfahren zur Schwefelbestimmung in Eisen und Stahl), H. Pinsl. Stahl u. Eisen, vol. 44, no. 3, Jan. 17, 1924, pp. 72-74. Points to high cost of iodometric method; principles underlying new method and results of tests on iron and steel samples.

Transformations in. On the Transformations in Pure Iron, K. Honda. Am. Soc. for Steel Treating—Trans., vol. 6, no. 2, Aug. 1924, pp. 187-194, 6 figs. Discusses A_3 transformation not being change of phase, X-ray analysis showing that there is no change of phase below A_3 point; nature of A_2 transformation, showing distinct difference between A_2 change and ordinary change of phase.

Wrought, Nick-Bend Test for. The Nick-Bend Test for Wrought Iron, H. S. Rawdon and S. Epstein. U. S. Bur. Standards—Technologic Papers, no. 252, Feb. 29, 1924, pp. 115-155, 23 figs. Details of and results obtained from investigation which consisted of fracturing, under different conditions, of nicked bars of a number of grades of wrought iron, and study of character of fracture.

IRON ALLOYS

Acrite. See Stellite and Similar.

Chromium-Iron. Some Engineering Applications of High-Chromium-Iron Alloys, C. E. MacQuigg. Am. Soc. for Testing Matls.—Preprint of paper no. 19j, for meeting June 24-27, 1924, 10 pp., 6 figs. Uses and limitations of an alloy with about 25 to 30 per cent of chromium and fractions of one per cent of silicon and manganese, remainder largely iron; carbon varies from about 0.1 to 3 per cent, depending on properties desired.

Corrosion. The Corrosion of Iron Alloys by Copper Sulfate Solution, C. M. Kurtz and R. J. Zaumeyer. Am. Electrochem. Soc.—Advance Paper, no. 26, for meeting Oct. 2-4, 1924, pp. 417-426. Samples of 400 different forgeable iron alloys were subjected to copper sulphate test; alloys containing chromium appeared most resistant; silicon was also found to be very effective.

Dendritic Segregation. Use of Sodium Picrate in Revealing Dendritic Segregation in Iron Alloys, A. Sauveur and V. N. Krivobok. Am. Inst. Min. & Met. Engrs.—Trans., no. 1304-S, Feb. 1924, 13 pp., 10 figs. Explains possibility of using advantageously a boiling solution of sodium picrate to reveal dendritic segregation in steel; mechanism of action of reagent; failure of manganese alone to produce persistent dendritic segregation.

Iron-Carbon. A Laboratory Method for the Preparation of Small Steel Bars Differing Only in Carbon Content and the Effect of Changes in Carbide Concentration on the Specific Resistance, E. D. Campbell and G. W. Whitney. Am. Soc. for Steel Treating—Trans., vol. 6, no. 1, July 1924, pp. 33-50. Results of laboratory tests by means of which small steel bars varying only in carbon content may be prepared; also specific resistance measurements on these bars when annealed and when hardened by quenching in oil or in water.

Iron-Carbon and Iron-Nickel. The Granulation Hypothesis and the Delta-Gamma Change in Iron-Carbon and Iron-Nickel Alloys, N. T. Belaiew. Am. Soc. for Steel Treating—Trans., vol. 5, no. 6, June 1924, pp. 549-570, 12 figs. Points out that dendritic structure of alloys, as revealed by macro-etching, is a very stable structure and is not readily broken up during usual heat treatment operations. Discussion of castings and slowly cooled steels in relation to structure of dendrites, based upon investigations of author and Giolitti. Describes and discusses author's granulation

theory, and gives explanation of manner in which delta-gamma transformation might account for occurrence of granulation in alloys, cooled down from melt. Bibliography.

Iron-Nickel. Hardness of Iron-Nickel Alloys (Die Härte von Eisen-Nickel-Legierungen), H. Schottky. Zeit. für anorganische u. allgemeine Chemie, vol. 133, no. 1, Feb. 11, 1924, pp. 26-28. Maximum hardness of iron-nickel alloys depends on co-existence of two solid solutions, viz., α-iron in α-nickel and γ-iron in α-nickel.

Iron-Oxygen. See IRON, Oxygen in.

Iron-Silicon. Density of Iron-Silicon Alloys and Its Relation to Diagram of State (Ueber die Dichte von Eisen-Silizium-Legierungen und deren Beziehung zum Zustandsdiagramm), O. Hengstenberg. Stahl u. Eisen, vol. 44, no. 31, July 31, 1924, pp. 914-915, 1 fig. Results of pyknometer experiments with 25 to 95 per cent silicon alloys at 18 per cent, gives curve of Si content and specific volume and explains its points.

See also NITRIC ACID, Plants, Acid-Resisting Iron for.

Magnetic and Electrical Properties. Magnetic and Electrical Properties of the Ternary Alloys FE-SI-C, T. D. Yensen. Am. Inst. Elec. Engrs.—Jl., vol. 43, no. 6, June 1924, pp. 558-567, 19 figs. Results of author's investigations show that carbon is largely responsible for variations in magnetic properties of iron and iron alloys, and that grain size has large and definite influence on magnetic properties; detrimental effect of sulphur, phosphorus and manganese on pure iron; beneficial effect of phosphorus on high-silicon alloys; increased reluctivity, coercive force, or hysteresis loss, due to carbon and other impurities are caused by inherent corresponding property of these precipitated impurities. (Abridged.)

Micrographic Detection of Carbides. Micrographic Detection of Carbides in Ferrous Alloys, N. B. Pilling. Am. Inst. Min. & Met. Engrs.—Trans., No. 1289-S, Jan. 1924, 5 pp., 6 figs., also (abstract) Min. & Metallurgy, vol. 5, no. 205, Jan. 1924, p. 31. New reagent developed for micrographic analysis of silicon steels, consisting of a dilute solution of nitric acid and methyl alcohol in nitrobenzol; action differs from that of sodium picrate in that there is no persistent deep-seated staining and solution is used cold.

Microstructure of Iron-Carbon. The Microstructure of Austenite and Martensite, F. F. Lucas. Am. Soc. Steel Treating—Trans., vol. 6, no. 6, Dec. 1924, pp. 669-686 and (discussion) 686-691, 37 figs. on supp. plates. Author applies photomicrographical methods to study of structure of austenite and martensite, from results of which logical deductions of scientific value may be drawn; that revelations by high-power photomicrography seem to corroborate findings by methods of X-ray analysis is significant and should lead to better understanding of metal structures.

Preparation and Properties. Preparation and Properties of Pure Iron Alloys, J. F. T. Berliner. U. S. Bur. Standards—Scientific Papers, no. 484, Mar. 5, 1924, pp. 347-356, 4 figs. Determination of critical ranges of pure iron-carbon alloys by thermoelectric method.

Stellite and Similar. Stellite and Similar Alloys (Stellit und Stellitähnliche Legierungen), E. H. Schulz. Zeit. für Metallkunde, vol. 16, nos. 9 and 10, Sept. and Oct. 1924, pp. 337-343, and 382-387 and (discussion) 387-390, 28 figs. Sept.: Deals with alloys of ferrous metals; magnet steel; properties and heat treatment; permalloy; chemically highly resistive nickel and cobalt alloys; composition, structure, and efficiency of stellite. Oct.: Article by C. W. Drescher, on production and tests with acrite, a new cutting metal of adequate hardness, toughness, and resistance to heat.

IRON CASTINGS

Automobile Cylinders. Making a Monobloc Cylinder Casting. Eng. Production, vol. 7, no. 141, June 1924, pp. 176-180, 25 figs. Equipment designed for intensive manufacture of small monobloc cylinder castings of 63-mm. bore by 69-mm. stroke; methods adopted to secure quality in quantity production.

Reinforced Gray-Iron Castings (La fonte armée). Fonderie Moderne, vol. 18, Jan. 1924, p. 16, 1 fig. Describes process employed for manufacture of automobile-engine cylinders by Belgian foundry; all parts of cylinder where porosity is frequent are provided with thin steel wall which welds closely to iron and ensures perfect tightness; by use of this method it becomes possible to cast cylinders in soft graphitic irons; same method has been employed for making high-pressure gas and liquid containers.

Burning-On. Burning-on, J. H. List. Foundry Trade Jl., vol. 30, no. 436, Dec. 25, 1924, p. 542, 1 fig. Principles underlying burning-on; scope; basic conditions; governing factors as to possibility of burning; making an open burn-on; cracking of burns; burning-on boxed work.

Chill Formation. Chill Formation in the Annealing Process (Ueber die Schalenbildung beim Temperprozess), P. Oberhoffer and E. Zingg. Stahl u. Eisen, vol. 44, no. 40, Oct. 2, 1924, pp. 1197-1200, 6 figs., partly on supp. plate. Influence of gas phase on reduction and oxidation processes in annealing pots, as shown by practical tests; character of skin and chill; tests to determine cause of trouble.

Cleaning. Cleaning Iron Castings Hydraulically. Iron Age, vol. 113, no. 13, Mar. 27, 1924, pp. 946-948, 2 figs. See also Mech. Wld., vol. 75, no. 1955, June 20, 1924, pp. 389-390. Describes new method of cleaning castings, successfully experimented with at Erie, Pa., foundry of Gen. Elec. Co.; results in considerable saving of labor and time, and eliminates dust. Abstract of paper read by C. B. Lockhart before Pittsburgh Foundrymen's Assn.

Contraction and Warping. Contraction and Warping in Castings, J. Gray. Foundry Trade Jl., vol. 30, no. 427, Oct. 23, 1924, p. 348. Report of paper read to Inst. Brit. Foundrymen.

Cost. The Economic Cost of Iron Castings, H. L. Hall. Machy. (Lond.), vol. 24, no. 615, July 10, 1924, pp. 465-466. Author suggests that while it is true that there are slight variations in prices quoted for heavy and light and cored and uncored castings, both producers and consumers would benefit by adopting his practice of obtaining true cost of making any given casting and using that cost as basis of negotiations.

Cupola Mixtures for. Simplifying Cupola Mixtures, Geo. A. Drysdale. Foundry, vol. 52, no. 11, June 1, 1924, pp. 433-434. Claims that chemical composition of pig irons used should closely parallel that for castings required; uniform amounts used in cupola mixture produce more even product.

Cylinders. See CYLINDERS, Castings for; Motorcycle.

Defective. Defective Castings: Causes and Remedies. Foundry Trade Jl., vol. 29, no. 390, Feb. 7, 1924, pp. 125-128, 10 figs. Causes and remedies of different defects; eccentric cores; venting plates and gutters; small high-speed flywheels.

Diesel-Engine. See DIESEL ENGINES, Castings for.

Electric-Generator. Canadian Foundry Producing Record Castings, F. H. Bell. Can. Foundryman, vol. 15, no. 2, Feb. 1924, pp. 18-21 and 29, 4 figs. Methods of Can. Westinghouse Co., Ltd., Hamilton, in producing large electric generators.

Foundry Methods. See IRON FOUNDING.

Gray-Iron, Annealing. The Soft Annealing of Gray Iron Castings (Ueber das Weichglühen von Grauguss), E. Schüz. Stahl u. Eisen, vol. 44, no. 5, Jan. 31, 1924, pp. 116-118, 2 figs. Results of tests on time of annealing and speed of cooling of silicon-poor, thin-walled castings, for purpose of obtaining high dgree of softness; metallographic determination of phenomena through quenching tests; practical results.

Green-Sand. New Ways of Producing Castings in Green Sand (Neue Wege in der Herstellung von Gussstücken mit grünen Kernen), Freytag. Giesserei-Zeitung, vol. 21, no. 14, July 15, 1924, pp. 302-306, 13 figs. Detailed description and illustrations of new method for producing small castings in quantities.

Green-Sand Cores. New Methods for the Production of Castings with Green-Sand Cores (Neue Wege in der Herstellung von Gussstücken mit grünen Kernen), Freytag. Giesserei-Zeitung, vol. 21, no. 4, Feb. 15, 1924, pp. 62-65, 11 figs. A new method for production of electric-motor casings with cast-on webs and flanges, according to which not only casing core, but also flange core is set in green-sand mold and boxes are decanted in green state.

Locomotive. Making Locomotive Castings, H. E. Diller. Foundry, vol. 52, nos. 2, 3, and 4, Jan. 15, Feb. 1, and 15, 1924, pp. 53-60, 89-95, and 137-143, 27 figs. Jan. 15: Survey of objects and problems of foundry of Baldwin Locomotive Works, and description of molding and core work. Feb. 1: Description of molding and core work for making locomotive cylinders. Foundry operations and control, and study of foundry layout. Feb. 15: Supervision by contractors.

Molecular Equilibrium in. Molecular Equilibrium in Grey Iron Castings, I. Lamoureux. Foundry Trade Jl., vol. 30, no. 435, Dec. 18, 1924, pp. 524-525. Discusses problem of producing castings which shall be free from internal stresses; remedies for contraction; method of casting; chills and denseners; annealing and tumbling. (Abstract.) Translated from paper read before Assn. Technique de Fonderie.

Patterns. See PATTERNS.

Permanent-Mold. Permanent Mold Casting Methods Cut Production Expense, D. H. Meloche. Automotive Industries, vol. 50, no. 13, Mar. 27, 1924, pp. 711-714, 11 figs. Chief problem in developing successful method was to regulate properly cooling rate; results achieved have resulted in better quality and less cost. (Abstract.) Paper read before Soc. Automotive Engrs.

Reinforced Cylinders. See Automobile Cylinders.

Semi-Steel. See SEMI-STEEL, Castings.

Sulphur as Hardening Agent. Sulphur as a Hardening Agent, R. H. Palmer. Foundry, vol. 52, no. 22, Nov. 15, 1924, pp. 894-896, 8 figs. Series of experiments carried out to determine relative hardening value of varying amounts of sulphur added to iron which later was poured into chill molds.

Test Bars. Testing Iron to Control the Properties of Castings, G. W. Gilderman. Foundry Trade Jl., vol. 30, no. 428, Oct. 30, 1924, pp. 385-386. Factors that tend to make test bars unreliable; variation in casting qualities; chill tests criticized; test bars and properties of iron in castings; precautions needed in making test bars; hardness testing.

Titanium Additions, Effect of. Some Experiments as to the Effect of Titanium in Iron Castings (Einige Versuche über den Einfluss eines Titanzusatzes zum Rohguss auf den metallurgischen Verlauf des Temperprozesses), E. Piwowarsky. Stahl u. Eisen, vol. 44, no. 26, June 26, 1924, pp. 745-748, 7 figs. Results show that titanium favors formation of fine structure; effects more rapid decomposition of carbide and gasification of carbon.

Transformer-Box Production. Making Transformer Castings, P. Dwyer. Foundry, vol. 52, no. 3, Feb. 1, 1924. pp. 81-85, 10 figs. Describes methods and equipment employed in Pittsfield (Mass.) foundry of Gen. Elec. Co. in making transformer boxes.

Welding. The Influence of Mass Upon Methods of Preheating and Welding Large Iron Castings. Acetylene Jl., vol. 25, no. 9, Mar. 1924, pp. 441-443, 4 figs. Typical example of difficulties encountered in repairing massive castings, and correct method of carrying out repair. From Acetylene & Welding Jl., Lond.

See also ELECTRIC WELDING, ARC, Iron Castings.

IRON DEPOSITS

Alabama. Notes on the Clinton Group in Alabama, T. H. Aldrich. Am. Inst. Min. & Met. Engrs.—Trans., no. 1375-M, Oct. 1924, 4 pp., 1 fig. and (abstract) Min. & Metallurgy, vol. 5, no. 215, Nov. 1924, pp. 547-548, 1 fig. Clinton group of the Silurian holds red or fossiliferous ore and is from 100 to 500 ft. thick in Alabama; examination of boreholes made in drilling for oil demonstrate possibility of source for red ore not seriously thought of until lately.

Canada. See also IRON ORE, Canada.

India. Notes on the Kunghka and Manmaklang Iron Ore Deposits, Northern Shan States, Burma, E. L. G. Clegg. India, Geol. Surv.—Records, vol. 54, part 4, 1923, pp. 431-435. Geology, occurrence, and description of ore deposit, and composition of ore.

Lappland. More Iron-Ore in Lappland and of Better Quality. Swedish Export, vol. 7, no. 12, Dec. 1923, pp. 137-139, 1 fig. Gratifying result of deep boring at Kiruna and Malmberget.

Magnetite, Porto Rico. Magnetite Deposits of Eastern Porto Rico, C. R. Fettke. Am. Inst. Min. & Met. Engrs.—Trans., no. 1294-M, Feb. 1924, 15 pp., 6 figs. Geology of district and description of deposits.

Minnesota. Manganiferous Iron Ores of Cuyuna District, Minnesota, C. Zapfee. Am. Inst. Min. & Met. Engrs.—Trans., no. 1390-I, Dec. 1924, 11 pp. It is estimated that reserves of these ores are ample for some time.

New South Wales. Iron, L. F. Harper. New South Wales, Dept. Mines, Geol. Surv.—Bul. no. 4, 1923, 23 pp., 6 figs. on supp. plates. Summary giving information available up to date on iron ore deposits of New South Wales.

Ontario. The Iron Ore Situation in Ontario, G. W. MacLeod. Can. Inst. Min. & Metallurgy—Bul. no. 143, Mar. 1924, pp. 157-165. Facts revealed by Ontario Iron Ore Committee appointed to investigate situation.

Tennessee and North Carolina. Magnetic Iron Ores of East Tennessee and Western North Carolina, W. S. Bayley. No. Carolina Geological & Economic Survey—Bul. 32, 1923, pp. 11-252, 64 figs. and Tennessee Dept. Education Division Geology—Bul. no. 29, 1923, 252 pp., 64 figs., partly on supp. plates. Discusses distribution of hematitic, titaniferous, and non-titaniferous iron ores in rocks of pre-Cambrian age. Study under-

taken to learn something of their value as a source of supply to furnaces in the South.

IRON FOUNDING

Automobile-Foundry Practice. Metallurgical Control in Automobile Foundry Practice, A. Harley. Foundry Trade Jl., vol. 29, no. 395 and 396, Mar. 13 and 20, 1924, pp. 207-210 and 235-237, 19 figs. Modern conditions and tendencies; organization of labor conditions; discusses cast iron, semi-steel, malleable iron, and cast steel castings; molding sands; non-ferrous metals castings; production of a cast-iron cylinder.

Modern Automobile Foundry Practice, P. Pritchard. Foundry Trade Jl., vol. 29, nos. 392, 393, 394, and 395, Feb. 21, 28, Mar. 6, and 13, 1924, pp. 158-161, 169-172, 191-194, and 215-218, 33 figs. Also Automobile Engrs., vol. 14, no. 187, Mar. 1924, pp. 84-91, 22 figs. Underlying principles; sand molds; molding machines; aluminum, its melting and molding, and defects which have to be overcome in founding; aluminum die-casting; cast iron, its melting and molding; coremaking; cylinder casting; mild steel castings; non-ferrous foundry practice; etc.

Studebaker Opens New Shop, P. Dwyer. Foundry, vol. 52, no. 21, Nov. 15, 1924, pp. 888-893 and 903, 13 figs. Detailed practice in connection with making molds and cores by hand and on various types of machines; cleaning room.

Economy in. Economy in Foundry Practice, E. H. Browne. Foundry Trade Jl., vol. 30, no. 412, July 10, 1924, pp. 38-40. Discusses monotony in foundry practice, case of patternmaker, management, layout of foundry, equipment, care of plant, provision of molding tools, design, patterns, molding and melting.

Falkirk, Scotland. Falkirk Uses New Methods, H. C. Estep. Foundry, vol. 52, no. 9, May 1, 1924, pp. 331-339 and 363, 14 figs. How bath tubs, telegraph-poles bases and other castings are made in old Scotch foundry using modern American machinery.

Feeders and Denseners in. Relative Values of Feeders or Denseners in Grey Iron and Malleable Iron, E. Longden. Foundry Trade Jl., vol. 29, no. 386, Jan. 10, 1924, pp. 29-33 and (discussion) Jan. 17, 1924, pp. 48-49, 46 figs. Results of experiments; comparison of merits of feeders and denseners, and comparison between white and gray iron treated in same way and poured into same form of mold; evidence showing effect of gases in producing unsoundness principally in gray iron.

German Practice. German Foundry Practice, Werner. Metal Industry (Lond.), vol. 25, no. 2, July 11, 1924, pp. 38 and 43. See also Foundry Trade Jl., vol 30, no. 421, Sept. 11, 1924, pp. 229-230 and (discussion) 230 and 232. Shurmann cupola; comparison of Shurmann with standard cupola; pearlitic cast iron; anealing cast iron; utilizing bad metal. Abridged report of paper and discussion at Int. Foundry Trades Exhibition, Eng.

Magnesium, Use of. Magnesium and Its Use in Foundry Work (Das Magnesium und seine Verwendung in der Giesserei). Zeit. für die Gesamte Giessereipraxis, vol. 45, no. 11-12, Mar. 22, 1924, pp. 25-26. Use of magnesium in metal industry is generally based on its great affinity to oxygen and to high temperatures it produces when it burns. Used to advantage in casting of aluminum as it deoxidizes any traces of aluminum oxide and improves cast metal in many ways. Also used in copper, brass, bronze, and mixed foundries as a valuable deoxidizer.

Metal Melting, Fuels for. Melting by Natural-Draught Gas and Other Fuels, A. J. Smith. Brass Wld., vol. 20, no. 3, Mar. 1924, pp. 93-94. Results obtained in foundries with different fuels.

Metallurgy. History of Foundry Metallurgy. Metal Industry (Lond.), vol. 24, no. 4, Jan. 25, 1924, pp. 83-84. Traces development of basis of modern iron-foundry metallurgy, leading up to present-day opinions as to grading of pig irons.

Modern Practice. Evolution of the Iron Trade and its Relation to Foundry Practice, J. I. Coleman. Foundry Trade Jl., vol. 30, no. 424, Oct. 2, 1924, pp. 287-289. Notes on cupola practice; sand; mechanical appliances; gating and running of molds.

Recent Evolution in Foundry Practice (Evolution récente de la fonderie), E. Ronceray. Revue de Métallurgie, vol. 21, nos. 1, 2, and 3, Jan., Feb., and Mar., 1924, pp. 4-11, 112-120, and 183-194, 16 figs. Jan.: General progress; semi-steel; fuels; American malleable; light metals; melting apparatus; heating furnaces. Feb.: Molding and casting; dry-sand and chill casting; molding machines. Mar.: Core and patternmaking; general layout of foundries.

Problems. Some Foundry Problems, A. H. Mundey. Foundry Trade Jl., vol. 29, no. 387. Jan. 17, 1924, pp. 58-61 and (discussion) 61-62. Deals with melting problems, non-ferrous alloys, heat treatment of gunmetal, die casting, bell and brass founding, mold facings, high-tensile brasses. beta brass, etc.

Quantity Production. Practical Problems from the Foundry and Pattern Shop (Praktische Betriebsfragen aus der Giesserei und der Modellwerkstatt), König. Giesserei-Zeitung, vol, 21, no. 7, Apr. 1, 1924, pp. 121-124, 8 figs. Quantity production, for example, of electric-motor housings, by means of molding machines with use of green-sand cores.

Thermit, Application of. Application of Thermit in Foundry Practice. West. Machy. World, vol. 15, no. 1, Jan. 1924, pp. 29-30, 1 fig. For increasing temperature of iron and steel, and making semi-steel in ladle; use in riser; titanium thermit cans for purifying iron and steel; method of making steel castings by thermit process.

IRON INDUSTRY

Canada. Iron and Steel Industry in Canada, C. S. Cameron. Iron & Steel of Canada, vol. 7, no. 10, Oct. 1924, pp. 195-204, 3 figs. Gives progress of iron and steel industry in Canada. Abstract of paper read before Empire Min. & Metallurgical Congress, London.

See also IRON AND STEEL, Canadian Industry.

Orange County, N. Y. Orange County Ironmaking, E. C. Kreutzberg. Iron Trade Rev., vol. 75, nos. 3 and 5, July 17 and 31, 1924, pp. 157-160 and 284-288, 8 figs. History of iron industry of Orange County, N. Y. District was principal producer in New York State in Seventies. Historic chain made at Sterling Iron Works.

Power in. Power in the Iron and Steel Industry, B. R. Shover. Iron & Steel Engr., vol. 1, no. 9, Sept. 1924, pp. 452-456. Data and estimates from which deductions are made as to present and probable future tendency of power generation and application in iron and steel industry.

Sweden. The Swedish Iron and Lumber Industry (Die schwedische Eisen- und Holzindustrie), H. von Eckermann. Zeit. des Vereines deutscher Industrie, vol. 68, no. 14, Apr. 5, 1924, pp. 330-334, 5 figs. Importance of charcoal for production of iron and recovery of by-products; extent of iron-ore deposits and purity of Swedish ore; production and export; forestry and lumber industry; sawmills, waste-wood industry, and lumber transportation.

IRON METALLURGY

Developments, 1923. Iron and Steel Metallurgy in 1923, C. E. MacQuigg. Iron Age, vol. 113, no. 1, Jan. 3, 1924, pp. 77-78 and 91-93. Review of literature on developments in fuels and furnaces, iron and steel, alloys and castings; value of research. Bibliography.

Direct-Production Process. Direct Production of Iron From Ore by Electric Process (Direkt järnframställning ur malm på elektrisk väg), A. Grönwall. Teknisk Ukeblad, vol. 71, no. 2, Jan. 11, 1924, pp. 21-22, 1 fig. Description of method in which distintegrated ore is carried in succession to electrically-heated rotary furnaces and then to a melting furnace where a soft iron is produced.

Electric Smelting. Electric Smelting of Iron Ore (Statens forsöksdrift med elektrisk jernmalmsmeltning 1922-23), H. Batt. Teknisk Ukeblad, vol. 71, no. 7, Feb. 15, 1924, pp. 67-69. Historical review of development of electric smelting of iron ore in Norway, with special reference to results recently obtained in experiments performed by Norwegian government.

Electric Smelting of Iron Ore in Norway (Statens forsöksdrift med elektrisk jernmalmsmeltning 1922-23), G. Tysland. Teknisk Ukeblad, vol. 71, nos. 28 and 29, Aug. 23 and 30, 1924, pp. 246-247 and 251-255, 20 figs. New type of furnace was developed in which charcoal is replaced by coke; development of electric coke furnace, patented by C. W. Soderberg, making use of "continuous electrodes"; report of results obtained with this furnace.

Manufacture of Pure Iron. Commercially Pure Iron. Gas Engr., vol. 40, no. 573, Jan. 1924, pp. 4-5, 2 figs. Purification of ingot iron; danger of fracture, and resistance to corrosion.

Reduction from Ore at Low Temperatures. The Reduction of Iron from its Ores at Low Temperatures, J. K. Smith. Foundry Trade Jl., vol. 29, no. 398, Apr. 3, 1924, pp. 280-282. See also Iron & Coal Trades Rev., vol. 108, no. 2928, Apr. 11, 1924, p. 590. Product of blast furnace, energy distribution, functioning of furnace, heat balance considerations, absence of nitrogenization, etc.

Smelters, Oil-Fired. Practical Results of Iron Smelting in an Oil-Fired Smelter without Crucible [Einige Betriebsergebnisse von Eisenschmelzen in einen tiegellosen Schmelzofen mit Oelfeuerung (Bauart Hetsch)], G. H. Zirker. Giesserei-Zeitung, vol. 21, no. 3, Feb. 1, 1924, pp. 41-45, 1 fig. Describes design of smelter and its oil burner and gives working results obtained from eight iron smelters with steel addition.

Sponge-Iron Production. A Process for the Production of Sponge Iron, C. E. Williams, E. P. Barrett and Bernard M. Larsen. U. S. Bur. Mines —Reports of Investigations, no. 2578, Feb. 1924, 5 pp., 1 fig. on supp. plate. Description of process developed by Northwest Experiment Station of Bur. Mines in coöperation with Univ. Wash., Seattle; cost data; uses of sponge iron.

IRON MINES

Electrification. See Minnesota.

Italy. Frigido Copper and Iron Mine (La miniera di rame e ferro del Frigido), L. Monetti. Rassegna Mineraria Metallurgica e Chimica, vol. 61, no. 1, July 15, 1924, p. 11. Discusses reopening of mine, new seams to work, analysis of iron, copper, and lead ores.

Minnesota. Operations of the Mesabi Iron Co., A. B. Parsons. Eng. & Min. Jl.-Press, vol. 117, nos. 4 and 5, Jan. 26 and Feb. 2, 1924, pp. 157-164 and 202-210, 24 figs. History; mining; economics; crushing, concentrating, and sintering of ore.

The First Complete Electrification of an Open-pit Iron-ore Mine in Minnesota, R. S. Walker. Gen. Elec. Rev., vol. 27, no. 9, Sept. 1924, pp. 580-591, 17 figs. Outline of Lake Superior iron ore region, with particular reference to Mesabi Range, and general résumé of open-pit method of mining. Description of electrical equipment of Wabigon open-pit mine, located at Buhl, Minn., on Mesabi Range, which is being electrified, giving specifications and operating costs.

New Brunswick, Canada. Bathurst Iron Mine, C. S. Parsons. Can. Min. Jl., vol. 45, no. 49, Dec. 5, 1924, pp. 1193-1194, 1 fig. Description of mine in New Brunswick, County of Gloucester, Canada.

Roof Support. Roof Support in the Red Ore Mines of the Birmingham District (Alabama), W. R. Crane. Am. Inst. Min. & Met. Engrs.—Trans., Advance Paper no. 1359-M, Sept. 1924, 39 pp., 45 figs. and (abstract) in Min. & Metallurgy, vol. 5, no. 215, Nov. 1924, pp. 546-547. Conditions affecting support; methods of roof support; failure of roof or top rock and of pillars; results of study of roof support.

Spain. The World's Oldest Iron Mine in Spain, C. De Kalb. Mfrs. Rec., vol. 85, no. 13, Mar. 27, 1924, pp. 83-87, 8 figs. Discusses history of mine, and iron and steel developments under way; to be center of great metallurgical development with American electrical equipment.

IRON MINING

Africa. Iron Mining in Northern Africa, A. Grenon. Compressed Air Mag., vol. 29, no. 4, Apr. 1924, pp. 845-847, 8 figs. Describes Djebel-Djerissa mines; composition of ore; mining equipment and methods.

Alabama. Red Iron Ore Mining Methods in the Birmingham District, W. R. Crane. Am. Inst. Min. & Met. Engrs.—Trans., Advance Paper no. 1368-M, Sept. 1924, 33 pp., 20 figs. and (abstract) in Min. & Metallurgy, vol. 5, no. 214, Oct. 1924, pp. 501-503, 1 fig. History and development of district, geology and mineralogy of ore, and detailed description of mining methods employed. Pub. by permission U. S. Bur. Mines.

Straight Line Production. F. J. Crolius. Coal Industry, vol. 7, no. 6, June 1924, pp. 224-230, 6 figs. Iron mining at Woodward Iron in Birmingham, Ala., district; Clinton hard and soft ores; system of mining, production and consumption of iron; brown ore; haulage and power; transportation.

Methods. Straight Line Production, F. J. Crolius. Blast Furnace & Steel Plant, vol. 12, nos. 5 and 6, May and June 1924, pp. 226-232 and 264-267 and 305, 11 figs. Practice at Woodward Iron in Birmingham, Ala., district; chemical composition of ores; mining system; production and consumption of iron ore; typical installations; Crockard furnace top; pig bed machines.

Michigan. Mining Methods at the Cliffs Shaft Mine, L. Eaton. Explosives Engr., vol. 2, no. 2, Feb. 1924, pp. 37-40, 8 figs. Ore at this mine is a hard specular hematite; room and pillar method used; floors mined by underhand stoping; backstoping employed for some orebodies; drilling and blasting methods.

IRON ORE

[See also IRON DEPOSITS.]

Beneficiation. See Canada; Low-Grade.

Canada. Beneficiation Tests, W. B. Timm. Can. Min. Jl., vol. 45, no. 20, May 16, 1924, pp. 481-483. Results of experimental tests on beneficiation of Canadian iron ores.

The Iron Ore Report. Can. Min. Jl., vol. 45, no. 7, Feb. 15, 1924, pp. 154-156. Extracts from report of Ontario Iron Ore Committee, appointed

to investigate extent and quality of deposits of low-grade iron ores in Ontario, best commercial methods of beneficiating them, and generally what steps or measures should be adopted to enable low-grade and other iron ores of this Province to be utilized in production of pig-iron and steel.

See also Minnesota.

Concentration. Iron Ores, the Basis of Iron Production (Die Eisenerze als Grundstoffe der Eisenerzeugung), J. Ferfer. Bergbau, vol. 37, no. 18, Sept. 4, 1924, pp. 493-500. Evaluation of iron ores; manganese and phosphorus content; most important iron ores and their metallurgical treatment; gives list of German ores with analyses.

Desulphurization of Pyrites. The Desulphurization of Iron Pyrites, F. C. Thompson and N. Tilling. Chem. & Industry, vol. 43, no. 9, Feb. 29, 1924, pp. 37T-46T, 13 figs. Experimental determination of effect of various common gases and gas mixtures upon desulphurization of pyrites at different temperatures; and determination of vapor pressures of sulphur dioxide, sulphur trioxide, and oxygen during oxidation of iron pyrites.

Direct Reduction. Studies Direct Reduction of Ore. Iron Trade Rev., vol. 74, no. 25, June 19, 1924, pp. 1635-1636, 1 fig. Nodular product obtained by treating high or low-grade iron ore in series of rotary kiln is converted into wrought iron and steel; physical and chemical characteristics; experiments carried out at demonstration plant built by Hornsey Iron Co., England.

See also IRON METALLURGY, Direct Production Process.

Germany. Origin of Iron Manganese Ores in the Spessart and Odenwald (Die Entstehungsweise der Eisenmanganerze im Zechstein von Spessart und Odenwald), K. Hummel. Glückauf, vol. 60, no. 35, Aug. 30, 1924, pp. 765-768. Discusses geology and tectonics of Dyas or Permian system.

Hematite. Notes on the Origin of Clinton Hematite Ores, G. W. Stose. Economic Geology, vol. 19, no. 5, Aug. 1924, pp. 405-411, 5 figs. Discusses origin of Clinton hematite ores of New York and Appalachians and concludes Irondale Mine formation was in part deposited originally as carbonate of iron, etc.

Lake Superior District. Future of Lake Ore Outlined, M. C. Lake. Iron Trade Rev., vol. 75, no. 26, Dec. 25, 1924, pp. 1701-1705, 2 figs. Depletion of reserves of merchantable material in sight; annual shipment of 75,000,000 tons in 10 years indicated.

Low-Grade, Mesabi Range. The Development of Low Grade Iron Ores on the Mesabi Range, W. G. Swart. Minn. Federation of Architectural & Eng. Soc.—Bul., vol. 9, no. 6, June 1924, pp. 11-14. Discusses use and beneficiation of low-grade ores.

Low-Temperature Reduction. Low Temperature Reduction of Iron Ore, J. Kent Smith. Iron Age, vol. 113, no. 14, Apr. 3, 1924, pp. 1003-1006. Direct processes and blast furnace; CO as factor in both; metallurgical, thermal and fuel conditions compared.

Magnetite. Commercial Possibilities of the Magnetite Slates of the Cuyuna Range, G. A. Thiel. Eng. & Min. Jl.-Press, vol. 118, no. 19, Nov. 8, 1924, pp. 735-738, 7 figs. Outlines occurrence of magnetite-bearing formations, their relations to intrusive igneous rocks of region, and bearing of microstructure of ore on possibility of magnetic concentration. Pub. by permission of Minn. Geol. Surv.

On the Electrical Conductivity of Magnetite, E. Wilson and E. F. Herroun. Roy. Soc.—Proc., vol. 105, no. A731, Mar. 1, 1924, pp. 334-345, 3 figs. Deals with electrical conductivity of certain varietites of magnetite as affected by impressed voltage, temperature, compressive stress, and magnetization.

The Smelting of Magnetite, B. Stoughton. Can. Inst. Min. & Metallurgy—Bul., no. 149, Sept. 1924, pp. 594-596. Reasons why smelting of magnetite is more costly than that of hematite.

Minnesota. Iron Sulphides in Magnetic Belts near the Cuyuna Range, G. A. Thiel. Economic Geology, vol. 19, no. 5, Aug. 1924, pp. 466-472, 1 fig. Discusses occurrence of numerous lenses of magnetite slates, geology of Long Lake region, pyrrhotite in Lake Superior region, paragenesis of iron sulphides, etc.

Minnesota and Ontario, C. P. McCormack. Iron & Steel of Canada, vol. 7, no. 4, Apr. 1924, pp. 66-67 and 77-78, 1 fig. Particulars of attempt being made to beneficiate low-grade magnetite of Babbitt, Minn., giving details of ore occurrences, conditions and description of plant, and application to Ontario ores where problem is similar.

Purification. Purifying Iron Ore by Chemical Methods, A. J. Moxham. Iron Age, vol. 113, no. 23, June 5, 1924, pp. 1637-1639. Results of work on Delaware green sands, using acid leach with subsequent washing for separation of iron, potash, and alumina.

Reduction. Comparative Investigations as to Permeability to Gas, Porosity, Compression Strength and Velocity of Reduction of Iron Ores (Vergleichende Untersuchungen über die Gasdurchlässigkeit, Porosität, Druckfestigkeit und Reduktionsgeschwindigkeit von Eisenerzen), F. Wüst and P. Rütten. Mitteilungen aus dem Kaiser-Wilhelm-Institut für Eisenforschung zu Düsseldorf, vol. 5, 1924, pp. 1-12, 10 figs. Shows that velocity of reduction is dependent mainly on physical structure of ore and in first place on its permeability to gas and its porosity.

Time Element in Iron Ore Reduction, P. H. Royster, T. L. Joseph and S. P. Kinney. Blast Furnace & Steel Plant, vol. 12, no. 5, May 1924, pp. 246-250, 7 figs. Series of experimental determinations which suggest very low volume of efficiency of reduction. Published by permission of U. S. Bur. Mines.

Silica Content, Effect of. How Silica Affects Cost of Iron, T. T. Read, T. L. Joseph and P. H. Royster. Iron Trade Rev., vol. 74, no. 4, Jan. 24, 1924, pp. 288-291, 2 figs. Great variation shown in values of iron ore; method suggested for scientific determination, according to results obtained in furnaces.

Sweden. Marketing Possibilities of Swedish Iron Ore (Avsättningsmöjligheter för den svenska järnmalmssligen), E. Fornander. Jernkontorets Annaler, vol. 108, Tekniska Diskussionsmötet, May 31, 1924, pp. 11-35, 3 figs. Statistics of Swedish iron ore production; consumption by Swedish steel mills and in briquetting plants; statistics of Swedish ore exports.

Vanadium in. Occurrence of Vanadium in Iron Ores, Its Action During the Metallurgical Processes and the Possibility of Its Extraction (Om vanadinens förekomst i järnmalmer, dess förhållande vid de järnmetallurgiska processerna samt möjligheterna för dess tillgodogörande), R. von Seth. Jernkontorets Annaler, vol. 108, no. 11, 1924, pp. 561-583. Vanadium occurs in German and French slags, English pig iron, iron ores in United States, Canada, Norway and Sweden. Is easily reduced in blast furnace and easily oxidized in Bessemer or basic process. Proposes to extract vanadium from slag obtained during early part of latter processes, particularly from basic process.

Volumetric Determination of Iron. Volumetric Determination of Iron by Titanous Chloride Method of Knecht and Hibbert (Ueber die massanalytische Eisenbestimmung mit Titantrichlorid nach Knecht und Hibbert), L. Brandt. Chemiker-

Zeitung, vol. 48, nos. 51 and 52, Apr. 26 and 29, 1924, pp. 265-266 and 270-271. Determination of iron in ores by titration of hydrochloric-acid solution of ore with titanous chloride solution gives results equally as accurate as those obtained by permanganate method, and can be carried out more rapidly; under described conditions copper is determined quantitatively together with iron; antimony, vanadium, and platinum cause high results, and cobalt and chromium interfere only if present in sufficient amount for color of their solutions to mask end point.

World Reserves. Iron Ore Reserves, O. R. Kuhn. Iron Age, vol. 114, nos. 19 and 20, Nov. 6 and 13, 1924, pp. 1204-1205 and 1248-1249, and 1285-1287, 3 figs. Nov. 6: Reserves of world which may be smelted in American furnaces; United States reserves should last 250 years. Nov. 13: Reserves of Eastern Hemisphere, with particular reference to sources which ultimately may become available for smelting in American furnaces.

World's Resources. Estimating Iron Ore Resources. Iron Trade Rev., vol. 75, no. 24, Dec. 11, 1924, pp. 1568-1569, 2 figs. World's actual supply sufficient for 76 years; potential tonnage to be exhausted by year 2200; amount available compared with increasing rate of consumption of pig iron.

IRON, PIG

Carbon Content. See STEEL, Carbon-Content Determination.

Characteristics and Uses. Characteristics that Chemical Analysis Fails to Disclose in Pig-Iron and Castings, W. E. Jominy. Foundry Trade Jl., vol. 30, no. 428, Oct. 30, 1924, pp. 371-376, 16 figs. See also Metal Industry (Lond.), vol. 25, no. 18, Oct. 31, 1924, p. 432, 2 figs. Results of author's examination of pig-iron samples over period of four months from five different blast furnaces; gives comparative strengths of irons produced from coke furnaces and those from charcoal furnaces. (Abstract.) Paper read before Am. Foundrymen's Assn.

Pig-Iron: Its Characteristics and Uses, H. Field. Foundry Trade Jl., vol. 29, no. 402, May 1, 1924, pp. 353-358, 1 fig. Elementary paper having the object to help foundry worker understand why there are "brands" of iron, why one brand is preferred to another, why pig-iron should be carried the length and breadth of the country, and why various castings in foundry are cast from different mixtures.

Charcoal, Manufacture of. The Mysore Distillation and Iron Works Design and construction, J. P. Carmody. Mysore Engrs.' Assn. Bul., vol. 1, no. 1, July-Sept. 1923, pp. 23-72. Description of works located at Bhadravati on Bhadra River, British India, including saw-mill, carbonizing, distillation, ore-crushing, and blast-furnace plants, power house and electrical equipment, and boiler house. Crude methyl alcohol, acetate of lime, tar and light oils are recovered from pyroligneous acid.

Coke and Charcoal. Coke and Charcoal Irons Differ, W. E. Jominy. Iron Trade Rev., vol. 75, no. 16, Oct. 16, 1924, pp. 1023-1025 and 1027, 2 figs. Chemical analyses fail to disclose certain characteristics in pig irons and castings; charcoal iron shows decided increase in physical properties on remelting; results of tests. (Abstract.) Paper presented before Am. Foundrymen's Assn.

Electric Smelting. See ELECTRIC FURNACES, Iron-Ore Reduction; Pig-Iron.

Foundry. Fusion Materials in the Iron Foundry (Schmelzstoffe in der Eisengiesserei), M. Engelen. Zeit. für die Gesamte Giessereipraxis, vol. 45, no. 21, May 24, 1924, pp. 141-143. Discusses hematite pig, foundry pig and Luxemburg pig, their compositions; special pig, etc.

French, Characteristics. French Pig Iron Characteristics Defined, V. Truant. Iron Age, vol. 114, no. 19, Nov. 6, 1924, pp. 1243-1244. Phosphoric and hematite irons of varying compositions used for different purposes; analyses of several grades.

Grading and Mixing. Grading and Mixing of Pig Irons. Metal Industry (Lond.), vol. 25, nos. 7 and 8, Aug. 15 and 22, 1924, pp. 155-156 and 179-180. Discusses American method of grading by analysis; noteworthy changes in American opinion as to completely chemical grading; difficulties of complete chemical limits; influence of melting conditions difficult of complete explanation on chemical basis; accuracy of analyses; scope of analytical control, scope of control by fracture; graphite condition and thermal influences, and chilling.

See also IRON FOUNDING, Metallurgy.

Judging and Mixing. The Judging and Mixing of Pig-Iron, H. J. Young. Metal Industry (Lond.), vol. 25, no. 10, Sept. 5, 1924, pp. 227-228. Author's reply to the various criticisms of his recent paper by above title.

Machine-Construction. The Development of Species of Pig Iron for Machine Construction (Ueber die Entwicklung der Gusseisensorten für den Maschinenbau), H. Koch. Schweizerische Bauzeitung, vol. 83, no. 22, May 31, 1924, pp. 251-254, 5 figs. Discusses properties of different alloy components, from which it is evident that through suitable additions and control of cooling speed, graphite quantity and properties of pig iron can to certain extent be regulated.

Manufacture. Physical Changes in Pig Iron due to Primary Temperatures, Metal Industry (Lond.), vol. 24, no. 9, Feb. 29, 1924, pp. 203-205, 3 figs. Influence of blast-furnace temperature and related factors on structure of resulting pig iron.

Oxygen, Use in Production of. Oxygen in Pig Iron (Några tankar om syre i tackjärn), J. A. Leffler. Jernkontorets Annaler, vol. 108, no. 3, 1924, pp. 149-177, 4 figs. Superiority of charcoal as a deoxidizer is claimed to be one of the main reasons for superiority of charcoal iron over coke iron. Analyses of Swedish charcoal iron as compared to German and English coke iron show also the very low contents of sulphur and phosphor of charcoal iron as compared to the much higher contents of these elements in coke iron.

The Use of Oxygen and Oxygenated Air in the Production of Pig Iron (Die Verwendung von Sauerstoff und sauerstoffreicher Luft bei der Roheisenerzeugung), R. Schenck. Stahl u. Eisen, vol. 44, no. 19, May 8, 1924, pp. 521-526, 3 figs. Reviews previous works and discusses phenomena in blast furnace and effect on them of nitrogen-free air and oxygen enrichment; summary of advantages to be gained by use of pure oxygen.

Pig-Casting Machine. La Follette Improvements. Iron Age, vol. 113, no. 19, May 8, 1924, p. 1353. See also Iron Trade Rev., vol. 74, no. 21, May 22, 1924, pp. 1368-1369, 2 figs. Single-strand pig-iron casting machine installed at blast furnace; improvements to other departments.

Production Cost, Effect of Silica in Ore on. The Effect of Silica in Iron Ore on Cost of Pig Iron Production, T. T. Read, T. L. Joseph and P. H. Royster. U. S. Bur. Mines—Reports of Investigations, no. 2560, Jan. 1924, 10 pp., 2 figs. on supp. plate. Results of investigation.

World Production. Pig Iron and Steel Output of the World, Edwin F. Cone. Iron Age, vol. 113, no. 1, Jan. 3, 1924, pp. 70-78, 3 figs. Two pre-war and five post-war years compared; steel production exceeds 1913; exports still below pre-war.

IRON AND STEEL

Austrian Industry. Austrian Iron and Steel Industry and Trade, E. M. Zwickel. Trade Information Bul. (Supp. to Commerce Reports), no. 265, Sept. 1, 1924, 19 pp. Information relating to production, prices, foreign trade, and market conditions of industry in 1923, and production and price data for first half of 1924; discussion of cartels and conventions, coal supply, labor, and freight rates; account of Alpine Montangesellschaft, largest Austrian iron and steel concern.

Bibliography, 1923. Review of Iron and Steel Literature for 1923, E. H. McClelland. Forging —Stamping—Heat Treating, vol. 10, no. 1, Jan. 1924, pp. 5-9. Classified list of more important books, serials and trade publications during year, with few of earlier date, not previously announced.

Body. "Body," J. K. Smith. Foundry Trade Jl., vol. 30, no. 416, Aug. 7, 1924, pp. 112-113. Popular definition of "body." Functions of blast furnace; puddling process and body; relationship between nitrogen and body.

British Industry. British Iron and Steel Industry, F. W. Harbord and E. F. Law. Iron & Coal Trades Rev., vol. 108, no. 2937, June 13, 1924, pp. 1011-1012. Review of improvements and advances made during last 70 years, and salient features of industry in principal producing districts. From paper read at Empire Mining and Metallurgical Congress.

Some Economic Considerations Affecting the Iron and Steel Industry, W. J. Larke and M. S. Birkett. Iron & Coal Trades Rev., vol. 108, no. 2937, June 13, 1924, pp. 1012-1014. See also Iron Trade Rev., vol. 74, no. 26, June 26, 1924, pp. 1697-1700 and 1702. Outlines present position of British iron and steel industry, together with some indication of probable lines of development in future. From paper read at Empire Mining and Metallurgical Congress.

Canadian Industry. Canadian Iron and Steel Industry and Trade, G. E. Phoebus. Trade Information Bul. (Supp. to Commerce Reports), no. 285, Nov. 1924, 12 pp. Canadian producers have been encouraged by establishment of governmental bounties in certain provinces; particulars of these efforts. Detailed statistics of Canadian iron and steel works, production of primary iron and steel products within Dominion, movement of iron ore and consumption of raw materials, and outgoing and incoming shipments of iron and steel.

The Iron and Steel Industry in Canada, C. S. Cameron. Iron & Coal Trades Rev., vol. 108, no. 2936, June 6, 1924, pp. 971-974. See also Engineer, vol. 138, nos. 3578 and 3579, July 25 and Aug. 1, 1924, pp. 112-113, and 128-129. Data regarding different steel works. Confines attention to fundamental processes, smelting of ore and production of primary forms of steel and those made directly from them, such as merchant bars, structural shapes, rails, plates, wire rods, and generally those that are sent from works of origin to others for further fabrication. From paper read at Empire Min. and Met. Congress.

The Iron and Steel Industry of the Dominion, C. S. Cameron. Can. Machy., vol. 32, nos. 8 and 9, Aug. 21 and 28, 1924, pp. 22-23 and 22-23. Brief outline of history of industry in Canada from its inception to present day with particular emphasis on its growth as factor in prosperity.

Chemical Specifications. Interpretation of Chemical Specifications for Iron and Steel in Relation to Analytical Accuracy, C. H. Ridsdale. Iron & Coal Trades Rev., vol. 108, no. 2923, Mar. 7, 1924, pp. 382-383. See also Iron & Steel Engr., vol. 7, no. 7, July 1924, pp. 130 and 133 and Chem. News, vol. 128, no. 3348, June 13, 1924, pp. 375-380. Abstract of paper read at joint meeting of Cleveland Instn. Engrs., Newcastle Sec. Soc. Chem. Industry, and Inst. of Chemistry.

Corrosion. Prevention of Corrosion of Iron and Steel, C. P. Perin. Engrs. & Eng., vol. 41, no. 8, Aug. 1924, pp. 223-225. Gives diagram showing causes external and those inherent in metal, general theory and prevention of corrosion.

The Submerged Corrosion of Iron, W. G. Whitman and R. P. Russell. Chem. & Industry, vol. 43, nos. 26 and 27, June 27, July 4, 1924, pp. 193T-196T and 197T-199T, 4 figs. Discusses corrosion under natural water and solutions of alkali and non-oxidizing acids and its explanation along electrochemical lines.

Fatigue. Fatigue Phenomena and Endurance Tests (Ermüdungserscheinungen und Dauerversuche), R. Mailänder. Berichte der Fachausschüsse des Vereins deutscher Eisenhüttenleute, Werkstoffausschuss, report no. 38, Mar. 15, 1924, 27 pp. Determination of working strength; shortened endurance tests; machines and devices for endurance tests; fracture and its appearance; different kinds of stress; influence of heat treatment, composition and structure. Bibliography.

German Industry. The Position of the German Iron and Steel Industries in Post-War Europe, C. J. Kavanagh. Iron & Coal Trades Rev., vol. 108, nos. 2937 and 2938, June 13 and 20, 1924, pp. 1025 and 1072-1073. New German combinations; iron ore supplies and production; export trade; French regrouping; coal resources and production; Franco-German collaboration.

History. Notes on the History of Iron and Steel, G. E. Trackray. Am. Soc. Steel Treating—Trans., vol. 6, no. 4, Oct. 1924, pp. 443-490. Compilation of some of salient points of history; notes were selected from various records, writings, researches, investigations by archaeologists, and others.

Indian Industry. India's Iron and Steel Industry, H. M. S. Tuckwell. Iron & Coal Trades Rev., vol. 108, no. 2939, June 27, 1924, pp. 1123-1125. Data regarding Tata Iron & Steel Co., Bengal Iron Co., Indian Iron & Steel Co., United Steel Corporation of Asia, and Mysore Ironworks; present position and future prospects.

Industrial Possibilities, British Columbia.—Possibilities for an Iron and Steel Industry in British Columbia, C. P. W. Schwengers. Can. Inst. Min. & Metallurgy—Bul., no. 149, Sept. 1924, pp. 589-593. Subject is approached from view points of business man rather than from that of technologist.

Italian Foreign Trade, 1923. Italy's Foreign Trade in Iron, Steel and Nonferrous Metals in 1923, A. A. Osborne. Trade Information Bul. (Supp to Commerce Reports), no. 237, June 2, 1924, 6 pp. Details of importation of iron, steel, and non-ferrous metals from France, Germany, Great Britain, Switzerland, and United States. Trade in aluminum, and data pertaining to the various iron and steel products imported during 1922 and 1923.

Italian Industry. The Technical and Economic Fundamentals of the Italian Iron and Steel Industry, with Special Regard to the Production of Electric-Steel Castings (Die technischen und wirtschaftlichen Grundlagen der italienischen Eisen- und Stahlindustrie, namentlich der Erzeugung von Elektrostahl-Formguss), H. Hermanns. Giesserei-Zeitung, vol. 21, no. 17, Sept. 1, 1924, pp. 357-378, 31 figs. General status of industry; heat and power supply; features of steel works and foundries; construction of furnaces and smelters; equipment and operation of steel foundries.

Magnetic Aging. The Magnetic Ageing of Iron and Steel, Thos. E. Green. World Power

(formerly Beama), vol. 1, no. 1, Jan. 1924, pp. 41-43. Aging of transformer and similar cores; aging or maturing of permanent magnets.

Magnetic Analysis. The Present Status of Magnetic Analysis, R. L. Sanford. Am. Soc. for Steel Treating—Trans., vol. 5, no. 6, June 1924, pp. 577-589. Makes reference to the numerous types of testing equipment which have been developed in study of special shapes and types of material, and reviews history of magnetic studies of various investigators. Points out advantages and disadvantages of this method of testing and makes a plea for more scientists to enter this field of investigation. Bibliography.

Pacific Coast, U. S. Iron and Steel on the Pacific Coast, C. E. Williams. Min. & Metallurgy, vol. 5, no. 205, Jan. 1924, pp. 23-25. Local demand and production; foreign pig iron being imported in preference to eastern United States products; raw materials supply; smelting methods; sponge iron.

Painting. Preparation of Iron and Steel Surfaces for Paint. Ry. Rev., vol. 75, no. 5, Aug. 2, 1924, pp. 166-173, 15 figs. General résumé of tests conducted by Am. Soc. for Testing Matls. furnishes valuable information on car maintenance.

Pickling. Pickling of Iron and Steel; A Bibliography, V. S. Polansky. Blast Furnace & Steel Plant, vol. 12, nos. 7, 8, and 9, July, Aug., and Sept. 1924, pp. 326-328, 368-371, and 431-434. See also Forging—Stamping—Heat Treating, vol. 10, nos. 7, 8, and 9, July, Aug., and Sept. 1924, pp. 267-269, 298-301, and 350-354. Contains articles on machines and equipment, pickling in acid solutions, pickling in salt solutions, electrolytic pickling, inhibitors and accelerators, effect of pickling, recovery of spent liquors, etc.

Russian Industry. Russian Mining and Iron and Steel Industries in 1914 to 1922. Iron & Coal Trades Rev., vol. 108, no. 2922, Feb. 29, 1924, pp. 348-349. Production, export and import statistics. From Bul. 3773 of Comité des Forges de France.

Statistics. Iron Ore, Pig Iron and Steel in 1922, E. F. Burchard and H. W. Davis. U. S. Geol. Surv.,-No. I:21, Jan. 25, 1924, pp. 341-376, 4 figs. Statistics on production, stocks, prices, imports and exports, etc.

Strength at High Temperatures. The Strength Properties of Wrought Iron, Mild Steel and Nickel Steel at High Temperatures, H. Carrington. Engineering, vol. 117, no. 3029, Jan. 18, 1924, pp. 69-71, 13 figs. Describes research, which is to some extent repetition of Martens' work, but which includes, in addition, relations between Sankey test properties, Poisson's ratio and temperature for the three materials.

Temperature, Effect on. Effect of Temperature on Metals. Power Plant Eng., vol. 28, no. 15, Aug. 1, 1924, pp. 801-803, 3 figs. Review of data on irons and steels. Presented before joint meeting of A. S. M. E. and A. S. T. M.

Terminology. Iron and Steel Terminology, H. D. Hibbard. Min. & Metallurgy, vol. 5, no. 206, Feb. 1924, pp. 77-78, Clarifies use of terms often occurring in writings on iron and steel, and suggests several new short abbreviated names for some of the things related to subject which now are indicated by phrases.

Trade of Great Britain. The Iron and Steel Trade in 1923. Iron & Coal Trades Rev., vol. 108, no. 2914, Jan. 4, 1924, pp. 8-17, 2 figs. District reviews, including pig-iron production, prices, iron ore, manufactured iron and steel, imports and exports, wages, by-product market, etc.

IRONING MACHINES. See LAUNDRY MACHINERY.

IRRIGATION

Alberta, Can. Lethbridge Northern Irrigation District in Alberta, C. M. Arnold and H. G. Cockrane. Eng. News-Rec., vol. 92, no. 6, Feb. 7, 1924, pp. 243-248, 8 figs. Internal storage found cheaper than large canals; controlled hydraulic jump utilized in grade-reduction drops.

Canals. Construction of Concrete Lined Irrigation Canals, W. E. Code. Eng. & Contracting (Water Works), vol. 61, no. 6, June 11, 1924, pp. 1314-1316, 1 fig. Methods and costs on two jobs in Arizona. From recent bulletin of Agricultural Experiment Station of Univ. of Ariz.

Measurement of Seepage Losses in Canals, O. V. P. Stout. Agricultural Eng., vol. 5, no. 1, Apr. 1924, pp. 52-53 and 90. Suitable instruments essential. Details of metering as practiced in recent seepage investigations. Measurement of depths in connection with determination of rate of discharge. Selection of inlet and outlet points where water cross-sections of channel are similar will materially further consistency in results of gagings.

Chinese Project. Irrigation in China. Times Trade & Eng. Supp., vol. 13, no. 288, Jan. 12, 1924, p. 438, 1 fig. Large scheme for Shensi Province which has been approved by China Famine Relief Commission.

Corrugation Method. The Corrugation Method of Irrigation. Eng. & Contracting (Water Works), vol. 61, no. 2, Feb. 1924, pp. 359-360. Notes on method well adapted for efficient application of water to steep or irregular slopes.

Dams. See DAMS.

Developments. A Review of the Important Advances in Irrigation since 1900. Agricultural Eng., vol. 5, no. 1 and 2, Jan. and Feb., 1924, pp. 9-11 and 32-34, 1923, report of committee on irrigation based on individual reports; deals with use of water in irrigation; hydroelectric power and irrigation; design of irrigation structures; pumping for irrigation. Feb.: Irrigation law and water rights; irrigation district development; settlement of irrigation enterprises; forecast of future development.

Drainage. See DRAINAGE.

Flumes. See FLUMES.

India. Indian Irrigation Problems, F. W. Woods. Times Trade & Eng. Supp., vol. 14, no. 300, Apr. 5, 1924, p. 95, 2 figs. Hydraulics of surface and sub-soil flow of River Indus and its tributaries.

Ramgarh and Dhil River Irrigation-Works, Jaipur State, Rajputana, Chas. E. Stotherd. Instn. Civ. Engrs.—Sessional Notices, no. 3, Feb. 1924, pp. 76-80, 2 figs. Construction details of the two works. (Abstract.)

The Mysore Irrigation Bill. Mysore Engrs.' Assn.—Bul., vol. 1, no. 2, Oct.-Dec. 1923, pp. 128-146. Legislation recently introduced regulating irrigation work; deals with water courses, supply of water, water rates, construction and maintenance of irrigation works on special terms, compulsory labor on emergencies, customary labor that may be required to be performed by occupiers of lands irrigated by an irrigation or drainage work, penalties, etc.

The Sutlej Valley Irrigation Project in India. Excavating Engr., vol. 18, no. 9, Sept. 1924, pp. 335-339, 14 figs. Describes enormous irrigation project covering area as large as state of New Hampshire and involving as much excavation as that of Panama Canal; discusses scheme of irrigation, construction, system of canals and excavation.

Legislation, U. S. Irrigation and Drainage Laws Critically Reviewed. Eng. News-Rec., vol. 93, no. 20, Nov. 13, 1924, pp. 788-790, 1 fig. U. S.

Dept. of Agriculture reports on land-reclamation policies; subsidies and failure; excess reclamation; future of reclamation.

Northwest Canada. Development of Irrigation in Northwest Canada, P. J. Jennings. Eng. News-Rec., vol. 92, no. 15, Apr. 10, 1924, pp. 616-618, 4 figs. Projects by individuals, companies and groups of farmers; Government supervision.

See also Alberta.

Projects and Policy, U. S. Reclamation Advisers Report on Needs of Projects and Policy for Future Irrigation. Eng. News-Rec., vol. 92, no. 17, Apr. 24, 1924, pp. 726-729. Report rendered by Special Advisers on Reclamation. Original law found ineffective; recommends repayment according to productivity of land; financial and agricultural aid necessary for success.

Pumping Plants. See PUMPING PLANTS, Irrigation.

Recovery of Return and Seepage Waters. Recovery of Return and Seepage Waters in California, T. R. Simpson. Eng. News-Rec., vol. 93, no. 19, Nov. 6, 1924, pp. 751-754, 6 figs. Applications for right to divert return flow are frequent; area irrigated with such water is rapidly increasing.

Sewage. Studies of Outlets and Crops on Sewage Irrigated Areas, Geo. A. Mitchell. Eng. News-Rec., vol. 92, no. 7, Feb. 14, 1924, pp. 284-287, 9 figs. Terra-cotta pipe lines used and several designs of concrete and concrete-protected cast-iron outlets tried; comparative yields of irrigated and non-irrigated land.

South Africa. A Short History of Irrigation Development in South Africa, C. O. Linscott. S. African Irrigation Mag., vol. 3, no. 2, June 1924, pp. 50-56.

Irrigation in the Union: A Discussion of Policy in Relation to the Conservation of Water, F. E. Kanthack. So. African Instn. Engrs.—Jl., vol. 22, no. 11, June 1924, pp. 174-181. Discusses various schemes of irrigation and conservation of water. So. Africa is handicapped by its distance from rain-producing oceans and is in portion of globe directly between trade and anti-trade winds, position which at times adversely affects seasonal rains.

Van Rynevelds Pass Irrigation Scheme, K. R. Shand. So. African Irrigation Dept. Mag., vol. 3, no. 1, Mar. 1924, pp. 15-20, 3 figs. on supp. plate. Scheme comprises concrete storage dam situated about one mile northwest of Graaff Reinet, 3 pick-up weirs and approximately 60 miles of canals. Length of crest level 1170 ft., crest width 10 ft., crest level, R.L. 2593, outlet level R.L. 2510, estimated quantity of concrete 130,000 cu. yd.

Spain. Irrigation in Spain. Times Trade & Eng. Supp., vol. 13, no. 289, Jan. 19, 1924, p. 466. Plans for regulation of the Segura River, involving extensive afforestation, and provision of four reservoirs, having total storage capacity exceeding 66,000 million gal.

U. S. A. The Movement of Water in Irrigated Soils, C. S. Scofield. Agricultural Research—Jl., vol. 27, no. 9, Mar. 1, 1924, pp. 617-696, 16 figs. Discusses certain aspects of alkali problem in relation to irrigation farming which as a whole relates to soluble salts in soil solution.

Western Section Project. Irrigation Systems, Rob. S. Stockton. Eng. Jl., vol. 7, no. 1, Jan. 1924, pp. 8-12, 7 figs. Engineering features of operation and maintenance with particular reference to Western Section irrigation project.

ISOSTASY

Theory. The Bearing of the Theory of Isostasy on Some Major Geological Problems, Wm. Bowie. Franklin Inst.—Jl., vol. 198, no. 2, Aug. 1924, pp. 181-200, 12 figs. Shows importance of theory to problems of geology. Bibliography.

"The Establishment of Isostasy," J. F. Hayford. West. Soc. Engrs.—Jl., vol. 29, no. 9, Sept. 1924, pp. 350-359 and (discussion) 360-362, 2 figs. Summary of elaborate tests conducted over period of 13 years which have been published by U. S. Coast & Geodetic Survey; describes nature of evidence by which truth of theory was established, together with speculations based upon it; theory is that any column of same cross section at top, say 1 sq. mi., and extending down to depth of compensation, about 70 mi. below sea level, has same total weight as any other such column, anywhere on earth.

ISOTOPY. See ATOMS, Isotopy; Atomic Weights.

J

JACKS

Lifting. See LIFTING JACKS.

JAPANNING

Electric Ovens for. See ENAMELING, Electric Ovens for.

Filing Cases. Japanning Filing Cases, E. C. Cook. Fuels & Furnaces, vol. 2, no. 5, May 1924, pp. 441-445, 6 figs. Notes on cleaning, dipping, and baking practice in japanning department at Yawman & Erbe Mfg. Co., Rochester, N. Y., where all kinds of filing cabinets and safes are made.

Plant. World's Largest Contract Japanning Plant Described, E. C. Cook. Fuels & Furnaces. vol. 2, no. 3, Mar. 1924, pp. 239-244, 5 figs. Method and equipment of plant of Wolverine Enameling Co., Detroit; intermittent conveyor and Curry-type ovens.

JETTIES

Clay-Cargo. New China Clay Jetty at Fowey. Engineer, vol. 137, no. 3556, Feb. 22, 1924, pp. 195-196, 5 figs., partly on p. 202. Jetty is 500 ft. long, has straight frontage of 300 ft., and is 50 ft. wide; has filling of brick arches and concrete, supported on 23 steel cylinders, 6-ft. diam., sunk to rock and afterwards filled with concrete; method of handling clay cargoes.

JIGS

Bevel Gear-Testing. Double Helical Bevel Gear-Testing Jig. Machy. (Lond.), vol. 23, no. 596, Feb. 28, 1924, p. 711, 3 figs. Special jig for testing both accuracy and truth of apex in double helical bevel wheels, as used in automobile back-axle drives.

Clamping Devices for. Swinging-leaf Clamping Devices, F. Server. Machy. (N. Y.), vol. 30, no. 7, Mar. 1924, pp. 544-546, 7 figs. Hinged cover with equalizing clamp; swing cover adapted for holding bushings; methods of clamping hinged covers; hinge pin with vertical adjustment; hinged-cover fixture for lathe chuck.

Design. See TOOLS, Designing for Production Manufacturing.

JOINTS

Balls and Sockets for, Machining. Machining Balls and Sockets, W. R. Graham. Machy. (N. Y.), vol. 31, no. 4, Dec. 1924, pp. 284-285, 6

figs. Describes machining of interchangeable cast-steel balls and bronze sockets for use in construction of electric commercial trucks.

Concrete Expansion. Expansion Joints in Concrete. Ry. Engr., vol. 45, no. 530, Mar. 1924. pp. 99-103 and 108, 24 figs. Joints in retaining walls; bridge and wall slabs; reservoir, canal and other watertight joints; expansion joints for bridges and viaducts; structural expansion joints.

Metal-To-Glass. A Metal-To-Glass Joint, H. N. Ridyard. Am. Chem. Soc.—Jl., vol. 46, no. 2, Feb. 1924, pp. 287-290. Method for coating soft glass, hard glass, silica or glazed porcelain, with homogeneous lead films, and for soldering material so coated to metal; can be applied to sheet or tube.

Riveted. See RIVETED JOINTS.

Soft-Soldered. Some Properties of Soft Soldered Joints, T. B. Crow. Chem. & Industry, vol. 43, nos. 12 and 13, Mar. 21 and 28, 1924, pp. 65T-68T and 69T-70T, 15 figs. Points out that tensile strength of joints increases with diminution of thickness of solder film in joint; tensile strength of all joints was less that yield point of copper, but strongest joint had tensile strength of 2½ times that of solder; action of zinc chloride is to prevent oxidation by preventing access of oxygen; it has no electrochemical action.

Welded. See WELDS, Welded Joints.

JUTE

Spinning. Effect of Single Carding of Jute on End Product and Its Economic Aspect (Untersuchungen über den Einfluss des Einkardenspinnverfahrens in der Juteindustrie auf die hergestellten Erzeugnisse und auf die Wirtschaftlichkeit des Betriebssystems), H. Sommer. Brennstoff- und Wärmewirtschaft, vol. 6, no. 4, Apr. 1924, pp. 65-71. Simplification of spinning by using single carding in place of double, without disadvantage to end produce.

K

KAOLIN

Colloidal Plasticity. See CLAY, Colloidal Plasticity.

Dehydration Product. Product of the Dehydration of Kaolin (Le produit de la déshydratation du kaolin), V. Agafonoff and W. Vernadsky. Académie des Sciences—Comptes Rendus, vol. 178, no. 13, Mar. 24, 1924, pp. 1082-1084. Study of product of dehydration of kaolin, obtained by heating at 450—550 deg.; density of product was 2.32—2.38, by flotation method in mixtures of bromoform and ether; product also appeared homogeneous under microscope, possessing similar optical properties to those of kaolin, and was uniformly colored by methylene blue.

Furtei, Sardinia. Kaolin Deposits at Furtei in Sardinia (Il giacimento caolinico di Furtei in Sardegna), E. Repossi. Rassegna Mineraria Metallurgica e Chimica, vol. 61, no. 1, July 15, 1924, pp. 1-5, and (translation) in Chem. Age (Lond.), vol. 11, no. 275, Sept. 20, 1924, pp. 15-16. Discusses geological formation and gives analysis of some samples.

Georgia. Distribution of Kaolin and Bauxite of the Coastal Plain of Georgia, R. T. Stull. Am. Ceramic Soc.—Jl., vol. 7, no. 7, July 1924, pp. 513-522, 2 figs. Discusses origin of sedimentary kaolins, formation of bauxite, and proposes classification for them.

KAPP VIBRATOR. See ELECTRIC MOTORS, A.C., Kapp Vibrator.

KATALITE. See INTERNAL-COMBUSTION ENGINES, Catalysis Applied to.

KATATHERMOMETERS. See THERMOMETERS, Katathermometers.

KEROGEN. See OIL SHALES, Distillation.

KEROSENE

Distillate, Acid Treatment of. Acid Treatment of Kerosene Distillate, W. M. Fraser. Oil & Gas Jl., vol. 23, no. 2, June 5, 1924, p. 100, 1 fig. Chart accurate to within one point in color, which saves tons of acid and permits keeping kerosene uniform.

Hydrocarbons in. Some Characteristics of the Hydrocarbons in Midcontinent Kerosene, C. R. Wagner. Indus. & Eng. Chem., vol. 16, no. 2, Feb. 1924, pp. 135-136. Closed fractionated kerosene cut from Oklahoma crude was separated into two fractions by use of liquid sulphur dioxide; insoluble portion gave evidence of C_nH_{2n} hydrocarbons, but none of paraffin series.

KEYSEATING MACHINES. See DRILLING MACHINES, Slot.

KIESELGUHR. See SILICA, Diatomaceous Earth.

KILNS

Brick. Tunnel Kilns in the Brick Industry (Die Bedeutung des Tunnelofens in der Ziegelindustrie), W. Pohl. Tonindustrie-Zeitung, vol. 48, no. 66, Aug. 16, 1924, pp. 724-727, 4 figs. Discusses experiences with old and new types of tunnel kilns at Saaran, Saxony.

See also Tunnel.

Cement. Efficiency of Cement Kilns With Waste Heat Boilers, H. E. Brown. Cement, Mill & Quarry, vol. 24, no. 2, Jan. 20, 1924, pp. 31-33. How many pounds of coal will be necessary per barrel of clinker and how much power can be generated by hot waste gases at 75 per cent efficiency on boilers, with 15 lb. steam per kw-hr. on turbines, steam to be at 200 lb. pressure on boilers, with superheat 125 deg. fahr. and vacuum of 28 in. on turbines.

New Gas Heated Vertical Cement Kiln (Nouveau four à ciment vertical, chauffé au gaz). Génie Civil, vol. 85, no. 1, July 5, 1924, pp. 14-16, 6 figs. Design and construction of Bartolomeis kiln constructed by Società Forni ed Impianti Industriali di Milano.

Refractories for Rotary Portland Cement Kilns, R. M. Howe. Cement, Mill & Quarry, vol. 24, no. 2, Jan. 20, 1924, pp. 35-38, 1 fig. Factors controlling service secured from fireclay linings and possible advantages to be gained by using linings of another type.

Ceramic. Operation of the Shaw Gas Kiln, L. H. Minton. Ceramist, vol. 4, no. 1, Apr. 1924, pp. 15-28, 8 figs. Design and operation of gas-fired compartment kiln developed in England, especially designed and adapted to firing of the finer grades of ware as well as the cruder types; comparison of fuel consumption; principal advantages.

See also Design; Heat Distribution.

Combustion in. Combustion in Kilns Burning Refractory Ware, R. A. Sherman. Am. Ceramic Soc.—Jl., vol. 7, no. 3, Mar. 1924, pp. 175-188, 2 figs. Results of a study of process of combustion in kilns using coal as fuel, undertaken in connection with investigation of burning problems in manufacture of refractories, conducted by

Bur. Mines in coöperation with Refractories Mfrs. Assn.

Design from Model Tests. The Design of Kilns and Furnaces from Model Tests, F. H. Norton. Am. Ceramic Soc.—Jl., vol. 7, no. 10, Oct. 1924, pp. 783-794, 5 figs. Analyzes effect of scale on gas and heat flow and determines possibilities and limitations of using models.

Drafts. The Significance of Drafts in Down-Draft Coal-Fired Kilns, R. A. Sherman, R. F. Lunger and W. E. Rice. Am. Ceramic Soc.—Jl., vol. 7, no. 4, Apr. 1924, pp. 255-270, 12 figs. Applies fundamental laws of gas flow to movement of gases through down-draft kilns; data on pressure conditions in four kilns presented graphically; cause of draft, superiority of down-draft over up-draft kiln, significance of stack draft, relation of draft and excess air, features of kiln design, and comparative merits of forced, induced, and natural draft. (Pub. by permission U. S. Bur. Mines.)

Heat Distribution. Determination of the Distribution of Heat in Kilns Firing Clay Wares, W. E. Rice and R. A. Sherman. Am. Ceramic Soc.—Jl., vol. 7, no. 10, Oct. 1924, pp. 738-763, 2 figs. Methods of collecting data on performance of ceramic kilns and explanation of formulas used in calculating heat accounts from data.

Lime. See LIME, Kilns.

Rotary. Large Rotary Kiln for Celite Products Company. West. Machy. World, vol. 15, no. 6, June 1924, pp. 187-188, 1 fig. New engineering and mechanical product for California manufacturing plant.

Measure of Air Supply to Rotary Kiln, F. Linstead. Cement, Mill & Quarry, vol. 25, no. 6, Sept. 20, 1924, pp. 35-37, 7 figs. Discusses amount of air required and analysis of gases.

Stokers for. See STOKERS, Automatic Kiln.

Tunnel. Automatic Control of Tunnel Kiln, Phil. Dressler. Fuels & Furnaces, vol. 2, nos. 1, 2, and 3, Jan., Feb., and Mar. 1924, pp. 33-39, 125-132, and 249-252, 13 figs. Jan.: Porcelain kiln used for baking spark plugs. Feb.: Regulation of gas supply from main and control of temperature in kiln. Mar.: Control of auxiliary gas burners used for producing a reducing atmosphere; anticipated improvements in regulators.

Booth Open Fire Tunnel Kiln. Brick & Clay Rec., vol. 65, no. 10, Nov. 11, 1924, pp. 680-683, 11 figs. Describes operation of two railroad tunnel kilns burning face brick in great variety of shades and textures, by Booth Brick & Lumber Co., New Toronto, Ont.

Burn Brick in Direct Fired Tunnel Kiln. Brick & Clay Rec., vol. 64, no. 8, Apr. 15, 1924, pp. 576-580, 10 figs. Description of Dressler coal-burning open fire tunnel kiln 217 ft. 7½ in. long, designed for production of 15,000 to 20,000 brick per day.

Importance of Tunnel Furnaces in the Brick Industry (Die Bedeutung des Tunnelofens in der Ziegelindustrie). Tonindustrie-Zeitung, vol. 48, no. 31, Apr. 16, 1924, pp. 321-322. Various authorities give their opinions on the subject.

The Direct Fired Car Tunnel Kiln on Roofing Tile, C. R. Minton. Am. Ceramic Soc.—Jl., vol. 7, no. 11, Nov. 1924, pp. 821-823, 2 figs. Describes Harrop car tunnel kiln for firing roofing tile which has been installed at plant No. 1 of Los Angeles Pressed Brick Co. of Los Angeles, Cal. Length, 324 ft. 11½ in.; tunnel width, 4 ft. 10 in.; holds 52 cars each of which carries 2.3 tons of fired ware.

The Role of Tunnel Kilns in the Brick Industry (Die Bedeutung des Tunnelofens in der Ziegelindustrie). Tonindustrie-Zeitung, vol. 48, no. 11, Feb. 6, 1924, pp. 98-101, 3 figs. Discusses advantages and disadvantages.

See also **Brick.**

"Turbine" Forced-Draft Furnace. Scientific Principles in Kiln Operation, A. E. Beet. Fuel, vol. 3, no. 6, June 1924, pp. 217-220, 3 figs. Account of series of tests carried out at firebrick and general refractory works at Charleroi, Belgium, with object of determining results obtained with "Turbine" forced-draft furnace in firing of kilns.

KLYDONOGRAPH. See ELECTRIC MEASURING INSTRUMENTS, Klydonograph.

KNITTING MACHINES

Circular, Manufacture. Building Circular Knitting Machines. Eng. Production, vol. 7, no. 146, Nov. 1924, pp. 327-331, 12 figs. Works and methods of Mellor Bromley & Co., Leicester, England.

KITES

Man-Lifting. Man-Lifting Kites (Neue Richtlinien für den Bau manntragender Drachen und zwei Lösungen des Problems), H. Seehase. Zeit. für Flugtechnik u. Motorluftschiffahrt, vol. 15, no. 19, Oct. 14, 1924, pp. 201-206, 14 figs. Experiments with such kites were initiated by German Government during war in connection with submarines; aircraft firm, Sablatnig, which coöperated with these experiments, continued them after war; main requirement is that no accident should happen if tow line breaks; last development is kite of parachute type—shallow bags having stiffening frame only around mouth, which can lift loads several times their own weight; it is hoped they find use for sport as well as for military purposes.

L

LABOR

Bibliography. Bibliography. Int. Labour Rev., vol. 9, nos. 4 and 5, Apr. and May 1924, pp. 627-642 and 791-813. International, official, and unofficial publications.

International Publications on Labor. Int. Labour Rev., vol. 9, no. 1, Jan. 1924 pp. 149-160. Bibliography of official and non-official publications.

Publications Relating to Labor. Monthly Labor Rev., vol. 18, nos. 1-6, Jan.-June, 1924, pp. 206-215, 251-257, 214-223, 225-233, 245-254, and 205-212 and vol. 19, nos. 4-6, Oct.-Dec. 1924, pp. 201-210, 268-274, and 187-195. List of official and unofficial publications in United States and foreign countries.

China, Conditions in. Labor Conditions in China, Ta Chen. Monthly Labor Rev., vol. 19, no. 5, Nov. 1924, pp. 36-49. Movement for labor legislation; problems of urban and rural labor; trade unionism; strikes; coöperative movement.

Coal Mines. See INDUSTRIAL RELATIONS, Coal Mines.

Convict. Convict Labor: 1923. Monthly Labor Rev., vol. 18, no. 4, Apr. 1924, pp. 1-33. Abridged report by Bur. of Labor Statistics containing collection of data concerning prison labor production in United States; shows kind and amount

of goods produced by prison labor and systems under which work was done.

Eight-Hour Day. Eight-Hour-Day Application in Continuous Running (Applications simples de la journée de huit heures dans les entreprises à service continu), J. Schwarz. Schweizerische Bauzeitung, vol. 84, no. 10, Sept. 6, 1924, pp. 115-117, 8 figs. Mathematical treatment of on-time and off-time for continuous operations. (In French).

Eight-Hour Shifts. Economies of Eight Hour Shifts in Ironworks (Wirtschaftliche Auswirkung der Achstundenschicht in Hüttenwerken), E. Hofmann. Stahl u. Eisen, vol. 44, no. 37, Sept. 11, 1924, pp. 1101-1105, 1 fig. Discusses decrease of output per capita, reasons for failure of eight-hour shifts, influence of length of shift on frequency of accidents and of sickness.

Family Allowances. Wages and Allowances for Workers' Dependants. Int. Labour Rev., vol. 10, no. 3, Sept. 1924, pp. 470-485. Discusses system of paying family allowances to workers over and above their ordinary wages; reasons for introduction of such systems and extent to which they are in operation.

Firemen. Qualitative Remuneration of Firemen (Ein Weg zur qualitativen Bezahlung der Heizerarbeit), K. Münzer. Wärme, vol. 47, no. 35, Aug. 29, 1924, pp. 406-409, 6 figs. Work of firemen and losses in combustion; determining quality of firemen's work; bonus by means of Duplex-Mono slide rule.

48-Hour Week. The Forty-Eight Hour Week and Industrial Efficiency, P. S. Florence. Int. Labour Rev., vol. 10, no. 5, Nov. 1924, pp. 729-758. Results of scientific study of effects of changes in hours of work or of introducing rest pauses into working hours, and of variations in output during working day, all tend, in writer's opinion, to general conclusion that on the whole the 48-hr. week is probably optimum length of hours, giving for majority of industrial operations maximum output with minimum accidents, lost time, and overhead charges, and permitting efficient distribution of working hours throughout week and day.

Hours of Work. Effect of Changes in Hours of Work on Output. Monthly Labor Rev., vol. 19, no. 1, July 1924, pp. 120-124. Discusses 8-hr. day entirely from economic standpoint and analyzes existing data on relation between hours of work and production, showing complexity of problem.

Hours of Work and Output, O. Lipmann. Int. Labour Rev., vol. 9, no. 4, Apr. 1924, pp. 481-506. Economic aspect of 8-hour day; author surveys existing data on relation between hours of work and output and finds few of them scientifically satisfactory; analyzing various factors determining hourly output, he shows extreme complexity of problem and danger of attributing changes in output solely to changes in hours; he believes that solution of problem of increasing output is to be found rather in increased intensity of work than in change in working hours. Bibliography.

Legal Restrictions on Hours of Work in the United States. Nat. Indus. Conference Board—Research Report no. 68, 1924, 125 pp. Systematic analysis of existing legislation restricting hours of work in United States.

The Question of Hours of Work of Furnace Hands (Zur Frage der Arbeitszeit für die Feuerarbeiter der Hüttenwerke), M. Schellewald. Stahl u. Eisen, vol. 44, no. 46, Nov. 13, 1924, pp. 1446-1455, 10 figs. Three-shift system; conflicting views and difficulties on hours of work; demands of workers; detail figures of working hours; etc.

Immigration and. See IMMIGRATION.

International Conference. The Sixth Session of the International Labour Conference. Int. Labour Rev., vol. 10, no. 4, Oct. 1924, pp. 550-582. Four main items on agenda were: Development of facilities for utilization of workers' leisure; equality of treatment for national and foreign workers as regards workmen's compensation for accidents; weekly suspension of work for 24 hours in glass-manufacturing processes where tank furnaces are used; night work in bakeries; includes appendix giving recommendation adopted by Conference.

International Organization. The Legal Character of the International Labour Organisation, J. de Vilallonga. Int. Labour Rev., vol. 9, no. 2, Feb. 1924, pp. 196-207. Discusses work of M. Guerreau, entitled International Labour Organization, especially that part dealing with legal status of the organization and nature of functions assigned to it by Treaty of Versailles and corresponding parts of other peace treaties.

Legislation, Bibliography. Bibliography of Recent Labour Legislation. Int. Labour Rev., vol. 9, nos. 2 nd 3, Feb. and Mar. 1924, pp. 289-316 and 427-466. List of laws and orders and international conventions comprising all those, text of which was received by Int. Labor Office subsequently to list published in Nov. and Dec. 1923, numbers of Review.

Bibliography of Recent Labour Legislation and Official and Non-Official Publications. Int. Labour Rev., vol. 10, nos. 3, 4, 5 and 6, Sept., Oct., Nov. and Dec. 1924, pp. 509-545, 703-727, 878-908, and 1062-1089.

Legislation, Bulgaria. Labour Legislation in Bulgaria, I. Yanouloff. Int. Labour Rev., vol. 10, no. 3, Sept. 1924, pp. 435-451. Protection of women and children; hours of work; hygiene and safety; factory inspection; social insurance.

Legislation, Mexico. Labor Law of Jalisco, Mexico, E. Y. Larson. Monthly Labor Rev., vol. 18, no. 6, June 1924, pp. 21-36. Law covers labor contracts, rights and obligations of contracting parties, hours and wages, conciliation and arbitration, employers' organizations and trade-unions, strikes and lockouts, private employees, shop rules, apprentices, safety and hygiene regulations, workmen's compensation and labor inspection.

Organizations, Roumania. Labor Organisations in Roumania, N. Ghiulea. Int. Labour Rev., vol. 9, no. 1, Jan. 1924, pp. 31-49. Organization of craftsmen; trade unions.

Pensions, Old-Age. See PENSIONS.

Railway, Germany. Labor Problem of the German State Railroads. Monthly Labor Rev., vol. 19, no. 1, July 1924, pp. 47-54. Discusses reasons for change from large surplus to huge deficit of railways, including increase in payroll and cost of materials, deteriorated railway conditions, diminished labor efficiency, faulty employment policy, etc. Abstract taken from Jl. Political Economy.

State Control, New Zealand. Experiments in State Control in New Zealand, J. B. Condliffe. Int. Labour Rev., vol. 9, no. 3, Mar. 1924, pp. 334-360. Traces developments of Arbitration Court and Board of Trade and recounts development of system of compulsory arbitration in labor disputes, dealing particularly with growing opposition to Arbitration Court manifested by certain leading trade unions in recent years.

Strikes. See STRIKES.

Trade Unions. See TRADE UNIONS.

Two and Three Shifts. The Working Shift in German Iron and Steel Works. Iron & Coal Trades Rev., vol. 109, no. 2952, Sept. 26, 1924, p. 516. Discusses question of favorable influence on production due to recent introduction of two-

shift system (in lieu of previous three-shift system) in German iron and steel works.

Unemployment. See UNEMPLOYMENT.

Utilization of Leisure. The Utilisation of Leisure in Finland. Int. Labour Rev., vol. 9, no. 4, Apr. 1924, pp. 573-586. Article based on information communicated by N. A. Mannio, Director of Gen. Dept. of Finnish Ministry of Social Affairs.

Wages and Hours. Wages and Hours of Labor. Monthly Labor Rev., vol. 19, no. 1, July 1924, pp. 101-119. Wages and hours in blast-furnace, Bessemer, open-hearth, and tin departments of iron and steel industry, 1924.

Wages and Hours of Labor. Monthly Labor Rev., vol. 19, no. 2, Aug. 1924, pp. 91-123. Details for iron workers in U. S., glass workers in Belgium, metal workers in Finland, mines and metal workers in France.

Wages and Hours of Labor in the Automobile Tire Industry, 1923. U. S. Bur. Labor Statistics—Bul., no. 358, Apr. 1924, pp. 1-58. Report shows results of study of wages and hours of labor in automobile tire industry in 1923. Information compiled covers 22,535 male wage earners and 1624 female wage earners working in 49 representative establishments located in Connecticut, Indiana, Massachusetts, Michigan, New Jersey, New York, Ohio, Pennsylvania, and Wisconsin. Tables show earning as per hour, full time or customary hours per week, hours and days actually worked, and earnings actually received in representative pay period taken.

Wages and Hours of Labor in Lumber Manufacturing in the United States, 1923. U. S. Bur. Labor Statistics—Bul., no. 363, Aug. 1924, 32 pp. Gives earnings per hour and per week and hours of labor per week. Sawmill operation only is covered. Tables.

See also WAGES.

Welfare Work. See WELFARE WORK.

Workmen's Compensation. See WORKMEN'S COMPENSATION.

LABOR TURNOVER

"Absentism." Absentism Factors for Industrial Plants, J. D. Hackett. Mgmt. & Administration, vol. 7, no. 2, Feb. 1924, pp. 199-203. Relative importance of absence; nature, calculation, and extent of absence; absence and wages; prevention of absence; remedies.

Reducing. Reducing the Turnover of Labor, C. A. Walker. Iron Trade Rev., vol. 74, no. 5, Jan. 31, 1924, pp. 350-352, 4 figs. Suitable records afford basis for study of causes of labor turnover.

What 86 Years Have Taught Us About Selecting Labor, H. B. Cheney. Monthly Labor Rev., vol. 18, no. 5, May 1924, pp. 1-13, 5 figs. Factors affecting labor cost: how to fit applicant to right job; keeping labor turnover down to minimum; how "credit rating" plan aids in reducing turnover.

LABORATORIES

Automobile Research. Cross-Examining the Automobile, A. C. Lescarboura. Sci. Am., vol. 131, no. 1, July 1924, pp. 8-9, 59-60, and 62, 4 figs. What organized research work is doing for present and future automotive industry; General Motors research laboratory at Dayton, Ohio.

Bell-System Research. The Bell System Research Laboratories, E. B. Craft. Elec. Communication, vol. 2, no. 3, Jan. 1924, pp. 152-163, 15 figs. Details of laboratories located in New York City, and outstanding achievements of past ten years.

Cable Research. Research Laboratories at a Cable Works. Engineer, vol. 138, no. 3596, Nov. 28, 1924, pp. 607-608, 9 figs. partly on p. 614. Layout and equipment of laboratory of Henley's Telegraph Works Co., Gravesend, Kent, Eng.

Chemical. See ELECTRIC RAILWAYS, Chemistry in Service of.

Electric-Insulator Testing. Ampere Laboratory (for Million-Volt Tests) of the Cie Electroceramique [Le Laboratorie Ampère (pour essais électriques à 1 million de volts) de la Compagnie générale d'Electro-céramique]. Société d'Encouragement pour l'Industrie Nationale—Bul., vol. 123, no. 7, July-Sept. 1924, pp. 619-626, 6 figs. Describes layout, buildings and equipment, including converters, transformers for stepping-up voltage, control desk, etc.; porcelain insulators testing methods.

The Ampere Laboratory for Very High-Tension Tests (Le Laboratoire Ampère, de la Compagnie générale d'Electro-Céramique, pour essais à très hautes tensions). Génie Civil, vol. 84, no. 8, Feb. 23, 1924, pp. 183-185, 8 figs. Describes laboratory recently erected at Ivry-Port by Compagnie générale d'Electro-Céramique, in which voltage of one million volts has been obtained, and which is intended principally for testing porcelain insulators manufactured by company.

The New Ampere Laboratory (Le nouveau laboratoire "Ampère"), P. Normier. Industrie Electrique, vol. 33, no. 767, June 10, 1924, pp. 205-209, 7 figs. Describes new laboratory of Cie. Générale d'Electrocéramique including buildings, current supply, converter groups, stepping-up transformers (up to 1,000,000 volt), etc., for testing high-tension material and especially porcelain insulators.

Electrical, Germany. New Equipment of Institute for Low-Tension Technics at the Dresden Technical High School (Die Neueinrichtungen des Instituts für Schwachstromtechnik der Technischen Hochschule Dresden), H. Barkhausen. Elektrotechnische Zeit., vol. 45, no. 49, Dec. 4, 1924, pp. 1338-1341, 10 figs.

Illumination. The Lighting Laboratories of the Baden Technical High School at Karlsruhe (Das Lichttechnische Institut der Badischen Technischen Hochschule in Karlsruhe), J. Teichmüller. Zeit. für Technische Physik, vol. 5, no. 8, 1924, pp. 321-327, 12 figs. Details of construction, light and dark rooms, equipment for testing lamps, research work and lecture courses.

Germany. See Electrical; Illumination.

High-Voltage. California Institute of Technology's Million-Volt Laboratory, R. W. Sorensen. Jl. Electricity, vol. 53, no. 7, Oct. 1, 1924, pp. 242-244, 7 figs. See also Elec. Wld., vol. 84, no. 14, Oct. 4, 1924, pp. 735-737, 4 figs. Details of equipment; electrical connections; voltage measurement; building characteristics.

Laboratories for Testing at Very High Voltages (Les installations d'essais à très haute tension), M. Gillon. Société Française des Electriciens—Bul., vol. 4, no. 31, Jan. 1924, pp. 5-42, 29 figs. Brief discussion of characteristics of special laboratories for testing cables, and review of phenomena observed in tests at very high voltage; examination of devices adopted to test transformers, arrangement of apparatus in testing room, resistances, alternator, measuring instruments, voltmeters, potentiometers, devices for measuring current and energy, etc.; details of laboratory of University of Louvain.

Hydraulic. The Hydraulic Laboratory of the Instituto Católico de Artes é Industrias (Spain) (Laboratorio hidráulico del I. C. A. I.), J. M. F. deCastro. Anales de la Asociacion de Ingenieros del Instituto Católico de Artes é Industrias, vol. 3, no. 4, 1924, pp. 350-358, 9 figs. Details of mechanical and electrical equipment, and activities of laboratory.

Materials, Testing. Observations on the Operation of Material Testing Laboratories, F. H. Jackson. Pub. Roads, vol. 5, no. 4, June 1924, pp. 14-17. 55 laboratories were inspected to ascertain to what extent they were following approved methods of testing as recommended by Committee on Tests & Investigations of Am. Assn. State Highway Officials and approved by Bur. Pub. Roads.

Testing Materials in the Laboratory. Machy (N. Y.), vol. 31, no. 3, Nov. 1924, pp. 184-186, 7 figs. How metallurgical laboratory maintained by Bullard Machine Tool Co. controls quality of materials used in building machines in shop.

Metallurgical. The Ernesto Breda Scientific and Technical Institute (L'Istituto Scientifico Tecnico "Ernesto Breda"), G. Bozza. Giornale di Chimica Industriale ed Applicata, **vol. 6, no. 8,** Aug. 1924, pp. 383-386, 10 figs. Details of equipment and activities of testing laboratory for metallurgy founded in 1917.

Mining and Metallurgical. The Southern Experiment Station—Its Problem and Purpose, A. H. Hubbell. Eng. & Min. Jl.—Press, vol. 118, no. 4, July 26, 1924, pp. 132-134, 8 figs. U. S. Bur. Mines established mining and metallurgical experiment station at Tuscaloosa, Ala., for purpose of studying ways of beneficiating low-grade iron ores. Anticipates future needs by studying possibilities of washing low-grade iron ores.

National Physical Laboratory, England. The National Physical Laboratory. Engineering, vol. 117, no. 3052, and vol. 118, nos. 3053 and 3055, June 27, July 4, and 18, 1924, pp. 823-824, 5-6, and 100-101, 1 fig. Review of work done by the Laboratory during 1923, including work of engineering and aerodynamics departments, work on metallurgy, physics, electrical standards and measurements, wireless, electrotechnics, cables, and photometry.

See also RESEARCH, National Physical Laboratory.

Petroleum Refinery. Laboratory Control Work Is Explained, W. E. Espy. Oil & Gas Jl., vol. 23, no. 6, Jan. 10, 1924, pp. 76, 84, and 86. Deals with control work of physical-testing laboratory of Cosden & Co.; testing methods; distillation test and apparatus; flash and fire tests; cloud and pour test; viscosity test.

Research, Raw Materials Testing. Testing Raw Materials in a Research Laboratory. Min. & Oil Bul., vol. 10, no. 7, July 1924, pp. 709-715, 6 figs. Notes on equipment and methods for testing materials used in oil-well equipment, at research laboratory of Axelson Machine Co., recently completed in connection with their Los Angeles plant.

Siemen-Schuckert. Testing and Research Laboratories of the SSW. Dynamo Works [Das Prüf- und Versuchsfeld (P. V. F.) des Dynamowerks der SSW.], G. Bopp and G. Köhler. Siemens-Zeit., vol. 4, nos. 7 and 8, July and Aug. 1924, pp. 202-207 and 263-268, 15 figs. Describes new laboratories installed at Siemensstadt; general layout of works and laboratories, equipment and tests carried out; current distributing lines and switching arrangements.

Telephone-Research. Engineering Research in the Post Office, B. S. Cohen. Telegraph & Telephone Jl., vol. 11, no. 117, Dec. 1924, pp. 46-49, 7 figs. Layout of new Engineering Research Station at Dollis Hill, England, description of laboratories, and outline of organization.

LACQUERS

Automobile Body Finish. See AUTOMOBILES, Bodies, Finishing.

Nitrocellulose and Pyroxylin. See NITROCELLULOSE, Lacquers.

LADLES

Bottom-Pour. Maintaining Down Pour Ladles, S. R. Robinson. Foundry, vol. 52, no. 8, Apr. 15, 1924, pp. 316-317, and Iron Trade Rev., vol. 74, no. 24, June 12, 1924, pp. 1568-1569. Principal causes of trouble in operation of steel ladles; suggests remedies which should help to remove prejudice against pouring devices of this type.

Portable Drying Apparatus. Portable Ladle Drying Apparatus, H. Hermanns. Foundry, vol. 52, no. 5, Mar. 1, 1924, p. 197, 1 fig. Describes arrangement employed in German steel foundry; flexible couplings render drying apparatus movable within upright ladle; direct control provided.

LANTERN SLIDES

Projectors. The Projection Apparatus as an Aid in Technical Addresses (Der Bildwerfer als Hilfsmittel für technische Vorträge), P. v. Denffer. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 17, Apr. 26, 1924, pp. 413-415, 6 figs. Points out defects of usual lantern-slide projectors and describes design which eliminates these defects.

Technical, Design. Modern Design of Technical Lantern Slides, P. Wölfel. Eng. Progress, vol. 5, no. 10, Oct. 1924, pp. 223-225, 7 figs. Rules governing their design, worked out by German Industrial Standards Committee; discusses two kinds of technical lantern slides, those made from drawings, and those representing photographed objects.

Technical, Standardization. Standardization of Technical Lantern Slides (Normung des technischen Lichtbildes), P. Wölfel. Siemens-Zeit., vol. 4, no. 3, Mar. 1924, pp. 79-82, 7 figs. Standardization committee has been formed in Germany to determine best features of lantern-slide making and of supervising and collecting technical slides and making them generally accessible at headquarters to be established; gives rules adopted.

LATH

Metal. See BUILDING CONSTRUCTION, Metal Lath for Fire Protection; Metal-Lath Reinforcement.

LATHES

Bench. Vidal Precision Bench Lathe. Machy. (Lond.), vol. 24, no. 626, Sept. 25, 1924, pp. 841-843, 6 figs. Describes lathe made by Vidal Eng. Co., Croydon, England; is of 3½-in. centers, bed being 33 in. in length; bed is of flat type with sloping edges.

Work of the Bench Lathe, F. D. Jones. Machy. (N. Y.), vol. 30, no. 12, and vol. 31, no. 1, Aug. and Sept. 1924, pp. 960-964 and 26-31, 24 figs. Examples from practice, illustrating methods of using various tools and attachments for precision toolmaking and manufacturing operations, including grinding, lapping, thread cutting, milling, cutter relieving, and screw slotting.

Capstan. See Turret.

Centers, Production of. Producing Lathe Centres in Quantities. Eng. Production, vol. 7, no. 147, Dec. 1924, p. 353, 2 figs. Describes five main operations.

Chucking Operations. The Machining of Small Components. Machy. (Lond.), vol. 23, no. 599, Mar. 20, 1924, pp. 793-803, 27 figs. Chucking operations on small automatic and capstan machines.

Comparative Measurements on. Comparative Measurements on Lathes (Vergleichsmessungen an Drehbänken), K. Meller. Siemens-Zeit., vol. 4, nos. 4-5 and 6, Apr.-May and June 1924, pp. 116-121 and 177-181, 10 figs. Results of measure-

ments made by Siemens-Schuckert Works on two lathes showing influence of system of drive on efficiency and performance of a lathe. Single drive and group drive, and comparative cost.

Cone-Pulley Drive. The Modern Lathe, P. G. Tetzner. Eng. Progress, vol. 5, no. 11, Nov. 1924, pp. 237-241, 20 figs. Constructive details of high-speed lathe wtih cone-pulley drive, manufactured by Wotan Werke, Leipzig.

Developments. Notes on Lathe Developments, F. Horner. English Mechanics, vol. 119, nos. 3083, 3084, and 3085, Apr. 25, May 2, and 9, 1924, pp. 196-197, 215-216, and 231, 4 figs. Brief résumé of progress in lathe construction.

Duomatic Automatic. Duomatic Lathe Performs Two Operations at the Same Time. Automotive Industries, vol. 50, no. 22, May 29, 1924, pp. 1186-1187, 6 figs. Full automatic machine, made by Lodge & Shipley Machine Co., Cincinnati, has two complete carriages with two slides, each with its power feed and independent quick forward-and-return traverse.

Elliptic-Turning Attachment. Lathe Attachment for Elliptic Turning, I. F. Yeoman. Machy. (N. Y.), vol. 30, no. 9, May 1924, pp. 677-678, 5 figs. Describes attachment primarily employed for elliptical-turning operations on punches and dies used in making oval or elliptical frames for retaining glass windows in automobile tops.

Engine. Unusual Engine Lathe Operations. Machy. (N. Y.), vol. 31, no. 3, Nov. 1924, pp. 207-211, 12 figs. Contains following articles: Arc Grinding in the Lathe, R. A. Black; Boring Concentric Slots, Phil. F. Shafran; Internal Spherical Turning, M. W. Kotawba; Deep-Hole Drilling Job, G. W. Jager; Winding a 300-Foot Coil Spring, J. J. Appel.

Gap. The Buckman 8½-inch Centre Lathe. Machy. (Lond.), vol. 23, no. 590, Jan. 17, 1924, pp. 511-512, 3 figs. Distinguishing feature of hollow-spindle, gap-bed lathe is novel construction of bed.

Gear-Box Design. Production Design of a Lathe Feed Gear-box, A. Clegg. Machy. (Lond.), vol. 23, no. 597, Mar. 6, 1924, pp. 735-737, 3 figs. Gives example of expensive design of 3-speed lathe feed-gear box and shows how this can be substituted by cheaper and better design of similar gear box.

High-Speed. Modern High-Speed Lathes. Eng. Progress, vol. 5, no. 5, May 1924, pp. 81-84, 9 figs. Design of headstock, feed gear, etc., of high-speed lathe manufactured by Heidenreich & Harbeck, Hamburg; comparison of economy with ordinary lathes.

Hollow-Spindle. New Hollow Spindle Lathe for Crankshafts Reduces Overhang to a Minimum. Automotive Industries, vol. 51, no. 18, Oct. 30, 1924, pp. 774-775, 2 figs. Ruggedness of construction siad to permit extra heavy cuts to be taken simultaneously with both front and rear tools; enlarged hollow spindle permits telescoping work inside headstock.

Inspection. Checking Lathes for Accuracy. Machy. (N. Y.), vol. 31, no. 3, Nov. 1924, pp. 195-199, 12 figs. Methods employed at plant of Am. Tool Works Co., Cincinnati, in inspecting various parts of lathes and assembled machines.

The Inspection System in a Lathe Building Plant, H. S. Riggs. Machy. (N. Y.), vol. 30, no. 11, July 1924, pp. 835-841, 12 figs., and Machy. (Lond.), vol. 24, no. 616, July 17, 1924, pp. 481-486, 12 figs. Checking accuracy of lathe parts, assembled units and completed machines of Lodge & Shipley Machine Tool Co.

Interchangeable Construction. Building Lathes Interchangeably, Chas. O. Herb. Machy. (N. Y.), vol. 30, no. 10, June 1924, pp. 758-761, 8 figs. See also Machy. (Lond.), vol. 24, no. 613, June 26, 1924, pp. 389-392, 8 figs. Manufacturing methods used by Chard Lathe Co., New Castle, Ind., to facilitate assembly of machines and supply of replacement parts.

Magazine Attachments. Design of Magazine Attachments, A. A. Dowd. Machy. (N. Y.), vol. 30, no. 11, July 1924, pp. 847-850, 8 figs. Magazine attachments for irregular work.

Screw-Cutting. Production of a 4-inch Screw-cutting Lathe. Machy. (Lond.), vol. 24, no. 601, Apr. 3, 1924, pp. 11-14, 9 figs. Practice of Britannia Lathe & Oil Engine Co., Colchester.

Small Screw-cutting Lathes. Machy. (Lond.), vols. 24 and 25, nos. 622 and 629, Aug. 28, and Oct. 16, 1924, pp. 688-692 and 78-84, 37 figs. Recent points in design.

Semi-Automatic. Semi-Automatic Lathe of Interesting Design, C. C. Walker. Machy. (N. Y.), vol. 30, no. 11, July 1924, pp. 870-873, 6 figs. See also Machy. (Lond.), vol. 24, no. 620, Aug. 14, 1924, pp. 623-626, 6 figs. Construction of machine; character of work; special form cutter used.

Surfacing and Boring. The Surfacing and Boring Lathe—The Poor Man's Turret Lathe, A. Clegg. Brit. Machine Tool Eng., vol. 3, no. 26, Mar.-Apr. 1924, pp. 33-42, 10 figs. Discusses merits and possibilities of surfacing and boring lathes.

Tool Equipment for. High Production Tool Equipment for Capstan and Turret Lathes, E. W. Field. Brit. Machine Tool Eng., vol. 3, no. 30, Nov.-Dec. 1924, pp. 172-182, 20 figs. Describes tool equipment exhibited by H. W. Ward & Co. at Machine Tool Exhibition at Olympia.

Turret. Capstan and Turret Lathe Practice, E. W. Field. Machy. (Lond.), vols. 24 and 25, nos. 612, 613, 614, 616, 618, 619, 624, 628, 630, 631 and 635, June 19, 26, July 3, 17, 31, Aug. 7, Sept. 11, Oct. 9, 23, 30, and Nov. 27, 1924, pp. 369-372, 401-405, 433-435, 489-492, 553-557, 585-591, 743-747, 33-39, 116-120, 129-134, and 257-262, 161 figs. Methods of tooling and chucking.

Chucking Work on Turret Lathes (Wirtschaftliche Ausführung von Futterarbeiten auf Revolverdrehbänken), A. Figge. Maschinenbau, vol. 3, no. 12, Mar. 27, 1924, pp. 396-397, 5 figs. Advantages of multiple-hole turret lathe with horizontal revolving head in regard to simplicity and convenient adjustment of tools.

Machining Differential Housings on a Universal Turret Lathe, I. F. Yeoman. Machy. (N. Y.), vol. 31, no. 3, Nov. 1924, pp. 217-219, 6 figs. Describes special equipment.

Machining Piston-valve Follower on the Turret Lathe. Machy. (Lond.), vol. 23, no 595, Feb. 21, 1924, pp. 690-691, 2 figs. Operations and tooling equipment employed in machining piston-valve followers on Libby turret lathe.

New Turret Lathe Has Greater Power and Range of Feed. Automotive Industries, vol. 51, no. 15, Oct. 9, 1924, pp. 652-653, 4 figs. No. 1—A universal hollow hexagon turret lathe of Warner & Swasey Co. is featured by all-steel geared head, increased number and range of feeds and feed control in carriage aprons.

Normal Capacity of Turret Lathe Increased, L. S. Love. Iron Age, vol. 114, no. 24, Dec. 11, 1924, pp. 1529-1531, 7 figs. Offset chuck jaws effect nearly double production; combining operations improves quality of product.

The Ungeared Capstan Lathe as a Chucking Machine, E. W. Field. British Machine Tool Eng., vol. 3, nos. 25 and 27, Jan.-Feb. and May-June 1924, pp. 3-7 and 28, and 54-60, 19 figs. No. 25: Examples showing large range of chucking work

small plain-head turret lathe will cover. Includes layout for cone-driven friction geared lathe of 6½-in. centers built by H. W. Ward & Co., and examples on ungeared range by same maker. Describes various processes.

Turret vs. Lathe Work. Lathe and Turret Work Compared, J. Horner. Mach. World, vol. 75, nos. 1932 and 1937, Jan. 11 and Feb. 15, 1924, pp. 18-19 and 94, 10 figs. Describes procedure.

Unusual Operations with. Unusual Engine Lathe Operations. Machy. (N. Y.), vol. 30, no. 11, July 1924, pp. 859-863, 12 figs. Contains following prize-winning articles in contest on interesting lathe practice: Worm Grinding in the Lathe, Jas. W. Armour; Precision Form-Turning, O. S. Marshall; Positioning Details on Drawings, E. Heller.

LAUNDRIES

Power Plants. See STEAM POWER PLANTS, Laundry.

LAUNDRY MACHINERY

Ironing Machines. An Improved Decoudon Ironing Machine. Engineer, vol. 138, no. 3594, Nov. 14, 1924, pp. 565-566, 2 figs. New type of machine is capable of drying and finishing all ordinary flat work with one passage through 42-in. roller.

LAUTAL. See ALUMINUM ALLOYS, Lautal.

LEAD

Alloys. See LEAD ALLOYS.

Antimony Removal. Investigation of the Removal of Antimony from Technical Lead by the Dry Method (Untersuchung über die Entfernung des Antimons aus dem Werkblei auf trockenem Wege), H. Leroux. Metall u. Erz, vol. 21, no. 18, Sept. 1924, pp. 421-432, 11 figs. Purpose and development of dry refining of lead; studies effect of reduction of antimony metal on oxide of lead; results of experiments and their influence on lead-refining process.

Corrosion. See CORROSION, Lead.

Electrolysis. Dissolution of Lead in Alkaline Lye by Means of Sinusoidal Alternating Current (Ueber die Auflösung des Bleies in den alkalischen Laugen mittels Sinuswechselstrom), F. Jirsa and J. Fabinger. Zeit. für Physikalische Chemie, vol. 109, no. 3-4, May 5, 1924, pp. 260-274; 10 figs. Results of experiments show that lead is dissolved by alternating current as bivalent, effect of number of periods on quantity dissolved, etc.

Pig, Molding and Loading. The Newman System of Molding and Loading Pig Lead, Wm. E. Newman. Min. & Metallurgy, vol. 5, no. 210, June 1924, pp. 267-269, 5 figs. Notes on size and shape of lead pigs and customary manner of stacking them in cars; description of lead-molding wheel.

Products, Manufacture. The Manufacture of Lead Products. Metal Industry (N. Y.), vol. 22, no. 4, Apr. 1924, pp. 139-142, 5 figs. Notes on manufacture of white lead, litharge, orange lead, and red lead at works of Cookson & Co., Newcastle-on-Tyne, Eng.

Statistics. The Mineral Industry of the British Empire and Foreign Countries. Lead. Imperial Mineral Resources Bureau, Lond., 1924, 67 pp. Statistics for 1920-1922 on production, exports and imports, and prices.

Structure. Crystalline Structure of Lead and Thallium (Struttura cristallina del piombo e del tallio), G. R. Levi. Nuovo Cimento, vol. 1, no. 2 (new series), May-June 1924, pp. 137-144. Details of experiments to establish datas for crystals.

LEAD ALLOYS

Alkaline-Earth Metals and. Equilibrium between Sodium and Potassium and Their Chlorides in the Fused State, and the Production of Alloys of Alkaline-Earth Metals and Lead (Ueber Gleichgewichte zwischen Natrium und Kalium und ihren Chloriden im schmelzflüssigen Zustand sowie über Herstellung von Erdalkalibleilegierungen), K. Jellinek and G. Tomoff. Zeit. für Physikalische Chemie, vol. 111, no. 3-4, Aug. 5, 1924, pp. 234-250, 4 figs. Equilibrium of reaction between alkali metals and their molten chlorides was studied by introduction of lead phase; alloys of lead with alkaline-earth metals are prepared by fusing together mixture of 75-85 per cent of alkaline-earth chloride and sodium-lead alloy containing about 10 per cent.

Casting. See CASTING, Lead Alloys.

Dross. Determination of Lead, Copper, and Tin in Drosses, J. H. Hastings Eng. & Min. Jl.—Press, vol. 118, no. 8, Aug. 23, 1924, pp. 293-294. Describes methods of analyzing drosses for lead, copper, and tin.

Lead-Antimony. Grain Growth in Lead Containing One Per Cent. of Antimony, R. S. Dean and W. E. Hudson. Am. Chem. Soc.—Jl., vol. 46, no. 8, Aug. 1924, pp. 1778-1786, 5 figs. Discussion of mechanism of grain growth as indicated by results of investigation of relations of time, temperature and amount of deformation to grain size.

Production of Thief-Proof Lead Seals (Versuche zur Herstellung diebessicherer Bleiplomben), M. Kühnel and M. Marzahn. Zeit. für Metallkunde, vol. 16, no. 7, July 1924, pp. 278-279, 3 figs. Proposes replacing lead by lead-antimony alloy as more suitable and gives examples of application.

White Metals. Analysis of White Metals (Analisi dei metalli bianchi), A. Trucco. Metallurgia Italiana, vol. 16, no. 9, Sept. 1924, pp. 378-388, 3 figs. Metals with high and medium lead content, and with antimony and tin base, and methods for determining constituents.

LEAD DEPOSITS

Australia. See SILVER DEPOSITS, Australia.

Canada. See SILVER DEPOSITS, Canada.

Great Britain. Lead- and Zinc-Ores in the Slaty Rocks of Britain, O. T. Jones. Instn. Min. Engrs.—Trans., vol. 64, Pt. 5, Feb. 1924, pp. 219-242, 2 figs. Review of distribution and mode of occurrence.

Mississippi Valley. Upper Mississippi Lead and Zinc Ores, J. E. Spurr. Eng. & Min. Jl.—Press, vol. 117, nos. 6 and 7, Feb. 9 and 16, 1924, pp. 246-250 and 287-292, 16 figs. Discusses conditions under which ores occur, and mentions some of the mose widely accepted interpretations of origin.

Transvaal. See SILVER DEPOSITS, Transvaal.

LEAD METALLURGY

Ore Dressing. See COPPER METALLURGY, Ore Dressing.

Roasting. Investigations on Lead Roasting at the Sulphide Corporation's Works at Cockle Creek, N. S. W., G. L. Clark. Australasian Inst. Min. & Metallurgy—Proc., no. 54, June 30, 1924, pp. 27-54, 17 figs. Lead-roasting in the Godfrey furnaces and Huntingdon-Heberlein pots; account of experiments on utilization of hood gases from Huntingdon-Heberlein pots for acid making.

Smelting. Lead Smelter Snapshots, E. H. Robie. Eng. & Min. Jl.—Press, vol. 117, no. 18, May 3, 1924, pp. 716-721, 20 figs. Notes on practice at plants of St. Joseph Lead Co., Her-

culaneum, Mo.; Federal Lead Co., Federal, near East Alton, Ill.; and St. Louis Smelting & Refining Wks., Collinsville, Ill.; in which three plants all of the Missouri concentrates are treated.

Lead Smelting at Sulphide Corporation Ltd.'s Cockle Creek Works, H. A. Evans. Australasian Inst. & Metallurgy—Proc., no. 51, Sept. 30, 1923, pp. 31-45, 3 figs. Some of the practices and conditions peculiar to these works, and some experiments carried out and conclusions reached.

LEAD MINES

Australia. The Lead Mines at Galena, Northampton, W. A., C. M. Harris. Chem. Eng., & Min. Rev., vol. 16, no. 192, Sept. 5, 1924, pp. 475-477. Review of developments.

Canada. A Short History of the Discovery and Development of the Sullivan Mine; the Solution of Its Difficult Metallurgical Problems; and a Description of the Plants Used in the Reduction of Its Ores, W. M. Archibald, E. G. Montgomery, E. M. Stiles, R. W. Diamond, B. A. Stimmel, J. Buchanan, G. E. Murray, J. J. Fingland and S. G. Blaylock. Instn. Min. & Metallurgy—Bul., no. 241, Oct. 1924, 55 pp., 16 figs., partly on supp. plates.

Ontario's Lead Mine, M. E. Wilson. Can. Min. Jl., vol. 45, nos. 20 and 21, May 16 and 23, 1924, pp. 477-478 and 501-502. Description of Kingdon mine, Galetta, Ontario.

The Development of the Sullivan Mine and Processes for the Treatment of its Ores. Can. Inst. Min. & Met., no. 146, June 1924, pp. 401-465, 23 figs., partly on supp. plates. Outline of history of Sullivan mine, now owned and operated by Consolidated Min. & Smelting Co. of Can., Ltd.; the various methods by which ore has been treated in efforts to solve metallurgical problems which its complex character presents; outline of present mining and metallurgical practice and description of mining and milling plant at Kimberley and smelter and refineries at Trail, in British Columbia.

Italy. Primary and Secondary Ores of the Bottino Mines, Italy. C. L. Sagui. Economic Geology, vol. 19, no. 6, Sept.-Oct. 1924, pp. 542-549. Mineralogy of veins; primary ores; origin of secondary ores.

Mexico. The Ahumada Lead Mine and the Ore Deposits of the Los Lamentos Range, in Mexico, T. A. Rickard. Eng. & Min. Jl.-Press, vol. 118, no. 10, Sept. 6, 1924, pp. 365-373, 9 figs. History of development of mine; geology of district; interesting possibilities of ground yet unopened; production of the two companies, Erupcion Min. Co. and Ahumada Lead Co., in May and June.

LEAD ORE

Classification. See ORE DRESSING, Classification.

Prospecting. How and Where to Prospect for Lead Mines; Some Pertinent Pointers for the Field Man, S. F. Hunt. Salt Lake Min. Rev., vol. 25, no. 19, Jan. 15, 1924, pp. 25-26. Geologic relations; ore-making menstruums never reach surface; surface indications, and mineral belts.

LEATHER

Artificial. Artificial Leather (Kunstleder), K. Micksch. Kunststoffe, vol. 14, no. 8, Aug. 1924, pp. 120-122. Discusses multifarious uses of artificial leather, process of manufacture, dyeing, materials used, etc.

Automobile Upholstery. Automobile Upholstery Leather, K. L. Herrmann and F. J. Radel. Soc. Automotive Engrs.—Jl., vol. 14, no. 3, Mar. 1924, pp. 327-334, 19 figs. Authors explain technical terms used in leather manufacture and describe process by which hide is transformed into upholstery leather suited for automobile use; defects and their influence on finished product; hide is followed through different stages of its transformance into leather from its green salted state.

Belting. See BELTING, Leather.

Manufacture. Applied Research Pays Dividends in Leather Manufacture, A. G. Wikoff. Chem. & Met. Eng., vol. 30, no. 23, June 9, 1924, pp. 896-901, 11 figs. Production of Russia calf, a vegetable-tanned calf leather used for uppers of high-grade shoes; raw skins are refrigerated; hair loosened by lime; lubricating leather fibers.

Puering and Bating. Some Scientific Aspects of Puering and Bating, C. E. Pickard. Chem. & Industry, vol. 43, no. 19, May 9, 1924, pp. 476-480, 3 figs. Attempt to coördinate numerous scattered publications on problems of puering and bating.

Tanning. Contributions to the Theory of Vegetable Tanning, H. G. Bungenberg de Jong. Am. Leather Chemists Assn.—Jl., vol. 19, no. 1, Jan. 1924, pp. 14-57, 4 figs. Dehydration of lyophilic sols and gels by tannins and its bearing on theory of vegetable tanning. Translated from Dutch.

Modern Tanning Processes (Les procédés modernes de tannage), G. Manquat. Technique Moderne, vol. 16, no. 16, Aug. 15, 1924, pp. 548-553, 13 figs. Discusses oil tanning, synthetic tanning, mineral and oil tanning, and gives details of processes and apparatus.

Tannic Acid Tannage, A. W. Thomas and M. W. Kelly. Indus. & Eng. Chem., vol. 16, no. 8, Aug. 1924, pp. 800-802, 2 figs. Study of action of simple tannin of known chemical constitution in order to lead ultimately to deeper understanding of vegetable tanning.

Tanning in Mexico, V. A. Wallin. Am. Leather Chemists Assn.—Jl., vol. 19, no. 2, Feb. 1924, pp. 73-81, 2 figs. Review of industry at present, and description of method employed.

Tanning with the Aid of Electricity, R. Ditmar. Chem. & Met. Eng., vol. 31, no. 22, Dec. 1, 1924, p. 856. Electro-osmotic process can now be used with existing tanyard equipment.

Tanning Materials. Chestnut Wood in the Tanning Industry, R. W. Griffith. Jl. of Forestry, vol. 22, no. 5, May 1924, pp. 542-544. Discusses chestnut wood as desirable source of tannin.

Comparative Analysis of Tanning Materials, 1924 Committee Report. Am. Leather Chemists Assn.—Jl., vol. 19, no. 5, May 1924, pp. 249-258. Tables giving results obtained by committee workers on samples of 4 tanning extracts.

Latin America as a Source of Tanning Materials, Otto Wilson. Chem. & Met. Eng., vol. 30, no. 8, Feb. 25, 1924, pp. 303-305, 2 figs. Mangrove jungles and industry; how mangrove is used. See also article by same author, entitled, Latin America's Greatest Contribution to the Tanning Industry, in same journal, no. 9, Mar. 1, 1924, pp. 344-346, 4 figs., discussing quebracho, divi-divi, and other tannin resources.

Tanning Materials Survey. The Problem of Our Commercial Independence in Tanning Materials. Trade Information Bul. (Supp. to Commerce Reports), no. 167, Jan. 2, 1924, 18 pp. Source of foreign tanning materials and nature of monopolies. Figures of domestic production and consumption of raw tanning materials and extracts during 1922, and exact position of tanning industry with reference to outlook for future.

LENSES

Choice of. See PHOTOGRAPHY, Lenses.

Production. Working Processes of Opticians and Their Auxiliaries (Die Arbeitsverfahren des Optikers und seine Hilfsmittel), F. Weidert.

Praktische Maschinen-Konstrukteur, vol. 57, nos. 18 and 22, May 20 and June 17, 1924, pp. 253-257 and 311-313, 22 figs. Discusses in detail various processes in production of lenses and special devices and machines necessary for them.

LEVEES

[See also RIVERS, Levees.]

Dredge Work, Electric-Hydraulic. Electric-Hydraulic Dredge Work on Illinois Levees. Eng. News-Rec., vol. 92, no. 22, May 29, 1924, pp. 944-945, 4 figs. Material pumped to enlarge levee and fill burrow pits; special cutter on suction and shutters on discharge pipe.

LEVELING

Methods. A New Scale Graduation (Eine neue Skalateilung), J. W. Dieperink. Zeit. für Instrumentenkunde, vol. 44, no. 9, Sept. 1924, pp. 381-409, 11 figs. Discusses leveling methods and their accuracy; Richards, Pemberton, Nestler, Werffeli, Stephenson, and other measuring rods; and describes new systems of graduation for rods and their practical application.

Precise. Precise Leveling in New England, E. B. Roberts. Boston Soc. Civil Engrs.—Jl., vol. 10, no. 10, Oct. 1924, pp. 283-313, 5 figs. Account of work by U. S. Coast and Geodetic Survey in establishing line of precise level from Providence, R. I., to Portland, Me.; descriptions and elevations of permanent bench marks.

LIFEBOATS

Launching Apparatus. New Apparatus for Launching Lifeboats. Nautical Gaz., vol. 107, no. 4, July 26, 1924, pp. 87 and 103, 4 figs. Liners under construction are being equipped with device which has many advantages over ordinary davits; gravity system of lowering is employed.

LIFTING JACKS

Heavy Weights. Construction and Use of Pressure-Water Lifting Jacks (Bau und Anwendung der Druckwasserhebeböcke), R. Hänchen. Praktische Maschinen-Konstrukteur, vol. 57, no. 24, July 1, 1924, pp. 333-338, 17 figs. Describes operation, use and form of lifting jacks for heavy weights in which water (or oil) is used, as in hydraulic presses.

LIGHT

Cold. See Production in Animals.

Diffraction. Kirchhoff's Theory of Diffraction (Zur Kirhhoffschen Beugungstheorie), A. Rubinowicz. Annalen der Physik, vol. 73, no. 5-6, Feb. 1924, pp. 339-364. Intensity of illumination behind screen with hole in it, illuminated by point source of light, may be obtained by Kirchhoff-Huyghens principle, as double integral taken over surface bounded by edge of hole; it is possible to reduce this to line integral taken along edge, and author studies approximate evaluation of this integral by use of principle of stationary phase.

Diffuse Reflection. On the Selective Reflection of Light at Diffuse Reflecting Bodies (Ueber die selektive Reflexion des Lichtes an diffus reflektierenden Körpern), G. P. Woronkoff and G. J. Pokrowski. Zeit. für Physik, vol. 20, no. 6, Jan. 11, 1924, pp. 358-370, 11 figs. Experimental investigation of problem, data being included for variety of substances.

Diffusion. Diffusion of Light from a Searchlight Beam, E. Karrer and U. M. Smith. Jl. Optical Soc. of Am. & Rev. Sci. Instruments, vol. 7, no. 12, Dec. 1923, pp. 1211-1234, 14 figs. Definition and importance of diffusion of light; general characteristics of light diffused by small particles; data from searchlight beams; practical importance of light diffused from searchlight beams; color of path of various searchlight beams. Bibliography. Pub. by permission U. S. Bur. Standards.

Dispersion. Light. Sci. Abstracts, vol. 27, no. 319, July 25, 1924, pp. 611-640. Mathematical investigation of effect of mutual influence of molecular scattering and scattering by irregular refraction upon dispersion of light.

Effect of Color on Eyes. Effect of Color of Illumination on Capacity of Eyes (Wird die Leistung des Auges durch die Farbe der Beleuchtung beeinflusst?), O. Schneider. Deutsche Optische Wochenschrift, vol. 10, nos. 36 and 37, Sept. 7 and 14, 1924, pp. 465-468 and 480-482, 2 figs. Capacity and fatigue of eyes as affected by color and application of results.

Effect of Composition on Ocular Functions. Further Studies on the Effect of Composition of Light on Important Ocular Functions, C. E. Ferree and G. Rand. Illuminating Eng. Soc.—Trans., vol. 19, no. 5, May 1924, pp. 424-447 and (discussion) 447-455, 12 figs. Apparatus and method of equalizing saturation and luminosity; acuity; speed of discrimination; eye fatigue with colored lights of equal saturation and brightness, etc.

Fluorescent, from Solids. A New Method for Measuring the Intensity of Fluorescent Light from Solids (Eine neue Methode zur Messung des Fluoreszenzlichtes fester Körper), A. Gyemant. Zeit. für Physik, vol. 26, no. 4-5, Aug. 14, 1924, pp. 223-234, 1 fig. Simple method applicable also to measuring intensity of fluorescence-exciting radiations, such as Röntgen rays; describes two types of apparatus.

Glare. Research on the Phenomenon of Glare (Alcune ricerche sopra i fenomeni di abbagliamento), U. Bordoni. Elettrotecnica, vol. 11, no. 25, Sept. 5, 1924, pp. 585-599, 17 figs. Discusses effect of glare on eye, measurement of light and glare, etc.

Interference. Interference by Diffusion (Interférences par diffusion), F. Wolfers. Académie des Sciences—Comptes Rendus, vol. 179, no. 4, July 28, 1924, pp. 262-263. Mechanism is suggested to explain results previously described; it is supposed that at surface of all bodies resonators exist capable of absorbing energy quanta and of re-emitting them in form of spherical waves.

Measurement. Light and Efficiency of Work. Photometric Magnitudes and Units (La lumière et le rendement du travail. Grandeurs et unités photométriques), E. Marcotte. Arts et Métiers, vol. 77, no. 47, Aug. 1924, pp. 281-286. Discusses light as a factor in industrial production; international photometric units; photometers, lumenmeters, luxmeters, and other measuring instruments.

Measuring Instruments. A New Form of Portable Illuminometer, D. H. Tuck. Optical Soc. Am.—Jl., vol. 9, no. 3, Sept. 1924, pp. 303-308, 3 figs. Describes Holophane Lightmeter, Model D, for measuring illumination intensity, brightness, luminous intensity, luminous flux, reflection factor, absorption factor, transmission factor, and special uses.

Plant Growth, Effect on. Effect of Light on Plant Growth. Illuminating Eng. Soc.—Trans., vol. 19, no. 10, Dec. 1924, pp. 981-1019, 25 figs. Includes following papers: Summary of Literature on Some Phases of Effect of Light on Plant Growth, H. W. Popp; Work to Date at Boyce Thompson Institute for Plant Research on Effect of Light on Plant Growth, J. M. Arthur; Discussion of Work at Boyce Thompson Institute and Its Applications, W. Crocker; Influence of Colored Light on Plant Growth, S. G. Hibben; and Stimulation of Plant Growth by Means of Electric Lighting, V. A. Tiedjens.

Primary Standard. A Primary Standard of Light, Following the Proposal of Waidner and

Burgess, H. E. Ives. Franklin Inst.—Jl., vol. 197, nos. 2 and 3, Feb. and Mar. 1924, pp. 147-182 and 359-400, 41 figs. Feb.: Discussion of existing standards; characteristics which a primary standard should possess; use of platinum in connection with a standard of light; black-body standards; luminous properties of a black body near temperature of melting platinum; development of a special design of platinum black body, and study of its performance. Mar.: Measurements by visual method of brightness of platinum black body at its melting point; measurements by physical photometric method. Bibliography.

Production in Animals. The Production of Cold Light by Living Organisms (Les organismes vivants produisent de la lumière froide), R. Dubois. Nature (Paris), no. 2604, Mar. 1, 1924, pp. 129-131, 5 figs. Discusses mechanism of light production in animals.

Projection of. Studies in the Projection of Light, F. Benford. Gen. Elec. Rev., vol. 27, nos. 8, 9, 10, 11, and 12, Aug., Sept., Oct., Nov., and Dec. 1924, pp. 504-510, 625-633, 698-704, 749-757, and 830-838, 36 figs. Aug.: Energy and light analysis of arc and incandescent searchlights. Sept.: Design of glass paraboloidal mirror. Oct.: Double paraboloidal mirror. Nov.: Surface errors in second-surface mirrors. Dec.: Design and optics of second-surface mirrors.

Quantum Hypothesis. Planck's Law and the Light Quantum Hypothesis (Planck's Gesetz und Lichtquantenhypothese), Bose. Zeit. für Physik, vol. 26, no. 3, Aug. 11, 1924, pp. 178-181. Method for establishment of Planck's law by utilization of light quantum hypothesis in combination with mechanical data, which is independent of classical theory. Note, in conclusion, by Einstein, suggests use of method for application of quantum theory in case of an ideal gas, and promises further remarks on this aspect.

Radiation. The Radiation of Light, H. A. Lorentz. Sci. Monthly, vol. 19, no. 2, Aug. 1924, pp. 170-179, 2 figs. Discusses corpuscular and undulatory or electromagnetic theory of light, radiation pressure, relativity, quantum theory, interference and photoelectric phenomena.

Reflection. Law of Reflection from Moving Mirrors (Les lois de la refléxion sur des miroirs en mouvement), F. Guery. Revue Générale de l'Electricité, vol. 16, no. 10, Sept. 6, 1924, pp. 371-376. Discusses optics of bodies in motion, interpretation of Michelson experiment, Sagnac experiment, theory of Lorentz and Ritz, relativity, ether, etc.

Reflexion of Plane Polarized Light by Etched Metals, O. Jones. Lond., Edinburgh & Dublin Philosophical Mag. & Jl. Sci., vol. 48, no. 283, July 1924, pp. 207-216, 3 figs. Plane polarized light reflected normally from etched metal surface changes in intensity when analyzed by nicol prism.

Time of Visual Impression. Some Experiments on the Speed of Vision, P. W. Cobb. Illuminating Eng. Soc.—Trans., vol. 19, no. 2, Feb. 1924, pp. 150-163 and (discussion) 163-175, 6 figs. Contribution to task of working out of a complete law of speed of vision. Shows in what way speed of impression of eye changes with change in brightness-level, under various conditions as to size of test-object, as to necessity for seeing form as against simple recognition of presence of object, and as to presence or absence of confusion due to images of other objects seen immediately before and after test-object.

Velocity. Preliminary Measurement of the Velocity of Light, A. A. Michelson. Franklin Inst. —Jl., vol. 198, no. 5, Nov. 1924, pp. 627-628. Result of observations at Mt. Wilson Observatory in preliminary work is, for velocity of light in vacuo, 299-820 km. per sec.

The Experience of Michelson, the Lorentz Contraction and Relativity (L'experience de Michelson, la contraction de Lorentz et la relativité), E. Brylinski. Revue Générale de l'Electricité, vol. 15, nos. 7, 8, and 9, Feb. 16, 23, and Mar. 1, 1924, pp. 243-250, 283-288, and 339-347, 14 figs. Interpretation of Michelson's experience with ordinary theory of light in assuming that ether is absolutely immobile and velocity of light is independent of velocity of source from which it is emitted; result of investigation shows that hypothesis of contraction of matter in the sense of movement appears improbable and that Michelson's experience cannot be regarded as constituting a verification of postulates which form basis of relativity theory.

Wave-Length Standards. Redetermination of Secondary Standards of Wave Length from the New International Iron Arc, W. F. Meggers, C. C. Kiess and K. Burns. U. S. Bur. Standards—Scientific Papers, no. 478, Jan. 5, 1924, pp. 263-272, 1 fig. on supp. plate. Gives new results for 159 lines between 3370 A and 6678 A, including 84 of international secondary standards.

LIGHTHOUSES

Construction. The Construction of Lighthouse Towers (Construction des tours en mer), G. de Rouville. Annales des Ponts & Chaussées (Partie Technique), vol. 94, nos. 1, 2, and 3, Jan.-Feb., Mar.-Apr., and May-June, 1924, pp. 21-101, 138-196, and 233-281, 57 figs. History of development and problems of design; study of shape and conditions of rock, and movement of water surrounding rock; shape of towers; preliminary work; cleaning and preparation of rock; foundation work; construction of superstructure and fittings; composition and proportioning of materials employed; equipment employed in erection; cost data, etc.

Distance of Penetration of. The Distance of Penetration of Coast Light (De optische dracht van kustlichten), P. Van B. Van Vloten. Ingenieur, vol. 39, no. 5, Feb. 2, 1924, pp. 67-74, 7 figs. Application of Allard formula and empirical method of Zuiver to lighthouses on Dutch coast are compared to actual measurements. Diagrams.

Fog Signal. Lighthouse Service Develops Hygroscopic Fog Signal. Eng. News-Rec., vol. 92, no. 23, June 5, 1924, p. 974, 2 figs. Operation of signals controlled by humidity of atmosphere; striking hammer run by small electric motor.

Luminous Flashing Signals. The Law of the Limiting Perception of Luminous Flashing Signals (Sur la loi de perception à la limite de la portée des eclats des signaux lumineaux), A. Blondel and J. Rey. Académie des Sciences—Comptes Rendus, vol. 178, no. 15, Apr. 7, 1924, pp. 1245-1247. Referring to paper by H. Piéron, authors point out that he has been studying different phenomenon from that which they have been investigating; law established by them is intended solely to apply to best conditions of emission of signals from lighthouses or of similar signals produced by sources which behave for observer as if coming from point sources; observations are meant to apply to maritime signals, in which it is impossible to realize signals of duration less than 1/50 sec.

LIGHTING

[See also ILLUMINATION.]

Art Galleries. Recent Observations and Tests on the Lighting of Picture Galleries and Museums, S. H. Seager. Roy. Inst. Brit. Architects —Jl., vol. 32, no. 4, Dec. 20, 1924, pp. 91-101, 8 figs. Classification of systems; advantages of top-side-lighted rooms; results of tests at different galleries; study of side-lighted rooms.

Automobile Factory. The White Motor Company Improves Illumination, H. Hylkema and H. T. Spaulding. Elec. World, vol. 83, no. 23, June 7, 1924, pp. 1177-1181, 6 figs. How engineering investigation recommended 4957 outlets, raising average intensity to 12 foot-candles; new type of reflector partly lights ceiling; more than 1800 units installed.

Beacon. Beacon Light and Signal Plants According to AGA System (Leuchtfeuer- und Signalanlagen nach dem AGA-System), A. Mellin. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 14, Apr. 5, 1924, pp. 334-338, 9 figs. Discusses illuminating system developed by G. Dalén, based on use of "dissous gas" as illuminating material; this gas, discovered and named by Claude and Hess, consists of acetylene which is dissolved under pressure in acetone and is stored in so-called gas accumulators; its main use is for beacon lights, different types of which are described, including railway signals, car lighting, locomotive, automobile, motor-boat lighting, emergency lighting in operating rooms and power plants, aviation signals, etc.

Building Exteriors. Color Flood-Lighting of Buildings, A. U. Gerber and E. D. Tillson. Illuminating Eng. Soc.—Trans., vol. 19, no. 6, July 1924, pp. 518-530, 5 figs. Details of color lighting of McJunkin Bldg., Chicago; principles underlying use of colors. Abstract of paper read before joint meeting of Illuminating Eng. Soc. and West. Soc. Engrs.

Color Lighting for Building Exteriors, E. D. Tillson. Elec. Wld., vol. 84, no. 21, Nov. 22, 1924, pp. 1090-1094, 5 figs. Principles that must be applied to avoid objectionable effects.

Calculation. Quick Method of Determining a Project for Electric Lighting (Méthode rapide d'établissement d'un projet d'éclairage électrique), J. Wetzel. Électricien, vol. 40, no. 1352, July 15, 1924, pp. 319-321. Discusses determining intensity of light, coefficient of utilization method and simplified method and how to apply it.

Central Stations. The Furtherance of Good Lighting by American Central Stations, John W. Lieb. Illuminating Eng. Soc.—Trans., vol. 19, no. 7, Sept. 1924, pp. 622-637. Central-station view of electric lighting; coöperation between electrical manufacturers and electricity-supply companies; incandescent lamps; lighting equipment; central-station illuminating engineering.

Unusual Phases of Power House Lighting, A. F. Loewe. Power Plant Eng., vol. 28, no. 17, Sept. 1, 1924, pp. 898-900, 2 figs. Illumination of control and distribution room. Consideration of requirements and methods of lighting.

Coal Mines. See COAL MINES, Lighting.

Code. A Code for Lighting (Di un codice della illuminazione), C. Clerici. Elettrotecnica, vol. 11, no. 25, Sept. 5, 1924, pp. 599-608, 12 figs. Discusses rules for lighting of industrial establishments, machine tools, spaces, etc.; advantages of good illumination, etc.

Color Flood Lighting. See Building Exteriors.

Colored. Colored Lighting, M. Luckiesh and A. H. Taylor. Illuminating Eng. Soc.—Trans., vol. 19, no. 2, Feb. 1924, pp. 135-144 and (discussion) 144-149, 7 figs. on supp. plates. Gives spectral limits of the various colors, and relative luminosity of the various portions of spectrum from a 150 or 200-watt gas-filled lamp; characteristics, advantages and disadvantages of various colored media; results of measurement of transmission factors of many samples of such media; describes two examples of recent large installations of colored lighting, with connected-load data. Bibliography.

Daylight. A Portable Instrument for the Direct Measurement of Daylight Factor, A. K. Taylor. Jl. Sci. Instruments, vol. 1, no. 7, Apr. 1924, pp. 214-218, 4 figs. Design and use of simple instrument for direct measurement of daylight factor; it is portable and does not require lamp, battery or other accessory.

Daylighting from Windows, H. H. Higbie and G. W. Younglove. Illuminating Eng. Soc.—Trans., vol. 19, no. 3, Mar. 1924, pp. 235-268, 16 figs. Experimental data covering various points of practical importance and great interest with respect to daylighting of interiors. Actual utilization coefficient for typical daylight illuminations, together with curves and coefficients representing distribution of daylight under a variety of conditions; effect of width of mullions or columns between windows upon distribution of illumination in room, relative effect and efficiency of light from various portions of window area, effect of various methods of controlling light from windows by means of shades and blinds, and effect of dirt accumulations on windows.

Some Principles Governing the Proper Utilization of the Light of Day in Roof Fenestration, W. S. Brown. Illuminating Eng. Soc.—Trans., vol. 19, no. 3, Mar. 1924, pp. 269-287 and (discussion) 288-289, 9 figs. Sources of daylight with which architect has to work are described as regards their intensity, direction, and seasonal and diurnal variation; usual requirements for natural illumination, and general principles governing utilization of latter in roof fenestration; methods of evaluating the three kinds of daylight entering, and examples worked out for certain usual types of roof fenestration.

The Determination of Daylight Intensity at a Window Opening, H. H. Kimball. Illuminating Eng. Soc.—Trans., vol. 19, no. 3, Mar. 1924, pp. 217-234 and (discussion) 288-289, 8 figs. Photometric measurements of sky brightness and determinations of intensity of daylight on horizontal, vertical, and sloping surfaces; method of determining extent of shading of window openings by neighboring buildings; advantage of laying out cities so that streets run NE-SW and NW-SE instead of E-W and N-S; determinations of reflecting power of surfaces of different kinds, and photometric measurements of their brightness under both cloudy and clear-sky conditions; computation of intensity of daylight at a window opening under given conditions.

Developments, 1923. Lighting Developments in 1923, G. H. Stickney. Elec. World, vol. 83, no. 1, Jan. 5, 1924, pp. 38-40, 3 figs. Improvements in illuminants, equipment and practice; notable increase in intensities and wider recognition of values of good illumination; possibilities of future.

Distribution Systems for Public. Distribution Systems for Public Electric Lighting (Sui sistemi di distribuzione della corrente per pubblica illuminazione), G. Storchi. Elettrotecnica, vol. 11, no. 23-24, Aug. 15-25, 1924, pp. 564-566, 2 figs. Critical review of series and parallel systems of feeding lamps for public lighting; copper economy, simplicity of cable laying, absence of junction boxes, uniformity in brilliancy of lamps and other reasons lead author to conclusion that best is series system.

Equipment Depreciation. Depreciation of Lighting Equipment Due to Dust and Dirt, E. A. Anderson and J. M. Ketch. Illuminating Eng. Soc.—Trans., vol. 19, no. 1, Jan. 1924, pp. 55-65 and (discussion) 65-86. Report of tests under service conditions to determine relative depreciation or loss in efficiency. Possibilities of a simple comparison standard for predicting depreciation rates in a particular installation.

Eye, Effect on. Illumination and the Eye (L'occhio umano e l'illuminazione), L. F. Pello. Elettrotecnica, vol. 11, no. 23-24, Aug. 15-25, 1924, pp. 548-551, 2 figs. Résumé of effect on performance of eye produced by different factors

in illumination, such as intensity, distribution and diffusion, steadiness, color, and glare; points out necessity for close coöperation between oculist and illuminating engineer.

Factories. Rules and Regulations for the Illumination of Factories and Other Industrial Workshops (Leitsätze für die Beleuchtung von Fabriken und anderen gewerblichen Arbeitsstätten), H. Lux. Licht u. Lampe, no. 10, May 8, 1924, pp. 255-257. Established by a number of interested German societies and authorities.

The Relation of Illumination to Production, W. E. Bush. Eng. Production, vol. 7, no. 140, May 1924, pp. 124-129 (includes discussion), 14 figs. Foot-candle meter; shadows; illumination and vision; effect of light on output.

Foundries. How to Illuminate Foundries, W. H. Rademacher. Iron Trade Rev., vol. 75, no. 12, Sept. 18, 1924, pp. 741-745, 3 figs. Explains essential differences between hit-or-miss methods and scientific use of modern electric lamps. Benefits derived through better production, with safety.

Fundamental Principles. The Effects of Quantity and quality of Illumination Upon the Human Eye and Vision, C. Sheard. Safety Eng., vol. 47, no. 2, Feb. 1924, pp. 91-98. Fundamental principles of good lighting, including quantity of light; kinds and effect of glare; quality of light and conditions to be avoided.

Gas, High-Pressure. High-Pressure Lighting in Paris, G. Reclus. Gas Jl., vol. 167, no. 3193, July 23, 1924, pp. 379-382, 14 figs. More than 5500 lamps giving total luminous output of 9,000,000 candlepower spread over 95 km. of streets is extent of high-pressure gas lighting of Paris; discusses history, mains and compressor stations, types of lamps, control and cost of installation and upkeep.

Globes. See Street.

Halls. Illumination Requirements of Halls and Means of Light Technics (Anforderungen an die Beleuchtung von Sälen und die Mittel der Lichttechnik), P. Heyck. Elektrotechnik u. Maschinenbau, vol. 42, no. 29, July 20, 1924, pp. 201-208, 28 figs. (Lichttechnik). Discusses avoidance of intense shadows, protection of eyes, proper position of lights, direct, semi-direct and indirect lighting number of lamps, etc.

Highways. Highway Lighting and Public Safety, G. A. B. Halvorsen, Jr., and S. C. Rogers. Nat. Safety News, vol. 10, no. 3, Sept. 1924, pp. 35-36, 4 figs. Discusses correct lighting of automobile roads with particular reefrence to "S" curves.

See also Street.

Holland. Public Lighting in Holland (L'éclairage public en Hollande), La Haye. Société Française des Electriciens—Bul., vol. 4, no. 37, July 1924, pp. 633-642, 10 figs. Lighting arrangements at The Hague, Scheweningen, Amsterdam, Utrecht and Rotterdam. Lighting is intense but there is little uniformity. Comparison with Parisian conditions.

Industrial. Conditions Which Should Be Fulfilled in the Lighting of Industrial and Commercial Establishments (Les conditions à remplir dans l'éclairage des établissements industriels et commerciaux), M. Leblanc. Revue Générale de l'Electricité, vol. 16, no. 20, Nov. 15, 1924, pp. 800-802. Proposes lighting of a specified number of lux for various operations in chemical, paper, printing, tanning and other industries.

Industrial and Commercial Buildings. The Lighting of Industrial and Commercial Buildings (L'éclairage des locaux industriels et commerciaux), J. Lynn. Génie Civil, vol. 84, no. 18, May 3, 1924, pp. 417-420, 9 figs. Physiological effects of luminous radiations; selection of lamps.

Industrial, Unit Costs of. Unit Costs of Industrial Lighting, D. H. Tuck. Illuminating Eng. Soc.—Trans., vol. 19, no. 5, May 1924, pp. 411-419 and (discussion) 419-423, 1 fig. Unit costs of installation and operation of various actual systems of lighting in industrial plants; value of unit costs is in comparing economy of installation and operating costs of various types of lighting and in arriving at quick estimate of cost of any industrial lighting installation when area to be illuminated, foot-candle intensity to be obtained and type of equipment to be used are known.

Installations. Modern Lighting Installations (Impianti moderni di illuminazione), D. Pagani. Industria, vol. 38, no. 15, Aug. 15, 1924, pp. 417-422, 19 figs. Discusses curve of radiation of lights and lamps, horizontal and vertical lighting, intensity of light, interior and street lighting, types of lamps used and their efficiency.

Interior. Experiments in Interior Lighting Alcuni dati sperimentali sulla illuminazione degli ambienti interni), G. Someda. Elettrotecnica, vol. 11, no. 27, Sept. 25, 1924, pp. 664-666, 5 figs. Details of experiments made in a room without windows with carbon, half-watt, and one-watt lamps, and of experiments on effect of color of walls, diffusion of light by walls, etc.

Italy. The Illuminating Situation in Italy (La nostra situazione in illuminazione, a che punto siamo e dove dobbiamo tendere), G. Peri. Elettrotecnica, vol. 11, no. 26, Sept. 15, 1924, pp. 629-635, 12 figs. Discusses consumption of electricity, most economic intensity for industrial lighting, street lighting, etc.

Light Intensity. Physiologic Considerations in Examination of Lighting Plants (Physiologische Betrachtungen zur Beurteilung von Beleuchtungsanlagen), L. Schneider. Zeit. für technische Physik, vol. 5, no. 10, 1924, pp. 468-471. Contends that intensity of light is main consideration in street lighting; condemns wide angle reflectors and prisms.

Machine Shops. Electric Lighting Plans for Machine Tools (Ueber die Projektierung elektrischer Beleuchtungsanlagen für Werkzeugmaschinen), H. Müller. Elektrotechnischer Anzeiger, vol. 41, nos. 84, 85-86, and 87-88, May 24, 28, and 31, 1924, pp. 428-430, and 436 and 438, and 444-445. Discusses kinds of illumination, distribution of light, globes, bulbs, individual and general lighting, etc.

Good Lighting Equipment Pays, J. J. McLaughlin. Am. Mach., vol. 61, no. 7, Aug. 14, 1924, pp. 253-256, 9 figs. Advantages of good lighting system; proper position and spacing of units for machine shops; saving through periodical cleaning of equipment.

Measurement. Effective Light in Lux and Light Density in Lumen ("Erhellung" in Lux und "Leuchtdichte" in HK/qcm), L. Bloch. Licht u. Lampe, no. 19, Sept. 11, 1924, pp. 523-526. Terminology and magnitudes used and proposed for measuring effects of light. Gives list of sources of light (oil, gas, electricity) and numbers for their density, lux, lumen, etc.

Methods. Modern Methods of Artificial Illumination, A. L. Powell. Am. Architect, vol. 125, no. 2438, Jan. 30, 1924, pp. 133-139, 8 figs. Desirable qualities of an illuminant, desirable qualities of illumination, and discussion of standard types of equipments which have diversified applications for different classes of service.

Mines. Improved Lighting Underground. Colliery Engr., vol. 1, no. 5, July 1924, pp. 233-236. Discusses advantages and drawbacks of Prof. Thornton's proposed system of safe electric lighting.

Modern. Modern Solutions of Lighting Problems (Les solutions modernes des problèmes

d'éclairage), M. E. Darmois. Société Industrielle de l'Est—Bul., no. 173, Apr.-May-June, 1924, pp. 15-30, 7 figs. Discusses lighting as factor in works, efficiency, number of accidents, sanitation; photometric units, tungsten-filament lamps, reflectors, calculation of lighting, etc.

Nomenclature and Standards. Recent Developments in Nomenclature and Standards. Illuminating Eng. Soc.—Trans., vol. 19, no. 1, Jan. 1924, pp. 7-16. Progress made during 1923 in revision of Illuminating Engineering Nomenclature and Photometric Standards previously prepared by I. E. S. committee and approved as American Standard by Am. Eng. Standards Committee. Presents questions for consideration on which it is desired to have discussion and advice, among which are definition of "light" and "lighting," matter of "brightness" and units to be used in measuring it, and use of term "luminaire."

Office and Plant Building. High-Intensity Illumination. Elec. World, vol. 84, no. 18, Nov. 1, 1924, pp. 943-949, 23 figs. Describes lighting equipment installed in offices and plant of McGraw-Hill Co. in New York City; problems encountered and types of equipment required.

Outdoor Advertisements. The Use of Light for Outdoor Advertisements, G. P. Garbett. Illuminating Engr., vol. 17, no. 4, Apr. 1924, pp. 38-43. Short history of electric sign; discusses construction, lamps, switch-gear, restrictions and color of lamps.

Principles. Modern Principles of Artificial Lighting (Principes moderns de l'éclairage artificiel), E. Darmois. Technique Moderne, vol. 16, no. 23, Dec. 1, 1924, pp. 805-811, 11 figs. Photometric units; sources of light; properties of eye, and glare; installation of lamps; etc.

Problems. Working with the Architect on Difficult Lighting Problems, A. D. Curtis and J. L. Stair. Illuminating Eng. Soc.—Trans., vol. 19, no. 1, Jan. 1924, pp. 43-54 and (discussion) 65-86, 15 figs. Emphasizes necessity for early consultation between architect and lighting man in planning of lighting features of a building as well as responsibility of lighting man in developing in himself an appreciation of architectural values so as to most intelligently work with his architectural colleague. Gives some specific examples of lighting problems to illustrate advantages to be derived by considering lighting as a component part of structure.

Progress. Progress in the Art of Illumination, A. Bishoff. Illuminating Eng. Soc.—Trans., vol. 19, no. 1, Jan. 1924, pp. 17-27. Progress made from Jan. 1, 1900, to July 31, 1923, as evidenced by number of patents granted by U. S. Patent Office. Brief discussion of more active branches is given to indicate trend of thought followed by inventors.

The Year's Progress in Illumination, 1923-1924. Illuminating Eng. Soc.—Trans., vol. 19, no. 8, Oct. 1924, pp. 711-800. 1924 report of Committee on Progress. Deals with gas; incandescent electric and arc and vapor tube lamps; lamps for projection purposes; street lighting and other exterior illumination; interior illumination; luminaires; photometery; physics; physiology; illuminating engineering. Bibliography.

Quality of. Quality of Lighting (Die Güte der Beleuchtung), J. Teichmüller. Elektrotechnische Zeit., vol. 45, no. 38, Sept. 18, 1924, pp. 1000-1002. Standards of German Electric Assn. and their shortcomings; light intensity, uniformity, color, shades, etc.

Railway Shops. See RAILWAY SHOPS, Lighting.

Railway Yards. See RAILWAY YARDS, Flood Lighting.

Reflectors. Reflectors and Diffusers in Interior Lighting (Riflettori e diffusori esaminati in rapporto alla illuminazione degli ambienti interni), S. Rebecchni. Elettrotecnica, vol. 11, no. 28, Oct. 5, 1924, pp. 695-699, 6 figs. Discusses direct, indirect, and semi-indirect systems of lighting; types of reflectors and diffusers used; and results of experiments to establish their merits.

Requirements. Physiological Requirements of Good Illumination and Their Realization in Practice (Die physiologischen Forderungen an eine gute Beleuchtung und ihre Verwirklichung in der Praxis), Schneider. Elektrotechnik u. Maschinenbau, vol. 42, no. 37, Sept. 14, 1924, pp. 277-283 (Die Lichttechnik), 18 figs. Structure and function of eye as affected by illumination; direct and indirect lighting; glare; projection of light, etc.

Research. Co-ordination of Research in Illuminating Engineering and Some Practical Applications, J. S. Dow. Illuminating Engr., vol. 17, no. 1-3, Jan.-Mar. 1924, pp. 6-15 and (discussion) 16-18. Classification of research; research on photometry and standards of light; illuminants and lighting appliances; research on glare; collection of statistical data on illumination; facilities for research.

Room, Calculation. The Calculation of Electric Lighting Plants (Die Berechnung elektrischer Beleuchtungsanlagen), F. Knepper. Licht u. Lampe, no. 4, Feb. 14, 1924, pp. 76-79. Discusses methods of calculating lighting requirement of a room.

Roundhouses. See RAILWAY SHOPS, Lighting.

School Buildings. Code of Lighting School Buildings. Illuminating Eng. Soc.—Trans., vol. 19, no. 5, May 1924, pp. 375-410, 21 figs., partly on supp. plates. Revision of Illuminating Eng. Soc.'s code issued in 1918.

Scientific, Application in Practice. The Application of Scientific Illumination in Practice, G. Herbert and R. A. Ives. Illuminating Engr., vol. 16, no. 10-12, Oct.-Dec. 1923, pp. 233-238 and (discussion) 238-242. Discusses importance of data, fundamentals of good lighting, relation between accidents and inadequate lighting, and shows how good illumination contributed to productive efficiency.

Ships. See SHIPS, Lighting.

Steel Works. See STEEL WORKS, Lighting.

Street. A Study of the Street Lighting Systems with Recommendations. Mun. & County Eng., vol. 67, no. 3, Sept. 1924, pp. 111-115, 1 fig. Full text of report of Joint Committee on Street Lighting of N. Y. State Conference of Mayors and Other City Officials and Empire State Gas & Elec. Assn. as presented on June 3, 1924.

Asymmetric Illumination Distribution for Ornamental Street Lighting, L. A. S. Wood. Elec. World, vol. 83, no. 20, May 17, 1924, pp. 999-1003, 8 figs. Sheridan Road installation in Chicago meets high-intensity lighting requirements economically and esthetically by directing greatest density at angle of 22½ deg. from curb line.

Common Return for Street Lighting, H. Richter. Elec. World, vol. 84, no. 16, Oct. 18, 1924, pp. 831-833, 2 figs. Advantages and disadvantages of system; field experience and methods for testing and maintenance; use of common-neutral network system.

Hollywood's Street-Lighting Installation, O. J. Helvey. Elec. Wld., vol. 84, no. 23, Dec. 6, 1924, pp. 1201-1202, 4 figs. Specially designed standards and lamps combine beauty with effective illumination; flexibility of posts an important feature; costs of installation and maintenance.

Maywood Street-Lighting System, F. Woodmansee. Elec. Wld., vol. 84, no. 6, Aug. 9, 1924, pp. 257-260, 6 figs. Complete installation of

1784 lamps with individual disconnecting transformers in base of posts costs $270 per lamp; 360 kw. compact-ring bus substation serves 12 circuits for suburb of 12,000 people (Maywood, Chicago, Ill.).

Model State Law for Street and Highway Lighting. Mun. & County Eng., vol. 67, no. 4, Oct. 1924, pp. 191-197. Presents a model law covering every class and condition of public lighting and embodying all good points of previous legislation, prepared by coöperation of legal and scientific minds.

Municipal Lighting Plant of Milan (L'impianto di illuminazione pubblica di Milano). Elettrotecnica, vol. 11, no. 27, Sept. 25, 1924, pp. 667-673, 5 figs. Development of plant, distribution and control, transformers, distance-control apparatus, lamp ports and lamps, consumption of current, rates and cost of service.

Proposed Improved Street Lighting Design for the City of Cleveland, Ohio, W. Harrison and O. F. Hass. Safety Eng., vol. 47, no. 5, May 1924, pp. 234-237 and 239, 3 figs. Old system and primary design of new system with approximate cost and other data for new.

Recent Advance in Street Lighting Methods, S. B. Hood. Elec. Light & Power, vol. 2, no. 8, Aug. 1924, pp. 13-15 and 58, 5 figs. Details of application at Minneapolis of low-voltage multiple supply in preference to more commonly used high-voltage series systems.

Recent Developments in Street Lighting, J. T. Rood. Wis. Engr., vol. 28, no. 7, Apr. 1924, pp. 135-137 and 152-153. Discusses arc lamp, incandescent lamp, probable future developments, and lighting of main business sections, residence and secondary business sections, outlying residential sections, and outlying highways.

Some Facts About Street Lighting, G. H. P. Dellman. Jl. of Elec., vol. 52, no. 11, June 1, 1924, pp. 404-408. Review of practice, showing changes which street lighting systems have undergone in past years; modern practices; essential features of proper lighting; methods and financing of lighting, etc.

Some Notes on Street Lighting, P. S. Millar. Am. Inst. Elec. Engrs.—Jl., vol. 43, no. 6, June 1924, pp. 495-503, 9 figs. Test data upon certain sizes and types of incandescent lamps for street lighting; present status of street lighting; presentation of selected list of modern lamp posts and lighting equipments; data to show character of installations recommended by experts for lighting of various classes of streets.

Street Lighting (Verkehrsbeleuchtung), J. Schaer. Elektrotechnische Zeit., vol. 45, nos. 25 and 26, June 19 and 26, 1924, pp. 641-646 and 684-688, 17 figs. Discusses illumination of horizontal as well as vertical planes, quality as opposed to strength of illumination; recommends double dioptric globes. Design of street lighting systems.

Street Lighting and Visability, E. J. Stewart. Gas Wld., vol. 81, no. 2097, Sept. 27, 1924, pp. 311-315 and (discussion) 315-317. Discusses functions of street lighting, methods of measurement, factors concerned in visibility, lighting name-plates, etc. Abstract of paper read before Instn. Pub. Lighting Engrs. meeting, Glasgow.

Street Lighting Glassware, F. Benford. Gen. Elec. Rev., vol. 27, no. 5, May 1924, pp. 304-312, 14 figs. Design of globes for street lamps.

Street Lighting in Its Relation to Highway Safety, C. A. B. Halborson, Jr., and S. C. Rogers. Safety Eng., vol. 47, no. 6, June 1924, pp. 283-289, 13 figs. Objects should be seen at night in silhouette rather than by direct light; glare; cost of lighting; use of signals, etc.

Street Lighting Planning and Judging, A. F. Dickerson. Elec. Light & Power, vol. 2, no. 11, Nov. 1924, pp. 23-25, 92 and 97, 2 figs. Modern practice; planning street lighting; costs, appearance and depreciation.

The Columbus Street Lighting Demonstration, F. C. Caldwell. Illuminating Eng. Soc.—Trans., vol. 19, no. 7, Sept. 1924, pp 675-678. Discusses various types of street lighting exhibited on streets of Columbus, Ohio.

Textile Mills. Developments in Mill Lighting, R. A. Palmer. Textile World, vol. 65, no. 5, Feb. 2, 1924, pp. 419-420, 4 figs. Studies show importance of speed of vision in manufacturing operations; higher intensities being employed; effect on production and accidents; development in suspension of units which facilitates maintenance of lighting equipment.

Some Problems in the Daylight Lighting of Textile Factories, P. J. Waldram. Illuminating Engr., vol. 17, no. 5, May 1924, pp. 79-87, 12 figs. Deals with lighting needs of cotton industry so far as relates to spinning of raw cotton into yarn and weaving of latter into cloths and sheetings.

Traction Vehicles. Some Notes on Traction Lighting by Electricity, J. F. Caine and E. A. Marx, Jr. Illuminating Engr., vol. 17, no. 1-3, Jan.-Mar. 1924, pp. 19-25 and (discussion) 25-28, 4 figs. Railway-carriage, tram, and bus lighting; drivers' compartments; lighting of railway platforms, station names, etc.; lamps, and voltage.

Train. Report of Committee on Illumination. Ry. Elec. Engr., vol. 15, no. 10, Oct. 1924, pp. 312-335, 18 figs. Deals with following subjects: Incandescent lamps for train-lighting service and for locomotive service; digest of industrial lighting codes issued by various states; flood-lighting system of illumination for railroad yards; manual of lighting practice for railroads; reflectors and enclosing glassware. Includes tables giving coefficients of utilization, computed illumination values, etc. Bibliography. Report before Assn. Ry. Elec. Engrs.

Tunnels. Study of Lighting for Hudson River Vehicular Tunnel, B. E. Shackelford and D. W. Atwater. Illuminating Eng. Soc.—Trans., vol. 19, no. 7, Sept. 1924, pp. 638-661, 14 figs. Power requirements for tunnel lighting; comparative equipment costs; comparative methods of various systems; model tunnel and tests; present standards of illumination in foot-candles for street lighting; proposed unit and tests; outdoor test installations.

LIGHTMETER. See LIGHT, Measuring Instruments.

LIGHTNING

Arresters. See LIGHTNING ARRESTERS.

Protection Against. Atmospheric Electric Phenomena and the Protection of Buildings from Discharges During Thunder Storms (I fenomeni elettrici dell'atmosfera e la protezione degli edifici dalle scariche temporalesche), U. Bordoni. Elettrotecnica, vol. 11, nos. 9, 10, 11, and 12, Mar. 25, Apr. 5, 15, and 25, 1924, pp. 190-195, 213-222, 240-245, and 261-270, 4 figs. Comprehensive monograph including a bibliography of 50 important references.

Electric Thunderstorm Field Researches, H. Norinder. Elec. World, vol. 83, no. 5, Feb. 2, 1924, pp. 223-226, 9 figs. Investigation shows that good line and transformer insulation affords better protection against surges and is superior to horn gaps and lightning arresters.

Protection Against Lightning, A. M. Schoen. Safety Eng., vol. 47, no. 3, Mar. 1924, pp. 109-117. Nature and characteristics of lightning and lightning discharges; statistics; suggestions for protection.

Thunderstorm Researches Versus No Lightning Arresters, E. E. F. Creighton. Elec. World, vol. 83, no. 11, Mar. 15, 1924, pp. 521-523. Comments on article by H. Norinder in same journal, Feb. 2, 1924, describing researches on thunderstorm fields in Sweden and giving conclusions for application to system-protective devices.

LIGHTNING ARRESTERS

Application of. Lightning Arrester Application from the Economic Standpoint, A. L. Atherton. Am. Inst. Elec. Engrs.—Jl., vol. 43, no. 9, Sept. 1924, pp. 813-817, 4 figs. Evaluates extent and cost of failures to average system, if entirely unprotected, with assumption that yearly expense so incurred may justifiably be spent for lightning arresters. Minimum transformer size for which protection is warranted.

California Experience. Lightning Arrester Experience in California, E. R. Stauffacher. Am. Inst. Elec. Engrs.—Jl., vol. 43, no. 7, July 1924, pp, 660-665, 7 figs. Discusses experience, particularly as regards Southern Cal. Edison Co.'s system.

Corona as. The Corona as Lightning Arrester, J. B. Whitehead. Am. Inst. Elec. Engrs.—Jl., vol. 43, no. 10, Oct. 1924, pp. 914-922, 10 figs. Experiments are described indicating relatively simple and inexpensive method of equipping transmission lines to take advantage of protective properties of corona, without incurring its disadvantages.

Grounds. Lightning-Arrester Grounds, H. M. Towne. Elec. World, vol. 83, nos. 3 and 4, Jan. 19 and 26, 1924, pp. 131-135 and 183-187, 16 figs. Characteristics of pipe grounds; resistance of grounds; artificial treatment of soils; maintenance, installation and testing of grounds; ground connections for different service conditions; multiple-ground electrodes; dissipation of energy in grounds.

Ideal, Design of. On the Behavior of Discharges as a Lightning Arrester, J. Okochi. Denki Gakkwai Zasshi (Jl. Inst. Elec. Engrs. Japan), no. 432, July 1924, pp. 624-650, 28 figs. Shows that arrester having series gap as in modern practice is undesirable, but that it is possible to design truly ideal lightning arrester by combination of principles of ideal discharger and of ideal high-frequency energy absorber; explains principle of high-frequency energy absorber designed by author. (In Japanese.)

Surge Type. Lightning Arresters, C. E. Bennett. Am. Inst. Elec. Engrs.—Jl., vol. 43, no. 9, Sept. 1924, pp. 791-797, 14 figs. Describes a surge arrester, composed of two essential parts; liquid resistance, and high-speed gap, which are explained separately. See (discussion) in vol. 44, no. 1, Jan. 1924, pp. 76-79, 1 fig.

LIGHTSHIPS

Diesel-Electric. See MOTORSHIPS, Diesel-Electric Lightships.

Radio Equipment. See RADIOTELEPHONY, Lightships.

LIGNITE

Automobile Fuel from. See AUTOMOBILE FUELS, Lignite as Source of.

Boiler Firing with. See BOILER FIRING, Lignite.

Boiler Furnaces for. See BOILER FURNACES, Lignite.

Briquetting. Degasification of Lignite Briquets (Ueber die Entgasung von Braunkohlenbriketts), A. Müller. Gas- u. Wasserfach, vol. 67, no. 11, Mar. 15, 1924, pp. 137-138. Discusses use of lignite dust for distillation so as to produce coke in form of briquets; this coke replaces coke from coal at considerable saving.

Lignite Briquets as Fuel (Das Braunkohlenbrikett als Brennstoff), Pradel. Feuerungstechnik, vol. 12, no. 22, Aug. 15, 1924, pp. 181-183. Increased lignite mining in Germany. Briquetting and use of briquets for industrial and domestic purposes.

The Manufacture of Brown Coal Briquettes—South Australia's Potential Industry, H. Basedow. Serial article in Indus. Australian & Min. Standard, vol. 71, nos. 1847-1853, May 1-June 12, 1924. General outline of briquetting process as author studied it on brown coal fields of Silesia and Rhineland of Germany.

Carbonization. Hydrogen and Nitrogen in Low-Temperature Gases (Wasserstoff und Stickstoff in Schwelgasen), Erdmann. Braunkohle, vol. 23, no. 37, Dec. 13, 1924, pp. 685-689. Results of experiments showing presence of H even at very small pressures in retort, and appearance of free N between 180 and 325 deg.

Lignite Carbonization, W. W. Odell. U. S. Bur. Mines—Reports of Investigations, no. 2569, Feb. 1924, 6 pp. Figures showing what proportion of fuel requirements of Northwest is industrial or domestic fuel, and what proportion of lignite consumed is used for domestic purposes; notes on carbonization products; briquetting raw lignite.

Low-Temperature Carbonization, Particularly of Lignites (La carbonisation à basse température, en particulier celle des lignites), C. Berthelot. Société d'Encouragement pour l'Industrie Nationale—Bul., vol. 123, no. 1, Jan. 1924, pp. 44-46, 9 figs. Definition and realization of low-temperature carbonization, and its practical importance in metallurgical-coke industry; low-temperature carbonization of lignite.

Chars. Ignition Temperature of Some Lignite Chars (Entzündungstemperaturen einiger Braunkohlengruden), A. Faber. Braunkohle, vol. 23, no. 22, Aug. 30, 1924, pp. 430-432. See also Gas- u. Wasserfach, vol. 67, no. 45, Nov. 8, 1924, pp. 680-682. Results of experiments to determine temperature of spontaneous combustion of four kinds of char.

Conveying. Recent Experiences in Pneumatic Transportation in the Briquet Factories in the Lignite Regions on the Rhine (Neuere Erfahrungen über pneumatische Förderung in Brikettfabriken des rheinischen Braunkohlenreviers), A. Haarmann. Braunkohle, vol. 23, no. 5, May 3, 1924, pp. 81-86, 7 figs. Methods of transportation of fine grain lignite and lignite dust are described and their economical advantages are analyzed.

Use and Economics of Chain Railways in Open-Workings of Lignite (Anwendbarkeit und Wirtschaftlichkeit der Kettenbahn- und der Zugförderung im Braunkohlentagebau), A. Ohnesorge. Braunkohle, vol. 23, no. 28, Oct. 11, 1924, pp. 521-527, 2 figs. Discusses use of chain-railway system using mine cars, field of its application, and cost. Conveying by train system.

Distillate. See Fuels.

Distillation. See PEAT, Distillation.

Distillation, Furnaces for. Historical Development of the Rolle Furnace Up to the Present Time (Die geschichtliche Entwicklung des Rolle-Ofens bis zur Neuzeit), A. Thau. Braunkohle, vol. 23, no. 2, Apr. 12, 1924, pp. 17-32, 30 figs. on supp. plates. Development of these furnaces, which serve the purpose of distilling lignite, extends over three-quarters of a century. Rolle's designs, of which a large number are illustrated and described, have not been materially improved upon by later designers.

Drying. Drying and Distillation of Lignite by Internal Heating (Braunkohlentrocknung und -Schwelung durch Innenheizung), O. Hubmann. Braunkohle, vol. 23, nos. 28 and 29, Oct. 11 and 18, 1924, pp. 527-531 and 542-545, 4 figs. De-

tails of Lurgi process for producing tar and coke from lignite of high water content; results of test.

Heat Economics at the First Rhine Lignite Fair (Die Wärmewirtschaft auf der ersten rheinischen Braunkohlenmesse), M. Grunewald. Archiv für Wärmewirtschaft, vol. 5, no. 8, Aug. 1924, pp. 145-150, 10 figs. Discusses drying plants for dust and briquets, drying of crude lignite, conveying and firing of coal dust, gas production from lignite and briquets, gas scrubbing and tar production plants, furnaces and boilers, etc.

Fires in Mines. Causes, Prevention and Fighting of Fires in Lignite Mines (Ursache, Verhütung und Bekämpfung von Flözbränden beim Braunkohlentiefbau), G. Kain. Braunkohle, vol. 23, no. 31, Nov. 1, 1924, pp. 572-574, 4 figs.

Fuel, Utilization as. Lignite Fuel Source of Heat for Industries, W. Roth. Gas Age-Rec., vol. 53, no. 22, May 31, 1924, pp. 763-764. Recent developments in Germany, described by editor of Chemiker Zeitung, including gas from lignite, by-products from lignite, and lignite for central stations.

Gasification. Burning and Gasification of Lignite (Verschwelung und Vergasung von Braunkohle), C. Arnemann. Zeit für angewandte Chemie, vol. 37, no. 37, Sept. 11, 1924, pp. 713-721, 13 figs. Processes of low-temperature gasification and gas producers used.

Gasification of Moist, Earthy Raw Lignite (Betriebsmässige Vergasung von grubenfeuchter erdiger Rohbraunkohle), K. Bunte. Gas- und Wasserfach, vol. 67, no. 24, June 14, 1924, pp. 344-348, 4 figs. Discusses composition of lignite (55 per cent H_2O), analysis and properties; describes eperimental plant, gives results of gasification, details of 6 days' working of Francke generator, etc.

Progress in the Gasification of Lignite (Fortschritte auf dem Gebiete der Braunkohlenvergasung), Theiler. Feuerungstechnik, vol. 12, no. 6, Dec. 15, 1923, pp. 4-45, 1 fig. Gas furnaces, producer gas and lignite gasification; producer-gas stations; influence of gas cleaning; combined gasification and distillation; low-temperature tar; economy of distillation producer plant with low-temperature-tar recovery.

Results of Prize Competition on Gasification of Lignite (Die Ergebnisse des Preisausschreibens über Rohbraunkohlenvergas-ung der Brennkrafttechnischen Gesellschaft E. V.), Brennstoff- u. Wärmewirtschaft, vol. 6, no. 5, May 1924, pp. 89-124, 6 figs. Competition arranged by Brennkrafttechnische Gesellschaft E. V. for model plant treating on unscreened material of 56 per cent water, 5 per cent tar and 7 per cent ash, capacity of 20 tons per 24 hr.; gives papers of first and second award.

German Production, 1923. Lignite Mining in Central Germany in 1923 (Der mitteldeutsche Braunkohlenbergbau im Kalenderjahr 1923), W. Pothmann. Braunkohle, vol. 22, no. 48, Mar. 1, 1924, pp. 723-728, 2 figs. Statistics of production.

Mine Management. Psychotechnical Rationalizing of Lignite Mining Operations (Psychotechnische Betriebsrationalisierung im Braunkohlenbergbau), G. Nicolai. Braunkohle, vol. 23, no. 32, Nov. 8, 1924, pp. 585-593. Deals with scientific management applied to mine officials and workers.

Mines, Germany. Critical Discussion of Underground Mining Methods Employed in Lignite Mines of Central Germany (Kritische Betrachtung des im mitteldeutschen Braunkohlenbergbau unter Tage üblichen Abbauverfahrens), W. Hoffmann. Braunkhole, vol. 22, no. 49, Mar. 8, 1924, pp. 741-752, 18 figs. Recent experiments and recommendations for improvements.

Mining. Electric Drive of Dredges and Locomotives in Lignite Mining (Elektrischer Antrieb von Baggern und Abraumlokomotiven im Braunkohlenbergbau), M. Philippi. Braunkohle, vol. 23, no. 18, Aug. 2, 1924, pp. 320-333, 24 figs. Discusses cascade and rotary converters, mercury-vapor rectifiers, locomotives for stripping operations; bucket dredges with electric drive control, coal planers used in stripping operations, etc.

Improvements in Lignite Mining on the Rhine (Neuerungen in rheinischen Braunkohlenbergbau), G. Zahn. Braunkohle, vol. 23, no. 34, Nov. 22, 1924, pp. 634-636, 4 figs. Describes lubricating devices for rapid lubrication of journal bearings, and of adjustable plow for coal- and stripping- dredges.

Open Working Operations and Rational Management (Der Tagebaubetrieb und die rationelle Betriebsführung), Ehlers. Braunkohle, vol. 23, no. 35, Nov. 29, 1924, pp. 649-651, 3 figs. Describes Buckau and Lübeck dredges of 810 cu. cm. and 360 cu. cm. capacity per hour, respectively, and their application in stripping operations.

State Lignite Mine at Häring, near Kirchbichl [Der Bundes-Braunkohlenbergbau in Häring bei Kirchbichl (Tirol)]. Montanistiche Rundschau, vol. 16, no. 18, Sept. 16, 1924, pp. 502-505, 3 figs. Details of present conditions, application of hydraulic mining, machinery equipment, steam and electric winding engines, benzine locomotives, centrifugal pumps, power production, coal washing, etc.

Mining, Strip. Economies of Dry Operation in Lignite Stripping (Ein Beitrag zur Untersuchung der Wirtschaftlichkeit des Trockenkippbetriebes im Braunkohlentagebau), A. Ohnesorge. Braunkohle, vol. 23, no. 15, July 12, 1924, pp. 257-262, 8 figs. Discusses increased use and development of apparatus to reduce expenses consisting mainly in wages; gives examples of ground plows, time study of operations, etc.

Mechanical Tipping in Lignite Stripping (Kippenmechanisierung in Braunkohlen-Tagebaubetrieben), D. F. Brennecke. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 32, Aug. 9, 1924, pp. 817-820, 10 figs. Discusses drawbacks of handtipping, advantages of mechanical tipping, operation, economy and efficiency of various types of tipping apparatus.

Texas Lignite Field Sets Steam Shovel to Work, H. Marshall. Coal Age, vol. 26, no. 13, Sept. 25, 1924, pp. 435-436, 4 figs. Particulars regarding strip mine in Rockdale lignite fields, opened and operated by West. Securities Coal Co., including equipment employed; field contains 20,000,000 tons of finest lignite coal in state.

Moisture Content. The Moisture Content of Lignite, Its Influence on Heating Value and Its Analytic Determination (Der Wassergehalt der Braunkohle, sein Einfluss auf den Heizwert und seine analytische Bestimmung), E. Erdmann. Braunkohle, vol. 23, no. 3, Apr. 19, 1924, pp. 49-56, 2 figs. Investigation of how combustion heat and heating value of coal changes with its moisture content.

Oil Recovery from. Oil Recovery from Lignite (Oelgewinnung aus Braunkohle), A. Faber. Wärme, vol. 47, no. 14, Apr. 4, 1924, pp. 139-141. Oil situation in Germany; methods of producing tar; phenomena occurring with distillation; process of oil recovery in shaft furnaces and rotary drums; tar recovery in producers.

Sardinia. The Gonnesa Lignite Basin (Il bacino lignifero di Gonnesa), M. Taricco. Rassegna Mineraria Metallurgica e Chimica, vol. 61, no. 2, Aug. 15, 1924, pp. 35-40. Discusses geology, tectonics and extent of lignitiferous basin, analysis of lignite and its uses.

Tar from. See TAR, Lignite.

Texas. The Lignites of Texas and Their Potentialities for Industry and Agriculture, C. F.

Drake. Mfrs. Rec., vol. 85, no. 5, Jan. 31, 1924, pp. 81-82. Notes on deposits and products that can be produced from lignite.

United States. Lignite. W. W. Odell. Minn. Federation of Architectural & Eng. Societies—Bul., vol. 9, no. 9, Sept. 1924, pp. 21-22, 24, 26 and 28. Discusses deposits in Montana, North and South Dakota, and Texas; properties and use of lignites; briquetting; work done by U. S. Bur. Mines.

LIME

Cement. Cement Lime (Zement-Kalke), H. Hirsch. Tonindustrie-Zeitung, vol. 48, no. 83, Oct. 15, 1924, pp. 929-932, 9 figs. on supp. plate. Definition and use; tables of composition and properties; micrographs of various kinds.

Hydrated. Hydrated Lime in Concrete. Contract. Rec. & Eng. Rev., vol. 38, nos. 30 and 31, July 23 and 30, 1924, pp. 743-745 and 761-762, 1 fig. Experimental investigations confirm practical experience that lime in mix facilitates handling and placing of concrete.

Yield of Hydrated Lime from Air-Slaked Lime and Magnesian Limes (Sul rendimento in grasselo delle calci aeree e sulle calci magnesiache), O. Rebuffat. Giornale di Chimica Industriale ed Applicata, vol. 6, no. 7, July 1924, pp. 328-330. Describes apparatus for measuring yield of lime paste (volume for given weight of dry substance) obtainable from air-slaked lime; this yield is not appreciably diminished by presence of magnesia, even in large proportion, and during setting of mortar made with such lime, magnesia undergoes conversion into carbonate.

Hydraulic. Hydraulic Limes, Natural and Artificial, C. R. Platzmann. Rock Products, vol. 27, no. 23, Nov. 15, 1924, pp. 49-51. Comparison with other limes and cements and their properties, uses and manufacture.

Kilns. A Shaft Lime Kiln Designed for Retarded Combustion of Coal Gases, J. C. Schaffer. Rock Products, vol. 27, no. 7, Apr. 5, 1924, pp. 41-43, 2 figs. Furnace built on gas-producer principles and kiln with air inlets above eyes for progressive combustion of gases in kiln.

Factors Affecting the Life of Lime-Kiln Brick Linings, V. J. Azbe. Rock Products, vol. 27, no. 22, Nov. 1, 1924, pp. 30-31, 1 fig. Reasons for failures of linings; choosing brick and laying them properly.

Waste Elimination by the Rotary Kiln for Lime, Chas. Wadsworth, 3rd Chem. & Met. Eng., vol. 30, no. 1, Jan. 7, 1924, pp. 13-16, 9 figs. Installation at Bellefonte plant of Am. Lime & Stone Co. produces high-grade lime from material unburnable in shaft kiln.

Plants. Modern Lime Plant That Makes Own Power. Rock Products, vol. 27, no. 16, Aug. 9, 1924, pp. 38-41, 15 figs. Design and construction of Gager Lime Co.'s plant at Sherwood, Tenn.; hydrating plant consists of large Schaffer continuous hydrator and two Raymond pulverizers and air separation systems of ordinary type; three turbo-generator sets; describes crushing plant.

New Lime-Burning Plant of Union Carbide Company, H. L. Noyes. Eng. News-Rec., vol. 93, no. 14, Oct. 2, 1924, pp. 546-548, 4 figs. Design and layout of plant at Sault Ste. Marie, Mich. Explosive qualities of pulverized coal dictated dust-proof partitions and dust-tight coolers and dryers. Zinc roof insulated from steel purlins.

New Lime Plant of Marble Cliff Quarries Company. Rock Products, vol. 27, no. 6, Mar. 22, 1924, pp. 36-42, 22 figs. Description of Columbus, Ohio, plant, an example of modern tendency to convert all raw material into best commercial form.

New Ohio Plant Completed in Record Breaking Time, C. A. Breskin. Rock Products, vol. 27, no. 17, Aug. 23, 1924, pp. 32-36, 20 figs. Describes hydrate mill of W. L. Urschel Lime & Stone Co.; daily capacity 250 tons of lime and 2000 tons of stone.

U. S. Gypsum's Geno Lime Plant Enlarged. Eng. Wld., vol. 25, no. 2, Aug. 1924, pp. 86-87, 1 fig. Genoa, Ohio, lime plant of U. S. Gypsum Co., Chicago, has enlarged its plant by addition of 13 new kilns and other equipment; installation includes new gantry crane, second Schaffer hydrator, second Williams swing hammer mill, new power house and additional cooling, grinding and shipping facilities.

Production from Small Stone. The Production of Lime from Small Stone, W. M. Meyers. U. S. Bur. Mines—Reports of Investigations, no. 2596, Apr. 1924, 9 pp. Conversion of small stone into lime is most desirable means of disposal. Difficulty of burning lime in shaft kiln; calcination of small stone impeded by CO gas; possible alterations in shaft kiln construction; use of rotary kiln, its advantages and disadvantages.

Rotary-Kiln Burning. Importance of Uniform Temperature in Lime Burning, M. Brill. Fuels & Furnaces, vol. 2, no. 4, Apr. 1924, pp. 355-357, 4 figs. Use of radiation pyrometers for solving problems in calcining of lime in rotary kilns.

Specifications. Requirements for Lime. Contract Rec. & Eng. Rev., vol. 38, no. 26, June 25, 1924, pp. 648-649. Recommendations accepted as standard for incorporation in building codes.

LIMESTONE

Building Requirements. Building Stone Requirements. Stone, vol. 45, no. 6, June 1924, pp. 349-351, 2 figs. Report of Committee on Building Requirements for Indiana Limestone includes code sections covering all classes of building stone customarily used, thus constituting recommended code of practical value.

Canada. Limestone in Canada (1923). Can. Min. Jl., vol. 45, no. 24, June 13, 1924, pp. 575-576. Résumé of sources, uses, mining and treatment, production and prices, imports and exports, and tariffs.

Jamaica. The Cretaceous Limestones of Jamaica and Their Mollusca, C. T. Trechmann. Geol. Mag., vol. 61, no. 9, Sept. 1924, pp. 385-410, 36 figs. Information on stratigraphy and palaeontology.

Mining. Mining Limestone for Lime Manufacture, O. Bowles. U. S. Bur. Mines—Reports of Investigations, no. 2585, Mar. 1924, 9 pp., 1 fig. See also Cement, Mill & Quarry, vol. 24, no. 9, May 5, 1924, pp. 23-27, 4 figs. Exploitation of limestone deposits by modern methods of underground operation. Growing tendency exists toward underground operation, for quarry owners are faced with increasing difficulties in open pit operation. Conditions encouraging undergound work; disadvantages of mining. Brief descriptions of limestone mines visited by writer, illustrating type of mines now or recently in operation and general mining methods pursued.

Mining Limestone with Shrinkage Stopes, A. B. Parsons. Eng. & Min. Jl.-Press, vol. 118, no. 16, Oct. 18, 1924, pp. 605-609, 11 figs. Underground operations displace open-cut mining at Bellefonte, Pa.

Utah. Petrographic Studies of Limestone Alterations at Bingham (Utah), A. N. Winchell. Am. Inst. Min. & Met. Engrs.—Trans., no. 1322-M, Mar. 1924, 16 pp., 9 figs. Petrographic studies of over 1400 rock and mineral samples, and studies of their field relations; show that there is a complete gradation between sandstone and limestone; lime-silicate rocks were produced by recrystallization of limestone.

The Ores in the Limestone at Bingham, Utah, Rich. N. Hunt. Am. Inst. Min. & Met. Engrs.—

Trans., no. 1323-M, Mar. 1924, 28 pp., 9 figs. Geology; metamorphism of limestone; relation of limestone alterations to ores.

LIMNORIA. See MARINE BORERS.

LINKS

Stresses in. See STRESSES, Links.

LINOLEUM

Manufacture. Modern Floors: Linoleum (La pavimentazione moderna: Il linoleum), F. Barbacini. Industria, vol. 38, no. 19, Oct. 15, 1924, pp. 534-538, 8 figs. Details of processes and machinery used in manufacture.

LIQUID AIR

Blasting. See BLASTING, Liquid-Air.

Equation of State. Equation of State and Diagrams for Air at Low Temperatures (Zustandsgleichung und Schaubilder für Luft bei tiefen Temperaturen), A. Seligmann. Zeit. für die gesamte Kälte-Industrie, vol. 31, no. 11, Nov. 1924, pp. 129-135, 2 figs. Discusses a series of thermodynamic diagrams for dry atmospheric air free from CO_2 with reference to calculation and development of air liquefaction and separation plants.

Liquefaction and Rectification. Calculation of Apparatus for Liquefaction and Separation of Air (Berechnung der Luftverflüssigungs- und Trennungsapparate), V. Fischer. Zeit. des Vereines Deutscher Ingenieure, vol. 68, no. 25, June 21, 1924, pp. 647-653, 6 figs. Discusses heat equations of interior of separating apparatus, operating pressures for production of gaseous and liquid oxygen, yield in oxygen at given operating pressure and initial temperature.

The Liquefaction and Rectification of Air, L. D. Goldsmith. World Power, vol. 2, nos. 7 and 8, July and Aug. 1924, pp. 29-37 and 108-112, 11 figs. Historical development of air liquefaction; practical methods of liquefaction by Hampson, Linde, and Claude; practical applications; magnitude of industry.

LIQUID OXYGEN

Blasting with. See BLASTING, Liquid Oxygen.

Production. Intense Refrigeration and Technical Oxygen (Tiefkühltechnik und technischer Sauerstoff), A. Neuburger. Dinglers Polytechnisches Journal, vol. 339, no. 15, Mid-Aug. 1924, pp. 141-144, 3 figs. Description of Heylandt system of production and transportation of liquid oxygen.

Production and Technical Use of Oxygen (Ueber die Gewinnung und technische Verwendung von Sauerstoff), B. Simmersbach. Wärme- u. Kälte-Technik, vol. 26, nos. 11, 15, and 16, June 1, Aug. 1 and 15, 1924, pp. 87-90, 126-128, and 133-135. Reviews air-liquefaction processes for production of oxygen, hydrogen, and nitrogen.

Uses. Industrial Possibilities of Liquid Oxygen, L. E. Bedortha. Acetylene Jl., vol. 26, nos. 3 and 4, Sept. and Oct. 1924, pp. 131-134 and 181-182, 1 fig. Discusses development of containers and uses for liquid oxygen. Abstract of paper read before Gas Products Assn. convention.

LIQUIDS

Absorption of Gases by. A Method for Studying the Rapid Absorption of Gases by Liquids; P. G. Ledig and E. R. Weaver. Am. Chem. Soc.—Jl., vol. 40, no. 3, Mar. 1924, pp. 650-657, 9 figs. Describes apparatus which makes possible detailed study of absorption from small bubbles; study of concentration and other variables with particular purpose of determining reproducibility and accuracy of method. Published by permission of Bur. Standards.

Boiling-Point Correction Chart. A Boiling Point Correction Chart for Normal Liquids, W. H. Bahlke and Rob. E. Wilson. Indus. & Eng. Chem., vol. 16, no. 11, Nov. 1924, pp. 1131-1132, 3 figs. With special application to petroleum products; chart may be used with reasonable accuracy for any of so-called non-associated liquids.

Cohesion Pressure. See GASES, Cohesion Pressure.

Compressible, Vortex Motion in. The Vortex Motion in a Compressible Liquid (Ueber Wirbelbewegung in einer kompressiblen Flüssigkeit), A. Friedmann. Zeit. für angewandte Mathematik u. Mechanik, vol. 4, no. 2, Apr. 1924, pp. 102-107. Author derives equations on conditions of dynamic possibility of motion of a compressible liquid.

Convection of Heat in. Free Convection of Heat in Liquids, R. A. Nelson. Phys. Rev., vol. 23, no. 1, Jan. 1924, pp. 94-103, 7 figs. Photographic study of convection streams; variation of heat loss with excess temperature of wire over that of liquid.

Density. See SOLIDS, Density, Determination of.

Density-Temperature Relation. Density of Liquids and Their Temperature (Die Dichte der Flüssigkeit und deren Temperatur), J. J. Saslawsky. Zeit. für Physikalische Chemie, vol. 109, no. 1-2, Apr. 12, 1924, pp. 111-135. Results of investigation to show connection between density (volume) of liquids and their temperature.

Dielectric Constants, Measurement of. An Electrometer Method for Measuring Dielectric Constants of Liquids, A. P. Carman. Physical Rev., vol. 24, no. 4, Oct. 1924, pp. 396-399, 3 figs. Instrument is a form of idiostatic electrometer, or electrostatic voltmeter, part or all of which is immersed in a liquid or liquids.

Distilling, Evaporating and Condensing. Distilling, Concentrating, Evaporating and Condensing Liquids. Abridgments of Specifications (Lond.), Class 32, 1924, Period 1916-20, 152 pp. Patents for inventions.

Evaporation. The Rate of Evaporation of Liquids in a Current of Air, T. B. Hine Physical Rev., vol. 24, no. 1, July 1924, pp. 79-91, 1 fig. Results of experiments show that rate of evaporation is linear function of wind velocity.

Flow of. See FLOW OF LIQUIDS; FLOW OF WATER.

Flowing, Heat Measurement of. See GASES, Flowing, Heat Measurement of.

Fluidity and Temperature, Relation of. A Relation Between the Fluidity and the Temperature of Liquids, H. J. M. Creighton. Nova Scotian Inst. Sci.—Proc. & Trans., vol. 15, part 3-4, Nov. 1923, pp. 165-168. Calculations.

Heat Convection in. See HEAT TRANSMISSION, Problems.

Heat of Evaporation. Apparatus for the Determination of the Heat of Evaporation of Liquids of High Boiling Points, J. H. Awbery and E. Griffiths. Physical Soc. of Lond.—Proc., vol. 36, part 4, June 15, 1924, pp. 303-312, 2 figs. Discusses two new forms of apparatus and their relative merits, tested by determining with them heats of evaporation of alcohol, water, and analine.

Heat Transfer. Heat Transfer vs. Agitation, D. E. Pierce and P. B. Terry. Chem. & Met. Eng., vol. 30, no. 22, June 2, 1924, pp. 872-873, 3 figs. Discusses use of agitation as means of increase of heating or cooling in places where it is difficult to provide more transfer surface.

Inflammable, Storage of. The Storage of Inflammable Liquids (Zur Frage der Lagerung feuergefährlicher Flüssigkeiten), A. Neuburger. Chemiker-Zeitung, vol. 48, no. 53, May 1, 1924, pp. 277-278. Describes Schilde-Eickemeyer system for storage of different kinds of inflammable liquids, including two kinds of pumping apparatus manufactured by firm of Benno Schilde, Berlin.

Mixing Apparatus. Mixing Apparatus for Liquids and Solids (Les appareils mélangeurs), R. Moritz. Chimie & Industrie, special no., May 1924, pp. 135-138, 13 figs. Most efficient apparatus for mixing liquids consists of rotor as used in centrifugal pumps combined with means for converting rotary motion into rectilinear; in nitrators and sulphonators liquid leaving rotor may be made to pass through several staggered rows of vertical rods; recommendations for carbonators, chlorinators, and sulphiting apparatus.

Molecular Association. The Molecular Association of Liquids and Highly Compressed Gases, E. E. Walker. Lond., Edinburgh, & Dublin Philosophical Mag. & Jl. Sci., vol. 47, no. 279, Mar. 1924, pp. 513-525, 2 figs. Molecular association of liquids; modified law of corresponding states is proposed, which indicates that only substances, molecules of which have same length, are truly corresponding substances.

Specific-Gravity Tables. See VAPORS, Pressure.

Specific Heats. See SPECIFIC HEAT, Liquid and Its Vapor; Organic Liquids.

Sprayed, Measurement of Drops. Measurement of Size of Drops in Sprayed Liquids (Die Messung der Tropfengrösse bei zerstäubten Flüssigkeiten), F. Häusser and G. M. Strobl. Zeit. für technische Physik, vol. 5, no. 4, 1924, pp. 154-157, 4 figs. Method developed by authors, in order to determine efficiency of spray and spraying devices.

Superheating of. The Superheating of Liquids, F. B. Kenrick. Jl. Physical Chem., vol. 28, no. 12, Dec. 1924, pp. 1297-1307, 2 figs. Details of investigation made to obtain definite information concerning extent to which superheating of a given liquid can be carried and length of time for which a liquid may be kept superheated at a given temperature.

Surface Energy. Surface Tension, Surface Energy, and the Surface Layer, A. M. Williams. Manchester Literary & Philosophical Soc.—Memoirs & Proc., vol. 68, no. 1, 1924, pp. 1-12, 2 figs. Attention is drawn to addition to usual expression for surface energy of liquid, arising from possible change of volume in passing from liquid phase to surface layer; this correction probably becomes important only at temperatures near critical; thermodynamical inequalities are deduced.

Thermal Conductivity. Convective Cooling in Liquids—Some Thermal Conductivity Data, A. H. Davis. Lond., Edinburgh, & Dublin Philosophical Mag. & Jl. Sci., vol. 47, no. 281, May 1924, pp. 972-975. Direct determinations of thermal conductivity at various temperatures, to supplement information previously given.

See also HEAT TRANSMISSION, Thermal Conductivity Values.

Vaporization at High Pressures. Estimation of Latent Heats of Vaporization of Liquids at High Pressures, W. H. McAdams and J. C. Morrell. Indus. & Eng. Chem., vol. 16, no. 4, Apr. 1924, pp. 375-378. With latent heats of vaporization of seven different liquids at pressures ranging from 0.006 to 45 atmos. as basis, range of Hildebrand function has been greatly extended; recommends new method of plotting such data, thus rendering extrapolation to high pressures less liable to error; outlines Lewis' method of estimating approximate molecular weight of mixtures of hydrocarbons.

Viscosity. Viscosities of Liquids Experimentally Correlated to Pendulum Dampings, E. H. Barton and H. M. Browning. Lond., Edinburgh, & Dublin Philosophical Mag. & Jl. Sci., vol. 47, no. 279, Mar. 1924, pp. 495-500, 2 figs. Results of experiments showing relations holding between viscosity and damping.

See also VISCOSITY, Liquids.

Viscous, Motion of. An Apparatus for Investigating Certain Types of Fluid Motion, E. N. da C. Andrade and J. W. Lewis. Sci. Instruments—Jl., vol. 1, no. 12, Sept. 1924, pp. 373-377, 3 figs. Designed to exhibit types of motion of viscous liquid between two rotating cylinders.

LITHOGRAPHING

Steel Sheets and Tin Plate. Lithographing 72,000 Sheets Daily. Iron Trade Rev., vol. 74, no. 12, Mar. 20, 1924, pp. 789-795, 9 figs. Describes process of lithographing; methods and equipment of Wheeling Steel Corpn. which operates a lithographing department for decorating steel sheets and tin plate.

LITHOPONE.

See PIGMENTS, Lithopone.

LOADING MACHINES.

See COAL HANDLING, Loading Machines.

LOCK NUTS

Klimax. The Klimax Nut (Klimax-Muttern), P. E. Perman. Teknisk Tidskrift, vol. 54, no. 8, Aug. 16, 1924, pp. 90-95, 20 figs. (Mekanik). Discusses locknut consisting of two nuts, bearing against each other along slightly inclined plane surface; relative movement between two nuts will bend bolt slightly and form effective lock.

LOCKS

[See also RIVERS, Trent, England.]

Canal. See CANALS, Locks.

Canal Gate. New Type of Canal Lock Gate Developed in Sweden, L. Lawski. Eng. News-Rec., vol 93, no. 4, July 24, 1924, pp. 135-136, 3 figs. Describes floating sector type canal gate developed to meet peculiar conditions which exist in Sodertalje Canal, at Sodertalje, near Stockholm, a tidal canal where difference in head is small. Filling water admitted around gates.

Germany. Poured Concrete Process Used in Building Double Lock at Geestemünde and Experiences With Poured Concrete (Das Gussbetonverfahren beim Bau der Doppelschleuse in Geestemünde und die Erfahrungen mit Gussbeton), Arp and Gaye. Zentralblatt der Bauverwaltung, vol. 44, nos. 38, 40, and 41, Sept. 17, Oct. 1, and 8, 1924, pp. 319-324, 339-343, and 349-353, 27 figs. Locks provide connection between Weser river and fishing port. Details of concrete work, arrangement of towers for pouring, process of concreting, structure of concrete, waterproof quality of concrete, temperature of setting, testing, etc.

Lock Chain Fenders. The Panama Canal Lock Chain Fenders, R. Z. Kirkpatrick. Military Engr., vol. 16, no. 85, Jan.-Feb. 1924, pp. 61-62, 3 figs. Description of chain fenders, and results of field experiments.

Remote Control of Valves and Gates. The Remote Operation of Valves and Gates, R. H. Rogers. Gen. Elec. Rev., vol. 27, no. 11, Nov. 1924, pp. 729-735, 16 figs. Deals with service of electricity in remote operation of valves and gates; remote control of valves and gates at locks of New York State Barge Canal; factors to be considered in design of equipment.

Sea. The New Baltic Sea Locks of the Kaiser-Wilhelm Canal (Die neuen Ostseeschleusen des

Kaiser-Wilhelm-Kanals, Rogge, Preugel, Schinkel, Linnemann and Klatt. Zeit. für Bauwesen, vol. 73, nos. 7-9 and 10-12, 1923, pp. 187-211 and 266-292, 81 figs., partly on supp. plates. Preliminary work; design of lock; construction materials; construction of earthwork and masonry work; lock entrances; sliding gates, their design and equipment; machinery of locks, including mechanical and electrical parts; sluices and their drive; spillways and their drive; central control and command; lock lighting; cable network; power plant; buildings.

Water Flow. Flow of Water in Operation of Chamber Locks (Die Wasserbewegung beim Betriebe von Kammerschleusen), B. Schumacher. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 31, Aug. 2, 1924, pp. 803-808, 8 figs. Mathematical discussion of flow of water from higher level and to low level.

LOCOMOTIVE BOILERS

Boiler-Sheet Flanging Machine. Cold Flanging of Locomotive Boiler Sheets. Boiler Maker, vol. 24, no. 8, Aug. 1924, pp. 232-233, 9 figs. Outline of work of pneumatic flanging machine developed to speed up sheet-metal production.

Broton. Broton Boiler Applied to Hungarian Locomotives. Boiler Maker, vol. 23, no. 11, Nov. 1924, pp. 309-312, 4 figs. Describes Mallet locomotive of Hungarian State Rys., designed to handle traffic on Fiume-Moravica section of Budapest-Fiume line, and of Broton boiler employed, a combined water and firetube boiler, adopted because of successful operation in bad water districts.

Design. Calculation and Construction of a Locomotive Boiler (Berechnung und Konstruktion eines Lokomotivkessels), E. Herms. Praktische Maschinen-Konstrukteur, vol. 57, nos. 21, 22, and 23, June 10, 17, and 24, 1924, pp. 285-290, 301-305, and 324-326, 26 figs. Complete calculation of locomotive boiler with heating surface of 68.4 sq. m.

Locomotive Boilers, H. Fowler and S. J. Symes. Ry. Engr., vol. 45, nos. 530, 531, 532, 534, 536, and 539, Mar., Apr., May, July, Sept., and Dec., pp. 81-85, 117-123, 179-183, 237-240, 301-305 and 427-431, 45 figs. Study of conditions which govern design, construction and operation of boilers as applied to railway locomotives, and influences which affect size and power of modern railway engines.

Locomotive Type Boilers. Power Plant Eng., vol. 28, no. 1, Jan. 1, 1924, p. 27, 1 fig. Losses due to air leakage and radiation reduced to minimum.

Developments. Locomotive Boilers (Notes sur la Chaudière Locomotive), M. Démoulin. Génie Civil, vol. 85, nos. 2 and 3, July 12 and 19, 1924, pp. 34-36, and 59-62, 5 figs. Discusses continued improvements in locomotive operation, boiler developments, variation of power, induced draft, long-distance running, increase in boiler tubes, etc. Process of combustion, feeding fuel, Penn. Ry. tests, conclusions.

Dome Flanging. Flanging Locomotive Boiler Domes in One Piece. Boiler Maker, vol. 24, no. 2, Feb. 1924, pp. 31-36, 4 figs. Practice of Am. Locomotive Co., Schenectady, N. Y.; flanging throat sheets.

Explosions. See BOILER EXPLOSIONS, Locomotives.

Feedwater, Treatment of. See WATER TREATMENT, Railways.

Fireboxes. Autogenous Welding in Case of Damage to Copper Locomotive Fireboxes (Die autogene Schweissung von Schäden an kupfernen Lokomotivfeuerbüchsen), M. Bothe. Technische Blätter, vol. 14, no. 29, July 19, 1924, pp. 220-221, 6 figs. Discusses welding work on steam locomotives and gives examples.

Four-Sheet Fireboxes for Mallet Locomotives. Ry. Rev., vol. 75, no. 5, Aug. 2, 1924, pp. 161-165, 9 figs. Describes firebox construction on Norfolk & Western Ry.; seven-sheet firebox construction reduced to four by use of unusually large boiler plates.

Making Four-piece Mallet Fireboxes, J. A. Doarnberger. Boiler Maker, vol. 24, no. 4, Apr. 1924, pp. 101-104, 9 figs. Methods used in construction of fireboxes for 2-6-6-2 heavy Mallet locomotives for freight service on Norfolk & Western Lines.

Saving Time in Laying Out Locomotive Boilers, C. A. Chincholl. Boiler Maker, vol. 24, no. 7, July 1924, pp. 196-197, 4 figs. Simplified methods of developing wrapper sheets and heads for narrow and wide type locomotive fireboxes.

Flue Holes and Patches. Flue Holes and Patches, T. P. Tulin. Boiler Maker, vol. 24, no. 5, May 1924, pp. 134-135, 6 figs. Methods of installing flue "blinders" with welding process and flue-sheet patches.

Fusible Plugs. Fusible Plugs for Locomotive and Stationary Boilers. Boiler Maker, vol. 24, no. 8, Aug. 1924, pp. 226-227, 8 figs. Discusses various design fusible plugs developed to prevent low water explosions.

Grates. Dump Grates for the German State Locomotives (Zur Frage des Kipprostes der Reichsbahn-Lokomotiven), Nordmann. Glasers Annalen, vol. 95, no. 9, Nov. 1, 1924, pp. 213-217. A criticism of article by Weinnoldt, showing that German Railway Department has smoke-control question well in hand without adoption of dump grates.

Inspection. Suggestions for Inspecting New Locomotive Boilers, G. L. Price. Boiler Maker, vol. 23, no. 16, Oct. 1924, pp. 279-281. Methods of inspection that have proved satisfactory to author.

Laying Out. Saving Time in Laying Out Locomotive Boilers, C. A. Chincholl. Boiler Maker, vol. 24, no. 8, Aug. 1924, pp. 234-235, 5 figs. Short cuts used in laying out regular and irregular cones and gusset sheets for boiler repair work.

Manufacture. Building Locomotive Boilers. Eng. Production, vol. 7, no. 139, Apr. 1924, pp. 105-110, 16 figs. Procedure at works of Great Western Ry. Co. at Swindon, Eng.

Shop Kinks for Locomotive Boiler Work. Boiler Maker, vol. 23, no. 16, Oct. 1924, pp. 282-284, 12 figs. Time and labor saving devices and shop methods developed by practical boiler makers.

Paying Weight. The Paying Weight in Locomotive Boilers, C. A. Seley. Ry. Age, vol. 76, no. 24, May 17, 1924, pp. 1216-1218, 1 fig. Firebox heating surface about twice as effective as tubes and flues per lb. of material.

Performance. Locomotive Boiler Performance, E. C. Poultney. Engineer, vol. 137, nos. 3556 and 3557, Feb. 22 and 29, 1924, pp. 192-195 and 218-221, 15 figs. Information on performance of locomotive boilers differing in proportions of their related parts when operating at various rates of power output, based upon tests made by Pennsylvania System on locomotive testing plant at Altoona, Pa.

Pulverized-Coal-Fired. Pulverized-Coal Firing for Locomotives (Die Brennstaubfeuerung für Lokomotiven), Dannecker. Organ für die Fortschritte des Eisenbahnwesens, vol. 79, no. 13, Oct. 15, 1924, pp. 296-300, 5 figs. Discusses treatment of coal, including crushing, drying and pulverizing, furnaces and burners, advantages, etc.

Repair Shop. A Modern Locomotive Boiler Reconditioning Shop, Alsace-Lorraine Railway, J. T. Burton-Alexander. Engineer, vol. 137, no. 3564, Apr. 18, 1924, pp. 404-407, 13 figs., partly on p. 414. Details of boiler shop erected since war at Strasburg; installation for repair of tubes.

Repairing. Repairing Locomotive Boilers at Bischheim, France. Boiler Maker, vol. 24, nos. 6 and 7, June and July 1924, pp. 157-160 and 198-200 and 219, 10 figs. Special equipment developed at new Alsace and Lorraine Railways' boiler shop to speed up production, including equipment for erecting and testing locomotive boilers and for flue reclaiming. Translated from Revue Générale des Chemins de Fer et des Tramways.

Side Lights on Boiler Work at Glenwood Shops. Boiler Maker, vol. 24, no. 7, July 1924, pp. 191-194, 10 figs. Special shop-made equipment aids in repairing many different classes of locomotives coming to Glenwood shops, Baltimore & Ohio Ry.

Using Compressed-Air Tools in Locomotive-Boiler Repairs (Die Verwendung von Pressluftwerkzeugen in der Eisenbahn-Lokomotivkessel-Reparatur), E. Pallas. Maschinenbau, vol. 3, no. 23, Sept. 11, 1924, pp. 859-863, 9 figs. Describes most recent pneumatic tools and their construction, and application in removing boiler tubes and rivets, repairing tubes, thread cutting, etc.

Siphons. Applying the Thermic Syphon to Locomotive Boilers. Boiler Maker, vol. 23, no. 11, Nov. 1924, pp. 313-315 (including discussion), 3 figs. Abstract of report read before Master Boiler Makers' Assn., dealing with effect of siphons on life of firebox sheets and flues.

Increasing Locomotive Boiler Efficiency and Capacity by Installing Nicholson Thermic Syphons for Circulation and Heating Surface, C. A. Seley. Assn. Chinese & Am. Engrs.—Jl., vol. 5, no. 6, June 1924, pp. 9-12, 9 figs. Describes Nicholson thermic siphon and its operation in action circulation of boiler water.

Staybolts. Oversize Staybolts for Locomotive Boilers (Im Gewinde dichte Stehbolzen). Glasers Annalen, vol. 94, nos. 9, 10, and 11, May 1, 15, and June 1, 1924, pp. 113-118, 123-129, and (discussion) 139-147, 37 figs. Different methods of expanding bolts in locomotive boilers so as to secure tight joints.

LOCOMOTIVES

Accidents. Annual Report of Bureau of Locomotive Inspection, A. G. Pack. Ry. Rev., vol. 75, no. 24, Dec. 13, 1924, pp. 952-955, 1 fig. Shows improvement in condition of locomotives and decrease in number of accidents; suggestions relative to means for preventing recurrence of number of more common causes of locomotive failures and accidents. (Abstract.)

See also ACCIDENTS, Locomotive.

Adhesion and Rack. A Modern Rack Locomotive. Ry. Gaz., vol. 40, no. 6, Feb. 8, 1924, p. 174, 1 fig. Principal data for recent type of 4-cylinder, 2-8-2 type, combined rack and adhesion locomotive, built for German State Rys. for operation on Abt system.

Algerian State Railways. New Locomotives for the Algerian State Railways. Ry. Gaz., vol. 41, no. 1, July 4, 1924, pp. 13-15, 6 figs. 4-8-2 "Mountain" type locomotives designed and built by Schneider & Co., designed to haul trains of 300 tons on gradients of 1 in 70 and 1 in 80 at 31 m.p.h.; for heavy service in passenger and freight traffic.

Alloy Steels for. See ALLOY STEELS, Locomotive Parts.

Articulated. See Garratt; Mallet.

Axle Boxes, Lubrication of. Reduction of the Cost of Traction: Lubrication of Axleboxes for all Rolling Stock, G. H. Emerson. Int. Ry. Congress Assn.—Bul., vol. 6, no. 11, Nov. 1924, pp. 1055-1090, 6 figs. Consideration of question as it applies to conditions and practices effective on American railways and particularly railways of Canada and United States.

Axle-Repair Machines. Machines for Repairing Journals, Cranks and Fly Cranks of Locomotive Axles (Appareils pour rectifier les fusées, tourillons et contre-manivelles des essieux de locomotives), M. Montillier. Génie Civil, vol. 84, no. 12, Mar. 12, 1924, pp. 279-280, 5 figs. Describes portable lathe for repairing axle cranks and journals which can be placed directly under axle, and machine for repairing fly cranks.

Axles, Calculation of. Practical Graphico-Analytic Method for Calculating Locomotive Axles (Metodo pratico grafico-analitico per il calcolo degli assi delle locomotive), N. Fabiano. Industria, vol. 38, nos. 17, 18 and 20, Sept. 15, 30, and Oct. 31, 1924, pp. 466-474, 498-501, and 554-563, 37 figs. Calculation of different types of axles, and numerical examples.

Baldwin. Baldwin Locomotives for the Madras & Southern Mahratta Railway. Ry. Gaz., vol. 41, no. 10, Sept. 5, 1924, p. 314, 2 figs. Describes 4-6-2 and 2-8-2 type locomotives built by Baldwin Locomotive Co. for Madras & Southern Mahratta Ry.; "Pacific" and "Mikado" type engines are built to large proportions for working heavy express passenger and freight trains on 5-ft. 6-in. gage.

Baltic Type. See Tank.

Bearings. See BEARINGS, Locomotive.

Behavior of Wheels on Track. Behaviour and Movement of Locomotive Wheels on the Track, J. Buchli. Int. Ry. Congress Assn.—Bul., vol. 6, no. 6, June 1924, pp. 417-437, 30 figs. Trials carried out on model which reproduced conditions encountered in practice as accurately as possible with object of ascertaining lateral adhesion of wheel on rail under most widely different service conditions. Translated from Schweizerische Bauzeitung.

Boilers. See LOCOMOTIVE BOILERS.

Bombay, Baroda & Central India Ry. New Express and Freight Locomotives, Bombay, Baroda & Central India Railway. Ry. Engr., vol. 45, no. 532, May 1924, pp. 170 and 178. Particulars of 4-6-2-type express passenger and 2-8-2-type freight locomotives; tractive force at 90 per cent of boiler pressure, 28,823 lb.

Boosters. Locomotive Boosters and Their Effect on Locomotive Design and Train Operation. Ry. & Locomotive Eng., vol. 37, no. 10, Oct. 1924, pp. 299-300. Consideration of limitations and functions; what booster is capable of doing in passenger and freight service. Committee report before Traveling Engrs.' Assn.

The Locomotive Booster, M. H. Roberts. Ry. & Locomotive Eng., vol. 37, no. 4, Apr. 1924, pp. 111-115, 6 figs. Effect of locomotive booster on operation and its efficiency as engine.

British. British Locomotives in 1923, J. F. Gairns. Int. Ry. Congress Assn.—Bul., vol. 6, no. 2, Feb. 1924, pp. 121-137, 8 figs. Designs and work.

British Empire Exhibition. British Empire Exhibition; Railway Material. Engineering, vol. 171, no. 3047, May 23, 1924, pp. 665-668 and 672, 19 figs. Details of 4-6-0 locomotive for Lond. Midland & Scottish Ry.; narrow-gage gasoline locomotive, constructed by Drewry Car Co.; Drewry standard car, and light-inspection "Alpha" trolley; electric battery-shunting locomotive, built by Hawthorn, Leslie Co.

Locomotive Development, J. H. Brittain. Engineer, vol. 137, no. 3568, May 16, 1924, pp. 528-531, 9 figs., partly on supp. plate. Description and comparison of Lond. & North-Eastern Ry. (Great Northern) 3-cylinder locomotive, Flying Scotsman, Great Western 4-cylinder locomotive, Caerphilly Castle, both exhibited at Brit. Empire Exhibition, and Vincent Raven's 3-cylinder Pacific, not exhibited.

Railway Material Exhibited at British Empire Exhibition. Engineering, vol. 117, no. 3043, Apr. 25, 1924, pp. 535-541, 18 figs., partly on supp. plates. Exhibits of locomotives and cars.

Cabs, Temperatures in. Temperatures in Cabs of Freight Locomotives Passing Through Tunnels of the Chesapeake & Ohio Railroad, S. B. Katz and E. G. Meiter. U. S. Bur Mines—Reports of Investigations, no. 2624, July 1924, 8 pp., 6 figs. and 3 tables on supp. plates. See also Ry. & Locomotive Eng., vol. 37, no. 9, Sept. 1924, pp. 264-268, 3 figs. Investigation of composition of atmospheres in cabs while in tunnels; test results; protection from smoke and irritating gases by means of pocket-size gas respirators.

Castings for. See IRON CASTINGS, Locomotive.

China, Types Used in. Locomotive Practice on the Chinese Government Railways. Ry. Engr., vol. 45, no. 529, Feb. 1924, pp. 66-69, 9 figs. Data on locomotives used on the different railways; a multiplicity of types of international origin are in use, but efforts toward standardization are being pursued.

Coaling Plants. Locomotive Coaling Installation at Nine Elms, Geo. F. Zimmer. Engineer, vol. 138, no. 3590, Oct. 17, 1924, pp. 442-444, 4 figs. Installation with overhead bunkers, installed by Mitchell Conveyor & Transporter Co. for Southern Ry. Co.

Recent Plants for Coaling Locomotives (Einige neuzeitliche Lokomotiv-Bekohlungsanlagen), B. Garlepp. Maschinenbau, vol. 3, no. 24, Sept. 22, 1924, pp. 890-894, 10 figs. Describes cranes, movable bunkers, etc., for stations of a daily capacity of up to 300-400 tons coal: track arrangement, coal stacks, etc.

See also COAL HANDLING, Locomotive Plants.

Compound. Compound Locomotives. Times Trade & Eng. Supp., vol. 14, no. 297, Mar. 15, 1924, p. 23. Discusses their reintroduction on British railways, giving data on different types.

1 E Superheater Two-Cylinder Compound Locomotive of the Austrian Federal Railway (1 E-Heissdampf-Zweizylinder-Verbundlokomotive der österreichischen Bundesbahnen), J. Rihosek. Organ für die Fortschritte des Eisenbahnwesens, vol. 79, no. 1, Jan. 15, 1924, pp. 8-11, 1 fig. Construction and characteristics of new freight locomotives.

See also High-Pressure Boiler.

Compound vs. Simple. Compound vs. Simple Locomotives in France, M. Vallantine. Ry. Age, vol. 76, no. 8, Feb. 23, 1924, pp. 461-462. Tests of Pacific locomotives in express service on P. L. & M. and Paris-Orleans show economy of compounds.

Condensing. Paris-Orleans Condensing Locomotive, H. Lefiot. Ry. Mech. Engr., vol. 98, no. 4, Apr. 1924, pp. 211-212, 3 figs. Means adopted on suburban tank locomotive for condensing exhaust steam while passing through long tunnel.

Reciprocating Steam Locomotives With Condensation (Die Kolbendampfmaschinen-Lokomotive mit Kondensation), K. Pfaff. Zeit. des Vereines Deutscher Ingenieure, vol. 68, no. 30, Sept. 20, 1924, pp. 997-1003, 18 figs. Discusses effect of condensation by means of diagrams and shows that a superheated-steam condensing locomotive does about double the work of a saturated-steam locomotive of same heating surface, i.e., same fuel consumption.

Connecting Rods. See CONNECTING RODS, Locomotive, Repair of.

Consolidation. Consolidation Type Locomotives for the Reading Company. Ry. & Locomotive Eng., vol. 37, no. 6, June 1924, pp. 179-180, 1 fig. Heavy consolidation 2-8-0 type built by Baldwin Locomotive Works; boiler is of Wootten type.

Heavy Freight Locomotives for the Reading. Ry. Mech. Engr., vol. 98, no. 10, Oct. 1924, pp. 581-583, 2 figs. Describes Consolidation type locomotive, weighing 314,950 lb., and having tractive effort of 71,000 lb.; 2-8-0 wheel arrangement.

New 2-8-2 Type Heavy Goods Engine, Imperial Japanese Railways. Ry. Gaz., vol. 41, no. 4, July 25, 1924, p. 120, 2 figs. Engine for working heavy freight trains built by Kawasaki Dockyard & Eng. Co. at their Hiogo Works, Kobe; piston stroke, 26 in.; total engine wheelbase, 31 ft. 6 in.; steam pressure, 180 lb. per sq. in.

New 2-8-2 Type Locomotives for the Sudan Government Railways. Ry. Gaz., vol. 40, no. 6, Feb. 8, 1924, p. 173, 1 fig. Principal data of locomotives being introduced for working on Kassala line extension; for 3-ft. 6-in. gage; tractive force at 85 per cent boiler pressure 26,000 lb.

New 3-Cylinder, 2-8-2 Type Locomotive, German State Railways. Ry. Gaz., vol. 40, no. 5, Feb. 1, 1924, p. 143, 1 fig. Principal dimensions and data of locomotives designed for working express passenger and heavy freight traffic; working pressure 200 lb. per sq. in.

Reading Company Consolidation Locomotives. Ry. Rev., vol. 75, no. 2, July 12, 1924, pp. 43-46, 3 figs. Particulars of new eight-coupled 2-8-0 locomotives placed in service by Phila. & Reading Ry. for handling coal trains. Tractive effort 71,000 lb.

Reading Consolidation Type Locomotive. Ry. Age, vol. 77, no. 1, July 5, 1924, pp. 19-20, 1 fig. Weighs 314,950 lb., with 284,190 lb. on drivers, and develops a maximum tractive force of 71,000 lb.

Construction. See BOILERMAKING, Locomotive Boilers.

Construction, France. Building Locomotives in France, V. Delport. Iron Trade Rev., vol. 75, no. 10, Sept. 4, 1924, pp. 600-603, 4 figs. Methods used at works of Société Française de Constructions Mécaniques, at Denain.

Crank Axles, Solid. Solid Crank Axles, H. Fowler. Engineer, vol. 138, no. 3597, Dec. 5, 1924, pp. 650-651. Discusses design based on author's experience on Midland Division of Lond. Midland & Southern Ry. (Abstract.) Lecture to Instn. Locomotive Engrs.

Crankpins, Bored. Bored Pins and Axles for Locomotives, L. H. Fry. Ry. Mech. Engr., vol. 98, no. 11, Nov. 1924, pp. 667-668, 1 fig. Claims that increased strength with less weight can be obtained by using larger inside diameters.

Crossheads. Calculating the Strength of Connection of a Piston Rod and a Locomotive Crosshead by Means of Wedging (Festigkeitsrechnungen an der Verbindung einer Kolbenstange mit einem Lokomotivkreuzkopf mittels Keil), Kühn. Praktische Maschinen-Konstrukteur, vol. 57, no. 33, Sept. 2, 1924, pp. 456-457, 8 figs. Gives complete calculation for diameter of cylinder = 350 mm., steam pressure = 10 atmos.

Cylinder Performance. Locomotive Cylinder Performance, E. C. Poultney. Engineer, vol. 138, nos. 3595 and 3596, Nov. 21 and 28, 1924, pp. 574-575 and 602-604, 12 figs. Test results appertaining to engines of Pennsylvania express

locomotives K2sa and E6s. Nov. 28: Cut-off, its relation to throttling; indicator diagrams for superheated and saturated steam; coal and water savings.

Cylinders, Machining. Machining of Locomotive Cylinders and Valve Liners (Bearbeitung von Locomotivzylindern und Kolbenschieberbüchsen), E. Trebi. Werkstattstechnik, vol. 18, no. 18 Sept. 15, 1924, pp. 489-492, 12 figs. Details of drilling and milling machines of various types.

See also CYLINDERS, Locomotive, Machining; Locomotive, Welding; MACHINING METHODS, Locomotive Cylinders.

Daily Performance. Engine Performances in Daily Slow and Fast Freight and in Yard Service, R. S. Parsons and J. F. Jennings. Central Ry. Club—Proc., vol. 32, no. 3, May 1924, pp. 1552-1560 and (discussion) 1560-1575. See also (abstract) in Ry. Rev., vol. 74, no. 20, May 17, 1924, pp. 884-886. Daily program and performance; mechanical features.

Decapod. Decapod Locomotives for Gulf, Mobile and Northern Railroad. Railroad Herald, vol. 28, no. 3, Feb. 1924, pp. 16-17, 1 fig. Dimensions and principal data of locomotive for freight service; tractive force 60,000 lb.; 2-10-0 wheel arrangement.

Decapod Tests Show Well Defined Fuel Economy. Ry. Mech. Engr., vol. 98, no. 11, Nov. 1924, pp. 662-666, 12 figs. Addition of feedwater heater results in 14 per cent coal saving over previous Ils Pennsylvania locomotives.

Decapod Type Locomotive for G. M. & N. R. R. Ry. Rev., vol. 74, no. 8, Feb. 23, 1924, pp. 317-320, 4 figs. See also Ry. & Locomotive Eng., vol. 37, no. 2, Feb. 1924, pp. 35-36, 1 fig. Dimensions and principal data of 2-10-0 type locomotives of Gulf Mobile & Northern R. R. for heavy freight service; 215 lb. boiler pressure; 60,000 lb. tractive force.

Russian "Decapod" Locomotives, A. Lipetz. Ry. Engr., vol. 45, no. 530, Mar. 1924, pp. 104-108, 12 figs. Describes frames and running gear, cab, running-board, jacket, brakes, tools, sandbox, radial buffer connection, tender, etc. (Continued from Aug. 1923 issue, p. 313.)

Tests of Decapod Show 14 Per Cent Fuel Saving. Ry. Age, vol. 77, no. 15, Oct. 11, 1924, pp. 635-638, 12 figs. Abstract of report in Bul. No. 32 (copyright 1924 by Pa. R. R.), giving results of test plant trials; latest Pennsylvania class Ils locomotives show expected economy with short cut-off.

2-10-0 Heavy Freight Locomotive, Polish State Railways. Ry. Gaz., vol. 41, no. 22, Nov. 28, 1924, p. 701, 2 figs. Locomotive built in Germany and shown at Seddin Exhibition.

Derailments on Curves. Derailments of Locomotives on Curves, R. C. Beaver and M. B. Richardson. Ry. Mech. Engr., vol. 98, no. 12, Dec. 1924, pp. 721-725, and vol. 99, no. 1, Jan. 1925, pp. 16-20, 12 figs. Investigation of mechanics of curving to determine why wheels leave rail; result of series of investigations begun in 1919. Jan. 1925: Practical application—factor of wheel bearing is worked out for 2-10-2 type.

Design. Individualism in Locomotive Design, J. G. H. Warren. Engineer, vol. 138, no. 3600, Dec. 26, 1924, pp. 717-719, 3 figs. Consideration of indiscriminate use of standard parts; modifications or additions to "basic" design, which add to weight without proportionate increase to heating surface; includes comparative table showing values of ratio of heating surface to total weight for representative good engines, 1895-1924.

Locomotive Design. Ry. Jl., vol. 30, no. 3, Mar. 1924, pp. 18-19, 45 figs. pp. 19-31. Deals with starting capacity, hauling capacity and general economy in operation. Illustrations of American locomotive types.

Modern Locomotive Engine Design and Construction, Ry. Engr., vol. 45, no. 529, Feb. 1924, pp. 50-53 and 65, 1 fig. Coned helical and volute springs; stresses in locomotive wheels; wheel-boss stresses; stresses in wheel tires.

New Locomotive Construction (Neue Wege im Lokomotivbau), F. Meineke. Zeit. des Vereines Deutscher Ingenieure, vol. 68, no. 37, Sept. 13, 1924, pp. 937-942, 13 fig. Discusses increased pressure and temperature for more economic working, Krupp turbo-locomotives, Diesel locomotives, 1200-hp. Diesel-electric locomotives of Russian State Railways, operating Diesel locomotives with hydrogen, etc.

The Design of Separate Parts of Steam Locomotives (Ueber die Gestaltung der Einzelteile von Dampflokomotiven), K. Ewald. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 12, Mar. 22, 1924, pp. 285-287, 7 figs. Seeks to formulate requisites for esthetic design and to develop rules for form and shape of principal parts.

The Locomotive of To-Day, J. Partington. New England Railroad Club—Proc., Feb. 12, 1924, pp. 245-257 and (discussion) 257-273. Discusses ways in which design must be definitely made to fit physical limitations of roadbed, bridges, tunnels, roundhouses, etc., and important connection between design and maintenance facilities especially as it applies to proper maintenance of appliances and materials now coming into general use. Review of three-cylinder locomotives in general; description of three-cylinder locomotive No. 5000 of Lehigh Valley R. R. and results of test made in Dec. 1923.

Design, Relation to Track Stresses. See RAILWAY TRACK, Stresses in.

Development. A Quarter Century of the Steam Locomotive, W. A. Austin. Ry. Rev., vol. 74, no. 2, Jan. 12, 1924, pp. 107-114, 24 figs. History of growth and development of the various types since introduction of first American Mogul and Atlantic types.

Development of the Modern Locomotive Engine, G. Greenough. St. Louis Ry. Club, vol. 28, no. 9, Jan. 11, 1924, pp. 178-195 and (discussion) 196-204, 6 figs.

Motive Power Development, Pennsylvania Railroad System, P. T. Warner. Baldwin Locomotives, vol. 2, no. 4 and vol. 3, nos. 1 and 2, Apr., July, and Oct. 1924, pp. 3-26, 33-57, and 3-29, 162 figs. Apr.: Development of power up to year 1868, when standard locomotive designs were adopted. July: Covers period 1868 to 1899, in which year Pennsylvania adopted Atlantic type for fast passenger service. Oct.: Development from 1899 to present time.

The Modern Steam Locomotive (Die Dampflokomotive der Gegenwart), Metzeltin. Hanomag-Nachrichten, vol. 11, no. 123, Jan. 1924, 1-7, 4 figs. Describes some of the latest modern high-powered locomotives and points out possibilities of further developments.

The Steam Locomotive; Engineering and Business Considerations, W. H. Winterrowd. Can. Ry. & Mar. Wld., no. 317, July 1924, pp. 322-325, 3 figs. Discusses development steam locomotive has undergone during past 20 years and lines along which future development may be expected.

Diesel and Steam, Performance. Calculating the Performance of Steam and Diesel Locomotives (Leistungsberechnung bei Dampf- und Diesellokomotiven), W. Bauer. Kraftmaschine, vol. 21, nos. 14 and 16, July 25 and Aug. 25, 1924, pp. 141-142 and 167-168. Discusses dependence of performance on drawbar pull, boiler and cylinder in

steam locomotives and number of cylinders, cylinder dimensions and r.p.m. in Diesel locomotives.

Diesel-Compressed Air. Diesel-Compressed Air Locomotive. Times Trade & Eng. Supp., vol. 13, no. 295, Mar. 1, 1924, p. 615. Invention consists in applying compressed air by means of Diesel engine as motive power for railway traction; results of trials on Italian railways.

Diesel-Electric. A Diesel-Electric Locomotive. Engineer, vol. 138, no. 3594, Nov. 14, 1924, pp. 552-554, 5 figs. Results of trials at Esslingen Engine Works, Stuttgart, Germany, where locomotive, designed by Geo. Lomonossoff, was constructed.

A 1,200-h.p. Diesel-Electric Locomotive. Oil Engine Power, vol. 2, no. 10, Oct. 1924, pp. 521-524, 4 figs. Built for Russian Government, new locomotive possesses decisive advantages over its steam competitors for operation in arid and fuelless districts.

An Italian Diesel-Electric Locomotive (Una locomotiva italiana Diesel-elettrica), G. Sona. Rivista Tecnica delle Ferrovie Italiane, vol. 25, no. 5, May 15, 1924, pp. 145-158, 9 figs. Details of experiments on Calabro-Lucana line with 440-hp. units constructed by Italian Brown-Boveri and Fiat companies.

Diesel-Electric Locomotive for Tunis Railway (Locomotive Diesel Electrique en Service en Tunisie), R. Debize. Revue Générale des Chemins de Fer & des Tramways, vol. 43, no. 3, Mar. 1924, pp. 172-180, 8 figs. Details of locomotive supplied by Diesel-Elektriska Vagn-Aktiebolaget, Sweden; consists of rigid frame mounted on two trucks, each equipped with two axles; a heavy-oil Diesel engine is mounted on frame which is direct coupled to generator.

Diesel-Electric Locomotive Surpasses Steam on Test, Lomonossoff. Oil Engine Power, vol. 2, no. 12, Dec. 1924, pp. 653-637, 6 figs. In discussing construction and performance of 1200-hp. unit built under his direction for Russian Government, author describes solution found for cooling problems and appends tests made comparatively with equivalent steam locomotive showing how Diesel locomotive wins on every point.

Diesel-Electric Locomotives (Locomotora Diesel Eléctrica), E. V. Moreno. Ingeniería, vol. 28, no. 9, Sept. 1924, pp. 393-386, 3 figs. Design, construction and operation of locotractor built by Diesel-Elektriska Vagn-Aktiebolaget, also advantages.

New Type Electric Locomotive. Area, vol. 12, no. 10, May 1924, pp. 1729-1732, 4 figs. See also Ry. Age, vol. 76, no. 23, May 10, 1924, p. 1159, 2 figs., and Ry. Rev., vol. 74, no. 19, May 20, 1924, pp. 840-847, 3 figs. Describes locomotive using oil for its fuel, built jointly by Gen. Elec. Co. and Ingersoll-Rand Co., and especially designed for switching service; fuel-oil engine operates d.c. generator supplying current to motors without intervening accelerating resistance; fuel cost exceedingly low, and new engine is smokeless.

Oil-Electric Locomotive Comes to New York. Compressed Air Mag., vol. 29, no. 7, July 1924, pp. 923-925, 6 figs. Details of new locomotive with 200-kw. generator directly connected to 300-hp. oil engine for switching service of N. Y. Central; uses low-cost fuel oil.

Oil-Engined Locomotive Proves Its Worth. Oil Engine Power, vol. 2, no. 8, Aug. 1924 pp. 417-419, 3 figs. 24-hr. operation in Manhattan's busy railroad yards proves satisfactory. Characteristics of engine, which has striking method of fuel distribution, supplement uncanny flexibility of electrical transmission.

The American Diesel-Electric Locomotive is Here. Oil Engine Power, vol. 2, no. 5, May 1924, pp. 257-259, 5 figs. 300-b.hp. locomotive constructed by Gen. Elec. and Ingersoll-Rand companies, with 6-cylinder airless-injection 4-cycle type Ingersoll-Rand oil engine directly connected to 200-kw. Gen. Elec. generator.

Diesel-Engined. German Diesel Locomotives, F. Meineke. Eng. Progress, vol. 5, no. 9, Sept. 1924, pp. 167-170, 8 figs. States that several locomotives with Diesel engines are being built in Germany, representing very remarkable solutions of problem; describes different types.

Tests of a 60-H.P. Diesel Locomotive on the London & North Eastern Railway. Ry. Gaz., vol. 41, no. 6, Aug. 8, 1924, pp. 178-180 and 193, 6 figs. Describes locomotive which is of Austrian manufacture, 0-4-0 type, and equipped with 60-hp. six-cylinder Diesel engine, which transmits its power through Lentz hydraulic transmission mechanism.

Tests of a 60-Hp. Graz Diesel-Engine Locomotive With Hydraulic Lentz Reduction Gear (Gutachten über die Probefahrten mit einer 60 PSe normalspurigen Grazer Dieselmotor-Lokomotive mit hydraulischem Lentzgetriebe). Glasers Annalen, vol. 95, no. 6, Sept. 15, 1924, pp. 148-154, 4 figs. All principal technical data and test results are given in detail. Tests were made by Austrian Nat. Rys. and were highly satisfactory.

The Graz Diesel Locomotive With Hydraulic Lentz Reduction Gears (Die Grazer Diesellokomotive mit hydraulischem Lentzgetriebe). Wirtschaftsmotor, vol. 6, no. 9, Sept. 25, 1924, pp. 1-5, 7 figs. Explains principle of Lentz hydraulic reducing gear, which permits of variation of speed of driven axle at constant speed of driving axle, and describes a locomotive embodying said principle.

The Next Step is the "Thermo-Locomotive," J. Barraja-Frauenfelder. Ry. Mech. Engr., vol. 98, no. 2, Feb. 1924, pp. 81-85, 1 fig. Application of Diesel engine to railway work; the Sulzer thermo-locomotive.

The Theory of the Diesel Locomotive (Zur Theorie der Diesellokomotive), G. Lomonossoff. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 9, Mar. 1, 1924, pp. 198-202, 3 figs. Whereas in steam locomotives tractive effort is limited by adhesive weight, cylinders and boiler, with Diesel locomotives transmission ratio takes place of cylinder between engine and driving wheels, and efficiency of engine takes place of boiler; influence of these values is discussed and formulas therefor derived.

See also Internal-Combustion; Switching.

Dimensions Comparison. The Comparison of Locomotive Dimensions, E. C. Poultney. Ry. Engr., vol. 45, no. 528, Jan. 1924, pp. 19-21 and 35. Discusses factors which it is necessary to consider when a general opinion is to be formed as to comparative capacity of any given locomotive. Locomotive power definitions.

Drafting Conditions, Control of. Exhaust Nozzle and Front End Adjustment, D. L. Derrom. Ry. Mech. Engr., vol. 98, no. 6, June 1924, pp. 362-365, 2 figs. Outlines effective means of controlling changes in drafting conditions.

Driving Boxes. Handling Driving Box Work, J. H. Hahn. Ry. Mech. Engr., vol. 98, no. 9, Sept. 1924, pp. 549-552, 10 figs. Proper layout of machine tools and use of special fixtures speeds up production.

Machining Driving Boxes, Shoes and Wedges. Ry. Rev., vol. 74, no. 23, June 7, 1924, pp. 1029-1039, 25 figs. Variations in design necessitate use of different practices in finishing these parts in railway machine shop.

Replacement Driving Boxes on the New York Central, L. C. Morrow. Am. Mach., vol. 61, no. 8, Aug. 21, 1924, pp. 309-312, 12 figs. Practice

of West Albany shops. Operations on driving boxes, crown brasses, shoes, and wedges.

The American Locomotive Company's Methods of Machining Driving Boxes, L. C. Morrow. Am. Mach., vol. 61, no. 19, Nov. 6, 1924, pp. 715-717, 10 figs. Details of all machining operations; machine equipment employed; methods of locating, supporting and clamping work; cutters; figures of output per 9-hr. day.

Dynamics. Dynamics of Steam Locomotives (Zur Dynamik der Dampflokomotiven), A. Closterhalfen. Hanomag-Nachrichten, vol. 11, no. 124-125, Feb.-Mar. 1924, pp. 13-48, 35 figs. Development of steam engine after Watt; movement of locomotives, including vertical, rocking, rolling, recoiling, turning, and hunting; dynamic aspects and mathematical treatment.

Electric. See ELECTRIC LOCOMOTIVES.

Electric Lighting. Report of Committee on Locomotive Electric Lighting. Ry. Elec. Engr., vol. 15, no. 10, Oct. 1924, pp. 336-337. Summary of various protective steps suggested to eliminate injury from electric circuits. Committee report before Assn. Ry. Elec. Engrs.

Enginehouses. See ENGINEHOUSES.

Erection. An Improved Method of Locomotive Erection By the Use of Erecting Forms, S. R. Limerick. Baldwin Locomotives, vol. 3, no. 1, July 1924, pp. 28-32, 8 figs. Describes mechanical erector, developed by Baldwin Locomotive Wks., a device for absolute control of work of erecting a locomotive, eliminating all possibility of errors in alignment, inequalities of measurement and all variances formerly existent in locomotives incidental to exercise of personal judgment or skill on part of workmen. Erection of locomotive by this method.

Erecting Locomotives on Special Forms, F. C. Hudson. Am. Mach., vol. 61, no. 17, Oct. 23, 1924, pp. 641-642, 5 figs. Methods used by Baldwin Locomotive Works for alignment of frames and other parts; miscellaneous jacks and temporary blocking formerly used have been eliminated.

Erection Methods in Locomotive Building, F. H. Ryan. Can. Machy., vol. 32, no. 26, Dec. 25, 1924, pp. 150-154, 8 figs. System of production in use in Kingston plant of Can. Locomotive Co. carried out in well-ordered plan of sequences.

Feedwater Heaters. See FEEDWATER HEATERS, Locomotives.

Feedwater Treatment. Union Pacific Water Work Proves Profitable. Ry. Age, vol. 77, no. 14, Oct. 4, 1924, pp. 585-592, 7 figs. Particulars of water improvement work undertaken. New treating plants built; anti-foaming compound supplements softeners; saving from softeners exceeds $200,000 annually.

Water Treatment on the Chicago & Alton R. R., L. O. Gunderson. Ry. Rev., vol. 75, no. 16, Oct. 18, 1924, pp. 571-575, 3 figs. Results of systematic soda-ash treatment for locomotive-boiler waters of exceptionally undesirable quality.

Fireboxes, Welding. See OXY-ACETYLENE WELDING, Locomotive Fireboxes.

Fireless. Project of a Fireless Locomotive (Entwurf einer feuerlosen Lokomotive), E. Herms. Fördertechnik u. Frachtverkehr, vol. 17, no. 18, Sept. 18, 1924, pp. 246-249, 1 fig. Heat, stored in boiler, is used to produce steam required to propel engine. Description and calculations.

35-Ton Fireless Locomotives (B-feuerlose Lokomotive von 35.5 t Dienstgewicht für Regelspur), Metzeltin. Hanomag-Nachrichten, vol. 11, no. 131, Sept. 1924, pp. 150-151, 3 figs. Describes locomotive provided with starting steam tank of comparatively small dimensions filled simultaneously with main tank but independent thereof; main and auxiliary valves are so arranged that they close automatically as soon as driver releases lever governing them.

Flange Oiler. See LUBRICATION, Locomotive Wheel Flanges.

Four-Cylinder. New Four-Cylinder "Baltic" Tank Engines, London Midland & Scottish Railway. Ry. Engr., vol. 45, no. 533, June 1924, pp. 207-209, 5 figs. Details of 4-6-4-type locomotive, ten of which are being introduced for working suburban passenger and shorter-distance residential main-line traffic.

See also British Empire Exhibition; Tank.

Freight. I D Superheated Freight Locomotives for Servia (I D-Heissdampf-Güterzug-Lokomotiven für Serbien), W. Franke. Glasers Annalen, vol. 95, no. 4, Aug. 15, 1924, pp. 51-56, 12 figs. Design, construction and equipment of locomotives built by Linke-Hofmann Works, capable of pulling train of 420 tons at 35 km. per hr.

1 E Large Freight Locomotives of the Austrian Federal Railway (1 E-Grossgüterzuglokomotiven der österreichischen Bundesbahnen), J. Rihosek. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 10, Mar. 8, 1924, pp. 225-232, 26 figs. Results of preliminary tests of coal-saving equipment; new designs of 1 E locomotives, series 81; details of Dabeg spray preheater; exhaust-gas preheater; Davis and Metcalfe exhaust-steam injector; Lentz valve gear; etc.

French Railways. New Locomotives for French Railways. Ry. Gaz., vol. 40, no. 26, June 27, 1924, pp. 923-925, 5 figs. Describes new 4-6-2 type four-cylinder engine for Calais-Paris express passenger service of Northern Ry. and 2-8-2 type tank engine equipped with condensing apparatus for Paris-Orleans Ry.

Fuel Economy. Suggestions on Locomotive Fuel Economy, D. L. Franciscus. Ry. Rev., vol. 74, no. 7, Feb. 16, 1924, pp. 286-288. Abstract of prize-winning paper in Int. Ry. Fuel Assn. contest.

See also FUEL ECONOMY, Railways.

Fuels. Reduction of the Cost of Traction: Fuel and Its Combustion, G. H. Emerson. Int. Ry. Congress Assn.—Bul., vol. 6, no. 11, Nov. 1924, pp. 1029-1054. Consideration of question as it applies to conditions and practices effective on American railways and particularly railways of United States. Discusses choice of locomotive fuel and gives particulars regarding the different fuels that are employed; apparatus for combustion of fuels.

Garratt. A Noteworthy Garratt Locomotive Development. Ry. Engr., vol. 45, no. 538, Nov. 1924, pp. 377-379, 5 figs. Engine is first built on Garratt principle to have 8 coupled wheels; claimed to be largest locomotive yet constructed for working on meter-gage lines.

Garratt Articulated Locomotives. Times Trade & Eng. Supp., vol. 14, no. 304, May 3, 1924, p. 191, 1 fig. Fundamental principle governing design is provision of engine combining great flexibility with comparatively high power, and affording possibility of large boiler dimensions; first of its kind to be used in England recently delivered by Beyer, Peacock & Co.

Garratt Locomotive in India and South Africa. Ry. Rev., vol. 74, no. 10, Mar. 8, 1924, pp. 447-449, 3 figs. Describes locomotives to be placed in service on Burma and New Cape Central railways, former having 2-8-0—0-8-2 wheel arrangement, and latter 2-6-2—2-6-2 arrangement.

The First "Garratt" Locomotive in Great Britain. Ry. Gaz., vol. 40, no. 24, June 13, 1924, pp. 844-847, 7 figs. Working of Garratt locomotive employed at Hafod copper mills of Vivian & Sons, Swansea.

The Latest Garratt Locomotive Development.

Ry. Gaz., vol. 41, no. 13, Sept. 26, 1924, pp. 408-409, 2 figs. Engine, constructed for Burma railways, is first of its kind to be constructed with eight coupled wheels, and is reputed to be largest locomotive yet constructed for meter gage.

Gasoline. See British Empire Exhibition.

German. E-h 2 Tender Locomotives for Secondary Lines of the Former Württemberg State Railways (E-h 2 Nebenbahn Tenderlokomotive der früheren Württembergischen Staatsbahn), Dannecker. Organ für die Fortschritte des Eisenbahnwesens, vol. 79, no. 13, Oct. 15, 1924, pp. 292-294, 2 figs. Design and construction of locomotive built by Esslingen Co. for maximum axial load of 12.5 tons; able to take curves down to 100 m. radius; maximum speed 50 km.p.h.

Modern Locomotives of the German State Railway (Neuere Lokomotiven der Deutschen Reichsbahn), F. Meineke. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 12, Mar. 22, 1924, pp. 273-276, 7 figs. Describes four new types; features that these locomotives have in common are large grates, bar frames and free axles; critical discussion and method of calculating superheater and frame.

Recent Developments in Locomotive Design in Germany, F. Meineke. Mech. Eng., vol. 46, no. 12, Dec. 1924, pp. 906-907. Discusses use of superheat, feedwater heating, employment of higher temperatures and pressures, and use of condensation; internal-combustion locomotives, and hydrogen locomotive, for which gas is produced by electrolytic decomposition of water. (Abstract.) Translated from Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 37, Sept. 13, 1924, p. 937.

Greases for. See LUBRICANTS, Railroad Engine Greases.

Great Britain, 1923. British Locomotives of 1923. Engineer, vol. 137, no. 3549, Jan. 4, 1924, pp. 6-7, 6 figs. partly on supp. plate. Review of developments.

Headlight Sets Reclamation. Reclaiming Damaged Locomotive Headlight Sets. Ry. Elec. Engr., vol. 15, nos. 3 and 4, Mar. and Apr. 1924, pp. 69-71 and 103-106, 22 figs. Describes methods of repairing headlight turbo-generator sets at Cumberland shops of Baltimore & Ohio Ry.

High-Pressure. Delaware & Hudson Co. Two-Cylinder Compound Locomotive with High-Pressure Boiler. Ry. Rev., vol. 75, no. 24, Dec. 13, 1924, pp. 939-942, 1 fig. Super-locomotive called Horatio Allen, carrying 350 lb. boiler pressure develops tractive effort of 84,300 lb. with adhesion factor of 3.54.

Locomotive Evolution, J. Riekie. Ry. Engr., vol. 45, no. 538, Nov. 1924, pp. 373-375, 2 figs. Advocates use of very high pressures on compound principle, in conjunction with boiler of flash type.

Theoretical Savings Effected by Using High Pressures and Super-Heated Steam. Ry. & Locomotive Eng., vol. 37, no. 1, Jan. 1924, pp. 12-13, 1 fig. Analysis of heat required to produce various steam pressures and temperatures of superheat. Chart giving comparison of B.t.u. values of characteristics of saturated and superheated steam at different pressures and temperatures.

High-Speed. Railway Developments and the Evolution of High-Speed Locomotives (Le développement des chemins de fer et l'évolution de la locomotive à grande vitesse), M. Demoulin. Génie Civil, vol. 84, nos. 3 and 4, Jan. 19 and 26, 1924, pp. 60-64 and 85-89, 14 figs. Describes engine types built between years of 1850 and 1865, showing that many reputedly modern innovations are merely re-inventions, success of which was due to certain improvements in details or other factors.

Hungarian Railways. Present-Day Locomotive Practice in Hungary. Ry. Gaz., vol. 40, nos. 2, 4, and 7, Jan. 11, 25, and Feb. 15, 1924, pp. 49-52, 104-105, and 205, 10 figs. Jan.: Details of 2-6-6-0 Mallet compound locomotives of latest pattern introduced for working passenger and freight trains on Cammeral-Moravicz-Fiume section of Budapest-Fiume line. Jan. 25: Particulars of 2-8-2 tank locomotive, having 22½-in. diam. cylinders, and 25,000 lb. tractive effort. Feb. 15: Notes on 2-6-2 suburban tank locomotive; boiler pressure 156 lb. per sq. in.

Improvements. Locomotives. G. Greenough. Ry. Club of Pittsburgh—Proc., vol. 24, no. 1, Nov. 28, 1924, pp. 5-13 and (discussion) 13-21. Discusses improvements in design and process of manufacturing locomotives.

Internal-Combustion. Crude-Oil Engine Shunting Locomotive. Engineering, vol. 118, no. 3073, Nov. 21, 1924, pp. 701-703, 10 figs. Locomotive constructed by Swiss Locomotive & Machine Works, Winterthur, Switzerland, is built for standard gage; engine works on 4-stroke cycle and utilizes airless injection for fuel.

Internal Combustion Locomotive Development, T. Grime. Machy. Market, no. 1248, Oct. 3, 1924, pp. 27-28. Thermal and economic aspect; consideration of problem of adapting internal-combustion engine to locomotive purposes; the direct-acting engine; geared, electric, and hydraulic transmissions.

Mountain Trains with Internal-Combustion Locomotives (Bergbahnen mit Motorbetrieb), W. Müller. Motorwagen, vol. 27, no. 11, Apr. 20, 1924, pp. 186-190, 6 figs. System recommended by author for rack railway in the Bavarian Alps, consisting of trains with internal-combustion locomotives in place of steam or electric locomotives.

The "Still" System Internal Combustion Locomotive. Ry. & Locomotive Eng., vol. 37, no. 1, Jan. 1924, pp. 14-15. Notes on new development by Still Engine Co.; 2-6-2 type. From Locomotive Mag. Ry. Carriage & Wagon Rev.

See also Diesel-Electric; Diesel-Engined; Switching.

Long Runs. Extension of Locomotive Runs, F. E. Russel. Ry. Mech. Engr., vol. 98, no. 8, Aug. 1924, pp. 464-467. Discusses advantages of long runs and mechanical difficulties encountered. Abstract of paper read before Pac. Ry. Club.

Long Locomotive Runs, F. E. Russell. Pacific Ry. Club—Proc., vol. 7, no. 12, Mar. 1924, pp. 9, 11, 13, 15 and 17-27, and (discussion) 27-39. Traces briefly development of steam locomotive in past 100 years. Shows that there is ample opportunity for improvement by obtaining greater mileage out of locomotives by increasing length of runs; gives list of 34 railways that have increased locomotive runs. Modern appliances and improvements in design and material that contribute to making long runs economical.

Long Locomotive Runs on the Norfolk & Western Ry. Ry. Rev., vol. 74, no. 5, Feb. 2, 1924, pp. 203-207, 8 figs. Account of experience in developing practice of locomotive runs in passenger service over multiple divisions; special reference is made to type of locomotive which made these runs possible, and details are given of construction of tenders whose increased capacity was essential feature.

Lubrication. Force Feed Lubrication on Locomotives, A. H. Woodward. Ry. Mech. Engr., vol. 93, no. 3, Mar. 1924, pp. 151-152, 4 figs. Describes an original method by which oil is automatically supplied to the various bearing surfaces.

Locomotive Valve and Cylinder Lubrication, W. J. Schlacks. Ry. & Locomotive Eng., vol. 37, no. 5, May 1924, pp. 148-150, 1 fig. Schlacks force-feed lubricator; valve and cylinder lubrication of super-heater locomotives.

Lubrication and its Effect on Locomotive Serv-

ice. Ry. Age, vol. 77, no. 13, Sept. 27, 1924, pp. 558-561. See also Ry. & Locomotive Eng., vol. 37, no. 11, Nov. 1924, pp. 343-347. Value of specific gravity and viscosity tests questioned; cylinder oil must be atomized; direct feed to cylinders unnecessary; fraction and temperature tests with different oils; etc.

Lubrication of Locomotives and Cars from the Standpoint of the Operating Department, D. Wood. Pac. Ry. Club—Jl., vol. 3, no. 8, Nov. 1924, pp. 3, 5, 7, and 9. Consideration of material, appliances and men concerned with locomotive and car lubrication.

Mallet. Baldwin Mallet Locomotive for India. Ry. Gaz., vol. 41, no. 5, Aug. 1, 1924, pp. 154-155, 2 figs. Baldwin Locomotive Works recently delivered to North Western Ry., India, powerful Mallet locomotive developing tractive force of 52,600 lb. at 85 per cent boiler pressure.

Hungarian Mallet with Brotan Type Boiler. Ry. Age, vol. 77, no. 10, Sept. 6, 1924, pp. 407-410, 4 figs. See also Ry. Mech. Engr., vol. 98, no. 10, Oct. 1924, pp. 583-586, 4 figs. Describes locomotive built at Budapest by Hungarian State Rys. for heavy freight service between Fiume and Moravica; steam pressure, 220 lb.; total evaporative heating surface, 2918 sq. ft.; weight 241,000 lb.

Mallet Compound Locomotive for North Western (State) Railway of India. Ry. Rev., vol. 75, no. 21, Nov. 22, 1924, pp. 821-824, 3 figs. Describes 2-6-6-2 type articulated locomotive built by Baldwin Locomotive Works, which is to be compared with Garratt 2-6-2—2-6-2 compound engine.

Motive Power of the Carolina Clinchfield & Ohio Ry. Ry. Rev., vol. 74, no. 23, June 7, 1924, pp. 1005-1017, 7 figs. Describes rebuilding of original Mallet locomotives and makes comparison with two types of new engines.

1D + D Four-Cylinder Compound Superheated Steam Locomotives (Mallet) for Dutch State Railways in Java [1D + D - Vierzylinder - Verbund - Heissdampf-Lokomotive (Mallet) der Holländischen Staatsbahnen auf Java], A. Frey. Hanomag-Nachrichten, vol. 11, no. 132, Oct. 1924, pp. 165-180, 25 figs. Details of design and construction; tractive effort up to 18,900 kg., speed 30 km.p.h. for gradients of 25 per mill and 300 ton trains.

Simple Mallets for the Chesapeake & Ohio. Ry. Age, vol. 76, no. 19, Apr. 12, 1924, pp. 927-929, 4 figs. See also description in Ry. Rev., vol. 74, no. 14, Apr. 5, 1924, pp. 631-640, 13 figs. 2-8-8-2 type designed to meet restricted clearances; rated tractive force, 103,500 lb.

2-8-8-2 Type Simple Mallet Locomotive for the Chesapeake and Ohio Railroad. Engineering, vol. 118, nos. 3076 and 3078, Dec. 12 and 26, 1924, pp. 795-798 and 860-861, 39 figs. partly on supp. plate. Details of articulated locomotive built by Am. Locomotive Co., Schenectady, N. Y.

Manganese-Steel Parts. See MANGANESE STEEL, Locomotive.

Mastodon Type. See Types.

Mechanical Draft. Report on Front-Ends, Grates and Ashpans, E. C. Schmidt. Ry. Rev., vol. 74, no. 23, June 7, 1924, pp. 999-1004, 6 figs. Devices for creating mechanical draft in locomotives and description of draft arrangements of oil-burning locomotive. (Abstract.) Report of committee to Int. Ry. Fuel Assn.

Mechanically Fired. What Effect Will the Mechanically Fired Locomotive Have on the Future Engineer? Ry. & Locomotive Eng., vol. 37, no. 10, Oct. 1924, pp. 300-302. Committee report before Traveling Engrs.' Assn.

Meter-Gage. Metre Gauge Locomotives for the Madras & Southern Mahratta Railway (India). Ry. Gaz., vol. 41, no. 26, Dec. 26, 1924, p. 825, 2 figs. New Engines, of 4-6-0 and 4-8-0 types respectively, introduced for working heavy passenger and freight traffic.

Mikado. Canadian National Mikado Type Locomotive, C. E. Brooks. Ry. Mech. Engr., vol. 98, no. 1, Jan. 1924, pp. 6-9, 7 figs. Belspaire fireboxes and extended side sheets reduce troubles from bad water in Western Canada.

4-Cylinder 2-8-2 Express Locomotive, Italian State Railways. Ry. Gaz., vol. 40, no. 17, Apr. 25, 1924, pp. 606-607, 2 figs. Particulars of locomotives with large diameter coupled wheels introduced for working heavy passenger trains on heavily graded sections of Rome-Naples and Rome-Florence lines; boiler pressure, 200 lb. per sq. in.; tractive effort, 8820 lb.

Mikado Type Locomotive, Canadian National Rys. Ry. Rev., vol. 74, no. 1, Jan. 5, 1924, pp. 12-16, 7 figs. Description of 45 engines designed largely to Can. Nat. standards especially for conditions in western Canada; cylinders, 27 in. by 30 in. diam.; driving wheels, 63 in. diam.; boiler pressure, 185 lb.; tractive power, 54,600 lb. without booster and 65,000 lb. with.

Mikado Type Locomotive, Elgin Joliet & Eastern Ry. Ry. Rev., vol. 75, no. 9, Aug. 30, 1924, pp. 317-320, 3 figs. Gives weights and dimensions of Elgin, Joliet & Eastern Ry. 2-8-2 type locomotives; engines are similar in design and construction to U.S.R.A. heavy Mikado locomotives.

Mikado Type Locomotive for Canadian National. Ry. Age, vol. 76, no. 4, Jan. 26, 1924, pp. 281-282, 1 fig. Boiler with Belspaire firebox special features; cylinders 27-in. diameter by 30-in. stroke; driving wheels 63-in. diameter with 56-in. cast steel centers; boiler pressure, 185 lb.; rated tractive force, 54,600 lb.; 2-8-2 type.

Mikado Type Locomotives, Canadian National Railways. Can. Ry. & Mar. World, no. 312, Feb. 1924, pp. 53-55, 4 figs. See also Boiler Maker, vol. 24, no. 2, Feb. 1924, pp. 45-47, 2 figs. Belspaire boiler; 27 by 30 in. cylinder; working pressure, 185 lb.; maximum tractive power 54,600 lb.

New Mikado-Type Locomotive for Heavy High-Speed Traffic (Nuove locomotive Mikado (1-4-1) a grande velocità per treni diretti pesanti su linee accidentate delle Ferrovie dello Stato Italiano), Enrico Levi. Rivista tecnica delle Ferrovie Italiane, vol. 25, no. 4, April 15, 1924, pp. 109-117, 7 figs. Illustrated description of new 4-cylinder compound 2-8-2 engine designed by engineers of Italian State Railways.

New Mikado Type Locomotives for the Wabash R. R. Ry. Rev., vol. 74, no. 13, Mar. 29, 1924, pp. 593-599, 6 figs. New 2-8-2 type freight engines somewhat larger than other locomotives of same type in use on this road.

Three-Cylinder Mikado for the South Manchurian. Ry. Mech. Engr., vol. 98, no. 11, Nov. 1924, pp. 656-659, 5 figs. Unusual test methods provide accurate data on performance of 2-8-2 locomotive.

Two Light Mikado Locomotives Built at Lima. Ry. Age, vol. 76, no. 9, Mar. 1, 1924, pp. 505-506, 2 figs. Designed for local conditions but approximately same capacity as U.S.R.A. light Mikados.

See also French Rys.; Pacific Type; Tank; Three-Cylinder; Types.

Mine. See MINE LOCOMOTIVES.

Mixed-Traffic. New Mixed-Traffic Locomotives for the Great Southern & Western Railway, Ireland. Ry. Engr., vol. 45, no. 537, Oct. 1924, pp. 345-348, 8 figs. Tests made with first of series have proved adaptability of class for handling fast passenger trains, although primarily built for freight traffic.

Mountain Type. Central of Georgia Ry. Mountain Type Passenger Locomotives. Ry. Rev., vol. 75, no. 13, Sept. 27, 1924, pp. 457-460, 4 figs. New 4-8-2-type passenger locomotive constructed by Am. Locomotive Co. for handling heavy passenger trains; equipped with Nicholson thermic siphons.

Heavy 4-8-2 Type Southern Pacific Locomotives. Ry. Age, vol. 76, no. 6, Feb. 9, 1924, pp. 375-377, 3 figs. See also Ry. Rev., vol. 74, no. 6, Feb. 9, 1924, pp. 250-256, 6 figs. Designed to haul 12 passenger cars on 2-per cent grades and run 815 mi.

Lehigh Valley Three-Cylinder Locomotive Tests. Ry. Age, vol. 76, no. 15, Mar. 15, 1924, pp. 755-757, 13 figs. 4-8-2 type built by Am. Locomotive Co. handles heavy tonnage with low fuel consumption; results of tests; performance on grades.

Southern Pacific 4-8-2 Type Locomotives. Ry. Mech. Engr., vol. 98, no. 3, Mar. 1924, pp. 141-146, 10 figs. Description of locomotives designed to haul trains of 12 passenger cars on 2 per cent grades and run 815 miles (between Los Angeles, Cal., and El Paso, Tex.); rated tractive force, 85 per cent, 57,510 lb., and with booster, 67,660 lb.

See also Algerian State Railways.

Oil-Burning. How to Improve Oil Burning on Locomotives. Ry. Age, vol. 77, no. 13, Sept. 27, 1924, pp. 555-558. See also Ry. Mech. Engr., vol. 98, no. 10, Oct. 1924, pp. 592-594; Ry. & Locomotive Eng., vol. 37, no. 10, Oct. 1924, pp. 302-308; and Ry. Rev., vol. 75, no. 26, Dec. 27, 1924, pp. 1025-1027. Discusses burners, burner location, air openings, dampers, furnace design, and refractories.

Oil-Fuel Storage. See OIL FUEL, Locomotive, Storage and Distribution of.

Pacific Type. Chicago & Eastern Illinois Ry. 4-6-2 Type Locomotives. Ry. Rev., vol. 75, no. 6, Aug. 9, 1924, pp. 197-200, 3 figs. Modern heavy Pacific type locomotives handling through passenger runs; tractive effort, 43,900 lb., steam pressure, 200 lb.

New "Pacific" Type Locomotives, Northern Railway of France. Ry. Engr., vol. 45, no. 534, July 1924, pp. 244-245, 4 figs. Describes new 4-6-2 type express locomotive designed for working heavy boat and other express trains between Calais and Paris; is of 4-cylinder, compound type with h.p. cylinders outside frames driving middle pair of coupled wheels.

Pacific and Mikado Type Locomotive for Canadian Pacific Ry. Ry. Rev., vol. 75, no. 19, Nov. 8, 1924, pp. 690-697, 9 figs. Passenger and freight locomotives designed for handling heavy trains under severe weather conditions.

See also Baldwin; Bombay, Baroda & Central India Ry.; French Rys.; Super-Pacific.

Painting. See PAINTING, Cars and Locomotives.

Parts, Case-Hardening. See CASE-HARDENING, Locomotive Parts.

Parts, Manufacture. Examples of Modern Working Methods in the Production of Locomotive Parts (Beispiele über neuzeitliche Arbeitsverfahren in der Herstellung von Lokomotivteilen). Werkstattstechnik, vol. 18, no. 19, Oct. 1, 1924, pp. 533-536, 23 figs. Shows more economic production by using special machine tools and gives examples in forging, milling, and guiding.

Parts, Testing. Production and Testing in Locomotive Construction (Fabrikations und Prüfvorrichtungen im Locomotivbau). Werkstattstechnik, vol. 18, no. 18, Sept. 15, 1924, pp. 492-495, 11 figs. Details of methods followed by Linke-Hofmann works in Breslau for finishing and testing crossheads and guides.

Performance and Rating Methods. Notes on Locomotive Performance and Rating Methods, E. G. Young. Assn. Chinese & Am. Engrs.—Jl., vol. 5, nos. 9 and 10, Sept. and Oct. 1924, pp. 1-8 and 5-11, 8 figs. on supp. plates. Usefulness of information obtained from laboratory and road dynamometer tests to anticipate performance of a locomotive of modern design. Shows use of simple data and graphic methods in checking and predetermining motive-power performance under various conditions.

Recording the Course of a Locomotive, as Well as Work and Output of Dynamic Forces (Aufzeichnen des Fahrzeuglaufs nach Zeit und Weg sowie der Arbeit und Leistung der Bewegungskräfte), W. Müller. Bautechnik, vol. 2, no. 40, Sept. 16, 1924, pp. 433-440, 10 figs. A study in graphic dynamics. Time-road curve, driving power variable as to time and as to velocity; curves of work and performance; comparison between graphic statistics and dynamics.

Power and Efficiency Improvements. Power and Efficiency Improvements In Steam Locomotives, G. M. Basford. Engrs. & Eng., vol. 41, nos. 3 and 6, Mar. and June 1924, pp. 61-64 and (discussion) 64-69 and 159-162, 4 figs. Paper read at Conference on Economy in the Use of Fuel, held at Engrs. Club of Phila., Jan. 15, 1924.

Production Statistics, 1923. Record-Breaking Increase in Motive Power. Ry. Age, vol. 76, no. 1, Jan. 5, 1924, pp. 77-82. Gives table of locomotive orders for 1923 for service in United States.

Pulverized-Fuel Firing. See PULVERIZED COAL, Locomotive Firing.

Rack. A New Rack Locomotive. Engineer, vol. 136, no. 3576, July 11, 1924, p. 55, 3 figs. Details of locomotive developed by Railgrip Syndicate, Ltd., Lond., Eng. A steam locomotive with an auxiliary pair of cylinders for driving a pair of wheels, having a positive grip on rails, through a set of speed-reducing gearing; auxiliary engine brought into operation only when gradient of line becomes so steep that usual driving wheels will not provide sufficient adhesion to move load.

See also Adhesion and Rack; Types.

Railway Service, Relation to. A Locomotive and Its Relation to the Railroad Service, C. B. Fletcher. Ry. Rev., vol. 75, no. 20, Nov. 15, 1924, pp. 795-796. Presents data relating to locomotive working year for freight and passenger service.

Rebuilt. Modernized Power From Reconstructed Locomotives. Ry. Rev., vol. 74, no. 9, Mar. 1, 1924, pp. 367-372, 9 figs. Account of overhauling of several classes of engines by Chicago Indianapolis & Louisville Ry. in its shops at La Fayette, Ind., illustrating methods by which Monon has practically made modern locomotives out of old, as engines pass through shops for repairs.

Repairing. A Record in Completing Class III Repairs. Ry. Rev., vol. 74, no. 16, Apr. 19, 1924, pp. 713-715, 12 figs. Time record for making class III locomotive repairs was established on Kansas City Southern Ry., Mar. 17, 1924, when locomotive No. 556 was put through shops at Pittsburg, Kan., in 7 hr. and 55 min.; manner in which work was planned, preparations made beforehand, and schedule on which it was executed.

French Shipyard Repairs American Locomotives, G. L. Carden. Ry. Age, vol. 76, no. 22, May 3, 1924, pp. 1106-1107, 4 figs. Engines formerly used by U. S. A. are being equipped with copper fireboxes at Penhoët shipyards at St. Mazaire and Nantes.

Locomotive Repairs at the Bellmead Shops, H. Campbell. Am. Mach., vol. 61, nos. 6 and 7, Aug. 7 and 14, 1924, pp. 219-221 and 257-259, 20 figs. Missouri, Kansas and Texas Ry. shops at Waco, Texas, equipped with new machinery

throughout; reducing costs by use of latest types of tools and attachments; design and use of special equipment. Machine driving boxes, special milling fixtures, grinding rods and links, etc.

Rebuilding Narrow-Gage Locomotives, H. Campbell. Am. Mach., vol. 61, no. 4, July 24, 1924, pp. 141-143, 10 figs. Details as to machining of small parts used in repairing of these locomotives.

Repairing Locomotives in a Manufacturing Plant, H. Campbell. Am. Mach., vol. 61, no. 9, Aug. 28, 1924, pp. 329-332, 10 figs. Details of some of the tools and methods used in a section of plant of Minneapolis Steel & Machinery Co., Minneapolis, Minn.

Repairing Locomotives Under Contract. Boiler Maker, vol. 24, no. 8, Aug. 1924, pp. 221-225, 13 figs. Beech Grove shop operating system developed by Railway Service & Supply Corpn. performs valuable service for Big Four.

See also Welding Practice; ELECTRIC WELDING, ARC, Locomotive Repairs; RAILWAY REPAIR SHOPS.

Resistance of. Locomotive Resistance and Tractive Force, K. Asakura. Ry. Mech. Engr., vol. 98, no. 9, Sept. 1924, pp. 523-527, 9 figs. States that locomotive resistance should be partly represented as so many pounds per ton weight and partly as a function of mechanical efficiency. Formula for mechanical efficiency is developed and method of calculating tractive effort by applying mechanical efficiency explained. Results of calculation according to this method are nearly equal to those calculated by speed-factor method; can be applied to a locomotive whose boiler capacity is less than 100 per cent.

Rod Brasses. See MACHINING METHODS, Side- and Main-Rod Work.

Rod Failures. Locomotive Connecting Rod Failures. Ry. Engr., vol. 44, no. 527, Dec. 1923, pp. 457-460, 3 figs. Report to Ministry of Transport on accident at Betley Road, near Crewe, Lond. Midland & Scottish Ry.

Rod Repairs. Handling Rod Work at Battle Creek Shops, M. H. Westbrook. Ry. Mech. Engr., vol. 98, no. 7, July 1924, pp. 437-442, 18 figs. Rod repair department at Grand Trunk shops, Battle Creek, Mich., is equipped and laid out to take care of 22-pit repair shop, handling all classified repairs to 334 locomotives, including U.S.R.A. Mikado type; each man handles special work.

Rods, Boring and Testing of. Fixtures for Boring and Testing Locomotive Rods, F. H. Colvin. Am. Mach., vol. 60, no. 26, June 26, 1924, pp. 947-949, 8 figs. Some of the methods and tools used by Lima Locomotive Works in boring and testing side rods of plain and articulated types.

Running Repairs. Union Pacific Systematizes Running Repairs. Ry. Mech. Engr., vol. 98, no. 11, Nov. 1924, pp. 694-696, 5 figs. Periodical detentions reduce locomotive maintenance costs 10 per cent with increased service.

Santa Fe Type. Building Freight Locomotives of Santa Fe Type, L. T. Rutledge. Can. Machy., vol. 32, no. 18, Oct. 30, 1924, pp. 19-21 and 42, 3 figs. Describes freight locomotive built by Can. Locomotive Co., Kingston, for Can. Nat. Ry., weighing, with loaded tender, 328 tons; 2-10-2 type.

Heavy Santa Fe Locomotives for B. & O. Ry. Age, vol. 76, no. 7, Feb. 16, 1924, pp. 413-414, 2 figs. Tractive force of 84,260 lb. obtained with 64-in. drivers; tenders of unusual capacity facilitate long runs.

Heavy 2-10-2 Type Locomotives for Baltimore and Ohio. Railroad Herald, vol. 28, no. 2, Jan. 1924, pp. 20-21, 1 fig. See also Ry. & Locomotive Eng., vol. 37, no. 1, Jan. 1924, pp. 19-20, 1 fig., and Ry. Mech. Engr., vol. 98, no. 2, Feb. 1924, pp. 73-76, 4 figs. Cylinders, 30 by 32 in.; driving wheels, 58 in. diam.; tractive effort, 84,260 lb.

Santa Fe Locomotives, Canadian National Railway. Can Ry. & Mar. World, no. 320, Oct. 1924, pp. 487-489, 4 figs. Built for heavy transfer service at Toronto, to operate between Mimico and Danforth; designated as T-t-a class; total weight, without tender, 409,000 lb.

2-10-2 Type Replace Mallets on Great Northern. Ry. Age, vol. 76, no. 8, Feb. 23, 1924, pp. 459-460, 1 fig. 3000 tons handled over 1.8-per cent grade by locomotives of 87,130-lb. tractive force; built by Baldwin Locomotive Works.

Scale for Weighing. See SCALES, Locomotive.

Shipment of. Packing, Loading and Shipment of Locomotives (Verpackung, Verladung und Versand von Lokomotiven), E. Metzeltin. Fördertechnik und Frachtverkehr, vol. 17, no. 10, May 22, 1924, pp. 135-140, 4 figs. Locomotives must comply with Bern agreements in order to pass over various European railroads. For transoceanic shipments locomotives must generally be taken apart.

Shops. Locomotive Workshops of the Linke-Hofmann-Lauchhammer A. G. in Breslau (Lokomotivwerkstätten der Linke-Hofmann-Lauchhammer Aktiengesellschaft in Breslau), K. Bernhard. Zeit. des Vereines deutscher Ingenieure, vol. 68, nos. 35 and 40, Aug. 30 and Oct. 4, 1924, pp. 889-895 and 1053-1058, 46 figs. partly on supp. plate. Details of design and construction of machine shops, satisfying all requirements of modern heavy-type construction, especially latest equipment in cranes, heating, lighting, etc.

Stacks. Calculation of Locomotive Stacks (Ueber die Berechnung von Lokomotivschornsteinen), A. Giesl-Gieslin. Zeit. des Oesterr. Ingenieur- u. Architekten-Vereines, vol. 76, nos. 43-44 and 47-48, Oct. 31 and Nov. 28, 1924, pp. 373-376 and 411-414, 9 figs. Economic importance of proper dimensioning; gives simple method of approximate calculation; energy losses through stack, design of stacks, etc.

Experimental Investigation of Locomotive Stacks (Experimentelle Untersuchung von Lokomotivschornsteinen), F. C. Huygen. Zeit. des österr. Ingenieur- u. Architekten-Vereines, vol. 76, no. 27/28, July 11, 1924, pp. 248-251, 3 figs. Discusses course of temperature, pressure, and velocity of flow from smokebox to mouth of stack. Translated from Dutch.

Starters. The Street Locomotive Starter. Ry. Age, vol. 77, no. 14, Oct. 4, 1924, pp. 598-600, 5 figs. See also Ry. Mech. Engr., vol. 98, no. 11, Nov. 1924, pp. 702-704, 5 figs., and Ry. Rev., vol. 75, no. 13, Oct. 4, 1924, pp. 518-521, 6 figs. Describes starting device recently developed by C. F. Street, Greenwich, Conn. Consists essentially of two cylinders which are arranged parallel to each other, with their pistons and connecting rods.

Steam Separator. A Steam Separator for Locomotives. Engineer, vol. 138, no. 3594, Nov. 14, 1924, p. 566, 4 figs. Form of steam separator for installation in dome of locomotives.

Steam-Turbine. A New Geared Turbine Condensing Locomotive. Ry. Engr., vol. 45, no. 533, June 1924, pp. 200-201, 2 figs. Constructed on Reid-Macleod system and patented by North Brit. Locomotive Co.

A New Turbo-Locomotive for the German State Railways. Ry. Gaz., vol. 41, no. 16, Oct. 17, 1924, pp. 513-516, 9 figs. Designed and built at Krupp Works, Essen, and since subjected to experimental runs for testing purposes.

Condensing Steam Turbine Locomotives (Dampfturbinen-Lokomotiven mit Kondensation), R. Lorenz. Kruppsche Monatshefte, vol. 5, Nov. 1924, pp. 221-248, 46 figs. partly on supp. plate. Development and design of Zoelly, Ljungström,

and Krupp types; comparative cost and efficiency data; future developments.

Developments of the Ljungström Locomotive. Ry. Age, vol. 76, no. 17, Mar. 29, 1924, pp. 849-850, 2 figs. Its performance and later developments in design.

Economy, Design and Development of the Steam-Turbine Locomotive (Die Turbolokomotive, ihre Wirtschaftlichkeit, Bauart und Entwicklung), R. P. Wagner. Organ für die Fortschritte des Eisenbahnwesens, vol. 79, nos. 1 and 2, Jan. 15 and Feb. 15, 1924, pp. 1-8 and 25-34, 17 figs. Discusses problems of design, and describes Ljungström, Ramsay, and Zoelly types.

Geared Turbine Condensing Locomotive. Ry. Age, vol. 77, no. 3, July 19, 1924, pp. 107-108, 1 fig. Mechanical, thermal, and economic advantages obtained with Reid-MacLeod steam-turbine-driven locomotive, built by North British Locomotive Co., Ltd., Glasgow, Scotland. Uniform torque gives rapid acceleration.

Ljungström Steam Locomotive (Ljungströms Locomotiv), I. F. Johansen. Ingeniören, vol. 33, no. 6, Feb. 9, 1924, pp. 61-68, 16 figs. Description of Swedish locomotive; great economy obtained by this design shown by test data; fuel consumption reduced about 50 per cent as compared to locomotives of usual design.

The First German Turbine Locomotive, R. Lorenz. Eng. Progress, vol. 5, no. 9, Sept. 1924, pp. 165-166, 5 figs. Describes condensing turbine locomotive built in Germany by firm of F. Krupp, Essen; author states that introduction of steam turbines to drive locomotives would save railways 20 to 30 per cent of coal now consumed.

The First Krupp Turbine Locomotives (Die erste Kruppsche Turbinenlokomotive), R. Lorenz. Kruppsche Monatshefte, vol. 5, Aug.-Sept. 1924, pp. 129-136, 8 figs. Details of construction, bearings and lubrication, condensers, feedwater heaters, Schmidt superheaters, ventilators, etc.

The Ramsay Turbo-Electric Condensing Locomotive. Ry. Engr., vol. 45, no. 528, Jan. 1924, pp. 5-10 and 24, 11 figs. partly on supp. plates. Discusses developing and transmitting power, design of condenser, driving motors, speed regulation, and gives results of tests made on Lond. Midland & Scottish Ry. subsequent to modification of certain details, showing possibilities of this class of locomotive for working main-line passenger traffic.

The Zoelly Turbine-Driven Locomotive, H. Zoelly. Mech. Eng., vol. 46, no. 11, Nov. 1924, pp. 653-660, 7 figs. Particulars of 1000-hp. experimental condensing locomotive provided with recooler for condensing water; theoretical considerations; fuel economy as compared with ordinary locomotive. (Abridged.)

Turbine Locomotive for British Railways. Ry. Gaz., vol. 41, no. 24, Dec. 12, 1924, pp. 768-769, 3 figs. Ljungström turbine condensing locomotive, under construction at works of Beyer, Peacock & Co., has been designed especially to meet British railway conditions.

Turbine Locomotives (Locomotives à turbines), M. Lamy. Revue Industrielle, vol. 54, no. 2181, Aug. 1924, pp. 217-221, 7 figs. Describes Escher Wyss type of Swiss Ry., Ljungström type in Sweden, their design, construction, and operation.

Turbo-Condensing Locomotives (Dampflokomotiven mit Kondensation). Glasers Annalen, vol. 94, no. 3, Feb. 1, 1924, pp. 25-31, 4 figs. Discussion by R. P. Wagner and others of paper by R. Lorenz, in which former claims that use of steam condensation in piston locomotives effects little or no improvement with regard to performance or economy.

Zoelly Turbine Locomotive. Engineer, vol. 138, no. 3593, Nov. 7, 1924, pp. 530-532, 4 figs. Features of new Swiss locomotive which has had remarkably successful trial trips.

Zoelly Turbo-Locomotive System (Die Turbolokomotive System Zoelly). Schweizerische Bauzeitung, vol. 84, no. 13, Sept. 27, 1924, pp. 151-152, 1 fig. Details of design and construction, including improvements based on some years of practical experience.

Steam and Electric, Comparison of. Steam and Electric Locomotives Compared. Ry. Gaz., vol. 41, no. 3, July 18, 1924, p. 90. Electric-locomotive traction enables large horsepower to be obtained from locomotives of reasonable length and with low axle loads.

Steel for. See ALLOY STEELS, Locomotive Parts.

Steep Grades. Locomotives for Steep Grades (Lokomotiven für starke Steigungen), Nordmann. Glasers Annalen, vol. 95, no. 6, Sept. 15, 1924, pp. 99-112, 13 figs. Describes a number of locomotive designs used in Germany for steep grades.

Superheater. 1 C 1 Superheater Tender Locomotives for One-Meter Tracks for Spain (Meterspurige 1 C 1-Heissdampf-Personenzug-Tenderlokomotiven für Spanien), W. Franke. Verkehrstechnik, vol. 41, no. 38, Sept. 19, 1924, pp. 468-471, 6 figs. Design, construction, and equipment of locomotives for La Robla Ry. Co.

1 E- (2-10-0) Two-Cylinder Superheated Goods Train Locomotive for the Polish State Railways. Eng. Progress, vol. 5, no. 2, Feb. 1924, pp. 29-34, 14 figs. See also description in Ry. Gaz., vol. 40, no. 12, Mar. 21, 1924, pp. 416 and 422, 3 figs. Locomotives built partly by Berlin Machine Co. and partly by Belgian works; requirements and characteristics; results of trial trips.

Recent Steam Collecting Boxes for Superheater Locomotives (Neuere Dampfsammelkästen für Heissdampflokomotiven), M. Igel. Wärme, vol. 47, no. 26, June 27, 1924, pp. 306-307, 8 figs. Details of boxes of ingot iron in place of cast iron or steel to avoid welding; 70 boxes used by German railways as test.

The Advantages of Highly Superheated Steam in Locomotives, R. S. York. Commonwealth Engr., vol. 11, no. 9, Apr. 1, 1924, pp. 359-363. Gives results of tests made on two locomotives of same dimensions, one fitted with superheater and one without.

Superheaters for. See SUPERHEATERS, locomotive.

Super-Pacific. The New Super-Pacific Type of Locomotives of the French Northern Railway Company (Note sur les nouvelles Locomotives "Super-pacific" de la Compagnie du Chemin de fer du Nord français). Revue Universelle des Transports, vol. 1, no. 14, Sept. 15, 1924, pp. 210-212, 2 figs. Particulars of new 4-6-2 type, having three-coupled driving wheels, for loads of 400-500 tons; Westinghouse brakes; electric lighting; speed 100 km.p.h.

Switching. A New Internal-Combustion Shunting Locomotive. Ry. Gaz., vol. 40, no. 16, Apr. 18, 1924, pp. 572-574, 6 figs. Particulars of the Vermont, gasoline-driven locomotive or tractor, designed to meet requirements of railway companies and industrial concerns; design based on simplicity of detail and economical operation.

Light-Weight Locomotives for Shunting Purposes. Indian & Eastern Engr., vol. 55, no. 1, July 1924, pp. 18-19, 3 figs. Discusses extended use of gasoline locomotive in classification yards; engine is of four-cycle internal-combustion type, having four water-jacketed cylinders (bore, 120 mm., stroke 140 mm.) and developing 40 hp. at 1000 r.p.m.

New 0-8-0 Heavy Switch Engines for Wabash Ry. Ry. Rev., vol. 74, no. 19, May 10, 1924, pp. 833-838, 8 figs. Modern switch engines for use in yard and transfer service at large terminals.

Oil-Electric Locomotive Built for Switching Service. Eng. News-Rec., vol. 93, no. 10, Sept. 4, 1924, pp. 390-391, 3 figs. Particulars of locomotive designed and built by Ingersoll-Rand Co. and Gen. Elec. Co. for N. Y. Central R. R. Co., for use in city streets; 300-hp. oil engine directly connected to a 200-kw. generator; four motors of a nominal rating of 95 hp. each, one of which is geared to each of four axles.

Oil-Engine Locomotive for Switching Service (Oelmotor-Lokomotiven für Rangierdienst). Schweizerische Bauzeitung, vol. 84, no. 7, Aug. 16, 1924, pp. 86-87, 7 figs. Details of design of 90-hp. 500-r.p.m. locomotive burning crude oil, developing 4000 kg. at drawbar.

Powerful Six-Wheel Switcher for the Monon. Ry. Mech. Engr., vol. 98, no. 11, Nov. 1924, pp. 660-661, 1 fig. Details of 0-6-0 switching locomotives which develop 42,000 lb. tractive force with 57-in. drivers and have total weight of 191,000 lb.

Rebuilt 0-6-0 Type Locomotive, London Midland & Scottish Railway. Ry. Gaz., vol. 41, no. 22, Nov. 28, 1924, p. 669, 2 figs. Engines originally designed and built for service in Turkey, now employed on Tilbury section of Lond. Midland & Scottish Ry.

Shipping Complete Locomotives to India. Ry. Engr., vol. 45, no. 530, Mar. 1924, pp. 95-96 and 108, 6 figs. Principal data on 0-6-0 type British-built locomotives delivered to East Indian Ry. at Calcutta.

Tank. Design of a Tank Locomotive (Entwurf einer C-Tender-Lokomotive), E. Herms. Praktische Maschinen-Konstrukteur, vol. 57, nos. 45, 47, and 48, Nov. 25, Dec. 9, and 16, 1924, pp. 605-608, 635-636, and 649-650, 2 figs. Design and calculations for a standard gage tank locomotive for branch line, capable of pulling a train of 100 tons gross weight at a speed of 16 km. over a gradient of 1:50 and a curve of 80 m. radius.

Four-Cylinder "Baltic" Tank Engine—London Midland & Scottish Railway. Ry. Gaz., vol. 41, no. 3, July 18, 1924, pp. 82-83, 3 figs. 4-6-4 type four-cylinder tank engine built at Horwich works of London Midland & Scottish Ry. for use in dealing with heavy suburban traffic over severely graded lines, also for hauling express residential trains within radius of about 50 miles.

L. M. S. Rly.—"Baltic" Tank Engines. Engineer, vol. 138, no. 3595, Nov. 21, 1924, pp. 582-584, 7 figs. Details of Horwich-built 4-cylinder superheated 4-6-0 locomotive.

New Four-Cylinder "Baltic" 4-6-4 Type Tank Engine, London Midland & Scottish Railway. Ry. Engr., vol. 45, no. 532, May 1924, pp. 166-169, 6 figs. Also Engineer, vol. 137, no. 3565, Apr. 25, 1924, p. 454, 2 figs.; and Ry. Gaz., vol. 40, no. 14, Apr. 4, 1924, pp. 503-506, 6 figs. Particulars of locomotives being constructed at Horwich Works for heavy suburban work and short-distance express residential traffic; total boiler heating surface, 1997 sq. ft.; working pressure, 180 lb. per sq. in.

New Goods Tank Locomotives, London Midland & Scottish Railway. Ry. Gaz., vol. 41, no. 7, Aug. 15, 1924, p. 215, 2 figs. Construction of inside-cylinder-type 0-6-0 engines for Lond., Midland & Scottish Ry.; cylinders; diameter, 18½ in.; piston stroke, 26 in.; wheelbase, 16 ft. 6 in.

New 2-8-2 Type Tank Engines for the East Indian Railway. Ry. Engr., vol. 45, no. 534, July 1924, pp. 243 and 245, 2 figs. Particulars of locomotives intended expressly for shunting heavy goods trains brought in by main line locomotive built by Beyer, Peacock & Co., Ltd., Manchester, Eng.

Ten-Wheel. A New Pennsylvania R. R. Locomotive. Ry. Gaz., vol. 40, no. 25, June 20, 1924, pp. 891-892, 2 figs. Particulars of first of a new class of locomotives designed for passenger train service and built at company's shops at Altoona, Pa.; 4-6-0 type, with outside cylinders driving middle pair of coupled wheels, steam being distributed to cylinders by piston valves actuated by Walschaerts valve gear; light reciprocating parts; high tractive effort.

Maine Central Purchases Ten-Wheel Locomotives. Ry. Age, vol. 76, no. 10, Mar. 8, 1924, pp. 555-556, 1 fig. Modern design of medium capacity with 63-in. drivers suitable for local passenger or freight traffic.

New 4-6-0 Mixed-Traffic Locomotive, Great Southern & Western Railway, Ireland. Ry. Gaz., vol. 41, no. 5, Aug. 1, 1924, pp. 148-150, 4 figs. Tests made with first of these engines show that, although primarily built for handling goods traffic, class will also be useful for working fast passenger trains, thus ranking them as mixed-traffic locomotives.

New 4-6-0 Type Metre Gauge Locomotives, Bombay, Baroda & Central India Railway. Ry. Gaz., vol. 40, no. 24, June 13, 1924, pp. 848-850, 6 figs. Features of interest of engines which are largest in use on Indian meter-gage lines.

New Locomotives for Indian Railways. Ry. Gaz., vol. 41, no. 6, Aug. 8, 1924, pp. 181-183, 4 figs. 4-6-0 type engines with superheaters, built by Wm. Beardmore & Co., Ltd., for Bombay, Baroda & Central India and Madras & Southern Mahratta Rys. for working on 5-ft. 6-in. gauge; tractive force, at 75 per cent boiler pressure, 19,488 lb.

Pennsylvania Ten-Wheel Passenger Locomotive. Ry. Mech. Engr., vol. 98, no. 1, Jan. 1924, pp. 16-18, 3 figs. Class G5S, new design for local passenger service with 68-in. drivers, develops 41,328-lb. tractive force.

See also British Empire Exhibition.

Tenders. Exhaust-Steam-Driven Tenders with Piston Locomotives (Abdampftriebtender bei Kolbenlokomotiven), R. P. Wagner. Organ für die Fortschritte des Eisenbahnwesens, vol. 79, no. 7, July 15, 1924, pp. 141-144. Discusses tender fitted with engine using exhaust steam of piston engine, and gives details of equipment and operation.

Terminals. See TERMINALS, LOCOMOTIVE.

Testing. Testing Locomotives on the Great Western Railway. Ry. Gaz., vol. 41, no. 7, Aug. 15, 1924, pp. 216-221, 8 figs. Abstract of paper read before First World Power Conference.

Unusual Method of Testing Steam Locomotives. Ry. Age, vol. 77, no. 17, Oct. 25, 1924, pp. 733-734, 2 figs. See also Ry. Rev., vol. 75, no. 17, Oct. 25, 1924, pp. 611-615, 10 figs. Describes use of regenerative braking feature of electric locomotive for determining drawbar pull of 3-cylinder Mikado locomotive.

Tests. Locomotive Tests on the Great Western Railway. Ry. Gaz., vol. 40, no. 18, May 2, 1924, pp. 637-642, 9 figs. Trials recently carried out between Swindon and Plymouth and vice versa with new 4-cylinder 4-6-0 type express locomotive, no. 4074, "Caldicot Castle," to obtain detailed information as to performance of locomotives of "Castle" class.

Thermal Efficiency. Engineering and Business Considerations of the Steam Locomotive, W. H. Winterrowd. Ry. Age, vol. 76, no. 30, June 13, 1924, pp. 1468-1471 and (discussion) 1471-1473, 3 figs.; also Ry. Rev., vol. 74, no. 24, June 14, 1924, pp. 1103-1108, 4 figs. Author disputes impression that steam locomotive is inefficient and losing its vitality; comparison of thermal efficiency curves of locomotive and stationary boiler proves conclusively that locomotive boiler is more efficient generator of steam; and by further development of superheated steam, larger grate area and higher boiler pressure, still greater maximum thermal efficiency can be obtained.

Thermo. Investigation of Thermo-locomotives (Zur Untersuchung von Thermolokomotiven), G. Lomonossoff. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 33, Aug. 16, 1924, pp. 849-852, 11 figs. Discusses methods free from objection by which thermo and steam locomotives may be compared as to efficiency.

Three-Cylinder. Development of the Three-Cylinder Locomotive (Entwickelung der Dreizylinder-Lokomotiven), Severin. Hanomag-Nachrichten, vol. 11, no. 127, May 1924, pp. 73-92, 36 figs. Historical development since 1846 in various countries; describes numerous designs; technical data of all known three-cylinder steam locomotives.

L. V. Tests of Three-Cylinder Locomotive. Ry. Mech. Engr., vol. 98, no. 4, Apr. 1924, pp. 203-206, 9 figs. See also Ry. & Locomotive Eng., vol. 37, no. 4, Apr. 1924, pp. 103-105, 13 figs. Fast movement of heavy trains produced with low fuel consumption and high boiler efficiency; results of tests run on Lehigh Valley mountain-type locomotive no. 5000, for freight service.

Lehigh Valley Three-Cylinder Locomotive. Ry. Age (Daily Edition), Vol. 76, no. 32, June 14, 1924, pp. 1585-1587, 6 figs. Details of 4-8-2 type, weighing 369,000 lb.; boiler is of inverted wagon-top type. See also article, entitled Performance of 3-Cylinder Locomotive No. 5000, in Ry. Rev., vol. 74, no. 24, June 14, 1924, pp. 1079-1093, 13 figs. Gives details of construction and record of results.

New Series 2-6-0 Type Locomotive, London & North Eastern Railway. Ry. Gaz., vol. 41, no. 18, Oct. 31, 1924, pp. 582-583, 2 figs. Details of 3-cylinder, express-goods engines, fitted with new standard tender.

The Steam Locomotive, J. G. Blunt. St. Louis Ry. Club—Proc., vol. 29, no. 7, Nov. 14, 1924, pp. 118-125 and (discussion) 125-132. See (abstract) in Ry. & Locomotive Eng., vol. 37, no. 12, Dec. 1924, 359-361. Presentation of advantages of three-cylinder locomotive.

The Three-Cylinder Locomotive, J. G. Blunt. Ry. Age, vol. 76, no. 30, June 13, 1924, pp. 1473-1476 and (discussion) 1476-1479, 7 figs. Normal tractive force; economy of 3-cylinder locomotive; crank-axle driving box; middle main rod, valve gear and crosshead.

Three-Cylinder Locomotive for the South Manchurian Ry. Ry. & Locomotive Eng., vol. 37, no. 11, Nov. 1924, pp. 325-332, 11 figs. Details embodied in Mikado 2-8-2 design of Am. Locomotive Co.

Three Cylinder Superheated Steam Express Locomotive of the German State Railways. Ry. & Locomotive Eng., vol. 37, no. 3, Mar. 1924, pp. 75-78, 3 figs. German argument against use of two-cylinder compound locomotive; describes type of three-cylinder locomotive first built at Borsig shops in Tegel in 1922 and now being used somewhat extensively on German railways.

Three-Cylinder Locomotives, Jas. Partington. South. & Southwest. Ry. Club—Proc., vol. 17, no. 12, Nov. 1924, pp. 16, 19-20, 23-24, 25-26, 31-32, 35-36, and 39, 1 fig. Principal changes in design between 2- and 3-cylinder locomotive are in cylinder arrangement, crank axle, and valve gear; advantages as compared with 2-cylinder engines.

See also British Empire Exhibition; Mikado.

Tire-Flange Welding. Welding Locomotive Tires. Ry. & Locomotive Eng., vol. 37, no. 1, Jan. 1924, pp. 21-23, 7 figs. Details of investigation made to determine effect on strength of material produced by local heating when building up worn tire flanges by either gas or electric process of welding.

Tire Practice. Locomotive Tire Practice on the Santa Fé, F. H. Colvin. Am. Mach., vol. 60, no. 19, May 8, 1924, pp. 697-698, 6 figs. Wheel gages and calipers, and how the are used; mating of tires by carbon content as well as size; standard shims; shrinkage allowance.

Tires and Forgings, Manufacture. Processes and Principles Involved in the Manufacture of Locomotive Tires, Locomotive Forgings and Rolled Steel Wheels for Railway Service, L. H. Fry. South. & Southwest. Ry. Club, vol. 17, no. 11, Sept. 1924, pp. 11-12, 15-16, 17-18, 23-24, and 27-28 and (discussion) 31-32, 35-36, and 39, 12 figs. Principles underlying processes of manufacture..

Tires, Shrink Fits. Material Stresses in Shrunkon Wheel Tires (Beräkning av materialpakänningar vid pakrympning av hjulringar), J. S. Fries. Teknisk Tidskrift, vol. 54, no. 5, May 17, 1924, pp. 54-55 (Mekanik) 4 figs. Theoretical investigations moderate that allowance for shrink fit should not exceed 0.001 in. diameter in case of soft steel and 0.00075 in. in case of hard steel tires.

Tracking Qualities, Testing. Otheograph Records Locomotive Characteristics, P. M. Gillilan. Ry. Age, vol. 77, no. 7, Aug. 16, 1924, pp. 283-286, 9 figs. Use of device properly calibrated gives accurate determination of tracking qualities of equipment.

Twelve-Wheel. 4-8-0 Type Locomotive for the Buenos Ayres Great Southern Railway. Ry. Engr., vol. 45, no. 535, Aug. 1924, p. 291, 1 fig. See also Ry. Gaz., vol. 41, no. 4, July 25, 1924, p. 119. Engine built by W. G. Armstrong, Whitworth & Co., Ltd., for Buenos Ayres Gt. Southern Ry. is oil-burning type having three single-expansion cylinders and 4-8-0 wheel arrangement.

2-8-2. See Baldwin.

Turbine. See Steam-Turbine.

Turbo. See Steam-Turbine.

Turbo-Electric. See Steam-Turbine.

Type and Size Designation System. New System of Designation of Type and Size of Locomotives of German State Railways and Their New Serial Numbers (Die neue Gattungsbezeichnung und Nummerung des Lokomotivparks der Deutschen Reichsbahn), W. Müller. Organ für die Fortschritte des Eisenbahnwesens, vol. 79, no. 8, July 30, 1924, pp. 157-166. Explains in detail principles on which new system of locomotive symbols is based. Gives tables of new symbols.

Types. Modern Locomotive Types (Zusammenstellung neuerer Lokomotivbauarten), C. Müller. Praktischer Maschinen-Konstrukteur, vol. 57, no. 7, Feb. 25, 1924, pp. 69-76, 18 figs. Adhesion, rack, and combined adhesion and rack locomotives; passenger and freight locomotives with and without tenders.

Passenger Steam Locomotives With Four-Coupled Axles (Personenzug-Dampflokomotiven mit vier gekuppelten Achsen), E. Lassueur. Schweizerische bauzeitung, vol. 84, no. 12, Sept. 20, 1924, pp. 143-147, 7 figs. Compares design of types of locomotives of Mikado and Mastodon class used in various countries including United States, Germany, France, Austria, and Spain.

Some Recent Notable Locomotives, J. Partington. Can. Ry. Club—Proc., vol. 23, no. 1, Jan. 1924, pp. 21-32 and (discussion) 32-39, 2 figs. See also Ry. & Locomotive Eng., vol. 37, no. 2, Feb. 1924, pp. 39-41, 1 fig. Characteristics and performances of several recent designs of locomotive.

Types Built in 1923. Locomotives. Ry. Rev., vol. 74, no. 1, Jan. 5, 1924, pp. 52-63, 30 figs. Mikado, Pacific, mountain, 2-10-2, 2-10-0, Mallet, Consolidation, and switching types locomotives ordered by Class I railroads in 1923, and principal dimensions and illustrations of these representative types.

Uniflow. A Uniflow Locomotive is Built for

Russia, J. Stumpf. Ry. Mech. Engr., vol. 98, no. 9, Sept. 1924, pp. 517-521, 8 figs. See also Ry. Age, vol. 77, no. 8, Aug. 23, 1924, pp. 327-331, 8 figs. Describes 0-10-0 type locomotive built by Nydquist & Holm, Trollhättan, Sweden, for Russian government; equipped with a Walschaerts valve gear. A remarkably high vacuum has been obtained by redesigning cylinder exhaust pipes.

Valve-Gear Setting. Helpful Suggestions for Setting Valve Gear, H. W. Stowell. Ry. Mech. Engr., vol. 98, no. 10, Oct. 1924, pp. 596-597, 1 fig. Simple formulas used to obtain correct alterations for eccentric rods and valve rods.

Valve Gears. Development of the Lentz Poppet Valve Gear, A. Niklitchek. Ry. Mech. Engr., vol. 98, no. 7, July 1924, pp. 407-409, 4 figs. Discusses valve-gear maintenance costs, lubricant and water consumption reduced on Austrian locomotives.

Elimination of Errors in Stephenson Valve Motion, R. C. Beaver. Ry. Mech. Engr., vol. 98, no. 4, Apr. 1924, pp. 214-216, 6 figs. Method for determining offset of link saddle pin and principal factors in design.

The Walschaert Locomotive Valve-Gear, R. C. Bond. Instn. Mech. Engrs.—Proc., vol. 2, no. 6, 1923, pp. 1137-1141, 2 figs. Detailed consideration of Walschaert valve gear. (Abridged.)

Velocity Profiles. The Preparation and Use of Velocity Profiles, V. I. Smart. Ry. Rev., vol. 74, no. 5, Feb. 2, 1924, pp. 209-215, 7 figs. Tractive effort, coal consumption, and running time may be obtained graphically from velocity profiles, prepared in accordance with principles laid down by Am. Ry. Eng. Assn.

Venezuela R. R. Locomotives of the Great Venezuelan Railroad [Die Lokomotiven der Grossen Venezuela-Eisenbahn (Südamerika)], E. Neuhaus. Organ für die Fortschritte des Eisenbahnwesens, vol. 79, no. 6, June 15, 1924, pp. 129-132, 7 figs. Design, construction, and equipment of various types of locomotives for Caracas-Valenzia line.

Welding Practice. Standardizing Welding Practice in Locomotive Shops, J. S. Heaton. Boiler Maker, vol. 23, no. 16, Oct. 1924, pp. 295-297. Suggestions for good welding practice, which have proved their merit in shops of Wabash System, Decatur, Ill. Discusses methods of maintaining records of welding, arrangement of a welding shop, system of carrying out firebox repairs with the process, flue welding and care of equipment.

Wheel-Center Counterweights. Calculating Counterweights of Wheel Centers for B+B Mallet Tender Locomotives of 250 Horsepower (Berechnung der Gegengewichte an den Radsternen für eine B+B-Mallet-Tender-Lokomotive von 250 PS.), E. Herms. Verkehrstechnik, vol. 41, no. 48, Nov. 28, 1924, pp. 625-628, 2 figs. Discusses disturbing action in running of locomotive and gives a complete example of calculation.

Wind. The "Wind-Locomotive," I. P. Church. Sibley Jl. Eng., vol. 38, no. 9, Dec. 1924, pp. 214-216 and 236, 4 figs. Describes two working models, designed and constructed by author 20 years ago, of wind locomotives which, when completely immersed in current of air, could proceed directly against it, deriving their power from this very current.

LOGGING

Tractors, Use in. See TRACTORS, Caterpillar.

LONARITE

Composition and Uses. Lonarite (Lonarit), Willers. Kunststoffe, vol. 14, no. 3, Mar. 1924, pp. 36-37, 4 figs. A product of acetyle (cellulose), a fireproof composition, which can be pressed in almost any shape; produced in different degrees of hardness; can be used as electrical insulators and for a multitude of objects.

LUBRICANTS

Automobile-Engine. See AUTOMOBILE ENGINES, Lubricants.

Dewaxing. Refrigeration as Applied to Dewaxing of Lubricants, L. D. Jones. Ice & Refrigeration, vol. 67, no. 2, Aug. 1924, pp. 92-93. Discusses refrigeration of oil to throw wax out of solution; utilization of centrifugal force in separation of precipitated wax from oil.

Greases. See GREASES.

Handling and Storage. Good Practice in Handling and Storing Lubricants. Lubrication, vol. 10, no. 1, Jan. 1924, pp. 1-12, 13 figs. Discusses factors involved in storage of lubricants, including construction of oil house or oil room, storage tanks and their accessory equipment, equipment for handling products and shipping containers, extent to which semi-solid lubricants are to be used, etc.

Oils. See LUBRICATING OILS.

Railroad Engine Greases. The Manufacture of Railroad Engine Greases, H. L. Kauffman. Ry. Mech. Engr., vol. 98, no. 1, Jan. 1924, pp. 13-14. Discusses materials and processes entering into production of these lubricants.

Specifications and Testing Methods. United States Government Specification for Lubricants and Liquid Fuels and Methods for Testing. U. S. Bur. Mines—Technical Paper no. 323A, 1924, 89 pp., 21 figs. Specification officially adopted by Federal Specifications Board Feb. 3, 1922, for use of departments and independent establishments of government in purchase of materials covered by it.

Standardization. Motor Lubricants Standardised, W. Blackwell. Motor Transport (Lond.), vol. 39, no. 1016, Aug. 18, 1924, pp. 203-205. Proposal for standard specifications for different-purpose oils; discusses merits of scheme.

Storage and Distribution. Money-Saving Methods Used in the Purchase, Storage and Distribution of Lubricants, H. Freeman. Indus. Engr., vol. 82, no. 10, Oct. 1924, pp. 475-477, 4 figs. How $6229 was saved during one year by a bulk storage and delivery system for Manufacturing departments of Allis-Chalmers Mfg. Co.

LUBRICATING OILS

Auto-Ignition. The Auto-Ignition of Oils and Fuels (Ueber Selbstentzündung von Oelen und Brennstoffen), H. Jentzsch. Zeit. des Vereines deutscher Ingenieure, vol. 44, no. 68, Nov. 1, 1924, pp. 1150-1152, 6 figs. Lubricating oil as cause of gas explosions; determination of auto-ignition capacity in oxygen; auto-ignition without oxygen addition; tests with oil mixtures; influence of oxidation; calculation of auto-ignition of required air volumes; requirements of oils and fuels.

Automobile-Engine. Lubricating Oils for Automobile Engines (Die Schmieröle für Automobilmotoren), H. Franz. Motorwagen, vol. 27, no. 7, Mar. 10, 1924, pp. 105-108, 5 figs. Study of process of lubrication in automobile engines and properties of lubricating oils in connection therewith.

Changes Due to Wear. Observations on the Causes of Change in Lubricating, and Insulating Oils During Use (Beobachtungen über die Ursachen der Veränderung der Schmier- und Isolieröle im Gebrauch). Maschinenbau, vol. 3, no. 26, Oct. 23, 1924, pp. F29-F30. A. W. F. report. Discusses absorption of air by oil as main difficulty, use of lubricating oil in steam turbines, Diesel engines, compressors and bearings, and mineral oil in transformers.

Classification. Practical Hints on Oils and Machinery Lubrication, W. E. Biggs and W. R. Woolrich. Nat. Engr., vol. 28, no. 9, Sept. 1924, pp. 129-131. Discusses qualities of good oil; some engineroom tests for oils; classification of oils; what oils to use for different services; grease and solid lubricants.

Contact Filtration. Contact Filtration Likely To Become Important Feature In Refining, W. S. Zehrung. Nat. Petroleum News, vol. 16, no. 23, June 4, 1924, pp. 27-28 and 30, 2 figs. Outlines features of process, and discusses methods of application.

Cylinder. Oils for Valve and Cylinder Lubrication, A. J. Dixon. So. Engr., vol. 41, no. 5, July 1924, pp. 60-61. Why some cylinders take polish and others do not. Selection of cylinder oils.

Deterioration. Causes of Change in Lubricating and Insulating Oils in Use (Beobachtungen über die Ursachen der Veränderung der Schmier- und Isolieröle im Gebrauch), F. Frank. Petroleum, vol. 20, no. 29, Oct. 10, 1924, pp. 1488-1493. See also Braunkohle, vol. 23, no. 29, Oct. 18, 1924, pp. 537-542. Discusses effects of oxygen on oil and formation of acids, formation of metal compounds by acids and bearing metals; treating transformer oils with ethyl alcohol.

Efficiency Measurement. Measuring the Lubricating Efficiency of Lubricating Oils (Ueber die Messung der "Schmierfähigkeit" von Schmierölen), R. von Dallwitz-Wegner. Zeit. für technische Physik, vol. 5, no. 9, 1924, pp. 378-384, 5 figs. Describes simple apparatus for measuring capacity of oils to "wet" methals, which capacity is deduced from molecular conditions expressible in numbers.

Friction of. Determination of Friction of Lubricating Oils (Zur Bestimmung der Schmiermittelreibung), R. Vieweg. Petroleum, vol. 20, no. 19, July 1, 1924, pp. 899-903, 6 figs. Discusses method which enables determination of friction losses in any bearings with any lubricant on basis of measurement of operating temperature and efficiency.

Investigating Method. A Novel, Simple and Universal Method for the Investigation of Lubricating Oils and Bearing Alloys, R. von Dallwitz-Wegner. Testing, vol. 1, no. 1, Jan. 1924, pp. 58-71, 8 figs. New method is said to be free from all factors of uncertainty.

Manufacture. How Oil Companies Manufacture Industrial Lubricants, W. Miller. Eng. Wld., vol. 25, no. 3, Sept. 1924, pp. 169-171, 3 figs. Modern processes of manufacturing lubricating oils; Abstract of paper read before Nat. Assn. Purchasing Agents.

Separation of Wax From Wax Distillate, L. D. Wyant. Nat. Petroleum News, vol. 16, no. 40, Oct. 1, 1924, pp. 73, 75-76, 78, and 82-83, 5 figs. Removal of paraffin from paraffin or intermediate base crudes in manufacture of lubricating oils.

The History, Manufacture and Function of Lubricating Oils, W. Miller. Oil Trade, vol. 15, nos. 9 and 11, Sept. and Nov. 1924, pp. 28-29, and 58 and 60, 7 figs. Sept.: Earliest lubricating use of petroleum; manufacturing and refining. Nov.: Distilling at low temperatures; removal of wax; use of agitator; chemical treatment.

Purification. Conservation, Upkeep, and Purification of Lubricating Oils (Conservation, manutention et purification des huiles de graissage principes généraux et méthodes modernes), J. Lévy. Technique Moderne, vol. 16, no. 13, July 1, 1924, pp. 453-460, 14 figs. Discusses storage, purification of used oils, nature and origin of impurities, filters, centrifugal separation, etc.

Purification of Marine Turbine and Diesel Engine Lubricating Oils. Am. Mar. Engr., vol. 19, no. 7, July 1924, pp. 11-13, 4 figs. In marine turbines and Diesel engines it is almost universal practice to reuse lubricating oil by means of circulation system; discusses batch and continuous systems of purification.

Purifiers. A New Centrifugal Oil Purifier. Elec. Rev., vol. 94, no. 2410, Feb. 1, 1924, pp. 174-175, 5 figs. Describes Empson machine designed to carry out processes of washing dirty hydrocarbon oils with water and afterward dehydrating them continuously in revolving drum.

The Centrifugal Oil Purifier. Power Engr., vol. 19, no. 219, June 1924, pp. 207-208, 2 figs. Methods and functions of centrifugal oil filters and cleaners, with particular reference to the De Laval machine.

Reclamation. A New Oil Reclaiming Process. Eng. Production, vol. 7, no. 138, Mar. 1924, p. 88, 2 figs. See also Elec. Times, vol. 65, no. 1689, Feb. 28, 1924, p. 251, 1 fig. Describes method invented by T. D. Richards, an Australian; deals with all classes and grades of dirty lubricating oils.

Reclamation of Used Lubricating Oils (Régénération des huiles de graissage usagées). Vie Technique et Industrielle, vol. 5, no. 61, Oct. 1924, pp. 457-458. Discusses filtration, decantation, and centrifuging. Notes on a French patent basing reclamation on contact electrification.

The Reclaiming of Waste Oil. Power Engr., vol. 19, no. 217, Apr. 1924, p. 138-139, 3 figs. Practice of modern steel works; use of centrifugal separator.

Refining. New Vacuum Refining Process Makes Narrow Cut Lub Oils, P. Truesdell. Nat. Petroleum News, vol. 16, no. 37, Sept. 10, 1924, pp. 64-66, 1 fig. Describes process of manufacturing lubricating oils invented by J. E. Schulze, keynote of which is vacuum distillation. Advantages claimed.

Rolling Stock. Lubricating Materials Used by the Russian Railroads. A. V. Sapožnikow. Petroleum & Oil-Shale Industry, vol. 5, no. 7-8, July-Aug. 1923, pp. 75-80. (In Russian.) See also article by A. K. Saytzeff, entitled Railway Car Oils and Lubricating Mixtures, Their Properties, Mechanical Tests, Valuation and Selection, pp. 81-92, 4 figs., with abstract in English, pp. 92-94.

Specific Heats. Specific Heats of Lubricating Oils, E. H. Leslie and J. C. Geniesse. Indus. & Eng. Chem., vol. 16, no. 6, June 1924, pp. 582-583, 1 fig. Measurement of specific heats of six typical lubricating oils over range of temperature from 37.78 to 143.33 deg. cent.

Steam-Turbine. Characteristics of Efficient Turbine Oil, A. F. Brewer. Elec. Light & Power, vol. 2, no. 8, Aug. 1924, pp. 16-18 and 38, 2 figs. Discusses properties of oil, including viscosity, cooling ability, tendency to evaporate, fluid friction developed, demulsibility, water content, tendency to decompose, foaming and content, carbon content, sulphur and acids.

Maintaining Quality of Steam Turbine Oils in Service, C. H. Bromley. Power, vol. 59, no. 4, Jan. 22, 1924, pp. 125-128, 6 figs. Principal factors in recent development of information and equipment as related to maintaining quality of lubricating oils in use in steam turbines.

Serial Report of the Prime Movers' Committee, 1923-24, Technical National Section of National Electric Light Association. Eng. Wld., vol. 25, no. 6, Dec. 1924, pp. 393-401, 22 figs. Details of tests made on extra-light steam-turbine oils, and description of sludge accelerator; laboratory device used.

Storage and Handling. Oil Storage and Handling Practice. Elec. Ry. Jl., vol. 64, no. 3, July 19, 1924, pp. 77-79, 6 figs. Information obtained

from 57 electric railways shows that careful storage of lubricants eliminates waste, prevents contamination, minimizes fire hazard, and facilitates keeping of records; increased use of buses by railways makes necessary storage of gasoline in quantity.

Testing. Lubricating Oil Tests; How to Make Them; What They Mean, H. L. Kauffman. Nat. Petroleum News, vol. 16, nos. 37, 39, and 41, Sept. 10, 24, and Oct. 8, 1924, pp. 34 and 36; 73-74 and 79; and 63-64 and 67; 6 figs. Sept. 10: Gravity determinations; history of development of Baumé and A. P. I. scales, and a simple formula for converting specific gravity into its equivalent on the two scales; flashpoint and fire test. Sept. 24: Viscosity test; cloud, pour, and cold tests; color test; emulsification, and miscellaneous tests. Oct. 8: Carbon residue test.

Lubrication. Nat. Elec. Light Assn.—Serial Report of Prime Movers Committee, Sept. 1924, 13 pp., 22 figs. Details of field and laboratory tests covering performance of lubricating oils in steam turbines, and results obtained.

Testing Lubricating Oils (Ueber die Prüfung von Schmierölen), G. Spettmann. Praktische Maschinen-Konstrukteur, vol. 57, no. 28, July 29, 1924, pp. 399-400. Discusses importance of testing; and describes methods; chemico-physical tests for classification of oils, mechanical for determining lubricating value; temperature measurement of bearings.

Tests for Lubricating Oils. Power Plant Eng., vol. 28, no. 16, Aug. 15, 1924, pp. 853-854. Details of number of tests and their comparative value.

Viscosity. Variation of Viscosity of Lubricating Oils with Temperature (Zur Temperaturabhängigkeit der Viscosität), F. König. Zeit. für angewandte Chemie, vol. 37, no. 1, Jan. 3, 1924, pp. 8-10, 1 fig. Discusses equation given by Vogel in previous issue of same journal as expressing variation of viscosity with temperature and reaches conclusion that constants employed in it cannot be determined with sufficient accuracy to render them of any value as criteria in judging commercial oils; explains how these difficulties can be overcome.

Viscosity and Surface Tension of Oils (Viskosität und Oberflächenspannung von Oelen), J. Don. Kolloid-Zeit., vol. 34, no. 5, May 1924, pp. 312-313, 1 fig. Experiments with mobile oil, rape, olive and other oils; lubricating properties.

Wear of. Cause of Chance in Lubricating and Insulating Oil in Use (Beobachtungen über die Ursachen der Veränderung der Schmier- und Isolieröle im Gebrauch), F. Frank. Praktische Maschinen-Konstrukteur, vol. 57, no. 43, Nov. 11, 1924, pp. 579-580. Discusses effect of oxygen on oil, formation of acids and secondary products of decomposition, formation of metal compounds from acids and bearing metals, etc.

LUBRICATION

Air-Compressor Cylinders. See AIR COMPRESSORS, Cylinder Lubrication; High-Speed.

Air Compressors. See AIR COMPRESSORS, Lubrication.

Automobile Chassis. See AUTOMOBILES, Chassis Lubrication.

Automobile Engines. See AUTOMOBILE ENGINES, Lubrication.

Automobiles. See AUTOMOBILES, Lubrication.

Bearings. See BEARINGS, Lubrication.

Boundary. Boundary Lubrication, Rob. W. A. Brewer. Iron Age, vol. 113, no. 6, Feb. 7, 1924, pp. 447-448, 7 figs. Being separation of metallic surfaces by an oily film of microscopic thickness; conception of safety-valve action.

Car Axles. See CAR AXLES, Lubrication.

Centrifugal Pumps. See PUMPS, CENTRIFUGAL, Lubrication.

Chain Drives. See CHAIN DRIVE, Lubrication.

Clay-Products Machinery. Lubrication of Clay Products Machinery. Lubrication, vol. 10, no. 9, Sept. 1924, pp. 97-108, 23 figs. Discusses lubrication of brick and hollow-tile machinery and of pottery machinery.

Control. Controlling Industrial Lubrication, K. Richards. Indus. Engr., vol. 82, no. 8, Aug. 1924, pp. 368-372, 8 figs. Outlines methods that are used to control from main office lubrication and inspection of variety of miscellaneous equipment in nine widely separated bakeries, each of which would be equivalent to moderate-sized factory.

Cutting Tools. Tool Engineering, A. A. Dowd and F. W. Curtis. Am. Mach., vol. 60, no. 4, Jan. 24, 1924, pp. 135-137, 3 figs. Use and importance of cutting lubricants; proper application of cooling liquid to tool and work; lubricating milling cuts; value of lubricants in thread cutting.

Cylinder. See STEAM ENGINES, Cylinder Lubrication.

Diesel Engines. See DIESEL ENGINES, Lubricating; Pipe-Line, Lubrication of.

Economics. Economics of Lubrication—Suggestions for a Research Program, W. F. Parish. Nat. Petroleum News, vol. 16, no. 19, May 7, 1924, pp. 59-60 and 63. Deals with lubrication of steam railroads, electric roads, and farming, marine, automotive, and industrial machinery.

Increasing Economy by Using Suitable Lubricants (Die Erhöhung der Wirtschaftlichkeit durch Verwendung zweckentsprechender Schmiermittel), G. Spettmann. Wärme, vol. 47, no. 42, Oct. 17, 1924, pp. 491-493. Discusses proper choice and sufficiency of lubrication, oil-testing methods and machines, measurement of temperatures and power.

Essentials. The Essentials of Lubricating Engineering, A. F. Brewer. Indus. Mgmt. (N. Y.), vol. 68, no. 3, Sept. 1924, pp. 145-151, 9 figs. How to minimize depreciation of expensive machinery.

Gas-Works Machinery. See GAS WORKS, Lubrication.

Gears. See GEARS, Lubrication.

Internal-Combustion Engines. See INTERNAL-COMBUSTION ENGINES, Lubrication.

Journal. A Graphical Study of Journal Lubrication, H. A. S. Howarth. Mech. Eng., vol. 46, no. 2, Feb. 1924, pp. 77-79 and (discussion) 79-80, 10 figs. Visualizes characteristics of oil film and pressures within it for journal completely surrounded by its bearing; influences of clearance and viscosity upon journal friction are quantitatively shown by means of chart that can readily be used for designing bearings. (Abridged.)

Journal Lubricating System. Ry. Age, vol. 76, no. 37, June 21, 1924, p. 1783, 2 figs. Describes system of journal lubrication developed by Froedtert Equipment Corpn., Milwaukee, Wis.

Roller Chain Lubrication (Die Rollenkettenschmierung), D. F. Dütting. Organ für die Fortschritte des Eisenbahnwesens, vol. 79, no. 12, Sept. 30, 1924, pp. 272-275, 3 figs. A new system of journal lubrication, whereby an ample supply of oil is applied to journal, thereby reducing friction and rise in temperature. Also means for preventing leakage of oil from journal boxes.

Locomotive. See LOCOMOTIVES, Axle Boxes, Lubrication of; Lubrication.

Locomotive Flanges. A Pneumatic Flange Oiler. Ry. Age, vol. 76, no. 17, Mar. 29, 1924, pp. 841-

842, 2 figs. Describes Hoofer flange oiler for lubricating locomotive and wheel flanges.

Lubricators. Lubricators and Lubricating Bearing-Surfaces. Abridgements of Specifications (Lond.), Class 12 (iii), 1924, Period 1916-20, 113 pp. Patents for inventions.

Methods of Applying Lubricating Oils (Méthodes d'application des lubrifiants liquides), J. Lévy. Technique Moderne, vol. 16, no. 3, Feb. 1, 1924, pp. 69-75, 14 figs. General principles and modern apparatus; describes different types of lubricators, including manual, semi-automatic, automatic, and mechanical; accessory and special devices.

Machinery. The Development of Automatic Lubrication. Lubrication, vol. 10, no. 4, Apr. 1924, pp. 37-48, 27 figs. A study of the various devices that have been involved.

Methods. Lubrication, E. H. Strange. Chem., Met. & Min. Soc. S. Africa—Jl., vol. 25, no. 3, Sept. 1924, pp. 48-52. Discusses friction; different methods of lubricating a bearing; notes on lubrication of steam cylinders, air compressors, dynamos and motors, mine cars, rock drills, and internal-combustion and explosion engines.

Methods for Applying Lubricants. Power Plant Eng., vol. 28, no. 10, May 15, 1924, pp. 560-562, 8 figs. Drop-feed method of lubrication; gravity circulation of oil; methods of purifying oil; methods of using purifiers.

Mine Cars. See MINE CARS, Lubrication.

Multiple-Feed High-Pressure. Experiences with Multiple Feed, High Pressure Lubrication, L. R. Humpton. Iron & Steel Engr., vol. 1, no. 3, Mar. 1924, pp. 127-129, 3 figs. Describes installation of lubricators in steel works and successful results.

Oil Engines. See OIL ENGINES, Heavy-Oil.

Paper Industry. See PAPER INDUSTRY, Lubrication in.

Prime Movers. Prime Movers and Their Lubrication. Power Plant Eng., vol. 28, no. 14, July 15, 1924, pp. 739-742, 4 figs. What oil must lubricate, method of applying lubricant, operating conditions that must be met, and determination of correct lubrication; continuous lubrication; steam turbine lubrication.

Recent Trends in the Practice of Lubricating Prime Movers, C. H. Bromley. Refrig. Eng., vol. 11, no. 5, Nov. 1924, pp. 159-164 and (discussion) 164 and 179, 8 figs. Discusses behavior of mineral lubricating oils in service, steam-turbine oils and turbine lubrication, soluble sludge, effect of heat and air on oil, reciprocating steam engines, hydraulic turbines, Diesel engines, clarification of Diesel-engine oil, and gear lubrication.

Railway Motors. The Importance of Efficient Lubrication of Railway Motors, C. Bethel. Elec. Jl., vol. 21, no. 10, Oct. 1924, pp. 467-472, 9 figs. Results of tests made to determine main factors affecting operation of waste-packed bearings; tests were conducted both in laboratory and in service.

See also BEARINGS, Railway-Motor, Lubrication of.

Railway Rolling Stock. Lubrication of Rolling Stock of the French Lines (Graissage du matériel roulant des réseaux français), A. Grison. Revue Générale des Chemins de Fer, vol. 43, no. 4, Oct. 1924, pp. 255-271, 11 figs. Discusses journal boxes and brasses, oil pads, oils, oil reclamation, etc. Table giving details of lubricating methods.

Refrigeration Compressors. See REFRIGERATING MACHINES, Compressors.

Steam Engines. See STEAM ENGINES, Cylinder Lubrication; Lubrication.

Steam-Turbine. See STEAM TURBINES, Lubrication.

Steel-Works Equipment. See STEEL WORKS, Lubrication in.

Stokers. See STOKERS, Lubrication of.

Street Cars. See STREET RAILWAYS, Car Lubrication.

Theory of. Some Notes on the Theory of Lubrication with Particular Application to the Michell Thrust and Journal Bearings, J. Ward. Inst. Mar. Engrs.—Trans., vol. 36, July 1924, pp. 141-185, 24 figs. Discusses dry, rolling, greasy and viscous friction; perfect lubrication; Michell viscometer; lubrication of parallel surfaces, inclined surfaces; flow of oil; pressure distribution; bearings, etc.

LUBRICATORS. See LUBRICATION, Lubricators.

LUMBER

Handling. Lumber Handling in an Automobile Body Plant, B. Nagelvoort and T. D. Perry. Automotive Manufacturer, vol. 66, no. 4, July 1924, pp. 7-9 and 26, 6 figs. Efficient and economical handling, storing, drying and cutting of lumber; equipment for handling it; methods followed; lumber lifts and stackers.

See also AUTOMOBILE MANUFACTURING PLANTS, Materials Handling in.

Standardization. Engineering and Industrial Standardization. Mech. Eng., vol. 46, no. 3, Mar. 1924, pp. 167-169. Simplified practice recommendations on lumber.

LUMBER INDUSTRY

Industrial Relations in. See INDUSTRIAL RELATIONS, Lumber Industry.

Electricity in. See ELECTRICITY, APPLICATIONS OF, Lumber Mills.

Swedish Industry. See IRON INDUSTRY, Sweden.

LYNITE. See ALUMINUM ALLOYS, Aluminum-Copper-Magnesium.

M

MACHINE DESIGN

Casting Shrinkage, Effect on. Foundry Engineering and Its Importance for the Machine Shop (Gjuteritekniken, en huvudfaktor för maskin- och verkstadsindustrien), S. Nilsson. Teknisk Tidskrift, vol. 54, no. 25, June 21, 1924, pp. 61-66 (mekanik), 14 figs. Influence of shrinkage of castings on machine design is illustrated by number of typical examples.

Feeding Devices. Feeding Devices for Automatic Machinery, A. A. Dowd. Machy. (N. Y.), vol. 31, no. 4, Dec. 1924, pp. 295-298, 6 figs. Examples of different designs of feeding devices.

Kinematic Study of Mechanisms. The Systematic Use of Bright Colors in the Study of Drives and Mechanisms (Die systematische Anwendung bunter Farben in der Getriebelehre), Hundhausen. Maschinenbau, vol. 3, no. 11, Mar. 13, 1924, pp. 355-356, 13 figs. on supp. plate. Discusses method employed successfully for many years by author, of using bright colors in order to distinguish different parts of a mechanism from one another

or the separate groups from an assembled set; includes kinematic instruction sheet, showing use of colors.

Materials, Relation to. Relation of Materials to Machine Design, Jos. K. Wood. Am. Mach., vol. 61, no. 26, Dec. 25, 1924, pp. 985-988. Points out that material specification is tie between producer and consumer; technical and commercial factors affecting selection of materials; kinds of materials to be used for machine parts.

Progress in. The Trend of Machine Design. Mech. Wld., vol. 76, nos. 1962, 1965, 1967, 1972, 1974, 1977, 1979, 1981, and 1982, Aug. 8, 28, Sept. 12, Oct. 17, 31, Nov. 21, Dec. 5, 19, and 26, 1924, pp. 82-83, 130-131, 162, 242-243, 274, 322-323, 354-355, 387, and 403-404, 47 figs. Discusses geometrical forms tooled; restriction of function; abolition of countershaft; single-pulley drive; back gears; motor driving; range of speeds and feeds; retention of accuracy; protection; ball bearings; counterbalancing; lubrication; cutting tools; tool steel; cooling liquids; examples of specialization; gear cutting; broaching machines; automatic lathes; drilling machines; turret lathes; shaping machines; etc.

Self-Centering Devices. Self-centering Devices, A. Perham. Machy. (Lond.), vol. 23, no. 593, Feb. 7, 1924, pp. 625-627, 1 fig. Term self-centering is used to describe devices in which displacement, and recovery, can be effected in each direction of movement; describes some of more usual and elementary forms of self-centering mechanism, and useful forms that are less generally known.

MACHINE GUNS

Relining Barrels. See ELECTROPLATING, Machine-Gun Barrels, Relining.

MACHINE SHOPS

[See also AUTOMOBILE MANUFACTURING PLANTS; RAILWAY REPAIR SHOPS; RAILWAY SHOPS.]

Apprenticeship Problem. Filling the Ranks of Machinists, J. C. Spence. Am. Mach., vol. 60, no. 13, Mar. 27, 1924, pp. 473-474. Discussion of seriousness of apprenticeship problem in the shop.

Construction. Steel Machine-Shop Construction (Eiserne Werkstattbauten), H. Gruetz. Bauingenieur, vol. 5, no. 14, July 31, 1924, pp. 430-435, 12 figs. Discusses modern machine-shop construction, consideration of largely increased dimensions, roof construction, light conditions, and quotes various examples of internal arrangement.

Conversion from Armament Works. Activities of Former Armament Works, F. A. Brackmann. Iron Age, vol. 113, no. 16, Apr. 17, 1924, pp. 1151-1153, 7 figs. Conversion of German government works at Haselhorst and Spandau into iron and engineering works.

Cost Estimating. How to Estimate Machine Shop Costs, A. A. Dowd. Serial article in Am. Mach., vols. 60, and 61, beginning Apr. 17, and ending Dec. 25, 1924, Apr. 17: Value of accurate estimates; organization and operation of estimating department. Apr. 24: Determination of machining time and total estimate for simple parts; reference sheets for machine tools. May 8: Shop conditions which affect cost estimate; coöperation between shop and estimating department. May 22: Classification for production estimates; machine-tool builder's estimate; estimates for contract and manufacturing work. May 29: Methods for making preliminary sketches of operation layouts; good and bad examples of layout sketching. June 12: Determination of machining time for estimate; calculation of machine speeds; selection of feeds. June 26: Methods used for estimating machining time. July 10: Speeds and feeds for various cutting tools and method for calculating time required for milling cuts. July 24: Procedure and calculations necessary to determine time required for hand-milling and hand-profiling operations. Aug. 7: How to estimate machining time for spline milling, gear milling, and gear-hobbing operations. Aug. 21: Estimates for gear cutting; thread work. Sept. 18: Estimating procedure for thread milling, hobbing and tapping operations. Oct. 16: Labor-time estimates for planing work; determining factors in planning work; complete estimates for job. Oct. 30: Examples of planing estimates. Nov. 13: Making time estimates for shaping operations in production work. Nov. 27: Time estimates for heavy-production milling work; horizontal-boring-machine operations. Dec. 25: Making time estimates for production grinding work; plain cylindrical grinding; surface grinding.

Cost Reduction. Reducing Shop Cost in the Engineering Department, J. A. Davis. Am. Mach., vol. 61, no. 20, Nov. 13, 1924, pp. 761-763, 8 figs. Reducing quantity and variety of tools and fixtures; modifying design without detriment to product; avoiding close tolerances where they are unnecessary.

Drafting-Room Management. A Practical Drafting-room System, I. B. Black. Machy. (N. Y.), vol. 30, nos. 8 and 9, Apr. and May 1924, pp. 605-607 and 671-673, 9 figs. Description of methods successfully applied in management of a drafting room.

Equipment. American Machinist Shop Equipment Review. Am. Mach., vol. 61, no. 3, July 17, 1924, pp. 89-131, 238 figs. Semi-annual résumé of machines, tools, and accessories described in Shop Equipment News section of Am. Mach. during first six months of 1924.

Fire-Department. Efficiency in the Fire Department Machine Shop, J. C. Moran. Fire & Water Eng., vol. 76, no. 3, July 16, 1924, pp. 107-108, 112, 135-136, 7 figs. Methods which make Hartford shop model; personnel and equipment; importance of good location for building. Abstract of paper read before New England Assn. Fire Chiefs.

Floating. See WARSHIPS, Floating Repair Ship.

Ford Motor Co., Canada. New Machine Shop for Ford Motor Co. Can. Engr., vol. 46, no. 7, Feb. 12, 1924, pp. 223-225, 3 figs. Covers 15 acres and is 1088 ft. by 570 ft. wide; a one-story sawtooth monitor type of building with a clear height under trusses of 14 ft. and with two longitudinal and one cross craneways.

French. The French Machine Shop, N. Lee. Am. Mach., vol. 61, no. 19, Nov. 6, 1924, p. 730. Differs little from American; limit gages fairly common; no claw hammers in carpenter shop.

Jobbing Work. Job Work Manufacturing Problems, E. W. Leach and J. T. Koch. Am. Mach., vol. 61, no. 11, Sept. 11, 1924, pp. 411-413. Discussion of factors to be considered in establishment of a jobbing department in a machinery plant.

Labor-Saving Devices. It Pays to Make the Job Easy for the Workman, L. C. Morrow. Am. Mach., vol. 61, no. 1, July 3, 1924, pp. 11-16, 18 figs. Increasing production by decreasing requirements for manual effort. Brief descriptions of some work-saving devices. Emphasizes principle of making smallest number of pieces serve greatest variety of uses.

Lighting. See LIGHTING, Machine Shops.

Locomotive Cylinder Shop. A Modern Locomotive Cylinder Shop, E. A. Custer. Baldwin Locomotives, vol. 3, no. 2, Oct. 1924, pp. 45-53, 10 figs. Describes method of machining locomotive cylinders; gives design and equipment of

plant of Baldwin Locomotive Works, Eddystone plant.

Lost Time, Causes and Correction of. How You Can Find Lost Time, L. M. Francis. Am. Mach., vol. 60, no. 13, Mar. 27, 1924, pp. 475-477, 5 figs. Study of causes of lost time in shop and methods for investigation and removal of these causes as used by a large automobile plant.

Materials Handling in. See MATERIALS HANDLING, Machine Shops.

Measurements. See MEASUREMENTS, Machine-Shop.

Measuring Instruments for. See MEASURING INSTRUMENTS, Machine-Shop.

Methods Used in. See MACHINING METHODS.

Organization. See INDUSTRIAL ORGANIZATION, Machine Shops.

Progress. Six Months in the Machine Shop Field. Am. Mach., vol. 61, no. 3, July 17, 1924, pp. 81-87. A review, in seven articles, of progress made during first half of 1924 in machinery field, railroad field, automotive industry, electric power and manufacturing industries, distribution of materials and supplies, and in exporting.

Repairs Handling. A Simple and Economical Method of Handling Repairs, F. H. Colvin. Am. Mach., vol. 61, no. 5, July 31, 1924, pp. 189-190, 3 figs. Plan, worked out by Gould & Eberhardt, Newark, N. J., which cuts out much of the paper work and overhead expense in repair work.

Signaling System. Signals in the Shop to Speed Production, C. J. Priebe. **Am. Mach., vol. 61, no.** 19, Nov. 6, 1924, pp. 731-734, 6 figs. How workman calls foreman, inspector or dispatcher; plan is part of production-control system, and is said to save time and keep materials moving properly.

Steel-Frame One-Story. Details of a Modern Steel Frame One-Story Shop. Eng. News-Rec., vol. 92, no. 11, Mar. 13, 1924, pp. 456-459, 7 figs. New plant of Sullivan Machy. Co., Michigan City, Ind., has specially fitted sawtooth roof and crane runways carried by main columns and jack columns; transfer table economizes yard space.

Sullivan Machy. Co. Planned for Expansion in Three Directions, G. L. Lacher. Iron Age, vol. 113, no. 2, Jan. 10, 1924, pp. 141-146, 9 figs. New plant of Sullivan Machy. Co. at Michigan City, Ind., anticipates future growth; layout and equipment show careful attention to manufacturing details.

MACHINE-TOOL INDUSTRY

Europe. Machine Tool Situation in Europe, W. R. Rastall. Iron Age, vol. 114, no. 16, Oct. 16, 1924, pp. 987-988. See also Machy. (N. Y.), vol. 31, no. 4, Dec. 1924, pp. 261-262. Position of American manufacturer of machine tools in markets of Europe; question of representation.

Export Problem, U. S. The Export Problem of the Machine-Tool Industry, W. H. Rastall. Mach. Eng., vol. 46, no. 4, Apr. 1924, pp. 184-185 and 205, 1 fig. Effect of war on export trade; changes in trend of U. S. machinery exports during recent years; competition to be expected from British sources.

Great Britain. Survey of British Machine Tool Industry, Johnstone-Taylor. Iron Age, vol. 113, no. 11, Mar. 13, 1924, pp. 799-800. Builders concentrate on either light or heavy tools; changes in last ten years; surplus of automatics; status of other tools.

MACHINE TOOLS

[See also names of tools, as LATHES; PLANERS; etc.]

Attachments for. Attachments for Standard Machines, A. A. Dowd. Machy. (N. Y.), vol. 30, no. 9, May 1924, pp. 711-712, 4 figs. Important points in design; types of flexible designs.

Automatic Machines. Designing Automatic Machines, A. A. Dowd. Machy. (N. Y.), vol. 31, no. 3, Nov. 1924, pp. 212-215, 5 figs. Procedure in design, and use of simple models for analyzing problems encountered.

Automobile Shops. High-Production Machines in the Automobile Shops. Am. Mach., vol. 61, nos. 5 and 7, July 31 and Aug. 14, 1924, pp. 191-194 and 277-279, 16 figs. July 31: "Simplimatic" lathe. Aug. 14: M.-G. production unit made by Meldrum-Gabrielson Corpn., Syracuse, N. Y.

The Automotive Industry and the Machine Tool Builder. Machy. (N. Y.), vol. 31, nos. 2, 3, and 4, Oct., Nov., and Dec., 1924, pp. 85-91, 179-183 and 263-267. See also Machy. (Lond.), vol. 25, nos. 627, 635 and 639, Oct. 2, Nov. 27 and Dec. 25, 1924, pp. 1-6, 265-268 and 399-402. Opinions of automotive-plant production managers and equipment engineers on machine-tool equipment for production work, also views of leading machine-tool builders.

Automotive Industry, Influence of. How the Automotive Industry Has Influenced the Design of Machine Tools, A. L. De Leeuw. Am. Mach., vol. 61, no. 23, Dec. 4, 1924, pp. 891-892. Pre-automobile influences, such as steam engine, interchangeability, high-speed steel and electric motor; effects brought about directly by automotive industry.

Ball-Bearing. See BEARINGS, BALL, Machine Tools.

Boiler-Shop. Machine Tools in the Boiler Shop. Eng. Production, vol. 7, nos. 138 and 139, Mar. and Apr. 1924, pp. 84-87 and 112-118, 32 figs. Detailed review of some modern equipment.

Boring Mills. See BORING MILLS.

British Design. British Machine-Tool Design, W. E. Sykes. Mech. Eng., vol. 46, no. 7, July 1924, pp. 395-401, 21 figs. Present status as shown by examples representative of current practice.

British Empire Exhibition. British Empire Exhibition: Machine Tools. Engineering, vol. 117, no. 3048, May 30, 1924, pp. 694-698, 5 figs. Exhibits of W. G. Armstrong, Whitworth & Co.; Vickers; and Fred. Town & Sons of Halifax.

Machine Tools. Engineering, vol. 117, no. 3043, Apr. 24, 1924, pp. 553-554, 7 figs. Exhibits of lathes, gear-shaping machines, woodworking machinery, etc., at Brit. Empire Exhibition.

Machine Tools at the British Empire Exhibition, I. W. Chubb. Am. Mach., vol. 61, no. 5, July 31, 1924, pp. 177-179, 4 figs. Types and performances of British machine tools at Wembley.

Machine Tools at Wembley. Mech. Wld., vol. 76, nos. 1957 and 1959, July 4 and 18, 1924, pp. 2-4 and 34-36, 14 figs. Details of wheel and axle lathes, electric drives, tool equipment; broaching machines, gear-shaping machines by Vickers, Ltd.; stamping presses, including single-action press with adjustable cam brake by Taylor & Challen Ltd.

The British Empire Exhibition. Machy. (Lond.), vol. 24, no. 608, May 22, 1924, pp. 241-250, 17 figs. Machine tools and mechanical equipment.

The Machine Tool Exhibition. Eng. Production, vol. 7, no. 144, Sept. 1924, pp. 257-267, 24 figs. Describes and illustrates important exhibits; high-speed side-planing machine, girder radial drilling machine, vertical drilling machine, high-power universal milling machine, turret lathe with covered bed, slot milling machine, bench drill, etc.

Chain Drive for. See CHAIN DRIVE, Silent.

Chucking Machines. See CHUCKING MACHINES.

Combination Metal-Cutting Machine. A Combination Type of Metal-cutting Machine, S. A. Asquith. Machy. (N. Y.), vol. 30, no. 11, July 1924, pp. 844-846, 8 figs. Universal machine especially adapted for reproducing various designs from enlarged patterns or drawings, either by punching, profiling, routing, milling, or engraving.

Cone-Pulley Drives. The Design of Cone Pulley Drives, S. Odegaard. Am. Mach., vol. 60, no. 7, Feb. 14, 1924, pp. 245-247, 1 fig. Useful tables for quick computation; design of back gearing; belt width and horsepower; design of drive for 24-in. lathe as example.

Defects in. Some Suggestions for Builders and Users of Machine Tools, Thos. Nadin. Soc. Automotive Engrs.—Jl., vol. 14, no. 2, Feb. 1924, pp. 134-135. Points out simple and obvious defects in many present-day production machine tools and offers constructive suggestions for their elimination.

Demand Forecast. Forecasting Demand for Industrial Equipment, E. F. DuBrul. Mech. Eng., vol. 46, no. 9, Sept. 1924, pp. 539-542, 5 figs. Business cycle in machine-tool industry. Cooperative study of stabilization. Machine-tool barometer.

Design. Methods of Machine Tool Design, A. L. DeLeeuw. Am. Mach., vol. 61, nos. 8, 9, 11, 13, 15, 17, 21 and 25, Aug. 21, 28, Sept. 11, 25, Oct. 9, 23, Nov. 20 and Dec. 18, 1924, pp. 317-320, 341-343, 431-433, 507-509, 575-578, 649-652, 799-801 and 947-949, 40 figs. Aug. 21: Feeds of intermittent type. Aug. 28: Design of feed drive and gearing for planers, and devices for feed variation and rapid traverse. Sept. 11: Design of combined intermittent feed and rapid traverse mechanism. Sept. 25: Factors affecting design of frame units for machine tools. Oct. 4: Necessity of seasoning of castings, resistance to bending and torsion. Oct. 23: Machine framework as support for slide ways; wear of sliding surfaces under various conditions. Nov. 20: Lubrication for slide ways and heavy machines; oil pressures for forced lubrication; bearing-surface proportions. Dec. 18: Problems in design of guides for machine tools; lathe-bed construction and proportions.

Development, New England. Development of Machine Tools in New England, G. Hubbard. Am. Mach., vol. 60, nos. 4, 5, 6, 7, 8, 12, 17, 24 and 26, Jan. 24, 31, Feb. 7, 14, 21, Mar. 20, Apr. 24, June 12 and 26, 1924, pp. 129-132, 171-173, 205-209, 255-258, 271-274, 437-441, 617-620, 875-878 and 951-954, 70 figs., and vol. 61, nos. 2, 5, 7, 8, and 12, July 10, 31, Aug. 14, 21, and Sept. 18, 1924, pp. 65-68, 195-198, 269-272, 313-316, and 453-455, 9 figs. Jan. 24: American exhibit at Crystal Palace; famous Enfield (England) Armory equipped with machinery and tools from New England; gages sent from England made of wood. Jan. 31: Hartford plant of Robbins & Lawrence turns out world-famous products and finally becomes part of Pratt & Whitney plant. Feb. 7: Windsor machine tools still in use; development of drilling machine. Feb. 14: Examples of early milling machines; first universal milling machine; edging or profiling machine. Feb. 21: Lathes and swiveling headstocks; tailstocks with square spindles; an early bolt-threading machine; evolution of turret lathe. Mar. 20: Officers of Robbins & Lawrence Co.; New England mechanics who have become famous. June 12: Drawings of machine tools in colors; interchangeable work at Harper's Ferry. June 26: Circumstances that led to formation of Jones & Lamson Machine Co. July 10: History of flat turret and lo-swing lathes; development of Fellows gear shaper and Bryant chucking grinder. July 31: Organization and activities of Windsor Machine Co. Aug. 14: Invention of Gridley automatic turret-lathe; machines for turning pistons and eccentric piston-rings. Aug. 21: Genesis of automatic screw machine. Sept. 18: Formation of Nat. Acme Co.

Developments. Fourth New Haven Machine-Tool Exhibition. Mech. Eng., vol. 46, no. 11, Nov. 1924, pp. 698-700. Review of papers and discussion in connection with exhibition conducted under auspices of A. S. M. E. New Haven Section, Yale University, and New Haven Chamber of Commerce.

Differential Gearing for. See GEARS, Differential.

Early Forms and Progress. The Master Tools of Industry, D. S. Kimball. Am. Mach., vol. 60, nos. 19 and 20, May 1 and 15, 1924, pp. 679-683 and 723-727, 27 figs. Early attempt of man to supplement his bodily efforts; principle of transfer of skill; modern machines and transfer of thought. Henry Maudsley and his enduring contribution to lathe design; beginnings of interchangeable manufacture; semi-automatic machine; Spencer and full automatic machine.

Electric Drive. See ELECTRIC DRIVE, Machine Tools.

Electric Equipment. Electrical Equipment for Machine Tools, J. W. Harper. Am. Mach., vol. 61, no. 6 and 7, Aug. 7 and 14, 1924, pp. 215-217 and 261-264, 11 figs. General features; characteristics of various types of motor controllers; duty each type is best fitted to perform; undervoltage protection; magnetic or push-button control. Devices giving protection from overload, types of winding.

Electrically Driven. Reglo Machine Tools (Reglo-Werkzeugmaschinen), O. Pollak. Werkstattstechnik, vol. 18, nos. 2 and 3, Jan. 15, and Feb. 1, 1924, pp. 21-28 and 53-57, 27 figs. Describes electric machine-tool drives of German Gen. Elec. Co. which form integral but interchangeable part of machine, so that such a machine works as whole unit in same way as turbo-generator, electric winding engine, etc.; numerous examples are described and illustrated.

Electrification of. The Electrification of Machine Tools, L. W. Scott Alter. South. & Southwest. Ry. Club, vol. 17, no. 6, Nov. 1923, 21 pp., 39 figs. Suggestions that may be applied to local conditions, including selection of different equipment and operating data.

Feet and Bases. Design of Machine Tool Feet and Bases, F. Horner. Machy. (N. Y.), vol. 30, nos. 6 and 7, Feb. and Mar. 1924, pp. 450-453 and 508-510, 12 figs. Typical designs for different classes of machines.

Gears for. See GEARS, Micarta Silent.

German. New Machines and Tools Exhibited at the Leipzig Fair (Neue Maschinen und Werkzeuge). Werkstattstechnik, vol. 18, nos. 4 and 5, Feb. 15 and Mar. 1, 1924, pp. 98-110 and 141-156, 104 figs. Feb. 15: Describes method of accurate production of dividing wheels for gear-cutting machines; gear-cutting machines; automatic gear-cutting lathes; planing machines; automatic and turret lathes; saws; microscope for workshop measurements; etc. Mar. 1: Device for cutting bevel gears; Lauf-Thoma gears for machine tools; grinding machines; shaping and slotting machines; milling machines; woodworking machines; etc.

Possibilities of Developing German Cutting Machine Tools (In welcher Richtung liegen die Entwicklungsmöglichkeiten der deutschen spanabhebenden Werkzeugmaschinen und welche Faktoren sind hierfür ausschlaggebend?), Huhn. Maschinenbau, vol. 3, no. 25, Oct. 9, 1924, pp. 947-951. Importance of high-speed steel and use

of recent rotary steels; electric individual drives; universal and special machines.

Progress in the Working of Metals, with Special Reference to the Leipzig Spring Fair (Fortschritte der Metallbearbeitungstechnik unter Berücksichtigung der Leipziger Frühjahrsmesse), M. Buxbaum. Zeit. des Vereines deutscher Ingenieure, vol. 68, nos. 29 and 31, July 19 and Aug. 2, 1924, pp. 745-750 and 798-802, 27 figs. Reviews most important improvements in working metals, machine tools and tools industry, covering lathes, drilling and molding machines, planers, etc., grinding machines, circular and surface, grinding wheels, saws, files, hammers, etc.

The Machine-Tool Exhibition of the Society of German Machine-Tool Builders at the Leipzig Technical Fair 1924 (Die Werkzeugmaschinenausstellung des Vereines Deutscher Werkzeugmaschinenfabriken auf der Leipziger Technischen Messe 1924), O. Rambuscheck. Maschinenbau, vol. 3, no. 10, Feb. 28, 1924, pp. 269-299, 116 figs. Describes tools and machine tools for metal and wood working. See also article by H. Pfennig, entitled New Machine Tools (Neue Werkzeugmaschinen), pp. 300-301, 4 figs., describing three new machines exhibited at show, namely, a turret lathe, grinding machine and automatic milling machine.

High-Production. See Automobile Shops.

Hydraulic Drive. See HYDRAULIC DRIVE.

Improvements. Trend of Improvements in Machine Tools, L. D. Burlingame. Iron Age, vol. 113, no. 1, Jan. 3, 1924, pp. 30-32, 1 fig. Ease of operation and better speed and feed ranges are features; replacing obsolete equipment profitable; need for training skilled workers.

Interlocking Devices. Interlocking Devices, Al. Clegg. Machy. (N. Y.), vol. 30, nos. 6, 7, and 8, Feb., Mar., and Apr. 1924, pp. 446-447, 526-528, and 614-616, 11 figs. Describes different types. Feb.: Two-lever and single-lever devices; an automatic device. Mar.: Device for lathe apron; an inexpensive mechanism. Apr.: Device for a geared drive; arrangement for back gears; device for elevating mechanism.

Leipzig Fair. Machine Tools Displayed at Leipzig Spring Fair 1924, O. Rambuschek. Eng. Progress, vol. 5, no. 6, June 1924, pp. 101-108, 23 figs. Descriptions of outstanding exhibits.

See also German.

Magazine Attachments. Design of Magazine Attachments, A. A. Dowd. Machy. (Lond.), vol. 24, no. 620, Aug. 14, 1924, pp. 617-620, 8 figs. Magazine attachments for irregular work.

Magazine Carriers. Design of Magazine Carriers and Slides, A. A. Dowd. Machy. (N. Y.), vol. 30, no. 12, Aug. 1924, pp. 931-934, 8 figs. In transferring parts from a magazine chute or hopper to cutting position in an automatic machine, a carrier or some other mechanical means is required, unless work can be fed directly by gravity. Points involved in designing a carrier; carrier supports; examples of carrier-slide design; control of carrier-slides; safety devices for slides; carriers for irregular pieces.

Magnetic Control. Electric Drive and Magnetic Control for Machine Tools, A. L. Harvey. Elec. Jl., vol. 21, no. 6, June 1924, pp. 265-269, 9 figs. Advantages of use of electric drive with magnetic control; reversing drive; suggestions in connection with operation.

New Types. Digest of New Machine Tools and Shop Equipment. Iron Trade Rev., vol. 75, no. 19, Nov. 6, 1924, pp. 1236-1243, 24 figs. Details of new equipment. Includes lists of tools described in this journal since beginning of 1924, alphabetically arranged according to manufacturers and according to products.

New Machine Tools and Shop Equipment. Iron Trade Rev., vol. 74, no. 23, June 5, 1924, pp. 1505-1513, 28 figs. Description of new machine tools and mechanisms; list of tools described thus far in this journal in 1924; phases of work being done by Nat. Machine Tool Bldrs.' Assn.

Principal Developments in Shop Equipment, L. C. Morrow. Am. Mach., vol. 60, no. 3, Jan. 17, 1924, pp. 81-111, 213 figs. Semi-annual résumé of machines, tools and accessories described in Shop Equipment News section of this journal during last six months of 1923. See also Index of Manufacturers, pp. 112-114.

Olympia Exhibition, London. British Machine Tools at the Olympia Exhibition. Engineer, vol. 138, no. 3585, Sept. 12, 1924, 16 pp. (Supp.), 47 figs. Descriptions of some of the British machine tools exhibited.

Machine Tool Trades' Exhibition 1924. British Machine Tool Eng., vol. 3, no. 29, Sept.-Oct. 1924, pp. 107-167, 74 figs. Descriptions of machine tools exhibited by Associated British Machine Tool Makers Ltd. at Olympia, London.

The Machine Tool and Engineering Exhibition, Olympia, 1924. Machy. (Lond.), vols. 24 and 25, nos. 623, 624, 625, 626, and 627, Sept. 4, 11, 18, 25, and Oct. 2, 1924, pp. 714-730, 750-768, 785-801, 819-837, and 20-25, 139 figs. Review of new machine tools and machine-tool features. See also Engineer, vol. 138, nos. 3584-3589, Sept. 5, 12, 19, 26, Oct. 3 and 10, 1924, and Engineering, vol. 118, nos. 3062-3065, Sept. 5, 12, 19 and 26, 1924.

Plate and Bar-Working. Plate and Bar-working Tools. Machy. (Lond.), vol. 23, no. 588, Jan. 3, 1924, pp. 450-454, 9 figs, and vol. 24, no. 615, July 10, 1924, pp. 467-473, 18 figs. Jan. 3: Plate edge planers; frame plate slotting and milling machines. July 10: Jib crane and outfit, pipe riveters, large boiler riveters, stay-bolt riveter, etc.

Production. Production Machine Tools. Machy. (Lond.), vol. 25, nos. 638 and 639, Dec. 18 and 25, 1924, pp. 353-366 and 389-398, 46 figs. Their application to manufacturing problems; comparison between single-purpose and standard machines; scope of production machine tools; types of machines and tooling operations. Manufacture and types of milling machines; gear-hobbing machines; grinders.

Production Service by Manufacturers. Production Service Co-operation Between Manufacturer and Machine User, F. A. Parsons. Am. Mach., vol. 61, no. 26, Dec. 25, 1924, pp. 981-983, 7 figs. Gives examples showing advantage of production service by machine-tool manufacturer; practice followed by Kearney & Trecker Corpn.

Railway Shop. Digest of New Machine Tools and Shop Equipment. Iron Trade Rev., vol. 75, no. 1, July 3, 1924, pp. 39-45, 23 figs. Descriptions of machine tools and other equipment exhibited at joint convention of Am. Ry. Assn. and Ry. Supply Mfrs.' Assn. at Atlantic City. Exhibition was intended primarily for railway shop tools and appliances, but nearly all of the machines and much of the equipment were applicable to all branches of metal-working industry.

Machine Tools for Railway Shops. Ry. Engr., vol. 45, nos. 535, 536, and 537, Aug., Sept. and Oct. 1924, pp. 279-281, 313-314, 341-344 and 350, 14 figs. Examples of new and improved types exhibited at Machine Tool & Eng. Exhibition at Olympia.

Reclaiming. Reclaiming Small Taps and Dies. Machy. (Lond.), vol. 24, no. 612, June 19, 1924, pp. 359-360, 2 figs. Tap and die grinding fixtures.

Safety Tapping Mechanisms. Mechanisms for Preventing Tap Breakage, A. Pestel Machy. (N. Y.), vol. 30, no. 6, Feb. 1924, pp. 424-426, 6 figs. Deals with more important problems involved in designing safety tapping mechanisms, and methods suggested for overcoming difficulties

encountered with certain mechanisms developed for this work.

Setting for Short Jobs. Setting Machine Tools for Short Jobs, A. A. Dowd. Iron Age, vol. 114, no. 2, July 10, 1924, pp. 74-77, 4 figs. Examples of economical handling of work requiring lathe set-up. Savings effected by providing operator with sketches and complete data.

Ship Machinery. Heavy Machine Tools for Construction of Ship Machinery (Schwere Werkzeugmaschinen für den Schiffsmaschinenbau). Schiffbau, vol. 25, no. 10, Feb. 27, 1924, pp. 236-239, 5 figs. Describes special lathes, drilling and cutting machine, and heavy planing machine.

Special. Special Machines and Their Use in Modern Manufacture (Spezialmaschinen und ihre Verwendung in der modernen Fabrikation), G. Storz. Wirtschaftsmotor, vol. 6, no. 10, Oct. 25, 1924, pp. 7-8, 2 figs. Design and operation of multiple automobile cylinder boring machine, automatic milling cutter for producing 30 teeth for quantity production.

"Ten Cookie Cutters per Minute," K. H. Crumrine. Am. Mach., vol. 60, no. 15, Apr. 10, 1924, pp. 535-537, 5 figs. How obstacles in development of special machine for making cookie cutter were overcome; cutting irregular pieces from thin aluminum tubing; mechanism based on ordinary pipe-cutter finally successful.

Speed Charts. Alignment Charts for Speeds (Fluchtlinientafel für Drehzahlen), H. Behr. Werkstattstechnik, vol. 18, no. 11, June 1, 1924, pp. 294-296, 3 figs. Plotting of alignment chart for determination of geometrically arranged revolution numbers, magnitude of average cutting-speed drop, and of quotients of geometrical series.

Speeds and Feeds. Tool Engineering, A. A. Dowd and F. W. Curtis. Am. Mach., vol. 60, no. 9, Feb. 28, 1924, pp. 315-318. Speeds and feeds of machine tools; definition of cutting speed; relation between speed and feed; points in design affected by speeds and feeds.

Sprinkler-Head Assembly Machine. Assembling Sprinkler Heads. Machy. (Lond.), vol. 24, no. 614, July 3, 1924, pp. 427-428, 3 figs. Describes automatic machine developed by Rockwood Sprinkler Co., Worcester, for assembly of sprinkler heads used in fire-extinguisher systems, and explains construction of sprinkler head.

Standard Data Sheets. Standard Data Sheets for Machine Tool Builders and Users, A. L. Evans. Am. Mach., vol. 60, no. 11, Mar. 13, 1924, pp. 381-386, 3 figs. See also Iron Trade Rev., vol. 74, no. 23, June 5, 1924, pp. 1499-1503, 4 figs., and Abrasive Industry, vol. 5, no. 10, Oct. 1924, pp. 245-249, 3 figs. Standard data sheets devised by author in order to simplify work of planning, routing, designing, equipping tools, making time studies, changing factory layout, and similar tasks.

Standardization. Contribution to the Question of Standardization of Machine Tools (Beitrag zur Frage der Vereinheitlichung im Werkzeugmaschinenbau), E. Toussaint. Praktische Maschinen-Konstrukteur, vol. 57, no. 22, June 17, 1924, pp. 306-309. Discusses principal point regarding lathes and shows that even in far-reaching standardization peculiarity of construction by individual firms may be maintained.

Standardization Versus Individuality, L. D. Burlingame. Mech. Eng., vol. 46, no. 9, Sept. 1924, pp. 529-530 and 538. Discusses standardization in machine-tool industry, giving a word of caution against the too eager adoption of ill-advised standards.

Tables. Work-holding Surfaces of Machine Tools, Machy. (Lond.), vol. 24, no. 605, May 1, 1924, pp. 132-137, 20 figs. Table design for different types of machines.

Tests. Acceptance Tests for Machine Tools (Abnahmekontrolle an Arbeitsmaschinen), M. Kurrein. Maschinenbau, vol. 3, no. 27, Nov. 13, 1924, pp. 1032-1036, 10 figs. Discusses technical and economic bases for establishing testing stations for machine tools, using them for acceptance tests.

Testing the Performance of Machine Tools (Leistungsprüfung von Werkzeugmaschinen), W. Mitan. Maschinenbau, vol. 3, no. 29, Dec. 11, 1924, pp. 1115-1117. Discusses rules for carrying out working resistance tests and turning them to account.

Tooling of. Proper Tooling a Big Factor in Production. Can. Machy., vol. 32, no. 21, Nov. 20, 1924, pp. 21-24, 6 figs. Increasing output of reciprocating machine tools by simple devices.

Tractor Building. See AUTOMOBILE MANUFACTURING PLANTS, Machine Tools for.

United States. Present Status of American Machine-Tool Construction for Quantity and Special Production (Der heutige Stand des amerikanischen Werkzeugmaschinenbaues für Massen- und Sonderleistungen), H. D. Brasch. Maschinenbau, vol. 3, no. 25, Oct. 9, 1924, pp. 931-947, 57 figs. Requirements of machine tools for quantity production; principal American and German forms; recent types of special machines.

Universal Metal-Cutting Machine. A Combination Type of Metal-Cutting Machine. Machy. (Lond.), vol. 24, no. 617, July 24, 1924, pp. 513-515, 7 figs. Universal machine especially adapted for reproducing various designs from enlarged patterns or drawings, either by punching, profiling, routing, milling, or engraving.

Wembley Exhibition. See British Empire Exhibition.

MACHINERY

[See also MACHINE TOOLS.]

Altitude, Influence on. Influence Exerted by Altitude on Apparatus, K. Lubowsky. Elec. Wld., vol. 84, no. 3, July 19, 1924, pp. 109-110. Influence of altitude on calculations connected with all apparatus which generates, distributes or consumes energy. Correction factors for various types of apparatus; influence on heating; outputs and ratings; table for any height.

Automatic, Feeding Devices for. See MACHINE DESIGN, Feeding Devices.

Automatic, Hopper Design. Hopper Design for Automatic Machinery, A. A. Dowd. Machy. (N. Y.), vol. 31, no. 1, Sept. 1924, pp. 37-40, 6 figs. Consideration of design of types of hoppers most commonly required. Examples of hopper design.

Construction. Elements of Construction in Mechanics of Precision (Konstruktionselemente der feinmechanischen Technik), O. Richter. Maschinenbau, vol. 3, no. 20, July 24, 1924, pp. 723-726, 68 figs. Discusses desirability of precision in construction and gives examples of electric spot welding, soldering, fits, force fits, joints, rivet joints, bearings, securing bearing pins, etc.

Czechoslovakian Industry. The Cost of Nationalism in Czecho-Slovakia, H. Obermeyer and A. L. Greene. Am. Mach., vol. 60, no. 8, Feb. 21, 1924, pp. 291-294, 3 figs. Present condition of machine industry; results of economic policy of this new republic; discrimination in favor of Czech industrials; domestic field in machinery.

Design. See MACHINE DESIGN.

Fatigue Breakages in Parts. Fatigue Breakages in Machine Parts and Their Elimination by the Use of Heat-Treated Alloy Steels (Utmattningsbrott hos konstruktionsstal och deras förekommande genom användning av seghärdade specialstal), S. von Hofsten. Teknisk Tidskrift, vol. 54, no. 43½, Oct. 25, 1924, pp. 420-425 (Allmänna Avdelningen), 5 figs. Explains nature of fatigue

breakages. Alloy steels permit effective hardening and consequent strengthening of bulky machine parts. High elastic limit most important feature. Coöperation between designers and metallurgists urged.

Foundations. Fundamentals of Machinery Foundation Design and Construction, W. E. Biggs and W. R. Woolrich. Nat. Engr., vol. 28, no. 11, Nov. 1924, pp. 538-540, 4 figs. Hints on construction of foundations and materials to be used for this purpose.

Machinery Foundations. Power Engr., vol. 19, no. 214, Jan. 1924, pp. 10-11. Notes on foundations for steam engines, turbo-alternators, and heavier kinds of pumping plant.

See also FOUNDATIONS, Engine.

Fractures from Freezing. Fractures from Freezing, E. Ingham. Power Eng., vol. 19, no. 225, Dec. 1924, p. 469. Notes on risks of disastrous fractures of machinery which may arise in consequence of frost; preventive measures; antifreezing solutions.

Grouping of. Grouping Machines Economically, H. M. Groff. Machy. (N. Y.), vol. 30, no. 8, Apr. 1924, pp. 583-586, 2 figs. Discusses laws that govern economical grouping of machines to be run by one operator, and describes a practical method of setting tasks on such operations; method can be applied to groups of shapers, planers, engine lathes, power milling and drilling machines, etc.

Guards for. Construction of Machinery Guards. Nat. Safety News, vol. 9, no. 1, Jan. 1924, pp. 43-53, 14 figs. Materials suitable for guard construction; machine tools needed for fabrication of guards; detailed guard features; specifications for guards; guard standards.

High-Pressure. Elements of Construction for High Pressures (Konstruktionselemente für hohe Drücke). Maschinenbau, vol. 3, no. 20, July 24, 1924, pp. 731-750. Series of articles on Significance of High Pressures in Low-Temperature Work, H. Hausen, 5 figs.; High-Pressure Steam Plants and Construction of Fittings, E. Edler, 9 figs.; Hydraulic Accumulators, Operation with, and Control of, High Pressures, O. Fahr, 1 fig.; Effect of High-Pressure Working on Pipe Lines, F. Seiffert, 15 figs.; Shaft Pipe Line, etc., E. Kaschny, 9 figs.

High-Speed Spindles. Speeding-Up Automatic Machines. Eng. Production, vol. 7, no. 143, Aug. 1924, pp. 242-243, 6 figs. Design and construction of new Brown and Sharpe high-speed spindles for speedy and efficient production of small parts in brass, aluminum, or other soft materials.

Knocks, Tracing. Tracing Knocks in Engines While Rotating, E. Prince. Mech. Wld., vol. 76, no. 1975, Nov. 7, 1924, pp. 296-297. Methods of tracing knocks of machinery in motion.

Manufacture, Size Control in. Workmanship—The New Direct System of Size Control, P. J. Darlington. Sibley Jl. of Eng., vol. 38, no. 4, Apr. 1924, pp. 92-96. Describes new microgage system of production measurement, or size control, in which precision made available by Bur. Standards, and represented in cylindrical standard, is directly transferred to part being produced by means of a new automatic measuring comparator called microgage.

Operation and Maintenance. The Operation, Management and Maintenance of Machinery, W. P. Walker. Power Engr., vol. 19, nos. 219, 220, 222, 223, and 225, June, July, Sept., Oct., and Dec. 1924, pp. 209-212, 268-271, 349-350, 390-393, and 462-463, 10 figs. Discusses principles and practice, based on author's experience.

Paper-Making. See PAPER MACHINERY.

Running, Stress Measurement in. Stress Measurements on Running Machines (Spannungsmessungen an laufenden Maschinen), J. Geiger. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 11, Mar. 15, 1924, pp. 265-268, 15 figs. Describes measuring instrument for determining stresses in running machines; requirements which instrument must fulfill, and five methods of testing values obtained.

Stress in Parts. Optical Investigation of State of Stress in Machinery Parts with Sharp and with Rounded-Off Corners (Optische Untersuchung des Spannungszustandes in Maschinenteilen mit scharfen und abgerundeten Ecken), W. Birnbaum. Zeit. für technische Physik, vol. 5, no. 4, 1924, pp. 143-149, 20 figs. Apparatus consists of optical bench, upon which luminous source, polarization, load, and compensation apparatus, as well as photographic equipment, are arranged on movable slides; special investigations on turbine-blade feet and T-pieces.

Torsional Oscillations. Investigation of Oscillations Around an Axis in a Machine (Beitrag zur Untersuchung von Drehschwingungen bei Maschinen), E. v. Brauchitsch. Zeit. für Technische Physik, vol. 4, no. 11, 1923, pp. 426-430, 5 figs. New method for analytical determination of natural frequency of each of the component parts of a rotating system and for investigation of oscillations in a torsional-elastic system.

Vibrations. See VIBRATIONS, Machinery.

MACHINING METHODS

Automobile Brake Parts. Machining Parts for Four-Wheel Brakes, H. Campbell. Am. Mach., vol. 61, no. 12, Sept. 18, 1924, pp. 465-467, 9 figs. Details of machining operations on cylinders and pistons for hydraulic brakes in Timkin-Detroit axle plant.

Automobile Cylinder Blocks. Machining Buick Cylinder Blocks, J. Younger. Am. Mach., vol. 61, no. 13, Sept. 25, 1924, pp. 503-505, 10 figs. Methods used in shops of Buick Motor Car Co.

Automobile-Engine Parts. Pierce-Arrow Machining Processes, J. Younger. Am. Mach., vol. 61, no. 15, Oct. 9, 1924, pp. 571-573, 10 figs. Account of major operations on latest product of Pierce-Arrow plant, the model 80 car.

See also AUTOMOBILE ENGINES, Machining Parts.

Automobile Parts. See AUTOMOBILE MANUFACTURING PLANTS.

Bearings. Special Tools Facilitate Machining of Bearings. Elec. Ry. Jl., vol. 64, no. 20, Nov. 15, 1924, pp. 834-837, 8 figs. Special tools employed by Twin City Rapid Transit Co. in machining of axle and armature bearings.

Blue Prints, Elimination of. Eliminating Blue Prints in Machining. Iron Age, vol. 114, no. 21, Nov. 20, 1924, pp. 1327-1328, 4 figs. Jigs registering from machined surface are used for tool setting; "greased air" employed in deep-hole drilling; practice at Snow-Holley Works, Buffalo, of Worthington Pump & Machy. Corpn.

Eccentrics, Turning of. Tools and Fixtures for Turning Eccentrics, F. H. Mayoh. Machy. (N. Y.), vol. 30, no. 12, Aug. 1924, pp. 976-979, 11 figs. Points out methods to be used in machining eccentric parts under different conditions.

Economical. Analysis of a Machine-Shop Problem on a Quantity and Final-Economy Basis, A. L. De Leeuw. Mech. Eng., vol. 46, no. 6, June 1924, pp. 335-338 and 362, 1 fig., and (discussion) no. 8, Aug. 1924, pp. 480-481. Discusses nature of analysis which should be followed in determining most economical method of machining work, either in large or small quantities; deals only with items relating to actual machining processes; particular attention is called to difference between saving of labor cost and ultimate economy; as example some of operations on automobile connecting rod are taken. (Abridged.)

Interchangeable Manufacture. See INTERCHANGEABLE MANUFACTURE.

Locomotive Cylinders. New York Central Cylinders, L. C. Morrow. Am. Mach., vol. 61, no. 13, Sept. 25, 1924, pp. 493-494, 4 figs. Operation sequence and methods at West Albany shops of New York Central valuable for comparative purposes.

Rifle Manufacture. See RIFLES, Bolt Manufacture.

Shouldered Work. Accuracy in Machining Shouldered Work, A. A. Dowd. Machy. (N. Y.), vol. 30, no. 8, Apr. 1924, pp. 590-591, 3 figs. Method of obtaining accurate shoulder distances with turret lathe. Accurate facing on a drill press.

Side- and Main-Rod Work. Side and Main Rod Work, L. C. Morrow. Am. Mach., vol. 61, no. 10, Sept. 4, 1924, pp. 367-369, 5 figs. Methods of West Albany shops of New York Central R. R. with description of an air-operated fixture used in machining rod brasses.

Single Pieces, Machining of. Economical Machining of Single Pieces, A. A. Dowd. Iron Age, vol. 113, no. 14, Apr. 3, 1924, pp. 989-991, 4 figs. Causes of loss in setting up machine tools for repair or replacement jobs; handling of work by planning department advantageous.

Tool-Slippage Prevention. Prevention of Tool Slippage in Machine Work, F. Horner. Can. Machy., vol. 32, no. 32, no. 19, Nov. 6, 1924, pp. 30-33 and 52, 29 figs. Various methods of holding work to ensure accuracy.

Tooling for Small-Quantity Work. Tooling for Small Quantity Work, L. S. Love. Iron Age, vol. 114, no. 19, Nov. 6, 1924, pp. 1193-1196, 11 figs. Jobs not calling for bulk production put through on semi-production basis; savings accomplished by grouping operations. Practice at Schenectady works of Gen. Elec. Co.

Vertical-Oil-Engine Parts. Building Vertical Oil Engines. Machy. (Lond.), vol. 24, no. 621, Aug. 21, 1924, pp. 665-669, 13 figs. Describes machining of crankshafts, cylinder frames and cylinder head, operations on liners, connecting rod and piston, etc.

MACROGRAPHY

Metal. See METALS, Macrography.

MAGNESITE

Austrian Works. The Veitsch Magnesite Works (Veitscher Magnesitwerke). Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 10, Mar. 8, 1924, pp. 247-248, 2 figs. Describes four plants of Veitsch Magnesite Works Corpn., the Veitsch, Breitenau and Eichberg plants, with total production of 170,000 tons sinter magnesite and magnesite brick.

Deposits. Types of Magnesite Deposits and Their Origin, G. W. Bain. Economic Geology, vol. 19, no. 5, Aug. 1924, pp. 412-433. Discusses properties, preparation and uses of magnesite, types of magnesite deposits, composition; magnesite as sedimentary rock, alteration of serpentine, vein filling, replacement of limestone.

Sources and Trade. Magnesite: Commercial Sources and Trade, C. G. Yale, R. O. Hall and E. Baldwin. Trade Information Bul. (Supp. to Commerce Reports), no. 184, Feb. 4, 1924, 19 pp. Data on industry of the different countries.

MAGNESIUM

Foundry Practice. Explains Use of Magnesium, H. J. Maybrey. Foundry, vol. 52, no. 3, Feb. 1, 1924, pp. 96-99, 3 figs. Peculiarities of metal which readily can be handled by foundryman are pointed out; features of molding and design, and means of avoiding defective castings.

Production. Magnesium. Chem. & Met. Eng., vol. 31, no. 10, Sept. 8, 1924, pp. 383-386, 2 figs. Mechanical properties of pure magnesium and of magnesium-aluminum alloys; new American process for producing magnesium; difficulties of casting, forging, and welding, etc.; New methods of producing this metal are rapidly changing its industrial status, especially as a material of construction.

Reagent for Precipitation. Metallic Magnesium as a Qualitative and Quantitative Reagent in Inorganic Analysis (Die Anwendung metallischen Magnesiums als qualitatives und quantitatives Reagens in der anorganischen Analyse), G. P. Pamfil. Zeit. für anorganische u. allgemeine Chemie, vol. 133, no. 2-3, Feb. 19, 1924, pp. 265-266. Magnesium is said to be suitable reagent for precipitation of various heavy metals.

Specific Heat. See METALS, Specific Heats.

U. S. A. Magnesium and Its Compounds in 1923, J. M. Hill and G. F. Loughlin. U. S. Geol. Survey, no. II: 2, July 28, 1924, pp. 7-21. Statistics of production of magnesium, dolomite, magnesium chloride and sulphate, metallic magnesium by states.

MAGNESIUM ALLOYS

[See also ALLOYS, Light.]

Electron. Magnesium Alloy a Substitute for Aluminum. Can. Foundryman, vol. 15, no. 5, May 1924, pp. 26-27 and 36. Mixed with small proportion of zinc this metal produces an alloy, called Electron, of low specific gravity and high tensile strength; easily ignited its greatest drawback.

See also MAGNESIUM, Production.

MAGNETIC ANALYSIS

Elements. The Elements of Magnetic Analysis, E. H. Crapper. Engineering, vol. 117, nos. 3041, 3045, 3047, 3051, and 3052, Apr. 11, May 9, 23, June 20 and 27, 1924, pp. 452-454, 601-602, 660-662, 786-788, and 816-817, 21 figs. Points out that no complete system of magnetic analysis has yet been evolved and put into practice; magnetic constants of magnet which require consideration are divided into two groups, according as they refer (1) to nature of material used, and (2) to working qualities or properties of magneto-magnets; these constants are obtained directly by experiment, or derived from experimental results obtained.

MAGNETIC FIELD

Alternating, Ferromagnetic Constants for. Ferromagnetic Constants for Weak Alternating Magnetic Fields (Die ferromagnetischen Konstanten für schwache Wechselfelder), H. Jordan. Elektrische Nachrichten-Technik, vol. 1, no. 1, July 1924, pp. 7-29, 10 figs. Shows that in case of weak alternating magnetic fields properties of various materials can be defined by a small number of constants which are determined by means of a few measurements.

Earth's. See EARTH, Magnetic Field.

Electrical Machinery. Magnetic Fields of Variable Speed of Motion (Ueber Magnetfelder mit veränderlicher Bewegungsgeschwindigkeit), N. Japolsky. Archiv für Elektrotechnik, vol. 14, no. 1, Nov. 7, 1924, pp. 106-128, 12 figs. Discusses increasing output of electric machines by not keeping constant velocity of driving magnetic field but always varying it in correspondence with velocity changes of movable parts.

Iron, Behavior in. See IRON, Behavior in High-Frequency Fields.

Mapping. A Method for Mapping Magnetic Vector Fields, P. Kirkpatrick. Optical Soc. Am. —Jl., vol. 9, no. 5, Nov. 1924, pp. 617-621, 3 figs. Describes method which permits determination through one series of operations of direction and magnitude of magnetic field vector.

Measurement. The Measurement of the Horizontal Intensity of the Earth Magnetic Field with Portable Electric Magnetometers, N. Watanabe and T. Kawamura. Japanese Jl. Astronomy & Geophysics, vol. 1, no. 6, 1924, pp. 191-206, 10 figs. Details of construction and operation of magnetometer used in magnetic survey of Japan, including theodolite, mirror magnetometer, vibration magnet and deflection bar, coil, standard for current, and accessories.

Strong, Method of Production. A Method of Producing Strong Magnetic Fields, P. L. Kapitza. Roy. Soc.—Proc., vol. 105, no. A734, June 2, 1924, pp. 691-710, 11 figs. Possibility of obtaining strong magnetic fields for a small fraction of a second. Describes an accumulator which gives a power of the order of 1000 kw. for a small fraction of a second, and timed switches for making and interrupting strong currents up to 12,000 amperes. Account of a high-frequency oscillograph (20,000 to 30,000 per sec.) for measuring strong currents occurring during a small fraction of a second. Construction and measurement of magnetic constant of coils for producing magnetic fields. Account of experiments in obtaining strong fields.

Transverse. Effect of a Transverse Magnetic Field at the Cathode of a Dim Discharge (Die Wirkung eines transversalen Magnetfeldes an der Kathode der Glimmentladung), A. Günther-Schulze. Zeit. für Physik, vol. 24, no. 2, May 22, 1924, pp. 140-147, 4 figs. Determination of normal current desity at mercury cathode in H_2, N_2, Ar, Hg, H_2O gases depending on strength of transverse magnetic field.

MAGNETISM

Calculation. Calculation of Magnetic Attraction by Means of a Spectrum (Calcul de l'attraction magnétique à l'aide d'un spectre), T. Lehmann. Revue Générale de l'Electricité, vol. 16, nos. 2 and 3, July 12 and 19, 1924, pp. 51-58 and 99-103, 15 figs. Shows that magnetic attraction may be found directly from spectral lines without field components.

Ferro- and Para-. Ferromagnetism and Paramagnetism (Ferro-magnétisme et paramagnétisme). Technique Moderne, vol. 16, no. 11, June 1, 1924, pp. 373-379, 8 figs. Discusses ferromagnetism, paramagnetism, and diamagnetism, real and apparent intensity of magnetization; review of present theories; theory of demagnetizing field.

See also FERROMAGNETISM.

Iron, Permeability of. See IRON, Permeability.

Magnetic Viscosity. See VISCOSITY, Magnetic.

Terrestrial. Terrestrial Magnetism of the U. S., N. H. Heck. Military Engr., vol. 16, no. 90, Nov.-Dec. 1924, pp. 482-486, 8 figs. Facts about earth's magnetism; method of making magnetic survey; magnetic observations; uses of magnetic information on land, air, and sea; future study and use of terrestrial magnetism.

The New Magnetic System of France (Le nouveau réseau magnétique de la France), E. Mathias. Annales des Postes Télégraphes & Téléphones, vol. 13, no. 5, May 1924, pp. 466-518, 2 figs. Improvements made in Moureaux system; magnetic charts; investigation of law of regular distribution of magnetic elements with aid of Moureaux system; magnetic anomalies and their explanation; usefulness of new magentic system for solution of different scientific problems.

MAGNETITE.

See IRON ORE, Magnetite.

MAGNETIZATION

Curves. See ELECTRIC CURRENTS, ALTERNATING, Magnetizing Curves.

Stress-Produced. See STEEL, Magnetization Produced by Stress.

MAGNETOMETERS

[See also ELECTRIC MEASURING INSTRUMENTS, Magnetometer; MAGNETIC FIELD, Measurement.]

Sensitive. A Sensitive Magnetometer. Insensitive to Extraneous Disturbances, E. P. T. Tyndall. Optical Soc. Am.—Jl., vol. 9, no. 4, Oct. 1924, pp. 465-468, 2 figs. Design described obliterates chief objection to magnetometric method, in that such a magnetometer may have great sensitivity without corresponding liability to erratic disturbances.

MAGNETOS

[See also IGNITION, Automobile Engines.]

French Types. Magnetos for Internal-Combustion Engines (Les magnetos pour moteurs à explosion), F. Collin. Génie Civil, vol. 84, nos. 18 and 19, May 3 and 10, 1924, pp. 426-430 and 447-452, 30 figs. General design of high-tension magnetos; principal parts; speed of rotation; primary and secondary winding; rupturing device; describes different types of magnetos of French design.

MAGNETS

Permanent. Influence of the Shape of Permanent Magnets Upon Their Residual Magnetism (Etude de l'influence de la forme des aimants sur le magnétisme rémanent), A. Michel and L. Veyret. Revue Générale de l'Electricité, vol. 15, no. 2, Jan. 12, 1924, pp. 43-52, 11 figs. Investigation to determine how shape of horseshoe-type permanent magnet affects intensity of its residual magnetism; girth, cross-section and center distance of magnet legs are taken into consideration; it was found that geometrically similar magnets are of about equal strength; simple formula is derived for calculating intensity of flux in horseshoe magnets; considerably stronger permanent magnets may be built if cobalt-steel alloy is used.

Judging Quality of Permanent Magnets (Die Bewertung der Güte von Dauermagneten), J. Würeschmidt. Zeit. für Physik, vol. 29, no. 3-4, 1924, pp. 175-185, 7 figs. Capacity and quality; symmetry of magnetisation curves of various kinds of steel; magnetization curve represented by elipses; calculations.

Permanent, Heat Treatment for. See STEEL, HEAT TREATMENT OF, Permanent Magnets.

Steel, Aging. See IRON AND STEEL, Magnetic Aging.

Steel for. See STEEL, Magnet.

Testing Instrument. The Ericsson Magnet Tester, A. Brookes. Testing, vol. 1, no. 3, Mar. 1924, pp. 223-226, 3 figs. Describes instrument which has been recommended for adoption as standard testing instrument for permanent magnets by British Eng. Standards Assn., developed to meet need for a rapid and reliable means of testing permanent magnets used in magetos, etc.

Torque on Cylindrical. Torque on a Cylindrical Magnet Through Which a Current Is Passing, J. Zeleny and L. Page. Physical Rev., vol. 24, no. 5, Nov. 1924, pp. 544-559, 4 figs. Develops theory and describes experiments performed to check theory.

MAGNOLITE.

See BUILDING MATERIALS, Magnolite.

MAGNUS EFFECT.

See AERODYNAMICS, Magnus Effect.

MAIL HANDLING

Conveyors for. See CONVEYORS, Mail and Parcel Transport.

MAIL TRANSPORTATION.

See COMPRESSED AIR, Pneumatic Mail Tubes.

MALLEABLE CASTINGS

Annealing. Cut Time of Malleable Anneal. Foundry, vol. 52, no. 2, Jan. 15, 1924, pp. 43-50, 13 figs. Construction and operation of tunnel type annealing oven of Int. Harvester Co., Chicago, Ill.; remote control featured; describes method followed in preparing castings for annealing and in handling them into and out of oven; accelerated production with improvement in uniformity of castings accomplished.

Europe. A European View of the Malleable Question, T. Levoz. Foundry Trade Jl., vol. 30, no. 419, Aug. 28, 1924, pp. 175-177. Discusses what is suitable metal, selection of furnace, electric-furnace experiments, methods of producing malleable iron, etc.

Feeders and Denseners. See IRON FOUNDING, Feeders and Denseners in.

Foundries. See FOUNDRIES, Malleable-Iron.

Manufacture and Properties. Malleable Castings. Eng. Production, vol. 7, no. 145, Oct. 1924, pp. 311-312, 1 fig. Notes on their properties and manufacture.

MALLEABLE IRON

Castings. See MALLEABLE CASTINGS.

Iron-Carbon Eutectoid. Identification of the Thermal Effect of the Iron-Carbon Eutectoid and Extrapolation of the Heating and Cooling Curve Values to Zero Rates. A. Hayes, H. E. Flanders, and E. E. Moore. Am. Soc. Steel Treating—Trans., vol. 5, no. 2, Feb. 1924, pp. 183-194, 6 figs. Application of thermal-analysis methods have been applied to location of iron-carbon eutectoid in malleable iron containing 0.95 per cent silicon; method places this point on iron-carbon diagram at temperature of 771 deg. cent.

Production in Short Annealing Periods. Possibilities of Producing Malleable Iron and Intermediate Products of Value in Short Annealing Periods, A. Hayes and W. J. Diederichs. Am. Soc. Steel Treating—Trans., vol. 6, Oct. 1924, pp. 491-498, 5 figs. Outlines laboratory methods for producing malleable iron in 31 hours or less and for producing intermediate products of desirable physical properties; relations between method of treatment, microscopic structures, and physical properties. Photomicrograhps.

MANAGEMENT. See INDUSTRIAL MANAGEMENT; RAILWAY MANAGEMENT.

MANGANESE

Australia. Notes on Manganese on the Darling Downs, L. C. Ball. Queensland Govt. Min. Jl., vol. 24, no. 283, Dec. 15, 1923, pp. 457-459. Description of the various deposits.

Determination. Determination of Manganese in Alloys Rich in This Metal (La determinazione del manganese nelle leghe ricche), I. Musatti and M. Croce. Giornale di Chimica Industriale ed Applicata, vol. 6, no. 1, Jan. 1924, pp. 12-17. Points out shortcomings in various volumetric methods given in text books for determining manganese in such alloys as spiegeleisen and ferromanganese; authors regard as best method that which involves oxidation of manganous salts to permanganate by means of sodium bismuthate.

Determination of Manganese in Metallurgical Products (Dosage du manganèse dans les produits métallurgiques), L. Bertiaux. Société Chimique de France—Bul., vol. 35-36, no. 10, Oct. 1924, pp. 1335-1351, 1 fig. Describes method which can be used in presence of aluminum, iron, zinc, cadmium, nickel, copper, and silver; it is not advisable to have more than 0.1 gr. of manganese present in solution.

The Determination of Managanese, R. W. Coltman. Indus. & Eng. Chem., vol. 16, no. 6, June 1924, pp. 606-609, 2 figs. Manganous oxalate is proposed as primary standard in connection with determination of manganese by Volhard's method, chlorate method, and similar processes; its preparation, properties, and uses.

Georgia, Russia. Manganese Ore Reserves of Georgia, D. Zereteli. Iron & Coal Trades Rev., vol. 109, no. 2954, Oct. 10, 1924, p. 585. Production and export conditions of district of Tshiaturi. Abstract of pamphlet issued at The Hague.

Minerals. The Manganese Minerals: Their Identification and Paragenesis, Geo. A. Thiel. Economic Geology, vol. 19, no. 2, Mar. 1924, pp. 107-145, 13 figs. Methods for mineralographic determination of opaque manganese minerals; microscopic study of internal structure of each of these; textural relationships of manganese minerals to each other, and to iron oxides, as seen in polished sections, with special reference to manganiferous iron ores of Cuyuna Range.

Panama Deposits. Manganese Ore Deposits in Panama, J. F. Sheridan. Iron Age, vol. 114, no. 8, Aug. 21, 1924, pp. 444-447, 3 figs. Survey of mines and quantity available. Early shipments to American consumers.

Precipitation from Meteoric Solutions. The Precipitation of Manganese from Meteoric Solutions, G. A. Thiel. Am. Jl. of Sci., vol. 7, no. 42, June 1924, pp. 457-472. Results of a series of experiments dealing with relative effectiveness of various rocks and minerals of Deerwood iron formation of Cuyuna range, Minnesota, in precipitation of manganese from solutions.

Statistics. Manganese and Manganiferous Ores in 1922, H. A. Jenison and H. M. Meyer. U. S. Geol. Surv., no. I:25, Feb. 25, 1924, pp. 585-594, 1 fig. Statistics for United States on production, imports, consumption, and prices.

United States Situation. Report of Sub-Committee on Manganese. Min. & Met. Soc. of Am., vol. 17, no. 3, Mar. 1924, bul. no. 168, pp. 65-80, 1 fig. Study of manganese situation in United States. Requirements; domestic resources; comparison of domestic requirements and resources; adaptation of low-grade reserves; foreign resources.

MANGANESE BRONZE

Castings. The Production of Manganese Bronze Castings. Metal Industry (Lond.), vol. 25, nos. 16, 18, 21, and 23, Oct. 17, 31, Nov. 21, and Dec. 5 1924, pp. 377-378, 419-420, 497-498, and 541-543, 22 figs. Deals specifically with production of certain important castings of this alloy. Oct. 17: 24-cwt. hydraulic casting. Oct. 31: A boiler feedwater heater. Nov. 21: Large rudder frame. Dec. 5: Marine-propeller cone caps.

MANGANESE STEEL

Bibliography. Bibliography of Manganese Steel, E. H. McClelland. Blast Furnace & Steel Plant, vol. 10, no. 12, Dec. 1924, pp. 548-552. Books and periodical literature.

Casting. Casting Manganese Steel, H. E. Diller. Foundry, vol. 52, nos. 7 and 8, April 1 and 15, 1924, pp. 245-249 and 298-302, 14 figs. Apr. 1: Open-hearth converter and electric-furnaces processes; methods of adding manganese to steel; metal softened by heating in oven and quenching. Apr. 15: Heat treatment in electric furnaces; quality of metal determined by bending test piece; molding and handling track work.

Locomotive. High-Manganese Steel for Locomotives, E. F. Cone. Iron Age, vol. 114, no. 14, Oct. 2, 1924, pp. 824-825, 4 figs. Its properties when incorporated in cast-steel engine frames and crossheads. Composition and heat treatment.

Manufacture. Making Cast Manganese Steel, J. M. Quinn. Foundry, vol. 52, no. 24, Dec. 15, 1924, pp. 964-966, 2 figs. Rapid melting and proper method of making slag and alloy additions

play important role in producing satisfactory metal; how steel is heat treated.

Silico-. The Hardening of Silico-Manganese Steel, E. W. Golbeck and D. Hanson. Iron & Steel Inst.—Advance Paper, no. 5, for meeting May 1924, 18 pp. 26 figs. Experiments show that temperatures required for complete hardening of steels used are very much higher than corresponding hardening temperatures for straight carbon steels having same carbon content.

Welding. Welding of Manganese Steel. Am. Welding Soc.—Jl., vol. 3, no. 5, May 1924, pp. 10-23, 14 figs. Discusses briefly what manganese steel is, its properties, and why it has those properties. Investigations of what happens during welding of manganese steel, how actual operation may be best conducted, and what structural results of welding are in both base metal and weld. Preliminary report of Gas Welding Committee of Am. Bur. Welding.

See also ELECTRIC WELDING, ARC, Manganese Steel; OXY-ACETYLENE WELDING, Manganese Steel.

MANOMETERS

Electromagnetic. New Electro-magnetic Manometer. Engineer, vol. 137, no. 3570, May 30, 1924, pp. 609-610, 7 figs. Instrument, invented by H. Martin, designed primarily and used for boiler steam-flow measurement, but lending its readily for other purposes.

High-Pressure, Measurement of. Measurement of High Pressures, F. H. Newman. World Power, vol. 1, no. 2, Feb. 1924, pp. 85-90, 7 figs. Compressed-gas type of manometer; elastic-membrane type of gage; optical lever and piezoelectrical manometer.

Highly Sensitive. A Manometer of High Sensitivity (Ein Manometer hoher Empfindlichkeit), L. Heis. Physikalische Zeit., vol. 25, no. 13, July 1, 1924, pp. 326-330, 3 figs. Instrument is diminutive form of Edelmann manometer provided with two pressure ducts which act upon two thin aluminum vanes, respectively, at each end of small indicator; suspension is especially designs for sensitivity, and deflections are recorded by movement of spot of light on horizontal ground-glass scale; new method is developed for finding susceptibility of gases.

Ionization. Ionization Manometer (Ionisationsmanometer), H. Simon. Zeit. für technische Physik, vol. 5, no. 6, 1924, pp. 221-233, 19 figs. Use of ordinary three-electrode valve for determination of relations between gas pressure and ionization is discussed theoretically and experimental results described; ionization with grid positive and anode negative is greater for given positive voltage than with grid negative and anode positive; manometer may be used to compare rates of exhaustion of vessel with different gases; shows that specific emission of tungsten filament is increased by occlusion of gas.

Recording. Modern Pressure Measuring, with Special Reference to Recording Manometers (Neuzeitliche Druckmessungen, unter besonderer Berücksichtigung der Schreibmanometer), J. Wohlfarth. Zeit. für technische Physik, vol. 5, no. 9, 1924, pp. 361-368, 18 figs. Discusses importance of accurate measuring; difference between leaf- and tube-spring manometers; production and functioning of tube springs; new types of recording manometers.

MANUFACTURE, INTERCHANGEABLE. See INTERCHANGEABLE MANUFACTULE.

MANUFACTURING

Close Limits. Some Limitations on Manufacturing to Close Limits, B. H. Blood. Mech. Eng., vol. 46, no. 4, Apr. 1924, pp. 186-188 and 205, 8 figs. What precise measurements really mean; tolerances in manufacturing operations; examples of close measurements; practical examples from everyday commercial work.

Interchangeable. See INTERCHANGEABLE MANUFACTURE.

Quantity Production, Accuracy in. Accuracy in Production Engineering, J. E. Baty and A. J. C. Brookes. Eng. Production, vol. 7, nos. 137 and 138, Feb. and Mar. 1924, pp. 48-56 and 64-67 and (discussion) 67-69, 18 figs. Some developments in measuring and latest scientific advancement in practical measurement in its application to economical quality production; production and maintenance of standards in form of reference length bars.

Simplification. Economic Progress of Simplification, E. W. McCullough. Iron Age, vol. 113, no. 4, Jan. 24, 1924, pp. 285-287. More than five-sixths of number of varieties formerly used have been eliminated in some industries; help of trade associations.

MANUFACTURING PLANTS. See AUTOMOBILE MANUFACTURING PLANTS; FACTORIES; FOUNDRIES; MACHINE SHOPS, etc.

MAPPING

Aerial. Aerial Maps Made to Facilitate California Home-Site Survey, T. R. Mini. Eng. News-Rec., vol. 93, no. 7, Aug. 14, 1924, pp. 264-265, 1 fig. Mosaic superimposed on plan-table topographic sheet eases work of plotting roads and trails in hills near Pasadena.

Aerial Photography in. Aerial Photography an Aid to Better Map Making, Gerard H. Matthes. Eng. News-Rev., vol. 92, no. 1, Jan. 3, 1924, pp. 25-27. Explains uses to which engineer can put bird's-eye, mosaic and line maps in revivifying and bettering map making.

Air Photography as an Aid to Survey, F. J. Salmon. Surveyor, vol. 34, no. 3, Nov. 1923, pp. 98-106. Troubles to contend with in producing maps from photographs; methods used in air photo mapping during war and which, so far, do not appear to have been very markedly improved upon; attempts that have been and are being made to overcome major difficulties.

Airplane Sketches and Maps (Luftbildskizze und Luftbildkarte), A. Schlötzer. Bauingenieur, vol. 5, no. 4, Feb. 29, 1924, pp. 81-86, 5 figs. partly on supp. plate. Use of airplane photographs for drawing of new maps as well as for checking up and correction of old ones is described and illustrated by an example. Such maps are as exact as topographical ones.

Photographical Measuring Methods (Fotografiska mätmetoder). Teknisk Tidskrift, vol. 54, nos. 5, 8, and 9, Feb. 2, 23, and Mar. 1, 1924, pp. 34-36, 60-63, and 67-70 (Allmänna Avdelningen), 13 figs. Explains theory of may drawing from photographs and describes various methods of taking suitable photographs from airplanes. Describes autocartograph, designed by Hungershoff and built by Heyde, and stereoautograph, invented by v. Orel and designed and built by Zeiss in Jena, and explains how to use them to draw maps from airplane photographs.

Stereophotography in Aerial Mapping, J. W. Bagley. Military Engr., vol. 16, no. 88, July-Aug. 1924, pp. 303-306, 9 figs. Operation of stereoscope; difficulty in securing vertical photographs and of interpreting those taken at a slant; gyroscopic stabilizers, etc.

The Making of Greater New York's Air Map. Aviation, vol. 16, no. 1, Jan. 7, 1924, pp. 16-17, 1 fig. Planes flew 3000 mi. and photographed 625 sq. mi. on largest city mapping project ever attempted.

See also SURVEYING, Aerial.

Earth-Figure Variations, Effect of. Effect of Variations in the Assumed Figure of the Earth on the Mapping of a Large Area, W. D. Lambert. U. S. Coast & Geodetic Survey—Spec. Pub. No. 100, serial no. 256, 1924, 35 pp., 6 figs. Various determinations of earth's mean figure; spheroids actually in use for geographic purposes; effect of change in dimensions of spheroid on computation of a triangulation; effect of change of spheroid on triangulation covering a large area; examples of effect of change of spheroid; formulas for computation of geodetic positions over long lines.

France, Methods and Instruments Employed. The New Maps of France (Les nouvelles cartes de France), A. B. des Chaumes. Génie Civil, vol. 84, no. 6, Feb. 9, 1924, pp. 125-128, 9 figs. partly on supp. plate. Map on scales of 1/20,000 and 1/50,000; actual status and plans made for execution of maps; methods of execution. See also article by same author, entitled Method of Preparing the New Map of France, in same journal, no. 7, Feb. 16, 1924, pp. 149-156, 13 figs., describing methods and instruments employed.

Orebody Cross-Sections. See ORE DEPOSITS, Mapping Cross-Sections of.

Photographic. Photographic Surveying for Mining Engineers, L. A. Woodworth. Eng. & Min. Jl.-Press, vol. 118, no. 13, Sept. 27, 1924, pp. 485-490, 8 figs. Describes author's experience in photographic mapping. Bibliography.

Topographic. A Review of Topographic Mapping, G. S. Smith. Military Engr., vol. 16, no. 86, Mar.-Apr. 1924, pp. 108-115, 7 figs. partly on supp. plate. Review of development of topographic mapping, and experience of government organizations.

See also AERIAL PHOTOGRAPHY, Topographic Mapping.

Variations in Figure of Earth, Effect of. Effect of Variations in the Assumed Figure of the Earth on the Mapping of a Large Area, W. D. Lambert. U. S. Coast & Geodetic Survey—Spec. Pub. No. 100, serial no. 258 (1924), 35 pp., 11 figs. Various determinations of earth's mean figure, spheroids actually in use for geographic purposes, effect of change in dimensions of spheroid on computation of triangulation, effect of change of spheroid on triangulation covering large area. Gives formulas and makes calculations. Tables.

MARBLE

Electric Conductivity of. Electric Conductivity of Marble (Leitfähigkeitsmessungen an Marmor), G. Stetter. Physikalische Zeit., vol. 25, no. 18, Sept. 15, 1924, pp. 441-443. Dependence of electric resistance on moisture; tests carried out in air saturated with moisture and in dry air; electric conductivity as index to constitution of rock.

Peru. Marble: A New Peruvian Industry, N. Rounsevell. Pan Am. Union, vol. 58, no. 6, June 1924, pp. 551-561, 10 figs. Quarry at Pachacamac, producing beautiful "black and gold" marble; notes on factory equipment; what marble industry means for Peru.

Tennessee. Marble Deposits of East Tennessee. Tenn.—Dept. Education, Division Geology, Bul. no. 28, 1924, 264 pp., 112 figs. partly on supp. plates. Pt. I: Occurrence and Distribution, by C. H. Gordon; Pt. II: Constitution and Adaptation of the Holston Marbles, T. N. Dale; Pt. III: Technology of Marble Quarrying, O. Bowles.

MARINE BOILERS

Care and Maintenance. The Economical Working of Marine Cylindrical Boilers. Mar. Engr. & Naval Architect, vol. 47, no. 558, Mar. 1924, pp. 85-86 and 103. Discusses points in connection with care and maintenance of Scotch boilers after a voyage, before lighting up, and while steaming.

Combined Fire-Tube and Water-Tube. A Combined Fire-Tube and Water-Tube Boiler. Shipbldg. & Shipg. Rec., vol. 24, no. 26, Dec. 25, 1924, pp. 745-746, 3 figs. Trial results of Prudhon-Capus boiler which is finding increasing adoption in French merchant service.

Explosions. See BOILER EXPOSIONS, Marine Boilers.

Oil Burning in. Oil Burning in Marine Boilers. Mar. Engine & Nav. Architect, vol. 47, no. 557, Feb. 1924, pp. 68-69. Bunkering considerations; precautions; entering tanks; heating of oil; feeding to burners; cones.

Prudhon-Capus. A Marine Boiler with Accelerated Circulation. Mar. Engr. & Nav. Architect, vol. 47, no. 556, Jan. 1924, pp. 33-34, 1 fig. Prudhon-Capus boiler to be adopted on new French liners.

Scotch. Scotch Marine Boilers. Power Plant Eng., vol. 28, no. 1, Jan. 1, 1924, pp. 28-30, 5 figs. General considerations of types and details of construction.

Tests. Tests of Marine Boilers, H. Kreisinger, J. Blizard, A. R. Mumford, B. J. Cross, W. R. Argyle and R. A. Sherman. U. S. Bur. Mines—Bul. 214, 1924, 302 pp., 181 figs. partly on supp. plates. Describes evaporative tests of marine water-tube boilers and of a Scotch marine boiler, also method of conducting tests and such special studies as were made of: combustion in furnaces; heat absorption by boilers; flow of gases through boilers by means of temperature, pitot-tube, and draft measurements; insulation of furnace walls; circulation of water in boiler; effect on heat transmission of blowing soot off heating surfaces with steam blowers; and use of special equipment to improve combustion or to improve heat absorption.

Tests on a Cylindrical Marine Boiler with and without Preheated Air, W. H. Owen. Mar. Eng., vol. 29, no. 4, Apr. 1924, pp. 244-248, 8 figs. Account of tests undertaken to ascertain what economical results were to be expected from a marine boiler of cylindrical type when air for combustion was preheated by new form of heater to a degree much higher than had been possible with type of apparatus hitherto used, and to compare this efficiency with that obtained with natural draft. Abstract of paper read before Instn. Engrs. & Shipbldrs. in Scotland.

Water-Tube. Standard Conditions for the Design and Construction of Water-tube Marine Boilers. Mech. Wld., vol. 75, no. 1940, Mar. 7, 1924, pp. 149-150. Rules for water-tube boilers, based on recommendations of British Marine Engineering Design and Construction Committee, recommended for adoption by Board of Trade, Lloyd's Register, British Corporation, and Bureau Veritas.

Water-Tube, Feed Systems. Details of Feed Systems for Marine Water-tube Boilers, C. C. Pounder. Mech. Wld., vol. 76, nos. 1972 and 1975, Oct. 17 and Nov. 7, 1924, pp. 246-247 and 293-294, 4 figs. Oct. 17: Discusses two systems. Nov. 7: Deals with avoidance of trouble from calcareous deposits and from corrosion, and with arrangement of pipes and mountings.

MARINE BORERS

Bermuda. Marine Borers in Bermuda, E. L. Mark, and New Species of Shipworms in Bermuda, W. F. Clapp. Am. Acad. Arts & Sci.—Proc., vol. 59, no. 11-12, May 1924. Contributions from Bermuda Biological Station for Research, nos. 142 and 143, pp. 259-294, 30 figs.

Destructive Action of. The Deterioration of Structures in Sea-Water. Engineering, vol. 118, no. 3075, Dec. 5, 1924, pp. 774-775. Review of report published by Committee of (Brit.) Instn. Civ. Engrs., giving results of experiments and observations.

Destructive Organisms. Destructive Marine Organisms. Engineering, vol. 137, no. 3027, Jan. 4, 1924, pp. 5-7. Refers to portions of three reports of committee appointed by Instn. Civ. Engrs. in 1916, dealing with timber and marine organisms which attack it.

Mollusk. Observations on Rock Boring Mollusks in Concrete, W. R. Sadler and D. E. Hughes. Eng. News-Rec., vol. 93, no. 26, Dec. 25, 1924, pp. 1027-1028. Analyses show acid used by borers in cement mortar at Los Angeles harbor; aggregate unlike rock on beach is immune.

Piling, Destruction by. See PILES, Marine Borers, Destruction by.

Protection Against. New Preservative Solution for Wooden Hulls May End Ravages of Teredo Worm. Nautical Gaz., vol. 106, no. 11, Mar. 15, 1924, p. 284. Description of Holzapfel mercurized process for making marine borers harmless.

Results of Experiments in Treatment of Piling Specimens Against Attack by Marine Borers, J. D. Maclean. Eng. & Contracting (Railways), vol. 61, no. 3, Mar. 19, 1924, pp. 626-634, 6 figs. Résumé of research work carried on by United States Forest Service over a period of 12 years.

The Preservation of Marine Structures, Wm. G. Atwood. Military Engr., vol. 16, no. 90, Nov.-Dec. 1924, pp. 507-510, 6 figs. Results of investigations of Nat. Research Council, supplementary to previous articles in same journal (May-June 1923); it is shown that certain species of shipworms can cause great damage in water of much lower salinity than had previously been thought; pile coatings and non-metallic armors are less expensive and less efficient than some impregnating methods and metal armors; other results.

Wood Preservation Against. See WOOD PRESERVATION, Marine Borers.

MARINE ENGINES

Lentz. Double Compound Reciprocating Engine of Steamer "Bilbao" (Die Doppelverbund-Kolbenmaschine des Dampfers "Bilbao"), J. Eggers. Hanomag-Nachrichten, vol. 11, no. 129-130, July-Aug. 1924, pp. 139-142, 4 figs. Design and construction of Lentz unit marine engine for single-screw freight steamer Bilbao; fuel consumption 0.48 kg. coal per i.hp.

Oil Engines. See OIL ENGINES, Marine.

Reciprocating, Water Rates of. Water Rates of Marine Reciprocating Engines, E. A. Stevens, Jr. Mar. Eng., vol. 29, nos. 5 and 6, May and June 1924, pp. 293-297 and 364-368, 9 figs. Quick method of estimating water rates with a reasonable degree of accuracy; effect of change of clearances; correction for fractional loads; superheat; variations; triple-versus quadruple-expansion engines; problems illustrating methods of estimating water rates.

MARINE STEAM TURBINES

Auxiliary Machinery, Drive of. The Application of the Steam Turbine for Auxiliary Machinery, R. W. Allen. Engineering, Apr. 11, 1924, pp. 477-479, 7 figs., Engineer, vol. 137, no. 3565, Apr. 25, 1924, pp. 455-457, 1 fig., and Mar. Eng. & Shipg. Age, vol. 29, no. 9, Sept. 1924, pp. 554-555 and 558, 5 figs. General advantages of turbine; turbine-driven electric generating sets, boiler feed pumps, and boiler-room fans; adaptability of turbine to general arrangement of machinery in engine and boiler rooms. (Abstract.) Paper read before Instn. Nav. Architects.

Balancing Rotors. Method of Balancing Turbine Rotors of Scout Cruiser Raleigh, C. Bean. Am. Soc. Nav. Engrs.—Jl., vol. 36, no. 1, Feb. 1924, pp. 30-33, 5 figs. Balancing device and method of making test.

Blade Material. Steam and Compressed-Air Trials with Turbine-Blade Material (Dampf- und Druckluftblasversuche mit Turbinenschaufelmaterial), B. Schulz. Brennstoff- u. Wärmewirtschaft, vol. 6, no. 6, June 1924, pp. 138-140, 2 figs. Discusses tests carried out by German Navy in devising acceptance test for blade material; 25 per cent Ni steel gave best results.

De Laval. Geared Turbine Drive. Pacific Mar. Rev., vol. 21, no. 4, Apr. 1924, pp. 216-217 and 242, 4 figs. Particulars of De Laval compound steam turbine with double-reduction gear, which is to be installed in Southern Pacific single-screw passenger steamer.

Design and Operation. Water Rates of Geared Turbines, H. E. Brelsford. Mar. Eng. & Shipg. Age, vol. 29, no. 3, Mar. 1924, pp. 171-174, 4 figs. Design and operating factors of impulse, reaction and combined impulse reaction turbines tending to increase economy.

Geared. Geared Turbine Machinery for the SS. "Drottningholm." Engineering, vol. 118, no. 3077, Dec. 19, 1924, pp. 841-842, 12 figs., partly on supp. plate and p. 834. Details of turbines constructed by Aktiebolaget de Lavals Angturbin, Stockholm, and installed in vessel, formerly S. S. Virginian.

High Pressure and Superheating. Modern Tendencies in Steam Turbine Power Plants, E. Berg. Mar. Eng., vol. 29, no. 5, May 1924, pp. 305-309, 10 figs. Advantages obtained in adoption for marine propulsion of high steam pressure, high superheat, steam extraction for heating feedwater and reheating. Abstract of paper read before metropolitan section of A. S. M. E.

Mauretania Turbines, Repair of. Reconditioning the Turbines of the s.s. Mauretania. Engineer, vol. 137, no. 3564, Apr. 18, 1924, pp. 410-412, 4 figs. Describes repairs carried out in 1923.

Reaction. Operating and Maintaining Marine Reaction Turbines, O. M. Gordon. Mar. Eng., vol. 29, no. 11, Nov. 1924, pp. 673-676. Practical suggestions on proper methods of operating, adjusting, and maintaining both turbine and reduction gear.

Reduction Gears. See REDUCTION GEARS.

Reversing-Clutch. The Reserving-Clutch Marine Turbine, O. A. Wiberg. Engineering, vol. 118, no. 3056, July 25, 1924, pp. 144-145, 5 figs. Describes oil-operated reversing clutch in connection with mechanical reduction gear and its successful application to number of ships. Abstract of paper read before World Power Conference.

MARTENSITE

Nature of. See IRON, Martensite, Nature of.

MASONRY

Calculation. Calculation of Masonry of Rectangular Cross-Section Under Compound Bending Load (Note sur le calcul des massifs en maçonnerie à section rectangulaire sollicités par flexion plane composée), F. Campus. Association des Ingénieurs sortis de l'Ecole Polytechnique de Bruxelles—Bul. Technique, vol. 19, no. 5, 1923, pp. 199-209, 3 figs. Discusses elastic stability of masonry and simplifies application of classical formulas.

Strength of. See MORTARS, Elasticity and Strength of Masonry.

MATCH MANUFACTURE

France. Manufacture of Matches in the French State Factories (La fabrication des allumettes dans les manufactures de l'état français). Nature, no. 2633, Sept. 20, 1924, pp. 180-186, 7 figs.

Details of manufacture of seven kinds of matches, including processes and equipment used.

MATERIALS

Care and Control. The Care and Control of Raw Materials. Factory, vol. 32, no. 6, June 1924, pp. 831-834, 872, 874 and 876, 4 figs. Plan adopted by Bausch & Lomb Optical Co. involves use of one central store and branch or divisional stores.

Elastic Limits. The Static and Dynamic Elastic Limit in Material Testing and Construction (Die statische und dynamische Elastizitätsgrenze im Marerialprüfungs- und Konstruktionswesen), G. Welter. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 1, Jan. 5, 1924, pp. 9-11, 3 figs. Points out necessity for reform in material-testing practice and makes plea for detailed investigation of statistically and dynamically true limit of elasticity of all structural materials, in order to keep pace with requirements of modern machinery construction.

Elasticity. See ELASTICITY.

Elasticity and Fatigue Breakdown. The Elastic Limit in Tension, and Its Influence on the Breakdown by Fatigue, J. M. Lessells. Engineering, vol. 118, no. 3076, Dec. 12, 1924, pp. 813-814, 9 figs. Deals with degree of influence which elastic properties of materials exert on their actual breakdown by fatigue; describes apparatus, and method of procedure; tension and fatigue; endurance by deflection. (Abstract.) Paper read before Instn. Mech. Engrs.

Fire-Resisting. Temperature Limits of Technical and Scientific Work (Materials of Greatest Resistivity Against Fire) [Die Temperaturgrenzen technischer und wissenschaftlicher Arbeit (die feuerbeständigsten Stoffe)], O. Ruff. Metall u. Erz, vol. 21, no. 12, June 2, 1924, pp. 272-277. Discusses carbon and tungsten as of highest resistivity, followed by some carbides and oxides including aluminum oxide and zinconium dioxide, also chemical behavior of these in furnace gases, etc.

Handling. See MATERIALS HANDLING.

Heat Conductivity of. Determination of Heat Conductivity of Engineering Materials (Ueber die Bestimmung der Wärmeleitfähigkeit technischer Materialien), Zeit. für Technische Physik, vol. 5, no. 6, 1924, pp. 233-236, 4 figs. Results of tests with materials used in building construction and machine construction.

Magnetic Properties, Testing of. A Null Method for Testing Magnetic Properties of Materials, Y. Niwa. Denki Gakkwai Zasshi (Jl. Inst. Elec. Engrs. Japan), no. 435, Oct. 1924, pp. 929-953, 17 figs. Description of theory, construction and operation of double bar and double yoke type permeameter devised by author, and experimental studies made of it. Gives satisfactory results in measurement of magnetic properties of solid and sheet materials of iron and steel. (In English).

Overstrain and Strength. A New Theory on Overstrain and Strength of Materials, H. P. Troendly and G. V. Pickwell. Am. Soc. for Steel Treating—Trans., vol. 6, no. 2, Aug. 1924, pp. 145-170, 7 figs. Discusses new theory on mechanics of overstrain and strength, i.e., plastic transfer of proportional elastic range; increase in strength in any direction is at expense of strength in opposite direction; increase in strength in direction of overstrain is through mechanism of slip, etc.

Plastic Deformations. The Theory of Plastic Deformations and Subsequent Stresses Caused by Them in Materials (Zur Theorie plastischer Deformationen und der hierdurch im Material hervorgerufenen Nachspannungen), H. Hencky. Zeit. für angewandte Mathematik u. Mechanik, vol. 4, no. 4, Aug. 1924, pp. 323-334, 5 figs. Author demonstrates physical importance of A. Haar's and v. Kármán's work on behavior of plastic media in the vicinity of the elastic field, and shows that by adopting their method a system of differential equations can be obtained which covers entire field of plastically elastic problems of equilibrium.

Plymax. A New Steel Coated Material, F. W. Cook. Can. Machy., vol. 32, no. 17, Oct. 23, 1924, p. 23, 8 figs. Notes on a material known as "Plymax," made by Venesta Ltd., of Lond., Eng., consisting of a plywood core, to which light-gage galvanized iron or lead-coated sheet steel is rigidly fixed. Claimed to be 80 times as stiff as steel plate and twice as stiff as ordinary plywood, weight for weight.

Rupture. Conditions Causing Rupture of Material (Betingelserna för materialbrott), A. F. Samsioe. Teknisk Tidskrift, vol. 54, no. 24, June 14, 1924, pp. 221-223 (Allmänna Avdelningen), 7 figs. Older theories are recorded. Guest's experiments with tough metals are described. Shearing stress or greatest difference between occurring stresses in different directions are proved to cause ruptures of material. Mohr's theory for brittle materials is explained.

Sampling for Inspection. Methods of Sampling for Material Inspection, H. M. Phillips. Ry. Mech. Engr., vol. 98, no. 5, May 1924, pp. 276-278. Study of application of laws of chance; specific cases.

Temperature, Effect of. The Effect of Low and High Temperatures on Materials, F. C. Lea. Engineering, vol. 118, nos. 3076 and 3077, Dec. 12 and 19, 1924, pp. 816-817 and 843-845, 24 figs. Deals with statical tests at temperatures ranging from —80 deg. cent. to 1000 deg. cent. in testing machines of ordinary character to determine elastic properties, breaking strengths, and other data generally obtained by tests at ordinary temperatures; investigation of effect of time upon metals loaded with known stresses; creep phenomena, and stress at various temperatures at which creep in time becomes or does not become zero; hardness tests, and repetition tests. (Abstract.) Paper read before Instn. Mech. Engrs.

Testing. Strength and Material Testing (Festigkeit und Materialprüfung), P. Ludwik. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 10, Mar. 8, 1924, pp. 212-214, 6 figs. Difference in strength and notch action in static, dynamic, and variable stress. Report from Experimental Engineering Inst. of Vienna Technical High School.

MATERIALS HANDLING

Accidents. A Study of Fatal Accidents in Material Handling, D. S. Beyer. Nat. Safety News, vol. 9, no. 3, Mar. 1924, pp. 27-28. Statistical data, and particulars of 16 fatal accidents reported to Liberty Mutual Insurance Co., Boston, Mass.

Apparatus. Characteristics of Construction and Operation of Apparatus for Mechanical Handling (Caractéristiques de construction et de fonctionnement des appareils de manutention mécanique), E. Pacoret. Technique Moderne, vol. 16, no. 21, Nov. 1, 1924, pp. 695-752, 93 figs. Classification of apparatus; continuous conveyors; calculation of aerial cable conveyors; use of electromagnets; various types of electric control; electric braking; safety rules; apparatus for use in shipbuilding yards, harbors, ships, marine and railway terminals, metallurgical plants, foundries, mines, etc.

Production and Conveying of Raw Materials (Rohstoffgewinnung und Beförderung), E. Simon. Tonindustrie-Zeitung, vol. 48, no. 76, Sept. 20, 1924, pp. 829-831, 7 figs. Apparatus shown at

Seddin Railway Exposition, including automatic unloaders, dredges, locomotives, etc.

See also Equipment.

Ashes. See ASH HANDLING.

Automobile Manufacturing Plants. Cutting Costs by the Use of Conveyors, F. H. Colvin. Am. Mach., vol. 60, no. 26, June 26, 1924, pp. 969-971, 7 figs. Some of the Maxwell methods of handling chassis and body in their various stages, and some time-saving devices employed.

Flexibility in Handling Production Material, A. A. Brown. Soc. Automotive Engrs.—Jl., vol. 14, no. 2, Feb. 1924, pp. 148-150. Routing and handling materials through receiving department; stocking of materials; service-department requirements; shortage report and its significance; stock records.

Lumber Handling in an Automobile-Body Plant, B. Nagelvoort and T. D. Perry. Mech. Eng., vol. 46, no. 8, Aug. 1924, pp. 472-477 (includes discussion), 11 figs. Yard layouts for efficient and economical handling, storing, drying, and cutting of lumber. Steam consumption of dry kilns. Equipment for handling lumber, including dry-kiln trucks and transfer cars, power transfer cars, lumber lifts, stackers, etc.

Material Handling as Our Key to Many Savings, M. R. Denison. Factory, vol. 33, nos. 1 and 2, July and Aug. 1924, pp. 30-33, 60, 62, 64, 66, 68, 70, 72, 74, 76, 78, 80, 82, 84, and 86; and 190-193 and 242-246, 27 figs. Important economies in labor, in inventory, and in floor space that have come out of material-handling methods at Studebaker plant. Details of methods.

Material Handling Is Cut to Minimum in Jewett Assembly Plant, W. L. Carver. Automotive Industries, vol. 50, no. 6, Feb. 7, 1924, pp. 281-288, 10 figs. Facilities for straight-line material flow and elimination of burdensome handling incorporated in new assembling plant of Paige-Detroit Motor Car Co.

Material-Handling Problems Encountered in the Assembly of Automobiles, M. R. Denison. See also Automotive Manufacturer, vol. 66, nos. 3 and 4, June and July 1924, pp. 24-26 and 10-12, 1 fig. Mech. Eng., vol. 46, no. 6, June 1924, pp. 339-342. Time- and labor-saving methods devised for handling and inspection of raw materials and finished parts in large modern automobile-manufacturing plant; deals with functioning of stores divisions as service departments, loss of material, reductions effected in amount of clerical labor required, instruction of store-room men, location of store rooms, handling sheet metal, transportation, final car assembly, etc.

Wide Use of Material Handling Equipment in Auto Plants. Automotive Mfr., vol. 65, nos. 10, 11, 12, and vol. 66, nos. 1 and 2, Jan., Feb., Mar., Apr. and May 1924, pp. 21-23 and 30, 11-13, 5-9, 19-20, and 6-8, 21 figs. The various kinds of conveyors used and the widely differing work which they are doing successfully and at a saving. Symposium presenting advantages of all forms.

Brick Plants. Mechanical Handling Equipment in Face Brick Manufacture, G. L. Montgomery. Chem. & Met. Eng., vol. 31, no. 11, Sept. 15, 1924, pp. 412-416, 9 figs. Describes plant of Bradford Brick & Tile Co. at Lewis Run, Pa., in which most modern mechanical handling devices have been adopted throughout.

See also BRICKMAKING, Materials Handling.

Cable Tramways. See CABLE TRAMWAYS.

Cableways. See CABLEWAYS.

Cake Bakery. Conveying under Difficulties in a Cake Bakery, G. F. Zimmer. Indus. Mgmt. (Lond.), vol. 11, no. 7, Apr. 3, 1924, pp. 189-192, 4 figs. Satisfactory solution of difficult problem of installing conveying plant at cake bakery of Kearley & Tonge, Ltd., which was laid out in a way which rendered adoption of handling plant most difficult.

Cargoes. See CARGO HANDLING.

Cement Mills. Handling 42,000,000 Tons of Raw Materials a Year, L. N. Duryea. Mgmt. & Administration, vol. 8, no. 1, July 1924, pp. 155-160, 11 figs. Mechanical conveying methods in cement industry.

Clay. See JETTIES, Clay-Cargo.

Coal. See COAL HANDLING.

Coke. See COKE HANDLING.

Concrete Building Units Manufacture. Economical Handling of Raw Materials in Building Unit Manufacture. Concrete, vol. 25, no. 1, July 1924, pp. 13-18, 6 figs. Summary of methods in common use in excavating and handling sand and gravel, according to conditions to be met.

Concrete Materials. See CONCRETE CONSTRUCTION, Swiss Alps.

Conveyors. See CONVEYORS.

Cost-Saving Methods. Materials Handling Methods That Have Added to Industrial Profits, Geo. E. Hagemann. Mgmt. & Administration, vol. 7, no. 5, May 1924, pp. 557-562, 1 fig. Experience data from 55 plants using larger equipment.

Cotton Mills. See CONVEYORS, Cotton-Mill.

Cranes. See CRANES.

Derricks. See DERRICKS.

Economies of. Fundamental Economies of Materials Handling, M. L. Begeman. Mech. Eng., vol. 46, no. 7, July 1924, pp. 405-409 and (discussion) 410. Discusses advantages of handling materials mechanically without reference to particular types of equipment; deals with necessity for substitution of mechanical handling of materials for labor and the economies to be gained by such substitution; points to be considered in analysis of proposed installation.

Elevators. See ELEVATORS.

Equipment. Cutting Corners in Material Handling, A. G. J. Rapp. Blast Furnace & Steel Plant, vol. 12, no. 4, Apr. 1924, pp. 12-16, 14 figs. Horizontal conveyors, vertical hoists, tractors, cranes and savings effected by their use.

Improvements in Transportation Engineering (Allgemeine Fortschritte auf dem Gebiete der Transporttechnik), C. Michenfelder. Praktische Maschinen-Konstrukteur, vol. 57, no. 8, Mar. 1, 1924, pp. 77-79, 6 figs. Describes latent designs of electric industrial trucks, electric cranes and conveyors.

Measuring the Savings of Mechanical Handling, W. T. Spivey. Mgmt. & Administration, vol. 7, no. 5, May 1924, pp. 551-556, 8 figs. Factors in selection of equipment for an installation.

Mechanical Handling Machinery at the British Empire Exhibition, Wembley. Indus. Mgmt. (Lond.), vol. 11, nos. 11, 12, 13, 14, and 15, May 29, June, July, Aug., and Sept., pp. 297-300, 327-329, 355-360, 385-387, and 415-420, 16 figs. Describes exhibits of different firms; also coal and ash-handling plant of Empire Exhibition power plant.

Speeding Industrial Progress, M. W. Potts. Indus. Mgmt. (N. Y.), vol. 67, no. 6, June 1924, pp. 348-355, 12 figs. How mechanical handling is revolutionizing all industry.

Trends in Handling Materials, F. E. Gooding. Indus. Engr., vol. 82, no. 2, Feb. 1924, pp. 81-89, 12 figs. Reviews present tendencies and practices in industrial plants in handling material by conveyors, industrial trucks, tractors, hoists, and similar equipment.

Factories. Development of Conveying and Unloading Plants Into Large Scale Installations (Die Entwicklung der Förder- und Verladeanlagen zu grossen Abmessungen and Leistungen), G. von Hanffstengel. Maschinenbau, vol. 3, no. 16, May 22, 1924, pp. 557-567, 34 figs. Discusses extensions of conveying and unloading plants generally; advantages of large capacities; progress in various conveying systems; conveying by air or water.

Receiving, Storing and Issuing Factory Materials, P. M. Atkins. Indus. Mgmt. (N. Y.), vol. 67, no. 2, Feb. 1924, pp. 120-126, 9 figs. Explains fundamentals which govern working out of practical system for any given set of conditions.

Shop Transportation Economics, S. M. Lowry. Mgmt. & Administration, vol. 7, no. 5, May 1924, pp. 533-538, 6 figs. Westinghouse Elec. & Mfg. Co.'s methods and results.

Flour. See CONVEYORS, Flour Mills.

Ford Motor Co. Plants. Material Handling a Factor in Ford Profits, A. Murphy. Can. Machy., vol. 32, no. 26, Dec. 25, 1924, pp. 135-143, 20 figs. Shows economies of mechanical equipment at Ford, Ont., plant.

Mechanical Handling at River Rouge, M. W. Potts. Indus. Mgmt. (N. Y.), vol. 68, no. 2, Aug. 1924, pp. 67-114, 103 figs. Describes receiving and distributing raw materials, blast furnace as a materials-handling problem, world's most modern foundry, handling large castings through production operations in machine shop, power-house fuel handling and electric-furnace building, sawmill and the tractor assembly, successful innovations in plate-glass manufacture, mechanical handling in by-products plant, and miscellaneous industries within Ford plant.

Foundries. See FOUNDRIES, Materials-Handling Equipment.

Freight. See FREIGHT HANDLING.

Glass Plants. Handling of Materials in Modern Glass Plant, D. M. Ewell. Eng. Wld., vol. 25, no. 3, Sept. 1924, pp. 157-161, 10 figs. See also Belting, vol. 25, no. 3, Sept. 1924, pp. 48-54, 10 figs. Describes facilities at works of Owen Bottle Co., Charleston, W. Va.

Materials Handling in Glass Works (Materialbewegung in Glashütten), C. Michenfelder. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 21, May 24, 1924, pp. 515-519, 20 figs. Nature and quantity of material to be handled; problems connected with transport of coal, mixtures and glass.

Grain. See GRAIN ELEVATORS; GRAIN HANDLING.

Labor-Saving Equipment. Quality Production from the Application of Automatic Handling Equipment, C. J. Alfred. Mgmt. & Administration, vol. 7, no. 5, May 1924, pp. 563-566, 7 figs. Labor-saving methods of Am. Sugar Refining Co.

Lifting Jacks. See LIFTING JACKS.

Lignite. See LIGNITE, Conveying.

Loaders and Unloaders. Mechanical Loaders and Unloaders, Math. W. Potts. Indus. Mgmt. (N. Y.), vol. 67, no. 2, Feb. 1924, pp. 107-114, 13 figs. How they cut costs and decrease car shortage.

Locomotive Coaling Plants. See LOCOMOTIVES, Coaling Plants.

Lumber. See AUTOMOBILE MANUFACTURING PLANTS, Materials Handling in; LUMBER, Handling.

Machine Shops. Train-Despatching in an Automotive-Parts Shop, R. S. Spencer. Am. Mach., vol. 60, no. 26, June 26, 1924, pp. 945-946, 3 figs. How a force of 250 truckers has been reduced to 9 men by application of railroad train-despatching methods to inter-departmental transportation of materials.

Metal-Working Plants. Handling Materials in Metal Working Plants. Can. Machy., vol. 32, no. 12, Sept. 18, 1924, pp. 29-33, 8 figs. Types of equipment; moving cars and materials; types of cranes.

Metallurgical Works, Ruhr. Materials Handling in the Metallurgical Industry of the Ruhr (Les engins de manutention dans l'industrie de la Ruhr), R. de Boysson. Vie Technique & Industrielle, vol. 5, no. 54, Mar. 1924, pp. 365-371, 12 figs. Describes gantries and cranes employed in storage houses and yards, blast-furnace, rolling-mill equipment, and foundry equipment, interplant transportation, and private railways connecting mines and plants.

Methods. Material Handling in a Plant Making a Diversified Product, H. C. Perkins. Factory, vol. 33, no. 5, Nov. 1924, pp. 654-657, 730 and 732, 10 figs. Results obtained from installing conveyors; semaphores simplified handling of trucks.

Offices. Mechanical Conveying Apparatus in Business (Les appareils transporteurs mécaniques de bureau), J. Jacob. Technique Moderne, vol. 16, no. 23, Dec. 1, 1924, pp. 815-821, 24 figs. Discusses systems and apparatus for conveying papers, documents, etc., for large offices, banks, department stores, etc., including gravity systems, belt conveyors, pneumatic tubes, and pick-up systems.

Ore. See ORE HANDLING; ORES, Transportation by Airplane.

Plant Painting Department. Handling Material in Painting Department, E. T. Bennington. Iron Age, vol. 113, no. 20, May 15, 1924, pp. 1413-1416, 6 figs. Overhead tramways with special carriers take filing cabinets through three dips, a drip and drying oven; automatic equipment featured.

Profitable Methods. Materials Handling Methods That Have Added to Industrial Profits, Geo. E. Hagemann. Mgmt. & Administration, vol. 7, no. 6, June 1924, pp. 693-694, 2 figs. Experience data on actual installations; cost of operation of 15-ton Brownhoist crane, and link-belt conveyors.

Railway Shops. Identification of Material Handling Costs Develops Unusual Possibilities. Ry. Rev., vol. 75, no. 19, Nov. 8, 1924, pp. 706-714, 7 figs. Materials-handling system established in Angus shops of C. P. railway makes possible correct cost finding and permits control of production costs.

Routing. Controlling the Flow of Package Products by Materials Handling Equipment, J. Mendleson. Mgmt. & Administration, vol. 7, no. 5, May 1924, pp. 545-550, 8 figs. Labor-saving devices and routing methods employed by B. T. Babbitt Co. in manufacture of chlorinated lime, caustic soda, lye, etc.

Shipboard. See SHIPS, Hoisting Apparatus; Unloading.

Shop Transportation. Reducing the Cost of Shop Trucking, Robt. T. Kent. Mgmt. & Administration, vol. 7, no. 3, Mar. 1924, pp. 317-322, 6 figs. Methods which effected big savings in plants where adopted.

Standardization of Equipment. Is Materials Handling Emulating the Automobile Industry? M. W. Potts. Indus. Mgmt. (N. Y.), vol. 67, no. 5, May 1924, pp. 265-271, 11 figs. Review of development of equipment in past years and consideration of new developments and of standard equipment now being produced.

Stone and Clay Industries. Modern Conveying in the Stone and Clay Industries. (Zeitgemässes Förderwesen in der Industrie der Steine und

Erden). Tonindustrie-Zeitung, vol. 48, nos. 78 and 87, Sept. 27 and Oct. 29, 1924, pp. 863-865 and 987-993, 27 figs. Methods and different types of conveyors employed.

Sugar. See CRANES, Traveling; Unloading.

Tie-Treating Plant. Overhead Cranes Serve New Creosoting Plant. Ry. Age, vol. 77, no. 24, Dec. 13, 1924, pp. 1055-1058, 6 figs. Details of improvements designed to increase efficiency, safety and economy in operation embodied in new timber-treating plant of Southern Pac. at Wilmington, Cal.; how ties are handled; creosoting plant; auxiliary facilities.

Unloaders. See UNLOADERS.

Zinc Works. The Handling of Materials at the Risdon Works of the Electrolytic Zinc Co. of Australasia, Ltd., A. W. Cook. Australasian Inst. Min. & Met.—Proc., no. 52, Dec. 31, 1923, pp. 167-184, 9 figs. Details of handling at 100-ton zinc plant at Risdon covering area of 149 acres with elevation from 6 ft. to 163 ft. above high-water mark.

MATHEMATICS

Circle of Inertia. Mohrs' Circle of Inertia (Ueber den Mohrschen Trägheitskreis), F. Schilling. Bauingenieur, vol. 5, no. 18, Sept. 30, 1924, pp. 576-577, 4 figs. Discusses derivation of Mohrs' circle of inertia and its properties and gives a new derivation with examples.

Elliptic Functions. Practical Use of Elliptical Functions (Utilité pratique des fonctions elliptiques), E. Mathy. Revue Universelle des Mines, vol. 67, no. 5, Mar. 1, 1924, pp. 319-322. Application of elliptical functions to calculation of resistance of materials, and mutual induction of two electric circuits.

Engineering. Mathematics and Engineers (Les mathématiques et les ingenieurs), E. Marcotte. Arts et Métiers, vol. 77, no. 49, Oct. 1924, pp. 361-366. Discusses advantages of mathematics in engineering and gives examples of application of differentials, differential equations and their solution, etc.

Key Equations. Formulation of Key Equations (Die Aufstellung von Schlüsselgleichungen), H. Karll. Schiffbau, vol. 25, no. 24, Sept. 24, 1924, pp. 654-656, 4 figs. Discusses formulation of equations for determining practically, results of processes by graphic trigonometric method.

MATTER

Atoms. See ATOMS.

Electrons. See ELECTRONS.

Ether. See ETHER.

Gravitation. See GRAVITATION; GRAVITY.

Molecular Activation. The Mechanism of Molecular Activation, R. G. W. Norrish. Chem. & Industry, vol. 43, no. 13, Mar. 28, 1924, pp. 327-328. Considers method by which problem of chemical reactivity may be attacked, which may be termed hypothesis of kinetic activation.

MEASUREMENTS

Accuracy in. Limits of Accuracy of Physical Measuring (Ueber die Grenze der physikalischen Messgenauigkeit), W. Block. Zeit. für Instrumentenkunde, vol. 44, no. 8, Aug. 1924, pp. 366-370. Bases of time, length, and mass measurements and their units. Maximum accuracy of length and mass measurements equals 5×10^{-7} and 5×10^{-8}.

C. G. S. System. The Dimension Theory of the Cm-Gram-Sec System (Om cgs-systemets dimensionslära), O. Gallander. Teknisk Tidskrift, vol. 54, no. 36, Sept. 6, 1924, pp. 153-154 (Elektroteknik). A severe criticism of said system and its condemnation as incorrect and unsuitable in modern physical science.

Length. Industrial Length Measures, Standard Measures and Systems of Tolerances (La mesure industrielle des longueurs, Etalons de mesures et systèmes à tolérances), H. Stroh. Génie Civil, vol. 84, nos. 25 and 26, June 21 and 28, 1924, pp. 594-597, 615-617, 12 figs. Discusses length measure in connection with production of good quantities and of interchangeable parts, establishing standards; mechanical precision and systems of tolerances; discusses symmetric and asymmetric tolerances, admissible wear of tolerances; standards for length measures.

See also Machine-Shop; INTERFEROMETERS.

Machine-Shop. Shop Measurements, E. Buckingham. Univ. of Toronto Eng. Soc.—Trans. & Year Book, Apr. 1924, pp. 26-34, and Mech. Eng., vol. 46, no. 9, Sept. 1924, pp. 535-538. English and metric standards of length and their interrelation. Accuracy and purposes of shop measurements.

Temperature. See TEMPERATURE MEASUREMENT.

MEASURING INSTRUMENTS

Bibliography. Bibliography for Measuring Instruments With Special Reference to Instruments and Methods of Metrology Used in Mechanical Engineering, F. J. Schlink. Optical Soc. Am.—Jl., vol. 9, no. 3, Sept. 1924, pp. 309-321. Covers general material on physical and mechanical instruments, measurement and production of small linear and angular displacements and distances, vibrations, speeds and time intervals, hysteresis and their relation to instrument design and testing, dynamometers, temperature and humidity, weighing scales, pressure gages, engine indicators, properties and design of springs, etc.

Bridge Loads. The "Ballbox," a New Swedish Device for Measuring Static and Dynamic Reactions at the Supports of Railway Bridges (Die Kugeldose, eine neue schwedische Vorrichtung zur Messung ruhender und dynamischer Auflagerkräfte an Eisenbahnbrücken), Saller. Bautechnik, vol. 2, no. 39, Sept. 12, 1924, pp. 425-426, 3 figs. Details of device consisting of two steel cylinders and a guide bush, the upper cylinder, which carries the load, having a spherical surface which makes a "ball" impression on the lower cylinder, by means of which measurements are calculated.

Electric. See ELECTRIC MEASURING INSTRUMENTS.

End Measuring Machine, Line Standards for. Ruling Line Standards, H. B. Lewis and C. G. Peters. Mech. Eng., vol. 46, no. 11a, mid-Nov. issue, 1924, pp. 796-798, 7 figs. Method of producing line standards free from measurable error by application of light interference, and end measuring machine upon which they are used.

Fluids. Fluid Measuring Devices, D. H. Killeffer. Indus. & Eng. Chem., vol. 16, no. 8, Aug. 1924, pp. 785-788, 8 figs. Devices for discontinuous and for continuous measurements; measurement without loss head; indicating mechanisms; recording meters; formulas applicable to flowmeters; measurement of static volume; specific-gravity records.

Gages. See GAGES.

Machine-Shop. Progress in Construction of Measuring Apparatus for the Machine Shop (Neuere Fortschritte im Bau von Messgeräten für den Maschinenbau), J. Geiger. Maschinenbau, vol. 3, no. 27, Nov. 13, 1924, pp. 1020-1023, 7 figs. Difficulties of general introduction of exact measuring instruments; improvements due to quantity production; particulars of torsiograph

adaptable for measuring vibration, acceleration, etc.

Optical. New Optical Measuring Methods for Tool and Machine Construction (Neue optische Messverfahren für den Werkzeug- und Maschinenbau), A. Steinle. Maschinenbau, vol. 3, no. 9, Feb. 14, 1924, pp. 244-249, 15 figs. New measuring instruments and favorable results obtained with them.

On the Limit of Accuracy in Optical Measurement, A. A. Michelson. Jl. Optical Soc. of Am. & Rev. Sci. Instruments, vol. 8, no. 2, Feb. 1924, pp. 321-328, 3 figs. Calculations for telescope, microscope, interferometer, and spectroscope.

Planimeter, Polar. The Bencze-Wolf Polar Planimeter (Das Bencze-Wolfsche Fadenpolarplanimeter), K. Oltay. Zeit. für Instrumentenkunde, vol. 44, no. 5, May 1924, pp. 217-229, 11 figs. Note for measuring area of hides and skins, pieces of leather, etc.

Precision. Modern Precision Measuring Instruments, W. L. Whitmarsh. Army Ordnance, vol. 4, no. 24, May-June 1924, pp. 381-384 and 400, 8 figs. Describes standard types, including micrometer caliper, vernier tools, vernier bevel protractor, fluid gage, limit gages, etc., and their functioning and use.

Precision Measuring Instruments Used in Gage Inspection, G. K. Burgess. Army Ordnance, vol. 4, no. 24, May-June 1924, pp. 375-380, 8 figs. Deals with such apparatus as is applied in measurement of dimensions of gages and tools used in manufacture of machine parts, artillery ammunition, etc.

Radium Recording. "Radium" Recording Devices, J. H. Powell. Jl. Sci. Instruments, vol. 1, no. 7, Apr. 1924, pp. 205-209, 5 figs. Describes types of recorder, namely, radiation, luminous paint, and shadow type.

Technical, Germany. Technical Measuring Instruments (Technische Messgeräte), W. Block. Maschinenbau, vol. 3, no. 27, Nov. 13, 1924, pp. 1036-1038. Discusses basic difference of scientific and technical measuring, independence of foreign instruments, simplification of existing instruments, etc.

Thread Recorder. Some Uses of the Thread Recorder in the Measurement of Physical Properties, J. L. Haughton and W. T. Griffiths. Jl. of Sci. Instruments, vol. 1, no. 8, May 1924, pp. 225-233, 9 figs. Methods of employing thread recorder for recording changes of dilation and resistivity of metals and alloys with temperature. Describes also method of combining recorded time-temperature and time-property curves to give a single temperature-property curve.

Torsion Meter. The Moullin Torsion Meter. Engineering, vol. 117, no. 3050, June 13, 1924, pp. 764-765, 12 figs. Apparatus for measuring torque in shafts up to 10 in. diam. and transmitting 1500 hp.

Types. Measuring Devices for Controlling Materials (Die Messgeräte zur Kontrolle der Werkstoffe), G. Berndt. Maschinenbau, vol. 3, no. 27, Nov. 13, 1924, pp. 1015-1020. Discusses various instruments for measuring quantity, length, profile, area and volume, and mechanic, electric, magnetic, thermic, optic, and chemical properties of materials.

Vibration Recorders. Conditions Which Measuring Instruments Must Satisfy for Determining Dynamic Effect of Vehicles on Steel Bridges (Welche Anforderungen sind an Messgeräte für die Ermittlung der dynamischen Wirkungen von Fahrzeugen an eisernen Brücken zu stellen?), F. Hülsenkamp. Bautechnik, vol. 2, no. 5, Nov. 28, 1924, pp. 575-577, 4 figs. Particulars of Geiger apparatus for recording vibrations, and examples of curves and interpretation.

MECHANICS

Dynamics. See DYNAMICS.

Elasticity. See ELASTICITY.

Inertia. See INERTIA.

"Motor" Calculation. Application of Motor Calculation (Anwendungen der Motorrechnung), R. v. Mises. Zeit. für Angewandte Mathematik u. Mechanik, vol. 4, no. 3, June 1924, pp. 193-213, 12 figs. Discusses fundamental equations for rigid bodies, general forms of equations of motion, mechanics of continuity, elastic bar, elastic frame, action and reaction of flowing liquids, etc.

Motor Calculation, a New Expedient of Mechanics (Motorrechnung, ein neues Hilfsmittel der Mechanik), R. v. Mises. Zeit. für angewandte Mathematik u. Mechanik, vol. 4, no. 2, Apr. 1924, pp. 155-181, 9 figs. Work is divided into three parts, as follows: (1) simplest definitions of addition and multiplication of motors; (2) brief explanation of main points of dyad calculation, that is, definition of dyad conception within ordinary tri-dimensional vector analysis, connecting this with analogous developments for field of motor calculation; (3) practical examples of applications of new principles and formulas.

Radially-Loaded Arc. The Stability of an Arc under Uniform Radial Pressure (Ueber die Stabilität eines Kreisbogens unter gleichmässigem radialem Druck), P. Funk. Zeit. für angewandte Mathematik u. Mechanik, vol. 4, no. 2, Apr. 1924, pp. 143-146, 1 fig. Calculation of buckling load under influence of radial pressure.

MECHANISMS

Intermittent-Motion. Intermittent Motion Mechanism, A. W. Harris. Machy. (N. Y.), vol. 31, no. 4, Dec. 1924, pp. 301-304, 6 figs. Describes intermittent movement which is not only of rotary type, but will give any variation of intermittent motion that may be required; design for starting one mechanism the instant another stops; arrangement for prolonged rest periods; application to automatic machine.

Kinematic Study of. See MACHINE DESIGN, Kinematic Study of Mechanisms.

MENSURATION

Simpson's Rules. Simpson's Rules Generalized, W. F. Durand. Mech. Eng., vol. 46, no. 12, Dec. 1924, pp. 885-886, 5 figs. Deals with Simpson's rules for finding areas bounded by irregular curve.

MERCURY

Boiler. See BOILERS, Mercury-Vapor.

Compressibility. Equation of State and Compressibility of Mercury (Die Zustandsgleichung und Kompressibilität des Quecksilbers), K. K. Järvinen. Zeit. für Physikalische Chemie, vol. 109, nos. 3-4, May 5, 1924, pp. 275-286, 1 fig.

New Zealand. The Action of Light on Cinnabar, W. H. Cropp. Australasian Inst. Min. & Met.—Proc., no. 52, Dec. 31, 1923, pp. 259-266. Discusses occurrence at Puhipubi, No. Auckland; fresh ore exposed to direct sunlight rapidly changes color from delicate pinks and brilliant reds to shades of translucent bluish-gray.

Quicksilver Production, 1923. Quicksilver in 1923, C. P. Ross. U. S. Geol. Survey (Mineral Resources of U. S.), nos. I:4, Sept. 29, 1924, pp. 35-46. Production; methods of production; prices; imports and exports; uses; mining industry by states; bibliography.

Resources. Report of the Sub-Committee on Quicksilver. Min. & Met. Soc. of America, vol. 17, no. 4, Apr. 1924, pp. 97-105, 2 figs. Report of sub-committee as to bases for formulation of laws and agreements affecting natural resources.

MERCURY-VAPOR PROCESS

Boiler Employing. See BOILERS, Mercury-Vapor.

Principles and Applications. Mercury Vapor as an Industrial Heating Medium, C. Field. Chem. & Met. Eng., vol. 30, no. 25, June 23, 1924, pp. 987-991, 8 figs. Outline of system, with discussion of various other sources of heat at high temperature available for industrial use.

METAL DRAWING

Dies for. See DIES, Drawing.

Shells. Drawing Double-walled Steel Shells, R. B. Hickey. Machy. (N. Y.), vol. 30, no. 8, Apr. 1924, pp. 592-594, 4 figs. Describes dies employed in production of steel shells used in connection with an auxiliary mechanism of an a.c. motor and generally known as "spring barrel tubes," and press operations required in blanking, drawing, redrawing and forming shells.

Unusual Metal Drawing. Machy. (N. Y.), vol. 30, no. 8, Apr. 1924, pp. 588-589, 4 figs. Describes drawing operation of shell having a straight hole and a tapered exterior, metal being comparatively thin at closed end and thickening toward open end; made from open-hearth hot-rolled dead-soft steel, and sheets are well oiled.

METAL FURNITURE

Manufacture. Sheet Metal Furniture, W. Scholl. Sheet Metal Worker, vol. 15, no. 17, Sept. 12, 1924, pp. 644-645, 6 figs. Deals with manufacture. How to design and make plain sheet-metal tables and desks.

METAL SPRAYING

Capabilities and Applications. Metal Spraying and Sprayed Metal, T. H. Turner and W. E. Ballard. Inst. of Metals—Advance Paper no. 14, for meeting Sept. 8-11, 1924, 17 pp., 25 figs. on supp. plates. Indicates critically actual capabilities of metal spraying as now practiced in England and other countries. Investigation includes examination of history of process and of its present capabilities and applications. Bibliography.

Schoop Process. Metallisation. Machy. (Lond.), vol. 24, no. 621, Aug. 21, 1924, pp. 641-644, 5 figs. Schoop process of depositing metals on metal or other material surfaces.

METALLIZATION. See METAL SPRAYING.

METALLOGRAPHY

Applications. Practical Metallography, S. P. Rockwell. Am. Mach., vol. 61, no. 13, Sept. 25, 1924, pp. 487-492, 18 figs. Applications of art of metallography to solution of problems in average plant. Practical methods of procedure. Illustrated studies of various examples.

Bibliographies. Bibliographies. Gen. Elec. Rev., vol. 27, no. 7, July 1924, pp. 456-458. Prepared by O. E. Harder, Dept. Metallography, Minn. School Mines, Univ. Minn. X-rays and metals; atoms, space lattice, solid solutions, etc.; slip interference theory of hardening.

Condenser Tubes. See CONDENSERS, STEAM, Tubes.

Conical Illumination in. Conical Illumination in Metallography, H. S. George. Iron Age, vol. 113, no. 6, Feb. 7, 1924, pp. 426-430, 12 figs. New method of illuminating opaque objects obliquely; practical application and advantages.

Heat Etching. Criticism of Metallographic "Heat Etching" (Zur Kritik der metallographischen Heissätzung), F. Sauerwald, W. Schultze and G. Jackwirth. Zeit. für anorganische u. allgemeine Chemie, vol. 140, no. 4, Nov. 17, 1924, pp. 384-390, 5 figs. on supp. plate. Investigates nature of "etching" of polished metallic specimens, especially those of iron and steel, in fused salt bath or in indifferent gas; it appears that development of structure by heat etching is not due to any specific action of etching reagent, but to changes in metal itself; draws attention to danger of decarbonization of steel by prolonged annealing in sodium-potassium chloride salt bath and to possibility of impurities in bath causing considerable changes in grain structure.

Lehigh University. Metallography at Lehigh University, H. B. Pulsifer. Forging—Stamping—Heat Treating, vol. 10, no. 7, July 1924, pp. 276-278, 7 figs. Leading engineering colleges are coming to recognize metallography as most important of the aspects commonly assembled under metallurgy.

Macrography. See METALS, Macrography.

Microscopes for. See MICROSCOPES, Metallographic Work.

Photomicrography. See METALS, Photomicrography of.

Polarized Light. Metallography in Polarized Light (Metallographie im polarisierten Licht), L. C. Glaser. Zeit. für technische Physik, vol. 5, no. 6, 1924, pp. 253-260, 12 figs. Discusses various methods of employing polarized light for metallography; gives details of various optical arrangements and shows colored photographs of phosphor-bronze, phosphor-tin alloys, taken in polarized light; by means of photometric method it is possible to determine reflection constants and anisotropic properties of various constituents of an alloy.

Simulating Natural Light in. Simulating Natural Light in Metallography, H. S. George. Am. Inst. Min. & Met. Engrs.—Trans., no. 1333-S, Mar. 1924, 15 pp., 16 figs. Method of illumination that enhances value of microscopic study of opaque materials, as in metallography; example is included of revelation of hitherto invisible microconstituent.

Specimens, Preparation of. Preparation of Metallographic Specimens, J. D. Gat. Blast Furnace & Steel Plant, vol. 10, no. 12, Dec. 1924, pp. 536-541, 7 figs. Compilation of definite facts and rules which will enable an investigator to prepare satisfactory specimens.

Transparent. Transparent Metallography, L. V. Foster. Am. Soc. Steel Treating—Trans., vol. 5, no. 4, Apr. 1924, pp. 413-419, 8 figs. Method of preparing transparent specimens of polished and etched metal surfaces; specimen containing finest structure prepared in described way and observed by means of dark-field illumination renders visible all detail present in metal specimen.

METALLURGICAL WORKS

Accidents. Accidents at Metallurgical Works in the United States During the Calendar Year 1922, W. W. Adams. U. S. Bur. Mines—Technical Paper 350, 1923. 31 pp. Statistics representing entire metallurgical industry, except iron blast-furnace plants.

Labor-Saving Equipment. Labor Saving Machinery Adopted, G. H. Charls. Iron Trade Rev., vol. 74, no. 24, June 12, 1924, pp. 1563-1564. Devices used in various departments of coke plants, blast furnaces, steel works and rolling mills to augment production and reduce costs.

METALLURGY

Amalgamation. See METALS, Amalgamation.

Developments. Developments in Metallurgy, S. B. Goodale. Blast Furnace & Steel Plant, vol. 12, no. 2, Feb. 1924, pp. 109-112. Review of investigational work being carried on by various agencies.

Development of the Freiberg Metallurgical Industry (Die Entwicklung des Freiberger Hüttenwesens), M. Schütz. Metall u. Erz, vol. 21, no. 12, June 2, 1924, pp. 261-264. Discusses successive developments and introduction of new processes between 1847-1923.

Education in. See EDUCATION, ENGINEERING, Metallurgy.

Electrometallurgical Development. See ELECTROMETALLURGY, Developments.

Electrometallurgy. See ELECTROMETALLURGY.

Electrometric Titration. Electrometric Titration: An Investigation of Its Methods and Application to Certain Metallurgical Analyses, G. A. Shires. Chem., Met. & Min. Soc. of S. Africa —Jl., vol. 24, no. 6, Dec. 1923, pp. 129-145, 8 figs. Detailed study of principles and methods involved, with view to acquiring familiarity with subject, and to determine practicability, or otherwise, of its employment in number of instances of metallurgical importance. Bibliography.

Hydrometallurgy. The Advantageous Use of Continuous Operation, J. V. N. Dorr. Chem. & Met. Eng., vol. 31, no. 12, Sept. 22, 1924, pp. 463-464. Developments in use of hydrometallurgical equipment for continuous mixing and decantation that result in more economical methods of production. Abstract from paper read before Am. Inst. Chem. Engrs.

Non-Ferrous. Progress in Metallurgical Production of the Most Important Metals During and Since the War (Fortschritte der hüttenmännischen Gewinnungsverfahren der wichtigsten Metalle während des Krieges und nach dem Kriege), K. L. Meissner. Zeit. für angewandte Chemie, vol. 37, no. 1, Jan. 3, 1924, pp. 1-4. Deals with metallurgy of copper, zinc and lead.

Some Impressions of American Non-Ferrous Metallurgy, W. Rosenhain. British Non-Ferrous Metals Research Assn.—Bul., no. 11, Jan. 1924, pp. 5-18. Impressions received from a visit made to America; brief account of works visited and methods observed.

Oxygenated Air, Use in. Use of Oxygenated Air in Metallurgical Operations. Am. Inst. Min. & Met. Engrs.—Symposium Abstracts, no. 1377-S, Nov. 1924, 119 pp., 16 figs. Abstracts of papers forming symposium, as follows: Summary of committee report and discussion; Enriched Air in Metallurgy, W. S. Landis; Application of Oxygen-enriched Air in the Blast Furnace, T. L. Joseph; Use of Oxygenated Air in the Blast Furnace, A. G. McKee; Use of Oxygenated Air in the Iron Blast Furnace, Chas. Hart; Proposed Use of Oxygen in the Openhearth Furnace, S. Cornell; Use of Oxygen in the Gasification of Coal, W. Dyrssen; Cheap Oxygen in Metallurgy, E. B. Kirby; Tabulated Thermal Effects of Use of Oxygenated Air, C. S. Witherell; Discussion on Use of Oxygenated Air in Metallurgical Operations; Effect of Oxygen-enriched Air in Roasting Zinc Ores.

Papers on. Practical Points from the Fourth Congress of Industrial Chemistry (Les indications pratiques du IV^{e} Congrès de Chimie Industrielle), Ch. Berthelot. Revue de Métallurgie, vol. 21, no. 11, Nov. 1924, pp. 686-701, 5 figs. Principal particulars of papers presented, especially regarding fuels, metallurgy, and ceramic industry. Bibliography.

Russia. Second Russian Congress on Scientific Metallurgy (Le 2^{e} Congrès de Métallurgie scientifique russe), L. Dlougatch. Chaleur & Industrie, vol. 5, no. 52, Aug. 1924, pp. 386-388, 4 figs., and Revue de Métallurgie, vol. 21, no. 11, Nov. 1924, pp. 702-705. Details of Leningrad Congress, May 25 to June 2. Review of papers presented, including production of iron and its alloys, production of copper and its alloys, electrometallurgy, metallography, etc.

Theory of Equilibrium, Application of. Application of the Theory of Equilibrium to Metallurgical Questions (Die Anwendung der Gleichgewichtslehre auf metallurgische Fragen), W. Heike. Metall u. Erz, vol. 21, no. 20, Oct. 2, 1924, pp. 469-482, 24 figs. Discusses behavior of bismuth in Pattison process; explains desilvering of lead by addition of zinc (Parkes process); discusses ternary equilibrium system in question; etc.

X-Ray Crystal Analysis. See CRYSTALS, X-Ray Analysis.

METALS

Acetone and Methanol, Action of. Metals for Use in Handling Organic Solvents, R. F. Remler. Chem. & Met. Eng., vol. 30, no. 13, Mar. 31, 1924, pp. 511-512, 6 figs. Action of acetone and methanol on metals used in chemical-engineering equipment.

Acoustic Testing. Change of Sound Figures of Rolled Sheets on Recrystallization (Ueber die Aenderung der Klangfiguren auf Walzblechen bei ihrer Rekristallisation), E. Schröder and G. Tammann. Zeit. für Metallkunde, vol. 16, no. 6, June 1924, pp. 201-206, 13 figs. Discusses acoustic process of testing work pieces, gives sound figures of elastic isotropic and anisotropic disks, change of sound figures in recrystallized copper, zinc, and aluminum-bronzes.

Amalgamation. Difficulties of Intensive Amalgamation, L. M. Kellogg. Eng. & Min. Jl.-Press, vol. 117, no. 24, June 14, 1924, pp. 966-969, 2 figs. Fundamental principles or conditions which amalgamators should meet; brief description of a few typical devices; why many devices have been unsuccessful; a suggested form of machine that has given good results in test work.

Analysis of. See CHEMICAL ANALYSIS, Metals, Methods for.

Attack by Acids. How are Metals Attacked by Acids? (Wie werden Metalle von Säuren angegriffen?), R. Gans. Zeit. für Physikalische Chemie, vol. 109, nos. 1-2, Apr. 12, 1924, pp. 49-64, 7 figs. Results of experiments with Au-Ag and HNO_3, and Ag and H_2S to determine time and manner of attack.

Brinell-Tensile Relationship. Experiments on the Brinell-Tensile Relationship, A. L. Norbury and T. Samuel. Iron & Steel Inst.—Advance Paper, no. 12, for meeting May 1924, 11 pp., 4 figs. Tensile, Brinell, and scleroscope tests on materials used; plotting of results according to Meyer's formula; comparison of Brinell and tensile results.

Brittleness. Brittleness, W. R. Barclay. Metal Industry (Lond.), vol. 24, no. 7, Feb. 15, 1924, pp. 151-162 and 158. Causes and types of brittleness; its relation to toughness, ductility, plasticity, and crystal structure.

Casting. See CASTING.

Casting and Molding, Patents for. Casting and Moulding Metals. Abridgments of Specifications (Lond.), Class 83 (i), Period 1916-20, 1924, 116 pp. Patents for inventions.

Cementation. See CEMENTATION.

Cleaning. Metal Cleansing with Alkaline Cleaning Solutions, E. M. Baker and R. Schneidewind.

Am. Electrochem. Soc.—Advance Paper, no. 15, for meeting, Apr. 24-26, 1924, pp. 203-229, 11 figs. Typical analyses of cleaners used for various purposes, and factors entering into mixing of cleaners.

Modern Methods of Cleaning Metals. Metal Industry (N. Y.), vol. 22, no. 10, Oct. 1924, pp. 402-404, 5 figs. How application of modern machinery and volume-production methods has lowered costs in metal-cleaning department and insured uniformly · thorough work.

Cold Working. Effect of Severe Cold Working on Scratch and Brinell Hardness, H. S. Rawdon and W. H. Mutchler. Am. Inst. Min. & Met. Engrs.—Trans., no. 1291-N, Jan. 1924, 11 pp., 7 figs., also (abstract) Min. & Metallurgy, vol. 5, no. 205, Jan. 1924, p. 31. Results obtained when a series of metals, copper, iron, tin, etc., were cold rolled to a definite degree without any intermediate annealing and hardness determined by both scratch and Brinell methods. Discussion in A. I. M. E. Trans., no. 1340-N, May 1924, pp. 3-14, 4 figs.

Interpretation of Cold Working on the Basis of Electric Measurements (Zur Deutung der Kaltbearbeitung auf Grund elektrischer Messungen), W. Geiss and J. A. M. vanLiempt. Zeit. für Anorganische und Allgemeine Chemie, vol. 133, no. 1, Feb. 11, 1924, pp. 107-112. Discusses deformation of metal crystals in cold working and current hypotheses; application of X-ray analysis and its limitations.

Compressing Powdered. The Production of Synthetic Metal Bodies through Compression or Sintering (Die Herstellung synthetischer Metallkörper durch Druck oder Sinterung), F. Sauerwald. Zeit. für Metallkunde, vol. 16, no. 2, Feb. 1924, pp. 41-46, 4 figs. Discusses internal processes occurring with pressing of powder and heat treatment of pressed material as basis for further research.

Corrosion. Notes on Corrosion Testing by Different Immersion Methods, H. S. Rawdon and A. I. Krynitsky. Am. Electrochem. Soc.—Advance Paper no. 20, for meeting Oct. 2-4, 1924, pp. 273-286, 5 figs. Need for choosing a corrosion test which shall in some measure approximate service conditions is emphasized and illustrated by reference to an unusual case of corrosion in a submarine cable; general types of immersion tests; comparative results of immersion tests on chromium steels. Pub. by permission U. S. Bur. Standards.

The Corrosion and Decay of Metals and Alloys, E. G. Jarvis. Brass Wld., vol. 20, no. 10, Oct. 1924, pp. 339-341. Discusses season cracking, types of alloy corrosion, etc.; conclusions of experiments with sea water.

The Micro-Chemistry of Corrosion, C. H. Desch. Am. Electrochem. Soc.—Advance Paper no. 18, for meeting Oct. 2-4, 1924, pp. 251-256. Description of apparatus employed in a microscopical study of early stages of corrosion and of method of testing alloys.

See also CORROSION, Metallic; Prevention.

Corrosive Agents, Behavior Under Action of. How Metals Stand Up Against Corrosion. Chem. & Met. Eng., vol. 31, no. 2, July 14, 1294, pp. 70-79. General and specific data from many sources on behavior of iron and steel, copper, aluminum, lead, nickel, tin, and zinc, under action of many destructive agencies encountered in industrial world.

Cutting. See CUTTING METALS.

Deformation. New Research in the Field of Deformation of Metals (Neue Forschungen auf dem Gebiete der Verfestigung der Metalle). Gewerbefleiss, vol. 103, nos. 8 and 9, Aug. and Sept. 1924, pp. 134-139 and 145-150, 23 figs. Discusses results of Czochralski's experiments to prove his theory that deformation beyond elastic limit is due to displacement of particles by any fractional parts of atomic distances, so that a series of atoms originally in straight line may form a continuous curve.

Torsional Tests of Metals, Elastic and Permanent Deformation (Les essais de torsion des métaux, déformations élastiques et déformations permanentes), J. Seigle and F. Cretin. Génie Civil, vol. 84, nos. 23 and 24, June 7 and 14, 1924, pp. 545-549 and 565-568, 19 figs. Describes apparatus used; studies angles of torsion, torsion curves for elastic and permanent deformation, elastic limit of torsion, etc.

Density Determination. See IRON, Density, Determination of.

Desulphurization. Sulphurization and Desulphurization of Metals by Means of Slag or Basic Slag (Sulfuration et désulfuration des métaux par les scories ou laitiers basiques), M. B. Bogitch. Revue de Métallurgie, vol. 21, no. 11, Nov. 1924, pp. 682-685. Discusses methods of desulphurization of metal in fused and in solid state, and production of matte.

Diffusion. Diffusion in Solid Metals (Die Diffusion in Metallen in festem Zustand), W. Geiss and J. A. M. v. Liempt. Zeit. für Metallkunde, vol. 16, no. 8, Aug. 1924, pp. 317-318, 2 figs. A single crystal made up by depositing successive layers of molybdenum and tungsten on small crystal of latter underwent no change on heating for 3 hours at 2400 deg., whereas with intimate mixture of small crystals of the two elements pressed into bar a complete solid solution was obtained after 15 min. at 2400 deg. and appreciable diffusion had taken place after 1 hour at 1300 deg.; a smooth tungsten rod heated in pure carbon commenced to absorb carbon at 1550 deg. with formation of carbide, but no carbon was absorbed by a single crystal of tungsten under similar conditions even after 3 hours at 1900 deg.

The Trend in the Science of Metals, Z. Jeffries. Am. Inst. Min. & Met. Engrs.—Trans., Advance paper no. 1337-N, May 1924, 23 pp., 23 figs. Discusses diffusion in solid state and plasticity of metals.

Drawing. See METAL DRAWING.

Elastic and Fatigue Limits. Elastic and Fatigue Limits in Metals, B. P. Haigh. Birmingham Met. Soc.—Jl., vol. 8, no. 9, Feb. 1924, pp. 412-422 and (discussion) 423-424, 8 figs., partly on supp. plate. Proving and research tests; tensile test as a basis of design; safe stress as a fraction of ultimate tension strength; measurement of fatigue limit; different elastic limits for different kinds of stress.

Elasticity of, Measurement. Further Contribution to Dynamic Measurement of Elasticity in Metals and Alloys (Weiterer Beitrag zur dynamischen Elastizitätsmessung an Metallen und Legierungen), G. Welter. Zeit. für Metallkunde, vol. 16, no. 6, June 1924, pp. 213-220, 24 figs. Describes new testing method for determining impact-elongation elasticity; effect of falling weight on dynamic limit of elasticity; compares dynamic and static elongation test.

Electric Conductivity. Electric Conductivity of Metals (Zur elektrischen Leitfähigkeit der Metalle), F. Simon. Zeit. für Physik, vol. 27, no. 3, 1924, pp. 157-163. Shows that change in electric conductivity of metals may be explained also for liquid state by change in the frequency number of oscillations of atoms.

See also ELECTRIC CONDUCTIVITY, Metals.

Electric Resistance. See ELECTRIC RESISTANCE.

Electrodeposited, Hardness of. The Hardness of Electro-Deposited Iron, Nickel, Cobalt and

Copper, D. J. Macnaughtan. Iron & Steel Inst. —Advance Paper no. 11, for meeting May 1924, 16 pp., 4 figs. Experimental work is attempt to correlate from results of number of experiments Brinell hardness, microstructure, and conditions of production of certain deposits of iron, nickel, cobalt and copper; consideration of possible causes of range of hardness obtained.

Electrodeposition. Dry Ionoplating or Galvanoplating (L'ionoplastie ou galvanoplastie par voie sèche), L. Houllevigue. Technique Moderne, vol. 16, no. 12, June 15, 1924, pp. 414-420, 14 figs. Electric deposition in rarefied air of metals used as cathodes on conducting or insulating surfaces for production of metallic reflecting surfaces, for great electric resistance, ornamentation, etc.

Electrolytic Analysis. Rapid Electrolytic Analysis in an Apparatus with a Rotating Anode (Appareil à anode rotative pour l'analyse électrolytique rapide), Bertiaux. Société Chimique de France—Bul., vol. 35-36, no. 8, Aug. 1924, pp. 1030-1039, 6 figs. Analysis is carried out in cell in which perforated cylindrical anode of platinum-iridium alloy is rotated within fixed cathode of similar shape and material.

Electrolytic Shaping and Molding. The Electrolytic Shaping and Molding of Articles from Very Hard Metallic Materials (Elektrolytische Formgebung von harten metallischen Gegenständen), M. Pirani and K. Schröter. Zeit. für Metallkunde, vol. 16, no. 4, Apr. 1924, pp. 132-133, 5 figs. Process consists in employment of sodium or potassium hydrate as attacking agent, with suitable form of anode to accomplish work desired, and use of some insulating liquid in order to protect those parts of object which it is desired to maintain free from electrolytic action; boring and hollowing operations are given as examples of this method, but practically any shaping or molding work can be carried out.

Electron Emission from Films. The X-Ray Emission of Electrons from Metal Films, with Special Reference to the Region of the Absorption Limit, L. Simons. Physical Soc. Lond.—Proc., vol. 37, no. 206, Dec. 15, 1924, pp. 58-71 (includes discussion), 4 figs. Problem presented by selective absorption and ionization; separation of beta and delta rays; properties of beta rays in region of absorption band; etc.

Electrons in, Thermal Energy of. The Thermal Energy of Electrons in Metals, E. D. Eastman, A. M. Williams, and T. F. Young. Am. Chem. Soc.—Jl., vol. 46, no. 5, May 1924, pp. 1184-1196, 3 figs. Data and results of a general survey made.

Endurance of. Correlation of Endurance Properties of Metals, D. J. McAdam, Jr. Am. Soc. Steel Treating—Trans., vol. 6, no. 3, Sept. 1924, pp. 393-395. Summary of paper presented by permission of Secretary of Navy.

The Evidence for the Existence of an Endurance or "Fatigue" Limit in Metals and Its Determination, H. F. Moore and T. M. Jasper. Engineering, vol. 118, nos. 3069 and 3071, Oct. 24 and Nov. 7, 1924, pp. 580-582 and 658-660, 12 figs. S-N diagram and endurance limit; elastic limit and its limitations; mechanism of fatigue breakdown of metal; tests for endurance limit and fatigue strength; summary of machines and test methods used in investigation at Univ. of Ill.

See also Elastic and Fatigue Limits; Fatigue.

Equilibrium Diagrams. The Application of the Ideal Solubility Curve to the Interpretation of Equilibrium Diagrams in Metal Systems, D. H. Andrews and J. Johnston. Inst. of Metals—Advance Paper no. 2, for meeting Sept. 8-11, 1924, 20 pp., 5 figs. Points out applicability of certain deductions, from laws of ideal solution, to phase equilibria in metal systems, and shows practical usefulness of these theoretical relations in aiding us to assess and interpret experimental data.

Expansion, Coefficients of. Determination of the Thermal Coefficients of Expansion of Some Commercial Metals and Alloys, J. N. Friend and R. H. Vallance. Inst. Metals—Advance Paper, no. 5, for meeting Mar. 12-13, 1924, 4 pp. Describes apparatus used and results obtained.

Extrusion of. See EXTRUSION OF METALS.

Fatigue of. An Investigation of the Fatigue of Metals, H. F. Moore and T. M. Jasper. University of Ill.—Bul., vol. 21, no. 39, May 26, 1924, 86 pp., 22 figs. Theory of fatigue of metals; evidence of existence of endurance limit for wrought ferrous metals and of improvement in strength of such metals by cycles of reversed stress at or below that limit; resistance to reversed axial stress (tension-compression); miscellaneous tests and results; resistance to repeated stress other than reversed stress. Bibliography.

Fatigue in Metals, H. J. Gough. Iron & Coal Trades Rev., vol. 109, no. 2963, Dec. 12, 1924, p. 963. Also Foundry Trade Jl., vol. 30, no. 435, Dec. 18, 1924, pp. 527-528. Types of stresses and tests, effect of speed, effect of surface scratches, and effect of stresses upon microstructure of metals. (Abstract.) Lecture before Brit. Acetylene & Welding Assn.

Fatigue Phenomena and Endurance Tests (Ermüdungserscheinungen und Dauerversuche), R. Mailänder. Stahl u. Eisen, vol. 44, nos. 21, 22, 23, 24, and 25, May 22, 29, June 5, 12, and 19, 1924, pp. 585-589, 624-629, 657, 661, 684-691, and 719-725, 31 figs. Summarized report of investigations up to end of 1923. Determination of working strength; machines and arrangements for endurance tests; notch action; deformation and hysteresis; fracture. Relations between strength and varying load, various ways of loading, change in strength due to sustained tests, effect of cold working and annealing, composition, structure, etc. Bibliography.

The Investigation of a Fatigue Failure of Brass Tubes in a Feed-Water Heater, with a Consideration of the Nature of "Fatigue," W. E. W. Millington and F. C. Thompson. Inst. Metals—Advance Paper, no. 11, for meeting March 12-13, 1924, 23 pp. 18 figs. Description of failure; effects of mechanical deformation on close-packed cubic crystal; compares new theory of authors—that straight markings are cause of embrittlement which lead to fracture—with actually observed facts.

The Work of the Fatigue Panel of the Aeronautical Research Committee, C. F. Jenkin. Engineering, vol. 118, no. 3059, Aug. 15, 1924, p. 245. Describes nature of problem that panel appointed to investigate problem of fatigue in metals is endeavoring to solve and the various lines of investigation which are being followed.

Grain Growth. See Recrystallization.

Hall Effect and Thermo-Force. The Hall Effect and Thermo-Force (Halleffekt und Thermokraft), R. Raethjen. Physikalische Zeit., vol. 25, no. 4, Feb. 15, 1924, pp. 84-89, 1 fig. Equation based upon classical electron theory for Hall effect is combined with thermo-force equation; measurements made on silver, gold, platinum, copper, aluminum, tin, and palladium hydrogen, show that equation does not hold even approximately.

Hardness, Determination of. See HARDNESS, Brinell Ball Testing Method.

Hardness Numbers. Hardness Numbers and Their Relation, H. P. Hollnagel. Iron Age, vol. 114, no. 22, Nov. 27, 1924, pp. 1404-1406, 5 figs. Absence of real basis for comparison; structure of metals; ideal physical state; true hardness.

Heat Conductivity. A New Application of the Bar Method for the Measurement of Thermal Conductivity, M. D. O'Day. Jl. Optical Soc. Am. & Rev. of Sci. Instruments, vol. 8, no. 2, Feb. 1924, pp. 245-254, 5 figs. Description of electrically-

heated bar method of measurement; describes test to find conductivity of lead and tin; Thomson effect.

Heat Conductivity of Technically Important Metals and Alloys (Die Wärmeleitfähigkeit technisch wichtiger Metalle und Legierungen), M. Jakob. Zeit. für Metallkunde, vol. 16, no. 9, Sept. 1924, pp. 353-358. Most probable values of heat conductivity of number of metals and alloys at different temperatures have been collected from work of many investigators for incorporation in newest Landolt-Börnstein tables; heat conductivity of most metals decreases between —180 and 0 deg., then increases again with further rise of temperature; in case of alloys, however, heat conductivity increases constantly with rise of temperature; nickel and aluminum appear to be exceptional.

Heat Transmission in. Calorific Conductivity of Metals and Alloys of Importance in Technical Application (La conductibilité calorifique des métaux et alliages presentant de l'importance pour les applications techniques), M. Jakob. Chaleur & Industrie, vol. 5, no. 55, Nov. 1924, pp. 557-563. Data on heat transmission by aluminum, copper, tin, iron, zinc, and their alloys.

Heat Treatment. The Heat Treatment of Metals, E. Pull. Machy. Market, nos. 1208 and 1209, Dec. 28, 1923 and Jan. 4, 1924, pp. 27-28 and 25-26, 3 figs. Definitions of words and phrases in general use in connection with annealing, hardening, and tempering.

Heats of Oxidation, Determination of. A Redetermination of the Heats of Oxidation of Certain Metals, J. E. Moose and S. W. Parr. Am. Chem. Soc.—Jl., vol. 46, no. 12, Dec. 1924, pp. 2656-2661, 2 figs. Methods and apparatus employed and results obtained in determination of heat of oxidation of aluminum, beryllium, cerium, cadmium, lanthanum, magnesium, molybdenum, tantalum, tin, tungsten, and zinc.

Hydrogen Overvoltage and Properties. The Hydrogen Overvoltage of Metals and Their Characteristic Properties, E. J. Weeks. Chem. News, vol. 128, no. 3347, June 6, 1924, pp. 359-360. Overvoltage and valency.

Impact Resistance. Elastic Impact Resistance of Metals and Alloys (Schlagelastizität von Metallen und Legierungen), Geo. Welter. Zeit. für Metallkunde, vol. 16, no. 1, Jan. 1924, pp. 6-11, 13 figs. In author's opinion elastic behavior of materials under dynamic stress is of greatest importance in dimensioning of machine parts and other constructions; describes new method of determining impact elasticity limit of metals and determines according to this method range of permissible permanent stress for aluminum, electrolytic copper, brass, iron, and hardened aluminum alloys; influence of notches is taken into consideration.

Impact Testing. See IMPACT TESTING.

Internal Structure. The Relationship between Mechanical Treatment and Internal Structure of Metals, F. Johnson. Birmingham Met. Soc.—Jl., vol. 8, no. 11, July 1924, pp. 479-496, 14 figs. Constitution of atoms; inter-atomic forces; plastic deformation; twinning in metals; slip-interference theory of hardening of metals; relation between grain size and strength; critical range of deformation; hardness of solid solutions; allows of duplex structure.

Light. See AIRCRAFT CONSTRUCTION MATERIALS, Light Metals.

Liquid Mixtures. Behavior of Liquid Cuprous Sulphide, Ferrous Sulphide, Copper and Iron (Das Verhalten von flüssigen Cu_2S, FeS, Cu and Fe), G. Tammann and H. Bohner. Zeit. für anorganische u. allgemeine Chemie, vol. 135, no. 3, May 21, 1924, pp. 161-168, 2 figs. Since at certain concentrations mixtures of liquid copper and cuprous sulphide and of iron and copper are immiscible, diagram shows existence of area in which three layers are formed instead of two, one of sulphide and two metallic; significance of this region is discussed; analysis of layers formed by melting together equivalent amounts of iron and cuprous sulphide shows that copper and iron are divided practically equally between metal and sulphide layers.

Machining Qualities. A Method for Determining the Resistance of Metals to Drilling and Its Application to the Investigation of the Machinability of Metals, A. Kessner. Testing, vol. 1, no. 4, Apr. 1924, pp. 270-285, 11 figs. Describes drilling testing machine; some investigations carried out by means of Kessner machinability testing machine; standard comparison metals for drilling tests.

Macrography. New Process of Metal Macrography by Direct Impression on Films (Nouveau procédé de macrographie des métaux par impression directs sur pellicule), J. Durand. Génie Civil, vol. 85, no. 6, Aug. 9, 1924, pp. 131-133, 6 figs. Discusses direct examination of metals more or less polished and etched with reagent as part of acceptance test, giving details especially of segregations, deformations due to working, solidification, and effect of any factor modifying the structure.

Melting, Fluxes and Slags in. Fluxes and Slags in Metal Melting and Working. Foundry Trade Jl., vol. 29, nos. 402 and 403, May 1 and 8, 1924, pp. 359-363 and 388-390. See also Metal Industry (Lond.), vol. 25, no. 5, Aug. 1, 1924, pp. 101-102. Abstracts of papers read at a general discussion on this subject which was held Apr. 28, 1924, at Instn. Mech. Engrs., under joint auspices of Faraday Soc., Inst. Metals, Inst. British Foundrymen, and British Non-Ferrous Research Assn., viz.: Oxidizing Fluxes in Melting of Non-Ferrous Metals, A. Portevin; Use of Fluxes in Brass Melting, R. Genders and M. A. Haughton; Note on Slags From Lead, Copper, and Other Blast Furnaces, G. Rigg; Slags Produced in Melting Silver Alloys, J. Phelps; Sulphurizing and Desulphurizing of Metals by Basic Slags and Fluxes, B. Bogitch; Slag Inclusions in Relation to Fatigue, B. P. Haigh; Fluxing Problems in Welding Mild Steel With Metallic Arc, H. Ogden; Physical Chemistry of Slags and Fluxes in Non-Ferrous Metal Industries, C. H. Desch; Fluxes and Slags in Oxy-Acetylene Welding, C. C. Smith.

Melting by N. D. Gas and Other Fuels, A. J. Smith. Metal Industry (Lond.), vol. 25, no. 1, July 4, 1924, pp. 1-2. Author gives figures comparing different systems of melting that have come within his experience.

Melting-Temperature Determination. Determining the Temperature of Melts (Ueber die Temperaturbestimmung in Metallschmelzen), M. Moeller. Giesserei-Zeitung, vol. 21, no. 20, Oct. 15, 1924, pp. 442-443, 3 figs. Discusses difficulties and describes a new immersion pyrometer.

The Temperature Determination of Molten Metals, R. L. Binney and N. I. Terbille. Metal Industry (N. Y.), vol. 22, no. 5, May 1924, pp. 189-190. A combination of base metal and rare metal couples which proved trustworthy in brass foundry.

Microstructure. Anomalies in Metals Disclosed by the Metallographic Microscope (Le anamalie dei metalli rilevate dal microscopio metallografico), V. Prever. Ingegneria, vol. 3, nos. 6 and 8, June 1 and Aug. 1, 1924, pp. 196-200 and 273-278, 38 figs. Discusses size of grain, annealing and cooling, and effect on microstructure and properties; heterogenous inclusions, cavities, impurities, abnormal thermal conditions, etc.

Molecular Slip. Gliding Surfaces Forming in Solid Bodies Under Load (Ueber die unter einer Belastung sich bildenden Gleitflächen der festen Körper), A. Nádai. Zeit. für technische Physik,

vol. 5, no. 9, 1924, pp. 369-378, 103 figs. partly on supp. plates. Discusses compression and tensile strength tests; flow figure of metals; molecular slip in metals under load; torsion. Results of tests shown in micrographs.

Non-Ferrous. See NON-FERROUS METALS.

Non-Metallic Inclusions in. A Note on Non-Metallic Inclusions in Metals, with Special Reference to Aluminium, A. G. Lobley. Foundry Trade Jl., vol. 30, no. 412, July 10, 1924, p. 34. Discusses cryolite present in aluminum, nitrogen, carbon, and aluminum; states that electric remelting is not harmful. Abstract of paper read at symposium on Slags and Fluxes, arranged by Faraday Soc., Inst. of Metals, Inst. of British Foundrymen and Non-Ferrous Research Assn.

Notch Action, Reduction of. New Ways of Reducing Notch Action (Neue Wege zur Herabsetzung der Kerbwirkung), H. Kändler. Zeit. für technische Physik, vol. 5, no. 4, 1924, pp. 150-154, 7 figs. Influence of acid etching on notches in metal surfaces; etching of notches in chrome-nickel steel; increasing life of rods by etching treatment.

Partition Coefficients. Partition of a Metal between Two Liquid Metallic Phases (Ueber die Verteilung eines Metalles zwischen zwei flüssigen metallischen Phasen), G. Tammann and P. Schafmeister. Zeit. für anorganische u. allgemeine Chemie, vol. 138, no. 2, Aug. 19, 1924, pp. 219-232, 6 figs. Partition coefficients determined by Wright are reviewed and some new determinations described.

Passivity. Effect of Anions on the Capacity for Passivity of Metals (Ueber den Einfluss der Anionen auf die Passivierbarkeit der Metalle), V. Rothmund. Zeit. für Physikalische Chemie, vol. 109, June 25, 1924, pp. 384-393, 3 figs. Determines passivity of nickel and tin in acid solutions of various concentrations; tin becomes passive in sulphuric acid, hydrochloric acid, etc., but not in nitric acid, etc.

Passivity of Metals, Especially of Iron (Ueber die Passivität der Metalle, Speziell des Eisens), W. J. M. Leverkusen. Zeit. für Elektrochemie u. Angewandte Physikalische Chemie, vol. 30, no. 9, Sept. 1924, pp. 401-416, 4 figs. Definition of passivity; theories to explain phenomenon; passivity curve; effect of size of surface on time taken in becoming passive; passivity with currents of various strength; iron being made passive as an anode in nitric acid.

Photomicrography of. High-Power Photo-Micrography of Metals, F. Rogers. Metal Industry (Lond.), vol. 24, no. 14, Apr. 4, 1924, pp. 328-330, 9 figs. Particulars of super-microscope system.

Plastic Deformation. The Effect of Free Surfaces on the Plastic Deformation of Certain Metals, F. C. Thompson and W. E. W. Millington. Iron & Steel Inst.—Advance Paper no. 9, for meeting Sept. 1924, 14 pp., 3 figs. partly on supp. plate. Gives reasons for believing that at free surfaces deformation will differ distinctly from that within mass; and shows importance of this in connection with determination of elastic limit and with elastic failure.

Plasticity. See Diffusion.

Precious, Canada. Precious Metals in Canada, A. W. G. Wilson. Can. Min. Jl., vol. 45, nos. 20 and 21, May 16 and 23, 1924, pp. 471-474 and 495-498, 7 figs. Historical data; physiography; gold and silver production; rare metals; etc.

Precipitates. 'Structure of Fibre of Electrolytic Metal Precipitates (Über die Faserstruktur elektrolytischer Metallniederschläge), R. Glocker and E. Kaupp. Zeit. für Physik, vol. 24, no. 2, May 22, 1924, pp. 121-139, 15 figs. Discusses ray examination of structure in sheet metal produced electrolytically for determining crystaline arrangement in copper, silver, nickel, chromium and iron.

Precipitation. Precipitation of Aqueous Solutions of Metallic Salts by Calcium Carbonate and Calcium Hydroxide (Die Fällung wässeriger Metallsalzlösungen mit Calciumcarbonat und Calciumhydroxyd), W. Schopper. Metal u. Erz, vol. 21, no. 2, 2nd Jan. issue, 1924, pp. 17-22, 1 fig. Gives numerous examples of different methods of separating iron, copper, nickel, zinc, and arsenic from each other in mixed solutions by means of calcium carbonate and calcium hydroxide; precipitation of iron from chloride solutions generally results in purer hydroxide than from sulphate solutions; in some cases it is preferable to remove copper by cementation, then to precipitate iron and arsenic together by treatment with limestone and current of air.

Properties at High Temperatures. The Physical Properties of Metals at Elevated Temperatures, V. T. Malcolm. Am. Soc. Steel Treating—Trans., vol. 5, no. 3, Mar. 1924, pp. 256-273 and (discussion) 273-275, 12 figs. Investigation undertaken with view of showing characteristic physical properties of materials used in construction of valves, as disclosed by results of tensile tests conducted at series of elevated temperatures; results may be expected to serve as criterion of physical properties available in several materials when used in valves under conditions of superheat, and also relative values for such use.

Properties, Synthetic Bodies. Strength and Density of Synthetic Metal Bodies and Adhesive Force Between Metal Surfaces (Ueber Festigkeit und Dichte Synthetischer Metallkörper und die Adhäsionskräfte zwischen Metallischen Oberflächen), E. Jaenichen. Zeit. für Elektrochemie, vol. 30, no. 4, Apr. 1924, pp. 175-180, 6 figs. Examines strength, density and elasticity of synthetic metal bodies of copper and iron.

Protection. Metal Protection (Metallschutz), E. Maass. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 34, Aug. 23, 1924, pp. 880-883. Theories on corrosion of metals; corrosion of aluminum; processes for protecting metals; corrosion of condenser tubes.

Protective Coating of. New Metal Coats (Neuere Metallüberzüge). Zeit. für Metallkunde, vol. 16, no. 5, May 1924, pp. 175-179. Discusses Liebreich process of electrolytic coating with chromium to prevent corrosion, and Schulze electrolytic coating process of aluminum for protection against weather conditions or chemicals.

Powders, Pyrophoric Properties of. Pyrophoric Properties of Metal Powders (Ueber die Pyrophorität von Metallpulvern), G. Tammann and N. Nikitin. Zeit. für anorganische u. allgemeine Chemie, vol. 135, no. 3, May 21, 1924, pp. 201-204, 1 fig. Iron produced by reduction of ferrous oxalate in hydrogen at 530 deg. or below, without stirring, is pyrophoric; when temperature is 536 deg. or over, metal is non-pyrophoric; if salt is stirred during reduction a non-pyrophoric metal can be obtained at 370 deg., temperature at which reduction commences; temperature at which each metal loses its pyrophoric properties is same as that at which cold-drawn metal regains its original properties.

Radiation Measurement. Micropyrometer With Spectral Decomposition and Optically Observed Melting Points of Some Platinum Metals (Ueber ein Mikropyrometer mit spektraler Zerlegung und die optisch beobachteten Schmelzpunkte einiger Platinmetalle), F. Henning and W. Heuse. Zeit. für Physik, vol. 29, no. 3-4, 1924, pp. 157-174, 1 fig. Discusses radiation properties of metals and describes micropyrometer and process of calibration; particulars of observations made.

Rare, Analysis of. Analytical Methods for Certain Metals, Including Cerium, Thorium, Molybdenum, Tungsten, Radium, Uranium, Vanadium,

Titanium, and Zirconium, R. B. Moore, S. C. Lind, J. W. Marden, J. P. Bonardi, C. W. Daviw and J. E. Couley. U. S. Bur. Mines—Bul. 212, 1923, 320 pp., 6 figs., partly on supp. plate. Gives bibliography.

Recovery from Jewelers' Waste. Methods for the Recovery of Platinum, Iridium, Palladium, Gold, and Silver From Jewelers' Waste, C. W. Davis. U. S. Bur. Mines—Technical Paper no. 342, 1924, 14 pp. Describes necessary manipulations and chemical procedures for recovery of valuable metals from scrap, filings, sweeps, and other waste.

Recrystallization. Recrystallization and Grain Growth in Soft Metals, M. Cook and U. R. Evans. Am. Inst. Min. & Met. Engrs.—Trans., no. 1382-E, Nov. 1924, 24 pp., 14 figs. Describes procedure for obtaining specimens of lead, tin, and cadmium with moderately equiaxed structure and smooth surface suitable for etching without grinding and polishing; advantages of general oblique illumination (as opposed to vertical illumination) in photomicrography of pure metals; statistical study of changes brought about in deformed lead, on annealing.

Single-Crystal. Method of Producing Single Crystal Metals (Eine Methode zur Herstellung einkristalliger Metalle), I. Obreimow and L. Schubnikow. Zeit. für Physik, vol. 25, no. 1, June 24, 1924, pp. 31-36, 3 figs. Describes modification of Tamman method by means of which single crystals of tin, cadmium, zinc, antimony, aluminum, magnesium, and copper may be produced.

Solution in Mercury. Heats of Solution of Some Metals in Mercury and in Gold Amalgam and Heat of Mixibility of Some Amalgams (Die Lösungswärmen einiger Metalle in Quecksilber und in Goldamalgam, sowie die Mischungswärmen einiger Amalgame), G. Tammann and E. Ohler. Zeit. für anorganische u. allgemeine Chemie, vol. 135, nos. 1 and 2, May 8, 1924, pp. 118-126. Discusses determination of heats of solution, heats of mixibility of Mg-amalgams with Zn-amalgams, etc.

Specific Heats. An Improved Method of Measuring the Specific Heats of Metals at High Temperatures, K. K. Smith and L. I. Bockstahler. Nat. Acad. Sciences—Proc., vol. 10, no. 9, Sept. 1924, pp. 386-388. Determination of specific heat of tungsten at temperatures between 2375 deg. K. and 2475 deg. K.

New Method for Determining the Specific Heat of Metals (Eine neue Methode zur Bestimmung der spezifischen Wärme von Metallen), W. U. Behrens and C. Drucker. Zeit. für Physikalische Chemie, vol. 113, no. 1-2, 1924, pp. 79-110, 9 figs. Details of new method in which a thin metal wire is heated in vacuum to constant temperature, electric energy is passed through and temperature rise is determined by measuring resistance before and after heating.

The Specific Heats of Magnesium, Calcium, Zinc, Aluminum and Silver at High Temperatures, E. D. Eastman, A. M. Williams and T. F. Young. Am. Chem. Soc.—Jl., vol. 46, no. 5, May 1924, pp. 1178-1183. Description of measurements and record of results.

Spinning. The Spinning of Metals, Wm. Mason. Metal Industry (Lond.), vol. 25, no. 20, Nov. 14, 1924, pp. 469-470, 11 figs. Principle of spinning; spinning "undersunk" articles; spinning lathe and tools; spinning qualities of various metals and their annealing.

Spraying. See METAL SPRAYING.

Strain Detection. The Detection of Strain in Metals, J. D. Jevons. Metal Industry (Lond.), vol. 24, no. 10, Mar. 7, 1924, p. 225. Survey of work done by various investigators on this subject, together with comments on practical utility of the different methods suggested.

Strength. Cross-Relations of Strengths of Metals in Tension, Compression, Torsion and Transverse Loading, G. B. Upton. Sibley Jl. of Eng., vol. 38, no. 1, Jan. 1924, pp. 2-6, 2 figs. Underlying relationships of strengths of materials under various kinds of loading; proper criteria of failure to apply to different kinds of metal in different places; reasons why specification of tension properties of a metal has been and will continue to be so satisfactory in insuring properties desired, whatever the kind of loading applied in actual structure.

Sulphurizing and Desulphurizing of. Sulphurising and Desulphurising of Metals by Basic Slags and Fluxes, B. Bogitch. Metal Industry (Lond.), vol. 24, no. 21, May 23, 1924, pp. 498-499. Describes methods and results of experiments. Translated from French, and contributed at symposium arranged by Faraday Soc., Inst. Metals, Inst. British Foundrymen, and Non-Ferrous Research Assn.

Surfaces, Properties of. The Properties of Metallic Surfaces, J. B. Nevitt. Birmingham Met. Soc.—Jl., vol. 8, no. 10, pp. 425-440 and (discussion) 441-446. Reviews means by which variations in surface conditions may be produced, and outlines effect of these surface conditions upon properties of metal.

Synthetic. See Compressing Powdered.

Temperature, Effect on. Effect of Temperature on the Properties of Metals, F. C. Thompson. Metal Industry (Lond.), vol. 25, no. 26, Dec. 26, 1924, pp. 609-611. Recuperation temperature; influence of allotropic changes and their importance in case of zinc; temperature influence of 70/30 brass, and practical application; temperature phenomena with steels; effect of alloying elements in steel; etc. (Abstract.) Paper read at Manchester Met. Soc.

Effect of Temperature upon Metals, E. G. Jarvis. Metal Industry (N. Y.), vol. 22, no. 11, Nov. 1924, pp. 446-447. Table giving data on tensile strength and elastic limit, and torsional strength and elastic limit at various temperatures.

Summary of the Results obtained from Experiments made during the Years 1918 to 1923 of the Effects of Temperature on the Properties of Metals, A. Mallock. Roy. Soc.—Proc., vol. 105, no. A730, Feb. 1, 1924, pp. 129-134, 6 figs. Study of effects which variations of temperature produce on elasticity and other constants of various metals.

Tensile Strength. The Relationship Between Tensile Strength, Temperature, and Cold-Work in Some Pure Metals and Single Solid Solutions, D. H. Ingall. Inst. of Metals—Advance Paper no. 8, for meeting Sept. 8-11, 1924, 24 pp., 7 figs. Results of investigation on silver, aluminum, nickel, 70:30 brass, and 80:20 cupro-nickel.

Tension Testing. Tension Testing of Thin Plate Metals, N. S. Otey. Iron Age, vol. 113, no. 14, Apr. 3, 1924, pp. 1008-1009, 5 figs. New test grips claimed to insure accurate results on duralumin and alloy-steel sheets.

Testing. Bending Tests with Rotating Bars (Essais de flexion avec rotation du barreau pour de fortes valeurs de la flèche de flexion), M. Cretin and M. Seigle. Revue de Métallurgie, vol. 21, no. 6, June 1924, pp. 358-367, 24 figs. Discusses principle of fatigue test by rotary bending; bending tests beyond elastic deformation.

Importance of Elastic Limit, Elongation and Notched-Bar Test for Constructors (Ueber die Bedeutung der Elastizitätsgrenze, Bruchdehnung und Kerbzähigkeit für den Konstrukteur), P. Ludwik. Zeit. für Metallkunde, vol. 16, no. 6, June 1924, pp. 207-212. Discusses value of usual tensile-strength testing methods, emphasizes insufficiency of tensile test, uncertainty of measuring

limit of elasticity, and suitability of combining tensile strength with notched-bar test.

Significance of Limit of Elasticity, Elongation and Notched Bar Tests to the Constructor (Die Bedeutung der Elastizitätsgrenze, Bruchdehnung und Kerbzähigkeit für den Konstrukteur), P. Ludwik. Maschinenbau, vol. 3, no. 28, Nov. 27, 1924, pp. 1093-1094. Discusses uncertainty in measuring elasticity, flow limit in place of tensile strength, elongation and construction, ductibility and fatigue, brittleness of ductile metals under certain conditions, etc.

Some Aspects of the Mechanical Testing of Materials, R. T. Rolfe. Birmingham Met. Soc.—Jl., vol. 8, no. 9, Feb. 1924, pp. 385-405 and (discussion) 405-411, 7 figs partly on supp. plate. Results of investigation carried out on eyebolts; considerations of Izod test in its relation to question of brittleness in mild steel; slag inclusions in forgings and their relation to hardening cracks and failures occurring in service; work-hardening of forgings in service.

Theory of. Theory of Metals (Beitrag zur Theorie der Metalle), J. Frenkel. Zeit. für Physik, vol. 29, no. 3-4, 1924, pp. 214-240. Movement of valency electrons and electric conductivity of metals; forces of cohesion and compressibility of metals, etc., leading to explanation of crystal structure of most metals.

Thermal Conductivity. See HEAT TRANSMISSION, Thermal-Conductivity Values.

Thermal Emissive Power. The Relation Between the Total Thermal Emissive Power of a Metal and Its Electrical Resistivity, C. Davisson and J. R. Weeks, Jr. Optical Soc. of Am.—Jl., vol. 8, no. 5, May 1924, pp. 581-605, 6 figs. Theoretical considerations. Details of experiments, and results obtained. Bibliography.

Uses. New Uses for Metals. Metal Industry (N. Y.), vol. 22, nos. 1 and 2, Jan. and Feb. 1924, pp. 1-4 and 55, 3 figs. Symposium containing following articles: Researching the Field of Brass and Copper Consumption, W. A. Willis; Development of Zinc, S. S. Tuthill; New Uses of Lead and Tin, G. O. Hiers; Aluminum; New Uses and Applications of Nickel and Its Products, E. A. Turner and R. L. Suhl; Miscellaneous Metals, A. Bregman.

The First Use of Metals, T. A. Rickard. Eng. & Min. Jl.-Press, vol. 117, nos. 13, 15, and 19, Mar. 29, Apr. 12, and May 10, 1924, pp. 528-530, 602-604 and 759-762. Early mining and metallurgical practice and uses of metals. Mar. 29: Gold and silver. Apr. 12: Copper and bronze. May 10: Iron, lead, and zinc.

Vapors, Condensation Temperature. See VAPORS, Metal.

Volumetric Analysis. New Methods of Volumetric Analysis (Ueber neue Methoden der Massanalyse), K. Jellinek and W. Kühn. Zeit. für anorganische u. allgemeine Chemie, vol. 138, no. 1, Aug. 4, 1924, pp. 81-103 and 109-134. Part VI: Gives suitable indicators for acidimetric and alkalimetric titration. Part VII: Precipitation of metals as ferrocyanide; determination of zinc; volumetric analysis by hydrolytic precipitation; titration of weakly dissociated salts.

New Methods of Volumetric Analysis (Ueber neue Methoden der Massanalyse), K. Jellinek and W. Kresteff. Zeit. für anorganische u. allgemeine Chemie, vol. 137, no. 3-4, July 21, 1924, pp. 333-348. Chlorometry as substitute for iodimetry and other analytical methods.

Wear Resistance. A Universal and Practical Machine for Determining the Resistance of Metals to Wear under the Various Kinds of Friction Encountered in Practice, F. P. Hitchcock. Testing, vol. 1, no. 2, Feb. 1924, pp. 147-155, 5 figs. Describes machine which is also suitable for investigation of efficiency of anti-friction metals and of lubricants.

The Jannin Method for Testing Metals as to Wear, and Its Application to Testing Antifriction Metals (Etude de la méthode de M. L. Jannin pour l'essai des métaux à l'usure et de son application à l'essai des métaux antifrictions), M. P. Nicolau. Revue de Métallurgie, vol. 21, no. 6, June 1924, pp. 347-355, 1 fig. Shows that by this method resistance to wear of anti-friction metals cannot be determined, and that application of this method is limited to rapid determination of friction conditions.

White. See LEAD ALLOYS, White Metals.

Work Hardening. See HARDNESS, Work Hardening.

Work Hardness, Effect of Temperature on. Effect of Temperature on Work Hardening Metal, E. G. Herbert. Can. Machy., vol. 32, no. 8, Aug. 21, 1924, pp. 19-21, 12 figs. Experiments prove heat essential in some stamping operations, and that cutting tools increase durability at speeds which raise work to its critical temperature.

X-Ray Examination. X-Ray Examination of Metals at the Watertown Arsenal, Watertown, Mass., T. C. Dickson. Mech. Eng., vol. 46, no. 11a, mid-Nov. issue, 1924, p. 773. Operation of 280,000-volt X-ray equipment and results obtained.

METEOROLOGY

Atmospheric Disturbances. See RADIOTELEGRAPHY, Atmospherics.

Wind. See WIND.

METHANOL

Action on Metals. See METALS, Acetone and Methanol, Action of.

Properties, Manufacture, and Uses. Methanol: Its Properties, Manufacture and Uses, R. F. Remler. Chem. Age (N. Y.), vol. 32, nos. 3 and 4, Mar. and Apr. 1924, pp. 109-111 and 159-161, 3 figs.

METHYL CHLORIDE. See REFRIGERANTS, Methyl Chloride.

METROCLINE. See GIRDERS, Deflection-Testing Instrument.

MICA

Australia. Australian Mica Deposits. Indus. Australian & Min. Jl., vol. 71, no. 1846, Apr. 24, 1924, p. 616. Valuable industry neglected. Uses for mica.

Austria. Austrian Mica (Der österreichische Nutzglimmer), H. Mohr. Zeit. des Oesterr. Ingenieur- u. Architekten-Vereines, vol. 76, no. 25/26, June 27, 1924, pp. 234-238, 2 figs. Details of kinds of mica available, their properties and uses, mining industry originating in war, and capable of further development.

Built-up, Manufacture of. The Manufacture of Built-Up Mica, J. R. McClain. Elec. Jl., vol. 21, no. 1, Jan. 1924, pp. 10-16, 5 figs. Method of mining; early application of sheet mica; classes of built-up mica; method of hand and machine building; semi-automatic building; selection of mica splittings and of bonds; general requirements of built-up mica.

Dielectric Properties. The Dielectric Properties of Mica, D. W. Dye and L. Hartshorn. Physical Soc. Lond.—Proc., vol. 37, no. 206, Dec. 15, 1924, pp. 42-55 and (discussion) 55-57, 4 figs. Describes two methods used for determining dielectric constant of thin sheets of mica and discusses errors; results of measurements on over 170 sheets of mica; gives values of power factor for many of the samples.

Insulation. Mica and Micanite Insulation, A.

A. C. Dickson. Elec. Rev., vol. 94, nos. 2416 and 2417, Mar. 14 and 21, 1924, pp. 408-409 and 469-470. Varieties, properties, practical tests and choice of mica, and manufacture and test of commutator micanite.

See also INSULATING MATERIALS, ELECTRIC, Mica.

Production, 1923. Mica in 1923, B. H. Stoddard. U. S. Geol. Survey (Mineral Resources of U. S.), no. II:17, Oct. 8, 1924, pp. 143-148. Production; classification; world's production; imports and exports.

MICANITE. See MICA, Insulation.

MICROMETERS

Care of. Proper Care Essential to Micrometer Accuracy. Can. Machy., vol. 32, no. 4, July 24, 1924, pp. 25-26, 6 figs. Hints on use and care of measuring instruments.

Projection. The Lewbeck Projection Micrometer. Engineering, vol. 117, no. 3048, May 30, 1924, p. 716, 3 figs. Instrument exhibited at Brit. Empire Exhibition for measuring fine wires.

Railway Shops. Application of Micrometers in Railway Shops, M. H. Williams. Ry. Mech. Engr., vol. 98, nos. 8 and 9, Aug. and Sept. 1924, pp. 481-485 and 553-558, 10 figs. Output and quality of work in car shop is improved by their intelligent use. Interchangeability of locomotive repair parts made possible by using accurate measuring devices.

MICROPHONES

Batteries for. The Electric Battery and the Microphone (La pile electrique et le microphone), E. Reynaud-Bonin. Revue Générale de l'Electricité, vol. 15, no. 21, May 24, 1924, pp. 923-926, 1 fig. Discusses selection of battery type suitable for microphone service; analysis of types of battery used more or less successfully for this purpose.

Film. The Siemens Film-Microphone and Siemens Talking Film (Das Siemens-Bandmikrophon und der Siemens-Bandsprecher, E. Gerlach. Siemens-Zeit., vol. 4, no. 6, June 1924, pp. 165-168, 4 figs. Discusses transformation of acoustic into electric work, construction and action of carbon and other microphones, sound amplifiers, development of talking film, etc.

Glow-Discharge. Microphones Without Diaphragms. Wireless Wld., vol. 14, no. 20, Aug. 13, 1924, pp. 559-560, 4 figs. Microphone which has been developed in America by Dr. P. Thomas and known as "glow discharge microphone" operates on principle where diaphragm can be dispensed with; in this instrument electric discharge takes place between two electrodes which are adjusted to very close proximity. "Kathodophon" consists of small perforated metal tube which constitutes anode and heat resisting material which, until it comes near anode, is cylindrical in form. Shows "Kathodophon" installed in broadcasting studio in Germany.

MICROSCOPES

Davon. The Davon Super-Microscope. English Mechanics, vol. 120, no. 3096, July 25, 1924, pp. 16-18, 5 figs. Outlines principal features and gives results of tests.

Design. Microscopes. Eng. Progress, vol. 5, no. 2, Feb. 1924, pp. 27-29, 3 figs. Physical principles of design; manufacturing difficulties; importance of German industry; special microscopes.

Illumination of. Modern Methods of Microscope Illumination. High Power Opaque Illumination, C. Beck. Jl. of Sci. Instruments, vol. 1, no. 8, May 1924, pp. 238-242, 6 figs. Various questions connected with high power opaque illumination are considered; a new immersion ring illuminator and a new vertical illuminator are described.

Modern Methods of Microscope Illumination. High Power Transparent Illumination, C. Beck. Jl. Sci. Instruments, vol. 1, no. 10, July 1924, pp. 314-316. Discusses characteristics of transparent illumination and considers precautions to be taken in order to reduce glare and flooding.

Vertical Illuminator for Microscopes. Engineering, vol. 118, no. 3053, July 4, 1924, p. 30, 3 figs. Describes vertical illuminator recently introduced by R. & J. Beck, Ltd., London, in which reflector can be moved along two lines at right angles and can also be tilted about both these axes. It is thus possible to adjust position and angle of reflector as required.

Metallographic Work. Microscopes for Metallographic Work. Engineering, vol. 118, no. 3067, Oct. 10, 1924, pp. 514-515, 6 figs. Describes high-powered microscope for use in research laboratory, and microphotographic apparatus for use in industrial plants; microphotographs produced with these instruments.

Metallurgical. Ore Problems and the Microscope, W. L. Uglow. Can. Inst. Min. & Metallurgy—Bul., no. 147, July 1924, pp. 495-504. Application of microscope in discovery, development, concentration, and reduction of metallic ores; types of microscopes.

Recent Innovations in the Metallurgical Microscope. Foundry Trade Jl., vol. 29, no. 397, Mar. 27, 1924, pp. 255-258, 13 figs. Principle embodied in super-microscope, and micro-telescope.

The Microscope as an Aid in Metallurgy, F. E. Lee. Can. Inst. Min. & Metallurgy—Bul., no. 147, July 1924, pp. 505-510, 8 figs. Application of microscope in problems arising from various operations of Tadanac Reduction Works.

Portable. Portable Microscope. Iron Age, vol. 113, no. 5, Jan. 31, 1924, p. 371, 4 figs. New type for use on metal in shop; applicable to various shapes.

Reichert-Brinell. An Improved Type of Microscope for Measuring the Impressions Produced in the Ball Hardness (Brinell) Test, O. C. Rudolph. Testing, vol. 1, no. 1, Jan. 1924, pp. 45-48, 2 figs. Details of latest Reichert-Brinell microscope.

MICROSCOPY

Telephone Apparatus, Application to. Photomicrography and Technical Microscopy in its Application to Telephone Apparatus, F. F. Lucas. Bell System Tech. Jl., vol. 3, no. 1, Jan. 1924, pp. 100-145, 51 figs. Discussion of apparatus; compound microscope; polarized light; preparation of specimens; Bell-system photomicrographic laboratory, New York City; ultra microscope; micrometry; dark-ground illumination.

MILK

Dairies. See DAIRIES.

MILLING

Automatic. Automatic Milling, F. D. Jones. Machy. (N. Y.), vol. 30, no. 12, Aug. 1924, pp. 919-925, 16 figs. See also Machy. (Lond.), vol. 24, no. 621, Aug. 21, 1924, pp. 653-659, 16 figs. Brown & Sharpe method as applied to various operations selected to show how different classes of work are milled on automatically-controlled machines.

Brakes, Drums and Spiders. Machining Sheldon Brakes, Drums and Spiders, F. H. Colvin. Am. Mach., vol. 60, no. 11, Mar. 13, 1924, pp. 387-389, 9 figs. Special fixtures and tools devised for machining work of odd shape; fixtures are shown

in considerable detail so their construction can be more readily understood.

Grooves. The Milling of Grooves (Das Fräsen von Nuten). Praktischer Maschinen-Konstrukteur, vol. 57, no. 5, Feb. 5, 1924, pp. 39-42, 4 figs. Describes different methods, tools and machines employed, and shows how running time of a Loeve milling machine can be calculated with aid of alignment charts.

MILLING CUTTERS

Cooling. Cooling Cutters in Milling, (Die Kühlung der Werkzeuge beim Fräsen), M. von Brandt. Werkstattstechnik, vol. 18, no. 15, Aug. 1, 1924, pp. 393-394, 3 figs. Discusses inadequate provisions for supplying cooling water to high-speed milling cutters; gives suggestions for effective cooling and states satisfactory results obtained.

Cutting Ratio. Cutting Ratios of Cutter Heads in Milling Aluminum Alloys (Die Ermittlung der günstigsten Schnittverhältnisse von Messerköpfen beim Fräsen von Aluminiumlegierungen), W. Lippart. Maschinenbau, vol. 3, no. 18, June 26, 1924, pp. 657-659, 5 figs. Discusses most favorable and economic angle of cutters, feeds, power consumption, etc.

Helical Tests. See GEARS, Double Helical.

Manufacture. Milling Cutter Notes, J. Doe. Model Engr., vol. 51, no. 1211, July 10, 1924, pp. 31-35, 7 figs. Shows that good cutters can be made without great effort and how they may be maintained in true-running and sharp condition; general considerations; cutting teeth; hardening and grinding.

MILLING MACHINES

Attachments. Combination Cherrying and Profiling Attachment. Forging — Stamping — Heat Treating, vol. 10, no. 5, May 1924, pp. 180-182, 7 figs. Improvement in form of die-sinking equipment in form of combination cherrying and profiling attachment for use on Becker vertical milling machines.

Special Milling Attachments and Fixtures, F. D. Jones. Machy. (N. Y.), vol. 31, no. 4, Dec. 1924, pp. 279-283, 14 figs. Examples of milling on standard machines by utilizing attachments or fixtures designed for unusual milling operations.

Cutters for. See MILLING CUTTERS.

Double-Spindle. A Double-Spindle Production Milling Machine. Am. Mach., vol. 60, no. 19, May 8, 1924, pp. 701-703, 3 figs. Sundstrand machine developed by Rockford Milling Machine Co.; work held on special turret.

Duplex Head. Duplex Head Milling Machine. Machy. (Lond.), vol. 23, no. 591, Jan. 24, 1924, pp. 554-555, 2 figs. Developed to meet requirements of manufacturers for either slab or face-milling operations.

Electric Drive. Milling Machines With Electric Drive for Cutting and Feeding (Fräsmaschine mit elektrischem Schnitt- und Vorschubantrieb), M. Heym. Praktische Maschinen-Konstrukteur, vol. 57, no. 19-20, June 4, 1924, pp. 275-278, 8 figs. Shows that by electric control the cutting and feeding motions can be adjusted much more completely to working conditions.

Feed Drive. Choice of Feed Drive in Milling Machines (Wahl des Vorschubantriebes bei Fräsmaschinen), E. Toussaint. Praktische Maschinen-Konstrukteur, vol. 57, no. 23, June 24, 1924, pp. 327-331, 14 figs. Shows by three different examples that independent drive of feed table is best solution, and that drive from cutter shaft must be eliminated.

Fixtures. Fixtures for Production Milling, A. A. Dowd. Machy. (N. Y.), vol. 30, no. 7, Mar. 1924, pp. 521-523, 5 figs. Examples of fixture design are given in detail to illustrate modern trend in locating and clamping methods and in general features of construction.

How Milling Machine Service Has Helped Manufacturers, F. H. Colvin. Am. Mach., vol. 61, no. 11, Sept. 11, 1924, pp. 405-409, 12 figs. Shows how high-production milling can be secured on standard machines by use of well-designed fixtures.

See also Attachments.

Specialized Work. Wide Range of Specialized Work Now Performed by Milling Machines, W. L. Carver. Automotive Industries, vol. 51, no. 8, Aug. 21, 1924, pp. 356-360, 10 figs. Standard machines with special heads do great variety of work at small additional expense, and place this type of tool in semi-automatic class.

Standards. Formulation of a Manufacturing Plan for Horizontal Milling Machines (Aufstellung eines Fabrikationsplanes für Wagerecht-fräsmaschinen), E. Toussaint. Praktische Maschinen-Konstrukteur, vol. 57, nos. 31 and 43, Aug. 19 and Nov. 11, 1924, pp. 435-440 and 581-584, 37 figs. Discusses variety of feeds, speeds, supports, frames, etc. offered in trade catalogues, and shows how more uniformity might be introduced.

Toolholders. The Standardization of Tool Fixtures for Milling Machines (Die Normung der Werkzeugbefestigung an Fräsmaschinen), G. Schlesinger and K. Hegner. Werkstattstechnik, vol. 18, no. 1, Jan. 1, 1924, pp. 1-3, 9 figs. Recommendations for standardization of toolholders by standards committee of Assn. German Machine-Tool Builders.

Types. Milling Machines, Their Operation and Forms (Arbeitsweise und Formgebung der Fräser), E. Toussaint. Praktische Maschinen-Konstrukteur, vol. 57, nos. 39 and 50, Oct. 14 and Dec. 30, 1924, pp. 533-535 and 675-677, 15 figs. Discusses proper shapes for milling cutters and describes principal types of milling machines, showing work of standardization.

MINE CARS

[See also MINES, Haulage.]

Larry, Motors for. Specially Designed Motors for Larry-Car Service, C. A. Atwell. Coal Age, vol. 25, no. 7, Feb. 14, 1924, pp. 237-238, 5 figs. Mechanical details are such as to accommodate heavier axles; must have armature winding and gear ratio suitable for slow speed; motors fitted with ball bearings.

Lubrication. A Standardized Greasing System for Mine Cars. Coal Mine Mgmt., vol. 3, no. 9, Sept. 1924, pp. 52-54 and 56, 5 figs. Describes a greasing system placed on market that is made up of three units, comprising (1) one standard type of grease plug for all cars (and that replaces present oilers or plugs on any type or make of car no matter where located), (2) a detachable coupler nozzle for applying lubricant that makes an instant, positive, and leakproof connection with oiler, and (3) an automatic air-operated greasing machine.

32-cu. ft.-Capacity. A New Design for Underground Ore Cars, L. L. Quigley. Eng. & Min. Jl.-Press, vol. 118, no. 2, July 12, 1924, pp. 57-58, 6 figs. Describes new car of Elm Orlu Min. Co., Butte, Mont., which meets all existing mine clearances, loading, dumping and track conditions and is very efficient in ore handling from stopes to shaft pockets; 33 in. wide by 30 in. high by 54 in. in length, capacity 32 cu. ft.

MINE HAULAGE

Accidents. The Nunnery Colliery Accident, Thos. H. Mottram. Colliery Guardian, vol. 128, no. 3328, Oct. 10, 1924, pp. 936-937, 1 fig. Report on causes of and circumstances attending

underground haulage accident which occurred on Dec. 3, 1923; conclusions and recommendations.

Analysis of Problems. The Analysis of Mine Haulage Problems, E. B. Stavely. Coal Industry, vol. 7, no. 4, Apr. 1924, pp. 155-160, 7 figs. Basic principles relating to electric haulage and brief comments upon application of these principles in analysis of mine-haulage problems.

Coal Mines. Designing Conveying Plants for Coal Mines (Richtlinien für den Entwurf der Tagesförderanlagen von Steinkohlenbergwerken), K. Hölzer. Glückauf, vol. 60, no. 44, Nov. 1, 1924, pp. 1003-1009, 9 figs. Discusses shaft arrangements and car circulation above ground, and design and construction of various types of headgears.

Hoisting from Great Depths (L'extraction aux grandes profondeurs), L. Lahoussay. Revue de l'Industrie Minérale, no. 95, Dec. 1, 1924, pp. 539-550, 6 figs. Work of sub-committee on winding engines, cable covering and cable construction, winding equipment, useful load and tonnage per hour.

Recent Progress in Mine Haulage, Rob. M. Black. Coal Industry, vol. 7, no. 1, Jan. 1924, pp. 37-38. Developments during past year from technical and safety standpoint; new storage-battery locomotives added to list of permissible equipment.

Some Notes on Underground Transport, A. V. Reis. Min. Inst. Scotland—Trans., vol. 44, part 6, 1923-1924, pp. 170-178. See also Instn. Min. Engrs.—Trans., vol. 67, part 1, Mar. 1924, pp. 14-22. Analysis of costs of hauling coal in mines, and discussion of the different cost items.

See also COAL HANDLING, Conveyors.

Development, Arizona. Development of Mine Transportation in Clifton-Morenci District, N. Carmichael and J. Kiddie. Am. Inst. Min. & Met. Engrs.—Trans., no. 1310-M, Mar. 1924, 28 pp., 15 figs. Describes evolution of transportation at important mining property, beginning at time when railhead was 400 mi. distant, and tracing steps leading to development of what is probably heaviest ore train ever operated in underground mine service over narrow-gage tracks, 300-ton ore train on 20-in. track, at working costs closely approximately those obtained on systems involving much greater capital expenditure.

Electric. Efficiency of Electric Haulage in Mines, C. A. Harmon. Modern Min., vol. 1, no. 3, Oct. 1924, pp. 66-69, 3 figs. Compares an ideal haulage system to one that is typical of a great many mines.

Equipment. Haulage Equipment for Mines. Engineering, vol. 118, no. 3074, Nov. 28, 1924, pp. 732-733, 3 figs. Describes 20-hp. hauling or winding engine working with compressed air or steam; stretcher-bar haulage engine; and 15/20-hp. electric haulage gear or hoist; manufactured by Holman Bros., Cornwall, Eng.

Rope Breakage. See COAL MINES, Haulage-Rope Breakage.

Winding, Deep-Level. Notes on Deep-Level Winding, J. A. Vaughan. So. African Eng., vol. 35, nos. 7, 8, 9 and 10, July, Aug. Sept., and Oct. 1924, pp. 134-138, 155-158, 176-177, and 198, 3 figs. See also So. African Instn. Engrs.—Jl., vol. 23, no. 3, Oct. 1924, pp. 252-285, 18 figs. Deals with goldfields of Witwatersrand. Discusses shafts, skips and cages, winding engines, drums, clutches, brakes, winding ropes, tail-ropes, underground engine rooms, etc.

MINE HOISTING

Cycles Calculation. Notes on Mine Hoisting, F. L. Stone and F. R. Grant. Am. Inst. Elec. Engrs.—Jl., vol. 43, no. 7, July 1924, pp. 618-621, 6 figs. Results that have been obtained from actual installations which have been designed to meet cycles calculated in manner described.

MINE LOCOMOTIVES

[See also MINES, Haulage.]

Ball Bearings on. See BEARINGS, BALL, Mine-Locomotive Motors.

Benzol. Experience and Results with Benzol Driven Locomotives (Erfahrungen und Ergebnisse aus dem Benzollokomotivbetriebe), H. Giese. Glückauf, vol. 60, no. 23, June 7, 1924, pp. 463-468, 5 figs. Discusses construction and operation of new type 4-cylinder locomotive by Rheiner Maschinenfabrik Windhoff. Efficiency trials in comparison with one-cylinder locomotive, showing 14 per cent greater speed and 25 per cent less fuel consumption.

Compressed-Air. See COMPRESSED AIR, Coal Mines.

Compressed-Air, Compressor for. See AIR COMPRESSORS, Five-Stage.

Control. Latest Improvements in Locomotive, H. H. Johnson. Coal Age, vol. 26, no. 11, Sept. 11, 1924, pp. 367-370, 7 figs. Developments of new controllers due to use of larger currents and necessity for power economy; electromagnetic and electropneumatic contractors on large locomotives; field control provided for storage-battery motors.

Electric. Baldwin-Westinghouse Locomotive for Mining Service, R. M. Campbell. Baldwin Locomotives, vol. 3, no. 1, July 1924, pp. 62-71, 23 figs. Development, construction, equipment, and accessories.

Important Points in the Construction of Electric Mining Locomotives, N. H. Reiger. Coal Mine Mgmt., vol. 3, nos. 3 and 5, Mar. and May 1924, pp. 48-51 and 61, and 33-37, 7 figs. Frame construction; motor capacity and construction; control equipment; types of control; standardization of motor equipment.

The New Ore Train Locomotives of the Swedish State Railways (Riksgränsbanans nya malmtågslokomotiv), S. Halden-Teknisk Tidskrift, vol. 54, no. 23, June 7, 1924, pp. 104-109 (Electroteknik), 10 figs. Description of design and equipment of new Swedish locomotives, performance diagrams and very complete technical data and photographs.

See also Storage-Battery.

Gasoline. Petrol Motor Locomotives for Mines. Eng. Progress, vol. 5, no. 1, Jan. 1924, pp. 8-11, 6 figs. Notes on weight, tractive effort, gradients, rails; fuels employed; arrangement of engine; drive of axles; speed regulation; safety devices for mine locomotives; locomotive raising device; danger of fire damp; water cooling; etc.

Slow-Speed. Slow Speed Locomotives for Coal Mines, S. W. Farnham. West. Soc. Engrs.—Jl., vol. 29, no. 9, Sept. 1924, pp. 363-369 and (discussion) 369-370. Development of special locomotive for gathering; advantages of slow speed.

Storage-Battery. Approval System of the Bureau of Mines as Applied to Permissible Storage-Battery Locomotives, L. C. Ilsley and H. B. Brunot. U. S. Bur. Mines—Reports of Investigations, no. 2581, Mar. 1924, 11 pp. Detailed information covering inspection and test for safety of a storage-battery locomotive manufactured by Mancha Storage Battery Co., St. Louis, Mo.

Notes on the Use of Storage-Battery Locomotives and Storage-Batteries Underground, J. Shanks. Can. Inst. Min. & Metallurgy—Bul., no. 150, Oct. 1924, pp. 654-666, 12 figs. Author gives his experience in operating different types or designs of locomotives, and draws attention to drawbacks of some designs, and to improvements made in more recent storage-battery locomotives.

put on market, as regards efficiency, upkeep, and safety.

On the Storage Battery Locomotives for Mines, T. Kurayama. Denki Gakkwai Zasshi (Jl. Inst. Elec. Engrs. Japan), no. 432, July 1924, pp. 619-623, 1 fig. Actual test data of locomotives in Muke colliery, one of largest in Japan. (In Japanese.)

MINE-RESCUE APPARATUS

[See also BREATHING APPARATUS.]

Automatic, Nitrogen Accumulation in. Danger of Nitrogen Accumulation in Automatic Rescue Apparatus (Die Gefahr der Stickstoffanhäufung in lungenautomatischen Atmungsgeräten), R. Sauer. Glückauf, vol. 60, no. 28, July 12, 1924, pp. 590-593. Describes washing process which eliminates danger from nitrogen and enables very simple construction of apparatus.

British Research Committee Report. Mine Rescue Apparatus. Iron & Coal Trades Rev., vol. 108, nos. 2923 and 2924, Mar. 7 and 14, 1924, pp. 381 and 430-431, 1 fig. See also Colliery Guardian, vol. 127, no. 3298, Mar. 14, 1924, pp. 676, 1 fig. Third report of Research Committee. Use of liquid air and liquid oxygen; description of Aerophor apparatus; construction of vacuum storage vessels for liquid air; etc.

Mine Rescue Apparatus Research Committee—Third and Final Report. Dept. Sci. & Indus. Research (Lond.),—Advisory Council, 1924, 30 pp., 21 figs. Deals mainly with use of liquid air and liquid oxygen in mine-rescue apparatus; details of improved aerophor apparatus.

Carbogen Reviver. The Edina Carbogen Reviver, D. Davidson. Colliery Guardian, vol. 128, no. 3336, Dec. 5, 1924, p. 1440. Describes apparatus designed by Prof. Briggs as result of experiments carried out at Heriot-Watt College Mine Rescue Station.

Inhabad. Mine-Rescue Apparatus (Der Gastaucher Inhabad), H. Woltersdorf. Glückauf, vol. 60, no. 12, Mar. 22, 1924, pp. 211-216, 3 figs. Describes Inhabad apparatus which is respirator with automatic oxygen supply for two hours' working period; all necessary parts for breathing regulation, air purification, and refilling are carried in a box on back, and mask is worn in front.

Liquid-Air. A New Liquid-Air Apparatus, F. P. Mills. Iron & Coal Trades Rev., vol. 108, no. 2923, Mar. 7, 1924, pp. 386-388 (includes discussion), 5 figs. Evolution of liquid-air type of breathing apparatus, including manufacture and properties of the liquid. Describes improved Brown and Mills type of Blackett's Aerophor apparatus; experiments.

Proto. The "Proto" Mine-Rescue Apparatus. Engineering, vol. 117, no. 3051, June 20, 1924, pp. 807-808, 7 figs. Description of breathing apparatus for recovery and rescue work in mines after fires and explosions, manufactured by Siebe, Gorman & Co., Ltd., Lond., exhibited at British Empire Exhibition.

Self-Rescuer. The Carbon Monoxide Self-Rescuer, A. C. Fieldner, S. H. Katz and D. A. Reynolds. Chem. Eng. & Min. Rev., vol. 16, no. 190, July 5, 1924, pp. 389-391, 3 figs. Carbon monoxide self-rescuers are pocket-size gas respirators which protect wearer from air contaminated with poisonous carbon monoxide gas; purpose is to help miners to escape from mines in which fires are burning or explosions have occurred; gives design, construction and materials of self-rescuer.

Types. Miners' Rescue (Algo sobre salvamento minero), L. Torón. Revista Minera Metalúrgica y de Ingenieria, vol. 75, nos. 2934, 2935, 2936, and 2937, July 1, 8, 16, and 24, 1924, pp. 381-384, 400-402, 414-417, and 431-437, 10 figs. Discusses rescuing of miners and rehabilitation of mines, organization of rescue brigades, construction and operation of modern types of rescue apparatus, including Draeger, Tissot, Proto, Brigge, Gibbe, Paul, Aerophor, Brown, and Mills.

MINE-RESCUE WORK

Germany. Rescue Work and First Aid in Prussian Mines in 1922 (Rettungswesen und Erste Hilfe im preussischen Bergbau im Jahre 1922). Zeit. für das Berg-, Hütten- u. Salinenwesen, vol. 72, no. 1, 1924, pp. 39-94, 5 figs. Discusses rescue organization and apparatus, apparatus for protection against gas, experiences and regulations for rescue work, first aid organization, etc.

Practice. First Aid in Mining Practice, T. L. Llewellyn. Colliery Eng., vol. 1, no. 7, Sept. 1924, pp. 338-341. Surveys accident problem in collieries.

Transport of Injured. Some Practical Notes on Mining Ambulance, and the Carbogen Method of Treating Carbon Monoxide Poisoning, D. Davidson. Colliery Guardian, vol. 127, no. 3299, Mar. 21, 1924, pp. 731-733, 9 figs. Describes three types of stretcher for transport of injured; underground ambulance rooms; resuscitation from CO poisoning.

United States. Mine Rescue Work, A. U. Miller. Coal Mine Mgmt., vol. 3, no. 8, Aug. 1924, pp. 38-41. U. S. Bur. Mines carries on investigative work relative to mining industry; history of breathing apparatus; fundamentals of rescue work; apparatus for gas analysis and prevention better than rescue. Abstract of paper read before Coal Mine Safety Conference.

MINE SHAFTS

Cables, Suspending. Suspending Armored Cables in Mines, W. E. Boyle. Elec. World, vol. 83, no. 2, Jan. 12, 1924, pp. 95-96, 2 figs. Describes methods of installation of shaft cables in mines.

Cementation. See SHAFT SINKING, Cementation.

Linings, Cast-Iron. The Evolution of Cast Iron Shaft Linings, J. Riemer. Colliery Guardian, vol. 127, no. 3304, Apr. 25, 1924, pp. 1058-1060, 21 figs. Translation from Glückauf.

Sinking. See SHAFT SINKING.

Surface Extensions. Surface Shaft Extensions. Colliery Engr., vol. 1, no. 2, Apr. 1924, pp. 64-66, 2 figs. Two examples of monolithic shaft walls erected on surface to meet special circumstances.

Widening. Widening a Pit Shaft, W. T. E. Malbon. Iron & Coal Trades Rev., vol. 108, no. 2927, Apr. 4, 1924, pp. 547-548, 8 figs. Describes operations and tackle employed in increasing diameter of shaft from 13 ft. to 17 ft.

MINE SIGNALING

Electric. The New "Simplex" System of Electric Signaling for Mine Shafts (Le nouveau système de Signalisation électrique "Simplex" pour puits de mines), G. Paques. Annales des Mines de Belgique, vol. 24, no. 4, 1923, pp. 1007-1019, 7 figs. Describes installation of new type of electric signal in coal mines of Carabinier at Pont de Loup, which has given entire satisfaction; advantages of system.

Geophones. Improvement of the Geophone by the Use of Electrical Sound Amplifiers, W. T. Ackley, Jr., and C. M. Ralph. U. S. Bur. Mines—Reports of Investigations, no. 2639, Sept. 1924, 5 pp., 2 figs. on supp. plate. Brief description of adaption of vacuum-tube audio frequency amplifier to a new form of geophone.

T. P. S. Method. Underground Signalling for Mines by the Ground-Conduction or "T. P. S."

Method, J. J. Jakosky. U. S. Bur. Mines—Reports of Investigations, no. 2576, Feb. 1924, 11 pp., 6 figs. on supp. plates. Description of T. P. S. system of underground communication, apparatus used, operation, and results of tests made.

Underground Radio Signals. Factors Retarding Transmission of Radio Signals Underground, J. J. Jakosky and D. H. Zellers. U. S. Bur. Mines—Reports of Investigations, no. 2651, Nov. 1924, 10 pp., 2 figs. Shows limitations of pure radio and influence of earth strata in retarding pure radio signals.

MINE TIMBERING

Europe. Notes on Mine Timbering and Preservatives in Europe, G. S. Rice. Min. Congress Jl., vol. 10, no. 2, Feb. 1924, pp. 98-99, 1 fig. Review of mine timbering conditions in England, France, Belgium and Germany; preservation of timber further advanced in Europe than in United States. From report to Am. Min. Congress.

Preservation. Impregnation of Mine Timber with Zinc Sulphate for Protection against Attack by Fungi, H. D. Bell. Chem., Met. & Min. Soc. S. Africa—Jl., vol. 24, no. 9, Mar. 1924, pp. 206-211 and (discussion) 211-213. Experimental results obtained while investigating with view to arriving at practical works method of impregnating timber with zinc-sulphate solution; reference to two such plants in operation.

Protecting Mine Timbers With Gunite at Butte, E. M. Norris. Compressed Air Mag., vol. 29, no. 6, June 1924, pp. 881-884, 9 figs. Anaconda Copper Min. Co. has found gunite coatings to be efficacious in fireproofing timbers and airproofing rock surfaces.

Some Destructive Features of Mine Timber, R. Z. Virgin. Coal Trade Bul., vol. 50, no. 8, Mar. 17, 1924, pp. 347-350, 5 figs. Main principle to be kept in mind in mine timbering; effects of various destructive agents; enormity of timber consumption; costs and suggestions for preservative treatment.

Treating Mine Timbers With Preservatives, G. M. Hunt. Min. Congress Jl., vol. 10, no. 2, Feb. 1924, pp. 102-105, 3 figs. This practice making progress; mining companies erecting open tank plants and using hot and cold bath method of treatment. Timber preservatives and specifications; relative durability of different species of wood; service records on mine timbers.

Protection from Fire. Protection of Mine Timbering From Fire, H. E. Tufft. Min. Congress Jl., vol. 10, no. 10, Oct. 1924, pp. 481-484, 2 figs. Outlines possibilities for fire prevention and timber preservation through utilization of the several known methods. Pub. by permission U. S. Bur. Mines.

Storage of Timber. Mine Timbering Serious and Costly Problem. Min. Congress Jl., vol. 10, no. 2, Feb. 1924, pp. 99-101, 4 figs. Notes on method of storing mine timbers, timber supply and cost, and sizes of ties recommended for steel rails from 16 to 60 lb. per yard.

Strength. Strength of Mine Timber, R. P. A. Johnson. Eng. & Min. Jl.-Press, vol. 117, no. 6, Feb. 9, 1924, pp. 240-242, 1 fig. Points to be considered in selecting suitable wood for support of openings.

Wood for Preservation. See WOOD PRESERVATION, Mine Timber.

MINERAL DEPOSITS

Belgian Congo. Geologic Map of the Belgian Congo (Carte géologique du Congo Belge), P. Fourmarier. Revue Universelle des Mines, vol. 4, no. 4, Nov. 15, 1924, pp. 182-208, 1 fig. and 1 map on supp. plate. Discusses stratigraphy, tectonics, and mineral deposits. Contains colored map and explanatory text.

Burma. Mineral Developments in Burma, H. H. Johnson. Min. Mag., vol. 30, no. 4, Apr. 1924, pp. 209-212, 3 figs. Details of coal, silver-lead, and copper deposits in Southern Shan States of Burma, which are attracting attention of London mining circles.

Canada. Mines and Mineral Deposits of Canada, R. P. D. Graham. Can. Inst. Min. & Metallurgy—Bul., no. 151, Nov. 1924, pp. 715-830, 2 figs. Outline of geology of Canada. Brief description of the more important ore deposits and mining districts; deals with metalliferous deposits, nonmetallic mineral deposits, coal and hydrocarbon compounds, and structural materials and clay products.

Colloidal Solutions, Effect of. The Role of Colloidal Solutions in the Formation of Mineral Deposits, H. C. Boydell. Instn. Min. & Metallurgy—Bul., no. 243, Dec. 1924, 108 pp., 2 figs. General properties of colloidal solutions; influence of colloidal solutions on some substances, minerals, and structures of common geological occurrence; effects of colloidal solutions in some types of mineral deposits; and discussion of some general mineral deposit problems with reference to influence of colloids on such.

Heavy Minerals. Some Methods for Heavy Mineral Investigations, R. D. Reed. Economic Geology, vol. 19, no. 4, June-July 1924, pp. 320-337, 1 fig. Discusses methods suitable for attack of petrographic problems, including sampling and preparing samples for study, use of electromagnet, microscope, refractive index, etc.

Jamaica, West Indies. Minerals in Jamaica, S. Brunton. Can. Min. Jl., vol. 45, no. 51, Dec. 19, 1924, pp. 1236-1241, 2 figs. Discusses geology, ore occurrences, and economic possibilities.

Sincosite. The Occurrence and Properties of Sincosite, a New Vanadium Mineral from Sincos, Peru, W. T. Schaller. Am. Jl. Sci., vol. 8, no. 48, Dec. 1924, pp. 462-480, 2 figs. Crystallography; physical and optical properties; chemical composition.

South Africa. Notes on Some Base Metal Deposits in the Union, T. G. Trevor. S. African Jl. of Industries, vol. 7, no. 6, June 1924, pp. 376-382. Notes on tin, antimony, arsenic, chromium, cobalt, lead, manganese, molybdenum, nickel, platinum, sulphur, etc.

Some Base Metal Deposits in the Union, T. G. Trevor. So. African Min. & Eng. Jl., vol. 35, no. 1708, June 21, 1924, p. 1145. Discusses cassiterite deposits, nickel, sulphur, arsenic and mercury. Abstract from Jl. of Industries, June 1924.

MINERAL INDUSTRY

Alberta, Canada. The Mineral Industry in Alberta in 1924, J. A. Allan. Can. Min. Jl., vol. 45, no. 3, Jan. 18, 1924, pp. 68-71, 3 figs. Production was represented largely by coal, natural gas, petroleum and bituminous sand; notes on salt and sodium sulphate.

Ontario. Mineral Production of Ontario. Can. Min. Jl., vol. 45, no. 24, June 13, 1924, pp. 581-583, 4 figs. Preliminary report.

Russia. What Soviet Russia Has Done to Mining and What It Now Offers, S. Brooks. Eng. & Min. Jl.-Press, vol. 117, no. 24, June 14, 1924, pp. 956-958, 3 figs. Mineral production reached its depths in 1921, but is being reëstablished; foreign companies should not overlook present opportunities; security a problem.

Siam and Malaya. The Mineral Industry of Siam and Malaya, With Special Reference to the Tin and Tungsten Markets, G. R. Oswald. Metal Industry (Lond.), vol. 24, no. 2, Jan. 11, 1924,

pp. 25-29, 1 fig. Brief outline of what is now being done, and forecast of probable future production: constructive suggestions as to how metal manufacturers and users may render themselves, in a measure, independent of market fluctuations, and ensure their supplies of raw material.

MINERAL OILS

Metals, Catalytic Influence on. Catalytic Influence of Metals upon Mineral Oils (Ueber den katalytischen Einfluss von Metallen auf Mineralöle), H. Stäger. Schweiz. Elektrotechnischer Verein—Bul., vol. 15, no. 3, Mar. 1924, pp. 93-106, 6 figs. Author gives detailed report of his systematic study of problem; he finds that bare copper, brass, tin and zinc accelerate sludging of oil considerably; action depends upon proportion between surface of submerged metal and volume of oil, except in case of aluminum, tin, nickel and iron, with which oxidation at zone of immersion is of importance; lead, copper and zinc are beaten away by generated asphaltogenous acids; data are compiled in curves, tabulations and photomicrographs.

MINERAL RESOURCES

Alaska. The Ruby-Kuskokwim Region, Alaska, J. B. Mertie, Jr., and G. L. Harrington. U. S. Geol. Surv.—Bul. 754, 1924, 126 pp., 17 figs. partly on supp. plates. Geography, geology, and mineral resources; placer gold is only mineral deposit that has been exploited on a commercial scale.

British Columbia. Reconnaissance of Silver Creek, Skagit and Similkameen Rivers, Yale District, B. C., C. E. Cairnes. Can. Dept. Mines, Geol. Survey, no. 2031, summary report, 1924, part A, pp. 46A-80A, 8 figs. partly on supp. plates. General and economic geology.

What British Columbia Offers the Prospector, A. W. Davis. Eng. & Min. Jl.-Press, vol. 117, no. 11, Mar. 15, 1924, pp. 437-349, 7 figs. Describes some of the more important finds in recent years, in northern part of province.

Bulgaria. The Mineral Resources of Bulgaria, D. A. Wray. Min. Mag., vol. 30, no. 2, Feb. 1924, pp. 73-84, 4 figs. Geology; coal, iron, manganese, chromium, copper, lead and zinc, gold, and other deposits.

Canada. Arnprior-Quyon and Maniwaki Areas, Ontario and Quebec, M. E. Wilson. Can. Dept. Mines, Geol. Survey.—Memoir 136, geol. series no. 117, 1924, 152 pp., 41 figs. partly on supp. plates. Location, area and accessibility; physiography; general geology; mineral deposits. Bibliography.

The Mineral Wealth of the Precambrian, C. V. Corless. Can. Inst. Min. & Met.—Bul., no. 146, June 1924, pp. 366-392 and (discussion) 392-400. See also Roy. Soc. Arts—Jl., vol. 72, no. 3743, Aug. 15, 1924, pp. 607-683 and (discussion) 683-687. Evidence both direct and inferential concerning mineral wealth of greatest physical and geological feature of Canada, viz., Precambrian Shield. Area of entire Shield is given as 2,000,000 sq. mi.

Gaspé Peninsula, Canada. The Mineral Deposits of Gaspe, F. J. Alcock. Can. Min. Jl., vol. 45, no. 41, Oct. 10, 1924, pp. 1000-1003, 4 figs. History, geology and structure; zinc and lead, copper, petroleum, chromite and asbestos deposits.

Illinois. Geology and Mineral Resources of the Kings Quadrangle, J. H. Bretz. Ill. State Geol. Surv., Extract C from Bul. no. 43, 1923, pp. 205-304, 37 figs. partly on supp. plates.

India. The Mineral Resources of the Kolhapur State, H. C. Jones. Geol. Surv. of India—Records, vol. 54, part 4, 1923, pp. 416-430, 2 figs. partly on supp. plate. Topography, drainage, and geology; description of mineral deposits, viz., bauxite (chief mineral of economic value in the state, and occurring in fairly large quantities), building materials, copper, gold, gypsum, iron, kaolin, manganese, saltpeter, and slates.

Nova Scotia. Nova Scotia's Mineral Resources. Can. Min. Jl., vol. 45, no. 14, Apr. 4, 1924, pp. 328-331. Report of Natural Resources Intelligence Service, Ottawa, Can.

MINERALS

Adsorption and Flotation Capacity. See FLOTATION, Minerals.

British Columbia. British Columbia's Record for 1923, R. Dunn. Can. Min. Jl., vol. 45, no. 1, Jan. 4, 1924, pp. 20-22. Mineral production for 1923; increase of 12.8 per cent in monetary value over that of 1922.

The Western Mineral Belt of British Columbia, V. Dolmage. Can. Min. Jl., vol. 45, no. 26, June 27, 1924, pp. 614-617. Deals with deposits occurring in Batholith Coast Range and along its western contact.

Canadian Production. Canada's Mineral Production in 1923, S. J. Cook. Can. Min. Jl., vol. 45, no. 1, Jan. 4, 1924, pp. 5-9. Twelve per cent increase, to $214,102,000.

Deposits. See MINERAL DEPOSITS.

Non-Metallic, Canadian Production. Non-Metallics in 1923, N. B. Davis. Can. Min. Jl., vol. 45, no. 1, Jan. 4, 1924, pp. 19-20. Canadian production.

Non-Metallic, Uses of. New Uses of Nonmetallic Minerals, W. M. Myers. U. S. Bur. Mines—Reports of Investigations, no. 2587, Mar. 1924, 7 pp. See also Ariz. Min. Jl., vol. 8, no. 6, Aug. 15, 1924, pp. 5-6. Discusses outstanding developments in new application of minerals; andalusite, preparation of andalusite for use, cyanite, sillimanite, beryl, spinel, and bentonite.

Radioactive. Principal Radioactive Minerals (Dei principali minerali radioattivi). Rassegna Mineraria Metallurgica e Chimica, vol. 60, no. 6, June 15, 1924, pp. 123-125. Details of minerals, their occurrence and properties.

Principal Radioactive Minerals (Principaux minéraux radioactifs), M. Legraye. Revue Universelle des Mines, vol. 2 (series 7), no. 3, May 1, 1924, pp. 176-180. Gives list of principal radioactive metals, their characteristics and occurrance. Bibliography.

Rare, Canada. The Rare Element Minerals of Canada, H. V. Ellsworth. Can. Chem. & Metallurgy, vol. 8, no. 11, Nov. 1924, pp. 261-263. Wide distribution shown of rare minerals in Canadian rocks. Promising research field for chemists in analysis of complex ores.

Saskatchewan. Mineral Possibilities of Northern Saskatchewan, E. L. Bruce. Can. Min. Jl., vol. 45, no. 26, June 27, 1924, pp. 618-621, 8 figs. Value of Keewatin rocks demonstrated; first gold found at Beaver Lake; comparison of rocks at Beaver Lake and Porcupine; copper and zinc sulphides; indications of nickel and iron.

United States. Gold, Silver, Copper, Lead, and Zinc in 1922. U. S. Geol. Surv., nos. I:22, I:23, I:24, I:25, and I:26, 1924. Five reports giving production statistics as follows: No. I:22: Utah, by V. C. Heikes, pp. 377-403; No. I:23: California and Oregon, by J. M. Hill, pp. 405-451; No. I:24: Montana, by C. N. Gerry, pp. 453-488; No. I:25: Arizona, by V. C. Heikes, pp. 489-518; and No. I:26: Colorado, by C. W. Henderson, pp. 519-556.

MINERS

Conditions Affecting Health. Underground Conditions Liable to Affect the Health of Workers

in Gold Mines on the Witwatersrand, H. Pirow. Chem., Met. & Min. Soc. S. Africa—Jl., vol. 25, no. 3, Sept. 1924, pp. 54-96, 5 figs. Results of investigations on conditions liable to affect health of underground workers, including investigations on determination, causation, prevention, allaying and dissipation of silicious dust in mine air, high temperatures in stagnant humid air, and animal tests. Bibliography.

Diseases. Miners' Beat Knee, Beat Hand and Beat Elbow, E. L. Collis and T. L. Llewellyn. Iron & Coal Trades Rev., vol. 109, no. 2956, Oct. 24, 1924, pp. 670-671. See also Colliery Guardian, vol. 128, nos. 3331 and 3332, Oct. 31 and Nov. 7, 1924, pp. 1126-1127, and 1192. Abstract of report prepared under direction of Medical Research Council of work undertaken to find improved means of preventing such afflictions; conclusions and recommendations.

Effects of High Temperatures on. Some Effects on Man of High Temperatures, W. J. McConnell and R. R. Sayers. U. S. Bur. Mines—Reports of Investigations, no. 2584, Mar. 1924, 13 pp., 8 figs. on supp. plates. Results of experiments in air temperatures above 90 deg. fahr.

Some Effects of High Air-Temperatures Upon the Miner (Sixth Report to the Committee on "The Control of Atmospheric Conditions in Hot and Deep Mines"), K. Neville. Instn. Min. Engrs.—Trans., vol. 64, part 5, Feb. 1924, pp. 284-299 and (discussion) 299-314. Brief account of elementary scientific principles involved; analysis of food and drink requirements of miners in relation to underground temperature; regulation of body temperature during work in hot air.

Lamps for. See MINERS' LAMPS.

Nutrition. The Nutrition of Miners and Their Families. Colliery Guardian, vol. 128, nos. 3318 and 3319, Aug. 1, and 8, 1924, pp. 285-286, and 354-355. Abstract from report of Medical Research Council of Committee on Quantitative Problems in Human Nutrition, dealing with needs of coal miner, his family budget, etc.

Nystagmus. Miners' Nystagmus: Its Prevention and Cure, T. L. Llewellyn. Iron & Coal Trades Rev., vol. 108, no. 2938, June 20, 1924, pp. 1064-1065. See also Colliery Guardian, vol. 127, no. 3312, June 20, 1924, pp. 1579-1580, and Instn. Min. Engrs.—Trans., vol. 68, part 1, Oct. 1924, pp. 57-68 and (discussion) 68-71, 4 figs. Deals with improvement of underground lighting conditions as means for prevention of miners' nystagmus and with general principles for treatment of diseases when established. Abstract of paper read before Min. Sec., Empire Min. & Met. Congress.

MINERS' LAMPS

Firedamp Estimation. Testing for Firedamp. Iron & Coal Trades Rev., vol. 103, no. 2918, Feb. 1, 1924, pp. 167-170, 2 figs. Report of Miners' Lamps Committee. Details of experiments made with different lamps to determine best types for gas testing in addition to their use as source of light; gas caps.

Firedamp Indicator. Phenomena of Singing Flames in Presence of Firedamp (Erscheinungen an singenden Flammen bei Anwesenheit von Schlagwettern), H. Fleissner. Berg- u. Hüttenmännisches Jahrbuch, vol. 71, no. 4, 1923, pp. 22-23, 2 figs. on supp. plate. Refers to Fleissner firedamp indicator and describes observed phenomenon which tends to make visible indication of firedamp more distinct.

"Wetterlicht" Firedamp Indicator (Schlagwetteranzeiger "Wetterlicht"), H. Martienssen. Zeit. für technische Physik, vol. 5, no. 11, 1924, pp. 519-524, 4 figs. Describes new lamp in which presence of methane and its quantity can be easily indicated.

Flame Safety. Flame Safety Lamp Proves Source of Danger, D. Harrington. Coal Age, vol. 26, no. 18, Oct. 30, 1924, pp. 610-611. Review of several explosions caused by safety lamps; claims that such lamps cannot be trusted even in hands of certified officials and should never be used when shift is at work.

Miners' Flame Safety Lamps with Open-Mesh Gauzers. Iron & Coal Trades Rev., vol. 109, no. 2949, Sept. 5, 1924, pp. 396-397. Discusses tests carried out at Mines Dept. Lamp-Testing Station; photometric tests, tests in still atmospheres, gallery tests, gas testing, and flickering light.

Gas-Testing. See COAL MINES, Gas Testing.

Gas Warning with. Safety-Lamps Giving Warning of Gas, W. M. Thornton. Instn. Min. Engrs.—Trans., vol. 67, part 2, May 1924, pp. 249-253 and (discussion) 253-257, 4 figs. See also North of England Inst. Min. & Mech. Engrs.—Trans., vol. 74, part 4, June 1924, pp. 104-108 and (discussion) 108-112, 5 figs. Describes different types of oil and electric lamps designed to utilize additional heat in air ascending from flame so as to give indication and warning of presence of gas.

Open, Danger from. See COAL MINES, Open-Lamp Hazards.

Relighting Underground. Relighting Lamps Underground. Iron & Coal Trades Rev., vol. 108, no. 2915, Jan. 11, 1924, pp. 47-48. See also Colliery Guardian, vol. 127, no. 3289, Jan. 11, 1924, pp. 95-96. Report of Miners' Lamps Committee dealing with unlocking and relighting from an open light, relighting electrically, relighting by an internal self-contained relighter, relighting of officials' lamps, and relighting of workmen's lamps by internal relighters; summary of recommendations.

Safety. Efficiency of Safety-Lamps, J. Cooper. Min. Inst. of Scotland—Trans., vol. 45, part 3, 1924-25, pp. 77-81 and (discussion) 81-83. See also Instn. Min. Engrs.—Trans., vol. 68, part 2, Nov. 1924, pp. 168-172 and (discussion) 172-174. Details of experiments carried on at rescue-station gallery of Heriot-Watt College, Edinburgh, Scotland, covering relative illuminating power and suitability of a large number of types of lamps.

Shadowless Light. Shadowless Light in Mines (Schattenloses Grubenlicht!). Bergbau, vol. 27, no. 22, Oct. 16, 1924, pp. 600-603. Describes Peters glass or globes in which interior is lined by means of a layer of pure quartz crystals, effect of which is to intensify light, eliminate all glare and development of heat and practically all shadows.

MINES

Accident Statistics. Mine-Accident Statistics, W. W. Adams. U. S. Bur. Mines—Reports of Investigations, no. 2579, Feb. 1924, 16 pp. Analysis based on reports covering 4699 accidents during months of January to October, 1923, at coal and metal mines operated by companies coöperating with Bur. of Mines in this special inquiry.

Mine Accident Statistics, W. W. Adams. U. S. Bur. Mines—Reports of Investigations, no. 2641, Sept. 1924, 8 pp. Analysis of so-called lost-time accidents to underground workers, which includes all injuries causing disability of a temporary nature lasting longer than remainder of day or shift.

Accidents in. See ACCIDENTS, Mines and Quarries.

Air Analysis, Apparatus for. Haldane's Apparatus. Sci. & Art of Min., vol. 34, no. 17, Mar. 15, 1924, pp. 260-261, 1 fig. Description of apparatus which is largely used for mine air analysis. Consists of a gas burette about 800 mm. long, having an upper part of greater width, and pro-

vided with a three-way stopper at top. Method of analysis.

Air Conditioning. The Cooling Effect of the Rock Surrounding a Mine on the Temperature of the Mine Air (Der Einfluss des Kältemantels und des Ausgleichmantels auf die Erwärmung der Wetter), R. Lehmann. Glückauf, vol. 60, no. 7; Feb. 16, 1924, pp. 107-112, 3 figs. Temperature conditions in earth crust and how they are influenced by mine shafts; new method of determining rock temperatures in surrounding of shaft and heat emitted from it to air: points out importance of wide use of gallery insulation for maintaining cool air in deep mines.

Air Flow in. See FLOW OF AIR, Mines.

Belgian Congo. A General Note on the Country and the Minerals Being Exploited in the Katanga Province of the Belgian Congo, C. H. Luja. Chem., Met. & Min. Soc. of So. Africa—Jl., vol. 24, no. 10, Apr. 1924, pp. 245-250. Details of country, geologic features and activities of Union Minière du Haut Katanga.

Cars. See MINE CARS.

Cement Spraying. See CEMENT GUN, Mines, Application in.

Cementing Water-Carrying Fissures. Method of Cementing Water-Carrying Fissures in the Star Crosscut, C. H. Foreman. Min. & Metallurgy, vol. 5, no. 213, Sept. 1924, pp. 417-422, 8 figs. Describes methods employed in connection with development of Star mine by Sullivan Min. Co., owned jointly by Bunker Hill and Sullivan Min. & Concentrating Co. and Hecla Min. Co., work calling for a crosscut from Hecla workings on 2000 level to Star ledge. Description of cement pump.

Clearing Falls and Securing Strata. Clearing Falls and Securing Strata on Highly-Inclined Roadways, A. T. Seymour. Iron & Coal Trades Rev., vol. 108, no. 2923, Mar. 7, 1924, pp. 384-385, 12 figs. Method introduced by author for dealing with falls of roof and securing strata on highly-inclined roads in mines.

Coal. See COAL MINES.

Communication. Can Signals Be Transmitted from Mine to Surface and Vice Versa by Ground Conduction System, J. J. Jakosky. Coal Age, vol. 25, no. 15, Apr. 10, 1924, pp. 529-534, 6 figs. Transmitting and receiving apparatus should be designed to resist adverse mine conditions; signals are most effectually transmitted through ground that is neither dry nor too moist. Results of study of underground communication by U. S. Bur. of Mines.

Further Progress Made with Voice Transmission From Underground Workings to Surface, J. J. Jakosky. Coal Age, vol. 25, no. 22, May 29, 1924, pp. 801-804, 4 figs. Discusses value of wireless tests when made between mine and high-powered stations on surface; propagation affected by earth strata and sheet water; successful experiments carried on from mine locomotive.

Radio as a Method for Underground Communication in Mines, J. J. Jakosky. U. S. Bur. Mines—Reports of Investigations, no. 2599, Apr. 1924, 4 pp. Discussion of some of the factors involved in applying radio in mines.

School Boys Work Out New Radio System for Mines, A. B. McCall. Coal Age, vol. 26, no. 9, Aug. 28, 1924, pp. 293-296, 6 figs. Scheme of Springfield, Ill., High School Radio Club for transmitting voice vertically through ground; may be great aid in rescue work; previous radio communication with mines needed metallic conduction.

Concrete Construction. See CONCRETE CONSTRUCTION, REINFORCED, Mines.

Control of Working Expenditures. A Method of Controlling Working Expenditure on the Mines, E. Hay. Chem., Met. & Min. Soc. of S. Africa, vol. 25, no. 4, Oct. 1924, pp. 104-118 and 118-120. Describes system devised and applied to mines controlled by General Mining and Finance Corpn.; advantages of system.

Copper. See COPPER MINES.

Cost Accounting. Factors in Mine Cost Accounting. Eng. & Min. Jl.-Press, vol. 118, no. 12, Sept. 20, 1924, pp. 463-467. Intricate decisions involved when working charges are analyzed and apportioned.

Development. Reducing the Cost of Prospecting Isolated Mining Properties, F. A. McLean. Can. Inst. Min. & Metallurgy, no. 148, Aug. 1924, pp. 531-538, 2 figs. Discusses development of promising claims, selection of compressed air plant, type of drive, tunneling, drifting, etc.

Electric Plants. See ELECTRIC PLANTS, Mines.

Electrical Equipment. Electric Mining Equipment, Its Selection, Care and Operation, A. F. Elliott. Iron & Steel Engr., vol. 1, no. 11, Nov. 1924, pp. 576-578. Question of generated vs. purchased power; substations; motors; haulage equipment; coal-cutting machines; care and operation; organization.

Electricity in Mines in 1923. Iron & Coal Trades Rev., vol. 119, no. 2959, Nov. 14, 1924, pp. 788-790, 1 fig. Progress in use of electricity; fatal and non-fatal accidents; systematic testing; repairs of trailing cables; Inspector's comments on electrical accidents. (Abstract.) Report of H. M. Elec. Inspector of Mines.

Flameproof Design of Casings for Electrical Apparatus, D. Hay and I. C. F. Statham. Colliery Guardian, vol. 127, no. 3297, Mar. 7, 1924, pp. 603-605 (includes discussion), 2 figs. Discussion of principles involved in safe design of electrical apparatus for mines. Account of investigations carried out in mining depart. of Univ. of Sheffield, Eng. Abstract of paper read before Midland Inst. Min. Engrs. See also Iron & Coal Trades Rev., vol. 108, nos. 2922 and 2923, Feb. 29 and Mar. 7, 1924, pp. 342-343 and (discussion) 390, 5 figs and Instn. Min. Engrs.—Trans., vol. 67, part 1, Mar. 1924, pp. 23-37 and (discussion) 37-45, 6 figs.

Electrical Safety Inspection. Electrical Safety Inspection: Suggestions for Mine-Safety Engineers, L. C. Ilsley. Safety Eng., vol. 47, no. 4, Apr. 1924, pp. 168-173. Important points that should be watched by inspectors, and brief review of work of U. S. Bur. Mines in testing of electrical apparatus or equipment to determine their permissibility for use in gaseous coal mines.

Electricity in. Electricity in Mines and "Safety First," W. M. Thornton. Colliery Engr., vol. 1, no. 1, Mar. 1924, pp. 5-6. Describes methods by which element of risk in use of electricity in mines can be practically eliminated.

Safety in Underground Use of Electricity, J. B. Johnson. Min. Congress Jl., vol. 10, no. 10, Oct. 1924, pp. 475-477, 1 fig. Urges that operators consider safety in underground electrical equipment first, and economy in installation, second; many recommendations made to prevent accidents.

Equipment, Maintenance of. How to Keep Mining Equipment in Satisfactory Operating Condition at All Times, J. F. MacWilliams. Coal Age, vol. 25, no. 23, June 5, 1924, pp. 843-844, 1 fig. Electrical apparatus should be supplied with rated voltage; repair of worn parts by welding and machining; pumps and fans must not be required to deliver more than their normal capacity.

Explosions. Explosions and Fires in Mines, J. T. Watson. Chem. Eng. & Min. Rev., vol. 16, no. 191, Aug. 5, 1924, pp. 427-431. Quotes five

cases furnishing irrefutable evidence that if safety lamps had been in use, with their attendant discipline, disasters would not have occurred; causes of fires in mines and their prevention.

Fire Fighting. The Functions and Practical Use of Liquefied Carbon Dioxide in Fighting Mine Fires, C. L. Jones. Coal Mine Mgmt., vol. 3, no. 3, Mar. 1924, pp. 34-35 and 52-57. Source and purity of CO_2 available; how long it should require for a mine fire to cool; heat generated by a fire, and leakage; heat dissipated; liquefied CO_2 compared with other inert gases; etc. Condensation of paper read at 12th Annual Safety Congress of Nat. Safety Assn.

Fire Prevention. Elimination of Fires Due to Winches (Bekämpfung und Verhütung von Haspelkammerbränden), R. Forstmann. Glückauf, vol. 60, no. 40, Oct. 4, 1924, pp. 891-896, 17 figs. Particulars of various devices used in Ruhr district for eliminating fire dangers, using fireproof brake blocks, etc.

Would Ventilate Mine Fire Area With Inert Gas, Jos. J. Walsh. Coal Age, vol. 25, no. 2, Jan. 10, 1924, p. 55. Why stopping intake is inadvisable; small fire area if shut in may explode.

Gas Samples, Collection of. Collection of Gas Samples. Sci. & Art of Min., vol. 34, nos. 15 and 16, Feb. 16 and Mar. 1, 1924, pp. 231 and 244-245, 2 figs. Advantages of periodic analysis of air samples; how to take sample.

Haulage. Haulage, A. Crawford. Coal Mine Mgmt., vol. 3, nos. 2, 3, 4, 5, 6, 7, 8, 9, 10, 11 and 12, Feb., Mar., Apr., May, June, July, Aug., Sept., Oct., Nov. and Dec. 1924, pp. 38-44, 38-45 and 60, 43-49, 44-54, 43-51, 49-62, 42-48, 43-48, 43-47, 36-41 and 45-46 and 42-51, 39 figs. Construction of different types of mine cars and of electric, storage-battery, and gasoline locomotives, including calculations; rope haulage; animal haulage; mine tracks; curves.

See also MINE HAULAGE.

Haulage Accidents. Prevention of Accidents due to Runaway Tubs, I. C. F. Statham. Iron & Coal Trades Rev., vol. 108, nos. 2933 and 2934, May 16 and 23, 1924, pp. 826-830 and 870-872, 37 figs. Official statistics show that a considerable number of fatalities in underground haulage are due to runaway tubs. Causes of runaway tubs; devices available for arresting runaways when tubs are being conveyed down inclines.

Headgear. Development of Headgear With Special Reference to Iron Construction (Ueber die Entwicklung der Bergwerks-Fördergerüste unter besonderer Berücksichtigung ihrer Eisenkonstruktion), H. Torp. Bauingenieur, vol. 5, no. 19, Oct. 1924, pp. 639-640, 8 figs. See also Bautechnik, vol. 2, no. 45, Oct. 17, 1924, pp. 512-513, 9 figs. Discusses headgear construction for coal mines and developments due to increasing depth of mines and increasing loads and velocities.

Hoisting in. See MINE HOISTING.

Hygrometry for Deep. Hygrometry for Deep Mines, H. S. Jones. Instn. Min. & Metallurgy—Bul., no. 240, Sept. 1924, pp. 1-47, 3 figs. Presents tables dealing with meteorology, and especially hygrometry, of ventilating air in hot and deep metal mines; gives method by which each table has been calculated, and also fundamental constants on which they depend.

Italy, Sardinia. The Tiny Mine in Sardinia (La miniera di Tiny in Sardegna), G. Castelli. Rassegna Mineraria Metallurgica e Chimica, vol. 61, no. 1, July 15, 1924, pp. 5-10, 2 figs. Discusses geological formation, ore deposits, mining operations, analysis of calamine and lead ores, transportation.

Japan. Cupriferous Pyritic Deposits, Hitachi Mines, Japan, M. Watanabé and W. R. Landwehr. Economic Geology, vol. 19, no. 5, Aug. 1924, pp. 434-454, 4 figs. Discusses geological formation, structure and texture of ore deposits, mineral relations, dynamic metamorphism, etc.

Katathermometer Observations. Some Katathermometer Observations in Tonopah Mines, R. S. Lewis. Eng. & Min. Jl.-Press, vol. 117, no. 9, Mar. 1, 1924, pp. 363-366, 3 figs. Observations in mines of Tonopah, Nevada.

Lighting. See LIGHTING, Mines.

Locomotives for. See MINE LOCOMOTIVES.

Maximum-Pressure Steam, Use of. Maximum Pressure Steam and Its Use in Mine Operation (Der Höchstdruckdampf and seine Wirtschaftlichkeit im Zechenbetriebe), F. Wintermeyer. Bergbau, vol. 27, no. 20, Oct. 2, 1924, pp. 547-551, 2 figs. Discusses types of design and construction, including Atmos and Benson boilers; turbines, preheating and superheating, safety devices, etc.

Metal, Accidents in. Metal-Mine Accidents in the United States During the Calendar Year 1922, W. W. Adams. U. S. Bur. Mines—Technical Paper 354, 1924, 72 pp. Statistics covering prospects as well as producing and nonproducing mines.

Mexico. Mines of the West Coast of Mexico, P. L. Bell and H. B. MacKenzie. Ariz. Min. Jl., vol. 8, nos. 3 and 5, July 1 and Aug. 1, 1924, pp. 9, 14-16 and 19-20; and 5-6 and 49-52, 4 figs. July 1: Outline of development and activity of mines in Sonora, Mexico. Copper principal mineral product of this district; silver, lead, zinc, gold, and other metals are mined. Aug. 1: Mining in Mazatlan district and in Nayarit as well as notes on miscellaneous ore deposits.

Mine-Rescue Work. See MINE-RESCUE WORK.

Ontario. Ontario's Mines, T. F. Sutherland. Can. Min. Jl., vol. 45, no. 23, June 6, 1924, pp. 551-553. Government and mining laws; taxation; ore-extraction problems; power and labor; timber, water, and climate.

Permissible Equipment and Supplies. Permissible Explosives, Mining Equipment, and Apparatus Approved Prior to January 1, 1924, J. E. Crawshaw, L. C. Ilsley, D. J. Parker and A. C. Fieldner. U. S. Bur. Mines—Tech. Paper, no. 364, 30 pp. 1 fig. List of permissible equipment and supplies for breathing apparatus, coal-cutting machines, electric drills, electric cap lamps, flame safety lamps, shot-firing units, storage-battery locomotives, and explosives.

Pumping Plants. See PUMPING PLANTS, Mines.

Pumps. See PUMPS, CENTRIFUGAL, Mine Service.

Queensland. Mount Isa: Queensland's New Silver Lead Field. Chem. Eng. & Min. Rev., vol. 116, no. 189, June 5, 1924, pp. 335-337, 4 figs. See also Queensland Gov. Min. Jl., vol. 25, no. 289, June 14, 1924, pp. 200-204, 6 figs. Details of occurrence and workings, especially by Mt. Isa Mines Ltd. and Mt. Isa Proprietary Co.

Reconstruction of Equipment. Reconstruction Methods of the "Hecla" Electrical-Mechanical Equipment, A. C. Stevenson. Min. & Metallurgy, vol. 5, no. 210, June 1924, pp. 273-275. Outline of various steps taken and exigencies met during time of unwatering and rebuilding burnt top equipment.

Rescue Apparatus. See MINE-RESCUE APPARATUS.

Rescue Communication Systems. Mine-Rescue Communication System of the Future, J. J. Jakosky. Coal Age, vol. 25, no. 4, Jan. 24, 1924, pp. 139-140. Results of actual mine ex-

periments; high- and low-frequency penetration; modified wired radio seems to hold greatest possibilities.

Rumania. The Law on Mines (La loi sur les mines). Annales des Mines de Roumanie, vol. 7, no. 14, July 25, 1924, pp. 425-480. Text of law on mineral deposits and mines, accidents, mineral fuel, oil, ores, validity of rights, concessions, etc. (In French and Roumanian.)

Russia. Mines and Mining in Russia from 1913 to 1922 (Bergbau und Hüttenwesen Russlands in den Jahren 1913-1922. Glückauf, vol. 60, no. 26, June 28, 1924, pp. 544-549. Statistical review covering coal mines, mining and conveying, production of coke and briquets; iron mines and mining; blast furnace operation, etc.

Safety in. See MINE-RESCUE APPARATUS.

Safety Problems. Researches on Safety Problems in Mining, E. Troup. Colliery Guardian, vol. 127, no. 3310, June 6, 1924, pp. 1441-1445. See also Iron & Coal Trades Rev., vol. 18, no. 2937, June 13, 1924, pp. 1016-1023. Statement of safety problems confronting mining industry and of researches into these problems now in progress. Abstracts of papers contributed to a symposium at Empire Mining and Metallurgical Congress, Lond., June 4, 1924, as follows: Coal Mining Explosives, F. L. Nathan; Explosion of Firedamp, H. B. Dixon; Coal Dust Explosions, W. Mason; Electricity in Coal Mines, R. Nelson; Miners' Safety Lamps, R. V. Wheeler.

Safety Resolutions. Mine Inspectors' Institute Advocates Legislation Requiring Closed Lights and Permissibles, A. F. Brosky. Coal Age, vol. 25, no. 22, May 29, 1924, pp. 807-808. Resolutions adopted by Mine Inspectors' Inst. include demands for electric cap lamps in all mines, flame safety lamps where necessary, exclusive use of permissible explosives, shotfirers to fire all shots electrically, detonators to be handled exclusively by shotfirers, rock dusting of all roadways, etc.

Sanitation. Sanitation in Mines, R. R. Wayers. U. S. Bur. Mines—Miners' Circular, no. 28, 1924, 14 pp. Deals with drinking water; sewage disposal, and ventilation.

Shaft House, Replacing. Moving a Shaft House, Geo. D. McLeod. Can. Min. Jl., vol. 45, no. 42, Oct. 17, 1924, pp. 1024-1027, 6 figs. Describes work done at mine in Northern Michigan in replacing old wooden shaft house with new one of steel, without interruption of hoisting.

Shaft Sinking. See SHAFT SINKING.

Shafts. See MINE SHAFTS.

Signaling. See MINE SIGNALING.

Slushing, Loading Device for. Loading Device for Slushing, I. W. Farrand. Eng. & Min. Jl.-Press, vol. 117, no. 13, Mar. 29, 1924, pp. 531-532, 6 figs. Describes device consisting of a four-wheeled steel-frame truck equipped with two vertical air cylinders, each operated by a four-way valve, which has given satisfactory results in drifts and tunnels of mines of Cerro de Pasco Copper Corpn.

Subsidence. Mining Subsidence. Surveyors' Instn.—Jl., vol. 3, part 12, June 1924, pp. 265-288. Discussion of paper by C. H. Bailey.

Substations for, Automatic. See SUBSTATIONS, Automatic.

Surveying. Notes on Borehole Surveying, G. A. Watermeyer. Chem., Met. & Bin. Soc. of S. Africa—Jl., vol. 24, no. 6, Dec. 1923, pp. 145-151, 5 figs. Notes on instruments patented for purpose of surveying bore-holes, some of which author has tested in practice.

Orientation in the Interior of Mines (Riktning av schakt och orter i en gruva), F. W. Berger. Teknisk Tidskrift, vol. 54, no. 32, Aug. 9, 1924, pp. 57-61, 10 figs. (Bergsvetenskap). Method of surveying in interior of mines so as to determine direction in which work has to be carried forward.

Use of Geophysical Investigations to the Mining Engineer (Welchen Nutzen bringen die geophysikalischen Untersuchungs-methoden den Bergbautreibenden?), G. Glockemeier. Metall u. Erz, vol. 21, nos. 8 and 9, Apr. and May 1924, pp. 165-172 and 189-203, 32 figs. Discusses theory, apparatus and applications of magnetic, gravitational, and electric methods of investigation, and explains them by typical examples.

Surveying Instruments. Improvements in Mine Surveying Instruments (Ueber Fortschritte im Bau der Grubenvermessungsinstrumente), H. Marchand. Montanistische Rundschau, vol. 16, no. 17, Sept. 1, 1924, pp. 464-467, 4 figs. Design and operation of recent theodolites for mine surveying built by Breithaupt.

Taxation, British Columbia. The Taxation of Mines in British Columbia, J. W. Bingay. Can. Inst. Min. & Metallurgy—Bul., no. 149, Sept. 1924, pp. 586-588. Points out necessity for lower taxation.

Temperature Measurement. Apparatus for the Measurement of Temperatures in Deep Wells by Means of Maximum Thermometers, C. E. Van Orstrand. Economic Geology, vol. 19, no. 3, Apr.-May 1924, pp. 229-248, 11 figs. Mercurial thermometers; apparatus for lowering mercury thermometers into deep wells; practical suggestions: accuracy and efficiency. Pub. with permission of U. S. Geol. Surv.

Temperature Regulation. Mine Temperature and Possibility of Controlling It (Die Bildung der Grubentemperaturen und die Möglichkeiten der Beeinflussung), F. Heise and K. Drekopf. Glückauf, vol. 60, nos. 28 and 29, July 12 and 19, 1924, pp. 583-590 and 607-614, 16 figs. Analyses mine temperature to obtain numerical values for separate factors and then proceeds to discuss possibility of influencing them artificially.

Temperatures. Effect of Hot and Cold Waves on Mine Temperatures (Die Wirkung von Hitze- und Kältewellen auf die Temperaturen des Wetterstromes), F. Heise and K. Drekopf. Glückauf, vol. 60, no. 39, Sept. 27, 1924, pp. 863-867, 12 figs. Discusses yearly and daily temperature fluctuation, night and winter cooling, influence of heat waves, and makes calculations.

Timbering. See MINE TIMBERING.

Tracks, Open-Pit. Tracks for Open-Pit Mines, W. R. Brown. Min. Congress Jl., vol. 10, no. 4, Apr. 1924, pp. 169-170. Standardizing open-pit track equipment; discusses items susceptible of standardization including rails, ties, spikes, splice bars and frog and switches.

Transportation Standardization. Standardizing Underground Transportation. Min. Congress Jl., vol. 10, no. 3, Mar. 1924, pp. 135-141, 9 figs. Recommendations of committee of Am. Min. Congress for tentative standards, including coal mine car design, hand brakes, mine car wheels, mine tracks and signals and locomotives.

Turkestan. A Reconnaissance in Turkestan and Southern Siberia, Wm. Roberts. Min. Mag., vol. 30, no. 6, June 1924, pp. 329-338, 7 figs. Describes journey of investigation into mineral districts in Asiatic region at present little known in England.

U. S. A. Gold, Silver, Copper, Lead, and Zinc in the Eastern States in 1923, J. P. Dunlop. U. S. Geol. Survey, no. I:1, July 7, 1924, 7 pp. Statistics of production by states.

Valuation. Should Mines Be Subjected to a Yearly Valuation?, C. P. McCormack. Coal Age, vol. 26, no. 5, July 31, 1924, pp. 145-148. As probable life of mine changes with development,

as market requirements and conditions modify profits and as such changes demand operating and financial reconstructions, frequent revaluations are desirable.

Ventilation. Economy and Efficiency in Ventilation. Instn. Min. Engrs.—Trans., vol. 67, part 1, Mar. 1924, pp. 1-12, 2 figs. Discussion on J. Parker's paper by above title published in Instn. Min. Engrs.—Trans., vol. 66, 1923-24, pp. 14, 69 and 181, and in Min. Inst. Scotland—Trans., vol. 44, part 6, 1923-1924, pp. 157-168, 2 figs. Discussion.

Efficiency of Jet Nozzles in Air Conduits (Der Wirkungsgrad von Strahldüsen in Wetterlutten), J. Maercks. Glückauf, vol. 60, no. 45, Nov. 8, 1924, pp. 1027-1032, 16 figs. Discusses isothermal efficiency of compressed-air nozzles and its determination, nozzle efficiency as a function of air velocity, and calculation of number of nozzles.

Tests on the Leakage of Mine Ventilating Doors, J. W. Paul, G. E. McElroy and H. P. Greenwald. Colliery Engr., vol. 1, no. 6, Aug. 1924, p. 262. Report of investigation; object of tests was to determine leakage of two air locks which had been placed in experimental mine as part of equipment for tests on friction factors.

The Application of Refrigeration to the Ventilation of Mines, F. A. Willcox and J. D. Farmer. Ice & Cold Storage, vol. 27, no. 318, Sept. 1924, pp. 235-239. Deals with two mines, one in Brazil and other on Continent. Abstract of paper read before Fourth Int. Congress of Refrigeration, Commission III.

The Theory of Ventilation, D. Hay. Iron & Coal Trades Rev., vol. 108, nos. 2927, 2928 and 2929, Apr. 4, 11 and 18, 1924, pp. 554-555 and (discussion) 601-602 and 634. See also Colliery Guardian, vol. 127, nos. 3302, 3303, 3304, and 3305, Apr. 11, 17, 25, and May 2, 1924, pp. 927-928 and (discussion) 992-993, 1056-1057 and 1122; and Domestic Eng. (Lond.), vol. 44, no. 8, Aug. 1924, pp. 172-175. Presents plea for codification of treatment, and discusses proposed selection of various units in form most suited for practical calculations. First report of Midland Inst. Min. Engrs. Committee of Ventilation of Mines.

The True Effect of Natural Ventilation in Deep Mines, R. Clive. Iron & Coal Trade Rev., vol. 108, nos. 2927, 2928 and 2929, Apr. 4, 11 and 18, 1924, pp. 558-559, 593 and (discussion) 601-602 and 634, 1 fig. Details of experiments and results obtained. Refers also to effect due to shaft resistance and resistance at shaft-mouthings, and variation due to observation errors, etc. Second report of Midland Inst. Min. Engrs. Committee of Ventilation of Mines. See also Colliery Guardian, vol. 127, nos. 3302, 3303, 3304, and 3305, Apr. 11, 17, 25, and May 2, 1924, pp. 929-931 and (discussion) 992-993, 1056-1057, and 1122, and (reply to discussion) in 3306, May 9, 1924, pp. 1192-1193.

The Ventilation of Mines, Douglas Hay and Rob. Clive. Instn. Min. Engrs.—Trans., vol. 67, part 5, Aug. 1924, pp. 411-442, 12 figs., partly on supp. plate. See also Colliery Guardian, vol. 127, no. 3310, June 6, 1924, pp. 1447-1449, 2 figs. Sci. and Art of Min., vol. 34, no. 23, June 7, 1924, pp. 354-355; Iron & Coal Trades Rev., vol. 108, no. 2938, June 20, 1924, pp. 1058-1061, 6 figs. Need and principles of ventilation; modes of production of ventilation; modern ventilators and surface arrangements; hot and deep mines; ventilation practice in laying out mines underground; review of existing conditions; research.

Ventilating Mines by Exhaust Steam. Colliery Guardian, vol. 128, no. 3319, Aug. 8, 1924, pp. 356-357, 1 fig. Details of British patent no. 212802, improved method of utilizing heat liberated by condensation of exhaust steam for heating outgoing air, steam being derived from mine engines installed above or below ground.

Ventilation and the Miner's Efficiency, R. S. Lewis. Salt Lake Min. Rev., vol. 26, no. 1, Apr. 15, 1924, pp. 19-21. Man's endurance of high temperatures; natural temperatures of deep mines; kata-thermometer for air testing, and some of its other uses; etc.

Ventilation as an Agent in the Prevention of Miners' Phthisis on the Witwatersrand, C. J. Gray. S. African Eng., vol. 35, nos. 9 and 10, Sept. and Oct. 1924, pp. 180-181 and 207-210, 3 figs. General impression of lines of thought and practice being followed.

Ventilation Problems at Champion Reef Mine, C. F. Heathcote. Instn. Min. & Metallurgy—Bul, no. 233. Feb. 1924, 40 pp., 4 figs.

Waste-Steam Ventilation, a New Method of Waste-Heat Utilization in Mines (Die Abdampfbewetterung, eine neue Art der Abdampfverwertung auf Bergwerken), Heise. Wärme, vol. 47, no. 8, Feb. 22, 1924, pp. 77-80. Difficulties in overcoming vapor from steam engines in underground mines; application of air condensation making use of outgoing air current; advantages for ventilation; volume of steam and condensation area required; calculation of costs.

See also Katathermometer Observations; BLOWERS, Mine Ventilation; FANS, Mine; VENTILATION, Still-Air Conditions, Temperatures for.

Water Neutralization. Neutralization of Mine Water in Don Basin, G. Lomoff. Russian Min. Jl., vol. 100, no. 4-5, Apr.-May 1924, pp. 425-428, 2 figs. Practice in a region where mine water contains three oxides. (In Russian.)

Water Supply. Using Mine and Shaft Water in the Mines of the Ruhr (Die Verwendung von Gruben- und Schachtwasser auf den Zechen in Ruhrbezirk), W. Trümpelmann. Glückauf, vol. 60, no. 36, Sept. 6, 1924, pp. 783-789. Origin, composition and use of mine waters; salt content and hardness preventing use; improvements of mine water; etc.

Welfare Work. Miners' Welfare Problems in Sierra de Cartagena (Problema social-minero de la Sierra de Cartagena), B. Rolandi. Revista Minera Metalurgica y de Ingenieria, vol. 75, nos. 2940 and 2941, Aug. 16 and 24, 1924, pp. 471-473 and 475, and 481-484. Details of report by Inst. Social Reform, discussing housing conditions, rents, wages and payment, accidents and their causes, transportation difficulties, etc.

MINING

Alaska. Mining in Alaska in 1923. Min. Congress Jl., vol. 10, no. 1, Jan. 1924, pp. 39-41, 2 figs. Value of mineral production greater than 1922; decrease in gold production, but coal and copper production increased about 20 per cent.

Australia. An Outline of Mining Practice in Australia. Chem. Eng. & Min. Rev., vol. 17, nos. 193, 194, and 195, Oct., Nov., and Dec. 1924, pp. 7-9, 53-55 and 97-100. Oct.: Methods at Broken Hill, N. S. W. Nov.: Methods at Kalgoorlie, W. A. Dec.: Methods at Mt. Morgan, Mt. Lyell, and Mt. Bischoff, Tasmania. Extracted from paper read at Empire Min. & Met. Congress, Lond.

Boreholes. See BOREHOLES.

British Columbia. Conditions Affecting Mining in British Columbia, R. W. Brock. Can. Inst. Min. & Metallurgy—Bul., no. 149, Sept. 1924, pp. 597-607. Deals with physical, geological, and artificial conditions.

Northwestern British Columbia, G. Hanson. Can. Min. Jl., vol. 45, no. 22, May 30, 1924, pp. 521-524, 5 figs. Summary description of active

mines and areas favorable for prospecting. Pub. with permission Ottawa Geol. Surv.

The Opportunity for Mining Investment in British Columbia, H. G. Nichols. Can. Inst. Min. & Met.—Bul., no. 144, Apr. 1924, pp. 213-225. Outlines some of the mining possibilities in British Columbia, considers factors affecting investment, and attempts an appraisal of opportunity presented.

British Empire. Mining Throughout the Empire. Min. Jl., vol. 145, no. 4635, June 21, 1924, 80 pp., 20 figs. Review of mineral resources and activities carried on all over world under British flag, and by undertakings depending on British enterprise and British capital.

California. Chapter of Report XX of the State Mineralogist Covering Mining in California and the Activities of the State Mining Bureau, Cal. State Min. Bur., Min. in Cal., vol. 20, no. 1, Jan. 1924, 72 pp., 11 figs., partly on supp. plate. Report of development and mining activities of the state, prepared by district mining engineers.

Coal. See COAL MINING.

Drilling. See DRILLING.

Geophysics in. Task of Geophysical Advisers in Mining (Die Aufgaben geophysikalischer Berater im Bergbau). Zeit. des Internationalen Vereines der Bohringenieure u. Bohrtechniker, vol. 32, no. 24, Dec. 15, 1924, pp. 188-190. Role of geophysical experts in aiding practical geology, prospecting, etc.

Hydraulic Stowing. Hydraulic Stowing at the Villeboeuf Mines, E. Jaboulay. Iron & Coal Trades Rev., vol. 109, no. 2945, Aug. 8, 1924, pp. 243-244, 3 figs. Details of design and construction of hydraulic stowing plant at Villeboeuf mines, France; advantages gained. Translated from Revue de l'Industrie Minérale.

Metal, Economics of. The Economics of Metalliferous Mining, H. Louis and H. F. Marriott. Iron & Coal Trades Rev., vol. 108, no. 2940, July 4, 1924, p. 15. See also So. African Min. & Eng. Jl., vol. 35, nos. 1709, 1711, and 1714, June 28, July 12, and Aug. 2, 1924, pp. 1167, 1242, and 1315; and So. African Eng., vol. 35, no. 7, July 31, 1924, pp. 143-146. Considers two methods in studying cost of production in ironstone mine, lead mine, copper mine and smelting works, and tin mine. Abstract of paper read before Empire Min. & Met. Congress.

Microscopic Investigation, Application of. Mineralography as an Aid to Mining, E. Thomson. Can. Inst. Min. & Met.—Bul., no. 144, Apr. 1924, pp. 231-237, 12 figs. Determination of opaque minerals by microscopic investigation; practical directions in which this method may be applied.

Newfoundland. Mining and Metallurgy in Newfoundland, D. J. Davies. Instn. Min. & Metallurgy —Bul., no. 243, Dec. 1924, 8 pp. Geology, iron ore, copper possibilities, lead ores, and nonmetallic minerals of Newfoundland.

Nova Scotia. Metalliferous Mining in Nova Scotia During 1923, A. E. Flynn. Can. Min. Jl., vol. 45, no. 1, Jan. 4, 1924, pp. 33-35. Reasons for low gold assays from dumps; arsenic ores; Harr concentrator; gold mining; gypsum mining; other minerals.

Ontario, Canada. Mining in Ontario in 1923, T. W. Gibson. Can. Min. Jl., vol. 45, no. 2, Jan. 11, 1924, pp. 45-46. Notes on nickel, gold, and silver.

Physiological Problems. Physiological Problems in Mining, J. S. Haldane. Can. Min. Jl., vol. 45, nos. 38, 39, and 40, Sept. 19, 26, and Oct. 3, 1924, pp. 932-933, 957-959, and 987-989. Sept. 19: Gases met with in mines. Sept. 26: Heat in mines. Oct. 3: Dust in mines; underground infections. See also (abstract) in Chem. Eng. & Min. Rev., vol. 17, no. 194, Nov. 1924, pp. 59-63; Instn. Min. Engrs.—Trans., vol. 68, part 1, Oct. 1924, pp. 34-47 and (discussion) 47-56; and Colliery Guardian, vol. 127, no. 3311, June 13, 1924, pp. 1507-1508.

Quebec. Mining Activities in Quebec during the Year 1923, A. O. Dufresne. Can. Min. Jl., vol. 45, no. 1, Jan. 4, 1924, pp. 28-30, 1 fig. Activities in gold belt; gold companies and syndicates; transportation and other facilities; activities of asbestos mines and mills; new construction; non-metallics.

Rock Containing Oil and Gas. Methods of Mining Loose or Semi-disintegrated Rock Containing Oil and Gas (Ueber die Methode rollige, halbfeste oder öl- und gasreiche Gebirgsmassen zu durchörtern und abzubauen), G. Schneiders. Petroleum, vol. 20, no. 27, Sept. 20, 1924, pp. 1377-1384. Describes shield method used in tunnel construction and its application in mining; details of English and American tunneling work.

Russia. New Russian Mining Law of 7-13 July 1923 and Petroleum (Das neue russische Berggesetz vom 7. bezw. 13. Juli 1923 und das Erdöl), H. Pohl. Petroleum, vol. 20, no. 19, July 1, 1924, pp. 905-910. Text of law covering prospecting, concessions, rights and duties of concessionaires.

Scrapers. Use of Scrapers in Narrow Veins, A. S. Wingher. Eng. & Min. Jl.-Press, vol. 118, no. 16, Oct. 18, 1924, pp. 618-619, 2 figs. Describes practice in mine of Utah Consolidated Min. Co., at Bingham Canyon.

Skip Changing. Homestake Method of Changing Skips, Felix Edgar Wormser. Eng. & Min. Jl.-Press, vol. 117, no. 26, June 28, 1924, pp. 1044-1045, 4 figs. Change is made at bottom of shaft instead of on surface.

Standardization. Standardization Applied to Metal Mining, Chas. A. Mitke. Min. Congress Jl., vol. 10, no. 4, Apr. 1924, pp. 147-148. Points out that standardization is absolute necessity. See also article entitled, Application of Standardization to Metal Mining, L. Eaton, pp. 149-150.

Time Study in. See TIME STUDY, Mining.

MINING INDUSTRY

Bolivia. Mining in Bolivia, H. L. Venables and E. J. Howard-Wright. Min. Mag., vol. 31, no. 6, Dec. 1924, pp. 350-355, 1 fig. Review of mining industry of Bolivia and general information relating to individual operating companies, taxes, legal conditions, etc.

Gaussian Curve, Application of. Application of Gaussian Curve to Mining Industry, H. Archbald. Am. Inst. Min. & Met. Engrs.—Trans., Advance Paper no. 1355-M, July 1924, 11 pp., 3 figs. It is possible to construct a simple diagram of earnings, or production, of men employed at a coal mine that will show not only if conditions tend toward contentment among men, but if operating distribution of work is correct. Basis of such a diagram would be Gaussian curve of normal variation in human ability. Shows how this may be done. Gives curves and tables.

Pacific Coast, United States. Trend of Mining Industries on the Pacific Coast, G. J. Young. Eng. & Min. Jl.-Press, vol. 118, no. 4, July 26, 1924, pp. 135-136. Discusses lead, zinc, gold and silver production of Pacific region.

Russia. See IRON AND STEEL, Russian Industry.

Water Power, Use in. Water Power in the Mining Industry. Can. Min. Jl., vol. 45, no. 27, July 4, 1924, pp. 648-652, 4 figs. General résumé of study made by Dominion Water Power Branch, Dept. Interior, of extent to which need of ample supplies of power available at cost that will permit of production and treatment

of large quantities of raw materials in districts in which mines occur, has been met by development of Canadian advantageously located water powers.

MINING LAWS

British Columbia. Mining Laws of British Columbia and Some Notes on Blue Sky Legislation, A. M. Whiteside. Can. Inst. Min. & Metallurgy—Bul., no. 149, Sept. 1924, pp. 574-585. Discussion of laws bearings upon economics of mining in British Columbia.

England. The Principles and Operation of the Mines (Working Facilities and Support) Act, 1923, Part I, J. H. Cockburn. Colliery Guardian, vol. 128, nos. 3338 and 3339, Dec. 19 and 24, 1924, pp. 1559-1561 and 1623-1625. Abridgment of paper read before Midland Inst. Min. Engrs.

Ontario. See MINES, Ontario.

Petroleum Exploitation and Storage. Roumania's New Mining Laws. Petroleum Times, vol. 12, nos. 303 and 305, Oct. 25 and Nov. 8, 1924, pp. 637-640 and 725-728, 1 fig. Oct. 25: Complete details of regulations applying to petroleum exploitation and storage. Nov. 8: Full text of regulations dealing with validation of acquired rights.

MISTS. See GASES, Mists, Analysis of.

MIXERS. See LIQUIDS, Mixing Apparatus.

MODELS

Use in Engineering. The Use of Models in Engineering, A. H. Gibson. Instn. Mech. Engrs.—Proc., no. 1, 1924, pp. 53-64. Points out that, when used with judgment, model experiments are capable of giving results of highest value, afford unique method of attack in more complex problems, and extension of their use by engineering investigators appears to offer very fruitful field of research.

MOLDING MACHINES

Applications. Molding Machine Practice, R. R. Clarke. Metal Industry (N. Y.), vol. 22, nos. 6 and 7, June and July 1924, pp. 237-238 and 272-275, 8 figs. Range of application, difficulties, and solution of difficulties. Various methods of pattern-mounting.

Brass-Foundry Practice. Molding Machine Practice, N. F. Flanagan. Metal Industry (N. Y.), vol. 22, no. 1, Jan. 1924, pp. 5-6. How molding machine is put to work in brass foundry; discusses core making, mold making, fast molding, and molding board sizes.

Hand-Operated. Hand-Operated Molding Machine With Flasks, "Patent Voss" (Die kastenlose Handformmaschine "Patent Voss"). Zeit. für die Gesamte Giessereipraxis, vol. 45, no. 42, Oct. 19, 1924, pp. 330-332, 3 figs. Molding machine as well as work bench of molder are moved along as work progresses and a man can begin and finish a mold without changing his position; use of this machine increases production about 200 per cent.

Hydraulic. New Hydraulic Molding Machine (Eine neue hydraulische Pressformmaschine). Zeit. für die gesamte Giessereipraxis, vol. 45, no. 39, Sept. 28, 1924, pp. 306-307, 3 figs. Design and operation of machine of simple construction, requiring small space and having large field of application.

Hydraulic vs. Jarring. Hydraulic vs Jarring Molding Machine (Hydraulische oder Rüttelformmaschine?), V. Zsák. Giesserei-Zeitung, vol. 21, no. 1, Jan. 1, 1924, pp. 1-5, 8 figs. Nature of sand packing with molding press and jarring machine; it is shown that for up to 24-in. boxes only hydraulic molding machines can be used; for boxes from 24 to 40 in. both systems are equally good; for boxes over 40 in. only jarring molding machine can be used.

Movable. Movable Molding Machine for Large Work. Iron Age, vol. 114, no. 5, July 31, 1924, pp. 247-249, 4 figs. Describes traveling sand mixer and rammer which handles molding for 12 to 14-ton castings, developed by foundry of Marion Steam Shovel Co., Marion, Ohio.

Sand-Dressing and Pig-Molding. Sand-Dressing and Pig-Molding Machine for the Molding of Blast-Furnace Pigs (Sandaufbereitungs- und Masselformmaschine zum Formen von Hochofenmasseln), M. Paschke. Stahl u. Eisen, vol. 44, no. 52, Dec. 25, 1924, pp. 1771-1772, 2 figs. Describes operation of machine, its manipulation and performance.

Sandslinger. Recent Developments in Moulding Practice. Eng. Production, vol. 7, no. 143, Aug. 1924, p. 233, 2 figs. Details of design and construction of Sandslinger machines.

Selection and Operation. Why Molding Machines? C. W. Miller. Metal Industry (N. Y.), vol. 22, no. 4, Apr. 1924, pp. 146-147. Conditions under which it is advisable to use machines in brass foundry, and when it is poor policy to use them; types best suited to different classes of work; methods of handling and operating to get best results; difficulties which may be encountered and how to overcome them; quality of machine-made castings.

Types. Machine Molding and Molding machines (Maschinenformerei und Formmaschinen), Praktische Maschinen-Konstrukteur, vol. 57, nos. 37 and 41, Sept. 30 and Oct. 28, 1924, pp. 509-511 and 557-559, 16 figs. Discusses advantages of machine molding and describes usual types of machines used. Management of complicated patterns.

Moulding Machines, J. McClelland. Foundry Trade Jl., vol. 30, no. 413, July 17, 1924, pp. 57-60 (includes discussion), 7 figs. Describes hand-operated, power, and jolt-ramming machines, and a boxless machine.

New Molding Machines (Les nouvelles machines à mouler). Fonderie Moderne, vol. 18, Apr. 1924, pp. 100-103, 7 figs. Describes two new machines patented by Glaenzer & Perreaud, for production of foundry cores.

Types of Molding Machines, R. E. Search. Metal Industry (N. Y.), vol. 22, nos. 8, 10, and 11, Aug., Oct., and Nov., 1924, pp. 315-317, 397-398, and 442-443, 10 figs. Describes stripping plate, jar ramming, and turn-over machines through representative types made in United States and abroad.

MOLDING METHODS

Aluminum Crankcases. See CRANKCASES, Aluminum, Molding.

Condensers. A Method of Moulding a Condenser. Foundry Trade Jl., vol. 30, no. 415, July 31, 1924, pp. 101-102, 4 figs. Practical details of molding and core making for making of a condenser. Main dimensions of casting are: Depth, with top and bottom flanges, approximately 8 ft.; diameter, 10 ft.; inside diameter of body, 9 ft.; thickness of metal 1½ in.

Cylinder Stuffing Box. Moulding a L.P. Cylinder Stuffing Box, B. Shaw and J. Edgar. Foundry Trade Jl., vol. 29, no. 395, Mar. 13, 1924, pp. 211-212, 7 figs. Describes successive operations.

Electric-Motor End Brackets. Molding Motor End Brackets. Foundry, vol. 52, no. 18, Sept. 15, 1924, pp. 735-736, 4 figs. Equipment and methods employed in producing standardized work in Westinghouse Elec. & Mfg. Co. foundry at Cleveland, Ohio, which is typical of manner in which jobs of a similar nature are handled to aid production.

Gear Cases. See GEARS, Cases.

Green-Sand Molding. Hints on Green-Sand Moulding, C. H. Brown. Foundry Trade Jl., vol. 29, no. 399, Apr. 10, 1924, pp. 297-298 (includes discussion). Ramming of mold, venting of molds, effects of bad gating, burning on castings, etc.

Jolt-Ramming. Jolt-Ramming Moulding Practice, A. L. Key. Foundry Trade Jl., vol. 29, no. 397, Mar. 27, 1924, pp. 249-251, 8 figs. Describes author's practice. Principles, advantages, types of machines and installations, layout and tackle.

Pipe, Special Shapes. Molding Special Pipe Shapes, P. Dwyer. Foundry, vol. 52, no. 10, May 15, 1924, pp. 373-378, 10 figs. Equipment developed for production of large valves and special shapes which usually are ordered in single units or in limited numbers; practice of Pittsburgh Valve, Foundry & Constr. Co.

Propellers. Molding a Propeller in Loam, L. V. Johnston. Foundry, vol. 52, no. 11, June 1, 1924, pp. 446-448, 1 fig. Methods and rigging employed for purpose; necessity for skill and observance of care and accuracy.

Sweeps a Differential Pitch, J. Edgar. Foundry, vol. 52, no. 2, Jan. 15, 1924, pp. 51-52, 7 figs. Describes characteristics peculiar to propellers in which pitch varies from that of a true screw; method employed in foundry to make mold.

Spiral Drums. Molding Spiral Drum From Pattern Swept in Loam, J. Taylor. Can. Foundryman, vol. 25, no. 4, Apr. 1924, pp. 12-14, 7 figs. Pattern swept on arbor in similar manner to sweeping cam core; molded same as wooden pattern; core also swept in.

Turbine Casing. Makes Heavy Turbine Casing, J. Shaw. Foundry, vol. 52, no. 19, Oct. 1, 1924, pp. 776-778, 5 figs. Detailed description of molding methods employed in producing a 15,000-kw. turbine casing, bottom half, exhaust end, in foundry of Brightside Foundry & Eng. Co., Ltd., Sheffield, Eng.

Turbine Wheel. Cores Play Prominent Part in Molding Turbine, F. H. Bell. Can. Foundryman, vol. 15, no. 10, Oct. 1924, pp. 39-42 and 59, 8 figs. Describes molding of water wheel at foundry of Canadian Gen. Elec. Co., Toronto.

MOLDS

Cast-Steel. Comparison of Cast Steel and Iron Ingot Molds, Fr. Schivetz. Forging—Stamping—Heat Treating, vol. 10, no. 3, Mar. 1924, pp. 123-125. Account of author's experiments with steel ingot molds, from which he concludes that great distrust toward steel molds is not wholly warranted; with properly chosen pouring method and careful observance of all physical properties, favorable economic results can be obtained. Translated from Stahl u. Eisen, Dec. 28, 1922. See reference to original article in Eng. Index 1922, p. 431, last item on page.

Drier for. Designs Portable Gas Mold Dryer, A. Zander. Foundry, vol. 52, no. 12, June 15, 1924, p. 482, 2 figs. Apparatus for drying molds with manufactured gas, which is applicable to great variety of work, introduced at Kedzie Foundry Co., Chicago.

Hardness Testing and Measuring. A Hardness Testing Apparatus for Moulds and Cores, L. Treuheit. Foundry Trade Jl., vol. 29, no. 387, Jan. 17, 1924, pp. 50-51, 3 figs. Describes horizontal and vertical mold-testing devices designed similarly to Brinell testing machine to determine hardness of molds and cores in gr. per. sq. mm., and in this manner to obtain a real supervision of all parts, and thereby ensure clean castings with a reduction in wasters. From paper read before Hamburg Conference of German Foundrymen.

A New Method of Measuring the Hardness of Molds, E. Ronceray. Am. Foundrymen's Assn.—Advance Paper no. 443, for meeting Oct. 11-16, 1924, 3 figs. Describes small mold-hardness meter designed for studying systematically methods of mold ramming actually in use; apparatus is based on principle of Brinell ball hardness tester; results of tests.

Long-Life. Making Long Life Molds, O. Smalley. Foundry, vol. 52, no. 8, Apr. 15, 1924, pp. 294-297. Details of refractory mixtures which give satisfactory service; record of series of tests under shop conditions; plaster, paper pulp, ganister, carborundum and monazite among materials used.

Permanent. Discusses Permanent Molds, R. J. Anderson and M. E. Boyd. Foundry, vol. 52, nos. 12 and 13, June 15 and July 1, 1924, pp. 463-468 and 510-513, 17 figs. Describes five different permanent-mold processes and discusses principles involved; typical molds; materials for molds and cores; mold design; methods of gating; various types of commercial alloys and typical castings. Annual exchange paper of Am. Foundrymen's Assn. presented at Inst. Brit. Foundrymen. See also Foundry Trade Jl., vol. 29, nos. 407 and 408, June 5 and 12, 1924, pp. 464-468 and 477-485, 17 figs. Bibliography.

Sand for. See SAND, MOLDING.

Supports. See CORES, Supports.

MOLER

Properties and Uses. Moler and Its Applications (Le moler et ses applications), P. Hannover. Chimie & Industrie, vol. 12, no. 5, Nov. 1924, pp. 807-815, 6 figs. Discusses deposits, properties, and uses of moler, a species of diatomaceous earth; manufacture of silica-lime brick; working of deposits; characteristics of moler bricks; use in hydraulic mortars.

MOLYBDENUM

Applicability as Alloying Constituent. Molybdenum, Its Alloys and Its Applicability as an Alloying Constituent, P. Powell. Brass World, vol. 20, nos. 2, 4, and 5, Feb., Apr., and May, 1924, pp. 47-51, 117-123, and 157-162, 40 figs. Compiled and abstracted from various sources, chiefly from address delivered by Guertler before German Met. Soc. in Apr. 1922, and from investigations of C. Lehmer and those of Lautsch and G. Tammann, and other authorities.

Binary and Ternary Alloys of. Investigations of Binary and Ternary Molybdenum Alloys (Untersuchungen binärer und ternärer Molybdänlegierungen), Dreibholz. Zeit. für Physikalische Chemie, vol. 108, no. 1-2, 1924, pp. 1-50, 25 figs. Copper, silver, and gold form no alloys with molybdenum; melting point of copper is not raised by addition of molybdenum, nor that of molybdenum reduced by addition of copper; platinum is capable of forming alloys with molybdenum; copper-nickel alloys are not improved in their tenacity or electrical properties by addition of molybdenum; addition of molybdenum to nickel increases hardness. Bibliography.

Deoxidizer, Use in. Molybdenum and Its Ferroalloys (La industria del molibdeno y sus ferroaleaciones), A. Comba and Sigüenza. Ingeniería y Construcción, vol. 2, no. 19, July 1924, pp. 314-315. Discusses molybdenum as a deoxidizing agent in steel works, replacing aluminum and manganese, and its production in electric furnace.

Thermal Expansion. Thermal Expansion of Molybdenum, P. Hidnert and W. B. Gero. U. S. Bur. Standards—Sci. Papers, no. 488, May 5, 1924, pp. 429-444, 9 figs. Gives results in figures and tables of expansion tests made for various

temperature ranges between room temperature and 750 deg. cent. on molybdenum ingots prepared from fine and coarse grained molybdenum powders and on samples swaged to various diameters.

MOLYBDENUM STEEL

Physical Properties. Molybdenum Steel—Some Production Data, E. W. Pierce. Am. Soc. for Steel Treating—Trans., vol. 5, no. 6, June 1924, pp. 571-576. Merits of molybdenum and chromium as alloying elements in structural steels, as compared with chrome-nickel steels. Physical properties, and actual cost of production and fabrication.

MONEL METAL

Corrosion. Corrosion of Monel Metal in Photographic Solutions, J. I. Crabtree and G. E. Matthews. Indus. & Eng. Chem., vol. 16, no. 7, July 1924, pp. 671-675, 13 figs. Details of corrosion of monel metal when in contact with acids in photographic utensils.

Impact Testing. See IMPACT TESTING, Notched-Bar Tests.

Welding. Welding Monel Metal. Can. Machy., vol. 32, no. 12, Sept. 18, 1924, pp. 39-40, 2 figs. Discusses precautions to be observed in welding of monel metal which are not ordinarily followed in welding steel.

Welding Monel Metal and Nickel. Welding Engr., vol. 9, no. 3, Mar. 1924, pp. 25 and 28-29, 8 figs. Correct procedure for welding by oxy-acetylene, metallic-arc, carbon-arc, and resistance methods.

See also OXY-ACETYLENE WELDING, Monel Metal.

Working and Uses. Technical Experiences With Monel Metal (Betriebstechnische Erfahrungen mit Monel-Metall), H. Krüger. Maschinenbau, vol. 3, no. 28, Nov. 27, 1924, pp. 1085-1087, 3 figs. Discusses welding, casting, working, and uses.

MORTARS

Alkali, Effect on. Effect of Alkali on Strength of Mortar, Chas. E. Proudley. Pub. Roads, vol. 5, no. 3, May 1924, pp. 25-26, 2 figs. Tests of mortar briquets made in laboratory of U. S. Bur. of Pub. Roads to determine to what extent presence of alkali in mixing water is harmful.

Cement. Further Investigation as to Suitable Grain Composition of Current Mortar in Concrete (Weitere Untersuchungen über die zweckmässige Kornzusammensetzung des Zementmörtels im Beton), O. Graf. Bauingenieur, vol. 5, no. 22, Nov. 25, 1924, pp. 736-740, 12 figs. Discusses dependence of compression strength and tensile strength on composition of sand, and gives tables and graphs summarizing results.

Cement, Contraction and Swelling. See CONCRETE, Contraction and Swelling.

Cement Methods. See CONCRETE, Cement Methods.

Composition. Investigation as to the Best Composition of Hydraulic Mortars and Concretes (Estudios de investigación sobre la mejor composición de los morteros y hormigones hidráulicos), R. Feret. Ingeniería y Construcción, vol. 2, no. 19, July 1924, pp. 289-302, 16 figs. Nature and quality of limes and cements; proportion of constituents of mortars and concretes by volume; compression tests; etc.

Elasticity and Strength of Masonry. Tests on Pressure Elasticity and Compressive Strength of Masonry, Especially for the Determination of the Influence of Different Mortars on the Pressure Elasticity of Concrete and Brick Masonry (Versuche über die Druckelastizität und Druckfestigkeit von Mauerwerk, etc.), O. Graf. Beton u. Eisen, vol. 23, nos. 5 and 6, Mar. 5 and 20, 1924, pp. 52-58 and 65-68, 19 figs. Account and results of tests to obtain information on elasticity and strength of masonry of different mortars and different brickwork.

Lime. Hardening Process of Lime Mortars, J. E. Duchez. Rock Products, vol. 27, no. 18, Sept. 6, 1924, pp. 62-63. Discusses chemistry of addition of aluminates to lime to give mortars quick-setting and hydraulic properties.

MOTION PICTURES

Cameras. Kinematics, A. W. Judge. Automobile Engr., vol. 14, no. 193, Sept. 1924, pp. 265-270, 16 figs. Gives analysis of complex rapid mechanical motions; discusses high-speed cinematography, etc.

Films. Recent Progress in the Motion Picture Industry (Les progrès récents de l'industrie cinématographique), L. Lobel. Technique Moderne, vol. 16, no. 14, July 15, 1924, pp. 475-481, 28 figs. Discusses film and its support, apparatus for treating films, negatives and positives, color films and talking films.

Utilizing Technico-Scientific Films (Die Auswertung arbeitswissenschaftlicher Filme), R. Thun. Maschinenbau, vol. 3, no. 13, Apr. 10, 1924, pp. 454-458, 2 figs. Discusses method for turning to account technical films for time-study purposes.

Natural-Color. Cinematography in Natural Colours, G. A. Smith. Roy. Soc. Arts—Jl., vol. 72, no. 3717, Feb. 15, 1924, pp. 214-217 (includes discussion). Describes further developments.

Projecting Apparatus. Incandescent Lamps as a Source of Light for Projection (Die Glühlampe als Projektionslichtquelle), W. Meinel. Licht u. Lampe Rundschau, nos. 23 and 24, Nov. 7 and 20, 1924, pp. 653-657 and 689-692, 13 figs. Discusses light transmission in vertical projection; data on projector made by Osram Co., Berlin; incandescent lamps for projection work.

Talking Films. Motion Pictures with Speech (Le cinéma parlant et chantant), p. Girardin. Radioeléctricité, vol. 5, no. 67, Sept. 10, 1924, pp. 231-232, 3 figs. Describes method proposed for reproduction of speech, etc., in exact synchronism with projection of pictures in cinematograph; essential novelty of method is use of special "photion" cell, comprising two electrodes of special metal with one of rare gases filling bulb; cell is used in conjunction with hot-wire microphone to affect narrow strip at one edge of cinematograph film, thus giving series of tiny rectangles whose different shades represent sounds to which they are due.

The Talking Film (Der sprechende Film), Radicke. Deutsche Optische Wochenschrift, vol. 10, no. 7, Feb. 7, 1924, pp. 71-73, 5 figs. Details of system and apparatus developed by Vogt, Massolle, and Engel, by use of which picture and speech can be reproduced, fully synchronized, in film.

MOTION STUDY

Applications. See INDUSTRIAL MANAGEMENT, Elements of Work, Classification of.

Naval Gunnery, Application to. The Application of Motion Study to Naval Gunnery, J. G. Gross. U. S. Nav. Inst.—Proc., vol. 50, no. 262, Dec. 1924, pp. 1998-2009, 2 figs. Definition of motion study based on extracts from publications by Frank B. and Lillian M. Gilbreth; its application in naval service; examples of instruction cards used on board U.S.S. Smith Thompson.

MOTOR BOATS

All-Metal. The Application of Experiences of German All-Metal Airplane Construction on Boat

and Automobile Construction (Die Anwendung der Erfahrungen des deutschen Ganzmetallflugzeugbaues auf den Boots- und Karosseriebau), G. Reinhard. Motorwagen, vol. 27, no. 1, Jan. 10, 1924, pp. 7-9, 4 figs. Describes various types of all-metal motor boats of German design and advantages of such construction.

Engines. Engines for Motorboats, Geo. F. Crouch. Soc. Automotive Engrs.—Jl., vol. 14, no. 2, Feb. 1924, pp. 117-119. Discusses remote control of spark, throttle, and reverse gear, and suggests improvements; minor details relating to reliable and compact installation; deals mainly with high-powered cruisers and to boats of runabout type.

Lifeboats. Solve Unusual Lifeboat Problem. Mar. Rev., vol. 54, no. 9, Sept. 1924, pp. 349-352, 5 figs. Engineers meet need for lifeboat capacity for 1500 persons on 300-ft. ship.

MOTOR BUSES

Axle Housings, Machining. See AUTOMOBILES, Axle Housings.

Berlin. Bus Traffic in Large Cities, With Particular Reference to Berlin (Der Kraftomnibus im Grossstadtverkehr. Erläutert an den Berliner Verkehrsverhältnissen), E. Giese. Verkehrstechnik, vol. 41, no. 46, Nov. 14, 1924, pp. 575-583, 11 figs. Historical development; motor bus as compared to street railway; improvements of motor bus suggested; congestion in large cities can be overcome only by construction of subways and by opening of new streets.

Bodies. Developments in Motorbus-Body Design, H. G. Bersie. Soc. Automotive Engrs.—Jl., vol. 15, no. 4, Oct. 1924, pp. 346-351 and 358, 13 figs. Discussion of subject from viewpoint of passenger, as motor bus approaches him, as he enters it, and as he judges quality of transportation it affords.

Coördination with Electric Railways. See ELECTRIC RAILWAYS, Coördination with Motor-Bus Transportation.

Design. European Motor Bus Design. Elec. Ry. Jl., vol. 64, no. 12, Sept. 20, 1924, pp. 448-452, 13 figs. Double-deck design coming in use more and more; effort being made to inclose upper deck for all weather; light wood bodies used; weight limitation imposed by Dept. of Police.

Future Problems of Motorbus Engineering; A. F. Masury. Soc. Automotive Engrs.—Jl., vol. 15, no. 5, Nov. 1924, pp. 426-430, 9 figs. The six-wheel motor bus; problems of large motor-bus design; advantages of two rear axles; brakes and steering; engine and chassis; other problems.

Detachable Tractor. Front Wheel Drive Chassis Without Axles Is Developed for Bus Purposes. Automotive Industries, vol. 51, no. 16, Oct. 16, 1924, pp. 678-680, 4 figs. Complete power plant, driving mechanism and most of braking system form detachable tractor unit in chassis of Uppercu coach designed and built by Aeromarine Plane & Engine Co., Keyport, N. J.; trailer unit which carries body, has very low stiff straight top frame and wheels mounted on radius arms.

Double-Deck. The Double-Deck Motor Omnibus, R. W. Meade. Soc. Automotive Engrs.—Jl., vol. 14, no. 2, Feb. 1924, pp. 209-216. London's experience with early motor buses; London motor-bus specifications, and post-war development; double-deck buses on European continent; early bus operation in New York City; expansion to other cities and improvements in equipment; controlling factors for future design.

Electric-Railway Operated. Extent and Kind of Bus Operation by Electric Railways. Elec. Ry. Jl., vol. 63, no. 1, Jan. 5, 1924, pp. 5-13. Summary of methods of 121 companies based on nation-wide survey of industry; feeder service is most common form of operation; great expansion planned for 1924.

Engines. Accessibility with Complete Enclosure Combined in New Wisconsin Bus Engine, W. L. Carver. Automotive Industries, vol. 51, no. 26, Dec. 25, 1924, pp. 1080-1081, 2 figs. Pushrod tappets are mounted in die-cast carriers which are integral with housing covers; valves are seated in top of machined combustion space; torque curve peaks at 650 r.p.m.

Continental Announces Special Engine for Express Bus Service. Automotive Industries, vol. 50, no. 20, May 15, 1924, pp. 1075-1076, 2 figs. 6-cylinder engine has piston displacement of 331 cu. in. and develops maximum of over 70 hp. at 2300 r.p.m.; built for rapid, inter-city passenger work with long, non-stop runs.

New Budá Six Cylinder Engine Designed Especially for Bus Service, D. Blanchard. Automotive Industries, vol. 51, no. 23, Dec. 4, 1924, pp. 955-956, 1 fig. Aluminum crankcase extends some distance below crankshaft axis for increased rigidity; special attention given to balancing of moving parts; both crankshaft and camshaft have four bearings.

100-Hp. Knight Six Designed Specially for Large High Speed Buses, B. M. Ikert. Automotive Industries, vol. 51, no. 14, Oct. 2, 1924, pp. 596-599, 11 figs. Describes new product of Yellow Sleeve Valve Engine Works, Inc., East Moline, Ill., designed specially to meet requirements of service in heavy motor coaches where rapid acceleration, high speed, quiet operation, high fuel economy, low oil consumption, minimum vibration and low maintenance costs are controlling factors.

Rigid, Deep Section Aluminum Crankcase Feature of New Waukesha Bus Engine, W. L. Carver. Automotive Industries, vol. 51, no. 20, Nov. 13, 1924, pp. 854-855, 2 figs. Latest six develops 103 b.hp. at 2000 r.p.m.; cylinders are cast in pairs and lower portion is oil cooled; tapped carriers are mounted inside case.

The Practical Engine for Public Automobile Transportation (Le moteur pratique des Transports publics automobiles), M. Bonhomme. Industrie des Tramways, vol. 18, no. 215, Nov. 1924, pp. 477-485, 3 figs. Report presented to Int. Congress in Paris, covering general characteristics of engines employed in industrial vehicles, principal desiderata of engines for industrial vehicles, fuels, special motors for heavy oils, future of explosion engine, and electric vehicles.

Field and Future. The Field and Future of the Motorbus, J. A. Emery. Soc. Automotive Engrs.—Jl., vol. 14, no. 2, Feb. 1924, pp. 107-110. Relation of buses to railroads on routes not served by railroads, as adjunct to railways; substitute for unprofitable railway lines.

Fire Extinguishers. Fire Extinguishers. Motor Transport (Lond.), vol. 39, no. 1022, Sept. 29, 1924, pp. 380-381, 1 fig. Details of requirements for fire extinguishers on public service passenger cars in Metropolitan area (London).

Gasoline-Electric. Gas-Electric Bus Proves Its Worth in 10,000 Mile Test. Automotive Industries, vol. 51, no. 4, July 24, 1924, pp. 195-197, 4 figs. Describes gas-electric bus with Arendt-Morton system of control and propulsion, built by Gen. Elec. Co. and Atlas Truck Corpn. and in service on a cross-town line in New York City. Small engine in conjunction with electric power furnishes rapid acceleration and consistent service. Carries 35 to 45 passengers.

Gear-Shifting Mechanism. Novel Gear Shifting Mechanism Chief Feature of German Bus, B. R. Dierfeld. Automotive Industries, vol. 50, no. 10, Mar. 6, 1924, pp. 575-576, 5 figs. New Kastner

gate change incorporates original design; special method used for locking shifter bars has merit of compactness and simplicity; device evolved to prevent swaying of rear end; front-axle steering pivot operates constantly in bath of oil; chassis is brought out by Mannesmann-Mulag Co., Aix-la-Chapelle.

Graham. Graham Brothers Introduce One-Ton Truck and Two New Bus Chassis, D. Blanchard. Automotive Industries, vol. 51, no. 18, Oct. 30, 1924, pp. 772-773, 2 figs. Latter are similar to 1½-ton model and have 140 and 158-in. wheelbase; sedan and pay-enter type bodies seat 13 to 20 passengers; brakes have interchangeable connections.

Hydraulic Transmission. Hydraulic Transmission for Omnibuses. Engineer, vol. 137, no. 3559, Mar. 1924, p. 292, 1 fig. New system of hydraulic transmission gear which is development of mechanism, devised by same inventor for locomotive work, but modified to suit exigencies of chassis on which it has been fitted.

International Harvester Co. International Bus Has Four-Wheel Air-Operated Brakes. Automotive Industries, vol. 50, no. 23, June 5, 1924, pp. 1216-1217, 2 figs. Chassis adapted for 30-passenger bodies, is furnished in three different gear ratios, and has ball-bearing removable cylinder sleeve engine and internal-gear final drive.

Lighting. Lighting the Motorbus, W. C. Brown. Soc. Automotive Engrs.—Jl., vol. 15, no. 3, Sept. 1924, pp. 259-264, 8 figs. General conditions that affect attainment of adequate lighting; available types of bus-lighting equipment are analyzed as to their suitability; "glare" is defined and means of obviating it suggested; essentials for headlamps; tail-lamps, stop and direction signals, step-lamps, trouble-lamps, lights for signs and marker-lights discussed; most suitable type of electrical wiring needed to minimize voltage-drop, switches, lamp sockets, fuses, generator, and voltage regulator.

London General Omnibus Co. Worm Driven Cranked Axle Is Novel Feature of Latest L. G. O. Bus, M. W. Bourdon. Automotive Industries, vol. 50, no. 4, Jan. 24, 1924, pp. 184-188, 5 figs. Final reduction by internal gear and pinion running in oil; pressed steel frame has one pronounced drop back of engine and another aft of rear axle; rubber buffers used to supplement springs.

New York City. Coach and Bus Operation in New York, J. A. Beeler. Elec. Ry. Jl., vol. 64, no. 6, Aug. 9, 1924, pp. 195-198, 4 figs. Details of Fifth Ave. and municipal lines; difference in service and buses; bus situation in Manhattan and Bronx.

Operation and Maintenance. The Operation and Maintenance of the Motorbus, J. B. Stewart, Jr. Soc. Automotive Engrs.—Jl., vol. 15, no. 4, Oct. 1924, pp. 311-316, 1 fig. Discusses use in intercity service, selection of motor bus or motor coach, brake rigging, repairs and replacements, use of anti-skid devices, reinforced cross-links, overcoming disadvantages of pit, and ventilation.

Public-Utility Operation. Public-Utility Experience with the Motorcoach, V. E. Keenan. Soc. Automotive Engrs.—Jl., vol. 15, no. 4, Oct. 1924, pp. 320-323, 6 figs. Experience of United Elec. Rys. Co., Providence, Ohio. About 16 per cent of electric-railway mileage in Providence to be abandoned because it does not pay cost of electric operation. Comparison of earning power of motor bus and street-railway car.

Reading, England. Municipal Motor'Bus Services and Building Development. Motor Transport (Lond.), vol. 39, no. 1010, July 7, 1924, pp. 15-16, 3 figs. When first introduced into Reading buses were regarded only as temporary system, but they promise to become permanent.

Removable-Top. New Bus with Removable Top is Installed by Fifth Ave. Coach Co. Automotive Industries, vol. 50, no. 11, Mar. 13, 1924, pp. 614-615, 4 figs. Novel covering protects passengers from rain and snow but can be rolled up in fair weather; front and rear are inclosed in glass panels; capacity increased by lengthening upper deck.

Reo. Six-Cylinder Engine and Four-Wheel Brakes Feature New Reo Bus. Automotive Industries, vol. 50, no. 9, Feb. 28, 1924, pp. 499-501, 4 figs. Power unit and gearset mounted in sub-frame in fashion similar to passenger car of same make; body seats 21.

Republic. A New Republic Chassis. Motor Transport (Lond.), vol. 39, no. 1022, Sept. 29, 1924, pp. 377-379, 10 figs. Particulars of a machine recently imported by Republic Motor Trucks, Sales & Service, Ltd., Lond., specially designed for passenger traffic. Is intended for an open or closed body seating 24 passengers.

Self-Charging. Self-Charging Principle Applied on 25-Passenger Bus. Bus Transportation, vol. 3, no. 3, Mar. 1924, pp. 109-112, 7 figs. Details of new bus in operation on 96th St. line, New York City; storage battery acts as a power reservoir; keeps engine-generator set working at constant output; combination permits use of a 20-hp. gasoline engine.

Six-Wheel. New Six-Wheel, Double-Deck Bus Brakes on All Wheels. Automotive Industries, vol. 51, no. 14, Oct. 2, 1924, pp. 613-614, 6 figs. Brief description of latest product of Moreland Motor Truck Co. of Los Angeles, Cal. Seats 60; air-operated Lockhead hydraulic brakes.

Six-Wheel Bus, Marketed by New Concern, Has Novel Features, H. Chase. Automotive Industries, vol. 51, no. 2, July 10, 1924, pp. 97-100, 9 figs. Particulars of new bus recently announced by a new concern to be known as Six-Wheel Co. of Philadelphia. Easy riding qualities and design which permits all important units to be detached quickly and replaced by spares. Frame of massive and rigid construction. Six-cylinder Continental engine is mounted on rubber blocks.

Specifications. American Gasoline Motor Bus Specifications. Automotive Industries, vol. 50, no. 8, Feb. 21, 1924, pp. 420-421. Table of statistics.

32-Volt Systems for. Higher Voltage Systems Suggested for Heavy-Duty Motor Buses, A. M. Dudley and W. E. Menzies. Bus Transportation, vol. 3, no. 4, Apr. 1924, pp. 169-171. Arguments advanced in favor of making 32 volts standard for electrical systems on buses capable of carrying 50 to 60 passengers.

Trolley. Railless Traction (Die schienenlosen Bahnen), E. Kurzel-Runtscheiner. Zeit. des Osterr. Ingenieur- u. Architekten-Vereines, vol. 76, nos. 29-30 and 31-32, July 25 and Aug. 8, 1924, pp. 259-264 and 276-279, 6 figs. Discusses first developments and failures in 1885; direct current traction in Germany, France, England, Austria, Italy, trolley bus in America, and auto-trolleybus in Paris; alternating-current traction in Austria; etc. Bibliography.

Types. Discussion of Papers at the 1924 Annual Meeting. Soc. Automotive Engrs.—Jl., vol. 15, no. 2, Aug. 1924, pp. 163-174, 4 figs. Discussions of papers on Field and Future of Motorbus, J. A. Emery; Double-Deck Motor Omnibus, R. W. Meade; and Essentials of Successful Constant-Compression Engine, C. E. Sargent.

MOTOR-GENERATORS

Arc-Welding. The Selection of a Single-Operator Arc-Welding Motor-Generator Set, M.

S. Hancock. Elec. Jl., vol. 21, no. 6, June 1924, pp. 269-272, 2 figs. Points that should be considered by purchaser in selection.

MOTOR PLOWS

Germany. Motor Plows at the Exposition of the German Agricultural Society of Hamburg (Die Motorpflüge auf der Wanderausstellung der Deutschen Landwirtschafts-Gesellschaft zu Hamburg), M. Dörffel. Automobil-Rundschau, vol. 23, nos. 7, 8, and 9, July 1, Aug. 1, and Sept. 1, 1924, pp. 87-91, 103-107, and 117-120, 32 figs. Design and construction of numerous types of plows, tractors, etc., including Fordson, Hansa, Pöhl, Stoever, Neumeger, Daimler, Lanz, Büssing, Stock, Cerva, Akra, M. A. N., Flader, Körting, etc.

MOTOR-TRUCK TRANSPORTATION

Central Stations. See CENTRAL STATIONS, Motor-Truck Transportation.

Coördination of Railroad and. The Coordination of Railroad and Motor-Truck Transportation, Rob. C. Wright. Soc. Automotive Engrs.—Jl., vol. 14, no. 3, Mar. 1924, pp. 302-304. As result of study, Pa. R. R. system has become convinced that motor truck can coöperate with steam railroad in three lines of activity: (1) in substituting motor trucks for rail transportation for handling short-haul less-than-carload traffic, (2) in motorizing terminals and (3) in door-to-door delivery service; advantages of motor truck in handling short-haul less-than-carload traffic; conclusions drawn.

Cost Calculation. Cost of Motor-Truck Transportation in Public Works (Coût des transports par camions automobiles dans les travaux publics), A. Mettler. Société des Ingenieurs civils Mémoires et Compte Rendu des Travaux, vol. 76, no. 10-12, Oct.-Dec. 1923, pp. 1138-1144, 2 figs. Develops formula and chart for calculating cost of transportation of cubic meter of material for a given distance.

Demountable Containers. See FREIGHT HANDLING, Containers, Demountable.

Electric. See CENTRAL STATIONS, Electric Trucks.

Freight Traffic. Utilizing the Motor Truck in Freight Traffic. Ry. Age, vol. 76, no. 5, Feb. 2, 1924, pp. 319-323, 7 figs. Contains following articles: Pennsylvania Installs 204 Miles of Motor Truck Service During 1923, R. S. Hurd; and English Store Door Delivery Practice, F. C. Horner.

Milk. Transportation of Milk by Motor Truck, H. R. Trumbower. Public Roads, vol. 5, no. 5, July 1924, pp. 1-18, 11 figs. Results of survey of milk transportation for eight large cities.

Tractor-Trailer Unit Operation. Tractor-Trailer Units in Operation, W. F. Bradley. Motor Transport (Lond.), vol. 39, no. 1015, Aug. 11, 1924, pp. 169-171, 6 figs. Work of large standardized fleet of Chenard-Walcker tractors and trailers employed by Paris firm with 180 retail shops.

MOTOR TRUCKS

Auxiliaries. Trucks, Truck Bodies, and Transportation, M. W. Potts. Indus. Mgmt. (N. Y.), vol. 67, no. 3, Mar. 1924, pp. 151-160, 12 figs. Auxiliaries that make motor truck important link in national transportation system of United States.

Axles. Building the Housings for the Sheldon Truck Axle, Fred H. Colvin. Am. Mach., vol. 59, no. 20, Nov. 15, 1923, pp. 715-718, 10 figs., and vol. 60, no. 2, Jan. 10, 1924, pp. 45-47, 8 figs. Sequence of operations and methods used in making heavy-duty axles. Nov. 15: Machines, fixtures, tools, and inspection practice. Jan. 10: Machining worm drive carrier.

Machining Sheldon Truck Axles, F. H. Colvin. Am. Mach., vol. 60, no. 8, Feb. 21, 1924, pp. 275-277, 8 figs. Some of the special machines and fixtures used in machining both front and rear axles by Sheldon Axle & Spring Co., Wilkes-Barre, Pa.

Ball-and-Socket Joints. See JOINTS, Balls and Sockets for. Machinery.

Brakes. Air Brake for Motor-Truck Trains (Die Druckluftbremse für Lastkraftzüge), T. Kollinek. Motorwagen, vol. 27, no. 18, June 30, 1924, pp. 316-318, 3 figs. Design and construction of Knorr air brake for heavily loaded trucks and trailers, acting on every wheel of train.

Convertible-Body. Originality in Convertible Bodywork. Motor Transport (Lond.), vol. 39, no. 1019, Sept. 8, 1924, pp. 301-302, 4 figs. New Republic vehicle converted from 14-seated bus to 25-30 cwt. van, requiring no lifting apparatus; power plant consists of Lycoming C.T. four-cylinder monobloc engine with detachable head, bore 3¾ in., length of stroke 5 in.

Crossley-Kégresse. Another Kégresse Track Application. Motor Transport (Lond.), vol. 39, no. 1024, Oct. 13, 1924, p. 450, 2 figs. Particulars of vehicle consisting of a 40-45-hp. Crossley chassis having a Kégresse attachment installed in place of usual rear axle and wheels; gross load capacity 2½ tons. Officially tested at Aldershot, Eng., by army authorities.

Electric. American Electric Truck Specifications. Motor Transport (N. Y.), vol. 29, no. 12, Jan. 15, 1924, pp. 418-419. Specifications of different makes.

General Design and Urban Performance of Electric Trucks, J. G. Carroll. Soc. Automotive Engrs.—Jl., vol. 14, no. 1, Jan. 1924, pp. 23-29 and (discussion) 29-30 and 35, 12 figs. Considerations that influence design and location of motors and various methods by which their control is effected; details of construction and factors that determine selection of best type of drive; examination of requirements of delivery systems operating over city routes shows that electric truck is capable of meeting practically all demands of mileage, topographical conditions and speed; points out its advantages.

Why American Railway Express Uses 1,800 Electric Trucks, Rob. E. M. Cowie. Elec. World, vol. 83, no. 21, May 24, 1924, pp. 1084-1085. Definite reasons for adoption of electric transportation; fifteen specific advantages of electric truck as compared with gasoline and other types of vehicles are enumerated. (Abstract.) Address delivered before Nat. Elec. Light Assn.

Electric, Motors for. See ELECTRIC MOTORS, D.C., Electric Trucks.

Engines. A Solid Fuel Engine. Motor Transport (Lond.), vol. 38, no. 991, Feb. 25, 1924, pp. 219-220, 5 figs. Engine based on principle of injection of compressed air into solid fuel dust when in a glowing state, invented by A. Schnuerle; application to 4- and 2-cycle principle; applicable for truck or tractor work.

Fleet-Operating Costs. An Analysis of Costs for 10 Years of Fleet Operation, R. E. Plimpton. Soc. Automotive Engrs.—Jl., vol. 14, no. 5, May 1924, pp. 539-544, 7 figs. and (discussion) vol. 15, no. 3, Sept. 1924, pp. 206-210. Discusses operating costs and their relation to age of vehicle. Comparison of costs.

French Types. Passenger Car Features Incorporated into French Commercial Vehicles, W. F. Bradley. Automotive Industries, vol. 51, no. 20, Nov. 13, 1924, pp. 842-844, 6 figs. Unification of design by individual makers is feature of Paris

truck show; Citroen creeper-track machine; Latil four-wheel-drive tractor.

Gas Producers for. Most Recent Application of Transportable Gas Producers (Les dernières applications des gazogènes transportables), C. Mathieu. Industrie des Tramways Chemins de Fer et Transports Publics Automobiles, vol. 18, no. 210, June 1924, pp. 197-209, 18 figs. Review of latest types of gas producers for traction by road or rail.

Producer Gas as Motor-Truck Fuel, E. Weiss. Mech. Eng., vol. 46, no. 12, Dec. 1924, p. 902, 1 fig. Describes Etia gas producer, which operates on charcoal with steam injection; and Renault unit, consisting of furnace, gas suction chamber, and fuel reservoir. (Abstract.) Translated from Nature (Paris), no. 2635, Oct. 4, 1924, p. 214.

German. A New Special Motor Truck with Oil Transmission Gear, Front-Wheel Drive and Four-Wheel Brake (Der neue Spezial-Lastwagen mit Oeldruckschaltung, Vorderradantrieb und Vierradbremse), F. Klinkenberg. Motorwagen, vol. 27, no. 9, Mar. 31, 1924, pp. 143-148, 7 figs. Details of L. W. D. 3-ton truck, and advantages.

A New Type of Motor Truck (Eine neue Lastkraftwagen-Konstruktion). Wirtschaftsmotor, vol. 6, no. 4, Apr. 25, 1924, pp. 5-8, 6 figs. Details of L. W. D. 3-ton truck.

German Show. Motor Trucks at the Berlin Automobile Show (Die Lastkraftwagen auf der Berliner Automobilausstellung). Allgemeine Automobil-Zeitung, vol. 25, nos. 50 and 50a, Dec. 12 and 15, 1924, pp. 51-52 and 40-43, 3 figs. Review of exhibits.

Glasgow Show. The Scottish Show Reviewed. Motor Transport (Lond.), vol. 38, no. 988, Feb. 4, 1924, pp. 137-140, 17 figs. Notes on representative display of British and imported heavy vehicles, including light vans.

Guy Subsidy. The Latest Subsidy Chassis Model. Motor Transport (Lond.), vol. 38, no. 997, Apr. 7, 1924, pp. 419-421, 9 figs. Particulars of new 30-cwt. Guy designed to meet War Office requirements; 25.6-hp. 4-cylinder engine.

Krupp. Krupp Rapid Motor Truck (Krupp-Schnellastwagen), G. Hagelloch. Kruppsche Monatshefte, vol. 5, Dec. 1924, pp. 270-272, 4 figs. Design and construction of light truck for loads of 1½ to 2 tons and 16-40 hp., with maximum speed of 50 km.; 4-cylinder block engine, 90 mm. cylinder diameter and 160 mm. stroke.

Light-Delivery. Special Design Features Are Incorporated in Federal Light Delivery Truck. Automotive Industries, vol. 50, no. 15, Apr. 10, 1924, pp. 816-818, 5 figs. Transmission is three-speed-and-reverse sliding pinion type; all four gears on secondary shaft are made in single unit mounted on stationary shaft on flexible roller bearings, equipped with Willys-Knight engine.

Lighting. Self-Contained Magneto Generator Designed for Truck and Tractor Lighting. Automotive Industries, vol. 51, no. 12, Sept. 18, 1924, pp. 529-530, 3 figs. Describes electric generator brought out by Harris Elec. Co. of San Francisco, Cal. Less than 0.5 volt and less than 0.3 ampere shown as a difference in output at engine speeds from 800 to 3000 r.p.m. Lubrication effected from oiling system of engine.

Loading and Unloading Mechanism. Handling Complete Loads by Engine Power. Motor Transport (Lond.), vol. 39, no. 1023, Oct. 6, 1924, pp. 419-421, 9 figs. Particulars of a 5-ton Berna chassis equipped with Vennez-Jacquemot type A demountable body and engine-power operated mechanism for loading and unloading.

Manufacture. The Production of Heavy Commercial Motors. Machy. (Lond.), vol. 24, nos. 620 and 622, Aug. 7, 14, and 28, 1924, pp. 577-581, 609-614, and 673-677, 34 figs. Operations on Leyland lorry by Leyland Motors, Ltd., Lancashire, Eng.

See also AUTOMOBILE MANUFACTURING PLANTS, Steam Trucks.

Maudslay. A 40-50 cwt. Maudslay. Motor Transport (Lond.), vol. 38, no. 1007, June 16, 1924, pp. 741-743, 6 figs. First of a new improved model for goods or passenger transport recently completed at Coventry (Eng.) factory.

Obsolescence. When Does a Motor Truck Become Obsolete? F. W. Davis. Soc. Automotive Engrs.—Jl., vol. 15, no. 6, Dec. 1924, pp. 516-520. Discusses various factors that make for obsolescence, inadaptability, and uselessness.

Paris Shows. Paris Automobile Show, Industrial Vehicles Section, Oct. 22-31, 1924 [Le XIX^e Salon de l'Automobile, Section des véhicules industriels (22-31 octobre 1924)], G. Delanghe. Génie Civil, vol. 85, nos. 21 and 22, Nov. 22 and 29, 1924, pp. 475-480 and 489-497, 28 figs. Particulars of agricultural automobiles, motor buses, motor trucks, fire engines, and tractors exhibited.

Producer-Gas. Producer Gas for Motor Vehicles, Railway Motor Cars and Internal-Combustion Locomotives (Sauggasbetrieb für Kraftfahrzeuge, Motorwagen, Motorlokomotiven), O. Günther. Motorwagen, vol. 27, no. 35, Dec. 20, 1924, pp. 720-723, 8 figs. Discusses advantages and disadvantages of use of gas producers and describes types of gas-producer-driven vehicles.

Producer-Gas Trucks (Les camions à gaz pauvre), E. Weiss. Nature, no. 2635, Oct. 4, 1924, pp. 214-221, 13 figs. Design and construction of various types, including Vierzon, Etia, G. P. A., Lion, Renault, Berliet, etc.

The New Renault Producer, W. F. Bradley. Motor Transport (Lond.), vol. 38, no. 988, Feb. 4, 1924, pp. 127-129, 8 figs. Designed to run on wood or charcoal; claimed to show cost economy of 80 per cent; comprises fire box, aspiration chamber, and fuel tank, and is a cylindrical chamber 4 ft. 6 in. in height, with a diameter of 2 ft., bolted to left-hand frame member by side of driver's cab.

Q. M. C., U. S. A. New Q. M. C. Trucks Drive on Four or Six Wheels, H. Chase. Automotive Industries, vol. 51, no. 6, Aug. 7, 1924, pp. 271-275, 11 figs. Rear-axle brakes run in oil and have lining attached to drum. Winch, driven off secondary gear set, is located entirely below frame. Units employed include Andrade self-locking differential, Covert gear set, and Hinkley engine. Universal helps in steering.

Rehberger. Wheelbase of New Truck Can Be Varied to Meet Service Requirements. Automotive Industries, vol. 51, no. 19, Nov. 6, 1924, pp. 803-804, 7 figs. Features of 3-, 4- and 5-ton truck chassis, built by Rehberger & Son in Newark, N. J.

Saurer. Saurer 6½-Tonner Placed on American Market. Motor Transport (N. Y.), vol. 29, no. 11, Jan. 1, 1924, pp. 376-377, 2 figs. Engine brake, ball bearings on crankshaft and camshaft, cast iron brake shoes in place of lining, and bevel drive are features.

Semi-Trailer Tanker. 3,000 Gallons by Semi-Trailer. Motor Transport (Lond.), vol. 38, no. 1005, June 2, 1924, pp. 664-666, 7 figs. Frameless semi-trailer tanker introduced by Scammell Lorries, Ltd., for fuel-oil transport and with other important possibilities.

Six-Wheel. A Six-Wheel Truck with Four-Wheel Drive. West Machy. Wld., vol. 15, no. 7, July 1924, pp. 229-230 and 246, 5 figs. Describes truck designed by A. H. Lacey and C. M. Crosson; driving unit contains two spiral bevel-gear assemblies, each rigidly attached to helical-gear assembly, thus making one compact unit which is attached to main-frame cross-members;

chassis designed to cover city and interurban buses, long-distance trucking, refrigerator trucks, and all high-speed transportation.

Specifications. Current Specifications of Gasoline Trucks. Motor Transport (N. Y.), vol. 29, no. 12, Jan. 15, 1924, pp. 409-414. Specifications of the different makes of trucks of from ¾ ton and under to 5 tons and over.

Specifications and Design. Recent Trends in Truck Design. Automotive Industries, vol. 50, no. 8, Feb. 21, 1924, pp. 424-439. American gasoline-truck specifications; British and Continental European truck-chassis specifications.

Steam. Six-Seven Ton Steam Wagon. Engineer, vol. 137, no. 3574, June 27, 1924, pp. 714-715, 4 figs. Details of steam truck which will be shown by John Fowler & Co., Ltd., at Royal Show at Leicester. Is of end-tipping type, designed to carry from 6 to 7 tons and haul a trailer; fitted with rubber tires; boiler is of vertical fire-tube type, devoid of stays, centrally fired, and designed for working pressure of 225 lb. per sq. in.

The Atkinson Six-Ton Steam Wagon. Automobile Engr., vol. 14, no. 196, Nov. 1924, pp. 352-361, 21 figs. Supplied with double-acting uniflow engine; boiler is of vertical type with cross water tubes.

The Fowler Steam Wagon. Engineering, vol. 118, no. 3078, Dec. 26, 1924, pp. 855-856, 3 figs. Designed to carry load of 6 to 7 tons easily up gradient of 1 in 10; boiler is built entirely without stays.

The "Sentinel" Steam Wagon. Indus. Mgmt. (Lond.), vol. 11, no. 2, Jan. 24, 1924, pp. 51-53, 4 figs. Particulars of Super-Sentinel and the various types of bodies built for different kinds of work.

Super-Speed Gear. Improvements in Motor Lorries. Eng. Progress, vol. 5, no. 12, Dec. 1924, pp. 253-254, 2 figs. Describes 3- and 5-ton trucks manufactured by Nationale Automobil Gesellschaft (N. A. G.), having cardan transmission and super-speed gear.

Testing. Modern Methods of Truck Testing, W. L. Day. Mgmt. & Administration, vol. 8, no. 3, Sept. 1924, pp. 285-287, 6 figs. Notes on new method of testing employed at plant of Gen. Motors Truck Co. and recording instruments used.

Thornycroft. A Moderate Cost 25-30-cwt. Chassis. Motor Transport (Lond.), vol. 39, no. 1018, Sept. 1, 1924, pp. 271-273, 9 figs. Details of new chassis having four cylinders combined in single casting with detachable head, and bore and stroke of 95 mm. and 127 mm., respectively.

Tipping Gears. The Latest Three-way Tipping Development. Motor Transport (Lond.), vol. 39, no. 1024, Oct. 13, 1924, pp. 443-444, 5 figs. Particulars of a modification of hand-operated three-way tipping mechanism of F. Waters & Co., Rugby, Eng., incorporating a new device for universal movement of lifting screw.

Trailers. Trailers and Demountable Bodies for Motor Transportation, H. W. Howard. Soc. Automotive Engrs.—Jl., vol. 15, no. 4, Oct. 1924, pp. 324-328, 6 figs. Importance of lost-time factor in truck operation, and how lost-time factor can be reduced; respective merits of two- and four-wheel trailers; explains the three methods of semi-trailer hauling, using one, two, or three such vehicles behind a tractor truck, and advantages of each. Describes a motor-driven vehicle specially designed to load, haul, and unload sugarcane.

Transmissions. New Brown-Lipe Maximum Transmission Used in Standard Truck. Automotive Industries, vol. 50, no. 14, Apr. 3, 1924, p. 753, 3 figs. Seven forward and two reverse speeds make it possible to meet large range of operating conditions; constant mesh pinions are replaced by pair of sliding gears with separate control.

Trolley-Wire-Repair. New Trolley-Repair Car of Société des Transports en Commun de la Région Parisienne (Nouvelle Voiture-Echelle de la Société des Transports en Commun de la Région Parisienne), M. Gentil. Industrie des Tramways, vol. 18, no. 215, Nov. 1924, pp. 443-448, 7 figs. Design and construction of motor truck with ladder and tower, for repairing overhead trolley wires.

Two-Way Drive. New Truck Travels Forward or Backward at Equal Speeds. Automotive Industries, vol. 51, no. 20, Nov. 13, 1924, pp. 852-853, 3 figs. Transmission gear provides five gear changes; special reverse gear in rear axle makes traveling in either direction possible; two seats are provided for driver facing opposite directions; manufactured by O'Connell Motor Truck Co.

Wheels. Laboratory Strength-Tests of Motor-Truck Wheels, T. W. Greene. Soc. Automotive Engrs.—Jl., vol. 15, no. 2, Aug. 1924, pp. 150-155 and 174, 13 figs. Discusses tests of mechanical properties of six types of wheels as shown in radial compression test, skid test, elastic resiliency, also character of failures, load deflection curves for skid test, etc.

MOTORCYCLES

British Show. The Motor Cycle Show. Automobile Engr., vol. 14, no. 197, Dec. 1924, pp. 398-405, 24 figs. Points to increased popularity of 350-cc. single-cylinder machines as outstanding feature; other features of interest.

Cylinders, Casting. See CYLINDERS, Motorcycle.

Design. Lessons Which Motorcycle Industry Can Learn from Automobile Construction (Was kann der Kraftbau vom Automobilbau lernen? J. Dauben. Motorwagen, vol. 27, no. 34, Dec. 10, 1924, pp. 667-672, 5 figs. Discusses how features in design of automobile engines, springs, transmission, lubrication, rakes, tires, etc., can be advantageously applied to design of motorcycles.

Diesel-Engined. See DIESEL ENGINES, Motorcycle.

Engine Valves. Vertical Valves or Inverted Vertical Valves for Motorcycles? (Stehende oder hängende Ventile für Krafträder?), J. Fischer. Automobil-Rundschau, vol. 23, no. 11, Nov. 1, 1924, pp. 151-155, 7 figs. Theoretical and practical considerations show that in spite of unavoidable complications advantages of inverted vertical valves outweigh disadvantages.

Gear Boxes. Machining Gear Box Components. Eng. Production, vol. 7, no. 144, Sept. 1924, pp. 273-277, 15 figs. Describes manufacturing methods of motorcycle gear boxes as produced at works of J. Jardine, Ltd., England; simple and efficient equipment for interchangeable manufacture.

German. German Motorcycles (Das deutsche Motorrad). Allgemeine Automobil-Zeitung, vol. 25, no. 20, May 17, 1924, pp. 27-38, 28 figs. Review of present status of development; description of German types arranged alphabetically according to their makers.

German Show. Motorcycles at the Berlin Automobile Show (Die Motorräder auf der Berliner Automobilausstellung). Allgemeine Automobil-Zeitung, vol. 25, no. 51, Dec. 17, 1924, pp. 39-43, 15 figs. Review of exhibits and improvements.

Horizontal-Frame. The Ner-a-car. Automobile Engr., vol. 14, no. 186, Feb. 1924, pp. 32-38, 12 figs. Describes motorcycle of unconventional design; main departure is use of horizontal frame in place of usual vertical diamond frame which has considerably simplified mounting for engine, transmission, and other accessories; two-stroke

engine is employed, fitted with combined flywheel magneto.

Specifications. American Motorcycle Specifications. Automotive Industries, vol. 50, no. 8, Feb. 21, 1924, pp. 451-453. Tabular data.

Types. International Motorcycle Show in Stuttgart (Germany) (Internationale Motorradausstellung in Stuttgart). Allgemeine Automobil-Zeitung, vol. 25, no. 21, May 24, 1924, pp. 19-21, 21 figs. Description of exhibits.

MOTORSHIPS

Air Compressors for. See AIR COMPRESSORS, Motorships.

Auxiliaries, Drive for. See STEAM TURBINES, Steam-Air Drive.

Cargo. A New Motor Grain-Carrying Ship. Mar. Engr. & Motorship Bldr., vol. 47, no. 567, Dec. 1924, pp. 441-448, 21 figs. Particulars of machinery space of the Silurian, built by Blythswood Shipbldg. Co., Ltd., Scotstoun, and engined by Wm. Beardmore & Co., Ltd., Dalmuir, for Owen & Watkin Williams, Ltd., Cardiff. Length b.p., 435 ft.; breadth, molded, 57 ft.; depth, molded, 33 ft. 3 in.; deadweight capacity, 11,000 tons.

A New Motor Ship for Tropical Coastal Service. Mar. Engr. & Naval Architect, vol. 47, no. 558, Mar. 1924, pp. 98-103, 11 figs. Particulars of the Kistna, built for British Indian Steam Navigation Co., Ltd.; a 6-cylinder Neptpune oil engine of 100 b.hp. at 125 r.p.m.; length, overall, 287 ft.; breadth, molded, 39 ft. 9 in.; depth, 24 ft.; gross tonnage, 2300 tons; deadweight capacity, 1650 tons.

First American Freighter with Opposed-Piston Oil Engines. Motorship, vol. 9, no. 2, Feb. 1924, pp. 88-94, 17 figs. Converted steamer Challenger runs trials with her new Sun-Doxford Diesel engine.

First Cargo Vessel with Beardmore-Speedwell Oil Engines. Mar. Engr. & Nav. Architect, vol. 47, no. 557, Feb. 1924, pp. 46-47, 4 figs. partly on p. 52. Motorship Margretian, built by Chas. Hill & Sons, Bristol, and engined by Wm. Beardmore & Co., has deadweight capacity of 4700 tons.

First Great Lakes Freighters Fitted with Diesel Engines. Mar. Engr. & Motorship Bldr., vol. 47, no. 567, Dec. 1924, pp. 455-457, 4 figs. Particulars of Henry Ford II, built by Am. Shipbldg. Co., Lorain, Ohio, and engined with Sun-Doxford opposed-piston Diesel engines. Length, overall, 611 ft.; breadth, molded, 62 ft.; depth, molded, 32 ft.

From Geared Turbine Steamer to Motorship. Shipbldg. & Shipg. Rec., vol. 24, no. 21, Nov. 20, 1924, pp. 606-608, 4 figs. Particulars of cargo ship of three-island type, owned by Stoomvaart My. Rotterdam, originally named Turbinia and renamed Wieringen, which has been converted from single-reduction geared turbine drive to Diesel-engine drive.

Machinery of the Converted Motorship Challenger. Mar. Eng. & Shipg. Age, vol. 29, no. 3, Mar. 1924, pp. 155-158, 11 figs. Describes machinery of American vessel converted from steam to Diesel drive, formerly a Shipping Board cargo steamer of approximately 11,600 deadweight. Main engine is a 2-cycle opposed-piston Diesel of Doxford type; Worthington auxiliaries and Westinghouse motors.

Motorship "Nordhval." Shipbldg. & Shipg. Rec., vol. 24, no. 8, Aug. 21, 1924, pp. 222-223, 1 fig. Describes motorship, sister ship to "Nordbo," built by Burmeister & Wain, Copenhagen. Length between perpendiculars, 380 ft.; breadth, molded, 53 ft. 6 in.; depth, 36 ft.; machinery, two Burmeister & Wain 6-cylinder, 4-cycle, short stroke marine Diesel engines; indicated horsepower, 2600.

M. S. Swanley Equipped with North British Engine. Mar. Eng. & Shipg. Age, vol. 29, no. 9, Sept. 1924, pp. 524-526, 6 figs. First British-built ship to be equipped with double-acting two-cycle engine; length, 410 ft.; beam, 55 ft. 3 in.; depth, 29 ft.; draft, 25 ft. 7 in.; break horsepower, 1850; speed 10 knots.

"Silverhelm" Has New Model Opposed-Piston Engine. Motorship, vol. 9, no. 7, July 1924, pp. 511-513, 6 figs. Only 3 cylinders are used and scavenging pump is driven off beam; engine room is short, although 2 auxiliary boilers are placed in it; purifiers and pyrometer enhance good running. Propelling power furnished by Doxford 3-cylinder 6-piston 2-cycle engine developing 1850 b.hp. at 52 r.p.m.

Single-Screw Motor Freighter "Fernbank" (Einschrauben-Motorfrachtschiff "Fernbank"). Schiffbau, vol. 25, no. 28, Nov. 19, 1924, pp. 789-797, 19 figs. partly on supp. plates. Details of design, construction and equipment. Length, 121 m.; draft, 7.7 m.; displacement, 11,165 tons; six-cylinder, DW-AEG oil engines of 115 r.p.m., 2800 i.hp.

The Diesel-electric Fruit-carrying Ships "La Playa," "La Marea" and "La Perla." Shipbldr., vol. 40, no. 161, Jan. 1924, pp. 29-44, 15 figs., partly on supp. plate. See also Mar. Eng. & Shipg. Age, vol. 29, no. 1, Jan. 1924, pp. 20-24, 6 figs. Built by Cammell, Laird & Co., Birkenhead; general arrangement and equipment; propelling machinery consists of four generating sets, each unit consisting of 4-cylinder Camellaird-Fullagar Diesel engine designed to develop 825 b.hp. at 250 r.p.m.

The Diesel-electric Ship "La Playa," T. H. Relton. Gen. Elec. Rev., vol. 27, no. 9, Sept. 1924, pp. 634-639, 7 figs. Description of propelling machinery and electrical control equipment and operation of fruit carrier of United Fruit Co.

The First Motorship for the Donaldson Line. Shipbldg. & Shipg. Rec., vol. 24, no. 16, Oct. 16, 1924, pp. 455-461, 6 figs. Details of single-screw vessel designed for carrying of general cargo, cattle, and also having considerable refrigerated space for transport of frozen meat. Vickers 8-cylinder 4-stroke cycle solid-injection Diesel engine of 2700 b.hp. Length, overall, 398 ft.; breadth, molded, 51 ft. 6 in.; depth to upper deck, 39 ft.; gross tonnage, 5200 tons; deadweight, about 7500 tons.

The First Ships with Neptune "B" Type Engines. Mar. Engr. & Motorship Bldr., vol. 47, no. 561, June 1924, pp. 219-226, 13 figs. Particulars of M. S. "Iossifoglu" and M. S. "Silverpine," built and engined by Swan, Hunter & Wigham Richardson, Ltd. Single sets of 2-stroke Neptune Diesel engines and steam auxiliaries.

The Twin-screw Motor-driven Cargo Ship "Dolius." Shipbuilder, vol. 30, no. 166, June 1924, pp. 467-477, 10 figs. Particulars of vessel built by Scotts' Shipbldg. & Eng. Co., Ltd., of Greenock, for Alfred Holt & Co., of Liverpool. Main engines consist of two 4-cylinder sets driving twin screws and designed for a combined output on service of 2500 b.hp. at about 120 r.p.m.; length, overall, 423 ft.; breadth, molded, 52 ft.; depth, molded, 32 ft.; load, deadweight, about 8000 tons.

The Twin-Screw Motor Ship "Sycamore." Mar. Engr. & Naval Architect, vol. 47, no. 558, Mar. 1924, pp. 87-94 and 103, 14 figs. Description of new Furness Withy cargo vessel; propelling machinery, 2 sets 6-cylinder Richardsons-Westgarth-Tosi marine Diesel engines, each developing 1250 b.hp. at 125 r.p.m.; length between perpendiculars, 364 ft.; breadth, molded, 52 ft. 2½ in.; depth, molded, 26 ft. 11 in.; deadweight capacity, 6000 tons.

Trials and Operation of the Motor Ship Cubore,

A. B. Homer. Soc. Nav. Architects & Mar. Engrs.—Advance Paper no. 10, for meeting Nov. 13-14, 1924, 7 pp., 2 figs. See (abstract) in Mar. Eng., vol. 29, no. 12, Dec. 1924, pp. 735-737. Description of ship and data on operation of vessel owned and operated by Ore S. S. Corpn. of N. Y.

Trials of the Motor Ship Sycamore. Inst. Mech. Engrs.—Proc., no. 5, 1924, pp. 863-985, 46 figs. See also Engineering, vol. 128, nos. 3074 and 3075, Nov. 28 and Dec. 5, 1924, pp. 750-753 and 784-786, 42 figs.; and Engineer, no. 3596, Nov. 28, 1924, pp. 618-620, 4 figs. Tests carried out by Marine Oil Engine Trials Committee on vessel equipped with two 2500-s.hp. oil engines of Richardsons-Beardmore-Tosi director valve type; shore test results and sea trials. Includes description of distant-indicating torsionmeter.

See also Passenger-Cargo.

Clutches. The Föttinger Clutches of the Motor-Ship "Vulcan." Engineering, vol. 138, no. 3063, Sept. 12, 1924, p. 369, 2 figs. Further information as to efficiency of oil-filled Föttinger clutches of motorship built by Vulcan Werke of Hamburg and Stettin.

Coastwise, Oil-Engine Application to. Coastwise Ships, Diesel Power and Propeller Speed, S. E. Slocum. Motorship, vol. 9, no. 10, Oct. 1924, pp. 739-741, 3 figs. Makes a strong case for use of moderate speed oil engine on basis that no arbitrary figure for rotative speed but rather a coördination in design of hulls, engines, and propellers is real secret of obtaining high efficiency.

Conversion of Steamships to. Problems in Connection with Conversion of the Hog Island Steamer Seekonk to a Motor Ship, J. C. Shaw. Soc. Nav. Architects & Mar. Engrs.—Advance Paper no. 11, for meeting Nov. 13-14, 1924, 6 pp., 12 figs. See (abstract) in Mar. News, vol. 11, no. 7, Dec. 1924, pp. 134-136; also Mar. Eng., vol. 29, no. 12, Dec. 1924, pp. 737-739. Reasons for selection of hull; old and new propelling machinery; auxiliaries; shafting and propeller changes; deck machinery; reconditioning and modifications to hull; results obtained with Seekonk in service; comparison with steamers.

Design and Operating Experiences. Twelve Years of Motorship Navigation (12 Jahre Grossmotorschiffahrt), A. Carstensen. Schiffbau, vol. 25, nos. 13 and 14, Apr. 9 and 23, 1924, pp. 332-337 and 365-370, 2 figs. Notes and comparisons based on author's trips on motorship Christian X, built in 1912 by Burmeister & Wain, Kopenhagen, and on different motorships since war, built by Deutscher Werft, Hamburg, having oil engines built by Deutscher Werft and German Gen. Elec. Co. (A. E. G.) according to design of Burmeister & Wain.

Diesel-Electric. First of the Big Transocean Motorliners. Motorship, vol. 9, no. 8, Aug. 1924, pp. 583-585, 2 figs. Union Steamship Co.'s 23,000 tons displacement ship "Aorangi" launched on Clyde; power is conservatively distributed on four screws, there being four six-cylinder 27½ in. by 39 in. Fairfield-Sulzer two-cycle Diesel engines of crosshead type, each developing 3250 s.hp. at 127 r.p.m. with piston speed of 825 ft. per min.; accommodates 970 passengers.

Diesel-Electric Lightship. Diesel-Electric Drive for Lightship. Motorship, vol. 9, no. 5, May 1924, pp. 363-364, 3 figs. New vessel Maas placed in service off Rotterdam harbor entrance.

Diesel-Engined. Diesel Hydraulic Drive. Shipbldg. & Shipping Rec., vol. 24, no. 3, July 17, 1924, pp. 78-79, 5 figs. Motorship "Vulcan," first Diesel-engined vessel to be fitted with Vulcan Föttinger reversible hydraulic transmission system, cargo vessel fitted with two engines, developing total of 620 s.hp. and speed of 9½ knots.

Electric Deck Auxiliaries. Correct Design in Electric Deck-Auxiliaries, G. E. Smith. Motorship, vol. 9, no. 2, Feb. 1924, pp. 98-107, 11 figs. Author seeks to show what is considered very best practice as to types of machinery and electrical equipment; discusses winches, steering gears, capstans, and windlasses.

History and Development. History and Development of the Internal-Combustion Engine and the Motor Ship, J. H. Narbeth. Steamship, vol. 35 and 36, nos. 415, 416, 417, 418, 419, 421, 423, 424, 425, and 426, Jan., Feb., Mar., Apr., May, July, Sept., Oct., Nov., and Dec. 1924, pp. 217-221, 249-253, 280-286, 312-313, 344-345, 10-17, 76-82, 108-113, 140-146, and 171-177, 35 figs. Jan.: General European progress up to 1920. Feb.: United States progress; notable ships. Mar.: Hot-bulb engines. Apr., May, July, Sept., Oct., Nov., and Dec.: Gas engines; gasoline and paraffin engines; Daimler's work; racing and pleasure craft developed.

Ocean-Going. The First Large French Ocean-Going Motorship. Shipbldg. & Shipg. Rec., vol. 24, no. 25, Dec. 18, 1924, pp. 718-720, 3 figs. Built by Ateliers & Chantiers de la Loire, Nantes, France, and propelled by two 4-cylinder 1700-hp. Sulzer engines.

Oil Tankers. A Motor Tanker with Four-Cycle Engines. Mar. Engr., vol. 47, no. 559, Apr. 1924, pp. 125-129, 9 figs. Particulars of main and auxiliary propelling machinery of oil tanker Wellfield, built for Field Tank Steamship Co., Ltd., Newcastle, Eng.; 7900 tons deadweight; two sets North Eastern-Werkspoor engines developing 2200 b.hp.

Diesel-Electric Tanker Added to Standard Oil Fleet. Mar. Eng., vol. 29, no. 4, Apr. 1924, pp. 234-237, 15 figs. See also Nautical Gaz., vol. 106, no. 13, Mar. 29, 1924, pp. 338-339, 2 ngs. Particulars of J. H. Senior, built for Standard Oil Co. of N. J.; length, overall, 220 ft.; breadth, molded, 38 ft.; depth, molded, 16 ft. 6 in.; displacement, loaded, about 2300 tons.

Italian Motor Tanker with Fiat Engines. Mar. Engr., vol. 47, no. 566, Nov. 1924, pp. 416-417, 5 figs. Particulars of "Lanuvio," built by Ansaldo San Giorgio, Spezia, Italy, for Societa di Navigazione "Roma"; two sets 4-cylinder 2-troke cycle Fiat Diesel engines, rated at 1300 b.hp. at 630 r.p.m.; length, overall, 393 ft.; breadth, 30 ft. 3 in.; depth, molded to main deck, 30 ft.; load displacement, 11,890 tons.

Large Motor Tankers Under Construction in Europe. Mar. Eng., vol. 29, no. 10, Oct. 1924, pp. 583-584, 1 fig. Details of British Aviator, built by Palmers, equipped with highest-powered Camellaird-Fullagar engine yet built; trial results.

Single-Screw Motor Tanker of 5,100 Tons D.W. Shipbldg. & Shipg. Rec., vol. 23, no. 13, Mar. 27, 1924, pp. 364-365, 2 figs. Particulars of Zoroaster, built for Rederiaktiebolaget Zoroaster, Stockholm; length, overall, 320 ft.; breadth, molded, 49 ft.; depth to main deck, 28 ft.; 4-cylinder 2-stroke Novel-Diesel engine of 2000 i.hp.

Tanker Propulsion and Diesel-Electric Drive. Motorship, vol. 9, no. 4, Apr. 1924, pp. 257-260, 4 figs. Describes how this form of propulsion in Standard Oil Co.'s new bulk-oil carrier, J. H. Senior, makes possible pilot-house control of machinery and simplifies navigation on rivers and harbors.

The Motor Oil-Tanker "Conde de Churruca." Mar. Engr. & Nav. Architect, vol. 47, no. 557, Feb. 1924, pp. 48-50, 4 figs. Operating figures of tanker which completed 102,988 mi. with average fuel consumption of 8.15 tons per day for 10.13 knots.

The Motor-Tanker Urano (Das Motortankschiff Urano), G. Wahl, V. Rembold and L. Baisch. Petroleum, vol. 20, nos. 24 and 25, Aug. 20 and

Sept. 1, 1924, pp. 1185-1193 and 1249-1256, 17 figs. Details of design and construction; built by Deutsche Werke A. G. at Kiel; speed, 10 knots at full load; length between verticals, 121 m.; four-stroke, six-cylinder Diesel engine at 950 hp. at 135 r.p.m.; auxiliary 3-cylinder Diesel engine of 180 hp. at 300 r.p.m.

The New Motor-Tanker "British Aviator." Mar. Engr. & Motorship Bldr., vol. 47, no. 564, Sept. 1924, pp. 336-346, 21 figs. Particulars of first ship fitted with six-cylinder Camellaird-Fullagar marine oil engine, built and engined by Palmers Shipbldg. & Iron Co. for British Tanker Co.; length between perpendiculars, 440 ft.; breadth, extreme, 57 ft.; depth to upper deck, 33 ft. 11 in.; gross tonnage, 6950 tons; ship develops 3000 b.hp.

Two New Motor Tankers with Werkspoor Engines. Mar. Engr. & Motorship Bldr., vol. 47, no. 562, July 1924, pp. 245-248, 5 figs. Particulars of "Varanger" and "Nordanger," oil tankers being constructed by Netherlands Shipbldg. Co., Amsterdam, for Westfal, Larson & Co., Norway. To be engined with 4-stroke single-acting Werkspoor Diesel engine of modified type. Length, 469 ft.; breadth, molded, 60 ft.; depth, 38 ft. 6 in.; displacement, 18-135 tons.

Operating Costs. Influence of Size on Operating Expense of Motorships, L. B. Chapman. Mar. Eng. & Shipg. Age, vol. 29, no. 3, Mar. 1924, pp. 143-145. Gives operating cost comparison between 6 typical motorships with idea of determining a practical method for determining size of most economical ship.

Ore-Carrying. Ford's Two 611-ft. Motorships Placed in Service. Motorship, vol. 9, no. 9, Sept. 1924, pp. 652-658, 18 figs. Describes two single-screw vessels, "Benson Ford" and "Henry Ford II"; power plant consists of 3000 s.hp. four-cylinder two-cycle, opposed-piston Sun-Doxford oil engine; length, overall, 611 ft.; breadth, molded, 62 ft.; depth, 32 ft.; deck camber in 60 ft. 15 in.

Ore-Carrying Motor Ships. Shipbldg. & Shipg. Rec., vol. 23, no. 5, Jan. 31, 1924, pp. 130-134, 5 figs. Fleet of Grangesberg Oxelösund Ore Co., Stockholm; details of propelling machinery, consisting of two sets of heavy-oil engines of Burmeister & Wain type.

Passenger. First Diesel Liner on Atlantic. Mar. Rev., vol. 54, no. 3, Mar. 1924, pp. 95-96, 1 fig. Principal data and characteristics of passenger motorship Gripsholm now under construction for Swedish American line; main engines, two Burmeister & Wain double-acting 4-stroke cycle Diesel type with total b.hp. of 13,500; length, 574 ft. 6 in.; breadth, 74 ft.; depth, 76 ft.; displacement, 23,500 tons.

Launch of the Second New Orient Liner. Shipbldg. & Shipg. Rec., vol. 24, no. 8, Aug. 21, 1924, pp. 234-235, 2 figs. Describes second of new 20,000-ton lines built at John Brown & Co.'s yard at Clydebank for Orient Line; length, 657 ft. 6 in.; breadth, 75 ft.; depth to upper deck, 47 ft.; propelling machinery consists of two independent sets of Brown-Curtis turbines driving twin-screws through single-reduction helical gearing and capable of developing about 20,000 shaft hp.

World's Most Modern Passenger Liner. Pac. Mar. Rev., vol. 21, no. 9, Sept. 1924, pp. 464-466, 9 figs. Describes quadruple screw Diesel-engined 23,000 ton motorship being built by Union Steamship Co. for their Vancouver-Sydney run; length, 600 ft.; beam, 72 ft.; molded depth, 46 ft. 6 in.; loaded displacement, 23,000 tons.

Passenger-Cargo. A Burmeister & Wain Engine with Cylinder Top Camshaft. Mar. Engr. & Motorship Bldr., vol. 47, no. 561, June 1924, pp. 203-205, 5 figs. Notes regarding new single-screw passenger and cargo vessel Frem, constructed and engined by Burmeister & Wain Ltd., Copenhagen, for Bornhölm Steamship Co. for service between island of that name and Copenhagen. Propelling machinery consists of Burmeister & Wain truck piston light-type 4-stroke cycle engine developing 1150 i.hp. at from 135 to 140 r.p.m. Length, 210 ft. 6 in. breadth, molded, 35 ft.

An Interesting 17-Knot American Day Steamer. Shipbldg. & Shipg. Rec., vol. 24, no. 11, Sept. 11, 1924, pp. 312-314, 3 figs. Specifications of "Catalina" built by Los Angeles Shipbldg. & Dry Dock Corpn. for Wilmington Transportation Co.; length between perpendiculars, 285 ft.; breadth, molded to main deck, 52 ft.; depth, molded, 44 ft.; propelling machinery consists of two sets of triple-expansion engines, having cylinders 20½, 35, and 60 in. in diameter and stroke of 36 in.

Mixed Cargo and Passenger Motorships. Mar. Eng., vol. 29, no. 11, Nov. 1924, pp. 649-651, 3 figs. Particulars of Centaur, single-screw vessel built for Singapore-West Australia service of Straits Steamship Co. of Singapore, and of City of San Francisco, twin-screw vessel built for service between San Francisco and Panama.

The First French Ocean-Goin Motorship. Mar. Engr. & Motorship Bldr., vol. 47, no. 564, Sept. 1924, pp. 329-330, 3 figs. See also Shipbldg. & Shipg. Rec., vol. 24, no. 6, Aug. 7, 1924, p. 176, 1 fig. Particulars of "Camranh" constructed by Ateliers et Chantiers de la Loire and engined by Sulzer Bros. for Chargeurs Reunis; length between perpendiculars, 449.5 ft.; breadth, 59 ft.; depth, 40 ft.; draught, loaded, 29.2 ft.; propelling machinery consists of two Sulzer four-cylinder two-stroke cycle engines, having cylinders 680 mm. diam. by 1100 mm. stroke.

Passenger-Mail. The First Quadruple-Screw Mail and Passenger Motorship. Shipbldg. & Shipg. Rec., vol. 23, no. 25, June 19, 1924, pp. 725-730, 7 figs. Particulars of motorship Aorangi, of Union Steamship Co. of New Zealand. Length, 600 ft.; breadth, 72 ft.; depth, 46 ft. 6 in.; tonnage, 22,000 tons displacement. Main propelling machinery is of Fairfield Sulzer type, there being 4 distinct sets of 6-cylinder engines having cylinder diameters 27½ in. by 39 in. stroke. See speed, about 18 knots.

The First Motorship for Passenger and Mail Carrying in the North Sea. Mar. Engr. & Motorship Bldr., vol. 47, no. 561, June 1924, pp. 206-207, 1 fig. Notes regarding 1400-ton-deadweight vessel being built for United Steamship Co., Copenhagen, for fast passenger and mail service between Harwich and Esbjerg. Propelled by twin sets Burmeister & Wain 6-cylinder 4-stroke cycle trunk-piston type Diesel engines, developing 3800 i.hp. at 195 r.p.m.; length, 304 ft.; breadth, molded, 44 ft.

Power Plants. The Economic Powering of Motorships and a New Design of Oil Engine, A. E. L. Chorlton. Mar. Engr. & Motorship Bldr., vol. 47, no. 561, June 1924, pp. 219-226, 13 figs. Operating figures and details of Beardmore-Speedwell oil engine and of a ship in which it is fitted. Abstract of paper read before Instn. Engrs. & Shipbldrs. in Scotland.

Reconditioning. Auxiliary Converted to Full Motor Power. Motorship, vol. 9, no. 5, May 1924, pp. 332-334, 5 figs. Propelling and auxiliary machinery is taken over bodily from war-time wooden motorship, and used to remake steel vessel formerly underpowered; steam auxiliaries replaced by wooden ship's electrical equipment; motorship has been renamed Admiral Peary.

Supercharging Engine. Forced Draft on Motorships Nets Big Operating Gains. Motorship, vol. 9, no. 3, Mar. 1924, pp. 179-182, 4 figs. Supercharging engine adds 500 i.h.p. to output

of motorship Tiradentes' 4-cycle engine; speed is increased and trips are shortened.

Transmission for. New Form of Transmission for Motorships. Nautical Gaz., vol. 106, no. 19, May 10, 1924, pp. 524-525, 1 fig. Combination of toothed gears and fluid coupling, placed between Diesel engine and propeller shafting. Makes possible a very material saving in weight and cost and offers entirely new operating possibilities.

Yachts. See YACHTS.

MUNITIONS

Manufacture. See INTERCHANGEABLE MANUFACTURE, Munitions.

Manufacturing, Industrial Mobilization for. The Role of the Engineer in Industrial Mobilization Planning, E. E. MacMorland. Mech. Eng., vol. 46, no. 11, Nov. 1924, pp. 693-695 and (discussion) 695-696. Author shows how engineering societies can aid Government materially in its program of industrial mobilization in event of war, by providing reserve officers, giving advice on technical problems, assisting in development of new weapons, etc.

MUNTZ METAL

Corrosion, Sea-Water. See CORROSION, Muntz Metal.

N

NAILS

Manufacture. Manufacturing Nails by Automatic Machinery, H. P. Armson. Can. Machy., vol. 31, no. 17, Apr. 24, 1924, pp. 19-21, 3 figs. Practice at Graham Nail Works, Toronto, Can. Raw Material first "pickled" to remove scale, then coated with lime to assist lubrication and reduce wear on dies in drawing operation.

NAPHTHALENE

Hydrogenated. See TETRALIN.

Vapor Pressure. See BENZOL, Recovery.

Washers. British Methods of Naphthalene Removal, C. H. S. Tupholme. Gas Age-Rec., vol. 54, no. 20, Nov. 15, 1924, pp. 707-709, 4 figs. Gives average operating costs for English plant that is utilizing rotary naphthalene washers.

NATIONAL DEFENSE

Automotive Industry and. See AUTOMOBILE INDUSTRY, National Defense and.

Industrial Mobilization. See INDUSTRIAL MOBILIZATION.

NATURAL GAS

Canada. Natural Gas and Oil Possibilities in Canada, E. Coste. Natural Gas, vol. 5, no. 1, Jan. 1924, pp. 24-25 and 42. Notes on "petroliferous provinces" of North Western Ohio, South Western Ontario and Rock Mountains.

Carbon Black from. See CARBON BLACK.

Casinghead. Why Save Casinghead Gas, E. G. Sievers. Natural Gas, vol. 5, no. 4, Apr. 1924, pp. 3-4, 46 ans 48-49, 4 figs. Aspects of waste; methods of conserving casinghead gas; advantages of gas traps; loss of casinghead gasoline.

Constituents. Natural Gas in 1923, S. J. M. Auld. Instn. Petroleum Technologists—Jl., vol. 10, no. 46, Nov. 1924, pp. 803-810. Notes on natural-gas gasoline, carbon black, hard carbon and hydrogen, helium, and other constituents of natural gas. Special uses of natural gas.

Gasoline from. See GASOLINE, Natural-Gas.

Hydrogen Sulphide Removal. The Removal of Hydrogen Sulphide from Natural Gas, L. Logan and G. G. Desy. Natural Gas, vol. 5, no. 2, Feb. 1924, pp. 12-13, 36, 38, 40, 42, and 44, 5 figs. Describes process of liquid purification developed by Koppers Co., Pittsburgh, Pa.; description of conditions in Tilbury field of Union Natural Gas Co. of Canada, Ltd., which offer a typical example of problems that would be met in purification of natural gas, and experiments made to investigate completeness with which liquid purification process would meet these problems.

Impurities, Removal of. Solid and Liquid Impurities in Natural Gas and Means for Their Removal. Natural Gas, vol. 5, no. 5, May 1924, pp. 22-25, 56, and 66, 12 figs.

Industrial Utilization. Industrial Utilization of Natural Gas, H. J. Struth. Natural Gas, vol. 5, no. 1, Jan. 1924, pp. 32-33 and 42, 1 fig. Includes chart showing distribution of amount of gas produced in 1921; notes on industries using natural gas.

See also Constituents.

Killing Bad Well. Monroe Gasser Is Controlled by Novel Combinations of Principles. Nat. Petroleum News, vol. 16, no. 11, Mar. 12, 1924, pp. 63-64, 1 fig. Method used in "killing" a bad gas well, Smith No. 2, of Ouachita Natural Gas Co., Monroe, La.

Louisiana. Louisiana's Famous Monrol Gas Field, H. A. Wheeler. Eng. & Min. Jl.-Press, vol. 117, no. 2, Jan. 12, 1924, pp. 52-54. Long life assured, but exhaustion inevitable; porous limestone carries gas; rotary method used in drilling; 68 per cent of wells drilled productive; much of output used in making carbon black.

Properties, Appraisal of. See OIL FIELDS, Property Appraisal.

Statistics. Natural Gas in 1922, G. R. Richardson. U. S. Geol. Surv., no. II:31, Apr. 26, 1924, pp. 353-358. United States production and consumption statistics.

NAUTOGRAPH. See COMPASSES, Nautograph.

NAVAL AIRCRAFT

[See also WARSHIPS, British Empire Exhibition.]

Carriers. Seagoing Aircraft, S. Ballou, U. S. Nav. Inst.—Proc., vol. 50, no. 261, Nov. 1924, pp. 1793-1801, 1 fig. Deals with seagoing aircraft as affecting fleet actions at sea; characteristics of aircraft carriers; it is concluded that a fleet can best devote its aircraft-carrier capacity to protection of the big gun, rather than to adding small fraction in shape of bombing planes to its offensive power.

NAVAL ARCHITECTURE. See SHIP DESIGN.

NAVIGATION

Azimuth, Measurement. See AZIMUTH, Determination.

Compasses. See COMPASSES.

Depth Sounding—Depth Sounding—Its History and Achievement. Am. Shipping, vol. 18, no. 9, Sept. 1924, pp. 23-27, 3 figs. Describes apparatus designed, manufactured and installed by Submarine Signal Corpn., Boston, Mass.

See also SOUNDING.

Direction Finding. See DIRECTION FINDING.

Nautical Devices. Modern Navigational Devices, F. E. Smith. Engineer, vol. 138, no. 3593, Nov. 7, 1924, pp. 534-537, 7 figs. Deals with leader gear, subaqueous sound ranging and radio-acoustic method of position finding, echo sounding, and directional wireless.

Radio Fog Signals. See RADIOTELEGRAPHY, Fog Signals.

Route Recorder. The Baule System of Automatically Recording Traversed Route of Ships (Le traceur de routes système Baule), A. Baule. Technique Moderne, vol. 16, no. 4, Feb. 15, 1924, pp. 113-115, 6 figs. Device, called Nautographe, was designed by author for purpose of reproducing automatically on a chart the route covered by ship according to its displacement.

NEEDLES

Metallographic Examination of. Metallographic Examination of Sewing Needles (Metallographische Untersuchung über die Nähnadeln), D. Uno. Kyoto Imperial Univ., College of Sci.—Memoirs, vol. 7, no. 3, Mar. 1924, pp. 123-133, 6 figs. Discusses methods of production, properties of good needles, device for measuring fracture, conditions for production of samples with necessary properties.

NICKEL

Alloys. See NICKEL ALLOYS.

Deposits, Alaska. Alaskan Nickel Minerals, A. F. Buddington. Economic Geology, vol. 19, no. 6, Sept.-Oct. 1924, pp. 521-541, 4 figs. Study of specimens collected from outcrops of several recently discovered nickeliferous pyrrhotite deposits in southeastern Alaska; investigation was made with aid of metallographic microscope.

Deposits, Sudbury, Ontario. A Study of the Sudbury Ore Deposits, A. Wandke and Rob. Hoffman. Economic Geology, vol. 19, no. 2, Mar. 1924, pp. 169-204, 5 figs. General geology and ores; thories of origin; genesis of deposits, and bearing of gensis upon development and exploration; nickel eruptive.

Detection of. See COBALT, Detection of.

Determination in Ores and Alloys. Determination of Nickel in Ores and Alloys by Means of Dimethylglyoxime (Het bepalen van nikkel met dimethylglyoxim in ertsen en legeeringen), J. G. Weeldenburg. Chemisch Weekblad, vol. 21, no. 30, July 26, 1924, pp. 358-362. Influence of common metals was examined; material is dissolved in aqua regia, and lead and alkaline-earth metals are removed as sulphates; filtrate is treated with hydrogen sulphide, and nickel determined in filtrate after addition of tartaric acid and ammonium chloride; if iron and cobalt are present together, former must be reduced before precipitation.

Electrolytic. Mechanically Perfect Electrolytic Nickel, Chas. P. Madsen. Am. Electrochem. Soc.—Advance paper, no. 28, for meeting Apr. 24-26, 1924, pp. 371-378. Means are described for producing electro-nickel almost equal to pure gold in ductility; use of hydrogen peroxide in bath is claimed to be absolute cure for pits, and exerts other beneficial effects; anode is described which gives consistently good results in above-mentioned bath.

The Structure of Electrolytic Nickel (Das Gefüge des Elektrolytnickels), G. Wazau. Zeit. für Metallkunde, vol. 16, no. 12, Dec. 1924, pp. 482-483, 7 figs. Causes of fracture and remedies.

Mines, Pennsylvania. A Note on the Lancaster Gap Mine, Pennsylvania, T. C. Phemister. Jl. of Geology, vol. 32, no. 6, Aug.-Sept. 1924, pp. 498-510, 8 figs. Results of visit to mine last worked in 1900. Records a series of observations both of field relations and of microstructure of this nickel ore body. Igneous theory of origin of deposits is brought into question and a hydrothermal view of genesis put forward.

Ore, Nevada. Nickel Ores from Key West Mine, Nevada, W. Lindgren and W. M. Davy. Economic Geology, vol. 19, no. 4, June-July 1924, pp. 309-319, 6 figs. Discusses occurrence and composition of ore; composition of sulphides, genesis of ore minerals.

Passivity. See METALS, Passivity.

Plating. See ELECTRODEPOSITION, Nickel.

NICKEL ALLOYS

Copper-Zinc-Nickel. Some Low Copper-Nickel Silvers, W. B. Price and C. G. Grant. Am. Inst. Min. & Met. Engrs.—Trans., no. 1303-N, Feb. 1924, 14 pp., 15 figs. Results of investigation undertaken to check work of L. Guillet on special brasses and to determine more accurately effect of addition of nickel on microstructure of binary alloys of copper and zinc; best hot- and cold-working nickel silvers.

Monel Metal. See MONEL METAL.

Nickel-Chromium. Magnetization of Nickel-Chrome Alloys Below the Curie Point (Aimantation des alliages nickel-chrome au-dessus du point de Curie), J. Safráneck. Revue de Métallurgie, vol. 21, no. 2, Feb. 1924, pp. 87-111, 20 figs. Study of alloying of ferromagnetic metal with paramagnetic metal; theory of paramagnetism of Langevin and the Curie law; Weiss's theory of ferromagnetism; thermal variation of spontaneous magnetization; application of Weiss's formula to nickel-chrome alloys; description of experimental apparatus; preparation of alloys; fusion of alloys; metallographic investigation. Bibliography.

Permalloy. Permalloy, A New Magnetic Material of Very High Permeability, H. D. Arnold and G. W. Elmen. Elec. Communication, vol. 2, no. 4, Apr. 1924, pp. 226-231, 7 figs. Describes a magnetic alloy which is a composition of about 78.5 per cent nickel and 21.5 per cent iron and at magnetizing fields in neighborhood of 0.04 gauss and with proper treatment has a permeability running as high as 90,000.

The Reductivity of the Recently Discovered Magnetic Metal Permalloy, A. E. Kennelly. Franklin Inst.—Jl., vol. 197, no. 5, May 1924, pp. 623-627, 2 figs. Gives data on observations of permalloy.

See also CABLES, ELECTRIC, Permalloy-Loaded.

Properties. A Note on the Properties of some Alloys of Nickel, W. R. Barclay. Soc. Glass Technology—Jl., vol. 8, no. 31, Sept. 1924, pp. 162-173, 3 figs. Deals with nickel-copper and nickel-chromium alloys which are said to be of greatest interest to glass technologists, because of their great resistance to corrosion and their retention of strength at high temperatures.

NICKEL-CHROMIUM STEEL. See CHROME-NICKEL STEEL.

NICKEL PLATING

Acidity Controlling Instrument. The Double Wedge Comparator, E. D. Stirlen. Brass Wld., vol. 20, no. 7, July 1924, pp. 235-236, 2 figs. Describes instrument for controlling acidity of nickel and zinc-plating solutions.

Automatic. Automatic Electroplating Installation. Machy. (N. Y.), vol. 30, no. 7, Mar. 1924, p. 525, 1 fig. Describes electroplating equipment installed at plant of Walden-Worcester, Worcester, Mass., by means of which wrench handles are nickel-plated automatically.

Black. Black Nickel Plating, H. B. Maxwell. Metal Industry (N. Y.), vol. 22, no. 11, Nov.

1924, p. 449. Composition of solution and methods of analysis for controlling it.

Durability of Surfaces. Durability of Plated Surfaces, W. M. Phillips. Soc. Automotive Engrs.—Jl., vol. 15, no. 5, Nov. 1924, pp. 461-463, 5 figs. See (abstract) in Am. Mach., vol. 61, no. 19, Nov. 6, 1924, pp. 738-739. Importance of cleansing; polishing; plating is said to be most important part of process; cost and testing.

Packard Car Co. Process. Quality of Nickel Finish is Improved by Packard Researches. Automotive Industries, vol. 50, no. 12, Mar. 20, 1924, pp. 676-678, 3 figs. Changes in equipment and methods have resulted in coating of increased depth and greater hardness; steel radiator shell replaces brass type formerly used; spray tests are favorable; immersion time, current, and strength of bath determine quality.

Steel, Rust Resistance. Rust Resistance of Nickel-Plated Steel, E. M. Baker. Soc. Automotive Engrs.—Jl., vol. 14, no. 2, Feb. 1924, pp. 127-133, 9 figs. Numerical method of rating of appearance of plated steel after exposure to action of salt spray; rust resistance of steel plated with nickel is shown to be dependent on thickness of plating; effect of salt-spray resistance of some common variables in nickel plating; sets forth advantages of controlled electroplating at high current densities.

Troubles. Diseases of Nickel Deposits, Wm. Voss. Metal Industry (N. Y.), vol. 22, nos. 2 and 4, Feb. and Mar. 1924, pp. 66-67 and 153-154. Symptoms, causes, and cures of unsatisfactory deposits.

NICKEL SILVER. See NICKEL ALLOYS, Copper-Zinc-Nickel.

NICKEL STEEL

Annealing. See STEEL, HEAT TREATMENT OF, Annealing.

Carburization. Heat-Treatment of Steel with Special Reference to Production, J. W. Urquhart. Machy. (Lond.), vol. 23, no. 588, Jan. 3, 1924, pp. 446-449. Carburization of nickel steels.

See also STEEL, HEAT TREATMENT OF, Nickel-Steel Carburization.

Heat Treatment. See STEEL, HEAT TREATMENT OF, Turbine Blading.

Martensitic, Softening of. The Softening of a Martensitic Nickel Steel (Weichmachen eines martensitischen Nickelstahls), N. H. Aall. Stahl u. Eisen, vol. 44, no. 36, Sept. 4, 1924, pp. 1080-1081. Martensitic structure of a nickel steel with 0.65 per cent carbon and 13.7 per cent nickel can be changed into a readily workable osmonditic structure by tempering.

Quenching. Quenching Properties of Glycerin and Its Water Solutions, H. Scott. Am. Soc. for Steel Treating—Trans., vol. 6, no. 1, July 1924, pp. 13-31, 5 figs. Results of experiments with glycerin, etc., and oil-water emulsion to find quenching media between water and oil, show that effect is slight but definitely reflected by scleroscope and Rockwell hardness of deep-hardening tool steels cooled at rates faster than their critical rate.

Strength at High Temperatures. See IRON AND STEEL, Strength at High Temperatures.

NITRATES

Chilean Industry. Nitrogen Survey. The Cost of Chilean Nitrate, H. F. Bain and H. S. Mulliken. Trade Information Bul. (Supp. to Commerce Reports), no. 170, Jan. 7, 1924, 69 pp., 3 figs. General survey of Chilean nitrate industry with particular reference to determining quantity of supplies and lowest price at which natural nitrate can be furnished to American consumers under conditions of maximum efficiency of production and minimum charges and profits. Discusses mode of occurrence and mining conditions, treatment and recoveries, etc.

Fires. Famous Nitrate Fires of History, Chas. E. Munroe. Chem. & Met. Eng., vol. 31, no. 25, Dec. 22, 1924, pp. 962-966, 7 figs. Authentic account of great industrial conflagrations involving nitrates of sodium and potassium.

Mining, Chile. Modern Methods of Mining Caliche, C. M. Briceno. Explosives Engr., vol. 2, no. 6, June 1924, pp. 181-184, 13 figs. Replacing hand-drilling methods by machines in Chilean nitrate fields.

NITRIC ACID

Oxidation of Ammonia to. See AMMONIA, Oxidation to Nitric Acid.

Plants, Acid-Resisting Iron for. Acid-resisting Iron for Nitric Acid Plant, S. J. Tungay. Chem. Age (Lond.), vol. 11, no. 277, Oct. 4, 1924, pp. 25-27, 4 figs. Advantages of iron-silicon alloys for construction of nitric acid plant, and discussion of modern tendency to favor units of moderate size, particularly for use in India and Far East.

NITROCELLULOSE

Gelatinization of Solutions. Gelatinization of Nitrocellulose Solutions (Ueber Gelatinierung von Nitrozelluloselösungen), A. Szegvari. Kolloid-Zeit., vol. 34, no. 1, Jan. 1924, pp. 34-37, 3 figs. Solutions of nitrocellulose in amyl actetate, ether alcohol, acetone, etc., when diluted with non-solvent for nitrocellulose (benzine, benzol, tetralin), gelatinize on elevation of temperature, but on lowering temperature again they re-liquefy; temperature of gelatinization depends on composition of liquid medium; phenomenon is attributed to solvation.

Lacquers. Nitrocellulose and Pyroxylin Lacquers, J. B. Wiesel. Chem. Age (N. Y.), vol. 32, no. 11, Nov. 1924, pp. 439-442. Notes on nitrocellulose lacquer and pyroxylin; nitrocellulose manufacture and hazards; nitrocellulose enamels; composition of lacquers.

NITROGEN

Ammonia from. See AMMONIA, Formation from Nitrogen.

Estimation. Application of "Formol Titration" to the Kjedahl Methol of Estimating Nitrogen, W. S. Shaw. Analyst, vol. 49, no. 585, Dec. 1924, pp. 558-565. Results of experiments to determine accuracy of formol titration method and to devise suitable modification of method.

Fertilizing Purposes. The Utilization of Nitrogen in Soils and Fertilizers as Affected by Lime, J. G. Lipman and A. W. Blair. Indus. & Eng. Chem., vol. 16, no. 4, Apr. 1924, pp. 373-375. Review of experiments started at N. J. Agricultural Experiment Station in 1898 for purpose of studying certain phases of nitrogen problem as related to crop production.

Fixation and Fixation Processes. Do Green Plants Have the Power of Fixing Elementary Nitrogen from the Atmosphere? C. B. Lipman and J. K. Taylor. Franklin Inst.—Jl., vol. 198, no. 4, Oct. 1924, pp. 475-506. Experiments carried out with wheat and barley in culture solutions proved conclusively that cultures gained nitrogen at expense of elementary nitrogen of atmosphere; results of experiments with other plants. Bibliography.

Electrical Nitrogen Production [Den elektriske kvaelstofforbraendingsproces (Iyssbueprocessen)], O. Jensen. Teknisk Ukeblad, vol. 71, nos. 45 and 46, Nov. 19 and 25, 1924, pp. 384-385

and 395-397, 4 figs. German industry, which uses ammonium process, produces 300,000 to 400,000 tons nitrogen per year, while Norway, using electrical method, produces about 25,000 tons. Discusses whether or not electrical method can be further developed to meet this competition; gives detailed description of process in electric arc and arrives at conclusion that development of suitable electrodes is most important problem which must be solved.

Nitrogen Fixation. Canada, Honorary Advisory Council for Sci. and Indus. Research—Bul. no. 11, 1924, 28 pp. What nitrogen is and where it is found in nature; practical application of nitrogen; principal forms and sources, and methods of production of combined nitrogen; present status of nitrogen fixation in various countries; some data and statistics relating tonitrogen. Principal contents of the various reports of Nitrogen Fixation Committee (Canada), including appendices thereto. Brief bibliography of important sources of information relating to nitrogen.

Nitrogen Fixation at Billingham. Chem. Age (Lond.), vol. 10, no. 261, June 14, 1924, pp. 619-620. Describes Brunner-Mond process for fixation of atmospheric nitrogen.

Nitrogen Fixation Processes, L. F. Goodwin. Can. Chem. & Metallurgy, vol. 8, no. 7, July 1924, pp. 158-161. Gives résumé of recent progress; discusses synthetic ammonia, Casale and Fauser processes.

Report of the Fixed Nitrogen Research Laboratory, Fred. G. Cottrell. Chem. Age (N. Y.), vol. 32, no. 12, Dec. 1924, pp. 485-487. Direct synthetic ammonia process; cyanides; hydrogen production; nitrates; cyanamide; nitrogen fixation by microörganisms; oxides of nitrogen and nitric acid; active nitrogen and chemical reactivity.

The Air-Nitrogen Processes, J. M. Braham. Trade Information Bul. (Supp. to Commerce Reports), no. 240, June 16, 1924, pp. 1-41. Describes arc, cyanamide, synthetic ammonia, and miscellaneous nitrogen fixing processes; interrelation of nitrogen-fixing processes and products.

The "American Process" for Nitrogen Fixation. Chem. & Met. Eng., vol. 30, no. 24, June 16, 1924, p. 948, 1 fig. Direct synthetic process developed at Fixed Nitrogen Research Laboratory, Washington.

The Fixation of Nitrogen as Cyanide, R. Franchot. Indus. & Eng. Chem., vol. 16, no. 3, Mar. 1924, pp. 235-238. When working at capacity of 40 million tons of pig iron, American blast furnace is fixing nitrogen at probable rate of 6,000,000 tons a year; this is double the rate at which it has been estimated that nitrogen is taken from soil in crops; hearth of blast furnace in United States develops 12 million kw. of which 25 per cent is apparently available for and absorbed in work done at 1500 deg. cent.; there appears to be power of order of 2 million hp., not only developed and available, but actually already engaged in nitrogen fixation.

Trend of Developments in the Nitrogen Problem, J. M. Braham. Indus. & Eng. Chem., vol. 16, no. 12, Dec. 1924, pp. 1277-1280, 3 figs. Commercial fixation; arc, cyanamide, and direct synthetic processes; other processes; power requirements of fixation processes.

United States, Situation in. General Review of the Nitrogen Situation in the United States, H. A. Curtis. Trade Information Bul. (Supp. to Commerce Reports), no. 226, May 5, 1924, 63 pp., 7 figs. Gives general review of situation based primarily on statistical data, and shows place which Chilean nitrate holds in supplying nitrogen needs of Nation. Particular attention given to domestic sources of nitrogen supply, with idea of ascertaining to what extent domestic production may be relied upon to meet requirements in near future.

NITROGLYCERIN

Explosive Decomposition. Explosive Decomposition of Nitroglycerin (Sur la décomposition explosive de la nitroglycérine), M. Audibert. Académie des Sciences—Comptes Rendus, vol. 178, no. 14, Mar. 31, 1924, pp. 1167-1169. Explosive decomposition is not instantaneous, since nature of gaseous products of reaction varies with rate of cooling; residual reaction is dependent on conditions; account and results of tests.

Substitutes. See EXPLOSIVES, Nitroglycerin Substitutes.

NOMOGRAPHIC CHARTS. See ALIGNMENT CHARTS.

NON-FERROUS METALS

[See also ALLOYS, Non-Ferrous; ALUMINUM; COPPER; ZINC; etc.]

Aircraft Construction. See AIRCRAFT CONSTRUCTION MATERIALS, Light Metals.

Cold Rolling vs. Drawing. Cold Rolling Compared with Drawing, C. E. Davies. Metal Industry (Lond.), vol. 25, nos. 6 and 7, Aug. 8 and 15, 1924, pp. 121-123 and 149-152, 13 figs. Discusses cases in which cold rolling can wholly or partly be substituted for drawing in production of many sections, comparing respective advantages and disadvantages.

Deoxidizers for. Explains Use of Deoxidizers, C. Vickers. Foundry, vol. 52, no. 17, Sept. 1, 1924, pp. 684-686. Value of deoxidizers in nonferrous metals and alloys depends solely upon ability of melter to know when and how to apply them properly.

Metallurgical Processes, Waste Elimination. Eliminating Waste in Non-Ferrous Metallurgical Processes. Metal Industry (Lond.), vol. 25, nos. 6 and 7, Aug. 8 and 15, 1924, pp. 127-129 and 134 and 152-154, 2 figs. Discusses treating manufactory scrap and by-products; flue dust; smelting and concentration of residue.

Metallurgy, United States. Non-Ferrous Metallurgy in America, M. Corse. Iron Age, vol. 114, no. 12, Sept. 18, 1924, pp. 693-694. Discusses recent developments in United States with particular reference to such subjects as nickel, aluminum, bronze and long-life molds. Abstract of address before British Inst. Metals.

Metallurgy of. See METALLURGY, Non-Ferrous.

NOVOCRETE. See CONCRETE, Novocrete.

NOZZLES

Steam, Design of. Third Report of the Steam Nozzles Research Committee. Engineering, vol. 117, no. 3047, May 23, 1924, pp. 681-685, 14 figs. Summary of previous reports; test results; conclusions. Report presented before (Brit.) Instn. Mech. Engrs. See (discussion), p. 657, and (editorial), pp. 673-674. See also Engineer, vol. 137, no. 3569, May 23, 1924, pp. 574-575 and 577, 9 figs, and (editorial) p. 572; full report in Instn. Mech. Engrs.—Proc., no. 5, 1924, pp. 715-735, 5 figs.

OIL

Analysis of Waters in Beds. The Elements Associated with Petroleum, J. E. Hackford. Oil Eng. & Finance, vol. 5, no. 98, June 1924, pp. 344-346. Shows how valuable to chemist is exact interpretation of results of analysis of waters that accompany petroleum, in natural beds.

Ash from. Petroleum Ash, W. H. Thomas. Instn. Petroleum Technologists—Jl., vol. 10, no. 42, Apr. 1924, pp. 216-220. Analysis of percentage and constituents of ash in different oils.

Australasia. Where Oil Deposits Occur in Australasia, E. De Hautpick. Min. Jl., vol. 147, nos. 4653, 4654, 4656, 4657, 4658, and 4659, Oct. 25, Nov. 1, 8, 15, 22, 29, and Dec. 6, 1924, pp. 829-830, 845-847, 865-866, 884-885, 901-902, 922 and 943-945, 1 fig. Results of exploration work to study possibilities in reference to existence of oil areas in British Empire; geology; deformation of earth's crust; conclusions.

Australia. Prospecting for Oil in Australia, E. De Hautpick. Min. Jl., vol. 146, no. 4637, July 5, 1924, 548-550. Chemical composition of underground waters as one of guides to investigation for oil, with special reference to Coorong Field, So. Australia.

Baku. The Petroleum Situation at Baku (La situation pétrolifère actuelle à Bakou), M. Aldebert. Société des Ingénieurs Civils de France—Mémoires et Compte Rendu des Travaux, vol. 77, no. 1-2-3, Jan.-Mar. 1924, pp. 87-112. Gives details of geology of oil region and Apsheron Peninsula, activity of refineries, oil reserves, transportation, financial matters, etc.

Bibliographies. Current Bibliography, W. J. Wilson. Instn. Petroleum Technologists—Jl., vol. 10, nos. 24, 45, and 46, Sept. and Nov., 1924, pp. 51A-92A, 195A-231A, and 263A-303A. Covers geology, geography, drilling and field operations, pipe lines, transportation and storage, refinery technique, natural gas, motor fuels, lubrication, testing, cracking and hydrogenation, shale and shale oils, etc.

Current Bibliography of Foreign Petroleum Resources. Am. Assn. Petroleum Geologists—Bul., vol. 8, no. 2, Mar.-Apr. 1924, pp. 251-260. Pub. by permission U. S. Geol. Surv.

Recent Articles on Petroleum and Allied Substances, H. Britton. U. S. Bur. Mines, Jan. 1924, 34 pp.; Feb., 32 pp.; Apr., 32 pp.; July, 34 pp.; Aug., 23 pp.; Sept., 24 pp.; Oct., 24 pp.; Nov. 29 pp.; and Dec., 31 pp. Compilation of articles on history, geographic occurrence, geology, origin, development and production, transportation, storage, distribution, properties and their determination, refining and refineries, utilization, legislation, etc.

Brazil. Is There Petroleum in Brazil? David T. Day. Oil Eng. & Finance, vol. 5, no. 98, June 1924, pp. 331-333. Shows there is lack of geological data and importance of petroleum development.

British Empire. Crude Oils of the Empire, A. E. Dunstan and Jas. Kewley. Instn. Petroleum Technologists—Jl., vol. 10, no. 44, July 1924, pp. 486-521 and (discussion) 522-526. Statistics of resources and production.

Bulk Distribution. Bulk Distribution of Oil. Depots and Storage, F. W. Black. Instn. Petroleum Technologists—Jl., vol. 10, no. 44, July 1924, pp. 584-603 and (discussion) 604-605. Review of problems of oil storage and bunkering.

Burma. Distribution of Petroleum in Burma, G. P. Chaplin. Min. Mag., vol. 30, no. 5, May 1924, pp. 265-270, 5 figs. Outline of present problems of oil industry in Burma.

California. Chemical Characteristics of California Petroleums, P. W. Prutzman. Am. Assn. Petroleum Geologists—Bul., vol. 8, no. 5, Sept.-Oct. 1924, pp. 560-575, 1 fig. Location of deposits; refining of cold-test and waxy oils; impurities in asphaltic oils.

California Production and Reserves. California Oil Production and Reserves, R. E. Collom and R. M. Barnes. Am. Assn. Petroleum Geologists—Bul., vol. 8, no. 2, Mar.-Apr. 1924, pp. 212-237 and (discussion) 237-239, 2 figs. Information on status of California oil production as a whole; geographic relationship and economic importance of the various oil fields of the state; quantity and quality of their production; brings down to July 1, 1923, estimates of oil reserves, made by California Committee of Am. Assn. Petroleum Geologists, as of July 1, 1921.

California, Technology of. Progress in California Petroleum Technology, G. Egloff and A. R. Chandler. Chem. Age (N. Y.), vol. 32, no. 10, Oct. 1924, pp. 405-407. World production in 1923; California production; drilling of wells; transporting crude oil from wells; concrete and steel storage tanks for crude oil; properties of California crude oil; chemical engineering progress; cracking of oils.

Californian, Chemical Properties. The Chemical Properties of Californian Petroleums, P. W. Prutzman. Petroleum Times, vol. 11, no. 262, Jan. 12, 1924, pp. 51-52. Chemical treatment of crudes of Group 2; the Edeleanu process; by-products; impurities in asphaltic oils.

Canada. Oil Developments in Canada during 1923, G. S. Hume. Am. Inst. Min. & Met. Engrs. —Trans., no. 1321-P, Feb. 1924, 4 pp.

Petroleum In Canada. Can. Min. Jl., vol. 45, no. 47, Nov. 21, 1924, pp. 1144-1146, 3 figs. An American opinion of possibilities in Canada.

Petroleum Resources of the Dominion of Canada, M. Chose. Compressed Air Mag., vol. 29, no. 1, Jan. 1924, pp. 751-753, 7 figs. Brief review of petroleum situation in Canada.

Capillarity and Migration. Some Experiments on Capillarity and Oil Migration, Wm. L. Russell. Economic Geology, Vol. 19, no. 1, Jan.-Feb. 1924, pp. 35-61. Evidence is put forth to show that oil was driven from shales or limestones, in which it originated, into sandstones in masses large enough to be affected by buoyancy.

Chemical Raw Material. Petroleum as a Chemical Raw Material, B. T. Brooks. Indus. & Eng. Chem., vol. 16, no. 2, Feb. 1924, pp. 185-189. Reasons for slow development of petroleum chemistry; isolation of hydrocarbons from petroleum;

study of typical pure hydrocarbons; problems with regard to unsaturated hydrocarbons in lubricating-oil distillates.

Colombia. Petroleum Laws of Colombia (Über die Erdölgesetze Kolumbiens). Petroleum Zeit., vol. 20, no. 15, May 20, 1924, pp. 660-667. Decrees of 1922 and 1923 regulating oil production, etc.

Colorado. Survey of Petroleum Progress, C. M. Rath, F. H. Lahee, H. T. Morley and J. R. Jones. Min. & Metallurgy, vol. 5, no. 212, Aug. 1924, pp. 378-383, 1 fig. Series of articles covering present status of petroleum industry in Colorado; New Richland Field, Navarro County, Texas; evaporation losses in field storage tanks; extensions of prospecting permits.

Coolers. The "Moore-Burmah" Oil Cooler. Petroleum Times, vol. 11, no. 276, Apr. 17, 1924, pp. 547-548, 2 figs. Describes new continuously-operating oil cooler invented by J. Moore, superintending engineer of Burmah Oil Co.'s refineries, and manufactured by A. F. Craig & Co., Ltd., Paisley, Scotland.

Coorongite. The Coorong Oil Company of Australia, E. de Hautpick. Petroleum Times, vol. 12, nos. 302 and 303, Oct. 18 and 25, 1924, pp. 623-624 and 665-666. Résumé of report upon properties of coorongite.

Cracking. Operating a Modern Cracking Plant, J. C. Morrell. Chem. & Met. Eng., vol. 31, no. 26, Dec. 29, 1924, pp. 1006-1010, 4 figs. How Dubbs oil-cracking process functions and commercial results obtained by proper control of equipment.

Petroleum Cracking Processes and Future Production Problems, T. A. Boyd. Indus. & Eng. Chem., vol. 16, no. 10, Oct. 1924, pp. 1004-1006. Review of developments and prospects.

Recent Development in the Art of Cracking, A. E. Dunstan and R. Pitkethly. Instn. Petroleum Technologists—Jl. vol. 10, no. 46, Nov. 1924, pp. 728-757 and (discussion) 757-774, 17 figs. partly on supp. plates. Discusses some processes which authors have personally investigated. Vapor phase process; atmospheric pressure.

The Dubbs Cracking Process, G. Egloff. Petroleum Times, vol. 12, no. 311, Dec. 20, 1924, pp. 983-985, 1 fig. Account of achievements.

The Dubbs Process for Cracking Oil. Petroleum Times, vol. 12, no. 287, July 5, 1924, pp. 5-8, 2 figs. Principles of Dubbs process, equipment and operation, commercial results, results with heavy oils and cracking products.

What About the Future of the Cracking Process? R. H. Brownlee. Chem. & Met. Eng., vol. 31, no. 22, Dec. 1, 1924, pp. 848-852, 4 figs. Probable developments may result in revival of vapor-phase and lower pressure equipment, with perhaps increased interest in catalytic and chemical processes.

Cracking, Catalyst for. See CATALYSTS, Oil-Cracking.

Crude. Crude Oils and Refined Products, J. L. Strevens. Chem. Eng. & Min. Rev., vol. 16, nos. 186 and 187, Mar. 5 and Apr. 5, 1924, pp. 213-217 and 271. Oil seepages; well oils; kinds of crude oils; constituents of crude oils; calorific values of fuel oils; oil refining; specifications of chief petroleum products imported into Australia.

The Crude Oils of the Empire, A. E. Dunstan and J. Kewley. Petroleum Times, vol. 11, no. 284, June 14, 1924, pp. 835-836. Discusses Great Britain, Canada, Burma and Assam, Australia, New Zealand, Trinidad, and Sarawak. Summary of paper read at Mining and Metallurgical Congress at Wembley.

Crude, Persia. The Crude Oil of Maidan-i-Naftun, A. E. Dunstan. Instn. Petroleum Technologists—Jl., vol. 10, no. 41, Feb. 1924, pp. 51-73 (discussion), 73-82, 4 figs. partly on supp. plate. Production data; geology of oil formations; nature of natural gas; analysis of crude oil, distillation and refining, characteristics of products obtained.

Crude, Sarawak. The Crude Oil of Sarawak, J. Kewley. Instn. Petroleum Technologists—Jl., vol. 10, no. 41, Feb. 1924, pp. 42-50. Production data; general characteristics, and chemical characters; products from Miri crude oil.

Crude, Transportation of. Transportation of Crude Oil, A. S. Jones. West. Machy. Wld., vol. 15, no. 9, Sept. 1924, pp. 290-291 and 296, 3 figs. Types of pumping stations generally in use, and notes on operation.

Czechoslovakia. The State Mineral Oil Mines in Gbley, Czechoslovakia, 1913-1922 [Die staatlichen Naphthagruben von Gbley in der Slowakei (1913 bis 1922)], E. Schnabel. Petroleum Zeit., vol. 20, no. 18, June 20, 1924, pp. 835-850, 8 figs. Discusses geology of oil and gas regions, development of mining operations, analyses of oils and gases. Bibliography.

Dehydration. The Electrical Dehydration of Cut Oil, F. D. Mahone. Am. Inst. Min. & Met. Engrs.—Trans., Advance Paper no. 1354-P, July 1924, 5 pp. Much crude oil, as produced from well, carries varying amounts of water, which may be present as free water in globules sufficiently large to settle out, in time, if fluid is allowed to stand, or as an emulsion formed by myriads of minute water particles, each surrounded and entrapped by a film of oil through which it cannot break under action of gravity alone. Such an emulsified mixture of oil and water is termed "cut oil." Describes apparatus for breaking up emulsion.

The Electrical Process for the Dehydration of Crude Oil Emulsions, A. J. Houston. Petroleum Wld., vol. 21, no. 289, Oct. 1924, pp. 424-425. See also Petroleum Times, vol. 12, no. 298, Sept. 20, 1924, pp. 453-454. Advantages of electrical dehydration process; description of "P.R." electric dehydrators; results achieved by electrical method of treating crude oil emulsions.

Desulphurizing. Desulphurization of Mineral-Oil Distillates by Means of Hypochlorite (Ontzwaveling van aardoliedestillaten met hypochloriet volgens Dunstan en Brooks), H. I. Waterman and J. H. Heimel. Chemisch Weekblad, vol. 21, no. 32, Aug. 9, 1924, pp. 374-375. Results obtained by Dunstan and Brooks with Persian oils have been confirmed and extended to Mexican oils.

The Desulphurising of Crude Oil Distillates by Means of Hypochlorite, after the Method of Dunstan and Brooks, H. I. Waterman and J. H. Heimel. Instn. Petroleum Technologists—Jl., vol. 10, no. 46, Nov. 1924, pp. 812-815. Describes experiments with distillates of Mexican oil.

See also Refining.

Developments. A Review of Petroleum Developments Abroad in 1923. Commerce Reports, no. 4, Jan. 28, 1924, pp. 222-225. Problems in marketing conditions; proposed oil legislation in Argentina; explorations conducted in other South American countries; Rumanian oil legislation; concessions in Persia and Near East; British Indian production; development active in Latin America; Polish production recovering; Japanese production declines; etc.

Distillates, Refining. Catalytic Treatment of Cracked Distillates in the Vapor Phase, T. T. Gray and M. R. Mandelbaum. Indus. & Eng. Chem., vol. 16, no. 9, Sept. 1924, pp. 913-916, 3 figs. Preliminary description of method of refining cracked distillates which is intended to obviate value losses due to reaction of sulphuric acid with olefins present; advantages of vapor-phase catalytic process.

The Hypochlorite Process, A. E. Dunstan,

Instn. Petroleum Technologists—Jl., vol. 10, no. 42, Apr. 1924, pp. 201-215, 1 fig. on supp. plate. Describes method of refining petroleum distillates by dilute hypochlorite solutions; action of hypochlorite on sulphur compounds; Mather and Platt's patent electrolyser, vertical flow type; advantages of hypochlorite processed as compared with use of sulphuric acid.

Distillation. A New Method of Distilling Petroleum (Ein neues Verfahren zur Destillation von Erdölen), W. Boormann. Petroleum, vol. 20, no. 28, Oct. 1, 1924, pp. 1417-1422, 1 fig., and (translation) Petroleum Times, vol. 12, no. 303, Oct. 25, 1924, pp. 649-650. Discusses Borrmann continuous steam system in which oil is continuously led through tubes, only 100 to 200 liters of it being in heating chamber at a time; cost data.

Better Fractionation of Condensates. Oil & Gas Jl., vol. 23, no. 20-A, Oct. 9, 1924, pp. 200 and 245-249, 7 figs. Details of patent of E. Owen, of New York City. Apparatus relates more particularly to distillation of petroleum and seeks for one of its principal objects to provide a means for effecting a more perfect separation of hydrocarbons which are evolved as a body of mixed vapors from a still, into distinct fractions than has heretofore been accomplished.

The Design of Oil Distillation Equipment, E. H. Leslie. Oil News, vol. 12, no. 2, Feb. 1924, pp. 11-12 and 47, 2 figs. Discusses packed versus bubbler-cap columns; evolution of bubbler cap, working versus perfect sections, etc.

The Reasons for Steam Distillation, E. H. Leslie. Oil News, vol. 12, no. 5, May 1924, pp. 13-14. Review of principles of distillation with steam.

Use of Inert Gases Instead of Steam in Petroleum Distillation, L. Gourvich and B. Kaminer. Petroleum & Oil Shale Industry (Russia), vol. 8, no. 8, 1924, pp. 334-340. Data of tests limited to distillation of upper fractions such as lubricating oil carried out with crude oil by semi-distilled products such as mazout. (In Russian.)

Emulsified. Emulsion Oil and Experiments of Its Decomposition, C. Kovalevski. Azerbeijan Oil Industry (Russian Oil Paper), no. 7-8, July-Aug. 1924, pp. 33-35. (In Russian.)

Emulsions, Destroying. See EMULSIONS, Oil.

Engineering Applications. Petroleum Engineering, C. Dalley. Instn. Petroleum Technologists—Jl., vol. 10, no. 44, July 1924, pp. 459-476 and (discussion) 476-485, 18 figs. partly on supp. plates. Notes on storage tanks; pipe-line pumping plant; refinery requirements; specification of mild-steel oil-storage tanks 116 ft. diam. by 40 ft. deep, 2,600,000-gal. cap.

Engines. See OIL ENGINES.

Evaporation Loss. Evaporation Loss of Petroleum Theories and Their Application, J. H. Wiggins. Am. Inst. Min. & Met. Engrs.—Trans., Advance Paper no. 1353-P, July 1924, 8 pp. Abstract in Min. & Metallurgy, vol. 5, no. 216, Dec. 1924, pp. 595-596. Pictures economic phase of evaporation losses and actual evaporative conditions in handling and storing crude and gasoline in United States; discusses some of the theories of physics involved in evaporation loss, and describes application of these theories to the handling of oil and gas on producing properties.

Fats, Production from. Petroleum from Vegetable and Animal Fats. Petroleum Times, vol. 12, no. 306, Nov. 15, 1924, p. 770. Describes methods of making use of local fatty oils for producing petroleum-like hydrocarbons devised by Prof. Mailhe, of Toulouse University, France. Abstracted translation from Petroleum.

Fields. See OIL FIELDS.

Fractionating. Fractional Distillation for the Separation of the Constituents of Petroleum, W. A. Peters, Jr. Indus. & Eng. Chem., vol. 16, no. 11, Nov. 1924, pp. 1126-1130, 9 figs. Summarizes theory of fractional distillation with mathematical formulas used for calculating fractionating columns; suggests method for calibrating fractionating columns to be used in petroleum work in order to determine proper balance between heat consumption, column efficiency, and sharpness of cut to be obtained.

The Theory of Fractionating Condensation, F. H. Leslie. Oil News, vol. 12, no. 3, Mar. 1924, pp. 15-16, 2 figs. Outlines basic theory of fractionating condensation or dephlegmation. Believes that separation of gasoline from petroleum should be effected by fractional distillation rather than fractional condensation, but realizes that for practical reasons or considerations of expediency dephlegmator will frequently be used.

France. Exploration for Petroleum in the Limagne, France, A. Werenfels. Am. Inst. Min. & Met. Engrs.—Trans., no. 1385-G, Dec. 1924, 7 pp., 3 figs. After discussing geology, surface indications of petroleum and recent exploration, author states that none of wells were properly located and that oil possibilities have not been adequately tested.

Petroleum in France (Le pétrole en France), C. Finaton. Vie Technique & Industrielle, vol. 5, nos. 56 and 58, May and July 1924, pp. 77-80 and 226-231, 11 figs. Discusses hydrocarbons of Pyrenees, oil indications in Landes, Béam and Basque country, geology, etc.; tectonics.

Petroleum Mines, C. Camsell and A. Buisson. Can. Min. Jl., vol. 45, no. 15, Apr. 11, 1924, pp. 352-355. Recovery of petroleum by shafts and galleries at Pechelbronn, Alsace, France, and at Wietze, Hanover, Germany.

Petroleum Researches in France and the Borings at Gabian [Les recherches de pétrole en France et le sondage jaillissant de Gabian (Hérault)], R. Brunschweig. Génie Civil, vol. 85, no. 25, Dec. 20, 1924, pp. 567-571, 5 figs. New French petroleum laws; geology of Gabian district, borings and storage at Frontignan, and properties of Gabian oil.

The Recovery of Petroleum at Pechelbronn, C. Camsell and A. Buisson. Petroleum Times, vol. 11, no. 278, May 3, 1924, pp. 635-638, 3 figs. Recovery of petroleum by shafts and galleries at Pechelbronn, Alsace, France.

Fuel. See OIL FUEL.

Gasification Capacity, Testing. The Testing of Petroleum Oils for Gasification, A. Holmes. Indus. & Eng. Chem., vol. 16, no. 3, Mar. 1924, pp. 258-261. Summary of investigation conducted to establish possibility of determining gasification capacity of petroleum oils from laboratory tests.

Genesis and Geology. Petroleum: Its History, Genesis, and Geology, Jas. Park. New Zealand Jl. Sci. & Technology, vol. 7, no. 3, Sept. 1924, pp. 147-154. Historical review; chemistry of petroleum; origin and geology; migration and accumulation of oil and gas; principles of oil accumulation; favorable rock structures; favorable oil indications; selecting site of oil well.

Petroleum Geology, T. Dewhurst. Instn. Petroleum Technologists—Jl., vol. 10, no. 44, July 1924, pp. 395-425 and (discussion) 426-431, 2 figs. Distribution of petroleum of various geological systems; nature of oil measures and occurrence of petroleum in a few oil-bearing countries; migration of petroleum; drilling methods as they affect recording of evidence of concealed strata, etc.

Gulf Coastal Plain, U. S. Oil Development in Gulf Coastal Plain during 1923, E. T. Dumble and W. F. Bowman. Am. Inst. Min. & Met. Engrs.—Trans., no. 1332-P, Mar. 1924, 7 pp. Survey of production, developments, and drilling methods.

Hydrogenation. Hydrogenation by the Bergius Method, H. I. Waterman and J. N. J. Perquin.

Instn. Petroleum Technologists—Jl., vol. 10, no. 45, Sept. 1924, pp. 670-677, 2 figs. Summary of most important results of research taken up concerning scientific and technical significance of Bergius' hydrogenation process.

New Facts Relating to the Bergius Process. Petroleum Times, vol. 11, no. 263, Jan. 19, 1924, p. 100. A process of hydrogenation. From article by P. Bruylante in Bul. de la Société Chimique Belge.

The Berginisation of Coal and Oil, A. W. Nash. Instn. Petroleum Technologists—Jl., vol. 10, no. 43, June 1924, pp. 329-334, 3 figs. Discusses artificial production of coal, hydrogenation of oil, and plant arrangement and equipment.

The Bergius Process (Le procédé Bergius), A. Kling. Chimie & Industrie, vol. 11, no. 6, June 1924, pp. 1067-1077, 8 figs. Discusses mechanism of dissociation, cracking process, Bergius patents, berginization of heavy oils, asphalts, etc., and its application in France.

See also OIL FUEL, Bergius Production Process.

Interfacial Tension between Water and. The Interfacial Tension between Petroleum Products and Water, E. M. Johansen. Indus. & Eng. Chem., vol. 16, no. 2, Feb. 1924, pp. 132-135, 2 figs. Study of relations between interfacial tension and number of other subjects.

Italy. Petroliferous Regions in the Latina Valley (I terreni petroliferi della Valle Latina), V. Novarese. Rassegna Mineraria Metallurgica e Chimica, vol. 61, no. 4, Oct. 15, 1924, pp. 87-95. Discusses Lazio and Campania districts in Latina Valley; geologic formation, tectonics, occurrence of oil, asphalt, characteristics and properties.

The Petroleum Problem in Italy (Intorno al problema del petrolio in Italia), B. Lotti. Rassegna Mineraria Metallurgica e Chimica, vol. 61, no. 3, Sept. 15, 1924, pp. 57-65. Discusses geologic formation and probable occurrence of oil in various parts of Italy; prospecting, especially on Adriatic; etc.

Japan. Petroleum in Japan, A. T. Coumbe, Jr. Trade Information Bul. (Supp. to Commerce Reports), June 30, 1924, 27 pp. Details of production of crude petroleum, producing fields, estimated reserves; prospecting, concession and production regulations; refining, etc.

Production and Consumption in Japan, C. E. Kern. Oil & Gas Jl., vol. 23, no. 7-A, July 10, 1924, pp. 28 and 133. Details of production of oil, gas and gasoline by Nippon Oil Co.

Japanese, Composition of. On the Composition of Japanese Petroleum, S. Komatsu and S. Kusumoto. Kyoto Imperial Univ., College of Sci.—Memoirs, vol. 7, no. 2, Feb. 1924, pp. 77-84, 1 fig. Composed, for greater part, of hydrocarbons of polymethylene series or naphthene; results of study to isolate polymethylene hydrocarbons in pure condition and to ascertain their constitutions by chemical means.

Kansas Developments. Petroleum Development in Kansas During 1923, J. M. Sands. Am. Inst. Min. & Met. Engrs.—Trans., no. 1325-P, Mar. 1924, 2 pp. Describes important developments in four counties, all of which brought in 40-deg. oil.

Kerogen. Kerogen and Its Relation to the Origin of Oil, E. A. Trager. Am. Assn. Petroleum Geologists—Bul., vol. 8, no. 3, May-June 1924, pp. 301-311, 18 figs. Kerogen is defined as "neither petroleum, bitumen, nor resin, but yielding petroleum and ammonium compounds on distillation." Results of studies based on destructive distillation, compression and microscopic study of shales containing kerogen.

Marketing. Marketing Crude Petroleum, L. M. Fanning. Eng. & Min. Jl.-Press, vol. 118, no. 6, Aug. 9, 1924, pp. 209-213. Account of how business is conducted from well to refinery.

New Mexico. The Petroleum Situation in New Mexico, C. T. Kirk and E. G. Woodruff. Oil Trade Jl., vol. 15, no. 8, Aug. 1924, pp. 30-34, 52 and 54, 1 fig. Gives general information on geology and petroleum possibilities of New Mexico; generalized tabulation of geological formations.

Nickel in. The Significance of Nickel in Petroleum, W. Ramsay. Instn. Petroleum Technologists—Jl., vol. 10, no. 41, Feb. 1924, pp. 87-91. Considers theories on nature and origin of petroleum; table giving nickel content of a number of authentic petroleums and some associated bodies expressed as parts per million.

Nickel and Vanadium in. The Occurrence of Vanadium and Nickel in Petroleum, E. DeGolyer. Economic Geology, vol. 19, no. 6, Sept.-Oct. 1924, pp. 550-555 and (discussion) 555-558. Points out that common occurrence of nickel in petroleum of widely different chemical types and geographic sources suggests that its presence may have important bearing on origin even from organic material.

Oklahoma. The Tonkawa Field, Oklahoma, G. C. Clark and F. L. Aurin. Am. Assn. Petroleum Geologists—Bul., vol. 8, no. 3, May-June 1924, pp. 269-283, 7 figs. Discusses location of Tonkawa field, history and development, surface and subsurface stratigraphy, possibilities for deeper production.

The Tonkawa Oil and Gas Field, Oklahoma, J. F. Hosterman. Am. Assn. Petroleum Geologists—Bul., vol. 8, no. 3, May-June 1924, pp. 284-300, 3 figs. Discusses location, stratigraphy, structure, drilling systems, casing problems, pipe lines, development of deeper sand.

Oregon. Petroleum Possibilities of Western Oregon, W. DuPre Smith. Economic Geology, vol. 19, no. 5, Aug. 1924, pp. 455-465, 1 fig. Discusses history of drilling operations, gives tentative table of stratigraphy of western Oregon; details of prospective fields; concludes that western Oregon is territory of possible but not probable petroleum reserve.

Origin. Notes on the Origin of Petroleum, F. M. Van Tuyl. Colo. School of Mines—Alumni Mag., vol. 14, no. 1, May 1924, pp. 8-12. Prevalent theories of origin; inorganic and organic theories.

Petroleum and Natural Gas, L. J. Jones. Petroleum Times, vol. 11, nos. 271, 272, and 273, Mar. 15, 22, and 29, 1924, pp. 389-390, 423-424, and 461-463. Origin, occurrence, prospecting, and drilling.

Packing and Shipping. Packing and Shipping Oil and Lubricants, J. B. Edwards. Mgmt. & Administration, vol. 8, no. 1, July 1924, pp. 59-64, 10 figs. Methods in use at Tide Water Oil Co., Bayonne, N. J.

Panama. Oil Possibilities of Panama, J. F. Sheridan. Eng. & Min. Jl.-Press, vol. 117, no. 14, Apr. 5, 1924, pp. 565-567, 1 fig. Review of recent activity of independent producers.

Paraffin and Mazouts. On the Properties and Structure of Groznyi Paraffinic Petroleums and Mazuts, B. C. Tycinin. Petroleum & Oil Shale Industry (Russian), vol. 6, nos. 5-6, 1924, pp. 838-853, 2 figs. Importance of solidification curves for valuation of paraffinic fuel; principles of thermic deparaffination; some technical qualities of paraffin wax obtained by thermic treatment; mode of formation of ozokerite deposits and temperature of paraffinic petroleum. (In Russian, with abstract in English).

On the Structure and Some Properties of Groznyi Paraffinic Petroleums and Mazouts (Residuum Oils), B. G. Tycinin. Petroleum & Oil-Shale Industry, vol. 5, no. 11-12, Nov.-Dec. 1923, pp. 620-631, 24 figs. on supp. plates. Part I:

Fundamental view concerning forms of occurrence of paraffin in petroleums; object and method of investigation. Part II: Method of determining maximum solidification temperature and structure of paraffinic mazout. Part III: Dissolvents and precipitants. (In Russian, with abstract in English, pp. 634-635.)

Paraffin Wax Extraction. Experimental Paraffin Wax Extraction From Groznyi Petroleum on an Industrial Scale, I. Elin. Petroleum & Oil-Shalc Industry, vol. 6, no. 3, 1924, pp. 462-468. (In Russian.)

Peat, Recovery from. See PEAT, Oil and Coke Recovery.

Persia. The Geology and Oil Measures of South-West Persia, R. K. Richardson. Instn. Petroleum Technologists—Jl., vol. 10, no. 43, June 1924, pp. 256-284 and (discussion) 284-296, 33 figs. Discusses topographical features, stratigraphy, correlation, Palæontology, geology and tectonics, origin of oil, Maidan-I-Naftun oilfield.

Peru and Ecuador. Petroleum Industry and Trade of Peru and Ecuador, W. W. Dobkin. Trade Information Bul. (Supp. to Commerce Repts.), no. 175, Jan. 21, 1924, 26 pp. History of fields; details of producing fields; production of crude petroleum; petroleum companies; laws in connection with concessions; refineries; market; etc.

Pipe Lines. Transportation of Petroleum (Trasporte de Petroleo), E. E. Bachofen. Ingenieria, vol. 28, no. 8, Aug. 1924, pp. 344-348. Calculation and construction of pipe lines.

See also PIPE LINES, Oil.

Production. Petroleum in 1922, G. B. Richardson. U. S. Geol. Survey, no. II:32, July 15, 1924, pp. 359-438, 15 figs. Statistics of production and consumption, mainly in U. S. A.

Production, Alsace. Petroleum Production in France. Petroleum World, vol. 21, no. 280, Jan. 1924, pp. 17-18. History of Alsatian production; geology; exploitation by shafts and galleries at Pechelbronn mines.

Production Cost. The Production Cost of Petroleum, M. E. Kopcinsky. Petroleum & Oil-Shale Industry, vol. 5, no. 7-8, July-Aug. 1923, pp. 19-21. (In Russian.) See also Remarks on Above Article, by V. I. Frolow, pp. 21-23.

Production, Europe. Present Oil Production in Europe. Oil & Gas Jl., vol. 23, no. 30, Dec. 18, 1924, pp. 78D and 196. Summary of operations and prospects in fields of Rumania, Czecho-Slovakia, Hungary, Austria, Jugoslavia, Germany, Poland, and France.

Production from Coal. Oil Production from Australian Coal and Shale. Indus. Australian & Min. Standard, vol. 71, nos. 1845 and 1846, Apr. 17 and 24, 1924, pp. 580-581 and 617. National importance of finding ways to produce petrol and oils from coal and shale. Indicates some of the difficulties to be faced and suggests lines along which solutions may be found. Progress of discovery in this field during past few years, with special reference to Australian conditions.

The Director of Fuel Research on Oil and Coke Production from Coal, C. H. Lander. Gas. Wld., vol. 81, no. 2086, July 12, 1924, pp. 8-10 (annual coal supp.). Discusses yield and quality of oil, market for coke, and ammonia yield. Extract of paper read before World Power Conference.

The Production of Oil From Coal, H. G. Shatwell. Colliery Engr., vol. 1, no. 1, Mar. 1924, pp. 7-10, 1 fig. Description of work of Bergius on liquefaction of coal.

Production, Gas in. The Function of Gas in Oil Production. Petroleum Times, vol. 11, no. 277, Apr. 26, 1924, pp. 603-604. Methods employed, either to substitute action of natural gas in oil fields or to reinforce its action when its pressure has become feeble.

Production Methods, California. Petroleum Production Methods in Southern California, G. P. Chaplin. Min. Mag., vol. 31, nos. 4 and 5, Oct. and Nov. 1924, pp. 218-224 and 265-275, 20 figs. Particulars of petroleum production from flowing wells and description of pumping wells, including discussion of well-tubing and pumping components; details of pumping jacks, power for pumping, pulling, etc., and of other forms of pumps.

Production Statistics. Huge Overproduction Is Chief Feature of 1923 Petroleum Business, Jos. E. Pogue. Automotive Industries, vol. 50, no. 4, Jan. 24, 1924, pp. 169-174, 8 figs. Eight flush pools, reaching individual peaks exceeding 100,000 bbl. per day, brought in during year; progress in drilling methods.

Production Statistics of the Petroleum Industry. Oil Eng. & Finance, vol. 5, no. 97, May 1924, pp. 274-277. Figures and notes on production of the various countries.

Production, Swabbing Method. Swabbing, A. Millar. Instn. Petroleum Technologists—Jl., vol. 10, no. 41, Feb. 1924, pp. 105-108 and (discussion) 108-110. Discusses swabbing method of raising oil from wells, giving practical hints.

Progress Survey. Survey of Petroleum Progress. Min. & Metallurgy, vol. 5, no. 207, Mar. 1924, pp. 132-137, 7 figs. Abstracts from symposium as follows: Alamo Pool, Mexico; World's Oil Production; Vanadium in Petroleum, E. S. Porter; Persia, E. DeGolyer; Argentine Development in 1923, C. W. Washburne; Settling Boxes for Rotary Mud, A. Knapp; Smith Pool, Seminole, County, Okla., S. Powers; Research in Microfaunas; Cromwell Pool Seminole County, Okla., S. Powers; Removal of Paraffin from Oil Wells.

Prospecting for. Coal as an Aid in Oil Exploration, E. R. Lilley. Eng. & Min. Jl.-Press, vol. 117, no. 25, June 21, 1924, pp. 1009-1012, 3 figs. Its character in a given locality may serve as an indication of presence or absence of petroleum.

Oil Prospecting. Queensland Govt. Min. Jl., vol. 25, no. 293, Oct. 1924. Containing following reports by L. C. Ball: Report on Oil Prospecting, near Tewantin, pp. 354-360, 8 figs; Report on the Oil Bores on Laguna Beach, near Tewantin, pp. 361-362; Report on Oil Prospecting at Beaudesert, pp. 362-364, 1 fig.

Oil Prospecting and the Argentine Mining Law, L. Sol. Oil Eng. & Finance, vol. 5, no. 93, Jan. 5, 1924, pp. 11-12. Its drawbacks and possibilities.

Prospecting for Petroleum in Australia, E. C. Andrews. Economic Geology, vol. 19, no. 2, Mar. 1924, pp. 157-168, 1 fig. History of prospecting and results in individual states; geological structure of Australia, and of commercial oil fields in neighborhood of Australia.

Some Planetable Methods, W. A. English. Am. Assn. Petroleum Geologists—Bul., vol. 8, no. 1, Jan.-Feb. 1924, pp. 47-54, 3 figs. Use of sighting points offset from planetable stations; preparation of correction table for use with gradienter; use of target rod for stadia measurements.

Theory and Science in Oil-Finding, G. M. Edwards. Oil Eng. & Finance, vol. 5, no. 93, Jan. 5, 1924, pp. 19-20. Points out that individuality of geologist is important factor; oil finder of future.

Pumps. See OIL PUMPS.

Recooling. Modern Plants for Recobling of Oil (Neuzeitliche Oelrückkühlanlagen), G. Spettmann. Praktische Maschinen-Konstrukteur, vol. 57, no. 41, Oct. 28, 1924, pp. 554-555. Details of Zimmerman system for cooling oil used in hardening or cooling, by being made to flow along outside of pipes in which cooling water circulates in opposite direction.

Recovery. Tube Section Treating Plant Cuts

Oil Recovery Costs 6 Cents a Barrel, P. Wagner. Nat. Petroleum News, vol. 16, no. 30, July 23, 1924, pp. 71-72, 3 figs. Tube section treating installation of Humble Oil & Refg. Co. consists of four tube sections, 3 ft. long, and three plain sections, 5 ft. long; gives records of results.

Refining. California Development in the Preparation and Use of Adsorptive Clays in Refining, C. J. von Bibra. Petroleum Wld., vol. 21, no. 288, Sept. 1924, pp. 359-364. Discusses theory of adsorption, developments, treated clays, clay treating methods, recovery of spent clay and economic aspects.

Doherty Gets Patent on Radically New Refining Method. Nat. Petroleum News, vol. 16, no. 4, Jan. 23, 1924, pp. 37-38 and 41-43, 5 figs. Invention comprises method of distilling petroleum oils, such as crude petroleum, wherein petroleum is distilled in plurality of stages at different temperatures; and process in which gaseous heat carried is used as assistant in distillation to aid in volatilizing fractions desired; also comprises method of distillation wherein temperatures are carried high enough to secure more or less cracking of oil.

Petroleum and Petroleum Refining, A. M. O'Brien. S. Wales Inst. Engrs.—Proc., vol. 39, no. 6, Feb. 2, 1924, pp. 729-751 and (discussion) 751-756, 11 figs. Brief description of winning of petroleum, and its transportation to refinery; method of distillation; refining; treatments.

Petroleum Refinery Statistics for 1923 (for United States), W. C. Hill. U. S. Bur. Mines, Feb. 1924, 31 pp., 4 charts. Runs to stills and output of refineries; stocks at refineries; gasoline, kerosene, gas and fuel oils, and lubricants statistics.

Refinery Heat Losses And Insulation—Stills and Settings, H. S. Bell. Nat. Petroleum News. vol. 16, nos. 13 and 14, Mar. 26 and Apr. 2, 1924, pp. 62-64, and 93 and 95-97, 3 figs. Sources of heat losses in refineries from lack of proper insulation, including losses from still and boiler surfaces and settings, steam and hot oil lines, tanks whose contents must be heated to permit them to be pumped, filter house, and wax plant.

Refining Petroleum by Sulphuric Acid Absorbed by Capillary-Active Substances (Ueber die Raffination mit kapillar aufgesaugter Schwefelsäure), F. Schulz. Petroleum, vol. 20, no. 9, Mar. 20, 1924, pp. 317-320. Removal of colloidal substances causing high color and turbidity by sulphuric acid in petroleum refining is said to be principally physical process, accompanied by subordinate chemical reactions; from colorimetric data curve may be drawn analogous to adsorption curve; acid refining is favored by low temperature; portion of sulphuric acid used in treating oil remains in colloidal solution in oil.

Simplification and Cheapening of Vacuum Oil Plants (Neue Mittel zur Vereinfachung und Verbilligung von Vacuum-Oelanlagen), K. Kahn. Petroleum, vol. 20, no. 31, Nov. 1, 1924, pp. 1689-1695, 6 figs. Details of new apparatus, dispensing with condenser, and comparative cost data showing large savings.

The Refining of Petroleum with Liquefied Sulphurous Acid (Die Raffination des Erdöles mit verflüssigter schwefliger Säure), L. Edeleanu. Petroleum, vol. 19, no. 34, Dec. 1, 1923, pp. 1195-1207, 3 figs. Describes method of treating hydrocarbons which is being extensively used in petroleum and lignite industry, and which has led to production of high-grade oils from asphalt-rich sulphurous and other low-grade crude oils, to recovery of temperature-proof lubricating oils, and to separation of hard and soft paraffins from lignite tar.

The Rôle of Adsorption in Petroleum Refining, H. L. Kauffman. Chem. & Met. Eng., vol. 30, no. 4, Jan. 28, 1924, pp. 153-156, 2 figs. How Fullers' earth and similar adsorbents make possible commercial purification and bleaching of gasoline, kerosene, and lubricating oils.

The Use of Bauxite in Petroleum Refining. Petroleum Times, vol. 12, no. 287, July 5, 1924, pp. 17-18. Bauxite is colloidal adsorptive of first order for organic sulphur derivatives; freshly ignited bauxite gives best results; bauxite per se is complete and sufficient refining agent for kerosene; other sulphurous distillates are also capable of purification by bauxite.

Use of Aluminum Chloride for Petroleum Refining, I. N. Strigeoff. Petroleum & Oil-Shale Industry, vol. 5, no. 9, Sept. 1923, pp. 246-250. (In Russian.)

World Survey of Petroleum Refining, C. E. Bowles. Oil & Gas Jl., vol. 23, no. 30, Dec. 18, 1924, pp. 82-83, 150B and 150D. Capacity far in excess of present production of crude oil and of existing consumption of oil products. Coming demand.

Russian Far East. Petroleum in the Russian Far East, P. I. Polevoj. Petroleum & Oil-Shale Industry (Russian), vol. 6, no. 3, 1924, pp. 449-457. Discusses petroleum in following three areas, eastern shore of lake Baikal, island Sachalin, and Kamcâtka peninsula. (In Russian).

Shales. See OIL SHALES.

Statistics, United States. Statistical Tables Relative to Petroleum. Am. Petroleum Inst.—Bul., vol. 5, no. 20, Apr. 7, 1924, 15 pp. Statistical tables relative to production and consumption; annual rate of excess of consumption or production in United States, California, and East of Rockies; export and domestic consumption; production of crude oil and well completion; oil imports into United States; crude-oil stocks and refined products; production, stocks, exports and domestic consumption of gasoline, kerosene, gas and fuel oils, and of lubricating oil.

Still Equipment on Railway Cars. Oil Still Equipment on Railroad Cars. Iron Age, vol. 113, no. 20, May 15, 1924, pp. 1439-1440, 2 figs. Portable plant with capacity up to 3500 bbl. a day useful for opening new fields; compactness and economical operation are features.

Still Tubes, Calorizing of. Comparative Advantages of Calorizing, A. H. Mayo. Oil & Gas Jl., vol. 23, no. 13, Feb. 28, 1924, pp. 96 and 100, 2 figs. Describes experience of Waverly Oil Works Co., Pittsburgh, Pa., with use of calorizing for tubes in pressure stills, and summarizes results and savings.

Storage. See OIL FUEL, Locomotive; OIL TANKS.

Sulphur Compounds. Action of Petroleum-Refining Agents on Pure Organic Sulfur Compounds Dissolved in Naphtha, A. E. Wood, A. Lowy and W. F. Faragher. Indus. & Eng. Chem., vol. 16, no. 11, Nov. 1924, pp. 1116-1120. Results of investigation.

Sulphur in. The Distribution of Sulphur in Crude Petroleum, N. A. C. Smith and D. D. Stark. U. S. Bur. Mines—Reports of Investigations, no. 2582, Mar. 1924, 17 pp., 3 figs. on supp. plates. Occurrences of sulphur-bearing crudes. Study of distribution of sulphur in the various products obtained from light Mexican crude. New method of separating asphaltic crudes into oil and asphalt. Effect of asphalt removal on sulphur distribution.

Sulphur in, Determination of. The Determination of Sulphur in Petroleum and Its Distillation Products, B. N. Tiutiunnikov. Petroleum & Oil-Shale Industry, vol. 5, no. 10, Oct. 1923, pp. 489-491. Method developed by author giving results which compare favorably with those obtained by

other methods. (In Russian, with brief abstract in English.)

Sweetening. The Chemistry of "Sweetening" in the Petroleum Industry, G. L. Wendt and S. H. Diggs. Indus. & Eng. Chem., vol 16, no. 11, Nov. 1924, pp. 1113-1115. Shows that sweetening consists in removal of hydrogen sulphide and of alkyl mercaptans which are only compounds responsible for sourness.

Synthetic. Synthetic Petroleum (Il petrolio sintetico), L. Dal Prato. Industria, vol. 38, no. 21, Nov. 15, 1924, pp. 578-585. Production of illuminating gas, water gas, hydrogen, and methane; syntheses of petroleum hydrocarbons; conversion and polymerization of methane, ethylene, and acetylene; hydrogenation of acetylene and carbon, and their conversion to liquid hydrocarbons; conversion of carbon and methane into liquid fuels; Olivier and Burgeois synthetic process.

Synthetic Petroleum by the Voltaic Arc (Le Pétrole synthetique par l'Arc voltaïque), P. Marval. Electricien, vol. 55, no. 1358, Oct. 15, 1924, pp. 465-468, 3 figs. Details of new process for manufacturing synthetic petroleum, starting from lignite.

Testing. Testing and Care of Refined Oils. Oil & Gas Jl., vol. 23, no. 14, Mar. 6, 1924, pp. 94 and 132-133. Close check necessary during process of manufacture and until products are put into tank cars ready for shipment.

Viscosity. The Viscosity of Oils at High Temperatures, A. R. Fortsch and Rob. E. Wilson. Indus. & Eng. Chem., vol. 16, no. 8, Aug. 1924, pp. 789-792, 3 figs. Data and curves covering viscosity determinations on wide variety of oils from Mid-continental and similar crudes up to temperature of 495 deg. fahr.; outline of method of interpolation.

Viscosity-Temperature Curves. Viscosity-Temperature Curves of Fractions of Typical American Crude Oils, F. W. Lane and E. W. Dean. Indus. & Eng. Chem., vol. 16, no. 9, Sept. 1924, pp. 905-911, 6 figs. Results of investigation made by Bur. of Mines; discusses method of rectifying temperature-viscosity curves, and possibility of its practical utilization.

Weights and Measures, Conversion of. Conversion of Petroleum Weights and Measure, G. Sell. Instn. Petroleum Technologists—Jl., vol. 10, no. 46, Nov. 1924, pp. 821-824, 1 fig. Notes on conversion of weights to measures and vice versa, and consideration of a quick and yet reliable method of carrying out such conversions.

Wells. See OIL WELLS.

World-War Problems. Petroleum Problems of the World War, P. Foley. U. S. Nav. Inst.—Proc., vol. 50, no. 261, Nov. 1924, pp. 1802-1832. Study in practical logistics. Bunkering problem of Brit. Grand Fleet; British and French armies in France; American Expeditionary Force; Italy; Far-Eastern agreement; war problems of American petroleum industry; post-armistice adjustments.

OIL ENGINES

Airless-Injection. See Solid-Injection; Heavy-Oil.

Automobile. See AUTOMOBILE ENGINES, Bagnulo.

Beardmore - Speedwell. See MOTORSHIPS, Power Plants.

Bearing Adjustments. Marine Oil Engines, J. Lamb. Inst. Mar. Engrs.—Trans., vol. 36, Oct. 1924, pp. 378-388 and (discussion) 388-393, 2 figs. and vol. 36, Nov. 1924, pp. 472-476. Practical notes on bearing adjustments.

Bearings for. See BEARINGS, Oil-Engine.

Bethlehem. The Bethlehem Steel Company's New Oil Engine. Shipbldg. & Shipg. Rec., vol. 23, no. 10, Mar. 6, 1924, pp. 275-282, 16 figs. See also Mar. Eng. & Shipg. Age, vol. 29, no. 3, Mar. 1924, pp. 161-167, 15 figs. Detailed description of vertical 2-cycle single-acting oil engine, claimed to be first oil engine of all-American design; constructed in units of four, six, or eight cylinders, running at a speed of from 161 r.p.m. for land power and twin-screw marine purpose down to 90 r.p.m. for single-screw marine use. Description of engine as installed on motorship Cubore.

Brayton-Cycle. The Brayton Cycle for Oil Engine Work. Oil Engine Power, vol. 2, no. 10, Oct. 1924, pp. 547-548, 3 figs. In engine which has given favorable indications on test block, air is introduced into working cylinder from receiver at constant pressure while spray of fuel burns in air current; 2-stage precompressor incorporated in engine keeps receiver charged.

Brotherhood-Still. The Brotherhood-Still Heavy Oil Engine. Power Engr., vol. 19, no. 217, Apr. 1924, pp. 128-130, 5 figs. Model of Still engine suited to stationary conditions.

Central-Station Service. See CENTRAL STATIONS, Diesel-Engined.

Cold-Starting. A Cold-starting Oil Engine. Engineer, vol. 137, no. 3555, Feb. 15, 1924, pp. 180-181, 9 figs. New vertical oil engines made by Ruston & Hornsby, Lincoln, England, of 4-cycle, mechanical-injection, high-compression type, which can be started when quite cold without use of blow lamp or any other heating device.

300 B. H. P. Heavy Oil Engine. Engineering, vol. 118, no. 3071, Nov. 7, 1924, pp. 638-640, 8 figs. Describes horizontal cold-starting oil engine shown by Blackstone & Co. at British Empire Exhibition.

Combustion in. See GAS ENGINES, Combustion in.

Developments. Recent Developments in Oil-Engine Practice, J. T. Godfrey and K. W. Merrylees. Roy. Engrs. Jl., vol. 38, no. 1, Mar. 1924, pp. 28-32, 2 figs. Developments in Diesel and semi-Diesel, or heavy-oil engine.

Diesel. See DIESEL ENGINES.

Double-Acting. A Sliding Cylinder Two-cycle Double-acting Marine Oil Engine. Engineer, vol. 137, nos. 3565 and 3566, Apr. 25 and May 2, 1924, pp. 451-452, 4 figs. and 483-485, 6 figs. Design and performance of 2000-b.hp. engine built at North Brit. Diesel Engine Works, Glasgow.

Dredges with. See DREDGES, Oil-Engined.

Exhaust-Gas Boilers for. See BOILERS, Exhaust-Gas.

Exhaust-Gas Utilization. Putting the Exhaust to Work. Oil Engine Power, vol. 2, no. 11, Nov. 1924, pp. 573-579, 10 figs. Considerations concerning quantity of heat recoverable at various loads and amount of heating surface required.

Falk. Further Development of the Falk Geared Oil-Engine. Motorship, vol. 9, no. 10, Oct. 1924, pp. 734-736, 4 figs. Notes on Falk 2200-s.hp. reduction geared oil-engine propulsion unit to which super-charging has been successfully adapted. Enables mean-effective pressure to be raised to 154 lb. per sq. in. without slightest sign of ill effect. Temperatures are kept down low even with uncooled pistons.

Farm. See FARM MACHINERY, Gas and Oil Engines.

Foos. See Solid-Injection.

Fraser & Chalmers. See Heavy-Oil; Powerplant.

Fuels, Specifications for. Standard Specifications for Oil Engine Fuels. Motorship, vol. 9, no.

7, July 1924, pp. 506-508, 3 figs. Compilation of replies to communication addressed by "Motorship" to representatives of marine and stationary oil-engine industry to users of engines and oil companies on possibility of recommending uniform specifications for oil-engine fuels.

Fullagar Land. The Fullagar Oil Engine for Land Purposes. World Power, vol. 1, no. 5, May 1924, pp. 305-309, 6 figs. Design and features of engine constructed by English Elec. Co.

Gardner. See Heavy-Oil.

Germania. The Development of Germania Large Oil Engines (Die Entwicklung der Germania-Grossölmaschine), W. Laudahn. Zeit. des Vereines deutscher Ingenieure, vol. 68, nos. 45 and 46, Nov. 8 and 15, 1924, pp. 1171-1176 and 1200-1204, 30 figs. Details of large marine engine built by Fried. Krupp Germania Works in Kiel-Gaarden, with special regard to cylinder construction; traces development from one-cylinder experimental engine of 1911; results of experiments.

Heavy-Oil. Evolution of the Heavy-Oil Engine (L'évolution des moteurs à huiles lourdes), R.-E. Mathot. Société des Ingénieurs Civils de France —Mémoires et Compte Rendu des Aravaux, vol. 77, no. 1-2-3, Jan.-Mar. 1924, pp. 143-181, 20 figs. Discusses properties of fuel oils, Diesel-type engines, explosion engines, and their design and construction.

Gardner Heavy-Oil Engines. Engineering, vol. 118, no. 3069, Oct. 24, 1924, pp. 595-598, 37 figs. Details of engines of hot-bulb type exhibited at British Empire Exhibition.

Report on Heavy-Oil Engine Working Costs (1922-23). Diesel Engine Users Assn., Report submitted to meeting of Feb. 15, 1924, 20 pp., 2 figs. Deals only with cost of running and maintaining engines and their auxiliaries.

The Fraser and Chalmers Heavy Oil Engine. Engineering, vol. 117, no. 3049, June 6, 1924, pp. 731-734, 10 figs. Totally enclosed forced-lubrication vertical engine working on 4-stroke cycle with compressed-air injection; test results.

The Lubrication of Heavy-Oil Engines, C. S. Darling. Mech. Wld., vol. 75, no. 1944, Apr. 4, 1924, pp. 209-210. Deals with lubrication of pistons, cylinders, air compressors, etc., including discussion on oils.

The Polar Heavy Oil Engine. Engineer, vol. 138, no. 3597, Dec. 5, 1924, p. 648, 3 figs. Details of airless-injection engine exhibited at Gothenburg Exhibition by Atlas Diesel Co., of Stockholm; runs on 2-stroke cycle and crank-chamber compression is employed.

High-Compression. High Compression Oil Engines in Theory and Practice. Power Engr., vol. 19, nos. 214, and 215, Jan. and Feb. 1924, pp. 13-15 and 49-51, 6 figs. Jan.: Recent designs and new developments that may be expected. Feb.: Practical matters affecting erection and operation.

Hvid-Type. American Oil Engines on French Barge Canals. Motorship, vol. 9, no. 8, Aug. 1924, pp. 587-589, 5 figs. Concerning numerous 14 b.hp. Bates & Edmonds Hvid-type oil engines, with description of method of working and installation in French canal craft having propeller mounted on rudder.

Hydraulic Couplings. Marine Oil Engine Gearing. Times Trade & Eng. Supp., vol. 13, no. 284, Dec. 15, 1923, p. 342, 1 fig. Describes system advocated by Vulcan Works, Hamburg, of interposing hydraulic coupling between engine and tooth reduction gearing.

Ice Plants. See ICE PLANTS, Oil-Engine-Driven.

Ignition. See IGNITION, Gas and Oil Engines.

Light-Oil Types. High-Speed Petrol and Paraffin Engines, J. Okill. Serial article in Gas & Oil Power, vols. 19 and 20, nos. 220-229, Jan. 3-Oct. 2, 1924, 20 figs. Features and management of the lighter-fuel types of oil engine.

Lubrication. The Two-Cycle Oil Engine. Lubrication, vol. 10, no. 11, Nov. 1924, pp. 133-144, 23 figs. Its lubrication and operation.

See also Heavy-Oil.

Marine. A New Type of Neptune Marine Oil Engine. Mar. Engr. & Nav. Architect, vol. 47, no. 556, Jan. 1924, pp. 5-8, 5 figs. Details of "B" type; special cylinder design; scavenge and bilge pumps lever-driven off crossheads; fuel valve lift control.

America's Newest Workboat Engine. Motorship, vol. 9, no. 2, Feb. 1924, pp. 113-115, 5 figs. Describes 70-b.hp. 4-cylinder Standard marine oil engine.

Building Two-Stroke Cycle Marine Engines, Wm. Eversley. Can. Machy., vol. 32, no. 23, Dec. 4, 1924, pp. 27-29 and 47, 6 figs. Product of St. Lawrence Engine Co., Brockville, Ont., water-cooled throughout, including exhaust manifold; liberal use of jigs important factor in plant's output.

Motor Ships and Marine Oil Engines in 1923. Engineer, vol. 137, no. 3549, Jan. 4, 1924, pp. 7-10, 5 figs. partly on supp. plate. Statistics of production and brief descriptions of most important types of oil engines.

Some Aspects of the Large Marine Oil Engine, C. J. Hawkes. North-East Coast Instn. Engrs. & Shipbldrs.—Advance Paper no. 2725S, for meeting Apr. 4, 1924, 15 pp., 3 figs. Deals with questions related to cycle temperatures.

10-H.P. Four-Cylinder Marine Motor. Engineering, vol. 118, no. 3076, Dec. 12, 1924, p. 815, 3 figs. Details of marine engine constructed by J. W. Brooke & Co., Lowestoft, Eng.

The Utilisation of Waste Heat in Marine Oil Engines. Mar. Engr. & Naval Architect, vol. 47, no. 558, Mar. 1924, pp. 111-114, 6 figs. Theoretical possibilities.

See also Bethlehem; Double-Acting; Falk; Palmer; Scott-Still.

Nickel Applied to Parts. Nickel and Its Alloys Applied to Oil Engine Parts. Motorship, vol. 9, no. 5, May 1924, pp. 361-363, 8 figs. Cast iron is improved by addition of from 3 to 5 percent of nickel and monel metal reduces maintenance on valves.

Operating Costs. See Heavy-Oil.

Palmer. The New Palmer Oil Engine. Shipbuilder, vol. 30, no. 164, Apr. 1923, pp. 285-286, 1 fig. Particulars of engine intended for British Tanker Co.'s oil-carrying ship British Aviator; 6-cylinder opposed-piston type working on two-stroke cycle and having a diagonal rod coupling system between top and bottom pistons of adjacent cylinders, giving a double-acting action in reference to each individual crank-pin; 3000 b.hp. at 90 r.p.m.

Parts, Machining. See MACHINING METHODS, Vertical-Oil-Engine Parts.

Petter. See Two-Stroke.

Polar. See Heavy-Oil.

Power-Plant. Types of Modern Power Plant Oil Engine. Oil Engine Power, vol. 2, nos. 8 and 10, Aug. and Oct., 1924, pp. 419-422 and 529-531, 8 figs. Aug.: Savings due to elimination of air compressor and of geared camshaft drive have been applied to improvements in general features of design; chain which is used in place of timing gears has big factor of safety against wear. Oct.: Engine developed at Fraser & Chalmers works of Gen. Elec. Co., Erith, England.

Richards Hot-Bulb. See Roller-Bearing.

Rock-Crushing Plant. Fuel Tests of Rock Crushing Plants. Ry. Rev., vol. 74, no. 18, May 3, 1924, pp. 805-807, 4 figs. Two modern installations of So. Pac. Co. tested to determine economy of oil engines; description of power equipment; oil engines were selected on account of low fuel cost and later a series of tests were conducted to determine in what measure object was realized.

Scavenging, Uniflow-Valve. Uniflow Valve Scavenging of Two-Stroke-Cycle Engines, R. Matthews. Power, vol. 59, no. 59, Feb. 5, 1924, pp. 208-209, 4 figs. Obtaining air and fuel mixing; solid injection for high speeds; external mixing.

Scott-Still. The Scott-Still Marine Engine. Diesel Engine Users Assn.—Advance Paper no. 38, for meeting Mar. 14, 1924, 3 pp., 2 figs. Report on 1250-hp. engine at Scotts' Shipbldg. & Engrg. Co., Greenock, for M. S. Dolius.

The Type of Still Engine Required for Marine Service with Special Reference to the Scott-Still Engine, W. J. Still. North-East Coast Instn. Engrs. & Shipbldrs.—Advance Paper no. 2698S, for meeting, Feb. 15, 1924, 25 pp., 17 figs. Discusses use of high-combustion m.e.p.'s and consequent production of excessive heat stresses in cylinder walls; fuel-injection troubles; insufficient ignition temperatures; water-circulation troubles; want of cylinder lubrication and wear of liners; bearing troubles.

Semi-Diesel. See SEMI-DIESEL ENGINES.

Solid-Injection. Features of Airless Injection Oil Engines, H. F. Birnie and R. C. Baumann. Power Plant Eng., vol. 28, nos. 14, 20, 22, and 24, July 15, Oct. 15, Nov. 15, and Dec. 15, 1924, pp. 751-754, 6 figs; 1056-1058, 6 figs.; 1143-1147, 9 figs.; and 1251-1254, 7 figs. July 15: Advantages and disadvantages of solid injection; types of spray valves used. Oct. 15: Valves of De La Vergne engine. Nov. 15: Scott-Still combination steam and oil engine, illustrating use of differential fuel valves. Dec. 15: Fuel-oil distribution in combustion chamber and directed turbulence are features of Hesselman's system.

Observations on the Solid-Injection Engine, P. H. Schweitzer. Power, vol. 59, no. 3, Jan. 15, 1924, pp. 90-91. Writer believes a flatter combustion line would be desirable, provided it would not lead to after-burning; better control of fuel injection as to spray action and accurate delivery in quantity and timing might lead to this end.

Standardizing Airless-Injection Engines. Motorship, vol. 9, no. 4, Apr. 1924, pp. 270-271, 2 figs. Standardization by Vickers, Ltd., of their 600-b.hp. mercantile 4-stroke oil engine.

The Solid-Injection Oil Engine, H. F. Shepherd. Mech. Eng., vol. 46, no. 5, May 1924, pp. 251-257 and (discussion) 257-258 and 278, 30 figs. Presents most pertinent facts on development of engine from former hot-surface unit and points out influence of combustion-chamber design, spray angle and velocity, atomization, detonation, and other problems confronting oil-engine designer.

Types of Modern Power-Plant Oil Engines. Oil Engine Power, vol. 2, no. 11, Nov. 1924, pp. 583-587, 6 figs. New Foos design for units of from 30 to 400 b.hp. is characterized by smooth exterior appearance and enclosure of most of cylinder head within framing; adoption of airless-injection system permits burning some of heaviest fuels at high economy.

Types of Modern Power-Plant Oil Engines. Oil Engine Power, vol. 2, no. 7, July 1924, pp. 386-388, 2 figs. Bessemer Gas Engine Co., Grove City, have joined with Atlas-Imperial Engine Co., Oakland, Cal., in manufacture of airless-injection oil engines by acquiring Eastern manufacturing rights. Gives table showing how oil engine effects savings in comparison with every other type of heat prime mover.

Stationary. Stationary Oil Engines at the British Empire Exhibition. Oil Engine Power, vol. 2, no. 7, July 1924, pp. 374-377, 5 figs. Discusses oil engines exhibited at British Empire Exhibition at Wembley, including airless-injection engines, both of surface-ignition and high compression kind.

Surface-Ignition. Types of Modern Power-Plant Oil Engines. Oil Engine Power, vol. 2, no. 5, May 1924, pp. 271-272, 3 figs. New model of Italian surface-ignition engine has crosshead and main oiling system entirely separated from cylinder bore, arrangement which results in low lubricating-oil consumption; Corliss-type valve controls admission of scavenging air, amount of which is regulated by governor.

Torsiograms of. Torsiograms and Vibrograms of Oil Engines. Motorship, vol. 9, no. 1, Jan. 1924, pp. 28-31, 45 figs. Simple instruments facilitate exploration of machinery for critical periodic stresses.

Two-Stroke. Petter Two-Stroke Oil Engines. Engineering, vol. 118, no. 3073, Nov. 21, 1924, pp. 720-722, 4 figs. Describes two examples, the 5-b.hp. paraffin engine, and 36-42-b.hp. crude-oil engine.

Vickers. See Solid-Injection.

Waste-Heat Recovery. See WASTE HEAT, Recovery.

Water-Works. Oil Engines for New York City's Water Supply. Oil Engine Power, vol. 2, no. 8, Aug. 1924, pp. 426-427, 2 figs. Specifications which are being prepared for replacement of steam-driven pumps at Clove Station, Staten Island.

OIL FIELDS

Argentina. The Most Southern Oilfield in the World. Petroleum Wld., vol. 21, no. 285, June 1924, pp. 235-238 and 240-242, 2 figs. Unique features of oilfield of Comodoro Rivadavia in Argentine Republic. Oil possibilities of other areas in Argentina. From "Lamp." See also Petroleum Times, vol. 11, nos. 281 and 282, May 24 and 31, 1924, pp. 725-726 and 767-768.

Arkansas. Smackover Oil Field, Ouachita and Union Counties, Ark., H. G. Schneider. Am. Inst. Min. & Met. Engrs.—Trans., no. 1326-P, Mar. 1924, 24 pp., 3 figs. Stratigraphy; tertiary system; productive sands; relation of oil and gas to structure; causes of accumulation; production; drilling methods; decline and ultimate production of wells.

Bulgaria. The Oil Regions of Bulgaria. Petroleum Times, vol. 12, no. 301, Oct. 11, 1924, pp. 561-562, 3 figs. partly on p. 563. Notes on several important oil regions which years of systematic research has disclosed.

California. A Comparative Study of the San Joaquin Valley Oil Fields, J. B. Stevens. Am. Assn. Petroleum Geologists—Bul., vol. 8, no. 1, Jan.-Feb. 1924, pp. 29-40, 3 figs. Geological discussion.

Dynamics of Oil-Field structure in Southern California, R. N. Ferguson and C. G. Willis. Am. Assn. Petroleum Geologists—Bul., vol. 8, no. 5, Sept.-Oct. 1924, pp. 576-583, 2 figs. Theories developed by authors as result of exploration work carried on largely in Los Angeles Basin, and example of their application to a particular structural problem.

Hovey Hills Area, Midway Oil Field, K. C. Wallace. Min. & Oil Bul., vol. 10, no. 7, July 1924, pp. 705-707 and 758, 1 fig. Gives geology of district and drilling activities.

Huntington Beach Oil Field, Orange County, California, S. H. Gester. Am. Assn. Petroleum

Geologists—Bul., vol. 8, no. 1, Jan.-Feb. 1924, pp. 41-46, 2 figs. Geology, and production data.

New Development Problems and Their Solution in Southern California Oil Fields, J. Jensen and G. D. Robertson. Am. Assn. Petroleum Geologists—Bul., vol. 8, no. 2, Mar.-Apr. 1924, pp. 135-151.

Report on the Long Beach Oil Field, J. B. Case and R. L. Keyes. Cal. Oil Fields, vol. 9, no. 4, Oct. 1923, pp. 5-17, 5 maps. Description and history of development of entire field; geology; oil and gas zones; drilling conditions; casing program; water conditions; gas wastage; production.

Report on Southeastern Portion of Thirty-Five Anticline, Sunset Oil Field, Kern County, California. Cal. Oil Fields, vol. 9, no. 5, Nov. 1923, pp. 5-33, 8 figs. Results obtained by recent drilling; shows present status of all wells located in sections mentioned, with special reference to water conditions.

Santa Fe Springs Field, California, R. R. Templeton and C. R. McCollom. Am. Assn. Petroleum Geologists—Bul., vol. 8, no. 2, Mar.-Apr. 1924, pp. 178-192 and (discussion) 193-194, 2 figs. History of early development; formations penetrated in drilling; drilling policy and practice; production; water problems; etc.

The Long Beach Oil Field and Its Problems, A. T. Schwennesen, R. M. Overbeck and H. H. Dubendorf. Am. Assn. Petroleum Geologists—Bul., vol. 8, no. 4, July-Aug. 1924, pp. 403-423, 7 figs. partly on supp. plate. Geology; oil zones; production problems; history of development; production and decline of wells.

The Minor Oil Fields of Kern County. Cal. Oil Fields, vol. 9, nos. 9 and 10, June and July 1924, pp. 5-29 and 5-22, 12 figs. Includes following reports: June: Devils Den Field, E. Huguenin; Hovey Hills Field, L. W. Saunders; Sunset Extension Field, R. G. Rogers; Wheeler Ridge Field, C. L. Kaiser. July: Lost Hills Oil Field, R. E. McCabe; Belridge and North Belridge Oil Fields, H. Boezinger; Poso Creek Field, C. L. Kaiser.

The Oilfields of the Los Angeles Basin, Southern California, H. B. Milner. Min. Mag., vol. 29, no. 6, Dec. 1923 and vol. 30, no. 1, Jan. 1924, pp. 329-336 and 9-16, 9 figs. Activities and developments at Long Beach, Huntington Beach, and Santa Fe Springs.

Canada. Oil and Gas in Ontario, R. B. Harkness. Can. Inst. Min. & Metallurgy—Bul., no. 143, Mar. 1924, pp. 148-156, 1 fig. Early gas fields; oil and gas-bearing formations; structure; general geological features; principles of accumulation; probable points of accumulation in Ontario.

Oil Prospects In Southern Alberta, M. Y. Williams. Can. Min. Jl., vol. 44, no. 48, Nov. 30, 1923, pp. 949-950. Geology, and summary of exploration.

Recent Developments in the Fort Norman Oil Area, G. S. Hume. Can. Min. Jl., vol. 44, no. 48, Nov. 30, 1923, pp. 939-940, 1 fig.

The Fort Norman Oilfields of Canada, G. S. Hume. Petroleum Wld., vol. 21, no. 288, Sept. 1924, pp. 353-357. Gives geology of district where Canada's largest well (2,000 bbl. daily) was brought in.

See also NATURAL GAS, Canada.

China. The Oil Fields of China, T. O. Chu. Am. Assn. Petroleum Geologists—Bul., vol. 8, no. 2, Mar.-Apr. 1924, pp. 169-177, 4 figs. Details of Shensi and Szechwan fields; other oil prospects.

Colombia, S. A. Colombia Oil Fields- -1923, L. G. Huntley. Am. Inst. Min. & Met. Engrs.—Trans., Advance Paper no. 1326-P, Mar. 1924, 5 pp., 1 fig. Points out differences between new, more liberal, law passed by Colombian Congress and law passed in 1919, gives a few facts about pipe-line concession granted to a Canadian company, and tells of new drilling developments.

Oil Production Prospects in the Coastal Belt of Colombia, L. Owen. Oil Eng. & Finance, vol. 5, no. 103, Nov. 1924, pp. 624-627, 1 fig. Geology and structure of district; oil and gas indications; correlations of Colombian tertiary belt with other fields; upper Cretaceous shales.

Colorado. Oil and Gas in Northeastern Colorado. Colo. School of Mines Mag., vol. 14, no. 7, Nov. 1924, pp. 13-18. Prospects of developing new fields.

Core Sampling. Determination of Core Samples in Core Drilling, A. C. Rubel. Petroleum Times, vol. 12, no. 305, Nov. 8, 1924, pp. 731-733, 2 figs. Methods of core barrel sampling; application to rotary drilling.

Dutch East Indies. Oil is Big Asset of Dutch East Indies, N. Van Aken. Oil & Gas Jl., vol. 23, no. 30, Dec. 18, 1924, pp. 138, 150D and 150F, 1 fig. Data on Sumatra, Palembang, Java and Borneo fields, including production and operations; quality of oils; up-to-date equipment used.

Electricity in. Electric Plants for the Roumanian Oil Fields (Les installations électriques des chantiers pétrolifères en Roumanie), Al. Proca. Revue Générale de l'Electricité, vol. 16, no. 22, Nov. 29, 1924, pp. 861-872, 24 figs. Applications of electricity, and requirements of electric motors. Gives examples of plants.

Fire Prevention. Fire Prevention in Oil Properties, F. A. Epps. Oil & Gas Jl., vol. 23, no. 21-A, Oct. 16, 1924, pp. 32 and 120-121. Fundamental conditions which give rise to fires in tanks and stills. Hazards from static electricity and carelessness.

Future Production Possibilities, U. S. What of the Future?, P. Wagner. Nat. Petroleum News, vol. 16, nos. 47, 48, 49, 50, 51, 52, and 53, Nov. 19, 26, Dec. 3, 10, 17, 24, and 31, pp. 63, 66 and 68; 84-86; 55 and 58; 65-67; 83-84 and 86; 75 and 78-80; and 47 and 50. Analysis of oil-production possibilities of known territory in United States. Nov. 26: Oil possibilities of Western Kansas. Dec. 3: Kansas fields. Dec. 10: East Central Oklahoma. Dec. 17: Osage Nation, Okla. Dec. 24: Core drilling to augment new pools in Central North Oklahoma. Dec. 31: Southwestern Oklahoma.

Gulf Coastal Plain. Résumé of the Geology of the Gulf Coastal Plain, J. E. Brantly. Am. Assn. Petroleum Geologists—Bul., vol. 8, no. 1, Jan.-Feb. 1924, pp. 21-28. Describes area extending from Florida westward and southward to Rio Grande, and thence southward and southeastward to Yucatan Peninsula in Mexico.

India. Petroleum in North-West India. Petroleum Times, vol. 11, no. 267, Feb. 16, 1924, p. 245. Data on the Khaur field.

Indiana. Conditions And Possibilities Of The Hotmire Oil Field Of Indiana, W. N. Logan. Nat. Petroleum News, vol. 16, no. 8, Feb. 20, 1924, pp. 56 and 58-59, 1 fig. Location, topographic, geological and structural conditions, oil sand, development, casing requirements, and future of field.

Jugoslavia. Oil Conference in Jugoslavia (Die Erdölhöffigkeit Jugoslawiens), L. Waagen. Petroleum, vol. 20, no. 26, Sept. 10, 1924, pp. 1313-1321. Discusses conditions in Croatia and Slavonia, geological formation, analysis of oil, results of drilling.

Mexico. Oil Potentialities of Mexico, Geo. Howell. Oil Eng. & Finance, vol. 5, no. 102, Oct. 1924, pp. 559-561. Mexico's total yield and future; American opinions.

Mining Process. Unique Method of Mining Oil in Texas Gaining Interest of Operators, Lawrence

E. Smith. Nat. Petroleum News, vol. 16, nos. 44 and 45, Oct. 29, and Nov. 5, 1924, p. 33 and 63-65 and 67, 5 figs. Practical operation of Ranney process of mining oil, which is said to be unlike French method employed at Pechelbronn, following it only in preliminary step of sinking a shaft.

Oklahoma. Burbank Field, Osage County, Oklahoma, J. M. Sands. Am. Assn. Petroleum Geologists—Bul., vol. 8, no. 5, Sept.-Oct. 1924, pp. 584-592, 2 figs. Discusses importance of study of sand conditions of any field and effect of such conditions on concentration and production of oil; and probability that rapid development of a field with subsequent open flow from wells where producing sand is close-grained gives a much larger ultimate production.

Four Horizons Below Mississippi Lime, L. H. White. Oil & Gas Jl., vol. 23, no. 15, Mar. 13, 1924, pp. 42 and 68, 1 fig. Important for oil operator to distinguish them so that he may know what to expect in way of production. Describes sands below Mississippi lime in district from Okmulgee to Pearsonia, Osage County, Oklahoma.

New High Gravity Oil Field in Lincoln County, Oklahoma, D. W. Moore. Oil Trade, vol. 15, no. 11, Nov. 1924, pp. 52 and 54, 1 fig. Development of new well at Davenport.

The Cromwell Pool, Geo. A. Kroenlein. Min & Metallurgy, vol. 5, no. 215, Nov. 1924, pp. 526-530, 2 figs. Location and history of pool which has been outstanding development in Oklahoma during 1924; geology; sand conditions; production conditions; recovery; production costs.

The Graham Field, Oklahoma, C. W. Tomlinson and W. Storm. Am. Assn. Petroleum Geologists—Bul., vol. 8, no. 5, Sept.-Oct. 1924, pp. 593-620, 10 figs. Location and history; structure; stratigraphy; correlation of Graham Pennsylvanian section with other areas; gravity of oil; ultimate production; and development methods.

Pechelbronn. Mining and Refining At Pechelbronn, E. C. Isom. Oil & Gas Jl., vol. 23, no. 10-A, July 31, 1924, pp. 124 and 140, 2 figs. Drilling wells, sinking shafts and treating sand employed to extract oil; refinery adopting many American methods.

The Oil Mines of Pechelbronn, J. F. Carter. Petroleum Wld., vol. 21, no. 286, July 1924, pp. 268-270. Impressions of T. E. Swigart, superintendent of experimental station, Bur. Mines, received from inspection of this district where there are extensive oil mines as well as producing wells, to obtain information on properties of oil sands.

Persia. Present Progress In Persian Oil Fields, C. Greenway. Oil & Gas Jl., vol. 23, no. 30, Dec. 18, 1924, pp. 130 and 205-206, 1 fig. Geological characteristics and report of operations of Anglo-Persian Oil Co.

Property Appraisal. Appraisal of Oil and Gas Properties, R. H. Johnson and P. Ruedemann. Serial article in Nat. Petroleum News, vol. 16, beginning Aug. 6, and ending Dec. 10, 1924. Aug. 6: Kinds and purposes of appraisal. Aug. 13 and 20: Definitions of expressions used in valuation work. Aug. 27: Organization of work. Calculation of past and present yield. Sept. 3, 10, and 17: Line and underground loss and field reduction factor. Estimation of future yield of producing wells; methods and decline curves. Sept. 24: Estimation of future yield of producing wells; ultimate and total recovery. Estimation of future yield of undeveloped areas, proven and unproven. Oct. 15: Refinements in estimation of future yield. Oct. 22, 29, and Nov. 5: Prediction of future prices. Nov. 19: Future cost of development and improvements. Dec. 10: Discount factor in annual analytical appraisals.

Queensland. The Search for Oil in Queensland, H. I. Jensen. Indus. Australian & Min. Standard, vol. 72, nos. 1869, 1870, 1871, and 1872, Oct. 2, 9, 16, and 23, 1924, pp. 500, 536, 569, and 600. Oct. 2: Oil legislation; labor politics and oil. Oct. 9: Oil indications and oil drilling. Oct. 16: Western Walloons. Oct. 23: Salt gas, mound springs, and oil.

Rumania. The Rumanian Oilfields, J. H. Blakiston. Instn. Petroleum Technologists—Jl., vol. 10, no. 46, Nov. 1924, pp. 775-786, 9 figs. Description of geology. Field engineering notes on Moreni.

Russia. Baku Field Production, S. A. Hamilonoff. Nat. Petroleum News, vol. 16, no. 30, July 23, 1924, pp. 78-80. Summary of drilling and exploitation methods.

Characteristics of the Kuban Industrial Oil Regions, K. A. Prokopov. Petroleum & Oil-Shale Industry (Russian), vol. 6, nos. 4 and 5-6, 1924, pp. 590-621 and 763-787, 4 figs. on supp. plates. Describes these regions from a geological as well as from an industrial point of view. (In Russian with abstract in English.)

Development of the Kirmakin Suite on the Bibi Eibat Field (Russian), S. A. Kovalevsky. Azerbayjan Oil Industry, no. 5-6 (29-30), May-June 1924, pp. 38-40. Description and statistical data including depth of drilling, date of initial drilling, and date of reopening. Kirmaki deposit affords information as to Bibi-Eibat disjunctive fault.

Oil Deposits of the Kabristan Fields, I. M. Goubkin. Petroleum & Oil-Shale Industry, vol. 5, nos. 7-8 and 10, July-Aug. and Oct. 1923, pp. 60-67 and 403-415, 3 figs. Geological description of districts; stratigraphy. (In Russian, with brief abstract in English.)

Possible New Oil Bearing Region Near the Town of Machac-Kala (Formerly Petrovsk) of the Dagestan Republic, K. P. Kalitzki. Petroleum & Oil Shale Industry (Russia), vol. 8, no. 8, 1924, pp. 329-333. No drillings appear to have been made yet. (In Russian with abstract in English).

The Dgengui Oil-Bearing District, S. M. Apresov. Azerbeijan Oil Industry (Russian Oil Paper), no. 11, Nov. 1924, pp. 41-44, 1 fig. on supp. plate. (In Russian.)

The New Oil Field Near Mahach-Kala (Petrovsk) in Dagestan, K. Kalitsky. Azerbeijan Oil Industry (Russian Oil Paper), no. 9, Sept. 1924, pp. 33-35. (In Russian.)

Salt Domes, Origin of Cap Rock of. The Origin of the Cap Rock of Salt Domes, J. E. Hackford. Oil Eng. & Finance, vol. 5, no. 101, Sept. 1924, pp. 512 and 515-516. Existing salt dome theory and cap rock theory as commonly accepted, and new theory of formation of salt dome and its cap rock.

Texas. The Minerva Oil Field, Milam County, Texas, D. S. Hager and I. O. Brown. Am. Assn. Petroleum Geologists—Bul., vol. 8, no. 5, Sept.-Oct. 1924, pp. 632-640, 3 figs. Topography, stratigraphy, structure, and development.

The West Texas Oil District, R. E. Allen. Min. & Oil Bul., vol. 10, no. 8, Aug. 1924, pp. 804-805 and 859, 3 figs. Deals with geology, stratigraphy, and structure; development of three new fields.

Venezuela. Oil Geology of Northern Venezuela, A. H. Garner. Am. Inst. Min. & Met. Engrs.—Trans., no. 1381-G, Oct. 1924, 11 pp., 2 figs. Oil is known to occur in many formations ranging in age from cretaceous to quaternary; most prolific source of oil is probably cretaceous shales and limestones, from which oil appears to have migrated into overlying porous beds; faulting or fracturing, folding, and porosity are governing in localization of commercial deposits.

Oil Prospecting on the North Coast of Venezuela,

M. L. Thomas. Oil Eng. & Finance, vol. 5, no. 98, June 1924, pp. 327-330, 6 figs. Gives geological structure in relation to location of wells and methods of drilling.

The Oilfields of Venezuela, M. O'Shaughnessy. Petroleum Times, vol. 12, nos. 307 and 308, Nov. 22 and 29, 1924, pp. 801-806 and 845-848, 8 figs. General survey, giving drilling statistics. Particulars of La Rosa field, about 32 km. southeast of Maracaibo City on eastern shore of lake, now a scene of great activity, of region west of lake, of Mene Grande field and the southeast, and of region from Maracaibo Straits to Atlantic coast.

Wyoming. Oil and Gas Fields of the Lost Soldier-Ferris District, Wyoming, A. E. Fath and G. F. Moulton. U. S. Geol. Survey—Bul., no. 756, 1924, 55 pp., 17 figs. partly on supp. plates. Results of geologic findings; stratigraphy; structure; oil and gas fields; petroleum analyses; determinations of porosity.

Oil Development in Southern Wyoming, J. G. Bartram. Min. & Metallurgy, vol. 5, no. 216, Dec. 1924, pp. 583-585. Developments; anticlines in Laramie Basin; Lost Soldier district.

The Teapot Dome Naval Reserve No. 3, Wyoming, F. G. Clapp. Oil Trade Jl., vol. 15, nos. 3, 4, 5, 6, 7, 8, and 9, Mar., Apr., May, June, July, Aug., and Sept. 1924, pp. 31-35; 38-39 and 92; 58, 60, 62 and 84-85; 58, 60, 62 and 90; 68 and 70; 70 and 72; and 60 and 62, 16 figs. See also Nat. Petroleum News, vol. 16, no. 13, Mar. 26, 1924, pp. 69-74, 76-81 and 83. Report made to Senate Committee on Public Lands regarding special investigations carried out.

OIL FUEL

Auto-Ignition. See LUBRICATING OILS, Auto-Ignition.

Bergius Production Process. The Bergius Process (Le procédé Bergius), P. Erculisse, F. Ranwez and P. Bruylants. Chaleur & Industrie, vol. 4, no. 44, Dec. 1923, pp. 931-943, 13 figs. Study of process which consists essentially in effecting a cracking under high hydrogen pressure; results of tests and practical experiences.

Burners. Combustion Devices for Liquid Fuel, W. Trinks. Fuels & Furnaces, vol. 2, nos. 1, 2, 3, and 4, Jan., Feb., Mar., and Apr. 1924, pp. 21-24, 135-138, 255-258, and 349-352, 22 figs. Jan.: Burners of vaporization and atomization type or combination of both. Feb.: How atomization is accomplished. Mar.: High furnace atomization; low-pressure atomization. Apr.: Means for proper mixing of atomized liquid fuel and air.

Correct Methods of Using Fuel Oil, H. A. Anderson. Iron Age, vol. 113, no. 7, Feb. 14, 1924, pp. 518-519. Analysis of four types of oil burners, three types of furnaces and combinations of furnaces with burners.

Domestic Oil Burning, L. B. French. Sheet Metal Worker, vol. 15, no. 1; Feb. 1, 1924, pp. 10-11 and 28. Future of domestic oil burner covering oil storage facilities, automatic controls, and principles of operation.

Measuring Oil Burner Steam Consumption, F. A. Rothwell. Power Plant Eng., vol. 28, no. 3, Feb. 1, 1924, pp. 175-176, 5 figs. Points out that orifice manifold for measuring steam consumption can easily be made in plant.

Oil Firing for Steam-Boiler and Central Heating Plants (Oelfeuerung bei Dampfkesseln und Zentralheizungen), M. Hottinger. Schweizerische Bauzeitung, vol. 83, nos. 25, 26, vol. 84, nos. 4 and 5, June 21, 28, July 26 and Aug. 2, 1924, pp. 292-295, 305-307, 44-48 and 58-62, 41 figs. Describes burners of various types used in industrial plants and locomotives; steam boiler plants with oil firing; oil firing for central heating boilers; kinds of oils and their properties, operating costs of heating by means of oil and of coke.

The Fuel Oil Burner from Fire Chief's Standpoint, A. J. Caulfield. Fire & Water Eng., vol. 76, no. 4, July 23, 1924, pp. 157-158 and 180. Discusses hazards of chimney defects; accepted and unaccepted types of burners; some suggestions bor better maintenance of burners. Abstract of paper read before New England Assn. Fire Chiefs.

Wallsend-Howden Oil-Burning Apparatus. Engineering, vol. 138, no. 3062, Sept. 5, 1924, pp. 345-347, 14 figs. Describes some oil-fuel burning apparatus, for marine and land purposes, exhibited by Wallsend Slipway & Engineering Co., Ltd., Wallsend-on-Tyne, Eng., at British Empire Exhibition, viz.: steam raising apparatus, combined pumping and heating unit, furnace front for use with natural draft, furnace front for use with Howden forced draft, furnace arrangements for burning oil or coal alternately or together, and low air-pressure burner for metallurgical furnaces.

See also FUELS, Liquid and Gaseous; HEATING, Oil Burners, Use in; HEATING, HOUSE, Oil Burners; HEATING, STEAM, Central; Oil-Burning System.

Burning. Air as a Factor in Industrial Oil Burning, W. G. Barstow. Forging—Stamping—Heat Treating, vol. 10, no. 5, May 1924, pp. 203-205. Experience proves low-pressure air to be more efficient and economical than high-pressure.

Fuel-Oil Burning in the United States Navy, H. G. Donald. Mech. Eng., vol. 46, no. 11a, mid-Nov. issue, 1924, pp. 769-770. Particulars regarding type of atomizer, combustion data, draft, boilers, furnaces and refractories, characteristics of oil, atomization, pumping and heating the oil.

Hazards of Industrial Oil Burning, H. E. Newell. Mech. Eng., vol. 46, no. 11a, mid-Nov. issue, 1924, pp. 765-768. Discussion of flash point; heating of oil in storage tanks; storage methods; fire hazard; features of design; installation and operation; cause of oil fires.

How They Heat with Fuel Oil on the Pacific Coast, C. W. Wright. Heat. & Vent. Mag., vol. 21, no. 8, Aug. 1924, pp. 41-43 and 45, 4 figs. Notes on present practice in section of country where oil burning has long been successfully applied.

Oil Burning in Industrial-Plant and Central-Station Service, N. E. Lewis. Mech. Eng., vol. 46, no. 11a, mid-Nov. issue, 1924, pp. 849-851, 1 fig. Steam atomizing vs. mechanical atomizing oil burners; oil heaters; furnace volume; introducing air for combustion; firebrick problems due to high furnace temperatures.

Preparing Boiler for Oil Burning, G. Spencer. Plumbers Trade Jl., vol. 77, no. 6, Sept. 15, 1924, pp. 492-493, 4 figs. Discusses arranging and setting refractory linings and baffles, etc.

See also AUTOMOBILE MANUFACTURING PLANTS, Oil-Fuel-Burning.

Burning Equipment. Auxiliary Equipment for Oil Burning, K. Miller. Fuels & Furnaces, vol. 2, nos. 10, 11, and 12, Oct., Nov., and Dec., 1924, pp. 1047-1054, 1149-1154, and 1261-1267, 17 figs. Describes various forms of apparatus available for supplying oil and air to oil burners and points out their characteristic properties. Oct.: Classification of blowers and compressors and discussion of fan characteristics. Nov.; Turbo-blowers. Dec.: Positive pressure blowers.

The Operation of Fuel Oil Burning Equipment, A. F. Brewer. Combustion, vol. 11, nos. 2, and 5, Aug. and Nov. 1924, pp. 131-133 and 369-371, 4 figs. Aug.: Fuel oil pumps. Nov.: Fuel oil strainers.

Central Heating with. Oil Fuel for Central Heating, A. F. Baillie. Domestic Eng. (Lond.), vol. 44, no. 8, Aug. 1924, pp. 167-171. Advantages and disadvantages of oil fuel, relative costs compared with coke, amount and different methods of storage, specific heat of oil and amount of heating

surface required, frictional loss in pumping through pipes, etc.

Coke-Oven By-Product. See COKE OVENS, Oil Fuel as By-Product.

Delivery and Storage. The Delivery and Storage of Fuel Oil, G. Porter. Gas & Oil Power, vol. 19, no. 223, Apr. 3, 1924, pp. 115-116. Advantages and disadvantages of modern methods.

Efficient Use. Efficient Use of Liquid Fuel, H. A. Anderson. Foundry, vol. 52, no. 1, Jan. 1, 1924, pp. 29-30. Type of burners and amounts of air and oil pressure influence economical application of fuel oil; use of insulating brick and grade of fuel contributing factors.

Equipment, Rules for. New Fuel-Oil Rules for New York City. Heat. & Vent. Mag., vol. 21, no. 3, Mar. 1924, pp. 67-71. Amendments adopted by Board of Standards and Appeals, dealing with construction and installations of oil-burning equipment and storage and use of fuel oil.

Firing. See HEATING, STEAM, Central.

Flash Point. The Flash Point of Fuel Oil. Mar. Eng., vol. 29, no. 10, Oct. 1924, pp. 595-598. Résumé of U. S. Navy's investigations; heating and pumping tests; temperatures at which inflammable gases form; conclusions.

Heavy-Oil Engines. Standardization of Fuels for Heavy-Oil Engines. Gas & Oil Power, vol. 20, no. 231, Dec. 4, 1924, pp. 58-59, 1 fig. Findings of Petroleum Committee of the Brit. Eng. Standards Assn.

Ignition Point, Determination of. Determination of Ignition Point under Pressure (Bestimmung des Zündpunktes unter Druck), J. Tauss and F. Schutte. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 22, May 31, 1924, pp. 574-578, 11 figs. and (translation) Mar. Engr. & Motorship Bldr., vol. 47, no. 564, Sept. 1924, pp. 325-328, 10 figs. Two series of tests were carried out to determine ignition under any given pressure, first for constant and second for variable pressure; values obtained vary greatly and show that testing under pressure for investigation of motor oils and mixtures in laboratory is very useful.

Installations. Oil-Burning Installations. Steamship, vol. 36, no. 423, Sept. 1924, pp. 84-87, 4 figs. Describes Smith's oil-burning installations consisting of pressure-jet, steam-jet, and air-jet systems; pressure-jet system is most efficient and simple, consisting of pump, suction and delivery filters, liquid-fuel steam heater, pressure-jet burner and furnace front or air director; describes various parts of Smith furnace front.

Locomotive, Storage and Distribution of. Facilities for Fuel Oil for Locomotives. Ry. Rev., vol. 74, no. 13, Mar. 29, 1924, pp. 602-608, 9 figs. Report of Am. Ry. Eng. Assn.'s Committee on Shops and Locomotive Terminals.

Typical Layouts for Storage and Distribution of Fuel Oil, Including Fuel Oil Stations Between Terminals. Am. Ry. Eng. Assn.—Bul., vol. 25, no. 260, Oct. 1923, pp. 66-95, 9 figs. Discusses unloading facilities, storage, delivery, and heating. Tabulation of replies from 14 oil-using railways to a questionnaire covering general features of design of facilities for handling, storage and delivery of fuel oil; representative layout and detail plans of such facilities.

Marine Diesel Engines. Petroleum and the Marine Engineer, M. Deloise Curwen. Mar. Engr. & Nav. Architect, vol. 47, no. 556, Jan. 1924, pp. 35-36. Petroleum for internal combustion; types of fuel; heavy oil for marine work; shale oils; tar oils; animal and vegetable oils; power alcohol.

Mazout. Investigation of the Deparaffination of Groznyi Mazut, N. D. Zelinskij, B. V. Maksorov and P. P. Borisov. Petroleum & Oil-Shale Industry (Russian), vol. 6, no. 2, 1924, pp. 274-285, 20 figs. Discusses a simple method of separating out paraffin to replace usual method of refrigeration and recrystallization.

Using Mazout in Blast Furnaces (Essai sur l'emploi du mazout au haut fourneaux), D. Perietzeano. Revue de Métallurgie, vol. 21, no. 10, Oct. 1924, pp. 624-627, 2 figs. Results of experiments carried out on behalf of Roumanian government to test suitability of mazout for blast furances.

Municipal Undertakings. Fuel Oil and its Possibilities for Municipal Undertakings, Robt. H. Bicknell. Domestic Eng. (Lond.), vol. 44, no. 9, Sept. 1924, pp. 191-199, 9 figs. Advantages of fuel oil over coal; discusses air-jet, steam-jet, and pressure-jet systems of atomization.

Properties. Heating and Motor Oils (Zur Kenntnis der Heiz- und Treiböle), A. Aufhäuser. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 17, Apr. 26, 1924, pp. 419-422, 1 fig. Points out that properties of oils are functions of degree of distillation, and combustion itself is also a fractionated process; method in use for determination of flash point is of no value for Diesel-engine practice.

Specifications. See LUBRICANTS, Specifications.

Storage and Handling. The Storage and Handling of Fuel Oil in Industrial Plants, C. G. Sheffield and H. H. Fleming. Mech. Eng., vol. 46, no. 11a, mid-Nov. issue, 1924, pp. 771-773, 1 table. Storing and handling of fuel oil for land oil-burning installations; deals with location, foundations, construction of steel tanks themselves, handling and heating.

See also Locomotive.

Synthetic. Synthetic Liquid Combustibles in France. Petroleum Times, vol. 12, no. 312, Dec. 27, 1924, p. 1024. Review of Bergius process of liquefying coal and other highly carbonaceous substances; method developed by Mailhe of transforming vegetable and animal oils, that is to say, fatty acids; and method suggested by Goutal, making use of water gas from lignite coke.

Vegetable Oils. See FUELS, French Colonies.

OIL INDUSTRY

California. Problems Confronting the California Oil Industry, R. D. Bush. Min. & Oil Bul., vol. 10, no. 1, Jan. 1924, pp. 23, 25, 27, and 83, 1 fig. Biggest problem is enforced close spacing of wells or "townlot" drilling; some of the evils resulting from this practice, which would be automatically eliminated in solution of main problem. Second most important problem is storage of oil, especially of high gravity, with least cost and evaporation loss.

Corrosion Problems. How the Petroleum Industry is Solving Its Corrosion Problems. Chem. & Met. Eng., vol. 31, no. 2, July 14, 1924, pp. 42-46, 7 figs. Editorial summary, based on opinions of representatives technologists in oil production, transportation, and refining.

Development Since 1911. The Development of the Petroleum Problem Since 1911 (Die Entwicklung der Erdölfrage seit dem Jahre 1911), H. O. Schlawe. Zeit. des Vereines deutscher Ingenieure, vol. 68, nos. 18 and 19, May 3 and 10, 1924, pp. 429-434 and 463-467. Present importance of petroleum for world industry; present production of crude oil, and possibility of substituting other products for certain petroleum products.

Economics of. The Economics of the Oil Industry, Rob. Waley-Cohen. Instn. Petroleum Technologists—Jl., vol. 10, no. 44, July 1924, pp. 371-390 and (discussion) 391-394, 1 map on supp. plate. Gives statistics of oil price cycles; reasons why equilibrium between supply and demand in oil industry is impossible to maintain, and why

oscillations in prices of crude oil are more violent than those of other raw materials.

Fullers' Earth in. Fullers' Earth and its Application to the Petroleum Industry, A. Rauch and G. E. Pain. Instn. Petroleum Technologists —Jl., vol. 10, no. 45, Sept. 1924, pp. 687-693 and (discussion) 693-694. Extensively used as a decolorizing medium. Properties, characteristics, analyses, preparation, method of recovering Fullers' earth, etc. Bibliography.

Indiana. Petroleum Industry in Indiana in 1923, W. N. Logan. Am. Inst. Min. & Met. Engrs. —Trans., no. 1315-P, Mar. 1924, 6 pp. Survey of geological conditions, production and prices in Indiana oil fields.

Kentucky and Tennessee. Oil and Gas Conditions in Kentucky and Tennessee during 1923, W. A. Nelson. Am. Inst. Min. & Met. Engrs.—Trans., no. 1320-P, Mar. 1924, 6 pp., 1 fig. Survey of prices, production, and developments.

Pacific Cost. The Petroleum Situation as Viewed from the Pacific Coast, J. Volney Lewis. Eng. & Min. Jl.—Press, vol. 118, no. 15, Oct. 11, 1924, pp. 574-577, 5 figs. Points out that wasteful and excessive extraction of oil is malady from which petroleum industry suffers.

Persia. What American Oil Men Face in Persia, A. Heinicke. Oil & Gas Jl., vol. 23, no. 20-A, Oct. 9, 1924, pp. 182 and 186, 5 figs. Persia's mineral wealth; first Persian drilling; equipment sold; oil politics in Persia; American concession. International rivalries dominant.

Poland. Polish Petroleum Industry in 1923. Commerce Reports, no. 19, May 12, 1924, 374-375. Data on production, refining, exports, and consumption.

Price Cycles. The Economics of the Oil Industry, R. W. Cohen. Petroleum Times, vol. 11, nos. 283, 284, and 285, June 7, 14, and 21, 1924, pp. 793-796, 861-862, and 901-903, 1 fig. Discussion of oil price cycles.

Progress. Survey of Petroleum Progress. Min. & Metallurgy, vol. 5, no. 209, May 1924, pp. 232-235, 6 figs. Contains following contributions: Sampling Device, A. Knapp, p. 232, 3 figs.; Curves of Daily Performance of Producing Properties, A. Knapp, p. 233, 2 figs.; The Burbank Field (Okla.), C. V. Millikan, pp. 234-235, 1 fig.

Rumania. The Rumanian Petroleum Industry in 1923, C. Leu. Instn. Petroleum Technologists —Jl., vol. 10, no. 45, Sept. 1924, pp. 661-670. General outlook, capital, companies, activity in fields, production of crude petroleum, activities of refineries, internal consumption and exports.

Russia. Condition of Russian Oil Industry, A. Serebrowsky. Petroleum Wld., vol. 21, no. 290, Nov. 1924, pp. 447-448. Peculiarity of Russian trade; historical review, 1914-20; task of reconstruction; trade of oil products; perspective of near future; Russian and American oil industry.

Petroleum Industry in Soviet Russia During 1923, L. J. Lewery. Commerce Reports, no. 9, Mar. 3, 1924, pp. 557-559. Gross production represented increase of 11 per cent over 1922, but was only slightly more than half pre-war output. Information based on reports in official Soviet publications.

Russian Oil Industry Under Soviet Management, T. Olferieff. Min. & Oil Bul., vol. 10, no. 8, Aug. 1924, pp. 813-815 and 861, 5 figs. Abstract of report on condition of oil industry in Russia at end of 1923.

The Petroleum Industry of Russia, Wm. A. Otis. Trade Information Bul. (Supp. to Commerce Repts.), no. 263, Aug. 25, 1924, 38 pp. Description of fields; production and operation of oil fields; refineries; foreign concessions in Russian oil fields since the Revolution; transportation; markets for Russian petroleum products.

Sarawak. Empire Oil: The Progress of Sarawak, T. G. Cochrane. Roy. Soc. Arts.—Jl., vol. 72, no. 3723, Mar. 28, 1924, pp. 308-315 and (discussion) 315-319. See also Oil Eng. & Finance, vol. 5, no. 96, Apr. 1924, pp. 210-216, 5 figs. Describes petroleum industry of Sarawak, East India Islands.

Shale-Oil. Status of the Shale-Oil Industry, G. W. Wallace. Eng. & Min. Jl.-Press, vol. 118, no. 8, Aug. 23, 1924, pp. 290-292, 6 figs. Summarizes general conditions, including deposits, technology, and geology.

Trinidad. Trinidad and Its Petroleum Industry, H. R. Berry. Petroleum Times, vol. 12, no. 310, Dec. 13, 1924, pp. 937-942, 6 figs. Notes regarding Trinidad Lake Petroleum Co.; producing oil fields; drilling methods; companies operating; etc.

United States. Petroleum in the United States, D. Hager. Eng. & Min. Jl.-Press, vol. 117, no. 16, Apr. 19, 1924, pp. 636-639, 1 fig. Present and future of the industry.

OIL PUMPS

Screw. The Screw Oil Pump, R. H. Pearsall. Automobile Engr., vol. 14, no. 189, May 1924, pp. 145-147, 10 figs. Principle and analysis of pump action; experiments which corroborate analytical results.

OIL REFINERY

Power Plant for. See STEAM POWER PLANTS, Oil Refinery.

OIL SHALES

Assay Retort Studies. Assay Retort Studies of Ten Typical Oil Shales, W. L. Finley, J. W. Horne, D. W. Gould and A. D. Bauer. U. S. Bur. Mines —Reports of Investigations, no 2603, May 1924, 9 pp., 6 figs. on supp. plates. Yields and results of analyses of oil and gas produced from a number of oil-shale samples from principal deposits of Colorado and other oil shale states, compared with samples from Scotland, Australia, and Brazil.

Bibliography. Oil Shale Bibliography, 1923. Railroad Red Book, vol. 41, no. 1, Jan. 1924, pp. 11-16. Compilation, by Editorial Dept. of Railroad Red Book, of important articles on subject printed during 1923.

California. A Section of the Monterey (Salinas) Shales in Pine Canyon, Monterey County, California, W. Stalder. Am. Assn. Petroleum Geologists—Bul., vol. 8, no. 1, Jan.-Feb. 1924, pp. 55-60, 1 fig. Description of bituminous shale area, and nature of beds, particularly with relation to oil indications.

Oil Shale in Santa Barbara County, California, F. D. Gore. Am. Assn. Petroleum Geologists—Bul., vol. 8, no. 4, July-Aug. 1924, pp. 459-472, 5 figs. Comparison of California shale with other shales; location of deposits; geology; activities of operating companies.

Distillation. Investigation of Oil Shale Kerogen by the Fractionation of the Primary Bitumen in High Vacuum and by Organic Extraction, C. O. Blackburn. Colo. School Mines—Quarterly, vol. 19, no. 2, Apr. 1924, pp. 9-46, 14 figs. Investigation undertaken for purpose of securing additional information on nature of oil shale from Elko, Nev. Deals with retorting shale kerogen under diminished pressure, high vacuum fractionations of primary shale bitumen, analysis of high vacuum fractions, and methods of extractions.

Fractional "Education" of Oil From Oil Shale, M. J. Gavin and L. C. Karrick. U. S. Bur. Mines

—Reports of Investigations, no. 2588, Mar. 1924, 10 pp., 3 figs. on supp. plates. Term fractional "education" gives expression to belief that when an oil shale is heated it produces light, low-boiling oils at low temperatures, and increasingly heavier, higher boiling oils as temperature of retorting rises. Details of experiments.

The Fractional Distillation of Oils from Oil Shale. Petroleum Times, vol. 11, no. 278, May 3, 1924, p. 619, 1 fig. Describes apparatus, patented in England by R. H. Crozier, for treatment of oil shale and similar oil-yielding materials which do not become soft or plastic but retain their capacity of moving freely by gravitation when heated in a confined space; also applicable to treatment of oil-yielding materials which may be kept in continuous motion by mechanical means.

The Trumble Oil Shale Cycle Distillation Plant, V. C. Alderson. Railroad Red Book, vol. 41, no. 9, Sept. 1924, pp. 789-793, 2 figs. See also Chem. Age (N. Y.), vol. 32, no. 9, Sept. 1924, pp. 364-365, 3 figs. Discusses preheater, retort, dephlegmator, cracking stills, sulphate of ammonia, producer-gas plant, superheater, turbine, starting plant, and steam cycle.

Trumble Oil-Shale Process. Min. & Oil Bul., vol. 10, no. 9, Sept. 1924, pp. 918-919 and 983, 2 figs. Describes process which employs superheated steam throughout, under high pressure, and experimental plant at Alhambra, Cal. See also article by C. O. Sprenger in Oil Trade, vol. 15, no. 10, Oct. 1924, pp. 44 and 49.

Economics and Technology. Economics and Technology of Oil Shale, S. D. Kirkpatrick. Chem. & Met. Eng., vol. 31, nos. 16, 17, 18, and 20, Oct. 20, 27, Nov. 3, and 17, 1924, pp. 611-615, 651-655, 688-692, and 770-775, 16 figs. Oct. 20: Survey of resources and history of their development. Oct. 27: Economic problems in development. Nov. 3: Problems of mining, crushing, and retorting shale and refining its products. Nov. 17: Status of principal processes proposed for distillation; operations of Catlin and Brown retorts.

Esthonia. The Oil-Shale and Oil-Shale Industry in Esthonia, L. S. Polak. Oil Eng. & Finance, vol. 5, nos. 102 and 103, Oct. and Nov. 1924, pp. 561-565, and 618-620 and 623, 7 figs. Geographical and hydrographical; geological; Kukkersite seams; distillation of Esthonian oil shale; production and consumption of oil shale in Esthonia; oil-shale reserves, 5,000,000,000 tons.

French Industry. Bituminous Oil Shale Industry in France (Note sur la situation de l'industrie des schistes bitumineux en France), M. R. Brunschweig. Annales des Mines, vol. 6, no. 7, July 1924, pp. 5-30, 3 figs. Discusses shale industry in France and Scotland; distilling apparatus used, and measures necessary to further it in France.

Great Britain. The Oil Shales of Somerset, W. Forbes-Leslie. Chem. & Industry, vol. 43, no. 21, May 23, 1924, pp. 532-539. Chemical composition of Somerset shale; origin, composition and properties of oil; properties of crude shale oil; description of fractions.

Heat Treatment. Heat Treatment of Oil Shale, V. Z. Caracristi. Combustion, vol. 10, no. 5, May 1924, pp. 336-340, 7 figs. Position of oil shale in relation to growing consumption of gasoline, and description of apparatus for treating oil shale.

Industry, 1923. The Oil Shale Industry, V. C. Alderson. Colo. School of Mines Quarterly, vol. 19, no. 1, Jan. 1924, pp. 1-19. See also Min. Jl., vol. 144, nos. 4613, 4614, and 4615, Jan. 19, 26, and Feb. 2, 1924, pp. 47-48, 74-75, and 91-92. Résumé of industry of the different countries for 1923. See also Oil Shale Bibliography compiled by V. C. Alderson on pp. 20-29.

New Brunswick, Can. Bituminous Shales of New Brunswick, M. Lodge. Can. Min. Jl., vol. 45, no. 40, Oct. 3, 1924, pp. 972-975, 4 figs. Some estimates of quantities in New Brunswick field.

New South Wales, Australia. The Shale Oil Industry of New South Wales, N. Waterhouse. Oil Eng. & Finance, vol. 5, nos. 94 and 95, Feb. 2 and Mar. 1, 1924, pp. 86-89 and 158-160, 7 figs. Occurrence of shale; Joadja Valley operations; Wolgan Valley operations; layout of works.

Oil Production on Commercial Basis. Persistent Pioneering in Shale-Oil Production, S. D. Kirkpatrick. Chem. & Met. Eng., vol. 31, no. 23, Dec. 8, 1924, pp. 884-885, 3 figs. Results shown at Ginet's plant at DeBeque, Colo., after 5 years of experiment; refining procedure.

Refining. The Refining of Oil-Shale, E. M. Bailey. Instn. Petroleum Technologists—Jl., vol. 10, no. 44, July 1924, pp. 527-553 and (discussion) 553-559, 8 figs. and Chem. Trade Jl. & Chem. Engr., vol. 74, no. 1933, June 6, 1924, pp. 679-682. Production of crude oil and sulphate of ammonia; distillation of crude oil; treatment or washing of distillates; extraction of solid paraffin; refining of crude solid paraffin.

Retorting. Principles of Oil Shale Retorting, J. E. Meyer. Oil & Gas Jl., vol. 23, no. 21-A, Oct. 16, 1924, pp. 92 and 101, 2 figs. Report of investigation by Colorado School of Mines covering distillation of oil from Grand Valley, Colo., shale.

Trumble Process. See Distillation.

United States Industry. Papers Presented at National Oil Shale Conference, Sacramento, California. Colo. School of Mines—Quarterly, vol. 19, no. 4, Oct. 1924, pp. 49-98, 2 figs. Includes following papers: Progress on Oil Shale, L. C. Phipps; The Naval Oil Shale Reserves, H. H. Rousseau; Trumble Shale Carbonizing and Refining Process, L. R. Ball; Imminence of Shale Oil Industry in the United States; L. C. Uren; Mining Oil Shale, L. R. Ball; The Present Oil Shale Outlook, D. D. Potter; Oil for the United States Navy, E. Winchester; Plan of Oil Shale Investigation at Colorado School of Mines, R. C. Beckstrom; and brief communications. For proceedings of conference, see pp. 3-49.

The Imminence of an Oil Shale Industry in the United States, L. C. Uren. Min. Congress Jl., vol. 10, no. 12, Dec. 1924, pp. 563-567, 2 figs. An estimate of trend of petroleum industry and of its influence on commercialization of shale oil industry.

OIL TANKS

Concrete. Concrete Oil Tanks Reinforced With Outside Bands, W. Travell. Eng. News-Rec., vol. 93, no. 11, Sept. 11, 1924, pp. 422-424, 3 figs. Details of design and construction of 20,000-bbl.-capacity storage tanks of Cal. Portland Cement Co., at Colton, Cal. Nominal reinforcement only in body of concrete walls but reliance against bursting pressure on tightened hoops.

Concrete Tank Construction and Its Use for the Storage of Petroleum, Norman Waterhouse. Oil Eng. & Finance, vol. 5, nos. 93 and 94, Jan. 5, and Feb. 2, 1924, pp. 15-18 and 75-77, 6 figs. Effect of oils on concrete; water and oil proofing; erection considerations; design; analysis of stresses; internal pressure.

Design. Oil Tanks (Tankanlagen), Fr. Bürk. Chemiker-Zeitung, vol. 48, nos. 125 and 131, Oct. 16 and 30, 1924, pp. 757-759 and 795-796. Design of tank cars for oil and oil-products transportation; electric heating of contents; storage tanks, their construction and equipment, police regulations; Oct. 30: Foundations for oil tanks; protection devices.

Fire Hazard, Measurement of. System for

Measuring Fire Hazard of Tanks, Stills and Contents. Nat. Petroleum News, vol. 16, no. 30, July 23, 1924, pp. 83-86. Gives code which is new analytic system prepared by West. Actuarial Bur. for measurement of relative fire hazard oil tanks and stills, and contents; system is applicable to all mineral oils, benzol and similar volatile and flammable products of coal tar, and alcohol and turpentine.

Fire Prevention. Vapor Tight Tanks, Well Vented, Will Reduce Fire Hazard, W. C. Platt. Nat. Petroleum News. vol. 16, no. 22, May 28, 1924, pp. 111-119. Proposed revision of regulations for construction and installation of oil-burning equipments where competent attendant is constantly on premises, and for storage and use of oil fuels used therewith; general requirements of piping.

Insulation Against Evaporation Losses. Insulation Against Evaporation Losses, E. H. Clausen. Min. & Oil Bul., vol. 10, no. 2, Feb. 1924, pp. 175, 177, and 179, 4 figs. Methods of preventing losses; insulating with hairinsul; advantages of Johns-Manville insulated tank top which can be applied to either wooden or steel decks.

Protection from Lightning. Investigations into the Protection of Oil Storage-Tanks from Lightning, W. R. Macdonald. Instn. Petroleum Technologists—Jl., vol. 10, no. 41, Feb. 1924, pp. 92-97 and (discussion) 97-99. Details of apparatus used in investigations, and conclusions drawn.

Welding. See ELECTRIC WELDING, Oil Tanks.

OIL TURBINES. See GAS TURBINES, Development.

OIL WELLS

Back Pressure, Effect of. Effect of Back Pressure on Wells in Brock Field, J. M. Lovejoy. Am. Inst. Min. & Met. Engrs.—Trans., no. 1292-P, Jan. 1924, 5 pp., 1 fig. Describes tests carried out in Brock Field, Carter County, Okla., showing that back pressure on flowing wells is a waste rather than a conservation of natural forces; stopcocking, however, gives encouraging results.

Boreholes. See BOREHOLES.

Casings, Welding. Arc Welded Well Casings. Welding Engr., vol. 9, no. 4, Apr. 1924, pp. 19 and 28, 4 figs. Discusses casing 13 in. in diameter, made of No. 10 gage iron, two ply and built in 30-ft. sections, each section consisting of 10 3-ft. joints. How work is routed through shop; efficiency of welded casings.

Cementing. Cementing Wells for Shutting Off Water, H. R. Berry. Petroleum Times, vol. 12, no. 307, Nov. 22, 1924, pp. 809-810, 1 fig. Notes on mechanical appliances and methods for cementing necessary for excluding from oil sands any water which may be encountered during drilling of an oil well.

Cleaning. Use of Liquids in Cleaning Oil Wells, L. Suverkrop. Petroleum Wld., vol. 21, no. 285, June 1924, pp. 221-226, 3 figs. Importance of careful choice of methods, and discussion of methods as practiced in oil fields of California.

Control. Mechanical Control of High-Pressure Oil Wells, A. J. Mason. Petroleum Times, vol. 12, no. 299, Sept. 27, 1924, pp. 481-484, 4 figs. Discusses some of the more important features of oil-well control and presents sketches showing the different methods of arranging connections at surface.

Drilling. An Improved Electric Rotary Oil Well Drilling Device, L. H. Keim. Jl. Electricity, vol. 53, no. 10, Nov. 15, 1924, pp. 364-365, 3 figs. Describes Hild differential drive which has been tested and proved in the fields during past two years.

Computation of the Breaking Stress of Long Rods and Ropes Used in Cable-Tool Drilling, L. S. Leibenzon. Petroleum & Oil-Shale Industry (Russian), vol. 6, no. 4, 1924, pp. 645-656, 8 figs. Neglecting stresses caused by weight of rod transmitting motion to drilling tools and by weight of auger stem with bit attached, determines breaking stress produced by momentum alternating in whole length of rod during its reciprocating motion. Points out some peculiarities connected with work of a high velocity percussion outfit. (In Russian).

Cost of Drilling in American Fields. Oil & Gas Jl., vol. 23, no. 10, Feb. 7, 1924, pp. 34 and 131-135. Drilling costs of different fields; wide variance in necessary expenditures.

Hazards of Drilling for Crude Petroleum, J. McIntyre. Oil & Gas Jl., vol. 23, no. 16, Mar. 20, 1924, pp. 68-70. Result of drilling test wells in 140 counties in Kansas, Oklahoma, Texas, Arkansas and Louisiana in 1923; percentage was 81.3.

Logging Wells Drilled by the Rotary Method, E. Kraus. Am. Assn. Petroleum Geologists—Bul., vol. 8, no. 5, Sept.-Oct. 1924, pp. 641-650. Measurements, method of determining formations, and details in recognition of formations.

Modern Diamond-Drill Practice, J. A. MacVicar. Min. Mag., vol. 30, nos. 3 and 4, Mar. and Apr. 1924, pp. 147-154 and 201-208, 8 figs. Describes advances in development of applications of diamond-drill, particularly in connection with oil exploration and oil-well sinking.

Percussion Systems of Drilling, H. G. Austin. Instn. Petroleum Technologists—Jl., vol. 10, no. 45, Sept. 1924, pp. 695-704 and (discussion) 704-706. Describes evolution of percussion system.

The Characteristics of the Rotary Drilling in Surakhany, A. Semenov. Azerbeijan Oil Industry (Russian Oil Paper), no. 11, Nov. 1924, pp. 50-54. (In Russian).

The Critical Line of Drilling in Oil-field Development, S. H. Brockunier. Eng. & Min. Jl.-Press, vol. 117, no. 21, May 24, 1924, pp. 850-851, 2 figs. Discussion of evil of overdrilling, with reference to Petrolia-Oil Springs district in Ontario.

The Evolution of Oil-Well Drilling Methods, A. B. Thompson. Instn. Petroleum Technologists—Jl., vol. 10, no. 44, July 1924, pp. 432-451 and (discussion) 451-458, 8 figs. See also Can. Min. Jl., vol. 45, no. 47, Nov. 21, 1924, pp. 1147-1150. General classification of systems in use; process of evolution.

The Modern Rotary Drilling System, L. R. McCollum. Instn. Petroleum Technologists—Jl., vol. 10, no. 41, Feb. 1924, pp. 1-26 and (discussion) 26-41, 9 figs. partly on supp. plates. Adaptability of the system; principle of operation; description of the different parts, including draw works, rotary machine, shaft drive, pumps, hoisting tackle, drill pipe, drilling bits, etc.; use and action of mud fluid; use of core barrels; speed; etc.

World's Rotary Drilling Record Broken, 7226 feet. Petroleum Times, vol. 12, no. 292, Aug. 9, 1924, p. 213, 1 fig. Union Oil Co. of Cal. established world's deepest rotary record with depth of 7226 ft., taking 351 days.

Extraneous Gas, Effect on. Effects of Extraneous Gas on Oil Wells, M. J. Kirwan. Oil & Gas Jl., vol. 23, no. 8-A, July 17, 1924, pp. 32, 96-100, 138-139 and 142-143, 1 fig. Exhaustive study of migrating gas on oil production from Lyons sand shows output was greatly increased.

Fire Protection. See FIRE EXTINGUISHERS, Foam.

Flooding. New Method of Flooding Bradford Sand Is Now Successfully Used, L. E. Smith. Nat. Petroleum News, vol. 16, no. 6, Feb. 6, 1924, pp. 37-38 and 41-45, 2 figs. Description of triangular method, evolved by Forest Oil Co., of Bradford, Pa.

Flowing. Some Methods Of Prolonging Natural Flow Of Oil Wells, J. M. Lovejoy. Nat. Petroleum News, vol. 16, no. 21, May 21, 1924, pp. 71, 73 and 74-75. Compilation of notes and letters on subject of flowing wells, dealing chiefly with methods of flowing.

Fluid Recovery from. Fluid Recovery from Oil and Gas Wells, S. C. Herold. Oil & Gas Jl., vol. 23, nos. 23-A, 25-A, 27, and 28, Oct. 30, Nov. 13, 27, and Dec. 4, 1924, pp. 21 and 125; 32, 76 and 78; 32, 126-127 and 132-135; and 32, 124, 126 and 128-132. Oct. 30: Data procured as result of intensive study of conditions in various fields prepared on scientific lines. Nov. 13: Functions pertaining to fluid delivery; proper terminology explained. Nov. 27: Explains fundamental conceptions.

Mud Fluid, Use of. Use of Mud Fluid in Rotary-Drilled Wells, W. J. Kirwan. Oil & Gas Jl., vol. 23, no. 26, May 29, 1924, p. 59, 2 figs. See also Petroleum Wld., vol. 21, no. 286, July 1924, pp. 265-267, 2 figs. Results of study and experiments by government engineers in Tonkawa and other fields on use of mud fluid for protecting upper oil and gas deposits cased off in wells drilled by rotary method; preparation of fluid important.

Oil-Exploitation Curves. Oil-Exploitation Curves of Oil Wells in Connection with the Subterranean Conditions of Oil Deposits, L. S. Leibenzon. Petroleum & Oil-Shale Industry, vol. 6, no. 1, Jan. 1924, pp. 40-65, 21 figs. Detailed investigation of exploitation curve of single bore hole and of whole oil deposits as function of subterranean conditions of oil deposit; author compares his equations of decline curve with same equations deduced by Ch. S. Larkey for exploitation of oil plots in Oklahoma, and finds them absolutely identical as to form; deduces formula of mass expenditure of gas flowing out of porous medium analogous to formula of O. Meyer; theoretical investigation of influence of thickness of oil-bearing bed on appraisal curves. (In Russian.) English abstract, pp. 64-65.

Oil Quantity Estimation. Estimating Future Oil Reserves with Particular Reference to Deep Pools in Los Angeles Basin, R. F. White. Min. & Oil Bul., vol. 10, no. 7, July 1924, pp. 696-697 and 775, 1 fig. Suggests method for estimating quantity of oil that may reasonably be expected after well has reached stage where mechanical methods of recovery are necessary.

Plugging. Plugging Wells With Lead Wool; Method and Material Described. Oil & Gas Jl., vol. 23, no. 8-A, July 17, 1924, pp. 72 and 80, 1 fig. Discusses "top" and "bottom" water, pumping water, lead wool, plugging methods, physical properties, etc.

Pole-Tool Fishing. Galician-Canadian Pole Tool Fishing Methods. Oil Eng. & Finance, vol. 5, nos. 94 and 95, Feb. 2 and Mar. 1, 1924, pp. 80-81 and 145-146, 4 figs. Casing accidents; complications caused by runaway tools, poles, and casing; complicated fishing with pole tools, many instances given are also applicable to other drilling systems.

Production-Decline Curves. Determining the Constants of Oil-production Decline Curves, H. M. Roeser. Am. Inst. Min. & Met. Engrs.—Trans., no. 1347-P, June 1924, 14 pp., 5 figs. Short cuts for determining constants of oil-decline curves, with method of least squares as starting point, are presented and applications made to practical examples; nature of raw data does not justify rigid adherence to orthodox theory but does lend justification to convenient methods of approximation within reasonable limits.

Production Increase. Increasing Production of Petroleum by Increasing Diameter of Wells, L. C. Uren. Am. Inst. Min. & Met. Engrs.—Trans., no. 1364-G, Oct. 1924, 21 pp., 12 figs. Demonstrates that flow of petroleum into well from stratum of oil-saturated sand of uniform texture increases with diameter of well; conclusion is supported by experimental evidence; it appears that if well may be reamed to diameter of 20 ft. within oil-sand, its production will be approximately doubled; novel method is proposed for forming and supporting cavity of such proportions within oil-producing stratum.

Pumping. A New Method of Pumping Oil Wells Now Used In Southeast Ohio, J. O. Lewis. Nat. Petroleum News, vol. 16, no. 8, Feb. 20, 1924, pp. 53-54, 2 figs. Description of method used in oil fields around Marietta, Ohio, known as Smith-Dunn Air Pump, employing air or gas to lift oil from well; has advantages of low installation and operating costs, extreme simplicity in construction and operation, and great reduction in cleaning out and pulling jobs.

Long Stroke Pumping and Meiers-Reskey Drive, R. E. D. Foster. Oil Trade Jl., vol. 15, no. 7, July 1924, pp. 33-36, 86-87, 3 figs. Present-day equipment; crank extension pumping. Describes H. M. A. (Meiers) geared long-stroke pump.

Long Stroke Pumps for Oil Wells, G. R. Taaffe. Oil Trade Jl., vol. 15, no. 6, June 1924, pp. 36, 38, and 40, 9 figs. Describes various designs.

Long Stroke, Slow Motion Pumps Used Successfully In Oklahoma, A. F. Hinton. Nat. Petroleum News, vol. 16, no. 12, Mar. 19, 1924, pp. 91-92, 4 figs. Describes appliances used in connection with long stroke pumping with slow motion.

Water in. Water Maintenance and Shutting Off in Oil Wells (Wasserhaltung und Wasserspersrung in Oelbergwerken), G. Schneiders. Montanistische Rundschau, vol. 16, no. 23, Dec. 1, 1924, pp. 663-668, 2 figs. Discusses making use of water, and shutting it off for oil production, giving examples.

OILS

Chinese Wood. American Tung-Oil Culture, H. A. Gardner. Paint Mfrs.' Assn.: of U. S., Sci. Section—Circular no. 195, Jan. 194, pp. 207-241, 11 figs. Progress made on 279 acres now being worked in Florida, followed by a reprint from China Bur. Pub. Information, Bul. No. 1, on Chinese Wood Oil, by D. Y. Lin.

Chinese Wood Oil, F. H. Rhodes and T. T. Ling. Indus. & Eng. Chem., vol. 16, no. 10, Oct. 1924, pp. 1051-1055, 1 fig. Geographical location of Chinese wood or tung oil; uses; extraction methods; distribution; outlook for industry; physical and chemical properties.

Colloid Chemistry. Colloid Chemistry in the Technology of Oils and Fats, N. G. Chatterji. Chem. Age (Lond.), vol. 10, no. 240, Jan. 19, 1924, pp. 56-58. Discusses bearing of recent research in colloid chemistry on refining of oils and fats, on glycerides which undergo a chemical change without being saponified, and on saponification of oils and fats.

Core-Binder. See CORES, Binders.

Drying, Polymerization of. So-called Polymerization of Drying Oils (Ueber die sogenannte Polymerisation der trockenen Oele), H. Wolff. Zeit. für angewandte Chemie, vol. 37, no. 38, Sept. 18, 1924, pp. 729-732, 1 fig. It is shown that there can be not more than trace of polymerization in process of thickening, and it is concluded that phenomenon is actually a colloidal gelation in which at most only small portion of oil actually

undergoes chemical change; this view is supported by fact that large proportion of unchanged oil can be recovered from highly gelatinized tung oil. See also critical remarks on above article by R. S. Morrell, in Chem. & Industry, vol. 43, no. 51, Dec. 19, 1924, p. 362T.

Drying Process. The Drying Process of "Drying" Oils (Ueber den Trocknungsprozess der "trocknenden" Oele), H. Wolff. Chemiker-Zeitung, vol. 48, no. 146, Dec. 4, 1924, pp. 897-899. Oxidation of oils in connection with drying forms only a part of phenomena; the actual drying process must not be identified with oxidation and absorption of oxygen; drying process shows forth at least three phases: oxidation under formation of colloidal solution; formation of gel; and further oxidation of solidified film.

Extraction from Seeds and Nuts. The Extraction of Oil from Seeds, Nuts and Kernels, J. Brewis. Chem. & Industry, vol. 43, no. 5, Feb. 1, 1924, pp. 111-119, 8 figs. Describes seed and lint-cleaning plant; decorticating plant; milling, etc.; extraction by means of solvents.

Hydrogenation. Catalytic Hydrogenation of Some Unsaturated Compounds, Especially of Oils, with Nickel at the Ordinary Temperature (Die katalytische Hydrierung einiger ungesättigter Verbindungen, insbesondere von Oelen, mit Nickel bei Zimmertemperatur), M. Tanaka. Chemiker-Zeitung, vol. 48, no. 5-6, Jan. 12, 1924, pp. 25-26. Nickel prepared as described by Kelber may be employed as catalyst in hydrogenation at ordinary temperature.

On the Catalytic Hydrogenation of Certain Oils, L. Kahlenberg and Tsu Pei Pi. Jl. Physical Chem., vol. 28, no. 1, Jan. 1924, pp. 59-70, 2 figs. Continuation of research, object of which is to find other and more effective catalysts and to test these on cottonseed and other oils as well as on free fatty acids actually prepared from these oils.

The Recognition of Hydrogenated Oils, K. A. Williams and E. R. Bolton. Analyst, vol. 49, no. 583, Oct. 1924, pp. 460-465, 2 figs. Describes use of iso-oleic acid for detection of hydrogenated oils; separation of solid and liquid fatty acids; approximate estimation of hydrogenated oil.

Insulating. Insulating Oils for Oil Circuit Breakers, D. Harvey. Elec. Jl., vol. 21, no. 12, Dec. 1924, pp. 573-578, 7 figs. Manufacture of insulating oil; properties of oils; shipment and sampling; method of test for dielectric strength; storage; placing oil in service; maintenance; purification.

Lubricating. See LUBRICATING OILS.

Mineral. See MINERAL OILS.

Palm Oil. Palm-Oil Extraction Plant. Engineering, vol. 118, no. 3067, Oct. 10, 1924, pp. 513-514, 8 figs., partly on supp. plate. Details of palm-oil extracting and kernel-separating plant for Nigeria, shown at Brit. Empire Exhibition.

Purification. The Purification of Oils, W. W. Myddleton. Chem. Age (Lond.), vol. 10, no. 245, Feb. 23, 1924, pp. 186-187. Deals with individual purposes for which oils are used, and discusses individual properties which should be sought for in each instance and constituents which should be retained or eliminated.

Solid Impurities, Removal of. Methods of Removing Solid Impurities from Extracted Oils and Fats (Wege zur Beseitigung des Schmutzes aus extrahierten Oelen und Fetten), B. Hassel. Chemiker-Zeitung, vol. 48, no. 22, Feb. 20, 1924, p. 92. Solid impurities may be removed from extracted oils and fats by settling; oil is heated to from 60 to 80 deg. cent. in rectangular tanks provided with steam coils and steam then shut off; after standing for 8 to 12 hr. impurities are removed from bottom of tank through valve and oil is decanted off from top; use of filter press is more satisfactory, but not always practicable on account of cost; oil may also be recovered from solid residue by steaming only.

Sulphurous. The Sulphurous Oil Industry of Spain (Die Sulfuröl-Industrie Spaniens), J. Bohle. Chemiker-Zeitung, vol. 48, no. 124, Oct. 14, 1924, pp. 745-746. Production of olive oil, including refining, deodorizing, etc.; sulphurous oils produced from residue called "orujo," by extraction with bisulphide of carbon, and apparatus used.

Transformer. See TRANSFORMERS, Oils.

Tung. See Chinese Wood.

Vegetable. A Vegetable Oils Industry for South Africa, E. F. English. S. African Jl. of Industries, vol. 7, no. 3, Mar. 1924, pp. 171-176. Consideration of sources and possibilities of a number of oils, large quantities of which are at present imported.

See also Palm Oil.

OPEN-HEARTH FURNACES

Acid. Importance of Temperature in Acid Open-Hearth Practice, E. G. Smith. Foundry Trade Jl., vol. 30, no. 426, Oct. 16, 1924, p. 341. Advantages of hot working are summarized.

Charging Equipment. Charging Devices in modern Open- Hearth Plants (Beschickvorrichtungen in neuzeitlichen Martinwerken), E. Blau. Chemiker-Zeitung, vol. 46, no. 44, Apr. 10, 1924, pp. 222-225, 6 figs. Deals with trough charging machines and cranes and ingot charging and withdrawing cranes.

Construction. Modern Open-Hearth Furnaces (Les fours martin modernes), J. A. de Grey. Génie Civil, vol. 85, no. 19, Nov. 8, 1924, pp. 426-430. Details of a modern installation of open-hearth furnaces in northeastern France, and comparison of American and European furnaces as to construction and dimensions.

Design. General Aspects in the Construction of Open-Hearth Furnaces (Allgemeine Gesichtspunkte für den Bau von Martinöfen), E. Diepschlag. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 48, Nov. 29, 1924, pp. 1233-1236, 20 figs. Discusses different forms of heat transmission; application of theory of heat transmission to design and operation of open-hearth furnaces; recent developments of open-hearth-furnace ends and heat accumulators.

Performance and Efficiency as Fundamentals for the Design and Calculation of Open-Hearth Furnaces (Leistung und Wirkungsgrad als Unterlagen für Bau und Berechnung der Siemens-Martin-Oefen), H. Bansen. Berichte der Fachausschüsse des Vereins deutscher Eisenhüttenleute, Stahlwerksausschuss, report no. 82, May 10, 1924, 23 pp., 19 figs. Functions of furnace; working conditions for temperature drop; heat circulation; relations of fuel supply and preheating to furnace efficiency and fuel consumption; calculation of heat required and efficiency; special means of influencing temperature drop; combustion, temperature conditions and heat transmission; heat accumulators; waste-heat utilization.

Some Recent Developments in Open-Hearth Steel Practice, G. A. V. Russell. Iron & Coal Trades Rev., vol. 109, no. 2944, Aug. 1, 1924, pp. 197-198. Discusses limitations of furnace charges; furnace hearths, coke-oven gas; mixed gases, thermal efficiency, furnace regenerators, furnace construction, etc. Abstract of paper read before Yorkshire Assn. of Instn. Civil Engrs.

Dimensions and Performances. Dimensions and Performances of Open-Hearth Furnaces (Ueber Abmessungen und Leistungen von Siemens-Martin-Oefen), H. Bansen. Berichte der Fachausschüsse des Vereins deutscher Eisenhüttenleute, Stahl-

werksausschuss, report no. 81, May 10, 1924, 7 figs. and supp. table, 8 figs. Report on result of questionnaire; includes table showing comparative performance and dimensions of German open-hearth furnaces.

Efficiency. The Efficiency of Open-Hearth Furnaces (Wirkungsgrade im Betriebe des Siemens-Martin-Ofens), G. Bulle. Berichte der Fachausschüsse des Vereins deutscher Eisenhüttenleute, Stahlwerksausschuss, report no. 80, May 10, 1924, 3 pp. Committee report on metallurgical, furnace, and producer performance.

End Design, Moll Method. The Moll End for Open-Hearth Furnaces (Der Moll-Kopf für Siemens-Martin-Oefen), H. Moll. Stahl u. Eisen, vol. 44, no. 8, Feb. 21, 1924, pp. 193-196 and (discussion) 197-202, 2 figs. See also (translations) Iron & Coal Trades Rev., vol. 108, no. 2925, Mar. 21, 1924, p. 478, 2 figs.; Foundry Trade Jl., vol. 29, no. 398, Apr. 3, 1924, pp. 275-276, 2 figs.; and Iron Age, vol. 113, no. 19, May, 1924, pp. 1277-1278, 1 fig. Describes new design of furnace end in which to secure a perfect mixture of gas and air before its admission to hearth, gas and air is led into a common flue and thence into hearth; end of furnace is so designed that gas flows without change of direction, and impinges at right-angles on air current flowing upward.

Extensions, Inland Steel Co. Increases Steelmaking Capacity, E. C. Boehringer. Iron Trade Rev., vol. 74, no. 24, June 12, 1924, pp. 1566-1567, 3 figs. Extension at open-hearth department of Inland Steel Co. plant at Indiana Harbor, Ind.; augments output 18 per cent; charging doors and reversing valves electrically operated; describes new units.

Gases in, Sulphur Absorption from. Absorption of Sulphur from Gas in Siemens-Martin Furnaces (Die Aufnahme des Schwefels aus dem Heizgas, im Siemens-Martin-Ofen), A. Jung. Stahl u. Eisen, vol. 44, no. 31, July 31, 1924, pp. 911-914. Discusses sulphur content in briquets, coal, generator gas and gas producer clinker, effect of addition of steam in gas producer, relations between sulphur content in gas and block on basis of melting results.

Heat Losses in. Heat Losses in Open Hearth Furnaces, W. Dyrssen. Fuels & Furnaces, vol. 2, no. 6, June 1924, pp. 565-569, 3 figs. Heat balance showing how 40 per cent of heat in fuel may be obtained in total steam in a furnace without gas checkers by passing part of waste gases from melting chamber direct to boiler.

Multiple-Flame Continuous. Multiple-Flame Continuous Melting Furnace Recovering Total Heat of Open-Hearth Process (Forno di fusione a fiamma multipla continua e a totale ricupero di calore per processo Martin), F. Fiorelli. Metallurgia Italiana, vol. 16, no. 10, Oct. 1924, pp. 446-451 and (discussion) 452-457, 5 figs. partly on supp. plates. Notes on operation of Siemens open-hearth furnace. Description of continuous multiple-flame furnace, including calculations, operation, and comparative cost data.

Operation. Efficiency in Open Hearth Furnace Operations (Wirkungsgrade im Betriebe des Siemens-Martin-Ofens), G. Bulle. Stahl u. Eisen, vol. 44, no. 43, Oct. 23, 1924, pp. 1324-1330, 1 fig. Report of subcommittee discussiong division of efficiency into (1) metallurgical (2) furnace, and (3) gas-producer efficiency, giving corresponding calculations.

Practice. Open Hearth Practice, A. W. Smith. Colo. School of Mines Mag., vol. 14, nos. 7 and 8, Nov. and Dec. 1924, pp. 8-9 and 10-16. Recommendations for design and operation.

The Flame in Open-Hearth Furnaces (La fiamma nei forni Martin), E. de Castro. Metallurgia Italiana, vol. 16, no. 10, Oct. 1924, pp. 458-488, 15 figs. Discusses application of oil fuel, furnace readjustment, and tests carried out with fuel oil operation. Cost data.

Producer-Gas-Fired. Recent Developments in Open-Hearth Furnace Practice. Fuels & Furnaces, vol. 2, no. 10, Oct. 1924, pp. 1057-1058, 2 figs. Use of jets of compressed air or steam to increase rate of combustion in producer-gas-fired furnaces.

Pulverized Coal for. See PULVERIZED COAL, Open-Hearth Furnaces.

Refractories for. See REFRACTORIES, Open-Hearth Furnaces.

Regulation. See GAS PRODUCERS, Regulation.

Waste-Heat Boilers. See BOILERS, Waste-Heat.

Waste-Heat Recovery. Recovery of Waste Heat in Open-Hearth Practice, W. Dyrssen. Iron & Steel Inst.—Advance Paper no. 6, for meeting May 1924, 48 pp., 16 figs. Complete detailed heat balance of fuel for modern American 80-ton producer-gas open-hearth furnace; results of study of heat balance; heat balance for coke-oven gas-fired open-hearth furnace is given for comparison with producer gas as fuel; steam output for various charges; comparison between blast-furnace and open-hearth practice; economic value of recovery of waste heat in steam in open-hearth practice.

See also WASTE HEAT, Recovery.

Wis. Steel Works, South Bend, Ind. Wisconsin Steel Works Adds Open-Hearth, G. L. Lacher. Iron Age, vol. 113, no. 20, May 15, 1924, pp. 1421-1425, 7 figs. Separate oil and tar systems, laminated buckstays, motor-operated doors, valves and stack dampers, and minimum of water cooling are features of new plant at South Chicago, Ill., comprising five 100-ton furnaces.

Wood Producer Gas as Fuel. The Use of Wood for the Generation of Open-Hearth Fuel Gases (Ved som martinugnsbränsle), A. Johansson. Jernkontorets Annaler, vol. 108, Tekniska Diskussionsmötet May 31, 1924, pp. 192-263, 21 figs. Extensive reports on economy obtained by use of generator gas produced from wood for open-hearth furnaces. Methods used by principal Swedish steel works. Description of machinery. Use of ashes as fertilizer.

OPHTHALMOSCOPES. See OPTICAL INSTRUMENTS, Ophthalmoscope.

OPTICAL INSTRUMENTS

Ophthalmoscope. Development of the Ophthalmoscope (Ueber die Entwicklung des Augenspiegels), A. Kühl. Deutsche Optische Wochenschrift, vol. 10, no. 27, July 6, 1924, pp. 343-348, 16 figs. Developments since Helmholtz; various types of eye-mirrors, micro-ophthalmoscopic instruments, photography, etc.

Thermal Expansion, Measurement of. A Sensitive Optical Lever Method for Measuring the Thermal Expansion of Small Specimens, J. Guild. Jl. Sci. Instruments, vol. 1, no. 7, Apr. 1924, pp. 198-204, 3 figs. Method employed is comparative one in which two specimens of suitable form stand close together on flat reflecting surface and support second reflecting surface approximately parallel to first; inclination between two surfaces is measured by auto-collimating telescope system.

OPTICAL MEASUREMENTS. See MEASURING INSTRUMENTS, Optical.

ORDNANCE

[See also GUNS.]

Design. Some Problems in the Design of Ordnance, J. B. Rose. Mech. Eng., vol. 46, no. 11a, Mid-Nov. issue, 1924, pp. 774-782, 9 figs. Out-

lines mechanical and engineering features involved in design, illustrating problems arising by reference to 75-mm. field gun.

Developments, United States. Modern Ordnance, C. C. Williams. Army Ordnance, vol. 5, no. 27, Nov.-Dec. 1924, pp. 565-570, 7 figs. Latest developments of American ordnance, including small arms, tanks, tractors, ammunition, superguns, and bombing.

Matériel, Design of. The Design of Ordnance Matériel, J. D. Pedersen. Mech. Eng., vol. 46, no. 12, Dec. 1924, pp. 887-890. Procedure to be followed in designing ordnance matériel for economical, interchangeable mass production.

Production Problems, U. S. War Dept. Some Production Problems in the War Department's Preparedness Program, H. W. Churchill. Mech. Eng., vol. 46, no. 5, May 1924, pp. 268-270 and (discussion) 270-271. Coöperation of engineering, industrial, and commercial bodies with War Department; reserve officer personnel problem; problem of securing facilities for manufacturing war matériel; problems typical of those confronting plant production engineers; features of type of contract now being developed; raw materials, gases, machine tools. (Abridged.)

Steel for Manufacture of. See STEEL MANUFACTURE, Ordnance Steel.

Stores Control. Ordnance Stores Control, L. D. Booth. Army Ordnance, vol. 5, no. 25, July-Aug. 1924, pp. 431-435 and 470, 5 figs. Discusses control of supplies by commanding generals of troops; shows review sheet, consolidated review records, abstract of reviews, transfer order, and report of stores.

ORE DEPOSITS

Canada. Productiveness of the Precious-Metal Mines of Canada, W. M. Goodwin. Compressed Air Mag., vol. 29, no. 2, Feb. 1924, pp. 763-767, 13 figs. Survey of development, character, and output of deposits.

Chile. The Ore Deposits and Mines of Copiapó, Chile (Die Erzlagerstätten und der Bergbau von Copiapó, Chile), J. Kuntz. Metall u. Erz, vol. 21, no. 5, 1st Mar, no. 1924, pp. 85-99, 10 figs. Geographical and geological conditions; gold, silver, and copper deposits and production.

China. Metal Ores and Other Useful Resources of China (Die Metallerz- und andern nutzbaren Vorkommen Chinas), M. Brücher. Glückauf, vol. 60, nos. 35, 36, 37, and 38, Aug. 30, Sept. 6, 13, and 20, 1924, pp. 759-765, 789-795, 811-815, and 840-848, 10 figs. Notes on occurrence, mining and production of gold, silver, copper, lead, zinc, tin, tungsten, nickel, molybdenum, mercury, arsenic, antimony, sulphur, alum, salt and soda, petroleum, etc.

Colombia and Venezuela. Survey of Ore Deposits of Columbia and Venezuela (Ein Ueberblick ueber die Erzlagerstätten Kolumbiens und Venezuelas), O. Stutzer. Metall u. Erz, vol. 21, no. 15, Aug. 1, 1924, pp. 349-354, 1 fig. Discusses mainly gold silver and platinum in Columbia, and gold, copper, and iron in Venezuela.

Formation. Process of Formation of Stretched Out Ore Deposits (Längsträckta malmformers bildningssätt), P. J. Holmquist. Teknisk Tidskrift, vol. 54, nos. 19 and 24, May 10 and June 14, 1924, pp. 33-36 and 41-43 (bergsvetenskap), 14 figs. Compilation of various processes, whereby stretched out ore deposits, such as "chinmeys of ore," "pipes," "dragfolds," etc., are found.

Germany. Occurrence of Ore in the Mieminger Wetterstein Alps (Die Erzvorkommen in den Mieminger Wetterstein-Alpen), M. Landgraeber. Technische Blätter, vol. 14, no. 31, Aug. 2, 1924, pp. 233-235. Discusses geology and stratigraphy, tectonics, occurrence of zinc blende, lead oxide, silver, pyrites, iron, etc.

Mapping Cross-sections of. Mapping Cross-sections of Orebodies, J. E. Harding. Eng. & Min. Jl.-Press, vol. 117, no. 19, May 10, 1924, pp. 767-770, 4 figs. Describes methods. Drill-hole data and geologic deductions should be combined

New South Wales. Antimony, Arsenic, Bismuth, Molybdenum, Tungsten, E. J. Kenny. New South Wales Dept. Mines, Geol. Surv.—Bul. no. 5, 1923, 47 pp., 10 figs. partly on supp. plates. Describes ores, treatment, uses, sources of supply, and production of each.

Primary Downward Changes. Primary Downward Changes in Ore Deposits, W. H. Emmons. Am. Inst. Min. & Met. Engrs.—Trans., no. 1319-M, Mar. 1924, 29 pp., 13 figs., also (abstract) Min. & Metallurgy, vol. 5, no. 207, Mar. 1924, pp. 140-141. Criteria for recognition of a parent igneous mass with which an ore deposit is associated; changes related to depth; rock differentiation and ore deposition; metallogenic provinces; reconstructed vein system; etc.

Sampling and Estimating. Sampling and Estimating Cordilleran Silver-Lead Limestone Replacement Deposits, B. Prescott. Am. Inst. Min. & Met. Engrs.—Trans., no. 1324-M, Mar. 1924, 11 pp. Describes various methods of sampling and cites factors that enter into estimation of these deposits.

Tasmania. See GEOLOGY, Tasmania.

Utah. Ore Deposits of the Deep Creek Range, Utah, D. O. Rohlfing. Salt Lake Min. Rev., vol. 25, no. 24, Mar. 30, 1924, pp. 11-15 and 18-19, 5 figs. Arsenic an important constituent. History, geography, and geologic and topographic features.

Venezuela. See Colombia; GEOLOGY, Venezuela.

ORE DRESSING

Ball- and Tube-Mill Liners. Ball- and Tube-mill Liners, Wm. T. W. Miller. Eng. & Min. Jl.-Press, vol. 118, no. 16, Oct. 18, 1924, pp. 613-617, 29 figs. Recent development has brought out many designs which help to increase grinding efficiency and prolong effective life of steel.

Classification. Hindered Settling Classification in Relation to Table Concentration of Idaho Lead-Zinc Ores, A. W. Fahrenwald. U. S. Bur. Mines —Reports of Investigations, serial no. 2618, June 1924, 11 pp. Results of investigating field of hindered classification in its practical and economic relation to table concentration.

Crushing. See CRUSHING, Ore-Crushing Plant.

Crushing Plants, Dust Control in. Dust Control in Crushing Plants Important, G. E. Lynch. Eng. & Min. Jl.-Press, vol. 117, no. 4, Jan. 26, 1924, pp. 165-167. How unhealthful working conditions in mills and crushing plants can be remedied.

Cylindrical Mills. Peripheral-Discharge Cylindrical Mills, A. W. Allen. Eng. & Min. Jl.-Press, vol. 117, no. 8, Feb. 23, 1924, pp. 325-328, 8 figs. Exit pulp flow through trunnion has disadvantages. Development shows progress in recent years.

Dielectric Separation. Dielectric Mineral Separation, S. J. Truscott. Nature (Lond.), vol. 114, no. 2874, Nov. 29, 1924, pp. 793-794. Discusses process brought forward by H. S. Hatfield, one based on differences in inductive capacity between minerals and one which he termed dielectric mineral separation, substances being dielectrics by virtue of their property to propagate electric forces through themselves by induction; process differs, on one hand, from ordinary electrostatic mineral separation in that it is not operative by reason of charges acquired by contact, and, on other hand, from cataphoresis.

Experimental Plant. The Experimental Ore Dressing and Metallurgical Plant of the Colorado School of Mines, S. P. Warren. Jl. Eng. Education, vol. 15, no. 4, Dec. 1924, pp. 252-258 and (discussion) 258-260. Describes test work being done at experimental plant.

Flotation. See FLOTATION.

Sintering, Fans for. Fans for Ore Sintering. Iron Age, vol. 114, no. 12, Sept. 18, 1924, p. 692, 2 figs. Severe service conditions and points of design to meet them.

Tube Mills. Recent Metallurgical Developments on the Witwatersrand, E. M. Weston. Chem. Eng. & Min. Rev., vol. 16, no. 192, Sept. 5, 1924, pp. 469-472, 3 figs. Describes new plant at West Springs in which amalgamation is entirely dispensed with.

ORE HANDLING

Bridges, Trolley Control for. Direct Current Hoist and Trolley Control for Ore Bridges, N. L. Mortensen. Iron & Steel Engr., vol. 1, no. 12, Dec. 1924, pp. 616-623 and (discussion) 623-628, 29 figs. Schemes of connections and curves are presented illustrating in general main requirements of ore bridges and what can be considered more or less average operating conditions.

Bunkers. Ore Bunkers (Erzsilo für Storch & Schöneberg A.-G., Abt. Bremerhütte in Geisweid), H. Butzer. Beton u. Eisen, vol. 23, no. 4, Feb. 20, 1924, pp. 37-38, 5 figs. Ore-bunker plant constructed for purpose of keeping blast-furnace works supplied with ore, coke and limestone; equipment for loading of bunkers.

Plants. See COAL HANDLING, Harbor Plants.

Unloaders. Mighty Machines at Conneaut Harbor. Blast Furnace & Steel Plant, vol. 12, no. 10, Oct. 1924, pp. 444-445, 1 fig. Eight modern ore unloaders discharge 70,000 tons of ore in 22 hours.

ORE SMELTING

Local. An Important Invention, J. A. Parker. Mineral Age, vol. 9, no. 2, Feb. 1924, pp. 19-20, 3 figs. To secure more favorable freight rates suggests transforming crude ore and concentrates into semi-finished furnace products and thus to reduce gross weight shipped and take advantage of favorable freight rates already established. Advantages and limitations of local smelting. Mace type open tuyere key to small unit smelting; tabulation of results in test runs on typical bodies of ore.

ORE TREATMENT

[See also metallurgy of various metals, as GOLD METALLURGY, etc.]

Complex Ores. Development of Treatment Methods for Complex Ores, R. G. Hall. Eng. & Min. Jl.-Press, vol. 117, no. 11, Mar. 15, 1924, pp. 440-445. Classifies common mineral combinations that go to make up what are known as complex ores and reviews briefly development of metallurgical methods to treat them.

Present Trend in Treatment of Complex Ores, G. L. Oldright. Am. Inst. Min. & Met. Engrs.—Trans., no. 1311-M, Mar. 1924, 15 pp. Treatment of low-grade complex ores by smelting; treatment of complex semi-oxidized ores to low-grade to be smelted; treatment of zinc concentrates and of lead-zinc middling products.

Developments. Recent Developments in the Fine Grinding and Treatment of Witwatersrand Ores, C. R. Davis, J. L. Willey and S. E. T. Ewing. Am. Inst. Min. & Met. Engrs.—Trans., no. 1386-B, Dec. 1924, 22 pp., 7 figs.

Electrolytic Refining. Improvement in Electrolytic Refining During the Last Decade, S. Skowronski. Am. Electrochem. Soc.—Paper for meeting Apr. 24-26, 1924, no. 30, pp. 391-402. Deals with refining of a crude metal anode into a refined cathode, which process is strictly "electrolytic refining," and recovery of metals from solutions obtained from ores, concentrates or metallurgical products, using various solvents.

Flotation. See FLOTATION.

Non-Ferrous Ores, Canada. Developments in the Treatment of Non-Ferrous Ores in Canada during 1923, G. J. Mackay. Can. Min. Jl., vol. 45, no. 1, Jan. 4, 1924, pp. 9-12, 4 figs. Describes developments of various companies.

Reduction Plant. Chief Consolidated Starts Novel Reduction Plant, A. B. Parsons. Eng. & Min. Jl.-Press, vol. 118, no. 15, Oct. 11, 1924, pp. 582-584, 7 figs. Flotation, tabling, and "oxide" volatilization combined; should solve long-standing treatment problem; description of plant at Eureka, Utah.

Refining, Sweden. Is It Possible to Reduce the Cost of Ore Refining in Sweden? (Kan den svenska järnmalmsanrikningen förbilligas?), H. Nathorst. Jernkontorets Annaler, vol. 108, Tekniska Diskussionsmötet May 31, 1924, pp. 36-89 and (discussion) 89-114, 11 figs. Improvements of present ore-crushing methods are described and recommended as means to reduce ore-refining costs.

Separation, Dielectric. Dielectric Separation: A new Method for the Treatment of Ores, H. S. Hatfield. Describes process depending upon action of an electrostatic field upon uncharged particles instead of charged particles. Dielectric Mineral Separation: Notes on Laboratory Work, B. W. Holman and St. J. R. C. Shepherd. The three different classes of laboratory testing that principles of dielectric separation may be applied to, and apparatus required. Instn. Min. & Metallurgy—Bul., no. 233, Feb. 1924, 15 pp., 6 figs. on supp. plates. Discussion on these two papers in no. 234, Mar. 1924, 20 pp., 9 figs.

Sintering. Ore-Sintering Processes, S. G. Smith. Iron & Coal Trades Rev., vol. 108, no. 2915, Jan. 11, 1924, p. 49. Describes Greenawalt process, including feed hoppers, sintering pan, and ignition hood; typical analyses of materials used for sintering; advantages of sintered material; other systems of sintering.

ORES

Assaying. Early Methods of Assaying, E. A. Smith, Instn. Min. & Metallurgy, no. 232, Jan. 1924, 57 pp., 7 figs. Describes history of assaying, including early furnaces and appliances, and methods used for different ores. Bibliography.

Electrometric Titration. See METALLURGY, Electrometric Titration.

Low-Grade, Microchemical Analysis of. Microchemical Analysis and Its Application in the Determination of Low-Grade Ores, E. E. Fairbanks. U. S. Bur. Mines—Reports of Investigations, serial no. 2613, June 1924, 6 pp., 3 figs. on supp. plates. Discusses microchemical analysis with aid of device for microscopic sampling.

Opaque, Determination of. The Determination of Opaque Ore-Minerals by X-Ray Diffraction Patterns, P. F. Kerr. Economic Geology, vol. 19, no. 1, Jan.-Feb. 1924, pp. 1-34, 8 figs. Shows possibilities and limits of powder method of X-ray analysis when applied to diagnosis of opaque ore minerals.

Sampling. Accuracy in Sampling Metallurgical Materials, A. C. Halferdahl. Eng. & Min. Jl.-Press, vol. 118, no. 19, Nov. 8, 1924, pp. 731-732. Faulty sampling is a frequent cause of error in metallurgical balance sheets, accuracy of sampling being often an unknown quantity. Gives a method of application of theory which

is believed to be fundamental to all sampling procedure. Basis of calculations is set forth first. Theory is due to Bowley, "Elements of Statistics," and Merriman, "Method of Least Squares."

Screening. Efficiency of Screening, R. K. Warner. Am. Inst. Min. & Met. Engrs.—Trans., no. 1293-M, Jan. 1924, 10 pp. 3 figs., also (abstract) Min. & Metallurgy, vol. 5, no. 205, Jan. 1924, p. 30. Suggests method for estimating quality of work done by a screen, consisting in considering only work done on "difficult" grains, that is, those grains of which intermediate diameters closely approach screen aperture; application of this method, together with derivation of formulas and an example of their use.

Testing. Ore Testing and Its Relation to Mill Results, L. E. Booth. Min. & Metallurgy, vol. 5, no. 216, Dec. 1924, pp. 573-576. Value of microchemistry; classification and screening; amalgamation; cyanidation; jig and table concentration; flotation concentration.

Transportation by Airplane. Transporting Ore by Aeroplane. Queensland Govt. Min. Jl., vol. 25, no. 285, Feb. 15, 1924, pp. 42-45, 2 figs. Discusses factors involved. Field for investment in Queensland. Means of exploiting mineral potentialities.

ORSAT APPARATUS. See GAS ANALYSIS, Orsat Apparatus.

OSCILLATIONS

Amplitudes. The Stable Amplitudes of Incited Coupled Oscillations (Ueber die stabilen Amplituden angefachter Koppelschwingungen), W. Runge. Archiv für Elektrotechnik, vol. 13, no. 1, Mar. 31, 1924, pp. 34-48, 11 figs. Simple method is developed to determine, under assumption of simple nonlinear relation between current and voltage, range of stability and resistance against disturbances in incitation of amplitudes occurring in a coupled system.

High-Frequency. Experimental Study of Some Processes for Detecting High-Frequency Oscillations (Étude expérimentale de quelques procédés de détection des oscillations de haute fréquence), M. R. Dubois. Onde Electrique, vol. 3, nos. 30 and 31, June and July 1924, pp. 285-298 and 347-363, 23 figs. Discusses exact and rapid measurement of rate of modulation for sustained wave senders; results of experiments with galena and lamp detectors amplifiers, etc.

Hydrodynamic. Oscillations Produced by Aperiodic Forces in Pump Valves and Oscillatory Sirens (Entstehung von Schwingungen durch nichtperiodische Kräfte bei Pumpenventilen und Oszillatorsirenen), W. Hort. Zeit. für technische Physik, vol. 5, no. 9, 1924, pp. 384-387, 5 figs. Shows that leaf-like bodies oscillating vertically to their plane, if placed in a liquid, are made to oscillate, if liquid flows past one side.

Resonance and Damping. The Resonance Curves with Different Types of Damping (Die Resonanzkurven bei verschiedenen Dämpfungstypen), D. Roschansky. Zeit. für Hochfrequenztechnik, vol. 23, no. 2, Feb. 1924, pp. 23-31, 1 fig. Through an approximate method of calculation it is possible to determine numerically resonance effects even in case of anomalous damping; deals specifically with case of a linear damping; influence of secondary damping on anomalous resonance curves; discusses different types of damping, which can occur with spark discharge, and a new value, the mean damping factor is introduced.

Theory. Theory of Oscillation (Zur Schwingungslehre), E. Meissner. Schweizerische Bauzeitung, vol. 84, nos. 23 and 24, Dec. 6 and 13, 1924, pp. 273-276 and 283-285, 5 figs. Details of graphic theory of enforced oscillations and resonance, new graphic method of Fourier analysis of any function, graphic theory of impact in oscillating systems, and oscillating systems with pulsating elasticity.

OSCILLATORS

Vacuum-Tube. Vacuum Tube Oscillators—A Graphical Method of Analysis, J. W. Horton. Bell System Technical Jl., vol. 3, no. 3, July 1924, pp. 508-521, 11 figs. Discusses graphic methods for determining conditions of stable operation in telephone lines; coördinated testing procedure and its application on southern transcontinental line.

OSCILLOGRAPHS

Braun-Tube. On a Direct Method to Determine the Sense of Rotation of Braun Tube Diagrams, K. Seiyama. Denki Gakkwai Zasshi (Jl. Inst. Elec. Engrs. of Japan), no. 425, Dec. 1923, pp. 950-957, 7 figs., partly on supp. plates. Describes stroboscopic method for determining directly sense of rotation of various diagrams such as dynamic characteristics, Lissajous' figures, etc., appearing on fluorescent screen of Braun tube oscillograph. Experiments made to verify method show that it is applicable to diagram of low and moderate frequencies. (In Japanese.)

Cathode-Ray. A Practical Demonstration of Some Applications of the Cathode Ray Oscillograph, N. V. Kipping. Wireless Wld., vol. 13, no. 23, Mar. 5, 1924, pp. 705-709, 12 figs. Construction of Braun tube and of new type of oscillograph and notes on general principles of operation.

Primary Radio-Frequency Standardization by Use of the Cathode-Ray Oscillograph, G. Hazen and F. Kenyon. U. S. Bur. Standards—Sci. Paper no. 489, May 22, 1924, pp. 445-461, 11 figs. Details of use of cathode-ray oscillograph for obtaining frequency ratios for establishing values of radio frequencies in terms of audio-frequency.

The Cathode Ray Oscillograph, P. B. Findley. Tech. Eng. News, vol. 5, no. 1, Apr. 1924, pp. 14-15 and 28, 5 figs. Describes oscillograph developed by J. B. Johnson, in which disadvantages of Braun tube have been overcome.

Measurement of Torsional Moments. The Measurement of Oscillations and Torsional Moments by Means of the Oscillograph (Messen von Schwingungen und Drehmomenten mittels des Oszillographen), R. Elsässer. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 20, May 17, 1924, pp. 485-491, 20 figs. Discusses conditions for correct recording of rapidly changing processes, and points out that oscillograph is most suitable measuring instrument for this purpose; describes simple device on order of Kirchhoff-Wheatstone bridge, with which longitudinal and torsional oscillations and rapidly changing torsional moments in oscillograph can be recorded and measured; practical examples of its application.

Polar Oscillograms. Polar Oscillograms, A. G. Beliavsky. Electrician, vol. 92, no. 2382, Jan. 11, 1924, p. 38, 2 figs. Their application in electrical work; polar oscillograph.

Single-Element Portable. The Osiso, J. W. Legg. Elec. Jl., vol. 21, no. 12, Dec. 1924, pp. 564-567, 7 figs. Describes single-element oscillograph of camera size.

OSCILLOSCOPES

Elverson. The "Elverson Oscilloscope," A. J. H. Elverson. Jl. of Sci. Instruments, vol. 1, no. 4, Jan. 1924, pp. 116-119, 4 figs. Describes an opto-mechanical device designed to facilitate examination of behavior of high-speed movements under working conditions.

OTHEOGRAPH. See ELECTRIC LOCOMOTIVES, Developments; LOCOMOTIVES, Tracking Qualities, Testing; RAILS, Wheel Thrust on.

OVENS

Baking. Electric Ovens for Bakeries (Les fours électriques dans le domaine de l'alimentation). Revue Industrielle, vol. 54, no. 2178, May 1924, pp. 106-109, 3 figs. Particulars concerning electric ovens for bakers, confectioners, and pork butchers.

Coke. See COKE OVENS.

Industrial Baking. Design of an Industrial Baking Oven. Sheet Metal Worker, vol. 15, no. 19, Oct. 10, 1924, pp. 705-706, 4 figs. How designing engineer retarded heat loss by long air travel; means taken to insure even distribution of heat.

Japanning. See JAPANNING, Plant.

OVERVOLTAGES

Measurement of Decomposition Potentials and. The Measurement of Decomposition Potentials, A. L. Ferguson and G. Van Zyl. Am. Electrochem. Soc.—Advance Paper no. 26, for meeting Apr. 24-26, 1924, pp. 337-352, 2 figs. Apparatus is developed by which a direct comparison is made between all values obtained by commutator and direct methods for measuring decomposition potential and overvoltages.

Passivity and, Phenomena of. Phenomena of Passivity, and Cathodic Overvoltage (Passivitätserscheinungen und kathodische Ueberspannung), E. Liebreich and W. Wiederholt. Zeit. für Elektrochemie, vol. 30, no. 6, June 1924, pp. 263-279, 18 figs. Study of potentials assumed by electrodes of chromium, iron, and mercury in electrolyte of 0.1 per cent sulphuric acid when external negative or positive currents are passed.

Predetermination. See HARMONICS, Transformers.

Protection Against. Protection Against Excess Voltage by Voltage Drop Relays and Their Practical Application (Der Ueberstromschutz durch Spannungsabfallrelais und seine Anwendung in der Praxis), F. Alten. Elektrotechnische Zeit., vol. 45, no. 22, May 29, 1924, pp. 553-558, 12 figs. Discusses localizing of short circuits in extensive and ramified long distance lines; describes installation with protective relays in 60,000 volt system.

OXY-ACETYLENE CUTTING

Advantages and Applications. Oxy-acetylene Process of Cutting Metals. Machy. (Lond.), vol. 24, no. 604, Apr. 24, 1924, pp. 123-125, 3 figs. Advantages of method and modern applications.

Cast Iron. Cutting Cast Iron, J. Fitzgibbons. Welding Eng., vol. 9, no. 8, Aug. 1924, pp. 23-24, 2 figs. Chemical discussion of cutting cast iron by oxy-acetylene; elements found in cast iron and their affinity for oxygen.

Cutting Tips, Manufacture of. Making Oxy-acetylene Cutting Tips. Machy. (N. Y.), vol. 31, no. 1, Sept. 1924, pp. 19-21, 6 figs. See also Machy. (Lond.), vol. 24, no. 626, Sept. 25, 1924, pp. 838-840, 6 figs. Cost-reducing methods used by Harris Calorific Co., Cleveland, Ohio, in manufacturing cutting tips for oxy-acetylene outfits.

Machines. The Godfrey Oxygen Jet Cutting Machine. Engineering, vol. 118, no. 3056, July 25, 1924, pp. 124-125, 11 figs. partly on pp. 123 and 134. Describes oxygen jet cutting machine designed by Alfred Godfrey of Godfrey Eng. Wks,. London, for purpose of combining cutting with precision and working with any type of templet.

The Oxytome Metal-Cutting Machine. Engineering, vol. 117, no. 3039, Mar. 28, 1924, pp. 411-412, 6 figs. partly on p. 402. Machine for ordinary workshop purposes by use of which iron and steel plates can be cut to any regular or irregular form of profile; results of tests show that, with good cutting, effect of cut on strength of ordinary mild steel is quite negligible and cracks are not more likely to start from cut surface than from surface of ordinary sheared cut.

Steel. Eliminating the Oxygen Waste, M. Piette. Welding Engr., vol. 9, no. 12, Dec. 1924, pp. 25, 28-29 and 44, 5 figs. Abstracted translation of paper "A Contribution to the Study of the Cutting of Steel by Means of Oxy-Acetylene Flame and a Jet of Oxygen," read at 8th Int. Acetylene and Welding Congress, giving summary of principal results.

OXY-ACETYLENE WELDING

[See also AUTOGENOUS WELDING.]

Aluminum. Gas Welding Aluminum, S. W. Miller. Am. Welding Soc.—Jl., vol. 3, no. 3, Mar. 1924, pp. 44-50, 2 figs. Flux used, welding without flux, procedure in welding, character of flame, preheating, manipulation of welding rod and torch, etc.

Applications. Welding and Its Applications (La soudure et ses applications). Revue de l'Ingenieur, Feb. 1924, 128 pp., 186 figs. Series of articles by different authors dealing with production of oxygen and acetylene; apparatus used in oxy-acetylene and electric welding; micrographic study of seams; electric resistance welding; examining autogenous seams by means of X-rays; welding of aluminum; autogenous welding in naval construction, coppersmith's work, automobiles, gas holders, railroad shops, underground conduits, etc.

Automobile Bodies. All-Steel Automobile Bodies, J. W. Meadowcroft. Welding Engr., vol. 9, no. 9, Sept. 1924, p. 24. Discusses oxy-acetylene, electric, and other processes used; many advantages claimed for all-welded bodies; lightness, strength, and smooth finish.

Boilers. Rules of the French Associations of Steam Boiler Users for Repairing Boilers by Means of Autogenous and Electric Welding (Recommandations relatives aux réparations de chaudières à vapeur par soudure au chalumeau on à l'arc électrique). Associations Françaises de Propriétaires d'Appareils à Vapeur—Bul., vol. 5, no. 16, Apr. 1924, pp. 91-97. Rules covering repairs permissible, choice of material, and kind of welding, carrying out welds, tests.

See also BOILERS, Autogenous Welding.

Brass. The Oxy-Acetylene Torch on Brass Work, D. Baxter. Am. Blacksmith & Motor Shop, vol. 23, no. 2, Feb. 1924, pp. 17-18 and 25, 5 figs. Peculiarities in action of brass under heat that must be considered when applying torch flame, and just how to work brass with gas torch.

Cast-Iron Pipe, Bronze Welding of. A New Field for the Oxy-Acetylene Process. Acetylene Jl., vol. 25, no. 11, May 1924, pp. 533-536, 9 figs. Bronze welding of cast iron pipe. Bronze welding overcomes practically all of the difficulties of preheating in the field and enables construction of cast-iron lines upon an economic basis.

An Unusual Test of Bronze Welding in Cast Iron Pipe. Acetylene Jl., vol. 26, no. 4, Oct. 1924, pp. 176 and 180, 2 figs. Describes test made to determine strength of a bronze welded joint in an 18-in. cast-iron artesian well casing.

Bronze Welding of Cast Iron Pipe, H. R. Swartley. Acetylene Jl., vol. 26, no. 6, Dec. 1924, pp. 274-277, 4 figs. General discussion of process of bronze welding and recommendations for field application covering sizes of pipe and classes of service.

Welding Cast Pipe with Bronze, H. Y. Carson. Iron Trade rev., vol. 75, no. 2, July 10, 1924, pp. 97-98, 2 figs. In method developed by author for welding cast iron, an ordinary welding rod of tobin bronze is used, joint being preheated by playing an oxy-acetylene flame back and forth transversely across joint

area; bronze rod is melted and allowed to flow along joint, spreading about one inch in width entirely around pipe. Only moderate temperatures required. Abstract of paper read before Nat. Gas Assn. Am. See also Foundry, vol. 52, no. 12, June 15, 1924, pp. 469-470, 2 figs.

Chemical Engineering Processes Equipment. Oxy-Acetylene Welding in the Process Equipment Field. Chem. & Met. Eng., vol. 31, no. 9, Sept. 1, 1924, pp. 341-346, 9 figs. Some examples of spread of this method for fabrication and repair of apparatus used in chemical engineering industries.

Efficiency. Present State of Autogenous Welding and Cutting of Metals (L'état actuel de la soudure autogène et du découpage des métaux), M. R. Thomas. Société des Ingénieur Civils de France—Mémoires et Compte Rendu des Travaux, vol. 77, no. 1-2-3, Jan.-Mar. 1924, pp. 182-201, 6 figs. Discusses methods of assembling and welding, welding rods, cutting, equipment, etc.

Gas Holders. See GAS HOLDERS, Oxy-Acetylene Welding.

Heavy Plate. Fabricating Heavy Plate by Oxy-Acetylene Welding. Boiler Maker, vol. 24, no. 3, Mar. 1924, pp. 63-67, 19 figs. Construction of two 1000-barrel oil-storage tanks, 125-ft. rotary kiln, and 50,000-cu. ft. gas holder.

Iron Castings. See IRON CASTINGS, Welding.

Iron Conduit Yokes. Welding Large Iron Castings with the Oxyacetylene Torch. Elec. Ry. Jl., vol. 63, no. 7, Feb. 16, 1924, pp. 245-246, 3 figs. The successful welding of conduit yokes by New York & Harlem R. R.; castings are heated with gas while they are being welded and afterward cooled slowly in annealing ovens; cost of reclaimed yoke one-sixth price of new one.

Locomotive Cylinders. See CYLINDERS, Locomotive, Welding.

Locomotive Fireboxes. Welding on Copper Fireboxes of Locomotives, J. F. Springer. Ry. Mech. Engr., vol. 98, no. 5, May 1924, pp. 293-294. Successful results obtained in Europe with oxy-acetylene torch and special filler rods.

See also LOCOMOTIVE BOILERS, Fireboxes.

Manganese Steel. Welding of Manganese Steel, S. W. Miller. Acetylene Jl., vol. 26, no. 2, Aug. 1924, pp. 65-71, 14 figs. Preliminary report of Gas Welding Committee of Am. Bur. Welding. Discusses what happens during welding of manganese steel, how actual operation may be best conducted and what structural results of welding are in both base metal and weld.

Medium High-Carbon Steel. Autogenous Welding. Ry. & Locomotive Eng., vol. 37, no. 7, July 1924, pp. 202-204, 4 figs. Investigation on steel of axles and wheels that fall under classification of medium high-carbon steel; rolled steel wheels, couplers, low-carbon steel, wrought iron, cast iron, cast-iron wheels, non-ferrous metal and torch cutting.

Methods. Cutting Manufacturing Costs by Means of the Oxy-Acetylene Blowpipe, Geo. E. Hagemann. Mgmt. & Administration, vol. 8, no. 5, Nov. 1924, pp. 509-512, 10 figs. Examples of work, based on data and photographs furnished by Linde Air Products Co.

Monel Metal. The Autogenous Welding of Monel Metal by the Oxy-Acetylene Process. Machy. (Lond.), vol. 24, no. 617, July 24, 1924, pp. 528-530, 12 figs. Discusses properties of monel metal, pressure of blowpipe, oxy-acetylene welding of rods, bars, sheets, plates and castings, and gives examples.

Non-Ferrous Metals. Oxyacetylene Welding of Non-Ferrous Metals, A. S. Kinsey. Am. Welding Soc.—Jl., vol. 3, no. 6, June 1924, pp. 27-51, 8 figs. Describes oxy-acetylene welding of copper, brass, bronze, aluminum, monel metal, nickel, and lead. Bibliography.

Plumbing and Heating Work. Welding in Plumbing and Heating, H. E. Wetzell. Welding Engr., vol. 9, no. 8, Aug. 1924, pp. 17-18, 3 figs. Work done in place with oxy-acetylene cutting and welding; joints, connections and special fittings economically welded.

Pressure Vessels. An Investigation of Welded Pressure Vessels. Am. Welding Soc.—Bul. no. 5, June 1924, 152 pp., 120 figs. Report of Pressure Vessel Committee of Am. Bur. of Welding covering recommendations to A. S. M. E. Boiler Code Committee, comments on construction, design, hydrostatic hammer test, welding wire, tests of welded specimens, marking and stamping, etc.

Railway Shops. Report on Autogenous and Electric Welding. Ry. Rev., vol. 75, no. 4, July 26, 1924, pp. 125-133, 23 figs. Gives results of investigations with reference to building up flat spots on steel and steel tired wheels, building up of worn collars at journal ends of axles, and welding of fractures in couplers; recommendations affecting gas and electric welding limits and regulations of report for 1919.

Welding Equipment in a Railroad Shop, J. S. Heaton. Ry. Mech. Engr., vol. 98, no. 7, July 1924, pp. 430-433, 6 figs. Modern tools should be provided so that operator may perform more accurate and efficient work.

Rotary Kilns and Coolers. Largest Oxy-Acetylene Welded Equipment Ever Built, R. R. Orwig. Acetylene Jl., vol. 25, no. 7, Jan. 1924, pp. 325-328, 6 figs. Experiences in oxy-acetylene welding of 8-ft. by 125-ft. rotary kilns and 5-ft. by 50-ft. coolers, installed at plant of Union Carbide Co., by Reeves Bros. Co. of Alliance, Ohio.

Structural Work. Oxy-Acetylene Welding and Cutting in the Structural Field, G. O. Carter. Am. Welding Soc.—Jl., vol. 3, no. 11, Nov. 1924, pp. 13-17, 4 figs. Considers several phases of situation of possibility of making a welded joint instead of a riveted connection; factors in making of good oxy-acetylene welds; use of bronze filler rods in place of steel in structural steel construction.

Tanks. Production Welding with Automatic Welding Machines. Acetylene Jl., vol. 26, no. 4, Oct. 1924, pp. 172-175, 5 figs. Discusses oxy-acetylene machine welding as applied to underground storage and other tanks.

Torch Uses. Variety of Torch Uses, C. W. Geiger. Welding Engr., vol. 9, no. 7, July 1924, pp. 22-25, 11 figs. Largest industrial firms on Pacific Coast use torch in many different and profitable ways.

Welders, Training. Training Course for Oxy-Acetylene Welders. Am. Welding Soc.—Bul. no. 4, Apr. 1924, 29 pp. Report of Committee on Training of Welding Operators of Am. Bur. of Welding.

OXYGEN

Cylinders for, Manufacture. The Manufacture of "Shelby" Seamless Steel Cylinders, J. L. Smith. Acetylene Jl., vol. 25, no. 7, Jan. 1924, pp. 329-332, 9 figs. Details of "cupping" method for manufacture of oxygen cylinders, accessory of oxy-acetylene welding and cutting equipment.

Electrolytic Generation. Catalytic Electrolytic Generation of Oxygen, C. G. Fink. Indus. & Eng. Chem., vol. 16, no. 6, June 1924, pp. 566-567. Deals primarily with anodes that form protective film electrolytically.

Production of Oxygen Through Electrolytic Decomposition of Water (Gewinnung des Sauerstoffs durch elektrolytische Zersetzung des Wassers), T. Kautny. Autogene Metallbearbeitung, vol. 16, no. 24, Dec. 15, 1923, pp. 299-307, 14 figs. De-

scribes electrolytic plants and apparatus constructed by Schuckert & Co., and others.

Extraction from Atmosphere. A New Process for Extraction of Oxygen from Atmospheric Air (Eine neues Verfahren zur Gewinnung des Sauerstoffs aus der atmosphärischen Luft), Autogene Metallbearbeitung, vol. 17, no. 5, Mar. 1, 1924, pp. 63-67, 2 figs. Describes device used; a rotating magnetic field is main agent used for the purpose.

Liquefaction Production Process. Economical Plant for Producing Oxygen by the Liquefaction Process, A. G. Wikoff. Chem. & Met. Eng., vol. 30, no. 5, Feb. 4, 1924, pp. 181-184, 5 figs. Describes process and points out its economic advantages.

Liquid. See EXPLOSIVES, Liquid Oxygen; LIQUID OXYGEN.

Manufacture. See HYDROGEN, Manufacture.

Metallurgical Uses. Some Applications of Oxygen to Ferrous Metallurgy, F. W. Davis. Iron & Steel Engr., vol. 1, no. 6, June 1924, pp. 339-346 and (discussion) 346-351, 2 figs. Discusses application of oxygenated air in metallurgical presses, especially iron blast furnaces and ferroalloys, and results to be expected from its use.

Oxygen Regulators. Design and Construction of Gas Regulators, E. L. Mills. Acetylene Jl., vol. 25, no. 7, Jan. 1924, pp. 336-340, 6 figs. Deals with devices for regulating pressure and volume of gas in cylinder (as used by oxy-acetylene and oxy-hydrogen industries) up to torch.

Production and Uses. Production and Technical Use of Oxygen (Ueber die Gewinnung und technische Verwendung von Sauerstoff), B. Simmersbache. Wärme- u. Kälte-Technik, vol. 26, nos. 19, 20 and 22, Oct. 1, 15, and Nov. 15, 1924, pp. 181-182, 189-190, and 208-209. Reviews developments and patent literature, especially of liquid oxygen.

Uses in Cutting Metals. See CUTTING METALS.

OZONE

Cold Storage and. See COLD STORAGE, Ozone in.

Industrial Applications. The Industrial Applications of Ozone, F. E. Hartman. Am. Soc. Heat. & Vent. Engrs.—Jl., vol. 30, no. 11, Nov. 1924, pp. 711-727, 8 figs. Data on production of ozone; ozonizer design; ozone in water purification, ventilation applications, use in bleaching operations, effect on linseed oil, etc.

Preparation and Uses. Ozone and Its Technical Applications, N. B. Lewis. Chem. Eng. & Min. Rev., vol. 16, no. 183, Dec. 5, 1923, pp. 105-107. History, occurrence, modes of preparation, preparation of pure ozone, properties, and uses.

Ozone (Ueber Ozon), G. M. Schwab. Zeit. für Physikalische Chemie, vol. 109, June 25, 1924, pp. 599-625, 6 figs. Discusses production of pure ozone; results of experiments show that liquid ozone and liquid oxygen are not miscible in all ratios.

Ventilation, Use in. Ozone and Its Use in Ventilation, F. E. Hartman. Am. Soc. Heating & Vent. Engrs.—Jl., vol. 30, no. 5, May 1924, pp. 365-382, 6 figs. Constitution of ozone; production; oxides of nitrogen; chemical properties of ozone; mechanical, or artificial, ventilation; temperature control; humidity control; air movement; odors; physiological effects; quantitative application.

OZONIZERS

High-Frequency Oscillations in. High-Frequency Oscillations in Siemens Ozonizers (Ueber Messungen an Ozonröhren), E. Warburg. Zeit. für technische Physik, vol. 5, no. 5, 1924, pp. 165-169, 1 fig. Gives particulars of measurements made with ozonizers of several diameters at frequencies of 50 to 500 when potential, resistance, and gas feed were varied.

P

PACKING

Boxes for. See BOXES.

Crate Design. Eleven Packing Problems and How They Were Solved, H. N. Knowlton. Factory, vol. 33, nos. 4 and 5, Oct. and Nov. 1924, pp. 515-519, 590 and 592, 15 figs.; and 662-664, 6 figs. Author gives his experience in redesigning crates for forge-manufacturing company; crating of telephone apparatus; crating heavy articles, such as automobiles, stoves, etc.

Refrigerating Machines. See REFRIGERATING MACHINES, Packing for.

PAINTING

Cars and Locomotives. Standards for Painting Cars and Locomotives. Ry. Mech. Engr., vol. 98, no. 5, May 1924, pp. 272-274. (Abstract.) Committee report submitted before Am. Ry. Assn., Equipment Painting Div.

The Possibilities of Mechanical Painting, J. W. Gibbons. Ry. Mech. Engr., vol. 98, no. 6 June 1924, pp. 360-362, 5 figs. Handicaps which have been overcome; increased protection of equipment against corrosion or decay.

Field Structures. How Should Field Structures Be Painted? Contract Rec. & Eng., vol. 38, no. 2, Jan. 9, 1924, pp. 26-29. Formulas for whitewash and cold water paints that may be used by contractors for either interior or exterior painting of field offices, bunk houses, camp structures, and similar buildings.

Industrial Plant Practice. Modern Maintenance of Plant and Equipment, Wm. G. Zeigler. Indus. Mgmt. (N. Y.), vol. 67, no. 1, Jan. 1924, pp. 24-31, 11 figs. Discusses paint and its manifold uses.

Standardization of Painting Practice, R. C. Sheeler. Indus. Mgmt. (N. Y.), vol. 68, no. 1, July 1924, pp. 25-28, 5 figs. Extremes of moisture or steam cause all metal surfaces to rust and corrode with extreme rapidity; other surfaces come in contact with gaseous fumes, weak acid vaports, etc. Much money wasted and much good paint condemned through use of wrong material for protective coat to withstand such contact. Discusses application of standardization to maintenance of plant and equipment through proper use of paint and varnish.

Iron and Steel. See IRON AND STEEL, Painting.

Ships. The Use of Paint at Sea. Pac. Mar. Rev., vol. 21, no. 7, July 1924, pp. 371-372 and (advt. sec.) 41 and 44, 1 fig. Analysis showing types of paint best adapted for various portions of hull and best methods of applying same.

PAINTS

Aluminum. Some Observations on Aluminum Paints, P. H. Walker and E. F. Hickson. Chem. & Met. Eng., vol. 31, no. 18, Nov. 3, 1924, pp. 693-696, 12 figs. Tests showing how and when aluminum paints can be used most satisfactorily.

Aluminum and Bronze Powders for. See ALUMINUM, Powders, Manufacture.

Cadmium, Use in. See CADMIUM, Application of.

Colloidal Lead Suspension. A New Lead Paint, R. Ditmar. Chem. & Met. Eng., vol. 31, no. 20, Nov. 17, 1924, p. 775. Colloidal suspension of metallic lead in linseed oil forms effective protective coating; material is being marketed in Europe under name of Subox; when applied to iron, metals, wood, cardboard, cement, etc., it is claimed that firmly adhering film of metallic lead is obtained on coated material after suspension agent has become dry.

Colloidal Reaction, Effect of. Phenomena in Paints and Varnishes Induced by Colloidal Reactions, H. A. Gardner. Paint Mfrs.' Assn. of U. S.—Sci. Section, no. 200, Mar. 1924, pp. 279-293. Wetting and grinding phenomena; texture of pigments; absorption phenomena; plasticity and yield value; electrical charge on pigments; viscosity and surface-tension effects, etc.

Fire-Resisting. Protection Against Fire (Vorbeugender Feuerschutz), Schrüffer. Schiffbau, vol. 25, no. 30, Dec. 24, 1924, pp. 885-887, 3 figs. Details of tests made by Berlin Materialprüfungsamt with gronid, a protective paint of high fire-resisting properties.

Heat-Absorption-Reducing. Paints of High Luminosity to Reduce Refrigeration Losses, H. A. Gardner and H. C. Parks. Paint Mfrs.' Assn. of U. S. Sci. Sec.—Circular no. 213, Sept. 1924, pp. 82-84, 2 figs. Suggests use of white or light tints for refrigerating cars or ships to reduce heat absorption.

Heat-Insulation Value of. Insulation Value of Paint and Its Effect in Reducing Condensation, H. A. Gardner. Paint Mfrs.' Assn. of U. S., Sci. Sec.—Circular no. 212, Sept. 1924, pp. 80-81, 1 fig. Shows insulating power by metal pipes carrying cold water in warm room, painted parts of which show no condensation.

Luminous. Luminous Paints and Their Technical Use (Radioaktive Leuchtfarben und ihre technische Anwendung), M. Wolf. Licht u. Lampe, no. 12, June 5, 1924, pp. 311-314, 8 figs. Discusses radio, radio-thorium, and mesothorium luminous paints and their many applications.

Metal-Protective. Paints for Metals, H. A. Gardner. Paint Mfrs.' Assn. of U. S.—Circular no. 202, Apr. 1924, pp. 302-327, 10 figs. Review of tests with suggestions regarding design and use of metal protectives.

Pigments. See PIGMENTS.

Pigments and Varnish in, Action of. Action of Pigment and Varnish in Paints for Protection from Rust (Ueber die Wirkung von Farbkörper und Firnis in Rostschutzfarben), P. Herrmann. Zentralblatt der Bauverwaltung, vol. 44, nos. 47 and 48, Nov. 19 and 26, 1924, pp. 411-414 and 421-422, 8 figs. Details of tests carried out with varnishes showing that linseed oil without pigment gives no protection whatever; pigments must be insoluble in water; red lead, zinc white, talcum, white lead, kaolin and iron mica are practically waterproof.

Protective Properties. The Protective Properties of Paint, W. T. Pearce. Chem. & Met. Eng., vol. 30, no. 12, Mar. 24, 1924, pp. 463-467, 10 figs. Scientific investigations at North Dakota Agricultural College; formulation of test paints; factors affecting durability.

Railway Buildings. Paints for Railway Buildings. Ry. Rev., vol. 74, no. 11, Mar. 15, 1924, pp. 557-559. Appendix C, report of Buildings Committee of Am. Ry. Eng. Assn. presented for approval for publication in manual.

Red Lead. Some Observations on Red Lead as a Paint Pigment, E. F. Hickson and H. R. Snoke. Paint Manufacturers' Assn. of U. S., Sci. Sec.—Circular no. 207, July 1924, pp. 47-60, 6 figs. Discusses flow test used in conjunction with brush test for determining painting qualities of red lead.

Rust-Preventive. Paint as a Rust Preventative, R. C. Sheeler. Indus. Mgmt. (N. Y.), vol. 68, no. 4, Oct. 1924, pp. 229-232, 3 figs. Importance of right kind of paint for iron and steel surfaces.

Sulphide-Fumes-Resistant. Paints Resistant to Sulfied Fumes, P. H. Walker and E. F. Hickson. Indus. & Eng. Chem., vol. 16, no. 11, Nov. 1924, pp. 1142-1143. Results of investigation of 25 paints subjected to tests.

Varnishes. See VARNISHES.

White. The Effect of Inert Fillers upon the Properties of White Paint: Development of a Paint for Plant Purposes, S. W. Ross. Australasion Inst. Min. & Metallurgy—Proc., no. 53, Mar. 31, 1924, pp. 1-14, 16 figs. Investigation to determine best combination of pigments and fillers for use as outside white paint on plant buildings.

White-Lead Manufacture. A Typical Problem in Chemical Engineering Development, J. H. Calbeck. Chem. & Met. Eng., vol. 31, no. 24, Dec. 15, 1924, pp. 920-924, 12 figs. Difficulties solved in developing commercial process that greatly improved quality and output of sublimed white lead.

Manufacture of White Lead (Fabrication de la Céruse), N. Chercheffsky. Chimie & Industrie, vol. 11, no. 1, Jan. 1924, pp. 45-48. Observations on the Dutch process; average yield of white lead is about 50 per cent of gross weight of lead taken; under abnormal conditions it may be as low as 27 to 28 per cent, but under favorable conditions it may attain 67 to 68 per cent.

White-Lead Substitutes. White Lead Substitutes (Ueber Bleiweissersatzmittel), J. F. Sacher. Zeit. für angewandte Chemie, vol. 37, no. 38, Sept. 18, 1924, pp. 732-735. Advantages of white lead. Discusses basic lead chloride, titanium white, zinc oxide, lithopone, and Hessian white, consisting of 81.23 per cent lithopone and 17.65 per cent zinc oxide, as substitutes.

Wood Preservatives. See WOOD PRESERVATION, Paint as Preservative.

PANAMA CANAL

[See also CANALS, Panama; FLOODS, Panama Canal.]

Salinity of. Salt Water Climbs the Locks of the Panama Canal, R. Z. Kirkpatrick. Eng. News-Rec., vol. 92, no. 22, May 29, 1924, pp. 935-936, 1 fig. Up-lockage brings seawater into Miraflores Lake; tests of salinity; conditions controlling increase.

PAPER

Abrasive. See ABRASIVES, Papers and Cloths.

Analysis of. Analysis of Coated Papers. Paper, vol. 34, no. 2, May 1, 1924, pp. 48-51. Methods available to paper chemists for ready determination and estimation of binding materials and surface coatings used in manufacture of coated paper.

Rapid Analysis of Paper. Paper, vol. 33, no. 25, Apr. 10, 1924, pp. 11-12, and vol. 34, no. 3, May 8, 1924, pp. 87-89. Factors that influence character of paper in beating process; determination of degree of sizing in paper; tests for rosin in paper fibers. Necessary conditions in analysis of sizing substances and description of methods employed. From Moniteur de la Papeterie Française.

Cellulose, Electrical Properties of. The Electrical Properties of Various Cellulose Papers (Ueber einige elektrische Eigenschaften verschiedener Zellulose-Papiere), U. Retzow. Kunststoffe, vol. 14, no. 2, Feb. 1924, pp. 20-24, 3 figs. Simple

method for testing electrical properties of papers. Influence of humidity and paraffin impregnation emphasized.

Inkfastness Testing. Testing Inkfastness of Paper, N. A. Stephens. Paper, vol. 34, no. 25, Oct. 9, 1924, pp. 1142-1144, 3 figs. Methods for testing degree of sizing or determining inkfastness of paper, with account of a new electrolytic apparatus.

Insulating. Some Notes on Insulating Papers, A. I. Macnaughton. Instn. Elec. Engrs.—Jl., vol. 62, no. 335, Nov. 1924, pp. 929-931, 4 figs. Manufacture of paper; paper machine; insulating papers; dry-core cables for telephone work.

See also INSULATING MATERIALS, ELECTRIC, Paper, Bakelized; Varnish Paper.

Machinery. See PAPER MACHINERY.

Manufacture. See PAPER MANUFACTURE.

Sizing-Quality Destruction. The Destruction and Restoration of Sizing Quality in Paper, N. D. Ivanov. Paper Trade Jl., vol. 79, no. 2, July 10, 1924, pp. 41-44, 10 figs. Details of experiments made in connection with phenomenon of destruction of sizing quality by sunlight. Translated from Bumazhnaia Promyshlenost (Russian).

Testing. Discussion of Standard Atmospheric Conditions for Paper Testing, R. O. Reed. Paper Trade Jl., vol. 78, no. 9, Feb. 28, 1924, pp. 45-46.

Testing Waterproofed Paper, F. T. Carson. Paper Trade Jl., vol. 79, no. 10, Sept. 4, 1924, pp. 48-50, 2 figs. Describes common methods of testing water resistance, and proposes new method which employs a ground glass surface to hold transuded moisture in a film which is plainly visible since it renders glass more transparent at that point. Pub. by permission U. S. Bur. Standards.

The Testing of Paper, E. O. Reed. Paper, vol. 35, no. 7, Dec. 4, 1924, pp. 269-272. Effect of temperature and relative humidity on folding endurance of paper, with a discussion of testing conditions.

PAPER INDUSTRY

Lubrication in. Lubrication in the Paper Industry. Lubrication, vol. 10, nos. 10 and 11, Oct. and Nov. 1924, pp. 109-120 and 121-122, 37 figs. Oct.: Preparation of raw product. Nov.: Conversion of pulp to paper.

Power Regulations. Power Factor Correction and Regulation as Applied to the Pulp and Paper Industry, W. W. Spratt. Paper Mill, vol. 48, no. 29, July 19, 1924, pp. 4-9 and 50, 10 figs. Discusses power factor in relation to various plants; selection of motors for mills, machines to be driven, and horsepower ratings, and speeds.

Sweden. The Development of the Swedish Pulp and Paper Industrie (Die Entwicklung der schwedischen Holzschliff-, Zellstoff- und Papierindustrien), Fr. Grewin. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 14, Apr. 5, 1924, pp. 343-347. Sweden's role in modern development of paper manufacture; most important manufacturing processes; progress in Swedish paper industry; production of Swedish pulp, cellulose, and paper industry.

Water Power. Water Power in Pulp and Paper Industry in Canada. Eng. Wld., vol. 25, no. 2, Aug. 1924, pp. 69-72, 1 fig. Low cost power essential to industry; general conditions in each province; construction activities; future power requirements of industry.

PAPER MACHINERY

Beaters. Beating and Refining Engine. Paper, vol. 34, no. 20, Sept. 4, 1924, pp. 899-900, 2 figs. Describes combined beating and refining engine invented by Sheldon Leicester, designed to produce a continuous flow of stock, beaten as to length, hydration, and flexibility (1) by regulating speed of motor, (2) by set of bedplates, and (3) by dilution of stock.

Shartle Continuous Beater. Paper, vol. 34, no. 2, May 1, 1924, pp. 38-39, 8 figs. Describes new invention providing a battery of beaters for continuous operation in combination with raw stock breaker for manufacture of paperboard.

Calenders. Hardness of Paper Rolls in Calenders. Paper, vol. 34, no. 13, July 17, 1924, pp. 563-564, 1 fig. Good glazing effects influenced by hardness of paper rolls; mathematics of pressure exerted on them.

Driers. Caterpillar Paper Dryer, J. W. Brassington. Paper, vol. 34, no. 25, Oct. 9, 1924, pp. 1135-1137, 1 fig. General characteristics and advantages claimed for new type of dryer in which water is boiled out of paper between felt surfaces. Cylindrical surfaces of standard paper machine dryer are replaced by straight line heating surfaces.

The Vacuum Paper Machine Dryer, O. Minton. Paper, vol. 33, no. 26, Apr. 17, 1924, pp. 5, 52-54, 56, 58, 60-62 and 64, 11 figs. Detailed description of Minton drier and its operation. See also Paper Mill, vol. 48, no. 15, Apr. 12, 1924, pp. 90, 92, 94, etc.

Finishing-Room Machinery. Finishing Room Machinery, O. C. Cordes and W. W. Spratt. Paper, vol. 34, no. 10, June 26, 1924, pp. 422-425, 8 figs. Describes and illustrates operation of calender drives, platers and cutters by Westinghouse dual-frequency system.

Newsprint Machines. Anti-Friction Bearings on High-Speed Newsprint Machines, G. H. Spencer. Paper Trade Jl., vol. 78, no. 22, May 29, 1924, pp. 46-49, 11 figs. See also Wood Pulp News, vol. 48, no. 23, June 7, 1924, pp. 16, 18, and 38, 8 figs. Fundamentals of plain and of anti-friction bearings; and advantages of anti-friction bearings.

High Speed Machine Construction, E. J. Neese. Paper, vol. 34, no. 10, June 26, 1924, pp. 428-431. Increased width and speed of newsprint machines bring many improvements in design and construction.

Newsprint Production. Electrician, vol. 92, no. 2396, Apr. 18, 1924, p. 485, 2 figs. Describes 164-in. high-speed electrically driven paper machine built by Gagley and Sewall Co. and equipped with Westinghouse sectional drive.

The Modern News Print Machine, A. N. Russell. Paper Mill, vol. 48, no. 22, May 31, 1924, pp. 26, 28, and 30. Discusses recent improvements, including Fourdriniers, improvements in press sections and in dryer section, etc.; advantages to be derived from driving paper machines by sectional electric drive.

Types. Paper-Making Machines, M. Wintermeyer. Eng. Progress, vol. 5, no. 12, Dec. 1924, pp. 255-260, 6 figs. Newspaper machines with high-pressure feed of material and withdrawable strainer section; machines for fine papers, medium fine papers, and papers with one-sided gloss; automatic delivery machines; round strainer machines; long strainer pasteboard machines.

Wood Grinders. Development in Wood Grinders Towards Achieving Highest Efficiency in Producing Mechanical Pulp, O. J. Goeppinger. Paper Trade Jl., vol. 78, no. 2, Jan. 10, 1924, pp. 43-48, 13 figs. Review of history of wood pulp grinding; construction and operation of caterpillar grinder; various methods of pulp grinding and their relation in producing uniform pulp; advantages of continuously operating grinders.

How Caterpillar Grinders Operate. Paper, vol. 34, no. 12, July 10, 1924, pp. 516-517, 8 figs. Essential features of magazine wood grinder invented by P. Priem, Heidenheim, Germany, which is now owned and controlled by Am. Voith Con-

tact Co., Inc., New York. Endless-chain device presses wood laterally as it nears stone, and feed mechanism is driven by fluid motor.

Magazine Grinders and Continuous Grinders (Magazinschleifer und stetige Schleifer), F. Hoyer. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 29, July 19, 1924, pp. 757-750, 7 figs. Discusses high power magazine grinders, continuous grinders in which wood is fed without interruption, improvement on magazine grinder, produced by J. M. Voith in Heidenheim.

New Type Magazine Grinder. Paper, vol. 34, no. 26, Oct. 16, 1924, pp. 1188-1193, 13 figs. Describes new magazine grinder invented by J. J. Warren, of Brownville, N. Y., believed to be improvement on previous forms.

PAPER MANUFACTURE

Beating. New Ideas on Beating, J. W. Brassington. Paper, vol. 34, no. 11, July 3, 1924, pp. 461-464, 3 figs. More speed and less weight of rolls is suggested in describing new type of beater using centrifugal force.

Simplicity in Research, A. B. Green. Paper, vol. 33, no. 25, Apr. 10, 1924, pp. 6-10, 6 figs. Study of beater action of effect of beater roll on pulp; control of variable of beating and measurement of its progress by use of beater drag.

Bibliography. Bibliography of Papermaking for 1923, compiled by C. J. West. Paper Trade Jl., vol. 78, nos. 17, 18, 19, 20, 21, 22, 23, 24, and 25, Apr. 24, May 1, 8, 15, 22, 29, June 5, 12, and 19, 1924, pp. 52-54, 49-54, 53-56, 49-52, 45-47, 51-52, 55-57, 45-46, and 41-43.

Bleach Requirements of Pulp. Determination of the Chlorine Absorbed by Unbleached Sulfite Pulp, R. B. Roe. Indus. & Eng. Chem., vol. 16, no. 8, Aug. 1924, pp. 808-811, 1 fig. Apparatus and method used in determination of chlorine as absorbed by wide range of unbleached sulphite pulps.

Bleaching Beaters. Function of the Washing Drum, Haas. Paper, vol. 34, no. 11, July 3, 1924, pp. 471-475, 6 figs. Determines consumption of energy and best method of operating washing drum of bleaching beater. Translated from Papierfabrikant.

Cardboard. Fine Cardboard Making, H. Postl. Paper, vol. 34, no. 23, Sept. 25, 1924, pp. 1043-1045. Furnishes and processes for ivory and alabaster cardboards used in German mills, with notes on adhesives and drying methods.

Cellulose. See CELLULOSE.

Chromo Paper. Special Moistening of Chromo Paper, E. Arnould. Paper Trade Jl., vol. 78, no. 14, Apr. 3, 1924, pp. 79-80. Notes on manufacture of chromo paper; moistening of paper as it is being reeled. Translated from Revue Universelle de la Papeterie et de l'Imprimerie.

Clay as Filler. Comparison of American and Foreign Clays as Paper Fillers, M. B. Shaw and G. W. Bicking. U. S. Bur. Standards—Technologic Papers, no. 262, Aug. 20, 1924, pp 337-380, 23 figs. Results of study as to amount of clay retained in paper, quality of paper produced, and those physical properties of clay that might affect paper-manufacturing processes. Bibliography.

Colloids and. Colloids and Papermaking, R. Fourner. Paper, vol. 34, no. 11, July 3, 1924, pp. 477-480. General principles in their relation to physico-chemical phenomena observed in manufacture of paper.

Decayed-Wood Utilization. Decayed Wood for Sulphite Pulp, J. D. Rue, R. N. Miller and C. J. Humphrey. Paper Trade Jl., vol. 78, no. 4, Jan. 24, 1924, pp. 45-50, 8 figs. Report of results obtained at U. S. Forest Products Laboratory, dealing with determination of utility of wood as found. Description of wood samples and of types of decay represented; preparation of wood for pulping, conditions of pulping, and other pulping data; properties of woods and their relation to pulping value.

Drying. Drying Paper, F. C. Stamm and E. P. Gleason. Paper Trade Jl., vol. 78, no. 21, May 22, 1924, pp. 54-56, 5 figs. Discusses drying methods in use today and brings out factors affecting drying; simple method of detecting some of the faults most commonly found.

Drying Paper, O. Minton. Paper Trade Jl., vol. 78, no. 7, Feb. 14, 1924, pp. 53-59, 4 figs. Evaporation temperature; finding heat values; rate of drying; thermal efficiency; vacuum drying; number of driers required; etc.

Drying Paper in a Vacuum, T. J. Keenan. Paper, vol. 34, no. 16, Aug. 7, 1924, pp. 699-701, 2 figs. Describes operation of Minton vacuum paper machine dryer at So. Norwalk, Conn. (Norwalk Co.), paper being dried in 28 in. vacuum.

Methods of Drying Paper, T. J. Keenan. Paper, vol. 34, no. 10, June 26, 1924, pp. 427-428. Principles of drying by steam-heated drums and review of recent novelties and difficulties caused by faulty ventilation.

Paper Drying Tests. Paper Trade Jl., vol. 79, no. 9, Aug. 28, 1924, pp. 52-54, 6 figs. Results of tests made by a number of paper mills based on Drying Code, which has been compiled by Paper Drying Committee of Tech. Assn. Pulp & Paper Industry in coöperation with a similar committe of Can. Tech. Sec.

Principles of Paper Drying, W. F. Goldsmith. Paper, vol. 34, no. 23, Sept. 25, 1924, pp. 1050-1051 and 1053. Results of investigations and tests made at mill of Pejepscot Paper Co., Pejepscot, Me. Influence of free and slow stock in preliminary extraction of water; importance of keeping dryers clean and functioning properly.

Fiber Board. Fiber Board Manufacture, R. H. Harding. Paper, vol. 33, no. 13, Jan. 17, 1924, pp. 7-10. Character of raw material used in making leather substitute; technical details of sorting, cooking, beating, etc.; sized with rosin and colored with pigments, ochers, and oxides.

Fillers. New Ideas on Paper Fillers, H. P. Biedermannsdorf. Paper, vol. 33, no. 12, Jan. 10, 1923, pp. 13-14. Use of starches; asbestos; blance fixe; gypsum; use of brilliant white; kaolin; chalk; magnesium carbonate; etc.

See also Clay as Filler.

Fire-Killed Wood, Pulping Qualities of. Pulping Qualities of Fire-Killed Wood. Paper Trade Jl., vol. 79, no. 19, Nov. 6, 1924, pp. 47-51, 3 figs. Describes work undertaken to obtain data on effect of fire killing on pulping qualities of wood, and probable difficulties which might arise in commercial utilization of this material. Results of cooking experiments with fire-killed spruce and balsam fir.

Flax Straw for. Flax Straw for Papermaking, J. De Rue, S. D. Wells and E. R. Schaefer. Paper, vol. 34, no. 23, Sept. 25, 1924, pp. 1037-1042, 3 figs. See also Paper Trade Jl., vol. 79, no. 13, Sept. 25, 1924, pp. 45-50, 3 figs., and Paper Mill, vol. 48, no. 39, Sept. 27, 1924, pp. 26, 28, 30, 32, and 38. Admirably adapted for making various high-grade papers. Location of flax-growing areas in United States; composition of straw; disintegrating methods; combined chemical treatments; etc.

Flow Sheet. Pulp and Paper Manufacture Flow Sheet. Indus. & Eng. Chem., vol. 16, no. 8, Aug. 1924, pp. 806-807, 1 fig. Chart showing flow of material through essential steps in manufacture of bleached wood pulp by bisulphite process.

Furnishes. Furnishes for Various Papers, A.

Rettori. Paper, vol. 34, no. 17, Aug. 14, 1924, pp. 762-767. Selection of formulas used in French mills. Abridged translation from Papeterie, Dec. 1923-Jan. 1924.

Groundwood Testing. Methods of Testing Groundwood, J. Teicher. Paper, vol. 35, no. 9, Dec. 18, 1924, pp. 355-359, 5 figs. Explains how groundwood-mill expert tells character of mechanical pulp by chemical, physical, and microscopical tests. Translated from Zellstoff & Papier, Oct. 1924.

The Matter of Groundwood Testing, C. S. V. Hawkings. Paper, vol. 33, no. 15, Jan. 31, 1924, pp. 11-15, 8 figs. Apparatus and methods in use at paper mill of Price Bros. & Co., Ltd., Kenogami, P. Q., Canada.

Management in. See INDUSTRIAL MANAGEMENT, Pulp and Paper Industry.

Minerals and Chemicals Used. The Non-Metallic Minerals and Chemicals Usein the Pulp and Paper Industry, L. H. Cole. Can. Min. Jl., vol. 45, nos. 7, 10, and 11, Feb. 15, Mar. 7 and 14, 1924, pp. 158-160, 236-289, and 258-261, 2 figs. Indicates where the different minerals and chemicals are being obtained, process of their manufacture, and possibilities of their being procured in commercial quantities in Canada.

Names and Terms. Dictionary of Papermaking Terms. Paper, vol. 33, no. 26, Apr. 17, 1924, pp. 66-100, (18 pp.). Names and terms used in paper industry; titles and definitions of sizes and finishes of paper and paper products. Prepared by subcommittee of Committee on Simplifications of Paper Sizes appointed by Bur. Standards, in collaboration with F. A. Curtis.

Newsprint. The Manufacture of Newsprint Paper, W. C. Munro. Chem. & Industry, vol. 43, no. 2, Jan. 11, 1924, pp. 28-33, 6 figs. Cutting and driving operations; manufacture of sulphite chemical pulp—preparation of wood; digesting or cooking process; groundwood or mechanical pulp; preparation of furnish for paper machines.

Parchment Paper. Parchment Paper Processes, M. Arnould. Paper, vol. 34, no. 23, Sept. 25, 1924, pp. 1083-1085. Deals with manufacture of true parchment paper from rag stock. Tested furnishes for high-grade products and particulars of treatment in beater to produce desired stock. Translated from Papier.

Pasteboard. Paperboard and Its Manufacture, A. O. Bragg. Paper, vol. 34, nos. 10, 12, and 22, June 26, July 10, and Sept. 18, 1924, pp. 413-417, 509-513, and 987-990, 4 figs., and vol. 35, no. 5, Nov. 20, 1924, pp. 177-182, 9 figs. Historical account of development of board industry illustrated by statistics of production; description of the numerous varieties of board, terms, applications and uses of the different grades; directions for ordering as to finish, grain, kind, quality, weight and thickness, with account of commercial grades of waste paper used in manufacture of different classes of board; machinery used in all departments of a board mill with technical descriptions of their operation. Necessary considerations in purchase of paperboard, with notes on conditions that influence costs and prices.

Photographic Paper. Making Photographic Paper, E. Arnould. Paper, vol. 24, no. 4, May 15, 1924, pp. 137-140. Details of its manufacture and characteristic properties; preparation of pulps calls for extra care in preventing contamination by iron; difficulties in sizing and coating; prefererd tinting substances.

Printing Paper. Why Paper Breaks in Printing, P. J. Massey. Paper, vol. 34, no. 15, July 31, 1924, pp. 657-661. Discusses causes of splicing, also breaks from other causes such as contamination of stock with wool hairs from felts and sizal and manila fibers from sweepings around mills. Factors to be considered in selection of paper for printing.

Pulp, Decay of. Decay of Wood and Groundwood Pulp, M. W. Bray. Paper Trade Jl., vol. 78, no. 23, June 5, 1924, pp. 58-60, 3 figs. Relation of loss in weight to chemical properties.

Pulp from Waste Wood. Production of Pulp from Waste Wood (Papierhalbstoff aus Abfallholz), F. Hoyer. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 51, Dec. 20, 1924, pp. 1319-1321, 5 figs. Describes modern methods, and shows that by means of certain chemical treatments of wood, still better results can be obtained without increasing cost of production.

Pulp Manufacture. A Liquid Sulphur Dioxide Process for Sulphite Pulp—Its Application to Longleaf Pine, R. H. McKee and D. E. Cable. Paper Trade Jl., vol. 78, no. 10, Mar. 6, 1924, pp. 53-56, 2 figs. Extraction with various organic solvents; extraction with liquid sulphur dioxide; comparison of liquid sulphur dioxide extraction process with present gasoline extraction process.

Bleaching of Wood Pulp, C. E. Curran and P. K. Baird. Paper Trade Jl., vol. 79, nos. 1, 3, and 11, July 3, 17, and Sept. 11, 1924, pp. 56-58, 41-43, and 45-47, 7 figs. July 3: Factors affecting process and their control. July 17: Effect of hardness of water. Sept. 11: Effect of temperature on bleaching of sulphite pulp.

Calcium Polysulphide Pulping Process, A. Tingle. Paper, vol. 34, no. 22, Sept. 18, 1924, pp. 1000-1002. Mechanism of pulping by alkaline treatments and chemical changes involved with summary of polysulphide process.

Chemistry of the Sulphite Process, R. Sieber. Paper, vol. 34, no. 17, Aug. 14, 1924, pp. 749-752, 4 figs. Describes some recent laboratory work in determining and establishing conditions which afford a better technical control of process. From address delivered before Finnish Soc. Paper Technologists.

Chlorination Treatment of Kraft Pulp, A. Papineau-Couture. Paper, vol. 35, no. 8, Dec. 11, 1924, pp. 314-317. Review of chlorine processes of pulping with reference to Jaffard's work on bleaching of sulphite pulp by DeVains process.

Continuous Pulping Process. Paper, vol. 35, no. 6, Nov. 27, 1924, pp. 227-231, 8 figs. Describes process and device for continuous manufacture of cellulose fibers, patented in United States by French inventor, Andre Olier, combining novel washing, crushing and pressing principles by which either bleached or unbleached pulp may be produced.

De Vains Process Explained, J. Strachan. Paper, vol. 35, no. 1, Oct. 23, 1924, pp. 8-10, 1 fig. A chlorination process for treatment of straw and grasses which is now operating successfully in a number of mills. Straw is cooked with a moderate amount of caustic soda which may vary from about 8 to 12 per cent (NaOH).

Machines for Preparing Wood for Paper Manufacture (Maschinen zur Vorbereitung des Holzes zur Papierstoff-Fabrikation), A. Bezner. Maschinenbau, vol. 3, no. 30, Dec. 24, 1924, pp. 1174-1177, 5 figs. Methods of comminuting wood; economic methods for removing bark; etc.

Pentasulphide Cooking Process, V. Drewsen. Paper, vol. 34, no. 26, Oct. 16, 1924, pp. 1181-1183. Tingle's claim for novelty in polysulphide cooking and impressions concerning features of pentasulphide process refuted.

Polysulphide Pulp, A. Tingle. Paper, vol. 34, no. 15, July 31, 1924, pp. 653-654. Describes Tingle process for making strong fiber from wood waste cooked with lime and sulphur and beaten in spent sulphite liquor.

Rinman Process for Cellulose Manufacture, E. L. Rinman. Paper, vol. 35, no. 6, Nov. 27, 1924, pp. 224-226, 1 fig. Details of process, and data from commercial practice. Translated from Papier, vol. 27, Sept. 1924, pp. 1029-1033.

Soda Pulp Production, H. J. Payne. Chem. & Met. Eng., vol. 30, no. 21, May 26, 1924, pp. 817-822, 11 figs. Survey of methods and equipment, with emphasis on recent developments.

Wood Pulp, Its Manufacture and Use (La pâte de bois, sa fabrication et son utilisation), G. Lanorville. Nature (Paris), no. 2629, Aug. 23, 1924, pp. 113-117, 10 figs. Details of manufacture of mechanical wood pulp at Kaysersberg in Vosges Mountains, and equipment used.

Pulp, Measurement of. Weight of Wood and Quantity of Pulp, R. Sieber. Paper, vol. 33, no. 21, Mar. 13, 1924, pp. 7-10, 5 figs. Measuring pulpwood by weight instead of volume; amount of moisture in wood influences yield of pulp, capacity of digester being affected; results of investigations. Translated from Svensk Pappers-Tidning, 15 and 17, 1923.

Pulp, Moisture Tests for. Moisture Tests for Pulp. Paper, vol. 34, no. 10, June 26, 1924, pp. 419-420, 2 figs. Rapid methods of expressing weight of water contained in given amount of pulp or determining consistence in beater. Translated from Papeterie.

Pulp Resources. World's Pulp Resources, S. Leicester. Paper, vol. 34, no. 11, July 3, 1924, pp. 465-468. Possible substitutes for wood and available sources of supply of new papermaking fibers.

Pulp Sources. Sources of Pulp in North America, G. J. Druckerman. Paper Trade Jl., vol. 78, nos. 23 and 24, June 5 and 12, 1924, pp. 44, 46, 48, 50, and 82; and 36, 38 and 64, 2 figs. Compilation of statistics relating to North American resources in wood and woody substitutes for manufacture of paper.

The Use of Wood of the Common Fir in the Manufacture of Wood Pulp and Cellulose (Eignung von Tannenholz zu Holzstoff und Cellulose), W. Freund. Chemiker-Zeitung, vol. 48, no. 53, May 1, 1924, pp. 279-280. Although wood of common fir is very similar to that of spruce, it finds little application in manufacture of wood pulp and cellulose, chiefly because its fibers are coarser than those of spruce wood; in winter, however, the fibers are shorter and finer than in summer; pulp produced from fir wood has much more constant and stable color than that produced from spruce wood, and is very suitable for soda pulp or for steamed mechanical pulp for leather board.

Pulp Testing. Effect of Pressure on Test Sheets, E. P. Cameron and J. M. Payne. Paper, vol. 33, no. 17, Feb. 14, 1924, pp. 5-11, 8 figs. Variations in pressures applied to sheets used in strength testing of pulp affect strength of ultimate sheet.

Pulping Process. New Pulping Process. Paper, vol. 34, no. 23, Sept. 25, 1924, pp. 1048-1049, 1 fig. Raw material is subjected to intense agitation by rotating blades in alkaline liquid under stream of sulphur dioxide.

Rag-Cooking Methods. European Rag Cooking Methods, R. Sansone. Paper, vol. 34, no. 13, July 17, 1924, pp. 557-559, 2 figs. Account of various forms and types of boilers used in European paper mills where rags and reeds are cooked for pulp. Translated from Papeterie, pp. 246-253, 1924.

Rubber Latex in. Rubber Latex in Paper Making. Paper Trade Jl., vol. 79, no. 7, Aug. 14, 1924, pp. 41-42. A list of references on the subject, compiled by C. J. West, which is practically complete up to July 1, 1924.

Sizing. Action of Rosin and Alum in Sizing Paper, C. G. Schwalbe. Paper, vol. 33, no. 14, Jan. 24, 1924, pp. 9-10. Scientific speculations concerning true sizing factor in rosin size; aluminum process. Translated from Papierfabrikant.

Colloid Studies in Rosin Sizing, R. Lorenz. Paper Trade Jl., vol. 78, nos. 23, 24, 25, and 26, and vol. 79, no. 1, June 5, 12, 19, 26, and July 3, 1924, pp. 61-66, 47-52, 43-45, 52-54, and 51-55, 13 figs. Colophony and its use; preparation of pure raw material; dispersoid analysis; surface tension and internal friction; chemical equilibrium in sizing beater; flocculation phenomena of rosin sizing; action of aluminum hydrates in sizing and electrostatic sizing theory. Translated from Papierfabrikant, 1923.

Keeping Qualities of Paper Sized With Rubber Latex, J. B.-Vinckers. Paper Trade Jl., vol. 79, no. 8, Aug. 21, 1924, pp. 47-49, 3 figs. Confirms conclusions of Shaw and Carson and extends work in that it shows that mechanical properties, which are at first increased by addition of latex, likewise gradually fall off with time. Translated from Papierfabrikant, May 18, 1924, pp. 217-219.

Rubber Latex as Paper Size, J. Beckering-Vinckers. Paper Trade Jl., vol. 79, no. 7, Aug. 14, 1924, pp. 43-46, 6 figs. Results of experiments with paper containing up to 30 per cent of rubber. Translated from Papierfabrikant, Mar. 30, 1924, pp. 129-132.

The Asa Process, E. Westarp. Paper Trade Jl., vol. 78, no. 14, Apr. 3, 1924, p. 77. Consists in use of chemical agent which, on addition to glue, transforms it into gel which can be ground and added to furnish in beater; is cheaper and simpler than other sizing processes and eliminates use of surface sizing but gives same results.

Straw and Reed Papers. Recent Methods of Making Paper from Straw and Reeds (Aufschliessen von Stroh und Schilf nach modernsten Verfahren), P. E. Altmann. Chemiker-Zeitung, vol. 48, no. 77, June 26, 1924, pp. 436-437. Paper similar to sulphite-cellulose wrapping paper was prepared from pulp made from rye straw by steam treatment without use of chemical agents; pulp suitable for cheap blotting paper can be prepared by treating straw with magnesium chloride and steam under pressure; paper resembling good rag paper was made from a German reed.

Talc, Use in. Use of Canadian Talc in Papermaking, W. C. Lodge. Paper, vol. 33, no. 15, Jan. 31, 1924, pp. 22-25, 4 figs. Describes laboratory tests. List of references on talc and related subjects.

Waste Fibers. De Vains Process for Paper from Waste Fibrous Materials, J. F. Clerc. Chem. & Met. Eng., vol. 30, no. 7, Feb. 18, 1924, pp. 262-265, 9 figs. How European mills utilize such fibers as straw, bagasse, and bamboo for high grades of paper.

Water Removal. Felts and Mechanism of Water Removal, E. A. Rees. Paper, vol. 33, no. 15, Jan. 31, 1924, pp. 6-10, 11 figs. Result of research work carried on by laboratory of F. C. Huyck & Sons as reported to Canadian convention.

Removal of Water by Couch System. Paper, vol. 34, no. 8, June 12, 1924, pp. 328-329. Account of new system of operating couch rolls on a paper machine, in which mechanism of water removal is described in connection with a new vacuum system recently patented in Germany. How pressure of roll acts in abstraction of water from sheet and affects speed of machine.

Waterproofing. Waterproofing Paper and Board, J. Frere. Paper, vol. 34, no. 17, Aug. 14, 1924, pp. 891-895. Review of methods, processes, and

formulas used or proposed for use in manufacture of waterproof papers and boards. Translated from Revue des Produits Chimiques.

Wheat-Straw. Making Paper From Wheat Straw, C. A. Lovell. Chem. & Met. Eng., vol. 31, no. 12, Sept. 22, 1924, pp. 459-462, 8 figs. Describes activities at plant of Emerson Carey Fiber Products Co., Hutchinson, Kan., for the purpose of outlining procedure followed, which indicate simplicity of lime cooking process for unbleachable pulp production.

Wood Pulp. Pulp-Wood Consumption and Wood-Pulp Production, 1922. U. S. Bur. Census, Forest Products, 1924, 16 pp. Compiled in coöperation with Dept. of Agriculture Forest Service.

See also Pulp; WOOD PULP.

Wood-Pulp Grinding. See GRINDING, Wood-Pulp.

PAPER MILLS

Cost Accounting. See COST ACCOUNTING, Pulp and Paper Mills.

Cutless Bearings for. Cutless Bearings for Paper Mills, C. F. Sherwood. Paper, vol. 34, no. 13, July 17, 1924, pp. 565-567. Application of rubber cutless bearings as substitute for ordinary bearings on wet end of Fourdrinier machine.

Electric Boilers and Digesters. Electric Boilers and Digesters, R. Sansone. Paper, vol. 34, no. 13, July 17, 1924, pp. 561-562, 2 figs. Electrically operated apparatus urged for use in pulp and paper mills for steam generation and direct heating of liquors.

Electric Drive. Application of Electric Drive to Finishing Room Machinery, O. C. Cordes and W. W. Spratt. Paper Mill, vol. 48, no. 21, May 24, 1924, pp. 50 and 52. Covers, in a general way, machinery used in finishing room, touching on the various methods of electric drive and discussing their relative merits.

Details of Paper-Mill Drives and Power Service, H. E. Stafford. Indus. Engr., vol. 82, no. 8, Aug. 1924, pp. 360-367 and 400-401, 11 figs. Includes transformation and distribution of electric power throughout mill, together with types of motors and kinds of drive used to connect motors to their loads, and characteristics of paper-mill loads.

Kalamazoo, Mich. Paper Mill Treats Feed Water Twice. Power Plant Eng., vol. 28, no. 8, Apr. 15, 1924, pp. 417-424, 14 figs. Bryant Paper Co. of Kalamazoo, Mich., has twin-cylinder uniflow engine, one cylinder run condensing; boiler pressure is 300 lb. and steam temperature 620 deg. fahr.; stokers are motor-driven.

Lignone Dust Explosions. See EXPLOSIONS, Lignone Dust.

Machinery, Bearings for. See BEARINGS, Paper-Mill Machinery.

Machinery for. See PAPER MACHINERY.

Model Plant. Model Paper-Making Plant. Engineer, vol. 138, no. 3578, July 25, 1924, pp. 95-99, 12 figs., partly on p. 106. Describes working model of up-to-date paper-making plant provided by nearly three dozen different firms, under organization of Paper Makers' Assn. of Great Britain and Ireland, as a joint exhibit at British Empire Exhibition. Designed to produce a finished roll of paper, 30 in. wide, at rate of 20 ft. to 100 ft. per min., i. e., up to 1 cwt. dry paper in an hour.

Power Plants. See STEAM POWER PLANTS, Paper Mills.

Sulphite-Mill Calculations. Some Sulphite Mill Calculations. Paper, vol. 33, no. 20, Mar. 6, 1924, pp. 12-13 and 27, 4 figs. See also vol. 34, no. 26, Oct. 16, 1924, pp. 1184-1187, 5 figs. Collection of formulas and graphs which will assist in designing apparatus or calculating results of tests.

Sulphite Mills, Steam Economy in. Heat Problems in a Sulphite Mill, A. H. Lundberg. Paper Trade Jl., vol. 78, no. 22, May 29, 1924, pp. 41-45. See also Paper Mill, vol. 48, no. 21, May 24, 1924, pp. 14-16, 62, and 64. Actual steam consumption for cooking, bleaching and drying of sulphite pulp and possibilities of savings.

Supercalender Electric Drive. Electrical Supercalender Drive, O. C. Cordes. Paper, vol. 33, no. 19, Feb. 28, 1924, pp. 9-11, 5 figs. Description of system of dual-frequency apparatus.

Waste-Heat Utilization. Waste Heat in Pulp and Paper Mills, von Lassberg. Paper Trade Jl., vol. 79, nos. 24 and 25, Dec. 11 and 18, 1924, pp. 45-49 and 49-54, 7 figs. Discusses utilization of heat released between a temperature of 100 deg. cent. and one of 50 deg. cent., dealing with nature and amount of this heat, use to which it has been put up to present time, and the more extended use which can be made of it. Makes calculations and gives formulas. Translated from Papierfabrikant, 1924, pp. 461-472.

Water-Power-Driven. See WATER POWER, Pulp and Paper Industry, Canada.

Well-Water System in. The Well Water System in the Mill, T. H. Hammond. Paper, vol. 33, no. 14, Jan. 24, 1924, pp. 11-13, 4 figs. How a well water system works out in practice in paper mill (plant of Hammond Bag & Paper Co., Wellsburg, W. Va.).

PARAFFIN

Hydrocarbons, Properties. The Physical Properties of the Paraffin Hydrocarbons, Rob. E. Wilson and W. H. Bahlke. Indus. & Eng. Chem., vol. 16, no. 2, Feb. 1924, pp. 115-122, 8 figs. Data from various sources in literature on vapor pressures, heats of vaporization, densities, critical constants, and specific heats of normal paraffin hydrocarbons; data are treated theoretically and method of applying results to actual refinery cuts is discussed.

Separation from Petroleum. Producing Wax and Lard by Mechanical Refrigeration, H. J. Macintire. Chem. & Met. Eng., vol. 31, no. 18, Nov. 3, 1924, pp. 699-701, 4 figs. Separation of paraffin from petroleum distillate and chilling of lard, described as processes that suggest further applications of refrigeration.

Vapor Tensions. The Vapour Tensions of the Normal Paraffins, A. A. Ashworth. Instn. Petroleum Technologists—Jl., vol. 10, no. 46, Nov. 1924, pp. 787-802, 3 figs. Formulation of law governing variation of vapor tension with temperature. Clapeyron equation. Gives diagram and table of vapor tensions of normal paraffins and petroleums.

Wax, Setting Time of. Determination of Setting Time of Paraffin Wax (Zur Bestimmung der Erstarrungsdauer von Paraffinen), K. Fricke. Chemiker-Zeitung, vol. 48, no. 107, Sept. 4, 1924, pp. 624-625, 1 fig. Setting time of paraffins of high melting point (54 to 56 deg.) is less than that of paraffins of low melting point (50 to 52 deg.); method and apparatus used in determining setting time.

PARSONS LINE. See BOILER OPERATION, Parsons Line; CENTRAL STATIONS, Parsons Line; STEAM TURBINES, Parsons Line.

PATENTS

Applications. The Preparation and Prosecution of Patent Applications, J. R. Langley. Elec. Jl., vol. 21, no. 6, June 1924, pp. 290-295.

Classification and Protection. Patents, W. G. Carr. Elec. Jl., vol. 21, no. 3, Mar. 1924, pp. 99-102. Requisites of patentable inventions; classes of inventions; essential parts of a patent application; treatment of applications; patent office records; brief comparison of United States and foreign patent laws; extensions; reissues, and disclaimers; etc.

Patentable Inventions, O. B. Buchanan. Elec. Jl., vol. 21, no. 4, Apr. 1924, pp. 143-148. How classified, defined, and protected.

Enforcement of Rights. Rights of Inventors and Patentees—How Enforced, W. G. Carr. Elec. Jl., vol. 21, no. 9, Sept. 1924, pp. 434-438. Notes on testing validity; equity and law suits; injunctions; infringements; interpretation of claims; defenses in suits for infringement; etc.

Infringement. How to Avoid Inadvertent Patent Infringement, H. A. Toulmin, Jr. Factory, vol. 32, no. 3, Mar. 1924, pp. 324-325 and 376. Gives eight rule-of-thumb guides in matters of infringement.

Law. Inventors and Patentees, J. R. Langley. Elec. Jl., vol. 21, no. 7, July 1924, pp. 326-330. Discusses U. S. law and patent office practice, covering issue of patents, conception of inventions and reduction to practice, preservation of evidence, interferences, etc.

Needed Reforms in the Patent System, Thos. A. Hill. Machy. (N. Y.), vol. 30, no. 9, May 1924, pp. 681-684. Points out important shortcomings of present American patent system, presents facts and suggestions.

Novelty, Utility, and Abandonment. Novelty, Utility and Abandonment of Patents, J. H. Procter. Elec. Jl., vol. 21, no. 5, May 1924, pp. 243-247. Essentials of invention; discussion of what constitutes novelty, utility, and actual and constructive abandonment.

Protection for. Method of Securing Patent Protection, N. Frucht. Military Engr., vol. 16, no. 89, Sept.-Oct. 1924, pp. 413-414. General procedure in securing patent protection; considerations before filing; application; prosecution; correction of errors.

Research. Research as Related to Patents and Patent Litigation, H. C. Bierman. Elec. Jl., vol. 21, no. 8, Aug. 1924, pp. 369-373. Discusses research in connection with development of incandescent and tungsten filament and other lamps.

Russia. New Russian Patent Law (Das neue russische Patentgesetz), H. Herzfeld. Elektrotechnische Zeit., vol. 45, no. 45, Nov. 6, 1924, pp. 1212-1213. Details of law of Sept. 20, 1924; filing applications, regulations as to fees, life of patent, compulsory manufacture, etc.

PATTERNMAKING

Electrodeposition in. Making Metal Patterns by Electro-Deposition, W. J. Reardon. Metal Industry (Lond.), vol. 24, no. 3, Jan. 18, 1924, p. 55, 2 figs. Method of procedure.

Flanged Patterns. Tool Engineering, A. A. Dowd and F. W. Curtis. Am. Mach., vol. 60, no. 10, Mar. 6, 1924, pp. 365-368, 4 figs. Pattern work and its relation to designer; importance of shape of pattern; methods of molding; construction of flanged patterns.

Glues Used in. See GLUES, Tests.

Methods. Modern Pattern Making, J. A. Stevenson. Foundry Trade Jl., vol. 30, no. 431, Nov. 20, 1924, pp. 437-439. Deals with plate patterns; patterns for oil-sand cores; flanged couplings; ring-oiling pedestals; pinion housings; pipe patterns; grooved-rope and weaving-shed pulleys, etc.

PATTERNS

Automotive, Drafting of. Automotive Pattern Drafting, W. Scholl. Sheet Metal Worker, vol. 14, no. 25, and vol. 15, nos. 2, 3, 7, 9, and 11, Jan. 4, Feb. 15, Mar. 15, Apr. 25, May 23, and June 20, 1924, pp. 940-941 and 979, 41-43, 114-115 and 143-144, 240-241, 329-330 and 348 and 414-415, 32 figs. How to lay out patterns for pressed steel radiator splash shield, and hood top and sides which are pressed to shape.

Fillets, Use of. Many Types of Fillets Used, W. C. Ewalt. Foundry, vol. 52, no. 22, Nov. 15, 1924, pp. 904-905, 13 figs. Reasons for their use; kinds of fillets which are best to use.

Metal Gear Patterns. Metal Gear Patterns, J. F. Hines. Machy. (N. Y.), vol. 30, no. 9, May 1924, pp. 692-693, 4 figs. Metal patterns of type shown are especially satisfactory for casting spur and bevel gears; details of construction; making patterns.

Plaster. Patterns Are Made of Plaster, W. C. Ewalt. Foundry, vol. 52, no. 23, Dec. 1, 1924, pp. 945-946, 6 figs. Material is used by patternmaker chiefly to make master patterns and core-boxes; care must be taken in mixing plaster.

Standardization. Preliminary Experiments on the Standardisation of Patterns, O. Querut. Foundry Trade Jl., vol. 30, no. 436, Dec. 25, 1924, p. 541. Author considers that standardization of patterns is intimately connected with that of cast machine parts, and that latter investigation is still in earliest stages; concludes that it is necessary at first to limit standardization to certain features common to all patterns. (Abstract.) Translated from paper presented before Assn. Technique de Fonderie.

Wheel. Quickly-Made Wheel Patterns, J. Edgar. Metal Industry (Lond.), vol. 25, nos. 5 and 6, Aug. 1 and 8, 1924, pp. 107-109, and 131-132, 8 figs. Describes use of odontograph in marking out gear teeth and subsequent construction of pattern.

PAVEMENTS

Asphalt. See PAVEMENTS, ASPHALT.

"Black Base" Construction. "Black Base" Construction in Mercer County, N. J., H. F. Harris. Good Roads, vol. 67, no. 1, July 1924, pp. 12-14, 3 figs. See also Highway Engr. & Contractor, vol. 11, no. 3, Sept. 1924, pp. 27-30, 4 figs. "Blase base" pavement was constructed on foundation of stone, which was taken from excavated material, and topped with regular standard sheet asphalt pavement 1½ in. thick. Up to present time "black base" work has shown no cracks and is to all intents and purposes in every respect equal to standard practice in constructing sheet asphalt with rigid base.

Brick. See PAVEMENTS, BRICK.

Concrete. See PAVEMENTS, CONCRETE.

Foundations. Relation of Depth of Foundations of Pavements to Their Strength, C. D. Pollock. Am. City, vol. 30, no. 1, Jan. 1924, pp. 11-13. Improving Subgrade vs. heavier foundation; damage from swelling of subsoil. (Abstract.) Paper read before Am. Soc. Mun. Improvements.

Roughness. Roughness as a Factor in Pavement Life, A. T. Goldbeck. Can. Engr., vol. 46, no. 9, Feb. 26, 1924, pp. 275-278 and 282, 5 figs. See also Eng. & Contracting (Roads & Streets), vol. 61, no. 2, Feb. 1924, pp. 306-316, 12 figs. Cause and effect of various types of road surface roughness; calculating pressure on surfaces; measurement of impact and fiber stresses; devices for measuring roughness.

Rubber-Block. Interlocked and Nailed Rubber Pavement, E. Swanson. India Rubber Wld., vol.

70, no. 6, Sept. 1, 1924, p. 783, 4 figs. Effective attachment needed to overcome traction wave; gives two practical suggestions; interlocking rubber blocks.

Rubber Street Pavement Laid in Boston. India Rubber Wld., vol. 70, no. 3, June 1, 1924, pp. 571-572, 3 figs. Boston, Mass., becomes pioneer American city to try out rubber paving blocks. Racine, Wis., railroad crossing experiment and Harvard bridge project.

Salva. Salva Street Paving (Salva-Strassenbelag), O. Salvisberg. Städtereinigung, vol. 16, no. 12, June 15, 1924, pp. 93-94. Salva, also known as tar-stone, consists of sand and broken stone of 2-20 mm. and specially prepared tar or bituminous products as a binder; they are thoroughly mixed and formed into bricks under high pressure.

Statistics. Additional Paving Tables. Pub. Wks., vol. 55, no. 3, Mar. 1924, pp. 96-100. Areas now in use, areas laid during 1923 and cost thereof, of plain or water-bound macadam, gravel, and concrete pavements as reported in February by several hundred cities.

Street Paving Tables. Pub. Wks., vol. 55, no. 2, Feb. 1924, pp. 64-74. Replies to questionnaire, giving amount of each kind of pavement in use, and that laid in 1923 and cost of it, in each of nearly 500 cities; also details of sidewalk design, including radius of curb corners.

Stone-Block. See PAVEMENTS, STONE-BLOCK.

Surface Testing. Illinois Tests Pavement Surfaces by Profilometer, H. F. Clemmer. Eng. News-Rec., vol. 92, no. 12, Mar. 20, 1924, pp. 484-485, 3 figs. 16-wheel carriage hauled over pavement inscribes graph and casts up sum of vertical irregularities.

PAVEMENTS, ASPHALT

Construction. Asphalt in Modern Highway Construction, F. P. Smith. Good Roads, vol. 66, nos. 4 and 5, Apr. and May 1924, pp. 98-100 and 130-132. Growth of asphalt industry since first sheet asphalt pavement was laid in 1870 near City Hill in Newark, N. J., down to present time. The various types of asphalt construction now in use, and their special application. Asphaltic surface mixtures.

Local Materials for. Local Materials for Pavements, R. M. Green. Can. Engr., vol. 46, no. 4, Jan. 22, 1924, pp. 175-176. Economic advantages of selecting types of asphalt pavements with reference to local materials; engineer should exercise judgment in preparing specifications.

Mixtures. Plant Inspection of Asphaltic Paving Mixtures, W. J. Emmons. Good Roads, vol. 66, nos. 1 and 2, Jan. and Feb. 1924, pp. 5-8 and 21, and 47-50 and 58, 5 figs. Arguments in favor of plant inspection; suggestions regarding inspection of materials, such as plant laboratory and equipment, duties of inspector, storage of materials, etc.; suggestions regarding process of combination.

Status of Design of Sheet Asphalt Mixtures, M. F. Macnaughton. Can. Engr., vol. 46, no. 15, Apr. 8, 1924, pp. 419-420. Composition of sheet asphalt surface mixtures; relationship between bitumen content and type of aggregate employed; development of Montreal mixture from Richardson's formulas. Paper read at Tenth Highway Conference, Univ. of Mich.

Sand-Asphalt. Development of Bituminous Base and Sand-Asphalt Pavements, E. R. Oldbrich. Highway Engr. & Contractor, vol. 10, no. 2, Feb. 1924, pp. 55-60, 11 figs. See also Eng. & Contracting (Roads & Streets), vol. 61, no. 2, Feb. 6, 1924, pp. 331-336, 4 figs. Describes methods and costs in North Carolina.

Types of. The Design and Construction of Asphalt Pavements, P. Hubbard. Mun. & County Eng., vol. 66, no. 5, May 1924, pp. 221-229. Constituents and types of asphalt pavements; asphalt macadam; asphaltic concrete; sheet asphalt; hot-mix construction; asphalt block; foundations; subgrades; traffic tests on various designs of pavements.

Warrenite-Bitulithic. Review of the Quarter Century Development of Warren Roadway Construction, Geo. C. Warren. Mun. & County Eng., vol. 66, no. 1, Jan. 1924, pp. 34-39, 6 figs. Early development of defects; Wallace invention; asbestophalt and asbestos-bitulithic; natural rock asphalt surfacing; dense mixed asphaltic concrete base; Warrenite-bitulithic surfacing.

PAVEMENTS, BRICK

Design. Important Principles of Brick Pavement Design with Recommendations, W. D. P. Warren. Mun. & County Eng., vol. 67, no. 2, Aug. 1924, pp. 55-64, 1 fig. Treats of original conditions and factors which governed early design, emphasizes changed conditions, and discusses design of brick pavement considered as engineering structure.

PAVEMENTS, CONCRETE

Accelerated Wear Tests. Accelerated Wear Tests of Concrete Pavements, F. H. Jackson and J. T. Pauls. Eng. & Contracting (Roads & Streets), vol. 62, no. 2, Aug. 6, 1924, pp. 302-313, 2 figs. Report of tests by U. S. Bur. Public Roads.

Construction. Concrete Pavement Construction in Wilbarger County, Texas, J. B. Nabers and E. L. McHugh. Eng. & Contracting (Roads & Streets), vol. 61, no. 1, Jan. 2, 1924, pp. 22-25, 5 figs. Unusual design and construction features of work carried out in 1923.

Construction of Concrete Pavements, H. C. Boyden. Can. Engr., vol. 47, no. 3, July 15, 1924, pp. 157-160. See also Eng. & Contracting (Roads & Streets), vol. 62, no. 3, Sept. 1924, pp. 537-543, 7 figs. Review of present day practices; quality of aggregate; uniform water-cement ratio; design of section; longitudinal center joint; construction methods.

Frictional Resistance. See CONCRETE, Friction Tests.

Impact on. Impact on Concrete Pavements. Pub. Works, vol. 55, no. 7, July 1924, pp. 221-223, 3 figs. Tests made by Bur. Pub. Roads using specially devised machine, and conclusions drawn from them.

Reinforcement. Concrete Pavement Reinforcement Logically Designed, Geo. D. Burr, C. Older and A. T. Goldbeck. Eng. News-Rec., vol. 92, no. 2, Jan. 10, 1924, pp. 78-81, 2 figs. Design for King County roads based on Bates Road, Pittsburg Road, and Arlington tests; discussed by engineers of Bates Road and chief of tests of Bur. of Pub. Roads.

Weighing Aggregates for. Weighing Concrete Aggregates for Highway Pavements, R. W. Crum. Eng. Wld., vol. 25, no. 2, Aug. 1924, pp. 89-91, 6 figs. Iowa Highway Commission has adopted actual weighing of aggregates on road pavement construction; quality in modern highway pavements is highly desirable and any economical method of attaining high degree of quality should be adopted; investment in hard surface pavements should be safeguarded by best methods of construction; materials used should not be abused by careless treatment.

PAVEMENTS, STONE-BLOCK

Dayton, Ohio. Stone Block Pavements in Dayton, Ohio, I. E. Houk. Engineer, vol. 137, no.

3570, May 30, 1924, pp. 606-607, 5 figs. States that Dayton's stone-block pavements have stood test of continuous heavy traffic better than any other type; methods and types of blocks employed.

PEAT

Bog Reclamation. See RECLAMATION, Peat Land.

Distillation. Processes for the Treatment of Peat and Lignite (Les procédés de traitement de la tourbe et du lignite), M. Migeon. Chimie & Industrie, vol. 11, no. 2, Feb. 1924, pp. 248-255, 7 figs. Describes process and producer, known as gazefactor, developed by author; and discusses relative values of vertical- and horizontal-retort processes for distillation of lignite.

Drying. Drying Peat with High Percentages of Moisture, J. W. Brassington. Power House, vol. 17, no. 10, Oct. 5, 1924, pp. 21-23, 1 fig. Modified type of paper-drying machine advocated as practical and fool-proof; makes peat a successful competitor of other fuels.

The Drying of Peat for Power Production, G. K. Fletcher. World Power, vol. 2, no. 9, Sept. 1924, pp. 156-163. Considers possibilities of using peat for purposes of power production.

Hydropeat. Coagulation of Hydropeat by Means of Gypsum and Its Effect on the Rate of Dehydration and the Condition of the Drying Beds (Die Koagulierung von Hydrotorf mit Gips und ihr Einfluss auf die Entwässerungsgeschwindigkeit und den Zustand der Trockenfelder), Geo. Stadnikoff and E. Iwanowsky. Kolloid-Zeit., vol. 35, no. 3, Sept. 1924, pp. 174-178, 3 figs. Hydropeat which has been coagulated by addition of solution of gypsum loses water by filtration through natural peat bed more rapidly than uncoagulated hydropeat, and does not show tendency of latter to block up bed; at same time gypsum solution has coagulating effect on peat bed in its passage through it.

Mining. Modern Peat Mining Processes (Neuzeitliches Torfgewinnungsverfahren). Technische Blätter, vol. 14, no. 29, July 19, 1924, pp. 219-220, 4 figs. Details of Maus presses for economic elimination of most of water by gradually increasing pressure, conserving natural fiber.

Oil and Coke Recovery. Oil and Coke Recovery From Peat (Möglichkeiten der Oel und Koksgewinnung aus Torf), W. Domnick. Petroleum, vol. 20, no. 34, Dec. 1, 1924, pp. 1891-1895, 3 figs. Particulars of new plant for briquetting peat, with peat coke of 84 per cent carbon, crude oil, paraffin, and pitch as by-products.

Power Production, Utilization for. The Utilization of Peat for Power Production, G. K. Fletcher. World Power, vol. 2, no. 7, July 1924, pp. 19-22. Discusses difficulties arising from moisture content, cost and advantages of peat production.

Preparation and Briquetting. New Process of Preparing Briquetting Peat, R. Schade. Iron & Coal Trades Rev., vol. 109, no. 2952, Sept. 26, 1924, p. 520. Outlines new German method of peat preparation, by which not only water in peat, but also sugar contained in it, are separated.

Production, United States, 1923. Peat in 1923, K. W. Cottrell. U. S. Geol. Survey (Mineral Resources of U. S.), no. 11:8, Sept. 27, 1924, pp. 69-70. Statistics of production.

PENDULUMS. See CLOCKS.

PENSIONS

Old-Age. Present Status of Old-Age Pension Legislation in the United States, A. Epstein. Monthly Labor Rev., vol. 19, no. 4, Oct. 1924, pp. 26-33. Present provision for poor relief; efforts toward old-age pension legislation; provisions of laws already passed; opposition and its results.

PERMALLOY. See CABLES, ELECTRIC, Permalloy-Loaded.

PERMEAMETERS. See ELECTRIC MEASURING INSTRUMENTS, Permeameters; MATERIALS, Magnetic Properties, Testing of.

PETROLEUM

[See also OIL.]

Bituminous Sands. See BITUMINOUS SANDS, Alberta, Canada.

Boiling Point. See LIQUIDS, Boiling-Point Correction Chart.

Cracking. See OIL, Cracking.

Distilling. See OIL, Distillation.

Industry. See OIL INDUSTRY.

Metals, Catalytic Influence on. See MINERAL OILS.

Occurrence. See OIL FIELDS.

Oil Fields. See OIL FIELDS.

Refinery Laboratory. See LABORATORIES, Petroleum Refinery.

Refining. See BAUXITE, Petroleum Refining Agent, Use as; LUBRICATING OILS, Manufacture; OIL, Refining.

Resources. See AUTOMOBILE FUELS, Resources and Supplies.

Rumanian Laws. See MINING LAWS, Petroleum Exploitation and Storage.

Still for. See DISTILLATION, Stills.

PETROLEUM INDUSTRY. See OIL INDUSTRY.

PHONOGRAPHS

Matrices. See ELECTROPLATING, Phonograph Matrices.

PHOSGENE

Determination. See GASES, Phosgene in Mixtures.

PHOSPHATE ROCK

Tennessee. Geology and Utilization of Tennessee Phosphate Rock, R. W. Smith. Am. Inst. Min. & Met. Engrs.—Trans., Advance Paper no. 1373-M, Sept. 1924, 20 pp., 5 figs. Brief history of phosphate industry of Tennessee. Describes distribution and origin, mining, treatment, and uses; gives costs of production.

PHOSPHATES

Acid, Production. See FERTILIZERS, Acid Phosphate Production.

Detection of Metals in. Detection and Determination of Metals Present in Small Amounts in Natural Phosphates (Etude sur les phosphates naturels), A. Grammont. Société Chimique de France—Bul., vol. 35-36, no. 10, Oct. 1924, pp. 1351-1354. Copper, nickel, and zinc were detected and amounts present determined in number of naturally occurring phosphates; ordinary separation methods for these metals are applicable to their quantitative determination in these minerals.

Metallurgical Uses. Utilization of Natural Phosphates in Metallurgy (L'utilisation des phosphates naturels en sidérurgie), S. Brull. Technique Moderne, vol. 16, no. 5, Mar. 1, 1924, pp. 138-143, 2 figs. Study of rôle of phosphates in metallurgical industry; characteristics of different phosphates; technical conditions governing selection; calculation of influence of silica on value

of phosphate; presence of fluorine in rich phosphates.

PHOSPHORIC ACID

Manufacture. Manufacture of Phosphoric Acid by the Volatilization Process, Wm. H. Waggaman. Indus. & Eng. Chem., vol. 16, no. 2, Feb. 1924, pp. 176-179, 8 figs. Advantages over sulphuric-acid method; technical problems.

Pyrolytic Production Process. The Future of the Pyrolytic Process for Phosphoric Acid, W. H. Waggaman and H. W. Easterwood. Chem. & Met. Eng., vol. 30, no. 11, Mar. 17, 1924, pp. 432-435, 5 figs. Theory of volatilization process; electric and fuel furnaces as two alternative methods; it appears that this method will eventually supplant sulphuric-acid process in production of pure phosphoric acid and supplement older method of manufacturing phosphates for fertilizer purposes.

Separation. Improvement in the "Lead Method" of Separating Phosphoric Acid in Qualitive Analysis (Eine Verbesserung der Bleimethode zur Abscheidung der Phosphorsäure bei qualitativer Analyse), D. Balarew and M. Dotschewa. Zeit. für anorganische u. allgemeine Chemie, vol. 138, no. 1, Aug. 4, 1924, pp. 79-80. Points out how authors' method for separation of phosphoric acid by means of lead nitrate can be improved upon by use of lead acetate instead of lead nitrate.

PHOTOCARTOGRAPH. See SURVEYING, Photographic.

PHOTOELASTIC ANALYSIS

Railway Motor Pinions. See ELECTRIC MOTORS, Railway.

PHOTOELASTICITY

Gear Stresses, Analysis of. The Photoelastic Method for the Determination of Causes of Failure of Metal Structures, P. Heymans, G. R. Brophy and A. L. Kimball, Jr. Am. Soc. Steel Treating—Trans., vol. 6, no. 4, Oct. 1924, pp. 505-514, 12 figs. Results obtained through scientific study of stresses set up in metal structures, resulting from design and method of installation or assembly; investigation applied specifically to study of pinion gears; as result of photoelastic method of analysis, predictions as to form of failures were made and then substantiated by actual tests with steel gears.

PHOTOELECTRICITY

Application. Photoelectric Cells and Their Application (Les piles photo-électriques et leurs applications), H. Vigneron. Nature (Paris), no. 2615, May 17, 1924, pp. 313-317, 8 figs. Explains theory of photoelectricity and its application to transmitting pictures.

Cells, High-Vacuum. Photo-Electric Cells, C. F. Elwell. Elecn., vol. 93, no. 2425, Nov. 7, 1924, pp. 520-522, 8 figs. Details and application of Case's high-vacuum type.

PHOTOGONIOMETER. See SURVEYING, Photographic.

PHOTOGRAPHY

Aerial. See AERIAL PHOTOGRAPHY.

Density Meter. A New Selenium Cell Density Meter, F. C. Toy and S. O. Rawling. Jl. Sci. Instruments, vol 1, no. 12, Sept. 1924, pp. 362-365, 3 figs. Instrument is essentially a density comparator and is calibrated by means of standard densities.

Exposure. On the Relation Between Time and Intensity in Photographic Exposure, L. A. Jones and E. Huse. Jl. Optical Soc. of Am. & Rev. Sci. Instruments, vol. 7, no. 12, Dec. 1923, pp. 1079-1113, 12 figs. Light source; lamp housings; photographic materials; developing; density measurements; etc. References; tables.

Lenses. Choice and Tests of Photographic Lenses (Choix et Essai des Objectifs photographiques), M. Lenouvel. Revue de l'Ingénieur, vol. 21, no. 9, Sept. 1924, pp. 30-34, 10 figs. Discusses focal length, opening of object-glass; aberration and distorsion, and methods of testing.

Photographic Lenses (Les objectifs photographiques), M. Berg. Revue de l'Ingenieur, vol. 21, no. 8, Aug. 1924, pp. 30-36, 4 figs. Development of photographic lenses; requirements of modern lenses; calculation.

Long-Distance Image Transmission. See TELESTEREOGRAPHY; Television.

Photographic Sensitivity. Studies in Photographic Sensitivity, S. E. Sheppard, E. P. Wightman and A. P. H. Trivelli. Franklin Inst.—Jl., vol. 198, nos. 4 and 5, Oct. and Nov., 1924, pp. 507-515 and 629-646, 5 figs. Oct.: Effect or oxidizers on sensitivity and on latent image. Nov.: Action of arsenite and oxidizing agents on sensitivity.

Plates. Properties of Photographic Plates (Sur quelques propriétés des plaques photographiques), Ch. Fabry and H. Buisson. Jl. de Physique & Radium, vol. 5, no. 4, Apr. 1924, pp. 97-104, 6 figs. New results obtained with instrument for registering densities of photographic plates during long series of researches on radiation of solar ultra-violet rays and atmospheric absorption; discusses laws of darkening of plates; photomicrographs of sections of photographic plate films showing differences in constitutions of emulsions with visible and ultra-violet radiations.

Projectile Flight. See CAMERAS, Photographing Moving Projectiles.

Radio Transmission of Photographs. The Transmission of Photographs by Radio, C. F. Jenkins. Tech. Eng. News, vol. 5, no. 3, Oct. 1924, pp. 96 and 110-111, 4 figs. Describes apparatus for sending photograph by radio and principle upon which design is based.

Stereoscopic. Stereoscopic Photography. English Mechanics, vol. 119, nos. 3071 and 3074, Feb. 1 and 22, 1924, pp. 32-33 and 76, 4 figs. Principles and field of stereoscopic vision; direct and indirect vision.

PHOTOMETERS

Brightness. See PYROMETERS, Optical.

Combined Light and Shadow. A New Photometer with Arrangement for Shadow Measurement (Ein neuer Beleuchtungsmesser mit Schattenmesseinrichtung), W. Bechstein. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 49, Dec. 6, 1924, pp. 1271-1272, 8 figs. Design and operation of combined light and shadow photometer made by firm of Fr. Schmidt & Haensch, Berlin, especially adapted for use outside of laboratory.

Definitions and Symbols. Photometric Definitions and Symbols (Définitions et symboles photométriques), A. Blondel. Revue Générale de l'Electricité, vol. 16, nos. 20 and 23, Nov. 15 and Dec. 6, 1924, pp. 771-775 and 896-905, 1 fig. Report on photometric definitions and symbols to International Commission on Lighting.

Flicker. A New Flicker Photometer for Heterochromatic Photometry, J. Guild. Jl. Sci. Instruments, vol. 1, no. 6, May 1924, pp. 182-189, 3 figs. Specially designed to fulfill conditions requisite to accuracy and precision in use of such instruments.

Micro. A Registering Micro-Photometer for

Accurate Measurements, M. Siegbahn. Lond., Edinburgh & Dublin Philosophical Mag. & Jl. of Sci., vol. 48, no. 283, July 1924, pp. 217-224, 5 figs. Describes new registering microphotometer, very convenient in use, enabling measurements of line-distances with precision of 0.002 mm.

Objective Measurement. Photometer With Objective Measurement, D. D. Zaklinski. Electritchestvo, no. 11, 1924, pp. 545-546, 6 figs. Description of photometric device somewhat along scheme of Rosenberg where no reliance is placed on subjective impressions of person performing measurement. (In Russian.)

Photoelectric. A Convenient Photo-Electric Photometer and Densitometer, E. A. Baker. Jl. Sci. Instruments, vol. 1, no. 11, Aug. 1924, pp. 345-347, 2 figs. Describes short-period electrometer which has exceptionally long scale and gives readings proportional to ratio of two potentials; it is applied in construction of photoelectric photometer and densitometer, both instruments being independent of battery variations.

PHOTOMETRY

Candlepower Measurement. See ELECTRIC LAMPS, INCANDESCENT, Candlepower Measurement.

Elements of. Photometry as Related to Illuminating Engineering, W. F. Little. Illuminating Eng. Soc.—Trans., vol. 19, no. 6, July 1924, pp. 497-508 and (discussion) 508-517, 16 figs. Discusses elements of photometry and its application to engineering problems including illumination tests, color photometry, actinicity measurements, etc.

Heterochromous. Heterochromous Photometry (sur la photométrie hétérochrome), Ch. Fabry. Revue Générale de l'Electricité, vol. 16, no. 13, Sept. 27, 1924, pp. 533-540. Report of Committee on Heterochromous Photometry to International Commission on Lighting, discussing research work necessary, radiation of black bodies and filaments of electric lamps, new photometric apparatus, etc.

Using Absorbing Screens in Heterochromous Photometry (Sur l'emploi des écrans absorbants en photométrie hétérochrome), R. Jouaust. Revue Générale de l'Electricité, vol. 16, no. 15, Oct. 11, 1924, pp. 571-574, 2 figs. Standards for measuring light; use of color screens; comparison with monochromatic light; etc.

Surface. Photometric Measurement of Sources of Light Having a Large Area (Die Photometrierung grossflächiger Lichtquellen), R. Hiecke. Elektrotechnik u. Maschinenbau, vol. 42, no. 41, Oct. 12, 1924, pp. 307-308 (Lichttechnik), 1 fig. Discusses application of photometry where source of light ceases to be a point and uses Sahulka photometer for this calculation.

Visibility of Radiant Energy. The Visibility of Radiant Energy, K. S. Gibson and E. P. T. Tyndall. Illuminating Eng. Soc.—Trans., vol. 19, no. 2, Feb. 1924, pp. 176-193 and (discussion) 194-196, 8 figs. Describes step-by-step method used by U. S. Bur. Standards in coöperation with Nela Research Laboratories in a determination made of visibility of radiant energy, an equality-of-brightness method with little or no hue difference in two parts of photometric field, also apparatus. Energy values based upon radiometric and spectrophotometric measurements. Comparison between results of present investigation and those previously obtained by step-by-step and flicker methods. Recommended changes in I. E. S. adopted mean values.

PHOTOMICROGRAPHY. See METALS, Photomicrography of; MICROSCOPY, Telephone Apparatus, Application to.

PICRIC ACID

Specific Heat. See EXPLOSIVES, Specific Heats.

PIERS

Bell-Base Cylinder. Bell-Base Cylinder Piers for a Heavy Warehouse, R. H. Chambers. Eng. News-Rec., vol. 92, no. 7, Feb. 14, 1924, pp. 287-289, 4 figs. Foundation on submerged site required 114 concrete piers sunk to depths up to 85 ft.; hardpan interrupts sinking by dredging; bases belled out under compressed air for bearing.

Coal. See COAL HANDLING, Piers.

Concrete. Bremerton Navy Yard Pier Built of Precast Concrete, W. F. Way. Eng. News-Rec., vol. 92, no. 11, Mar. 13, 1924, pp. 436-440, 8 figs. Design avoids delays and dangers that menace concrete while setting in tidewater; beams, girder sides, and cylinders with bell ends cast in yard.

Construction of the Ballantyne Pier, Vancouver, A. L. Harvey. Can. Engr., vol. 47, no. 8, Aug. 19, 1924, pp. 249-252, 5 figs. New pier greatly improves shipping facilities at port; pier which is 1200 ft. long and 341 ft. wide is principally of concrete construction, equipped with modern cranes and complete electrical installation.

Mobile Tower Chuting Plant Builds Concrete Pier at Havana. Eng. News-Rec., vol. 93, no. 2, July 10, 1924, pp. 52-54, 4 figs. Describes concreting plant and form construction in connection with construction of a massive concrete pier deck and house on concrete piles in deep water in Havana. Stiff-leg tower, having a counterweight chute, travels on apron around pier house. Deck forms suspended from pile tops.

Special Features in Construction of New Pier, C. R. Wilson. Concrete, vol. 25, no. 1, July 1924, pp. 9-12, 5 figs. Work in connection with building of reinforced-concrete pier and headhouse for their Port of Havana Docks Co., in Havana Harbor, Cuba, adjacent to other docks. Reprinted from Turner Constructor, Apr.-May 1924.

Fire Protection. Report of the Special Committee Appointed to Consider the Report Made to the National Fire Protection Association on the Fire Hazard of Docks, Piers, and Wharves. Am. Soc. Civ. Engrs.—Proc., vol. 50, no. 3, Mar. 1924, pp. 272-285. Recommendations on nomenclature, fire walls and clear height; fire-resistive and non-fire-resistive piers and wharves; treatment of existing piers; fire protection.

Pneumatic Concreting of Cylinders. Foundation Cylinders Concreted by Pneumatic Method, W. F. Way. Eng. News-Rec., vol. 92, no. 12, Mar. 20, 1924, pp. 479-480, 3 figs. Combination concrete lock and manway inserted in top of concrete cylinder and made tight with rubber skirt.

PIG IRON. See IRON, PIG.

PIGMENTS

Litharge. See LEAD, Products, Manufacture.

Lithopone. Record of Experiments in Testing the Light-Resistance of Lithopone, H. A. Gardner and P. C. Holdt. Paint Mfrs.' Assn. of U. S. —Sci. Section, circular no. 194, Jan. 1924, pp. 174-205, 11 figs. Effect of acidity of varnish and oil.

Microchemistry. The Microchemistry of White Pigments and Inerts as They Occur Mixed in Paints, H. Green. Indus. & Eng. Chem., vol. 16, no. 7, July 1924, pp. 677-680, 7 figs. Used in making paint analyses and in studying nature of complex pigments such as lithopone.

Oil Absorption of. The Oil Absorption of Pigments, J. H. Calbeck. Chem. & Met. Eng., vol. 31, no. 10, Sept. 8, 1924, pp. 377-382, 12 figs. A study based upon recent investigations of wetting

properties of paint and varnish vehicles and upon volume relationship between vehicle and pigment. Bibliography.

Prussian Blue. See COAL GAS, Prussian Blue from.

Red Lead. See LEAD, Products, Manufacture.

Titanium White. Production and Properties of Titanium White (La fabbricazione e le proprieta bei bianchi di titanio), E. Livraghi. Industria, vol. 38, no. 15, Aug. 15, 1924, pp. 424-426. Discusses process of manufacture in Norway, by treating finely powdered ilmenite with concentrated H_2SO_4; its use and properties as pigment.

White Lead. New View of the Old Dutch White Lead Process, Fred. W. Shaw. Chem. & Met. Eng., vol. 30, no. 2, Jan. 14, 1924, pp. 51-53, 8 figs. Account of experiments that seem to upset accepted theory of fermentation of tan bark in stacks.

See also LEAD, Products, Manufacture.

PILE DRIVERS. See CRANES, Combination Pile Driver and Crane.

PILES

Combination Wood and Reinforced-Concrete. Wood and Reinforced Concrete Combination Pile, H. J. Harms. Concrete, vol. 25, no. 5, Nov. 1924, pp. 172-174 and 179-180, 17 figs. Describes Handle pile, invented by Egi Handl, Dutch engineer, which has been used to a great extent in Holland, solving their foundation problem for ordinary houses.

Concrete. Concrete Piles and Concrete Piling Construction, M. M. Upson. Engrs.' Soc. West. Pa.—Proc., vol. 40, no. 3, Apr. 1924, pp. 103-128 and (discussion) 128-142, 22 figs. Résumé of concrete pile industry and development in United States during last 20 years.

Pile Casting Methods for Concrete Pier at Havana, J. S. Vedoe. Eng. News-Rec., vol. 93, no. 20, Nov. 13, 1924, pp. 785-788, 5 figs. Plan and equipment of casting yards; form construction and molding processes; fabricating reinforcement; repairing casting defects and fractures.

See also CONCRETE CONSTRUCTION, REINFORCED, Gas Works; WHARVES, Wing-Pile Construction System.

Driving. Formulas Used in Pile Driving (Notas sobre algunas fórmulas empleadas en la hinca de pilotes), J. Botin. Ingeniería y Construcción, vol. 2, no. 23, Nov. 1924, pp. 500-504, 5 figs. Discusses Dutch and Benaveng formulas for calculating permissible load, and gives some examples in pile driving.

Marine Borers, Destruction by. Marine Piling Investigations of the National Research Council, W. F. Clapp. Boston Soc. Civil Engrs.—Jl., vol. 11, no. 9, Nov. 1924, pp. 417-425 and (discussion) 426-442, 5 figs. Review of work accomplished in last few years in study of shipworm and some of the methods which have been used in preventing or alleviating destruction.

See also MARINE BORERS, Protection Against.

Set Recorder. The Ackermann Autographic Apparatus for Measuring and Recording the Movements of a Pile While Subject to the Blow of a Hammer, A. S. E. Ackermann. Jl. of Sci. Instruments, vol. 1, no. 4, Jan. 1924, pp. 123-124, 2 figs. Describes apparatus which is more particularly for use in connection with marine and river piles where a fixed point from which to measure set is difficult to obtain.

Sheet, Concrete. Concrete Piles Resist Action of Sea Water for Five Years, Chas. M. Spofford. Eng. News-Rec., vol. 92, no. 18, May 1, 1924, p. 765. Precast sheet piling apparently in good condition in bulkheads at Boston Army Supply Base; special care used to obtain dense concrete.

Novel Sheet Pile Construction at New Orleans, L. M. Arms. Ry. Age, vol. 76, no. 21, Apr. 26, 1924, pp. 1023-1025, 5 figs. Illinois Central uses Bignell yet type in building levee wall at Stuyvesant dock.

Supporting Power and Pulling Resistance. The Ultimate Supporting Power and Pulling Resistance of Piles Placed Hydraulically, R. P. V. Marquardsen. Eng. & Contracting (Buildings), vol. 61, no. 4, Apr. 23, 1924, pp. 885-893, 5 figs. Discussion of vertical and horizontal supporting power of piles, vertical and inclined pulling resistance of piles, and miscellaneous problems.

PIPE

Blast-Furnace-Slag. A New Process for the Manufacture of Pipes from Blast-Furnace Slag (Ein neues Verfahren zur Herstellung von Rohren aus Hochofenschlacke), Fr. Riedel. Stahl u. Eisen, vol. 44, no. 39, Sept. 25, 1924, pp. 1173-1174. See also (translation) Iron & Coal Trades Rev., vol. 109, no. 2961, Nov. 28, 1924, p. 870. Describes production of pipes from blast-furnace slag without addition of cement; tests of strength; advantages of process.

Cast-Iron. See PIPE, CAST-IRON.

Centrifugally Cast. See PIPE, CAST-IRON, Centrifugally Cast.

Concrete. See PIPE, CONCRETE.

Connections. Various Methods of Making Pipe Connections, R. W. Angus. Can. Engr., vol. 46, no. 14, Apr. 1, 1924, pp. 381-382, 5 figs. Details in construction and operation of water works plants which are not always given sufficient consideration; connection of service pipes to water main; waste pipe design; reservoir connections and drain pipes.

Corrosion. Corrosion of Underground Pipe Lines, K. H. Logan. Chem. & Met. Eng., vol. 31, no. 26, Dec. 29, 1924, pp. 1011-1012. First progress report of extended investigation indicates that soil conditions are more important factor than pipe materials. (Abstract.) Paper presented before Am. Foundrymen's Assn. and published by permission of Bur. of Standards.

Remedies for Subaqueous Corrosion of Pipe, C. W. Foulk. Fire & Water Eng., vol. 76, no. 6, Aug. 6, 1924, pp. 259-260 and 277. Discusses phenomena of corrosion; effect of dissolved oxygen on iron; protective coating deposited by water; formation of acid water. Abstract of paper read before Ohio conference on Water Purification at Columbus, Ohio.

Coverings. See PIPE COVERINGS.

Flanges, British Standard. British Standard Flanges, M. H. Sabine. Machy. (Lond.), vol. 25, no. 639, Dec. 25, 1924, pp. 410-411, 2 figs., 2 tables. Presents tables prepared to show what saving in space can be gained by clipping of flanges for equal and unequal combinations.

Intersections, Volumes and Areas of. Formulas for Volumes and Areas of Pipe Intersections, G. Paaswell. Eng. News-Rec., vol. 93, no. 1, July 3, 1924, pp. 28-29, 3 figs. Data covering determination of volumes of cylinder intersections such as those at junction of arches or in special pipe castings.

Laying. See PIPE LAYING.

Lead-Lined. Making Lead-Lined Pipe. Chem. & Met. Eng., vol. 30, no. 9, Mar. 1, 1924, pp. 351-353, 5 figs. How piping and valves are produced so that they possess both chemical resistivity of lead and strength of iron.

Small, Heat Transfer in. See HEAT TRANSMISSION, Pipes.

Steam. See STEAM PIPES.

Steel. See PIPE, STEEL.

Strength and Stiffness Determination. Charts for Bars and Pipe in Torsion, F. Szabo. Am. Mach., vol. 60, no. 8, Feb. 21, 1924, pp. 279-282, 2 figs. Two charts making possible rapid solution of problems dealing with round bars and pipe in torsion; for determining strength and stiffness or angle of twist.

Stresses in. Stresses in Thin Circular Pipes, etc., Under Symmetrical Loads, G. P. Manning. Concrete & Constructional Eng., vol. 19, nos. 7 and 8, July and Aug. 1924, pp. 437-442 and 491-495, 6 figs. Develops formulas and makes calculations.

Water. See WATER PIPES.

Welding. Helping the Pipe Welder, C. R. Price. Welding Engr., vol. 9, nos. 11 and 12, Nov. and Dec. 1924, pp. 34, 36 and 38; and 34, 36, and 38, 20 figs. Experience obtained in welding of pipe in oil refineries, which may be found applicable in other fields where considerable pipe welding is done. Devices used which greatly reduce labor; clamps and rollers; methods of welding flanges to pipe.

Wood-Stave. See PIPE, WOOD-STAVE.

Wrought-Iron. See PIPE, WROUGHT-IRON.

PIPE, CAST-IRON.

[See also WATER PIPE, Cast-Iron.]

Census of Manufactures. Cast-Iron Pipe. U. S. Bur. Census, 1923, 7 pp. Census of manufactures, covering operations of manufacturing establishments during 1921.

Centrifugally Cast. Centrifugal Cast Pipe. Iron Age, vol. 114, no. 26, Dec. 25, 1924, p. 1674. New process for iron to eliminate chilling and annealing; known as Henry-Weitling-Peake process; involves employment of liquid mercury and mercury vapor.

Centrifugal Metal Mould Cast Iron Pipes. Metal Industry (Lond.), vol. 25, no. 25, Dec. 19, 1924, p. 598. Discussion on spun cast iron pipes at meeting of Lancashire Branch of Instn. Brit. Foundrymen. Advantages of process; rate of output; comparison with ordinary sand-cast pipe; resistance to corrosion; comparative costs.

Centrifugal Pipe by a New Process. Iron Age, vol. 113, no. 23, June 5, 1924, p. 1660. "Sand-spun" iron from sand mold with refractory lining; developed by group of American foundrymen.

Manufacture of Cast-Iron Pipe in the South, R. Moldenke. Am. Inst. Min. & Met. Engrs.—Trans., Advance Paper no. 1365-S, Sept. 1924, 5 pp. Discusses some economic conditions which have made career of cast-iron pipe industry in United States a checkered one. Describes the two new developments in manufacture of cast-iron pipe, both along lines of centrifugal casting, and presents advantages and disadvantages of both processes. Statistics on production of pipe in United States at present time, as well as on Southern plants and their capacities.

Modern Methods of Pipe Manufacture by the Centrifugal Process, E. J. Fox and P. H. Wilson. Foundry Trade Jl., vol. 30, no. 417, Aug. 14, 1924, pp. 131-139, 15 figs. See also Iron & Coal Trades Rev., vol. 109, no. 2948, Aug. 29, 1924, pp. 344-346, 8 figs. Describes methods at works of Stanton Ironworks Co., Ltd., Stanton, operating on de Lavaud process.

Concrete Lined. Concrete-Lined Pipes Resist Acidulous Mine Water, C. H. S. Tupholme. Coal Age, vol. 26, no. 16, Oct. 16, 1924, pp. 548-549. Centrifugal method for making both iron and concrete pipes, introduced into England by Stanton Ironworks Co.

Modern Cement Lined Service Pipe, R. J. Newsom. Can. Engr., vol. 47, no. 9, Aug. 26, 1924, pp. 283-284. Cast Iron pipe lined with modified portland cement mixture has proved satisfactory for water services; fittings lined with lead or tin. Abstract of paper read before Am. Water Works Assn.

Prolonging the Life of Pipe by Cement Lining, R. J. Newsom. Fire & Water Eng., vol. 76, no. 6, Aug. 6, 1924, pp. 255-256 and 280-281. How this type of lining lengthens age of pipe and increases delivery of water; fallacy of oversizing; lining of large pipe. Abstract of paper read before Am. Water Works Assn.

Foundries. See FOUNDRIES, Soil-Pipe.

Gas Mains. See GAS MAINS.

Welding. An Improved Process of Jointing Cast Iron Pipe. Can. Mfr., vol. 44, no. 12, Dec. 1924, pp. 19-20, 3 figs. Method of welding cast iron pipe with Tobin bronze which has been found to be satisfactory and is at present recommended as process to be used.

PIPE, CONCRETE

Centrifugally Cast. Centrifugal Cement Pipes (Schleuderzementrohre), Tonindustrie - Zeitung, vol. 48, no. 52, June 28, 1924, pp. 567-568, 4 figs. Details of pipes constructed according to German patent 387745 at works of Berger Maschinenfabrik.

The Manufacture of Plain and Reinforced Cement Pipe by the Centrifugal Method (La fabrication des tuyaux en ciment armé et non armé par l'action de la force centrifuge), Y. Letort. Société d'Encouragement pour l'Industrie Nationale—Bul., vol. 123, no. 2, Feb. 1924, pp. 117-145, 21 figs. Describes different processes for manufacture of both reinforced and non-reinforced cement pipe by centrifugation, with special reference to STAC process.

Coignet-Ravier System. See WHARVES, Wing-Pile Construction System.

Manufacture. The Manufacture of Pipe for Spavinaw Water Project. Eng. News-Rec., vol. 92, no. 21, May 22, 1924, pp. 899-902, 8 figs. 53 mi. of reinforced-concrete pipe made in field factory in 13½ months; operation rate at 97 per cent capacity was 1.3 mi. per week.

Pressure. Reinforced-Concrete Pipe for Pressure Lines (Tuyaux en béton armé pour conduites forcées), E. Monteux. Génie Civil, vol. 85, no. 17, Oct. 25, 1924, pp. 374-377, 11 figs. Requirements of reinforced-concrete pipe capable of replacing steel pipe. Makes calculations.

Reinforced-Concrete Pipes for Water Under Pressure (Les tuyaux en ciment armé pour conduites d'eau sous pression), M. Bousquet. Nature (Paris), no. 2623, July 12, 1924, pp. 21-24, 6 figs. Details of manufacture by centrifying process by Zublin & Co. at Strassburg; reinforcing, jointing, etc.

Sewer. See SEWERS, Concrete.

Spun. The Modulus of Elasticity of "Spun" Concrete in Tension. Concrete & Constr. Eng., vol. 19, no. 11, Nov. 1924, pp. 709-714, 3 figs. Report of investigation on spun concrete pipes; results of transverse, compression, and tension tests.

Water-Supply. Pre-Moulded Reinforced Concrete Pipe, W. G. Chace. Can. Engr., vol. 46, no. 15, Apr. 8, 1924, pp. 416-417, 3 figs. Design of pipe which has recently been offered for water works intake lines and which has received very favorable comment, including its acceptance for use of two New England cities. From paper read before Can. Sec., Am. Water Wks. Assn.

PIPE COVERINGS

Specifications. Specifications for Pipe Coverings, H. E. Collins. Mgmt. & Administration, vol.

8, no. 5, Nov. 1924, pp. 503-506, 1 fig. Rules for specifying quality and size of insulation.

Steam-Pipe, Radiation Losses. Eng. & Boiler House Rev., vol. 37, no. 8, Mar. 1924, pp. 286-287, 2 figs. Saving to be effected by suitable and efficient steam-pipe covering.

See also STEAM PIPES, Coverings, Heat Loss Through.

Tests. Commercial Efficiency of Single and Graded Steam Pipe Coverings. Heat. & Vent. Mag., vol. 21, no. 1, Jan. 1924, pp. 48-52, 6 figs. Results of recent tests on magnesia, air cell, asbestocel, carocel, nonpareil, sponge felt and multiply types, conducted at State College of Wash. and reported in Eng. Bul. no. 12 by H. J. Dana.

PIPE LAYING

Water Mains. Laying Large Water Main Through Swamps in New Orleans, J. T. Eastwood. Eng. News-Rec., vol. 92, no. 20, May 15, 1924, pp. 854-856, 6 figs. Mules haul pipe on 8-wheel wagons; clamshell lifts wedge of roots cut by steel sheeting; piles hold bends; tapping machine brought to job for special connection.

PIPE LINES

Bridges. Pipe Lines on Bridges, P. L. Brockway. Public Works, vol. 55, no. 8, Aug. 1924, pp. 239-241, 3 figs. Details in designs of arch and concrete girder bridges to provide for carrying pipe lines and other public utility conduits.

Friction of. Pipe Friction. Mech. Wld., vol. 76, no. 1958, July 11, 1924, pp. 21-22, 2 figs. Discusses available formulas for calculating frictional resistance in pipe lines for water, applicable mainly to power-plant work.

Oil. About Oil Pipe Lines, V. G. Shookhoff. Petroleum & Oil-Shale Industry (Russian), vol. 6, no. 2, 1924, pp. 308-313. Author deals with transportation cost of oil in pipe lines, basing his considerations not only on work of few existing Russian pipe lines, but also on American practice. Considers construction of pipe lines, their design, construction cost and exploitation, and calculates cost of transportation from these data. (In Russian.)

The Design of Oil Fuel Pipe Lines, W. G. Watkins. Engineering, vol. 118, nos. 3076, 3077, and 3078, Dec. 12, 19, and 26, 1924, pp. 792-793, 823-825, and 853-854, 15 figs. Factors on which design depends; temperature is said to be keynote of problem; presents charts to facilitate calculation; examples.

Water Hammer in. See WATER HAMMER.

Welding. Pipe Line Welding, N. E. Wagner. Acetylene Jl., vol. 25, no. 6, Dec., 1923, pp. 276-280 and 284-285, 8 figs. Review of progress made in this field during 1923.

Report on Welding of Pipe, G. O. Carter. Am. Welding Soc.—Jl., vol. 3, no. 7, July 1924, pp. 13-19. Discusses welding applied to very extensive pipe lines, large and small plants and installations, including long oil and gas pipe, etc., organization of welding crews, cost of welding, etc.

Wood-Stave, Reconditioning of. Reconditioning Wood Stave Pipe Line, J. B. Holdcroft. Can. Engr., vol. 46, no. 17, Apr. 22, 1924, pp. 447-449, 4 figs. How repairs were made to sections of a 72-in. continuous pipe line at Anyox, B. C., which had deteriorated owing to severe operating conditions. Suggestions for preserving wood pipe and care of bands and shoes.

PIPE, STEEL

Bending. Pipe Bending, Johnstone-Taylor. Boiler Maker, vol. 24, no. 3, Mar. 1924, p. 81, 1 fig. Brief review of Bonn system developed in England and scope of its application.

Corrosion. See STEEL, Corrosion.

Failure. High-Head Penstock Failure Found Due to Bad Steel. Power, vol. 59, no. 10, Mar. 4, 1924, pp. 373-374, 1 fig. Section of 30-in. pipe for 1909-ft. head ruptures through laminated end of plate; welds not affected.

Gas Mains. See GAS MAINS, Welded Steel.

Manufacture and Laying. The Pipe Lines for the Tansa Completion Works. Engineer, vol. 137, no. 3560, Mar. 21, 1924, pp. 302-303. Manufacture and laying of steel pipes required in scheme for additional supply of water to be conveyed to City of Bombay.

Threading. Pipe Threading in Oil Field Service, F. D. Bostaph. Oil Trade Jl., vol. 15, no. 7, July 1924, pp. 40-44. Investigation shows that greater percentage of trouble develops when long threaded pieces and couplings are being screwed together in field than when shorter couplings and threads were used. Concludes that threading chasers as in use in all threading machines at present time do not reproduce pitch of their own threads on pipe in all cases.

PIPE, WOOD-STAVE

Construction. Wood Stave Pipe for Pueblo's Water Supply Line, W. A. Scott. Eng. Wld., vol. 25, no. 2, Aug. 1924, p. 61, 1 fig. Federal Pipe & Tank Co., Seattle, completed installation of 21,800 lin. ft. of continuous-stave wood pipe as water-supply line; pipe was made of Douglas fir staves which were creosote treated by vacuum and pressure process.

Wood Stave Pipe Lines and Penstocks, J. B. Holdcroft. Can. Engr., vol. 47, no. 3, July 15, 1924, pp. 149-151, 5 figs. Consideration involved in design of wood-stave pipe employed for hydraulic power installations; Douglas fir used in manufacture; settling dimensions of staves; design of tongues, bands, and cradles.

Design. Wood-Stave Penstocks (Holzdaubenrohre), H. Rabovsky. Elektrischer Betrieb, vol. 22, no. 2, Jan. 24, 1924, pp. 9-10, 3 figs. Points out that steel penstock may frequently be replaced by much cheaper wood-stave pipe line; up to diameter of 600 mm. ready-made wooden pipes of 3 to 6 m. length can be obtained and shipped from factories; penstocks of larger diameter are assembled in place from specially shaped wooden pieces; as a rule these pipes are for hydraulic pressures not exceeding 15 atmos; internal friction of pipes decreases with time, as their inside surface becomes covered with slimy sediment.

Maintenance. Maintenance of Wood-Stave Pipe in Hydro-Electric Practice, B. E. White. Power, vol. 60, nos. 21 and 26, Nov. 18 and Dec. 23, 1924, pp. 794-796 and 1019-1020, 4 figs. Information of methods of installation and maintenance, including description of number of cases where troubles with wood-stave pipe have developed in and near New York State; means taken to safeguard pipe and lengthen its life; suitable methods of installing and maintaining such pipe so as to obtain longest life. Dec. 23: Failures due to improper backfill.

PIPE, WROUGHT IRON

Hammer-Welded. Making Large Size Hammer-Welded Pipe, Geo. F. Tegan. Iron Age, vol. 114, no. 20, Nov. 13, 1924, pp. 1263-1268, 11 figs. Practice of Nat. Tube Co., McKeesport, Pa., in manufacture of penstocks, tanks, stills, digesters and receivers; methods of forming and welding; finishing to size.

Manufacture. The Manufacture of Wrought Iron Pipe. Universal Engr., vol. 40, no. 4, Oct. 1924, pp. 34-40, 16 figs. Chemical and physical characteristics.

PIPING

Compressed-Air, Calculation of. Application of Nomography to Calculation of Compressed-Air Con-

duits (Application de la nomographie au calcul des conduites d'air comprimé), J. Ponset. Arts et Métiers, vol. 77, no. 45, June 1924, pp. 204-219, 2 figs. Formulas available; construction of graphic charts and their application; examples.

Power Plants. Maintenance of Piping Systems, A. K. Vradenburgh. Power Plant Eng., vol. 28, no. 18, Sept. 15, 1924, pp. 940-941. Familiarity with piping layout is of first importance when taking charge of a plant.

PISTON RINGS

Casting. See CASTING, Centrifugal.

Design. The Design of Piston Rings. Machy. (Lond.), vol. 25, nos. 632 and 635, Nov. 6 and 27, 1924, pp. 171-173 and 273-274, 5 figs. Nov. 6: Remarks and data applying to Ramsbottom type of ring; formula for radial pressure; normal stress on cross section of ring. Nov. 27: Design of concentric ring.

Groove Finishing. Methods of Finishing Piston Ring Grooves. Automotive Mfr., vol. 66, no. 3, June 1924, pp. 15 and 26. Current practice of leading American firms; ordinary formed cutters leave tool marks and result in gas leakage.

Machining. Machining Piston Rings on a Production Basis, H. P. Armson. Can. Machy., vol. 31, no. 4, Jan. 24, 1924, pp. 13-16, 3 figs. Comparison of casting methods with a description of process employed by a Toronto plant in manufacturing rings for automotive industry.

Making Satisfactory Piston Rings, J. McIntosh. Am. Mach., vol. 61, no. 24, Dec. 11, 1924, pp. 917-918, 2 figs. Correct mixture of iron and careful pouring and cooling are said to be necessary for best results; grinding oversize with provision for closing.

Piston-rings and their Production, J. McIntosh. Machy. (N. Y.), vol. 31, no. 2, Oct. 1924, pp. 93-94, 1 fig. Methods of machining, finishing, testing, facing sides, and grinding outside diameter.

Pearlitic Cast-Iron. See CAST IRON, Pearlitic.

Self-Tightening. A New Method of Calculation and Production of Self-Tightening Piston Rings (Ein neues Verfahren zur Berechnung und Anfertigung selbstspannender Kolbenringe), O. Pollert. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 11, Mar. 15, 1924, pp. 253-254, 2 figs. Special process devised by Swedish engineer, R. Bennet, based on principle that ring should be turned to such form, before being cut, that it becomes exactly circular when closed; author considers problem mathematically and from standpoint of practical realization of correct curve; measurements made in cylinders using ordinary and Bennet rings show marked superiority of latter as regards uniformity of cylinder wear.

PISTONS

Accurate, Securing. Maxwell Method of Securing Accurate Pistons, F. H. Colvin. Am. Mach., vol. 60, no. 24, June 12, 1924, pp. 873-874, 4 figs. Novel chuck by which piston is squared with piston-pin hole before final turning; gages used in measuring checking and grading.

Aluminum-Alloy, Casting. Casting Aluminum Alloy Pistons in Metal Moulds, R. J. Anderson and M. E. Boyd. Metal Industry (Lond.), vol. 25, nos. 21 and 22, Nov. 21 and 28, 1924, pp. 494-496 and 517-518, 17 figs. Results of investigations into effect of different gating methods, feeders, risers, etc., and effect of variations in pouring and mold temperatures. (Abstract.) Paper read before Am. Foundrymen's Assn.

Automatic Piston Machine. Automatic Piston Machine. Iron Age, vol. 113, no. 20, May 15, 1924, pp. 1432-1433, 7 figs. New 6-spindle, 10-in. Contin-U-Matic machine, with which automobile pistons are machined at rate of three per min. with three simultaneous operations.

Automobile-Engine. Pistons of Light Metal for Fuel-Oil Engines for Automotive Purposes (Leichtmetall- und Leichtstoffkolben unter Berücksichtigung der Hochdruck-Schweröl-Fahrzeugmotoren), F. E. Bielefeld. Wirtschaftsmotor, vol. 6, no. 6, June 25, 1924, pp. 1-7, 28 figs. Light weight and high thermal conditions of such pistons are valuable features. Describes number of designs.

See also AUTOMOBILE ENGINES, Machining parts.

Inwardly Sprung Rings. The Design of Piston Rods and Pistons with Inwardly Sprung Piston Rings (Gestaltung der Kolbenstangen und Kolben mit nach innen federnden Kolbenringen), O. Graf. Maschinenbau, vol. 3, no. 15, May 8, 1924, pp. 520-522, 7 figs. Characteristics of inwardly sprung piston rings; examples of application to piston rods and pistons; stress curve; stress and diameter measuring instrument; universal piston-ring diameter; measuring clock.

Machining. Machining Pistons and Other Contract Work, H. P. Armson. Can. Machy., vol. 31, no. 3, Jan. 17, 1924, pp. 17-20, 3 figs. Describes method of Allatt Machine & Tool Co., Toronto, of machining cast-iron automotive engine pistons accurately and economically; salvaging worn cams by recutting race-ways for larger rollers.

Metals for. Use of Light and Ultra-Light Metals for Pistons of Explosion Engines (Au sujet de l'emploi des alliages légers et ultra-légers pour les pistons de moteurs à explosion), M. de Fleury. Académie des Sciences—Comptes rendus des séances, vol. 178, no. 26, June 23, 1924, pp. 2161-2164. See also Génie Civil, vol. 85, no. 3, July 19, 1924, pp. 71-72. Discusses advantages of light metal from standpoint of cooling and of lightness of piston.

Pins. Some Notes on Carburized Piston Pins, R. S. Archer. Am. Soc. Steel Treating—Trans., vol. 6, no. 5, Nov. 1924, pp. 615-618. Discusses manufacture and heat treatment of piston pins used in Liberty aircraft engines which were produced in large quantities during World War; types of steels used, their heat treatment and methods of testing.

PITCH

Coal-Tar. See WATERPROOFING, Coal-Tar Pitch for.

Coal-Tar, Roofing. See ROOFS, Coal-Tar Pitch for.

PITOT TUBES

Calibrating. See FLOW OF WATER, Measurement.

PLANERS

Development. Possibilities of Developing Planing Machines (Entwicklungsmöglichkeiten der Hobelmaschine), O. Forkel. Maschinenbau, vol. 3, no. 18, June 26, 1924, pp. 641-644, 5 figs. Discusses increase in speed of operation, reversing, etc.

Equipment for. Tooling Reciprocating Machine Tools. Eng. Production, vol. 7, no. 139, Apr. 1924, pp. 94-97, 10 figs. Tools and special equipment for planers.

High-Speed. A Large High-speed Planing Machine. Engineer, vol. 138, no. 3586, Sept. 19, 1924, pp. 321-322, 1 fig. Brief description of unusually large high-speed planing machine, made by Thomas Shanks & Co., Ltd., Johnstone, Scotland, for one of the largest marine engineering and shipbuilding firms. Especially intended for dealing with heavy Diesel engine work. Distance between uprights 16 ft. 9 in.; height above table and under cross slide at its highest 12 ft. 4 in.

New Type. Planer with New Features. Iron Age, vol. 114, no. 26, Dec. 25, 1924, pp. 1677-1678, 3 figs. Cross rail carries own motor for rapid traverse of rail and heads in new planer brought out by Liberty Machine Tool Co., Hamilton, Ohio; control is centralized.

PLANETARIUM. See GEARS, Planetarium.

PLANIMETERS

Polar. The Constants of the Polar Planimeter (Die Konstanten des Polarplanimeters), A. Haerpfer. Zeit. für Instrumentenkunde, vol. 44, no. 6, June 1924, pp. 270-274. Mathematical investigation of two principal constants of instrument which are connected with its mechanical adjustments; theoretical results are supported by appropriate numerical data; this study was necessary for very accurate work.

PLANING

Sine-Bar Gage for. See GAGES, Sine-Bar.

PLASTER

Gypsum. Getting Rid of Efflorescence on Gypsum Plaster, F. C. Welch. Chem. & Met. Eng., vol. 31, no. 7, Aug. 18, 1924, pp. 263-264. Study of causes of surface spotting of plaster by soluble salts and suggestions for eliminating it.

PLASTICITY. See ELASTICITY, Plasticity and.

PLATES

Annular. The Elastic Stability of an Annular Plate, W. R. Dean. Roy. Soc.—Proc., vol. 106, no. A-737, Sept. 1, 1924, pp. 268-284, 3 figs. Deals with elastic stability of a circular annular plate under uniform shearing forces applied at its edges.

Circular, Stresses in. Contribution to the Theory of Stresses Occurring in Circular and Ring-Shaped Plane Disks Subjected to Unevenly Distributed Pressure (Bidrag till hållfasthetsteorien för den cirkulära och ringformiga plana skivan belastad med ett jämnt fördelat tryck), A. F. F. Peterson. Teknisk Tidskrift, vol. 53, nos. 39, 40, 41, and 42, Sept. 29, Oct. 6, 13, and 20, 1923, pp. 306-308, 315-316, 321-322, and 329-331 (Allmänna Avdelningen), 17 figs. Develops theories for different methods of support of disk.

Drilled, Stresses in. Effect Net Section of Drilled Plates, C. R. Young and W. B. Dunbar. Can. Engr., vol. 47, no. 24, Dec. 9, 1924, pp. 575-580, 10 figs. Tests show zig-zag section always weaker than right section of same area; usual hypothesis respecting stress variation on diagonal section incorrect; new and less severe deduction diagrams; approximate rule.

Elastic Deformation. Elastic Deformation of a Uniformly Loaded Contour-Supported Thick Plate (Plaques rectangulaires épaisses), C. A. Garabedian. Acad. des Sciences—Comptes Rendus, vol. 178, no. 7, Feb. 11, 1924, pp. 619-622. Author indicates his method of investigation by employment of series, as previously applied by him to investigation of circular plates; also gives complete solution for displacements. Note by Mesnager calls attention to interest and importance of work.

Flanging Tests. Tests on the Flanging of Thin Plates (Essai d'emboutissage sur tôles minces), M. Guillery. Revue de Métallurgie, vol. 21, no. 5, May 1924, pp. 303-311, 17 figs. Describes two machines for testing thin plate in order to determine their resistance to cold flanging; method of testing, and results of tests.

Flattening Machine. Hydraulic Plate Flattening Machine. Machy. (Lond.), vol. 23, no. 600, Mar. 27, 1924, pp. 838-839, 4 figs. Type which operates on principle of gripping plate at each end and pulling it taut until irregularities and buckles disappear.

Perforated, Stresses in. On Stresses in a Plate with a Circular Hole, S. Timoshenko. Franklin Inst.—Jl., vol. 197, no. 4, Apr. 1924, pp. 505-516, 6 figs. Method of approximating influence of beads, used to reinforce holes, on local stresses.

Rectangular, Deflection of. Deflection of a Rectangular Plate of Different Stiffness Against Bending in Longitudinal and in Transverse Direction, the Edges Being Supported but not Clamped In (Über die Biegung einer rechteckigen Platte von ungleicher Biegungssteifigkeit in der Längs- und Querrichtung bei einspannungsfreier. Stützung des Randes), M. T. Huber. Bauingenieur, vol. 5, nos. 9 and 10, May 15 and 31, 1924, pp. 259-263 and 305-311, 8 figs. Exact solution of problem in case of sinusoidal distribution of load and approximate solution in case of uniform load. Exact general solution by means of double infinite series. Consideration of concrete slabs with transverse reinforcement.

PLATINUM

Canada. Platinum Situation in Canada. Can. Min. Jl., vol. 45, no. 39, Sept. 26, 1924, pp. 953-954. Résumé of conditions.

Production, 1923. Platinum and Allied Metals in 1923. U. S. Geol. Survey, no. I:2, Aug. 9, 1924, pp. 9-22. Production, imports and exports, consumption and stock; world's production; proposed statutory definition of platinum; metallurgy; foreign deposits.

PLATINUM ALLOYS

Iridium in, Determination of. Investigations on the Platinum Metals—Determination of Iridium in Platinum Alloys by the Method of Fusion With Lead, R. Gilchrist. U. S. Bur. Standards—Scientific Papers, no. 483, Feb. 28, 1924, pp. 325-345. Details of study made of analytical details of Deville and Stas method for determination of iridium in platinum alloys containing from 0.1 to 20 per cent of iridium, and results obtained.

PLOWING

Improved Methods. See AGRICULTURE, Farm Equipment, Research in.

PLOWS

Anti-Balance Cable. Four-Furrow Anti-Balance Cable Plough; Empire Exhibition. Engineering, vol. 118, no. 3067, Oct. 10, 1924, p. 516, 1 fig. Plow is arranged to cut four furrows 14 in. wide and from 8 to 12 in. deep.

Electric. The Manless Plow, J. B. Davidson. Agricultural Eng., vol. 5, no. 8, Aug. 1924, pp. 174-175, 3 figs. Manless plow designed and built by D. B. Lucas consists of two-wheel tractor, with four-horsepower, single-cylinder engine to furnish power. Equipment built by E. D. Gordon consists of skid carrying electric motor and reels for main cable used in drawing implement back and forth across field, anchor skid upon opposite side of field carrying pulley, and reels on motor skid for moving power skid and anchor skid forward at proper time reversing mechanism.

PLUMBING

Tests. Tests on the Hydraulics and Pneumatics of House Plumbing, H. E. Babbitt. Univ. of Ill.—Bul., vol. 21, bul. no. 143, July 21, 1924, 78 pp., 31 figs. Details of tests undertaken with a view of obtaining definite information concerning positive and negative pressures found in soil-stacks, waste pipes, traps, and vent pipes, and also concerning limitations of rates of discharge and capacities of waste pipes and soil-stacks, which involved consideration of hydraulics and pneumatics of different parts of plumbing systems. Bibliography.

PLYMAX. See MATERIALS, Plymax.

PLYWOOD. See AIRCRAFT CONSTRUCTION MATERIALS, Plywood.

PNEUMATIC MACHINERY

Plate-Tightening Machine. A Pneumatic Plate Tightening Machine. Engineer, vol. 138, no. 3598, Dec. 12, 1924, p. 667, 3 figs. New type of pneumatic tool designed to automatically draw together metal sheets or plates prior to operation of riveting them together; known as Hollett pneumatic plate-tightening machine.

PNEUMATIC MAIL TUBES. See COMPRESSED AIR, Pneumatic Mail Tubes.

PNEUMATIC TOOLS

[See also COMPRESSED AIR, Improvement.]

Coal Cutters. See COAL MINING, Pneumatic Tools.

Repair and Upkeep. Repair and Upkeep of Pneumatic Tools, R. W. Wilson. Instn. Mech. Engrs.—Proc., no. 2, Jan. 1924, pp. 151-163 and (discussion) 163-207, 19 figs. See also Engineering, vol. 117, no. 3033, Feb. 15, 1924, pp. 219-220, 7 figs. Consideration of what is necessary to maintain in efficient operation and in economical service pneumatic tools commonly used in engineering workshops and shipbuilding yards; these are roughly classified as reciprocating tools or pneumatic hammers, and rotating tools or pneumatic drills.

Waste Elimination. Cutting Out Waste in the Factory Air System, F. Johnston-Taylor. Indus. Mgmt. (Lond.), vol. 11, no. 9, May 1, 1924, pp. 239-240 and 242, 4 figs. Explains how wastage and leakage may be detected in connection with pneumatic installations in factory, and how by use of compressed-air meter, economies may be effected.

POISONING

Carbon-Monoxide. See CARBON MONOXIDE, Poisoning.

Lead. Examination of Workers at the Jena Printing Plants for Lead Poisoning (Untersuchungen der Arbeiter in den Jenaer Druckereibetrieben auf Bleikrankheit), E. Boening. Gesundheits-Ingenieur, vol. 41, no. 47, Oct. 11, 1924, pp. 477-480. Detailed examination shows that danger to workers is not nearly as great as was formerly supposed; advocates examination on larger scale to obtain more reliable statistics. Bibliography.

POLES

Concrete. See POLES, CONCRETE.

Foundations. Calculation of Pole Foundations (Berechnung von Mastfundamenten), O. Stötzner. Elektrotechnische Zeit., vol. 45, no. 49, Dec. 4, 1924, pp. 1346-1348, 5 figs. Calculations for pole foundations for German Post Office by Möller method.

Joint Use by Utilities. Joint Use of Poles by Utilities, A. D. Knowlton. Elec. Wld., vol. 84, no. 23, Dec. 6, 1924, pp. 1203-1206, 4 figs. Connecticut experience has proved advantageous to both those concerned with power circuits and with communication; how satisfactory contractual relations have developed in past few years.

Setting Equipment. Pole Setting by F. W. D. Lorry. Motor Transport (Lond.), vol. 38, no. 995, Mar. 24, 1924, pp. 359-360, 5 figs. Description of vehicle constructed by Four-Wheel Drive Auto Co., of Clintonville, Wis., for setting telegraph poles or standards for carrying overhead electric power lines and other work entailing digging of deep holes in ground.

Sizes, Determination of. Determination of Pole Sizes, J. H. Mathews. Elec. World, vol. 83, no. 23, June 7, 1924, pp. 1173-1176, 1 fig. Table permitting quick calculation of pole size for almost any type of line and facilitating calculation of type of line that can be carried on selected poles; based on Nat. Elec. Safety Code.

Steel. See POLES, STEEL.

Wooden. See POLES, WOODEN.

POLES, CONCRETE

Cast. Making and Erecting Concrete Poles, L. R. Brown. Elec. Ry. Jl., vol. 64, no. 5, Aug. 2, 1924, pp. 159-161, 6 figs. Casting is done in horizontal steel forms with reinforcing rods wired to cast-iron rings and suspended in place; portable derrick is used for erection.

Centrifugally Cast. Resistance Test of Centrifugally Cast Poles for Traction Equipment (Prove di resistenza su pali centrifugati per elettrotrazione), M. Manerba. Ingegneria, vol. 3, no. 9, Sept. 1, 1924, pp. 317-319, 5 figs. Discusses testing of new poles of Brescia-Tavernole street car line, showing their efficiency.

Norway. Power Transmission Line Towers of Reinforced Concrete (Kraftledningsmaster av jernbetong), J. Andresen. Teknisk Ukeblad, vol. 71, no. 40, Oct. 24, 1924, pp. 345-347, 11 figs. Construction, transportation, mounting, and foundation of reinforced-concrete poles for lines in Norway. Costs of construction of complete line.

Steel vs. Concrete or Lattice Poles? (Betonmast oder eiserner Gittermast?), L. David. Bauingenieur, vol. 5, no. 17, Sept. 15, 1924, pp. 538-540. Comparative efficiency of concrete and steel lattice poles; possibility of transportation; erection; etc.

POLES, STEEL

Erection. 228 Transmission Towers Built and Erected in 75 Working Days, H. A. Scribner. Elec. News, vol. 33, no. 11, June 1, 1924, pp. 61-62, 4 figs. Methods employed in erection of towers for 132,000-volt double circuit 27-mile tower line erected by Pub. Service Co. of Northern Illinois.

Foundations. Calculations of Foundations for Metallic Poles on Transmission Lines (Note sur le Calcul des Fondations des Poteaux Métalliques supportant des Lignes électriques), F. Baldini. Assn. des Ingénieurs Electriciens sortis de l'Institut Electrotechnique Montefiore—Bul., vol. 2, series 7, no. 4, Apr. 1924, pp. 151-156. Author examines matter theoretically and deduces formulas for use of designers; tables are given showing values of constants in formulas under different conditions of construction.

Girder, Foundations for. Report on Testing of Foundations for the Overhead Equipment at Gösgen (Bericht über die Erprobung der Fundamente von Freileitungstragwerken in Gösgen), G. Sulzberger. Schweiz. Elektrotechnischer Verein—Bul., vol. 15, nos. 5 and 7, May and July 1924, pp. 185-202 and 313-321, 27 figs. Discusses tests with different foundations with view to revision of Swiss federal regulations regarding foundations for girder poles.

Girder, Guys for. Regulating Mechanical Tension of Cables (Le réglage des tensions mécaniques des cables), O. Bouvier and M. Bourseire. Génie Civil, vol. 85, no. 22, Nov. 29, 1924, pp. 497-500, 7 figs. Discusses control guys of girder poles for wireless antennas. Develops curves for graphic calculation.

POLES, WOODEN

Calculation. Calculation of Wooden Poles from Mechanical Viewpoint (Calcul des poteaux en bois au point de vue mécanique), P. Burdin. Revue Générale de l'Electricité, vol. 15, no. 18, May 3, 1924, pp. 799-805. Results of calculation, made

with aid of logarithmic tables, are given in tabular form and relate to poles of from 9 to 20 m. in height and from 20 to 35 cm. in diam.

Foundations. Wooden Poles (De l'Emploi des Supports en bois, etc.), Geo. Lumay. Société Belge des Electriciens—Bul., vol. 38, July 1924, pp. 205-215, 6 figs. Summarizes requirements of foundations and describes several types in use, including Forclum, Prée and Ponsolle sockets, Gaillard type, and Palix foundation extensively used in Switzerland and France.

Inspection. Systematic Inspection of Pole Lines, L. I. Bates. Elec. World, vol. 84, no. 25, Dec. 20, 1924, pp. 1313-1314. Cause of decay in wooden poles; general plan of inspection; directions for conducting work and records that should be kept. (Abstract.) Paper read before Empire State Gas & Elec. Assn.

Life and Maintenance of. Life and Maintenance of Poles, H. Rost. Telephony, vol. 86, no. 15, Apr. 12, 1924, pp. 28-31, 10 figs. Factors regarding life of wooden poles and their maintenance; various methods used to prevent decay; describes reinforced-concrete base support designed by author for increasing life of poles, and its advantages.

Line Calculation. Graphical Pole Line Calculations, J. L. Niesse. Telegraph & Telephone Age, no. 24, Dec. 16, 1924, pp. 566-570, 2 figs. Describes a simple and easy method of graphically calculating strength (factors of safety) of wood pole lines of standard construction as used in telegraph and telephone service.

Preservation. A New Method of Prolonging the Life of Poles, H. Rost. Elec. Traction, vol. 20, no. 3, Mar. 1924, pp. 134-136, 3 figs. Causes of failures of wooden poles for trolley lines, telegraph lines, telephone lines and power lines, importance of seasoning, preservative treatments, mechanical means of protection, setting in concrete, and description of a base support.

How Mexico Fights Pole Rot, H. Rost. Telephone Engr., vol. 28, no. 1, Jan. 1924, pp. 28-31, 7 figs. Discusses various methods of protection at Groundline; suggests concrete socket in place of usual earth setting of poles.

Impregnation of Wooden Poles by the Cobra Process (Holzmastenimprägnierung nach dem Cobraverfahren), R. Nowotny. Elektrotechnik u. Machinenbau, vol. 42, no. 34, Aug. 24, 1924, pp. 521-523. Discusses Cobra process using mainly sodium, fluoride and sodium nitrophenol with optional addition of arsenic compound.

Preserving Standing Poles, P. J. Howe. Telephone Engr., vol. 28, no. 12, Dec. 1924, pp. 20-21 and 42, 3 figs. Method in use by Western Union Telegraph Co. by charring and spraying with creosote oil. Good penetration is secured and profitable increase in life is expected. From paper read before Telegraph and Telephone Sec. of Am. Ry. Assn.

Prolonging the Life of Poles, P. J. Howe. Ry. Signaling, vol. 17, no. 11, Nov. 1924, pp. 448-451, 3 figs. Study of pole timber and methods of preservation both for new poles and those in service. (Abstract.) Paper presented before Telegraph & Telephone Section, Am. Ry. Assn.

Specification for the Preservative Treatment of Poles by Pressure Process. Wood Preserving News, vol. 2, no. 2, Feb. 1924, pp. 22-24, 6 figs. General requirements; preservatives, and amount to be used; treating operations.

Swedish Methods of Impregnating Poles, E. Hedenlund. Elec. World, vol. 83, no. 8, Feb. 23, 1924, pp. 373-375, 4 figs. New method involves charring pole and then treating it with creosote; relation between value of increased life and cost of impregnation; details of processes used in Sweden and conclusions as to best methods.

Substitutes for. Report of Sub-committee on Substitutes for Wood Poles, L. J. Corbett. Jl. of Elec., vol. 52, no. 11, June 1 1924, pp. 438-443, 14 figs. Data upon concrete poles, tubular steel poles and structural steel poles as complete substitutes, and concrete stubs as partial substitutes to which wood poles may be attached above ground line, including details of tests.

Transmission-Line. See ELECTRIC TRANSMISSION LINES, Wooden Poles for Long Spans.

Types. Wood in the Construction of Overhead Lines (Das Holz als Konstruktionsmaterial im Freileitungsbau). Maschinenbau, vol. 3, no. 30, Dec. 24, 1924, pp. 1173-1174, 2 figs. Construction of G. H. F. standard masts and Duplex masts, and advantages of wooden masts in economic maintenance of overhead lines.

POLISHING

Tumbling and Burnishing. Tumbling and Burnishing, B. G. Krause. Machy. (N. Y.), vol. 30, no. 7, Mar. 1924, pp. 501-502, 1 fig. Types of tumbling barrels; tumbling media of materials; ball-burnishing practice; plating and japanning; examples of work suitable for tumbling and burnishing.

PORCELAIN

Electrical. Electrical Porcelain: the Effect of Varying the Composition Upon Some of Its Properties, E. Watkin. Ceramic Soc.—Trans., vol. 23, part 3, 1923-24, pp. 185-205 and (discussion) 205-210, 8 figs. Details of investigation of specific resistance and dielectric strength, including effect of heat upon these two characteristics porosity and density determination, and mechanical strength.

Insulators. See INSULATORS, ELECTRIC, Porcelain.

Properties. Composition, Microstructure and Properties of Porcelain, (Composizione, microstruttura e proprietà della porcellana), Eugenio Alessandri. Elettrotecnica, vol. 11, no. 13, May 5, 1924, pp. 285-290, 23 figs. Notes on composition, fabrication, firing, and glazing; mechanical, thermal, and electrical properties, etc.

Technical. Contribution to the Better Knowledge of Genuine Hard Porcelain, K. H. Reichau. Ceramic Soc.—Trans., vol. 23, part 2, 1923-1924, pp. 145-155, 8 figs. Reviews methods and results of universal-optical tests, using microscope specially constructed for purpose by Zeiss and to determine if such results could be attained by other methods.

POROSIMETER. See BRICK, Porosity Determination.

PORTLAND CEMENT. See CEMENT, PORTLAND.

PORTS

Calcutta, India, Extensions. The Extension of the Port of Calcutta. Engineering, vol. 117, no. 3028, Jan. 11, 1924, pp. 37-40, 12 figs. partly on supp. plate. Describes construction of new King George's dock and new Riverside berths at Garden Beach.

Cherbourg, France. Improvements in the Port of Cherbourg (Les transformations du port de Cherbourg), A. Powlowski. Génie Civil, vol. 85, no. 18, Nov. 1, 1924, pp. 389-394, 5 figs. Discusses Cherbourg as a port of call for transatlantic passenger traffic; new maritime railway station, naval works, etc.

Development. See TERMINALS, MARINE.

Docks. See DOCKS.

Genoa, Mechanical Equipment. Mechanical

Equipment of the Port of Genoa and Other Ligurian Ports (Arredamenti meccanici nel Porto di Genova e in altri Porti Liguri), A. Albertazzi. Ingegneria, vol. 3, no. 1, Jan. 1, 1924, pp. 10-16, 11 figs. Details of the various types of hydraulic and electric wharf and floating cranes, capstans, etc., installed.

Havre, France. Extension Work in the Port of Havre (Les travaux d'extension du port du Havre), M. Michel-Schmidt. Société des Ingénieurs Civils de France—Mémoires et Compte Rendu des Travaux, vol. 77, no. 7-9, July-Sept. 1924, pp. 433-518, 100 figs., partly on supp. plates. Construction of 4 km. of dikes, 1000 quays in deep water, dockyards, floating docks, etc., for refitting of ships and accessories.

Königsberg, Germany. Traffic Questions of Königsberg (Königsberger Verkehrsfragen), Kutschke. Verkehrstechnik, vol. 41, no. 48, Nov. 28, 1924, pp. 619-623, 4 figs. Particulars of new harbor extensions and facilities, including free port.

La Rochelle, France. Enlarging the Port of La Rochelle (Les agrandissements du port de La Rochelle), A. Pawlowski. Génie Civil, vol. 85, no. 13, Sept. 27, 1924, pp. 265-269 6 figs. Details of extensions of La Pallice harbor facilities and La Rochelle fishing port.

Leghorn, Italy. Port of Leghorn. Times Trade & Eng. Supp., vol. 14, no. 300, Apr. 5, 1924, p. 93, 1 fig. New scheme of extension involves conversion of swamp into ample inland port, capable of being constructed in successive stages and coordinated simultaneously with development of an industrial area.

Lorient, France. The Port of Lorient (Les ports de Lorient), R. Tayon. Revue Universelle des Transports, vol. 1, nos. 7, 8, and 9, June 1, 15, and July 1, 1924, pp. 108-112, 122-126, and 132-136, 21 figs. Details of four ports; equipment and upkeep of fishing port.

Montreal. Development of the Port of Montreal, M. T. S. Casey. Can. Engr., vol. 47, no. 21, Nov. 18, 1924, pp. 513-518, 6 figs. Engineering works undertaken and completed recently; great expansion of grain elevator and conveyor system; new elevator at Tarte Pier; extension to elevator "B"; new piers and wharves constructed.

Paris, France. See HARBOR IMPROVEMENTS, Paris, France.

Planning. Port and City Planning, R. S. MacElwee. Wld. Ports, vol. 12, no. 10, Aug. 1924, pp. 57-79. Discusses the various problems to be considered, viz.: freight and passenger waterborne commerce for deep-sea, coastwise, or inland traffic; industries and the harbor; municipal requirements; and public benefits and amusements.

Rotterdam. The Maritime and River Port of Rotterdam [Le port maritime et fluvial de Rotterdam (Hollande)], A. Bijls. Génie Civil, vol. 85, nos. 23 and 24, Dec. 6 and 13, 1924, pp. 513-521 and 549-552, 108 figs. History and geographic position; description of present port, and projects for extensions; details of equipment.

Wharves. See WHARVES.

Yokohama. Rapid Strides Made In Yokohama Port Reconstruction, K. Koyanagi. Eng. News-Rec., vol. 93, no. 14, Oct. 2, 1924, pp. 552-554, 17 figs. Restoration of harbor facilities, made necessary through earthquake damage of Sept. 1923, includes extensive work on breakwater, piers, quays, and warehouses, to cost $10,000,000. Precast pier caissons and heavy steel girder sections are features.

POTASH

Alunite as Source. See ALUNITE, Uses.

Extraction from Orthoclase Feldspar. A Study of the Extraction of Potash From Orthoclase Feldspar by Carbon Dioxide and Sulphur Dioxide, E. F. Whyte. Nova Scotian Inst. Sci.—Proc. & Trans., vol. 15, part 3-4, Nov. 1923, 145-151. Historical review; description of method; results of experiments and brief description of apparatus used.

Manufacture from Leucite. The Manufacture of Potash and Other Salts from Leucite, J. W. Hinchley. Chem. & Industry, vol. 43, no. 7, Feb. 15, 1924, pp. 158-165 and (discussion) 165-168, 5 figs. Discusses use of leucite, found principally along line of Italian volcanoes, as raw material for manufacture of potash salts.

Production from Minnesota Shale. Possible Potash Production from Minnesota Shale, H. A. Schmitt. Economic Geology, vol. 19, no. 1, Jan.-Feb. 1924, pp. 72-83, 2 figs. Deals with problem of whether this shale has any commercial value because of its potash content, aside from its value for brick manufacture.

Recovery from Cement Dust. Potash from Cement Dust, E. J. Fox and C. W. Whitaker. Indus. & Eng. Chem., vol. 16, no. 10, Oct. 1924, pp. 1044-1046. Deals with concentration by elutriation; fractions of cement dusts, potash contents of which are approximately double those of original materials, were obtained by air separation; in no instance was all the potash obtained in one fraction of material, regardless of size and fraction; in all fractions of given sample, potash content decreased as size of particles increased.

Russia, Extraction from Soil. Extracting Potash from Russian Soil, Jos. R. Minevitch and W. M. Malisoff. Chem. & Met. Eng., vol. 30, no. 13, Mar. 31, 1924, pp. 501-504, 2 figs. Development, economics, and engineering of industry that produced 20,000 tons of potash in year from sunflower stalks.

Salts from Kelp. Potash from Kelp, J. W. Turrentine and H. G. Tanner. Indus. & Eng. Chem., vol. 16, no. 3, Mar. 1924, pp. 242-248, 7 figs. Certain equilibria used in manufacture of potassium chloride from kelp brine.

Texas. The Potash of the Texas Panhandle, Chas. Wm. Dabney. Chem. Age (N. Y.), vol. 32, no. 1, Jan. 1924, pp. 37-38. Origin and extent; Government attitude toward development; potash in commerce and industry.

POWDERS

Classification of Grains. Proposal for Uniform Classification of Granulant and Pulverulent Materials (Projet d'une classification uniforme des matières grenues et pulvérulentes), R. Feret. Société d'Encouragement pour l'Industrie Nationale—Bul., vol. 136, no. 4, Apr. 1924, pp. 373-381. Definition of size of grains; proposed decimal classification.

Screen Testing. How Much Does Screen Testing Mean? R. B. Ladoo. Chem. & Met. Eng., vol. 31, no. 16, Oct. 20, 1924, pp. 623-626, 9 figs. States that fine powders cannot be tested by screening methods, because of many variables; mesh specifications are also shown to be inaccurate and meaningless when above certain limits.

POWER

Abbreviations. See ABBREVIATIONS.

Cost, Control of. See INDUSTRIAL PLANTS, Power-Cost Control.

Costs. See COTTON MILLS, Power Costs.

Developments. Lines of Development of Steam Engines and Prospects of Gas Engines and Turbines (Entwicklungslinien der Dampfkraftmaschinen und die Aussichten des Gasmaschinenbetriebes), H. Hoff. Stahl u. Eisen, vol. 44, nos. 46, 47, and 49, Nov. 13, 20, and Dec. 4, 1924, pp.

1437-1446, 1482-1488 and 1567-1575, 23 figs. Discusses development leading up to high-pressure steam engines; d.c. machines; thermodynamic and economic considerations; linking-up power and heat; development of steam turbine; superheating; development of gas engines; waste-heat utilization; prospects of gas turbine. Dec. 4: Discussion of paper.

Electric. See ELECTRIC POWER.

Industrial, Pittsburgh District. Industrial Power of the Pittsburgh District Outside That of the Iron and Steel Industry, S. B. Ely and W. F. Rittman. Mech. Eng., vol. 46, no. 12, Dec. 1924, pp. 861-865, 10 figs. Facts and data relating to total industrial power of district; changes and trends in industrial power of district and their influence on its industry; relationship existing between power and population and tendency to develop further and further from congested centers.

Measurement. See DYNAMOMETERS.

New England Requirements. Power Requirements and Sources of Supply of New England, C. T. Main, H. I. Harriman and D. C. Jackson. Boston Soc. Civil Engrs.—Jl., vol. 11, no. 5, May 1924, pp. 193-227. Report of Committee of Associated Industries of Mass., covering kinds and amount of present power, cost, available new sources, probable demand for power from new sources, probable cost of supplying it, coal prices, fuel oil for power, Diesel engine: with summary and general conclusions.

Power Show, New York City. Third National Exposition of Power and Mechanical Engineering. Power, vol. 60, nos. 23 and 24, Dec. 2 and 9, 1924, pp. 899-904 and 940-948, 9 figs. Dec. 2: Includes alphabetical list of exhibitors at Power Show and their products. Dec. 9: Details of exhibits.

Resources. Power, F. R. Low. Power, vol. 60, no. 24, Dec. 9, 1924, pp. 937-939. Power resources at hand; notes on molecular action in furnace; absorption of heat from sun; results with early engines; lowest attainable steam consumption.

World Power Conference. First World Power Conference. Electrician, vol. 93, no. 2407, July 4, 1924, pp. 4-7. Details of opening ceremonies.

Proceedings of the First World Power Conference. Engineering, vol. 118, nos. 3053, 3054, 3055, and 3056, July 4, 11, 18, and 25, 1924, pp. 18-20, 35-47, 77-87, and 115-124, 3 figs. Abstracts of papers presented and discussions which took place at conference, held June 30 to July 12, 1924.

The First World Power Conference. Power, vol. 60, no. 5, July 29, 1924, pp. 160-165. Report of discussion at sessions dealing with world power resources, and steam generation and utilization of fuels.

The First World Power Conference. World Power, vol. 2, no. 7, July 1924, pp. 7-18. Detailed program and list of papers, June 30 to July 12, 1924.

The Significance of the First World Power Conference. World Power, vol. 2, no. 7, July 1924, pp. 1-6. Discusses object, focusing information on policy of main countries in development of power resources; evolution of international power policy; natural power resources.

POWER FACTOR

Correction. Causes and Consequences of a Low Power Factor in Electric Plants and Elimination of These Consequences (Die Ursachen und schädlichen Folgen eines niedrigen Leistungsfaktors in elektrischen Anlagen und die Mittel zur Bekämpfung dieser Folgen), M. Schiesser. Schweiz. Elektrotechnischer Verein Bul., vol. 15, no. 9, Sept. 1924, pp. 433-461, 33 figs. Physical causes of phase displacement; lines, transformers and motors, and their sphere in low power factor; suggests remedies.

Economics of Power-Factor Correction, R. C. R. Schulze. Elec. Wld., vol. 84, no. 24, Dec. 13, 1924, pp. 1247-1251, 8 figs. Where and why power-factor correction should be applied; method of computing cost and analysis of typical installations; recommendations for use as regards type and location of corrective equipment.

Power Factor Correction, R. A. Neal. Iron & Steel Engr., vol. 1, no. 10, Oct. 1924, pp. 564-565, 1 fig. States typical case covering application of a static or synchronous condenser; shows savings effected by use of static condenser.

Power-Factor Correction in Practice, L. W. W. Morrow. Elec. World, vol. 84, no. 21, Nov. 22, 1924, pp. 1096-1100, 4 figs. Use of static condensers for individual motor correction; what customers of results obtained.

Practical Ways to Correct Power Factor, H. B. Dwight. Elec. Wld., vol. 84, no. 23, Dec. 6, 1924, pp. 1199-1200. Use of synchronous motors advocated; their neglect by power companies; proposal that bonus be paid for each kva. installed; other methods; illustrative example.

Improvement. Different Methods of Improving Power Factor in Central Stations (Olika metoder för förbättring av effektfaktorn i kraftanläggningar), R. Liljeblad. Teknisk Tidskrift, vol. 54, no. 44, Nov. 1, 1924, pp. 190-194 (Elektroteknik), 11 figs. Describes methods of using synchronous motors, auto-synchronous motors, phase compensators, compensated induction motors, and static condensers, and discusses their comparative value.

Examples of Power Factor Improvement, M. G. Farrell. Power Plant Eng., vol. 28, no. 19, Oct. 1, 1924, pp. 1005-1008, 2 figs. Describes three practical ways of strengthening power factor in industrial plants.

Improvement of Power Factor (Der Leistungsfaktor in Drehstromnetzen und die Mittel zu seiner Verbesserung), K. Baudisch. Elektrotechnik u. Maschinenbau, vol. 42, no. 19, May 11, 1924, pp. 289-295, 15 figs. Considering improvement of low power factor on existing networks, author describes various practical methods, from large synchronous condensers to smallest power motors of special design, used today to compensate lagging current; explains and analyzes several new types of 3-phase motors operating with characteristics of synchronous machine; fact that all of them have commutator in addition to collector rings in general disadvantage of these motors, which are intended to replace simple and rugged squirrel-cage armature induction type; some of these "compensated" motors are manufactured for as little as 1½-kw. output.

Measurement. Simplified Power-Factor Measurement (Vereinfachte cos ϕ-Messung), L. Schüler. Elektrotechnische Zeit., special spring no., 1924, pp. 13-14, 4 figs. Describes how measurement can be carried out with sufficient accuracy for all practical purposes with unskilled personnel and without installation of a wattmeter.

Rate Clauses. Power-Factor Rate Clauses, R. R. Herrmann. Elec. World, vol. 84, no. 26, Dec. 27, 1924, pp. 1357-1359, 2 figs. It is shown that transformer and regulator costs are most affected by poor power factor; operating expenses increase slightly; rates should care for demand and energy charges; new rates advocated.

Unbalanced Three-Phase Circuits. Determination of Power Factors in Unbalanced Three-Phase Circuits (Sulla determinazione del fattore di potenza nei circuiti trifasi squilibrati), B. Focaccia.

Elettrotecnica, vol. 11, no. 13, May 5, 1924, pp. 291-295, 3 figs. Method devised by author.

POWER GENERATION

Earth's Internal Heat. Power from the Earth's Heat, T. T. Read. Mech. Eng., vol. 46, no. 8, Aug. 1924, pp. 446-449, 8 figs. Discusses increase of earth's temperature toward its center. Gives résumé of published material about actual installations at favorable places on earth's surface, and plants proposed by well-known engineers for further development.

Economical Operation. Increasing Efficiencies in Power Generation, R. W. Angus. Power House, vol. 17, no. 4, Feb. 20, 1924, pp. 22-24, 3 figs. Improvements in economical operation of power by steam; modern trend to be toward higher pressures with less superheat, and multistage feedwater heating processes.

Steam. Modern Steam Power Generation, R. W. Angus. Univ. of Toronto Eng. Soc.—Trans. & Year Book, Apr. 1924, pp. 35-41, 3 figs. Discussion of developments in economical generation of power by steam made during past 10 years, including bleeding of steam from turbines, mercury turbines, etc.

POWER PLANTS

British Empire Exhibition. Power Plants at Wembley. Power Engr., vol. 19, no. 220, July 1924, pp. 256-268, 20 figs. Survey of prime movers employed at British Empire Exhibition to furnish power and lighting to exhibitors and for other necessary services.

Central Stations. See CENTRAL STATIONS.

Diesel-Engine. See DIESEL ENGINES, Power Plants, Use in.

Electric. See ELECTRIC PLANTS.

Equipment Purchasing. Purchasing Power Plant Equipment. Power Plant Eng., vol. 28, no. 15, Aug. 1, 1924, pp. 795-796. Specifications must be complete and definite. Bids must be brought to a comparative basis analysis.

Hydroelectric. See HYDROELECTRIC PLANTS.

Management. State Versus Private Management of Power Plants, A. T. Hadley. Engineering, vol. 118, no. 3058, Aug. 8, 1924, pp. 209-211. Concludes that history of state management creates strong presumption against encouragement of government-owned electric plants. Abstract of paper read before World Power Conference.

Oil-Engine. See CENTRAL STATIONS, Diesel-Engined; FLOUR MILLS, Diesel-Engine-Driven.

Portland Electric Power Co. Completion of Oak Grove Project, W. A. Scott. Eng. Wld., vol. 25, no. 2, Aug. 1924, pp. 63-66, 11 figs. Power plant of Portland Elec. Power Co. is equipped with initial generating unit of 30,000 kva. capacity.

Railroad. A Model Oil-Burning Railroad Power Plant. Ry. Elec. Engr., vol. 15, no. 8, Aug. 1924, pp. 247-251, 9 figs. See also Ry. Age, vol. 77, no. 6, Aug. 9, 1924, pp. 237-240, 9 figs. Power plant of Missouri, Kansas & Texas at Parsons, Kan., provides steam, air, and electric power for railroad terminal; electric power is developed by two bleeder-type turbine-generator sets; discusses power machinery, turbine generators, air compressors and fire pumps, flowmeters, motor-generators, etc.

Steam. See STEAM POWER PLANTS.

POWER TEST CODES

Condensing Apparatus. See CONDENSERS, STEAM, Test Code.

Gas Producers. See GAS PRODUCERS, Test Code for.

Governors, Speed-Responsive. See GOVERNORS, Speed-Responsive, Test Code for.

Solid Fuels. See FUELS, Solid, Test Code for.

POWER TRANSMISSION

Belt Drive. See BELT DRIVE.

Belt vs. Electric. Mechanical Conduction of Energy (Mechanische Energieleitung), M. Pollak. Dinglers Polytechnisches Jl., vol. 339, no. 17, Sept. 1924, pp. 167-169, 4 figs. Considers advantage of individual electric-motor drive largely due to neglect in group transmission drive, and suggests improvements in lubrication, couplings, etc.

Chain Drive. See CHAIN DRIVE.

Couplings. See COUPLINGS.

Electric. D.C. versus A.C., A. Scherbius. Electrician, vol. 92, no. 2383, Jan. 18, 1924, p. 70. Comparison of the two systems for transmission purposes. Abstract from Elektrotechnische Zeit.

Transmission of Electric Power From Norway to Denmark, A. R. Angelo. Engineering, vol. 118, no. 3055, July 18, 1924, p. 114. In 1921 three commissions were appointed, one by Danish, one by Norwegian, and one by Swedish State, with object of investigating question of transmission of electric power from Norway to Denmark. Main points of report submitted in 1923 by a Joint Comittee elected by these commissions for investigation of technical and financial aspects of the matter. Paper, abridged, contributed to World Power Conference.

See also ELECTRIC POWER, Transmission.

Gears. See GEARS.

Hydraulic Drive. See HYDRAULIC DRIVE.

Losses, Elimination of. See INDUSTRIAL PLANTS, Power-Transmission Losses.

Shafting and Shaft Hangers. Things to Know About Lineshafting and Hangers, F. E. Gooding. Indus. Engr., vol. 82, no. 4, Apr. 1924, pp. 178-182 and 211, 5 figs. Characteristics of lineshafting produced by various methods of manufacture, and different designs of hangers in common use.

Wave. The Transmission of Energy through Oscillating Liquid Columns (Energieübertragung durch schwingende Flüssigkeitssäulen), P. v. Vágò. Zeit. für angewandte Mathematik u. Mechanik, vol. 4, no. 2, Apr. 1924, pp. 113-124, 5 figs. Development of hydrodynamics of a.c. power transmission and confirmation of analogy between hydrodynamic and electrodynamic phenomena, first discovered by Constantinesco.

Wave-Power Transmission, E. A. Barclay-Smith. Lond., Edinburgh & Dublin Philosophical Mag. & Jl. of Sci., vol. 48, no. 283, July 1924, pp. 97-109, 9 figs. Discusses phenomena occurring in wave-power transmission through liquids in Constantinesco system.

Wave Transmission of Power, H. Moss. Instn. Mech. Engrs.—Proc., no. 1, 1924, pp. 1-14 and (discussion) 15-24, 6 figs. Account of elements of Constantinesco system of hydraulic transmission, and results of tests; elements of theory; power and efficiency calculations.

PRECIPITATION

Cottrell Process. Cottrell Electrical Precipitation Process, A. Stansfield. Fuels & Furnaces, vol. 2, nos. 3 and 4, Mar. and Apr. 1924, pp. 269-271 and 361-364, 2 figs. Review of various methods of cleaning gases with detailed account of application of Cottrell precipitator to blast-furnace gases; approximate cost and savings possible.

Dust, Electrical. See DUST, Precipitation, Electrical.

Electrical. Electric Purification of Gas, E. L.

Heidenreich. Concrete, vol. 25, no. 6, Dec. 1924, pp. 107-109, 13 figs. Notes on Lurgi and Oski methods. Extract from articles by H. Nitzsche in Tonindustrie-Zeitung, and E. Oppen in Zement.

Electrical Precipitation, Oliver Lodge. Elecn., vol. 93, no. 2425, Nov. 7, 1924, pp. 523 and 529. Discusses natural and artificial methods. (Abstract.) Lecture before Inst. Physics.

Electrical Precipitation in Retrospect, W. A. Schmidt. Indus. & Eng. Chem., vol. 16, no. 10, Oct. 1924, pp. 1038-1041, 5 figs. Discussion, with especial reference to service which has been performed by some of older installations; investigations at plant of Riverside Portland Cement Co.; other developments.

Fundamentals of Electrostatic Precipitation. Power Plant Eng., vol. 28, no. 14, July 15, 1924, pp. 755-757, 6 figs. Application of Cottrell process for precipitation of dust particles from gases by means of an electrostatic field has been recently made at Trenton Channel power station of Detroit Edison Co., for precipitation of flue dust from gases of combustion of pulverized-fuel furnaces. Gives description of process from this point of view.

See also Cottrell Process; GAS MANUFACTURE, Tar Removal.

PRESSED METAL

Automobile Uses. See AUTOMOBILES, Pressed-Metal Parts.

PRESSES

Accident Prevention on. See ACCIDENT PREVENTION, Industrial.

Classification. Classification of Power Presses, F. R. Daniels. Machy. (N. Y.), vol. 30, no. 8, Apr. 1924, pp. 617-618, 7 figs. Advocates classification by style of frame, because use to which a press may be put and method of moving gate may be varied; describes machines built by Waterbury Farrel Foundry & Machine Co., Waterbury, Conn., the names given them being those applied by this company.

Coining, Forging in. Coining-Press Operation, A. R. Kelso. Soc. Automotive Engrs.—Jl., vol. 15, no. 5, Nov. 1924, pp. 399-406, 19 figs. See also (abstract) in Am. Mach., vol. 61, no. 18, Oct. 30, 1924, pp. 685-688, 11 figs. Outlines development and tells how such machinery was adapted to speed up production of automobile parts, such as forged arms and levers, by squeezing process that superseded milling or spot-facing methods; details of squeezing operations and increase in production over that attained under former methods; photomicrographs showing grain structure of coin-pressed forgings.

Drawing. Press for Motor-cycle Mud Guards. Machy. (Lond.), vol. 24, no. 611, June 12, 1924, p. 348, 1 fig. Double-crank toggle press installed in works of Raleigh Cycle Co., Nottingham, for drawing and forming motorcycle mud guards at one operation.

Ejectors for. Ejectors for Punches and Dies, H. M. Groff. Machy. (N. Y.), vol. 30, no. 8, Apr. 1924, pp. 608-609, 3 figs. Describes different devices employed for ejecting parts from punches and dies of power presses.

Hydraulic. Hydraulic Presses and Pumps (Hydraulische Pressen und Pumpen), E. Feyer. Werkstattstechnik, vol. 18, no. 11, June 1, 1924, pp. 289-293, 15 figs. Describes types manufactured by M. Hasse & Co., Berlin, Germany.

See also HYDRAULIC PRESSES.

Hydraulic, Platen Design. The Design of Hydraulic Press Platens. Machy. (Lond.), vol. 24, no. 662, Aug. 28, 1924, pp. 693-694, 2 figs. Suggestions on designing of platens; table giving suitable proportions for a range of circular platens capable of withstanding working loads of from 50 to 300 tons.

Inclinable. Design of Inclinable Power Presses, P. A. Friedell. Machy. (N. Y.), vol. 30, nos. 6 and 8, Feb. and Apr. 1924, pp. 442-445 and 626-628, 5 figs. See also Machy. (Lond.), vol. 24, no. 613, June 26, 1924, pp. 409-411, 1 fig. Feb.: Proportioning mechanical knockout, legs, and inclining mechanism for power plants. Apr.: Calculations for designing gearing, driving shaft, backshaft bearing, flywheel and pulleys.

Power. Automatic Power Presses. Machy. (Lond.), vol. 24, no. 618, July 31, 1924, pp. 545-550, 11 figs. Details of exhibition at Wembley, stagger presses for blanking and drawing from sheet stock at one stroke of press ram, incorporating Berry patent single-action deep-draw mechanism, automatic hinge press, etc.

See also Classification.

Quantity-Production, Manufacture of. Making Power Presses for Quantity Production, H. P. Armson. Can. Machy., vol. 31, no. 5, Jan. 31, 1924, pp. 13-17, 3 figs. Description of methods employed in plant of Brown, Boggs Co., Hamilton, Can., with particular reference to inclinable type.

PRESSURE GAGES.

See MANOMETERS.

PRESSURE VESSELS

Mouthpiece Rings for. Designing Flanged Mouthpiece Rings of Vulcanizers and Similar Pressure Vessels. Boiler Maker, vol. 24, no. 2, Feb. 1924, pp. 55-60, 24 figs. Deals with strength of flanged ring which is riveted to main shell of vessel.

Unfired, Code for. Report on Code for Unfired Pressure Vessels. Mech. Eng., vol. 46, no. 12, Dec. 1924, pp. 916-923, 5 figs. Final report; A.S.M.E. boiler-construction code.

Unfired, Mouthpiece Rings for. Calculating the Stress in Mouthpiece Rings for Unfired Pressure Vessels. Boiler Maker, vol. 23, no. 16, Oct. 1924, pp. 287-291. Discusses internal stresses, distribution of circumferential stresses, and other forces acting on ring. Reprinted from Locomotive.

Welding. See OXY-ACETYLENE WELDING, Pressure Vessels.

PRESSURES

Measurement. See FLUIDS, Pressure Measurement.

PRESSWORK

Drawing-Press Tools. The Calculation of Draw-Press Tools (Die Berechnung von Ziehwerkzeugen), W. Sellin. Maschinenbau, vol. 3, no. 9, Feb. 14, 1924, pp. 229-235, 10 figs. Discusses most accurate method of determining diameter of blank; calculation of punch diameter; development of proper relation between diameter of shell and drawing depth.

Methods. Questions as to Materials in the Production of Pressed Metal Parts (Werkstoffragen bei der Herstellung von Metallpressteilen), H. Obermüller. Zeit. für Metallkunde, vol. 16, nos. 6 and 8, June and Aug. 1924, pp. 229-235 and 308-311, 42 figs. Discusses process of making pressed metal parts, and dies for same, also properties of alloys, especially copper-zinc, and gives practical examples of failures in production of pressed metal parts, showing how to avoid mistakes.

Pressed-Metal Production. Pressed-Metal Engineering, D. P. Cook. Mech. Eng., vol. 46, no. 3, Mar. 1924, pp. 123-128, 12 figs. Diversity and complexity of process; rapid growth of industry; lack of engineering standards and information; possibilities and limitations of press production; examples of pressed-metal design. (Abridged.)

Pressed-Metal Production. Machy. (Lond.), vol. 24, no. 611, June 12, 1924, pp. 328-331, 6 figs. Practice of Fisher & Ludlow, Birmingham, featuring combination tools, deep-drawn work, and pressings to replace castings.

Pressed Steel, Applications of. The Development of Modern Stamping Practice, W. W. Galbreath and J. R. Winter. Mech. Eng., vol. 46, no. 1, Jan. 1924, pp. 17-19, 6 figs. Early uses of pressed metal; pressed steel in automobile field; replacement of cast-iron parts by pressed steel; various applications of pressed steel. (Abridged.)

Sheet-Steel Punchings. The Cost of Sheet Steel Punchings, F. C. Lawrence. Engineer, vol. 137, no. 3570, May 30, 1924, pp. 397-598, 3 figs. Review of methods more commonly adopted for pricing material in punchings, and suggestions for alternative which is free from their shortcomings.

PRINTING

Lithographing. See LITHOGRAPHING.

PRINTING MACHINERY

Railway Tickets. Ticket Printing and Numbering Installation of Société des Transports en Commun de la Région Parisienne, at Malakoff (Installation de l'imprimerie de tickets et de numeros d'appel de la Société T.C.R.P., à Malakoff), M. Lorin. Industrie des Tramways, vol. 18, no. 214, Oct. 1924, pp. 386-391, 14 figs. Technical details of machines employed, which consist principally of rotary machines for large and small production.

PRODUCER GAS

Analysis. Analysis of Producer Gas and Determination of Oxide of Carbon (Analyse des gaz de gazogènes et dosage de l'oxyde de carbone), Ch. de La Condamine. Chaleur et Industrie, vol. 5, nos. 53, 54, and 55, Sept., Oct., and Nov., 1924, pp. 478-486, 526-537 and 586-590, 21 figs. Report to Société de Physique Industrielle on methods of analysis of industrial gas and particularly CO content, including sampling, particulars of apparatus, reagents used for absorbing gases, etc., tests in Orsat apparatus with cuprous chlorides.

Producer Gas, R. T. Haslam. Indus. & Eng. Chem., vol. 16, no. 8, Aug. 1924, pp. 782-784, 2 figs. Apparent equilibrium between its constituents and influence of depth of fuel bed.

Automobile Fuel. See AUTOMOBILE FUELS, Producer Gas.

Combustion, Excess-Air Determination in. A Graphical Chart for Determining Excess Air in the Combustion of Producer Gas, G. M. Peltz. Am. Ceramic Soc.—Jl., vol. 7, no. 6, June 1924, pp. 437-441 and (discussion) 441-443, 1 fig. Presents a calculating chart by which it is possible to determine percentage of excess air existing in any producer gas fired furnace when analysis of gas and percentage of CO_2 in products of combustion are known.

Factory Power and Heating. Gas for Power and Heating. Power Engr., vol. 19, no. 216, Mar. 1924, pp. 99-105, 12 figs. Describes Raleigh's Cycle Co.'s power and heating plant; factory uses suction and producer gas for whole of its heat-treatment processes, and as fuel for its prime movers.

Heating, Value. The Calorific Value of Producer-Gas by Graph, A. Levesley. Fuel, vol. 3, no. 12, Dec. 1924, pp. 422-423, 3 figs. Reproduces graph designed with object of eliminating rather lengthy and monotonous calculations ordinarily necessary to determine net value of producer gas in B.t.u. per cu. ft. from its analysis.

Hydrogen and Methane in. See GAS ANALYSIS, Hydrogen and Methane in Producer Gas.

Hydrogen in. Determination of Hydrogen in Producer Gas. Fuels & Furnaces, vol. 2, no. 2, Feb. 1924, pp. 167-168. Percentage of hydrogen in gas serves as guide in successful producer operation; thermal conductivity of hydrogen used as basis for its continuous physical analysis.

Illuminating Gas Substitutes. Using Producer Gas as a Substitute for Illuminating Gas (Benutzung des Generatorgases als Leuchtgasersatz in Eisenbahnwerkstätten). Wärme, vol. 47, no. 37, Sept. 12, 1924, pp. 427-429, 3 figs. Discusses use of producer gas for forges in railway repair shops, which has been found suitable for all purposes for temperatures up to 1600 deg. cent.; it may be made from peat, brown coal, or other low-grade fuel.

Producers. See GAS PRODUCERS.

Utility of. Producer Gas as an Industrial Fuel, D. J. Demorest. Chem. & Met. Eng., vol. 31, no. 15, Oct. 13, 1924, pp. 578-581, 3 figs. Consideration of its utility and economics obtained through its proper use.

PROFILING. See MILLING MACHINES, Attachments.

PROFILOMETERS. See PAVEMENTS, Surface Testing.

PROFIT SHARING

English Plans. Profit Sharing. Monthly Labor Rev., vol. 19, no. 5, Nov. 1924, pp. 241-242. English profit-sharing and copartnership schemes in 1923.

The Case for Profit Sharing. Indus. Mgmt. (Lond.), vol. 11, no. 18, Dec. 1924, pp. 499-501. Describes scheme for increasing output, reducing costs, and curtailing waste by providing employees with share of savings, etc.

France. Profit Sharing. Monthly Labor Rev., vol. 18, no. 5, May 1924, pp. 222-223. Profit sharing in France.

Profit-Sharing and Recent French Legislation, P. Pic. Int. Labour Rev., vol. 10, no. 1, July 1924, pp. 1-29. Discusses act passed by French Parliament in 1922 for joint stock companies with profit-sharing schemes, and reluctance in its application.

Why Our Workmen Produce 30% More Than They Did, E. Romanet. Factory, vol. 33, no. 6, Dec. 1924, pp. 782-785, 836 and 838, 1 fig. Describes form of organization established at Joya Establishments at Grenoble, France, workshops for making hydroelectric equipment, steam boilers, autoclaves, caissons, bridges, etc.; how profits are distributed; it has been proved at factory that profits of capital will be much greater when it is planned to give greater share to workmen.

PROJECTILES

Effect of Wind Upon. Experimental Investigation of the Effect of Wind Upon the Motion of a Projectile, P. Schwartz. Coast Artillery Jl., vol. 60, no. 2, Feb. 1924, pp. 93-97, 1 fig. Results of test carried out which consisted in firing two guns whose azimuth of fire differed by 180 deg., almost simultaneously and over about same area; gun firing with wind had its range or deflection increased, and one firing against wind had a corresponding decrease.

Flight of, Photographing. See CAMERAS, Photographing Moving Projectiles.

Spinning, Drift of. On the Drift of Spinning Projectiles, J. W. Campbell. Roy. Soc.—Proc., vol. 106, no. A-737, Sept. 1, 1924, pp. 222-232, 1 fig. Discusses case of drift of spinning projectiles where yaw and inclination of axis of projectile to plane of fire do not become too great.

PROPELLERS

Airplane. See AIRPLANE PROPELLERS.

Ship. See SHIP PROPELLERS.

PROSPECTING

Aircraft, Use of. The Use of Aircraft in Mineral Exploration and Development, C. C. Mackenzie. Can. Inst. Min. & Metallurgy—Bul., no. 150, Oct. 1924, pp. 675-704 and (discussion) 704-706, 3 figs. Discusses possibilities of utilizing aircraft in exploring new country and hastening development of latent resources.

Copper. See COPPER, Prospecting.

Electrical. Electrical Methods of Prospecting, A. L. Flagg. Ariz. Min. Jl., vol. 8, no. 3, July 1, 1924, pp. 5-6 and 34, 7 figs. Methods used and results obtained by electrical prospecting.

Electrical Prospecting by the Lindblad-Sundberg-Vos Methods. Min. Mag., vol. 31, no. 6, Dec. 1924, pp. 346-349, 9 figs. Particulars of prospecting methods developed by Centralgruppen Emissions A. B., a company consolidated with Elektrisk Malmletning A. B., which developed Lundberg-Nathorst process.

Electrical Prospecting in Canada, S. F. Kelly. Can. Inst. Min. & Metallurgy—Bul., no. 143, Mar. 1924, pp. 166-187, 14 figs. See also Am. Zinc Inst.—Bul., vol. 7, no. 5, May 1924, pp. 21-39, 14 figs. Principles underlying Schlumberger's first method of electrical prospecting and later improvements; application to Canadian deposits; prerequisites for success; Conklin's method.

The Eötvös Torsion Balance. Colliery Guardian, vol. 128, no. 3326, Sept. 26, 1924, p. 812, 1 fig. Describes gravity balance for geological surveys.

Electro-Aeronautic. Electro-aeronautic Investigation of the Interior of the Earth (Elektroaviatische Erforschung des Erdinnern), Taussig. Elektrotechnik u. Maschinenbau, vol. 42, no. 46, Nov. 16, 1924, pp. 666-668. Details of Löwy method based on principle of exciting electric oscillations in a conductor and measuring their duration. Describes capacity method and reflection method. Application from airships in arid regions for finding water and ore.

Geological Research Work, Need of. Immediate Need of Geological Research Work That Will Aid Prospectors in Finding New Mines, L. Balliet. Salt Lake Min. Rev., vol. 26, no. 6, June 30, 1924, pp. 11-15, 3 figs. Discusses need of immediate and widespread geological research on occurrence of minerals and oil; gives geology of Tonopah district.

Geophysical Methods. What Are the Merits of Geophysical Investigating Methods? (Welchen Nutzen bringen die geophysikalischen Untersuchungsmethoden den Bergbautreibenden?), G. Glockemeier. Metall u. Erz, vol. 21, nos. 8 and 9, Apr. and May 1924, pp. 165-173 and 189-202, 32 figs. Discusses purpose, theory, apparatus, and application of magnetic, gravitometric, and electric investigating methods, and gives typical examples.

Methods. Notes on Scientific Prospecting, H. F. Lunt. Mineral Age, vol. 9, no. 2, Feb. 1924, pp. 9-10 and 22. Describes processes and apparatus which have been used with success.

Prospecting, V. Dolmage. Can. Min. Jl., vol. 45, no. 17, Apr. 25, 1924, pp. 391-396. How the great problem of mining industry is being solved. Describes methods, including Schlumberger and Lundberg-Nathorst electrical methods, and Eötvös Torsion Balance method.

Searching the Interior of the Earth's Crust, A. Gradenwitz. Eng. & Min. Jl.-Press, Vol. 118, no. 2, July 12, 1924, pp. 54-56, 3 figs. Résumé of methods used for determining presence of orebodies at distance by electrical, magnetic, and other means.

Radio. Prospecting by Radio, W. C. Riley. Eng. & Min. Jl.-Press, vol. 118, no. 19, Nov. 8, 1924, pp. 733-734, 2 figs. Development and possibilities of electrical investigations by this method.

PROTECTIVE COATINGS

Aluminum. See ALUMINUM, Protective Coatings for.

Galvanizing. See GALVANIZING.

Metal Spraying. See METAL SPRAYING.

Metals. See METALS, Protective Coating of.

Paints. See PAINTS.

Varnishes. See VARNISHES.

PRUSSIAN BLUE. See COAL GAS, Prussian Blue from.

PSYCHOLOGICAL TESTS

Employment Psychology. Employment Psychology, V. M. Cady. Engrs. & Eng., vol. 41, no. 11, Nov. 1924, pp. 277-279. Discusses application of tests to employment, non-intelligence tests or those that concern morality and emotionality, and use of some standard method of testing out industrial possibilities of employee after he has been accepted into organization.

PSYCHOLOGY.

Industrial. See INDUSTRIAL MANAGEMENT, Psychology in Industry.

PUBLIC UTILITIES

Accounting for. See ACCOUNTING, Public-Utility.

Properties Valuation. Three Recent Decisions of the United States Supreme Court, Upon Valuation, L. Metcalf. Am. Water Wks. Assn.—Jl., vol. 11, no. 1, Jan. 1924, pp. 1-16. Decisions on valuation of public utility properties handed down in Southwestern Bell, Bluefield Water Works, and Georgia Ry. & Power Co. cases.

Regulation. Shall Public Utility Service Be Rendered by Regulated Monopolies, W. A. Shaw. West. Soc. Engrs.—Jl., vol. 29, no. 11, Nov. 1924, pp. 416-426 and (discussion) 426-430. Gives graphic picture of growth of public-utility services and brief history of efforts toward regulation.

PULLEYS

Belt. Faults in Construction and Production of Belt Pulleys (Konstruktions- und Herstellungsfehler bei Riemenscheiben), M. Markmann. Maschinenbau, vol. 3, no. 17, June 12, 1924, pp. 618-621, 4 figs. Criteria for high-speed belt pulleys; production of wrought and cast-iron pulley; tests with 19 belt pulleys.

Clutch. See ELECTRIC MOTORS, A. C., Starting.

Cone. The Calculation of Cone-Pulley Diameters, H. E. Merritt. Mech. Wld., vol. 76, no. 1961, Aug. 1, 1924, pp. 66-67. Details of calculation for crossed belts and its application to open belts by means of correction determined to high degree of accuracy by simple slide-rule calculation.

Loose, Defects of. Overcoming the Defects of the Loose Pulley, H. Bentley. Can. Machy., vol. 32, no. 6, Aug. 7, 1924, pp. 37 and 48, 4 figs. Reduction of belt tension and increase in bearing area important factors in eliminating overheating and excessive wear.

Machining. Machining Pulleys on a Big Production Bases, A. E. Granville. Can. Machy., vol. 31, no. 6, Feb. 7, 1924, pp. 27-30, 13 figs. Methods employed by different shops to expedite work vary in accordance with equipment available and ideas of men in charge.

Pressed-Metal, Manufacture. Application of Pressed Metal to Pulleys, S. G. Gaillard, Jr. Forging—Stamping—Heat Treating, vol. 10, no. 6, June 1924, pp. 226-229, 12 figs. Various operations in manufacture of pressed-steel belt pulleys.

Redesigning a Pressed Metal Pulley, E. Panek.

Forging—Stamping—Heat Treating, vol. 10, no. 3, Mar. 1924, pp. 129-130, 8 figs. Eight operations eliminated in manufacture of pulley by change of design and addition of one more part; strength and appearance materially improved.

PULVERIZED COAL

Advantages. Advantages in Burning Pulverized Coal, F. L. Wolf. Steam Coal Buyer, vol. 2, no. 2, Sept. 1924, pp. 22 and 24, 1 fig. Practical description showing why pulverized coal gives more perfect combustion, with figures on comparative costs.

Anthracite Slush. See STEAM POWER PLANTS, Pulverized Anthracite-Slush-Burning.

Boiler Firing. An Investigation of Powdered Coal As Fuel for Power-Plant Boilers, H. Kreisinger, J. Blizard, C. E. Augustine, and B. J. Cross. U. S. Bur. Mines—Bul. 223, 1923, 90 pp., 48 figs. Results of 36 tests made on a 468-hp. Edge Moor boiler fired with pulverized coal at Oneida St. Station of Milwaukee Elec. Ry & Light Co., Milwaukee, Wis., to determine what overall boiler efficiency could be obtained with pulverized coal under various conditions of furnace operation and with coal of different fineness and moisture content.

Application of Pulverized Coal to Boilers. Power Plant Eng., vol. 28, no. 1, Jan. 1, 1924, pp. 71-72, 2 figs. Preparation of fuel; storage of dry pulverized coal; importance of furnace design; ash removal facilitated by water screens; safety rules.

Burning Low-Grade Fuels in Pulverized Form, E. K. Scott. Colliery Guardian, vol. 127, no. 3297, Mar. 7, 1924, pp. 607-608 (includes discussion). Particulars of some of the largest boilers in world designed for working with pulverized fuel firing on Lopulco system; particulars of power stations in France and Belgium which are being equipped with boilers to burn pulverized fuel; application to colliery boilers; colliery coal dust as pulverized fuel.

Economic Interest of Use of Pulverized Coal in Boilers (Intérêt économique de l'emploi du charbon pulverisé dans les foyers de chaudières), M. de Vathaire. Revue de l'Industrie Minérale, no. 91, Oct. 1, 1924, pp. 469-480. Fineness of pulverization; efficiency of pulverized coal; boiler tests; comparison with other kinds of firing.

Experience with Coal Dust and Combustion of Pulverized Coal (Les expériences sur les poussières de houille et la combustion du charbon pulvérisé), J. A. de Grey. Revue Universelle des Mines, vol. 2 (series 7), no. 5, June 1, 1924, pp. 276-283, 2 figs. Discusses principle of burner construction, combustion chamber, use of low-grade fuels and mixtures.

Further Development of Pulverized-Coal Firing (Die Aussichten für die Weiterentwicklung der Kohlenstaubfeuerung), F. Wintermeyer. Feuerungstechnik, vol. 13, no. 5, Dec. 1, 1924, pp. 47-50. Discusses further development of burners, combustion chamber, ignition, etc.; examples of recent construction types.

Powdered Coal Firing for Water-Tube Boilers and Metallurgical Furnaces, H. W. Hollands. Instn. Mech. Engrs.—Proc., vol. 2, no. 6, 1923, pp. 1143-1151, 6 figs. Describes unit system, which consists of one pulverizer per boiler or furnace, and points out its advantages; coal drying; savings in use of pulverized coal. (Abridged.)

Powdered Coal for Small Boiler Plants, T. W. Atterbury. Power Plant Eng., vol. 28, nos. 18, 19 and 20, Sept. 15, Oct. 1 and 15, 1924, pp. 937-939, 996-999, and 1048-1050, 12 figs. Describes unit pulverizer method of pulverizing and firing; system makes powdered coal an economical fuel for plant with few boilers; analysis of operating costs; comparative advantage and desirable characteristics of unit pulverizer.

Pulverized-Coal Boiler Performance, Brunot Island Power Station, L. W. Heller. Power, vol. 60, no. 16, Oct. 14, 1924, pp. 600-603, 9 figs. States that 22 months of operation has shown that this method of burning Pittsburgh coal has operating characteristics that are desirable and will be dominating factors in selection of furnace equipment in future; general arrangement and operating performance.

Pulverized-Coal Firing (Le chauffage des chaudières au charbon pulverisé), M. Sohm. Arts et Métiers, vol. 77, no. 48, Sept. 1924, pp. 338-347, 11 figs. Discusses advantages and application in various industries; describes plant of Bruay Min. Co., and gives operating data; diagrams.

Pulverized-Coal Firing Plant at the Friedrich Ernestine Mine (Die Kohlenstaubfeuerungsanlage auf der Zeche Friedrich Ernestine), K. Hold. Glückauf, vol. 60, no. 50, Dec. 13, 1924, pp. 1175-1179, 4 figs. Describes new plant and shows from results of tests and operations that there is a 30 per cent better utilization of fuel and considerable saving in labor.

Pulverized-Coal Firing and Its Economic Significance (Die Kohlenstaubfeuerung und ihre wirtschaftliche Bedeutung), F. Wintermeyer. Bergbau, vol. 37, nos. 14 and 15, July 10 and 24, 1924, pp. 356-363 and 399-400, 4 figs. Discusses production of pulverized coal, conveying, combustion, advantages, and application to boiler firing.

Pulverized Fuel for Boilers, W. M. Selvey. Colliery Guardian, vol. 128, no. 3316, July 18, 1924, pp. 157-158. Discusses fuel, preparation, burners, absorption of heat, and application to British condition. Abstract of paper read before World Power Conference.

Pulverized Fuel—Its Utilization in the Industries, C. F. Herington. Combustion, vol. 10, nos. 3 and 5, Mar. and May 1924, pp. 199-201 and 347-348, 2 figs. Mar.: Its adaptation to steam boilers using Lopulco system. May: How to operate a pulverized-coal plant.

Status of Pulverized-Coal Firing for Boilers in Germany (Stand der Kohlenstaubfeuerungen für Dampfkessel in Deutschland), Fr. Schulte. Zeit. des Vereines deutscher Ingenieure, vol. 68, nos. 39 and 41, Sept. 27 and Oct. 11, 1924, pp. 1021-1025 and 1071-1074, 16 figs. Special characteristics of pulverized-coal firing; combustion process; ignition; furnace design; lining; slag and ash removal; description of installations; experimental results; economy.

See also BOILER FIRING, Pulverized Coal.

Calculations. Calculations Respecting Pulverised Fuel, E. Kilburn Scott. Power Engr., vol. 19, no. 217, Apr. 1924, pp. 148 and 157. Also Combustion, vol. 10, no. 5, May 1924, pp. 360-361. Elementary considerations regarding use of pulverized fuel, arranged as calculations.

Cement Industry. See CEMENT MILLS, Pulverized Coal, Use of.

Central Stations. See CENTRAL STATIONS, Comines, France; Pulverized-Coal-Burning; St. Louis, Mo.

Combustion. Combustion Devices for Powdered Coal, W. Trinks. Fuels & Furnaces, vol. 2, nos. 5, 6, 7, 8, and 9, May, June, July, Aug., and Sept. 1924, pp. 449-452, 553-556, 663-666, 783-786, and 951-952, 17 figs. May: Theory of powdered-coal burning. June: Feeding devices and feeders. July: Low- and high-pressure burners. Aug. and Sept.: Capacity of burners and method of regulation.

Experimental Investigation of the Combustion of Pulverized Coal (Etude expérimentale de la combustion du charbon pulvérisé), E. Audibert. Revue de l'Industrie Minérale, no. 73, Jan. 1, 1924, pp. 1-32, 16 figs. Points out that primary reason for large combustion chambers is abnormal temperature otherwise reached by brickwork; it is

suggested that combustion chamber should be in two compartments, viz., an ignition chamber of very refractory bricks, impermeable to heat, and main combustion chamber with walls permeable to heat; heat passing through latter could be recovered by means of water jacket through which passes feedwater. See also (translation) Colliery Guardian, vol. 127, nos. 3306 and 3307, May 9 and 16, 1924, pp. 1188-1189 and 1251-1252, 4 figs.

Phenomenon of Combustion in Pulverized-Coal Firing (Der Verbrennungsvorgang bei der Kohlenstaubfeuerung), F. Schulte. Glückauf, vol. 60, no. 43, Oct. 25, 1924, pp. 971-978, 4 figs. Pulverizing; degree of fineness; ignition temperature of fuels; process of combustion; ignition; combustion of gas and coke of pulverized coal-ash content; proper firing, etc.

The Combustion Process in Pulverized-Coal Furnaces (Der Verbrennungsvorgang in der Kohlenstaubfeuerung), Wm. Nusselt. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 6, Feb. 9, 1924, pp. 124-128. Points out that process of combustion falls in two parts, both of which are explained; by use of law of heat transmission and diffusion, formulas are obtained for both parts of process, so that time of ignition and duration of combustion of blown-in fuel can be calculated.

Conveying System. See CONVEYORS, Pulverized-Material.

Developments. Pulverized Fuel. Nat. Elec. Light Assn.—Serial Report of Prime Movers Committee, Sept. 1924, 32 pp., 39 figs. Recent developments. Refinements in design and reliability of apparatus have been accomplished. Statements of operating companies and manufacturers, indicating progress, present trend in design and results obtained; progress in Europe.

Pulverized Fuel and Efficient Steam Generation, D. Brownlie. Instn. Elec. Engrs.—Jl., vol. 62, no. 329, May 1924, pp. 385-418 and (discussion) 418-469, 1 fig. Detailed consideration of latest developments in use of pulverized coal for steam generation, and comparison of its advantages and disadvantages as compared with mechanical stoking under most modern conditions; full account of Lakeside station at Milwaukee with exact working costs, and description of River Rouge plant at Dearborn, Detroit, as representatives of modern pulverized-fuel practice; comparison with Dalmarnock power station, Glasgow, characteristic of best British mechanical-stoker practice; in author's opinion advantages of pulverized fuel are so great that they constitute almost revolution in boiler practice.

Economies. Economies to Be Derived from Pulverized Fuel, H. D. Savage. Engrs. & Eng., vol. 41, no. 10, Oct. 1924, pp. 261-265 and (discussion) 265-268, 1 fig. Possible economies; stoker and pulverized-fuel firing compared; burning inferior coal.

Explosion Hazard. See COAL DUST, Explosions.

Forging and Rolling-Mill Furnaces. The Problem of Pulverized Coal (Zur Kohlenstaubfrage), W. Schmitz. Stahl u. Eisen, vol. 44, no. 11, Mar. 13, 1924, pp. 285-287, 2 figs. Pulverized-coal furnaces for forge shops and rolling mills at plant of Vereinigten Stahlwerken van der Zypen & Wissener Eisenhütten A.-G.; composition of fuel; refractory brick; temperature conditions; ashes and flue dust; tests on open-hearth furnace.

Foundry Use. See FOUNDRIES, Pulverized-Coal-Burning.

Hazards of. The Hazards of Pulverized-Fuel Systems, H. E. Newell and Rob. Palm. Mech. Eng., vol. 46, no. 11a, mid-Nov. issue, 1924, pp. 783-784. Principal features underlying proper installations; types of systems; driers of indirect type; safety requirements.

Heating Furnaces, Use in. Pulverized-Coal Firing in a Billet Reheating Furnace (Le chauffage au charbon pulvérisé d'un four poussant à billettes). Génie Civil, vol. 84, no. 26, June 28, 1924, pp. 621-623, 3 figs. Details of reconstructing furnace for reheating billets before rolling formerly fired with half gas; difficulties met with, and advantages of new system.

The Prospects of Pulverized-Coal-Fired Heating Furnaces in Rolling Mills (Aussichten der Staubfeuerung an Wärmeöfen in Walzwerken), H. Hochgesand. Wärme, vol. 47, nos. 12, 13, 14, 15, and 16, Mar. 21, 28, Apr. 4, 11, and 18, 1924, pp. 117-119, 128-132, 141-144, 154-157, and 166-169, 14 figs. Investigation on an ingot-heating furnace with former half-gas firing; influence of fineness of grinding and size of chamber on furnace efficiency and coal consumption; economy of pulverized-coal over half-gas firing; discussion of results.

Locomotive Firing. Pulverized Fuel for Canadian Locomotives, A. J. T. Taylor. Eng. Jl., vol. 7, no. 10, Oct. 1924, pp. 633-635, 2 figs. Review of possibilities of economy in use of fuel for railway purposes.

Pulverized Coal in Locomotives. Times Trade & Eng. Supp., vol. 15, no. 335, Dec. 6, 1924, p. 274. American and British experiments.

Malleable Furnaces. Powdered Coal in a Malleable Casting Plant, F. L. Wolf and Wm. Romanoff. Am. Foundrymen's Assn.—Preprint no. 444, for meeting Oct. 11-16, 1924, 8 pp. Applications; suitable coals; theory of pulverized coal; factors affecting its efficiency; furnace operation.

Pulverized Coal for Malleable Furnaces. Iron Age, vol. 113, no. 22, May 29, 1924, pp. 1633-1635, 5 figs. Capacity increased about 20 per cent by installation at malleable plant of Am. Radiator Co., Buffalo; equipment and advantages.

Nature, Preparation, and Use. Nature, Preparation and Use of Pulverized Coal, R. K. Meade. Rock Products, vol. 27, nos. 9, 11, 14, 16, 20, and 22, May 3, 31, July 12, Aug 9, Oct. 4, and Nov. 1, 1924, pp. 52-54, 27-29, 34-36, 42-44, 51-53, and 32-34, 53 figs. Application; earlier attempts to burn pulverized fuel; construction and method of operation of types of commercial burners. Oct. 4: Practice of burning cement and lime in rotary kilns using pulverized coal as fuel; application to rotary dryers. Nov. 1: Practice of burning pulverized coal in metallurgy; under boilers; possibilities in shaft lime-kiln firing.

Open-Hearth Furnaces. Pulverized Coal for Open-Hearth Furnaces, W. H. Fitch. Iron Age, vol. 113, no. 7, Feb. 14, 1924, pp. 521-522. Comparisons with producer gas and fuel oil; use in air and regenerative furnaces and soaking pits.

Physical Aspects. A Study of the Physical Properties of Powdered Coal of Varying Degrees of Fineness; and of the Distribution of Ash and Volatile Matter among the Fractions of Different Size, Chas. Roszak. Fuel, vol. 3, no. 5, May 1924, pp. 161-165, 7 figs. Paper read at Congrès de Chauffage Industriel in Paris, 1923. See reference to original article in Eng. Index 1923, p. 526.

Plants. Clark Thread Co. Installs Pulverized-Fuel Equipment. Power, vol. 60, no. 19, Nov. 4, 1924, pp. 714-719, 10 figs. Typical pulverized coal installation for industrial plant; furnaces of 4270 sq. ft. Stirling boilers remodeled to burn either pulverized coal or oil; preparation plant is adjacent to point of unloading and coal is transported in pulverized form through 5-in. pipe line (placed underground) a distance of 600 ft. to boiler plant.

How to Project a Pulverized-Coal Plant (Wie projektiere ich eine Brennstaubanlage?), M. Weiss. Wärme, vol. 47, nos. 19 and 20, May 9 and 16, 1924, pp. 199-202 and 225-227, 3 figs. Discusses coal bunkers, conveyors, drying plant,

dust explosions, pulverizing, dust conveying, firing, combustion chamber, ignition, etc., and describes two modern plants.

Self-Contained Pulverized Coal Unit, C. H. Tupholme. Power Plant Eng., vol. 28, no. 15, Aug. 1, 1924, pp. 800-801, 2 figs. Describes British development which crushes, separates, dries, and delivers pulverized coal to furnace. Requires no auxiliary plant except means for rotating its spindle and provision of a supply of raw coal to hopper; low first cost and compactness; permits low-grade fuels to be burned economically.

Preparation and Utilization. Commercial Considerations in the Use of Powdered Fuel, F. A. Scheffler. Nat. Engr., vol. 28, no. 11, Nov. 1924, pp. 527-532, 5 figs. Recent developments in use of pulverized coal. Design of pulverized-fuel furnaces; cost data on operation of pulverized-fuel plants; boiler efficiencies of pulverized-fuel plants; distribution systems and their installation.

Pulverized Coal: Its Preparation and Utilisation, R. Jackson. Engineer, vol. 137, no. 3555, Feb. 15, 1925, p. 179. See also Engineering, vol. 117, nos. 3038 and 3039, Mar. 21 and 28, 1924, pp. 381-383 and 415-418, 22 figs. Notes on pulverizers; pendulum mills; storage bins, feeders and burners.

The Preparation and Use of Pulverised Coal, J. W. Wardell. Colliery Engr., vol. 1, no. 3, May 1924, pp. 143-146, 1 fig. Advantages of pulverizing and plant required; crushing and drying methods; pulverizing mills; types of burners; application.

Propagation of Combustion Zone. The Propagation of a Zone of Combustion in Powdered Coal, F. S. Sinnatt and L. Slater. Fuel, vol. 3, no. 10, Oct. 1924, pp. 350-355, 4 figs. Determination of minimum temperature for combustion.

Pulverizers. A British Unit Pulverizer for Coal and Other Materials. Power Engr., vol. 19, no. 214, Jan. 1924, p. 16, 2 figs. Features of design of Vickers-Griffin self-contained coal pulverizer, which enables small users of coal to adopt powdered-fuel firing economically.

Pulverized Coal Firing and the Kofino Pulverizer (Staubfeuerung und Kofinomühle), O. Berner. Elektrische Betrieb, vol. 22, no. 13, July 10, 1924, pp. 122-125, 8 figs. Design and construction of Kofino pulverizer plant, and examples of application.

Pulverisers for Powdered Fuel Firing. Power Engr., vol. 19, nos. 218, 219, 221, 222, and 224, May, June, Aug., Sept., and Nov., 1924, pp. 184-186, 213-215, 293-295, 345-346, and 414-416, 28 figs. Describes various forms of gear suited to preparation of pulverized fuel and similar work; Sturtevant ring roll mill; outstanding features of several designs of pulverizing mills.

Pulverizers for Pulverized Coal Firing (Feuerungsmühlen für Staubfeuerung), Berner. Wärme, vol. 47, no. 36, Sept. 5, 1924, pp. 413-416, 8 figs. Advantages of pulverized-coal firing . Describes Kofino grinding mill by Krupp, and gives examples of application and results of tests.

Sheet Mills. Pulverized Coal Used as Fuel in Sheet Mills, J. Glew. Iron & Steel Engr., vol. 1, no. 10, Oct. 1924, pp. 553-554, 4 figs. It has been found that where continuous-type furnaces have been used results have been much more gratifying than when batch-type furnace is employed; methods of using pulverized coal to get best results; design of furnace.

Steam Power Plants. Pulverized Coal and Rational Steam Production (Staubkohle und rationelle Dampferzeugung), H. Esselbach. Wärme, vol. 47, no. 19, May 9, 1924, pp. 216-218. Details of English, American and French pulverized-coal-fired power centrals; advantages and efficiency of pulverized coal; future outlook.

Steam Generation with Pulverized Fuel, D. Brownlie. Can. Engr., vol. 47, no. 12, Sept. 16, 1924, pp. 343-344. Development of system of low-temperature carbonization of coal with reference to important installations in Great Britain, on Continent, and in United States; efficiencies obtained by system. Abstract of paper read before Inst. Elec. Engrs.

Systems. Pulverized-Fuel Systems, A. L. Cole. Power, vol. 59, nos. 23, 24, 25, and 26, June 3, 10, 17, and 24, 1924, pp. 900-905, 16 figs.; 940-945, 17 figs.; 985-988, 16 figs.; and 1022-1027, 26 figs. Different types of equipmentt in general use for drying, pulverizing, transporting, and burning coal in pulverized form. June 3: Types of dryers. June 10: Types of pulverizers used in unit and multiple systems. June 17: Systems used for conveying coal in pulverized form, construction and operation. June 24: Type of feeders and burners used with different systems of firing coal in pulverized form; review of earlier types; typical boiler settings designed in last four years.

Tests. Experiences with Coal Dust and Combustion of Pulverized Coal (Les expériences sur les poussières de houille et la combustion du charbon pulverisé), J. Arnoul de Grey. Chaleur & Industrie, vol. 5, no. 45, Jan. 1924, pp. 23-26, 2 figs. Calls attention to important results obtained by Taffanel and Audibert from tests carried out at Liévin and Montlucon, and discusses their application to different problems of combustion of pulverized coal, dealing with problem of burners, combustion chambers, and possibility of utilizing certain combustibles in pulverized state.

Unit System. The Unit System of Pulverized Coal, W. W. Clinedinst. Sibley Jl. Eng., vol. 38, no. 8, Nov. 1924, pp. 197-199, 2 figs. Advantages of unit system; construction and theory; steam raising; test data; maintenance and cost of operation.

Unit System for Pulverized Coal, S. C. Martin. Power Plant Eng., vol. 28, no. 9, May 1, 1924, pp. 471-472, 1 fig. Advantages of unit system in remodeled plants; results of tests.

Use, Development in. Development in use of Pulverized Coal, C. F. Herington. Elec. Light & Power, vol. 2, no. 5, May 1924, pp. 121-125 and 166, 6 figs. Review of development of its use in industrial furnaces, boilers, locomotives, etc.; comparisons between pulverized coal and other fuels; future possibilities.

Velocity of Particles Falling in Air. The Terminal Velocity of Particles of Powdered Coal Falling in Air or Other Viscous Fluid, J. Blizard. Franklin Inst.—Jl., vol. 197, no. 2, Feb. 1924, pp. 199-208, 1 fig. Shows how velocity is affected by size and density of particle, and density and viscosity of gaseous medium in which it falls. Terminal velocity acquired by a particle of powdered coal falling in combustion chamber of a furnace is important factor determining rate at which particle burns, for the higher the velocity the more rapidly will a fresh supply of oxygen be brought to its surface. Conclusions reached applicable to estimation of velocity with which small particles other than coal fall in fluids.

PUMICE

Italian, Production of. How Italian Pumice Is Produced, A. Y. Van Amringe. Abrasive Industry, vol. 5, no. 2, Feb. 1924, pp. 46-47, 2 figs. Is quarried on mountain sides and brought to coast for inspection and sorting; notes on preparation and manufacture for commercial purposes; care necessary in grinding.

PUMPING ENGINES

Compound. New Compound Pumping Engines of the Hamburg Water Works (Die neuen Verbund-Pumpmaschinen des Hamburger Wasserwerks), R. Schröder. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 12, Mar. 22, 1924, pp. 277-283, 12 figs. Results of public tender for delivery of piston and turbo pumping engines; describes design of accepted piston pumping engine and auxiliary boiler installation; results of tests with pump valves and determination of steam consumption of engines.

PUMPING PLANTS

Double-Unit. A Double-Unit Pumping Plant, R. James. Colliery Engr., vol. 1, no. 6, Aug. 1924, pp. 283-286, 5 figs. Describes economies effected by reorganization at Navigation Colliery, Crumlin.

Economics. Heat-Economic Control of Steam Pump Works (Die wärmewirtschaftliche Kontrolle von Dampfpumpwerken), P. Brinkhaus. Gas- u. Wasserfach, vol. 67, nos. 29 and 30, July 19 and 26, 1924, pp. 421-424 and 436-437, 7 figs. Discusses boiler operations, determination of calorific value of coal, operation of pumps, calculation of pumping and boiler plants, etc.

Electrically Driven. Electric Pumping Plant on the C. & N. W., Jos. A. Andreucetti. Ry. Elec. Engr., vol. 15, no. 10, Oct. 1924, pp. 366-367, 2 figs. Notable economies effected by substituting electric operation for steam-driven equipment.

Holland. Modern Pumping Engines in Holland, J. C. Dijshoorn. Engineering, vol. 117, no. 3040, Apr. 4, 1924, pp. 446-448, 5 figs. Describes representative installations of modern practice and considerations involved in design. (Abstract.) Paper read before Instn. Engrs. & Shipbldrs. in Scotland.

Irrigation. An Electrically Operated Irrigation Plant, C. W. Geiger. Nat. Engr., vol. 28, no. 6, June 1924, pp. 259-261, 3 figs. Description of irrigation pumping plant of River Farms company in California; capacity 504,000,000 gal. per day; screw pumps designed to operate very efficiently at low heads and driven by synchronous motors constitute present equipment.

Irrigation Pumping Machinery (Gezira Scheme), Sudan, R. W. Allen. Engineering, vol. 117, nos. 3046 and 3047, May 16 and 23, 1924, pp. 654-656 and 685-687, 11 figs. See also Engineer, vol. 137, no. 3568, May 16, 1924, pp. 549-550, 5 figs. Object of scheme is to provide, for purpose of growing cotton, irrigation of northern portion of Gezira plain; construction details of Wad-el-Nau pumping station; drainage arrangements; suction wells and pipes; discharge pipes; labor employed on erection; trials of machinery.

Mines. Features That Should be Embodied in the Design of Plunger and Centrifugal Pumps. Coal Age, vol. 25, no. 1, Jan. 3, 1924, pp. 11-14, 3 figs. Mining Congress committee suggest standards which should govern construction of pumps in coal mines, not for gathering water but for its delivery to surface.

Pumping 2,200 Feet in a Single Lift, E. F. Irving. Eng. & Min. Jl.—Press, vol. 117, no. 26, June 28, 1924, pp. 1041-1043, 4 figs. See also Arizona Min. Jl., vol. 7, no. 19, Mar. 1, 1924, p. 9, 1 fig. Details of large and unusual installation in junction shaft of Calumet & Arizona Mining Co., Warren, Ariz.

Railway Service. Southern Pacific Completes Million Gallon Pumping Plant. Ry. Eng. & Maintenance, vol. 20, no. 3, Mar. 1924, pp. 105-107, 5 figs. Large air-life system at El Paso proves big improvement over prior arrangement.

Water-Works. A Large English Bored Well, F. J. Dixon. Eng. & Contracting (Water Works), vol. 61, no. 2, Feb. 1924, pp. 347-353, 3 figs. Sinking, lining and testing of a 1054-ft. hole in 36-in. to 20-in. diameter sections, and brief account of Somerford pumping plant, of South Staffordshire Water Works Co.

Selection of Auxiliaries for Steam-Operated Pumping Stations, F. G. Cunningham. Am. Water Wks. Assn.—Jl., vol. 11, no. 2, Mar. 1924, pp. 341-357. Methods of driving auxiliaries; comparing power requirements of auxiliaries; heat balance; condensers and condenser auxiliaries; boiler feed pumps; stoker drives; mechanical draft driving mechanism.

$60,000 Saved in One Year's Pumping By Diesel Power. Oil Engine Power, vol. 2, no. 2, Feb. 1924, pp. 103-105, 1 fig. Comparison of two pumping plants of Rond Point Water Works of Alexandria Water Co., Ltd., Egypt, one steam-driven and other Diesel-engine-driven, showing tremendous advantages of Diesel power over that of steam.

Water Works Pumping Plant at Guelph, H. S. Nicklin. Can. Engr., vol. 46, no. 9, Feb. 26, 1924, pp. 267-268, 4 figs. Describes additional pumps installed in plant at Guelph, Ont., in 1920 and 1922; motor-driven Rees Roturbo and Bawden centrifugal pumps, also Sterling engine-driven units; operating costs reduced.

Water Works Pumping Stations, C. B. Burdick. Am. Water Wks. Assn.—Jl., vol. 11, no. 2, Mar. 1924, pp. 358-380, 11 figs. Outlines general principles of pumping station design and cites a few examples of recent construction, referring more particularly to buildings for housing water works equipment.

PUMPING STATIONS

Baltimore, Md. Nine Years' Operation of the Baltimore Sewage Pumping Station, C. E. Keefer. Pub. Works, vol. 55, no. 7, July 1924, pp. 207-210, 5 figs. Description of plant and details of operation, including amount of screenings, slip and duty of pumps, and most of operation for each year from 1915 to 1923, inclusive.

Central. No Unnecessary Pipe Fittings in This Pump Station, J. H. Edwards. Coal Age, vol. 26, no. 19, Nov. 6, 1924, pp. 651-654, 7 figs. New central pump station of Keystone Coal & Coke Co., Greensburg, Pa.; single-stage centrifugal pumps are connected in series; units rated 400 hp., 4200 gal. per min., 285-ft. head; brick-lined duct connects pump house with 60-acre sump.

Cleveland, Ohio. The Fairmount Pumping Station and Heating Plant, L. A. Quayle. Mech. Eng., vol. 46, no. 12, Dec. 1924, pp. 866-872, 4 figs. See also Power, vol. 60, no. 22, Nov. 25, 1924, pp. 844-847, 3 figs. Particulars of novel features incorporated in new station in Cleveland, Ohio, together with analysis of efficiency of various steam prime movers available for water-works use.

Coal Handling. See COAL HANDLING, Pumping Station.

Diesel-Engine-Driven. A Novel Diesel Pumping Plant, F. J. Dixon. Power Engr., vol. 19, no. 214, Jan. 1924, pp. 23-24, 1 fig. Diesel-driven combination of bore-hole and force-pump, without reservoir, erected at Somerford by So. Staffordshire Waterworks Co.

Cutting Pumping Costs With Oil Engine Driven Generator, A. L. Greene. Fire & Water Eng., vol. 75, no. 5, Jan. 30, 1924, pp. 207-208 and 224-225, 5 figs. Particulars of new water works plant at Gloucester, N. J., having motorized pumps with Diesel-engine-driven generators furnishing motive power; reasons for installing motorized pumps; conditions governing use; summary of advantages gained.

Large Paris Pumping Plants are Diesel-Driven.

Oil Engine Power, vol. 2, no. 7, July 1924, pp. 388-390, 3 figs. Gives illustrations and account of one of large oil-engined pumping plants of Paris, fitted with two 4-cylinder, 4-cycle engines belt-connected to Rateau double-suction centrifugal pumps.

Operating Experiences of a Diesel Engine Pumping Station, W. De Witt Vosbury. Fire & Water Eng., vol. 75, no. 23, June 4, 1924, pp. 1215, 1219, and 1224, 4 figs. See also Am. Water Works Assn.—Jl., vol. 12, no. 4, Dec. 1924, pp. 381-390 and (discussion) 390-392, 1 fig. Statistics showing experiments in use of Diesel engine in Gloucester, N. J., station, a typical small water works pumping station.

The Somerford Pumping Station, South Staffordshire Waterworks Company, F. J. Dixon. Engineering, vol. 117, nos. 3031 and 3032, Feb. 1, and 8, 1924, pp. 155-157 and 187-189, 10 figs. See also Sulzer Bros. Technical Rev., no. 3, 1924, pp. 1-12, 9 figs. Pumping plant consists of 4-cylinder Sulzer Diesel engine, driving vertical-spindle centrifugal borehole pump; details of plant and auxiliaries. (Abstract.) Paper read before Instn. Water Engrs.

Electric Control. Electrically-Controlled Pumping Station. Engineering, vol. 118, no. 3072, Nov. 14, 1924, pp. 670-672, 8 figs. Describes Dean system of remote control for valves installed at Chester Water Works.

Electrically Driven. Illinois Central Builds Modern Pumping Station, C. R. Knowles. Ry. Age, vol. 76, no. 26, May 31, 1924, pp. 1309-1311, 3 figs. See also Ry. Eng. & Maintenance, vol. 20, no. 6, June 1924, pp. 233-236, 5 figs. Facilities at Clinton, Ill., consist of three deep wells equipped with turbine pumps and 50,000-gal.-per-hr. water softener, all of which are electrically driven, together with filters, pipe lines, and additional storage tank having capacity of 100,000 gal.

France. The Loire Pumping Station at Pertuiset [Station de pompage dans la Loire au Pertuiset (Loire)], G. J. Laferrière. Génie Civil, vol. 85, no. 17, Oct. 25, 1924, pp. 357-360, 10 figs. Details of water intake, feed pumps, reservoirs, sand filters, and main pumping plant of a station on Loire river, having capacity of 5000 cu. m. per 22 hours, for industrial purposes.

Oshkosh, Wis. Reconstruction of Oshkosh Water-Works, J. Sam Hartt. Power, vol. 60, no. 21, Nov. 18, 1924, pp. 802-803, 2 figs. Describes rebuilding of municipal pumping plant at Oshkosh, Wis.; synchronous-motor gasoline-engine pumping units replace old-time steam plant.

Sewage. See SEWAGE DISPOSAL, Pumping Stations.

Vereeniging, South Africa. Pumping Plant Installed in Connection with the Rand Water Board Vaal River Scheme, W. Ingham and C. E. Mason. S. African Instn. Engrs.—Jl., vol. 23, no. 2, Sept. 1924, pp. 232-246 and (discussion) 246-248, 14 figs. Details of pumping plant installed at Vereeniging.

PUMPS

Air. See AIR PUMPS.

Air-Lift. Experimental Study of Air Lift Pumps and Application of Results to Design, C. N. Ward and L. H. Kessler. Univ. of Wis.—Bul., vol. 9, no. 4, serial no. 1265, 1924, 166 pp. 60 figs. See also Eng. & Contracting (Water Works), vol. 61, no. 16, June 11, 1924, pp. 1273-1278, 6 figs. Results of experiments as to foot pieces show that conditions of eduction pipe, where energy of air is expended in producing motion of water, are factors determining success or failure.

Theory of the Air-Lift Pump with Special Reference to the Slip of Air Bubbles in Water, O. Miyagi. Tôhoku Imperial Univ.—Technology Reports, vol. 4, no. 2, 1924, pp. 1-18, 2 figs. Solves problem of air-lift pump with special reference to slip of air bubbles in water, and constructs formulas giving terms by which its effect on air-lift pump can be determined separately from others.

With Air Lift Flood Water Can Be Removed at a Single Inexpensive Setting of Equipment, E. J. Gealy. Coal Age, vol. 26, no. 25, Dec. 18, 1924, pp. 868-870, 4 figs. Difficult pumping problems solved in mines of Glen Alden Coal Co. by use of compressed air; three air lifts deliver 2300 gal. per min.; economy of installation and convenience of operation.

Boiler-Feed. Boiler Feed Pump Explanations and Calculations, Chas. L. Hubbard. Power, vol. 60, nos. 25 and 26, Dec. 16 and 23, 1924, pp. 979-982 and 1021-1024, 8 figs. Dec. 16: Principles underlying successful operation and how to figure capacity, suction lift or pressure of feed pump. Dec. 23: Selecting boiler feed pumps; characteristics.

Borehole. A New Borehole or Well Pump, J. A. Frerichs. S. African Min. & Eng. Jl., vol. 35, no. 1702, May 10, 1924, pp. 938-939. Describes pump designed and patented by G. E. White, White's Patent Pumps, Johannesburg; consists of 2 cylinders with buckets and ball valves, placed in tandem in an outside casing, and each of these cylinders is directly connected by separate suction passages to outside of outer casing.

"Mirrlees-Leggett" Borehole Pumps. Elec. Times, vol. 66, no. 1730, Dec. 11, 1924, pp. 707-708, 2 figs. Improved type of circulating borehole pump which, until now, has been manufactured only in India.

British Empire Exhibition. British Empire Exhibition; Pumps and Pumping Machinery. Engineering, vol. 117, no. 3048, May 30, 1924, pp. 689-692, 17 figs.; vol. 118, nos. 3053 and 3059, July 4 and Aug. 15, 1924, pp. 2-5 and 216-220, 31 figs., partly on supp plates. May 30: Worthington-Simpson 48-in. centrifugal pump for Littleton reservoir of Met. Water Board; centrifugal pumps constructed by Pulsometer Engrg. Co.; Restler double-acting pump; etc. July 4: Describes high-lift turbine pumps, emergency bilge pump, and low-lift turbine pump for submerged working exhibited by Gwynnes Eng. Co., Ltd., Hammersmith; duplex pump with Twells valve gear, vertical piston cooling pump, and duplex steam pump, of Hayward-Tyler & Co., Ltd.; and opposed-impeller extraction pump, low-lift condensate pump, and multi-stage high-lift pump, of Mirrlees Watson Co., Ltd. Aug. 15: Describes exhibits, including motor-driven two-throw double-acting pump and 20,000-gal. turbo boiler-feed pump of G. and J. Weir, Ltd.; emergency bilge pump and 4-in. salvage pumping set of Drysdale & Co., Ltd.; Gwynne-Pennel rotary trap; and steam turbine boiler-feed pump and other pumping machinery of Gwynnes Engineering Co., Ltd.

Chemical Industry. Pumps in the Chemical Industry (Pumpen in der chemischen Industrie), F. Jaeger. Zeit. für angewandte Chemie, vol. 37, no. 45, Nov. 6, 1924, pp. 882-884. Discusses centrifugal pumps and their operation, acid-resisting lining, piston pumps and valve efficiency, diaphragm pumps, air-pressure pumps, steam-pressure pumps, etc.

Circulating, Motor-Driven. Motor-Driven Circulating Pumps, H. B. Seeley. Elec. Wld., vol. 84, no. 13, Sept. 27, 1924, pp. 689-691, 3 figs. Characteristics of circulating system, applications of various pump combinations, desirable speed requirements, and economical operation.

Condenser. See CONDENSERS, STEAM, Pumps, Cooling-Water.

Drainage. Double-inlet Drowned Drainage

Pumps. Engineer, vol. 136, no. 3550, Jan. 11, 1924, p. 52, 2 figs. Describes large drainage pumps manufactured for Renala irrigation scheme of Indian Government.

Some Large Dutch Drainage Pumps, J. C. Dijxhoorn. Engineer, vol. 137, no. 3567, May 9, 1924, pp. 506-507, 3 figs. Particulars concerning pumps which were put to work over 3 years ago near village of Zoutkamp on Lauver Zee. (Abstract.) Paper read before Instn. Engrs. & Shipbldrs. in Scotland.

Electric Drive. See ELECTRIC DRIVE, Irrigation Pumping.

Gas. In This Gas Pump Water Acts as a Piston, F. J. Taylor. Fire & Water Eng., vol. 75, no. 20, May 14, 1924, pp. 1001, 1054, and 1056, 4 figs. An English self-contained internal-combustion gas pump, resulting energy of which is used to pump water without assistance of connecting rod, crankshaft or other parts.

See also Humphrey.

Gasoline. The "Shell" Kerbside Petrol Pump. Engineering, vol. 117, no. 3036, Mar. 7, 1924, pp. 301-304, 10 figs. Gasoline is raised from underground tank by hand-operated, semi-rotary pump and delivered into one or other of two measuring vessels, or containers, through four-way plug cock.

Humphrey. The Humphrey Gas Pump. Can. Engr., vol. 47, no. 7, Aug. 12, 1924, pp. 243-244, 2 figs. Internal-combustion engine used for pumping water; explosion of gas forces water through pipe.

Mine, Metals for. Metals Used in Mine Pumps, G. A. Drysdale. Min. Congress Jl., vol. 10, no. 1, Jan. 1924, pp. 47-49. Relative value of their resistive properties.

Oil. See OIL PUMPS.

Oil-Well. See OIL WELLS, Pumping.

Rotary. A New Rotary Pump (Neuerung im Bau von Rotationspumpen), E. Winter. Zeit. des Oesterr. Ingenieur- u. Architekten-Vereines, vol. 76, no. 9-10, Mar. 7, 1924, pp. 80-81, 7 figs. Describes "Feuerheerd" pump, named after its inventor. Shaft drives inner rotor, which carries three radial projections or arms, which fit into four corresponding pockets of outer rotor. Pump provides a uniform flow, is simple and reliable, and has found considerable use in England and British Colonies.

Positive Rotary Pumps for Oil-Engine Drive. Oil Engine Power, vol. 2, no. 9, Sept. 1924, pp. 480-482, 4 figs. Discusses characteristics of direct-connection to oil engines and pressures developed by them.

Selection. Comparison of Pumping Equipment, R. T. Livingston. Power Plant Eng., vol. 28, no. 16, Aug. 15, 1924, pp. 849-850. Discusses types of pumps and practical method of comparing pumping equipment.

Testing. The Comparison of Pump Tests with Special Reference to Low Head Pumps, E. F. Delery. Louisiana Eng. Soc.—Proc., vol. 10, no. 2, Apr 1924, pp. 98-107. Lays stress on capacity and spouting velocity as related to lift in selecting or designing pumps; gives practical examples of determining efficiency.

Theory of. The Theory of Pumps and Compressors (Beiträge zur Theorie von Pumpen und Kompressoren), E. Altenkirch. Zeit. für technische Physik, vol. 5, no. 2, 1924, pp. 44-52, 7 figs. Author endeavors to solve problem which frequently occurs in practice, that is, to describe working and to design pump or compressor which in given time will produce prescribed vacuum or compression in container, whose volume continuously varies through entrance or removal of liquid; author applies geometrical method of calculation based on properties of circle; gives graphs embodying results of graphical solutions; conclusions are drawn as to working of pump according to relative sizes of piston space, dead space, etc.

Vacuum. An All-Metal High-Vacuum Pump System, I. Backhurst and G. W. C. Kaye. Lond., Edinburgh, & Dublin Philosophical Mag. & Jl. Sci., vol. 47, no. 281, May 1924, pp. 918-929, 3 figs. Describes pump system of two-stage type, constructed wholly of metal and consisting of (1) mercury-vapor jet pump in series with (2) mercury-vapor condensation pump; advantages of system. Bibliography. See also paper by same authors, entitled, A Metal Annular-Jet Vacuum Pump, describing modification of pump described in first paper, pp. 1016-1020, 2 figs.

Determining the Type of Vacuum Pump for Given Air Removal Conditions, C. M. Reed. Power, vol. 60, no. 2, July 8, 1924, pp. 52-54, 4 figs. Discusses rotative dry-vacuum pump and steam-jet pumps, and gives charts for simplified calculation of relative volumes and weights of dry air in air-steam mixtures.

Time Required for Exhausting Containers by Means of Rotary Vacuum Pumps on the Multiple-Cell Principle (Evakuationszeit beim Evakuieren von Behältern durch rotierende Vakuumpumpen des Vielzellenprinzips), H. Baum. Fördertechnik u. Frachtverkehr, vol. 17, no. 23, Dec. 3, 1924, pp. 327-329, 2 figs. Determination of effective suction action of rotary vacuum pumps at various vacuums, effective suction for a given vacuum being known.

Water Elevators. See WATER ELEVATORS.

PUMPS, CENTRIFUGAL

Boiler-Feed. Sulzer Turbo Boiler Feed Pumps. Sulzer Tech. Rev., no. 1, 1924, pp. 3-7; 4 figs. Advantage of steam-turbine drive; types of turbines used for drive; how turbo boiler-feed pumps are governed.

British Empire Exhibition. See PUMPS, British Empire Exhibition.

Calculation. The Calculation of Centrifugal Pumps (Die Berechnung von Kreiselpumpen), H. G. Bader. Zeit. des Vereines deutscher Ingenieure, vol. 44, no. 68, Nov. 1, 1924, pp. 1145-1149, 9 figs. Theory of the confined vortex, which has been found useful in calculation of airfoils, can be successfully applied to systematic design of centrifugal pumps; the faulty basic equation for calculation of pressure head is replaced by an equation which not only avoids considerable deviation from measured values, but also gives excellent reproduction of characteristic curve.

Characteristic Curves. Centrifugal Pump Characteristic Curves, W. E. W. Millington. World Power, vol. 2, no. 8, Aug. 1924, pp. 103-107, 10 figs. Indicates a method of analysis of pump characteristic curves which, in author's opinion, is much more valuable in actual practice than usual method of employing equations which have proved to be most treacherous in actual use.

Use of Centrifugal Pump Curves. Power Plant Eng., vol. 28, no. 9, May 1, 1924, pp. 497-499, 2 figs. Usual forms of characteristic curves for centrifugal pumps based on constant speed.

Characteristics, Calculation of. Figuring Centrifugal Pump Characteristics from Those at Known Speed, F. C. Evans. Power, vol. 59, no. 13, Mar. 25, 1924, pp. 487-488, 2 figs. Three laws of centrifugal pump operation on which are based calculations to predict variable speed characteristics.

Deep-Suction. Modern Centrifugal Pumps With Electric Drive for Deep Suction (Neuartige Tiefsauge-Motor-Kreiselpumpen), C. Redzich. Gesundheits-Ingenieur, vol. 47, no. 36, Sept. 6, 1924, pp. 397-400, 9 figs. Details of pumping plants

which are practically independent of depth of groundwater and are of very high capacity, especially mine pumps.

Developments. Modern Centrifugal Pump Practice. Indian & East. Engr., vol. 55, nos. 2, 3, and 4, Aug., Sept., and Oct. 1924, pp. 67-68, 111-114, and 155-160a, 22 figs. Notes on recent improvements in design, various types for a variety of duties, and outline of notable installations.

Electric vs. Steam Drive. Electric Motors for Driving Centrifugal Water Pumps, E. G. Sohlberg. Chem. & Met. Eng., vol. 30, no. 21, May 26, 1924, pp. 832-833, 3 figs. Comparison of cost of pumping water by this method, using central-station current, with steam turbine and engine drives.

Fire. Fire Pumps (Motorwagen-Feuerlöschpumpen). Zeit. des Vereines deutscher Ingenieure, vol. 44, no. 68, Nov. 1, 1924, pp. 1153-1154, 5 figs. Advantages of centrifugal over piston pumps; equipment of motor fire engine; description of Sulzer adjustable centrifugal pumps.

Flow Phenomena in. Experimental Investigation of Flow of Water through a Turbine Acting as Centrifugal Pump (Experimentelle Untersuchung der Wasserströmung durch ein rotierendes Zellen-Kreiselrad), H. Oertli. Schweizerische Bauzeitung, vol. 83, no. 20, May 17, 1924, pp. 231-234, 13 figs. Results of tests to investigate flow phenomena in rotary water wheel.

High-Lift. Centrifugal Pumps at the British Empire Exhibition. Engineering, vol. 118, no. 3070, Oct. 31, 1924, pp. 625-627, 10 figs. High-lift turbine pumps exhibited by Brit. Elec. Plant Co.

The Construction and Operation of Centrifugal Pumps. Gas Engr., vol. 40, no. 584, Dec. 1924, pp. 265-266, 2 figs. Briefly enumerates advantages of central pump, and describes action of a pump of this type as at present designed for high lifts, which is becoming increasingly popular for gas works purposes.

Internal Leakage. Determination of Internal Leakage in Centrifugal Pumps, A. F. Sherzer. Eng. News-Rec., vol. 92, no. 25, June 19, 1924, pp. 1056-1058, 5 figs. Facts regarding coefficient of discharge established by research in hydraulic laboratory of Univ. of Mich.

Lubrication. Oil System Specially Designed for Municipal Pumping Plant, H. R. Cady. Power, vol. 60, no. 6, Aug. 5, 1924, pp. 203-205, 3 figs. Tells why continuity of service is highly important and how low renewal cost is obtained. Gravity tank provides 15-min. supply without pump, and indicating devices check operation.

Mine Service. Some Advantages of the Centrifugal Pump for Mine Service, W. A. Cather. Coal Mine Mgmt., vol. 3, nos. 10 and 11, Oct. and Nov. 1924, pp. 38-42 and 28-31, 5 figs. Oct.: Proper field for centrifugals; low first cost; space advantages; lower piping costs. Nov.: Operating costs; attendance; maintenance.

Operation. The Operation of Centrifugal Pumps, J. S. Pillans. Engineer, vol. 138, no. 3600, Dec. 26, 1924, pp. 732-733, 3 figs. Deals with low-lift and turbine pumps.

Semi-Portable. See AIR COMPRESSORS, Semi-Portable.

Specifications. Notes on Centrifugal Pump Specifications, J. D. Morgan. Power Plant Eng., vol. 28, no. 10, May 15, 1924, pp. 555-559, 7 figs. Service requirements are principal data needed by designer; service records show dependability of centrifugal pumps.

Suction Pipes, Evacuating. Evacuating the Suction Pipes of Centrifugal Pumps, W. S. Douglas. Power Engr., vol. 19, no. 219, June 1924, pp. 205-207, 4 figs. Study of conditions obtaining during process; develops formulas for predetermination of pump capacities, etc., for given plants.

Sulzer. Reclamation Pumping Stations Equipped with Sulzer Centrifugal Pumps. Sulzer Tech. Rev., no. 4, 1924, pp. 7-14, 18 figs. Describes types of pumps installed in Swiss pumping stations.

Testing. Testing of Centrifugal Pumps (Prüfung von Kreiselpumpen). Maschinenbau, vol. 3, no. 29, Dec. 11, 1924, pp. 1127-1128, 3 figs. Necessity for verification of calculation of centrifugal pumps due to hydraulic losses which cannot be determined exactly; arrangement of testing station; measurement of pressure and power consumption; etc.

Turbine. Turbine Pump for Boiler Feeding, C. H. S. Tupholme. Power Plant Eng., vol. 28, no. 5, Mar. 1, 1924, pp. 279-280, 4 figs. Recent installations in Great Britain indicate growing use of turbine pump.

Turbo-Pumps, R. James. Colliery Engr., vol. 1, nos. 3 and 4, May and June 1924, pp. 113-115 and 196-198, 15 figs. Review of principles and practice of turbine pump as applied to conditions of colliery work.

See also Boiler-Feed.

Turbine-Driven. A Steam Turbine Waterworks Set. Power Engr., vol. 19, no. 214, Jan. 1924, pp. 17-19, 2 figs. Describes plant erected to meet special circumstances at Oakfield Road pumping station, Clifton.

Port of London Authority Rotary Hydraulic Pumping Plant. Power Engr., vol. 19, no. 223, Oct. 1924, pp. 378-382, 6 figs. Describes two turbine pumping plants for furnishing high-pressure water at London docks.

PUNCHES

Dies and, Standard Sets. Standard Punch and Die Sets, S. Diamant. Am. Mach., vol. 61, no. 5, July 31, 1924, pp. 199-201, 3 figs. Various types and advantages. Time and original cost saved by standard equipment. Abstract of paper for Metropolitan Sec. A.S.M.E., Apr. 15, 1924.

PYRITES

Chalcopyrite. Roasting of Chalcopyrite (Ueber die Vorgänge bei der Röstung von Chalkopyrit), V. Tafel and E. Greulich. Metall u. Erz, vol. 21, no. 22, 2nd Nov. no., 1924, pp. 517-520, 2 figs. Analytical results of lye tests with products from roasting chalcopyrite in dry air current at temperatures between 300 and 700 deg. Formation of $CuSo_4$, $FeSo_4$, $Fe_2(SO_4)_3$, etc.

Germany. Pyrites and Sulphur (Schwefelkies, Schwefel und seine Bedeutung). Bergbau, vol. 37, nos. 23 and 24, Oct. 23 and 30, 1924, pp. 620-622 and 638-642. Occurrence of pyrites at Meggen, on Lenne river, and at Goslar, in Harz mountains; analysis of minerals and geological data. Pyritic smelting furnace.

Roasting. The Hydrogen Roasting of Pyritic Ores With Recovery of Sulphur and Iron, H. Conder. Australasian Inst. Min. & Met.—Proc., no. 52, Dec. 31, 1923, pp. 286-296. Discusses new process in which hydrogen is produced by electrolysis of solution carrying hydrochloric acid and ferrous chloride, yielding ferric chloride, hydrogen being passed over pyritic ores, yielding sulphurated hydrogen.

Servia. Pyrites at Maidan-Peck, Servia (Les pyrites de Maidan-Peck, Serbie), J. Barthoux. Académie des Sciences—Comptes Rendus, vol. 179, no. 19, Nov. 10, 1924, pp. 982-984. Discusses Maidan-Peck deposit along Danube, formerly worked for copper and now being worked for iron pyrites.

Spontaneous Combustion Caused by. Pyrites

as a Cause of Spontaneous Combustion in Coal Mines, J. Ivon Graham. Colliery Guardian, vol. 127, no. 3298, Mar. 14, 1924, pp. 671-672 (includes discussion). Results of researches; shows that any form of pyrites in a finely divided condition will absorb oxygen rapidly from air with consequent heat production, and that heatings due to oxidation of pyrites will probably develop more rapidly than those caused by oxidation of coal. From paper read before South Staffordshire and Warwickshire Inst. Min. Engrs.

Sulphur and Moisture Determination. Methods for the Determination of Sulphur and Moisture in Pyrites Ores. Analyst, vol. 49, no. 584, Nov. 1924, pp. 528-531. As approved by Swedish Govt. Testing Inst. and by Norwegian Govt. Analysis Committee.

PYROMETERS

Classification and Application. Classification and Application of Pyrometers, R. W. Newcomb. Engrs.' Soc. West. Pa.—Proc., vol. 40, no. 7, Oct. 1924, pp. 249-267 and (discussion) 268-280, 5 figs. Deals with types and their suitability, construction, and serviceability.

Disappearing-Filament. A Direct-Reading Pyrometer of the Disappearing-Filament Type, F. H. Schofield and D. C. Gall. Jl. Sci. Instruments, vol. 1, no. 7, Apr. 1924, pp. 193-198, 5 figs. Modified form of disappearing-filament pyrometer in which pyrometer lamp forms one arm of a Wheatstone bridge.

Glass Furnaces. The Use of Pyrometers in the Glass Industry. Soc. Glass Technology—Jl., vol. 8, no. 30, June 1924, pp. 94-150. Series of articles on: Use of Pyrometers in Glass Industry, E. A. Goad-Pryor, 94-105; Continuous High Temperature Measurement in Glass Works, W. M. Clark, 105-109; Practical Applications of Pyrometers to Glass Works, C. E. Foster, 109-116; Some Reflections on Pyrometer Design and Description of New Radiation Pyrometer, 117-123, 3 figs.; Recent Advances in Design of Temperature Measuring Instruments, 124-138, 11 figs.; Thermal Endurance of Glass, V. H. Stott and E. Irvine, 139-150, 1 fig.

Immersion. See METALS, Melting-Temperature Determination.

Micro. See METALS, Radiation Measurement.

Optical. An Optical Pyrometer. Metal Industry (Lond.), vol. 25, no. 14, Oct. 3, 1924, pp. 329-330, 2 figs. Construction and technical features of "Pyro" pyrometer.

Optical Temperature Measurement in Practice (Optische Temperaturmessung in der Praxis), A. Fry. Stahl u. Eisen, vol. 44, no. 45, Nov. 6, 1924, pp. 1398-1405, 6 figs. See also Kruppsche Monatshefte, vol. 5, Oct. 1924, pp. 193-201, 6 figs. Discusses optical pyrometers and pyrometry; correction factors, test measurements, practical measurements with a Halborn-Kurlbaum Pyrometer.

The Optical Pyrometer as a Brightness Photometer, W. E. Forsythe. Franklin Inst.—Jl., vol. 197, no. 4, Apr. 1924, pp. 517-525, 4 figs. Disappearing filament pyrometer, with red-green glass in eyepiece, has been found very satisfactory as photometer for measuring brightness of different surfaces that were difficult to measure by ordinary means.

Radiation. Determination of High Temperatures (Die Bestimmung hoher Temperaturen), F. Henning. Zeit. für Elektrochemie, vol. 30, no. 7, July 1924, pp. 309-318, 2 figs. Discusses temperature measurement by radiation pyrometers, bases of optic pyrometry, black temperature, micropyrometers, etc.

The "Pyro" Radiation Pyrometer. Engineering, vol. 117, no. 3042, Apr. 18, 1924, pp. 493-494, 6 figs. It is easily portable, weighing only 25 oz., and is completely self-contained, requiring no batteries or other accessory apparatus.

Uses. Modern Temperature-Measuring Apparatus (Die modernen Temperaturmessgeräte), F. Knoops. Metall u. Erz, vol. 21, no. 12, June 2, 1924, pp. 270-272. Discusses various groups of pyrometers, their field of application, advantages and drawbacks, errors in measuring, etc.

PYROMETRY

Fundamental Principles. Non-Technical Discussion on Pyrometry, G. C. McCormick. Forging—Stamping—Heat Treating, vol. 10, nos. 1 and 2, Jan. and Feb. 1924, pp. 38-39 and 72-74. Fundamental principles reduced to terms within understanding of layman; frequent checking of couples and instruments essential.

Steel-Works. General Phases of Pyrometry and Temperature Control in the Steel Industry, O. Brewer. Iron & Steel Engr., vol. 1, no. 3, Mar. 1924, pp. 116-123 and (discussion) 123-127, 8 figs. Deals with instruments for indicating, recording and controlling temperatures, and their application to blast furnace, open hearth, soaking pits, rolling mill, etc.

Thermoelectric. The Principles of Applications of Thermoelectric Pyrometry, L. B. Haney. Australasian Inst. Min. & Met.—Proc., no. 52, Dec. 31, 1923, pp. 185-206, 7 figs. Discusses developments, thermocouples, precious metal, base-metal, cold end of couples, protection and repairs of couples; methods of standardization of couples and instruments, etc.

PYROXYLIN

Lacquers. See NITROCELLULOSE, Lacquers.

Q

QUANTA

Mechanics. Quantum Mechanics (Ueber Quantenmechanik), M. Born. Zeit. für Physik, vol. 26, no. 6, Aug. 20, 1924, pp. 379-395. Investigation which seeks to establish first step in quantum mechanics, as to which of main characteristics of atom (stability, resonance, fulfillment of correspondence principle, etc.) furnishes adequate basis for calculation and originates from classical laws in natural manner; theory includes dispersion formula of Kramer and shows close relationship to Heisenberg's formulas for rules concerning anomalous Zeeman effect; mathematical discussion of classical theory for disturbance of system exposed to external forces, classical dispersion theory, and review of quantum theory in relation to same problem.

Theory. Contributions to the Interpretation of the Quantum Theory (Beiträge zur Deutung der Quantentheorie), R. Mecke. Zeit. für Physik, vol. 21, no. 1, Jan. 24, 1924, pp. 26-37. The usual three-dimensional conception of the mass atom is extended to its four-dimensional analogue, the effective quantum.

The Quantum Theory, E. P. Adams. Nat. Research Council—Bul., vol. 7, part 3, no. 39, Nov. 1923, 109 pp. General dynamical theory; hypotheses of quantum theory; specific heat of solids;

quantum theory and kinetic theory of gases; spectral lines; photoelectric phenomena; quantum theory and magnetism.

QUARRIES

Electric Locomotives for. See ELECTRIC LOCOMOTIVES, Pit and Quarry Haulage.

Electric Railway System for, Centrally-Controlled. The Operation of a Centrally-Controlled Electric Quarry Railway System. Rock Products, vol. 27, no. 17, Aug. 23, 1924, pp. 47-49, 8 figs. Discusses advantages of centrally-controlled electric haulage system in use at one of Marble Cliff Quarries Co.'s quarries, near Columbus, Ohio.

Property Exploration and Examination. Exploration and Geological Examination of a Quarry Property and Their Relation to Financing, D. B. Rush. Rock Products, vol. 27, no. 5, Mar. 8, 1924, pp. 56-59, 3 figs. Suggestions for anyone desiring to operate or open a quarry property.

Safety Code for. New Special Rules for Quarries. Colliery Guardian, vol. 128, no. 3329, Oct. 17, 1924, pp. 1001-1002, 3 figs. Revised code of rules issued by (Brit.) Mines Dept. relating to safety of quarry, use of explosives, means of access, machinery and plant, first aid and ambulance arrangements; other duties of owner and officials and of persons employed.

QUARRYING

Blasting. See BLASTING, Quarry.

Boreholes. See BOREHOLES.

Drilling and Blasting. Some Fundamentals of Big Blast Hole Drilling, M. B. Garber. Eng. Wld., vol. 24, no. 4, Apr. 1924, pp. 228-232. See also Concrete, vol. 24, no. 3, Mar. 1924, pp. 37-40. Suggestions on quarrying drilling, including importance of properly balanced tool, factor of weight in drilling tools, care of drilling tool taper joints, shape of drill bits, welded versus all-steel drill bits, seams, crevices and crooked holes, etc.

Symposium: Drilling and Blasting. Rock Products, vol. 27, no. 5, Mar. 8, 1924. Contains following papers: Some Fundamentals of Big Blast Hole Drilling for Quarry Work, M. B. Garber, pp. 87-91; Standardization of Drill Joints and Properly Balanced Tools, F. A. Gill, pp. 91-92; Hercoblasting, J. Barab, pp. 93-94, 3 figs.; Blasting Data—Costs and Efficiency, S. R. Russell, pp. 95-96.

Granite. Granite Quarrying in Wisconsin, W. Wiske. Explosives Engr., vol. 2, no. 11, Nov. 1924, pp. 379-382, 6 figs. Blasting and quarrying methods of Wisconsin Granite Co.

Mining and. Mining and Quarrying Compared by an Engineer Familiar with Both Operations, J. R. Thoenen. Rock Products, vol. 27, nos. 8, 10, 13, 16, 18, 20, 23, and 25, Apr. 19, May 17, June 28, Aug. 9, Sept. 6, Oct. 4, Nov. 15, and Dec. 13, 1924, pp. 27-29, 35-36, 35-38, 52-56, 47-49, 41-43, 52-53, and 18-19, 39 figs. Brief historical sketch; some differences in professions of quarryman and miner; where mining may be substituted for quarrying; terms used in mining translated into quarry language; various methods of removing rock; mining methods used in quarrying limestone and their application to various local conditions; some typical limestone mining operations; mining limestone with dip of 60 deg. from horizontal. Oct. 4: Typical limestone mining operations in Central Pennsylvana. Nov. 15: Typical limestone mining operations. Dec. 13: Typical gypsum mining operation.

QUARTZ

Density. The Effect of Prolonged Grinding on the Density of Quartz, A. J. Dale. Ceramic Soc. —Trans., vol. 23, part 3, 1923-24, pp. 211-216, 2 figs. Particulars of investigation carried out, an accessory aim of which was to test validity of conclusions of Ray and of Washburn and Navias, when possible contamination during grinding is taken into account. Reprinted by permission Brit. Refractories Research Assn., from Bul. no. 5, Dec. 1923.

Fused. Clear Fused Quartz, E. R. Berry. Chem. & Met. Eng., vol. 30, no. 18, May 5, 1924, pp. 715-717, 3 figs. New electric-furnace process makes possible production of this material in large pieces of excellent quality.

Clear Fused Quartz. Illuminating Eng. Soc.—Trans., vol. 19, no. 6, July 1924, pp. 568-574, 4 figs. See also Chem. Age (N. Y.), vol. 32, no. 7, July 1924, pp. 310-311, 4 figs. Discusses physical properties, application in microscopes, thermometers, therapeutics, astronomy, and photography.

Clear Fused Quartz Made in the Electric Furnace, E. R. Berry. Tech. Eng. News, vol. 5, no. 4, Nov. 1924, pp. 142-143 and 152, 3 figs. Results of development of clear fused quartz, and some of its surprising properties.

Electric Fusion of Quartz by the Vacuum Compression Process (Das elektrische Schmelzen von Quarz nach dem Vakuum-Kompressionsverfahren), H. Helberger. Zeit. für Elektrochemie u. Angewandte Physikalische Chemie, vol. 30, no. 9, Sept. 1924, pp. 435-440, 8 figs. See also Zeit. für Technische Physik, vol. 5, no. 10, 1924, pp. 476-481, 8 figs. Design and operation of Helberger furnace and its development since 1913. Properties and uses of fused quartz.

Wide Field for Quartz Opened by Fusing Process. Cement, Mill & Quarry, vol. 24, no. 9, May 5, 1924, pp. 33-36, 4 figs. See also Eng. Wld., vol. 24, no. 6, June 1924, pp. 365-368, 4 figs. Clear fused quartz can be produced on a commercial basis, in sizes and quantities heretofore impossible of achievement. The large variety of uses made possible by new process.

QUAY WALLS

Berlin. Supporting and Quay Wall at the South Bank of the Spandau Ship Canal in Berlin (Die Stütz- und Ufermauern am Südufer des Spandauer Schiffahrtkanals in Berlin), A. Schroeter. Bauingenieur, vol. 5, no. 14, July 31, 1924, pp. 423-427, 5 figs. Details of competitive designs, and construction of foundations and walls, reinforcing work, etc.

Calculation. Calculation of Quay Walls (Calcul des murs de quai), G. Sainflou. Génie Civil, vol. 85, no. 19, Nov. 8, 1924, pp. 419-424, 9 figs. Discusses under-pressure in joints of masonry. Real and fictitious joints, and two methods of calculation.

Construction. Compression and Tensile Strength Tests of Reinforced-Concrete Piles for Quay Wall Construction (Druck- und Zugversuche an Eisenbetonpfählen für Hafenkaibauten), H. Butzer. Bauingenieur, vol. 5, no. 13, July 15, 1924, pp. 401-408, 7 figs. Describes tests with piles 16-18 m. in length for new quay walls in Holland.

Reinforced-Concrete. Quay Wall at Fulham. Concrete & Constructional Eng., vol. 19, no. 8, Aug. 1924, pp. 512-514, 2 figs. Describes quay wall in use at Lensbury Fuel Oil Establishment of Shell-Mex, Ltd., England; heavy surcharge is imposed on quay wall by stacks of oil barrels, wharf being used for storage and for discharging fuel oil into oil barges.

QUAYS

Deep-Water. Effect of Deep Water Quays on Navigation, E. Latham. Engineer, vol. 137, no. 3571, June 6, 1924, pp. 625-626. Points to bear in mind from navigation point of view, with special reference to Thames estuary.

Equipment. Equipment of Seaport Quays

(L'aménagement des quais des ports de mers). P. Caufourier. Génie Civil, vol. 84, no. 6, Feb. 9, 1924, pp. 134-135, 23 figs. Discusses quayside equipment, including fixed railings, bollards, moorings, ladders, fendering and capstans; refers to article on this subject by E. Latham, published in Engineering, Oct. 5, 1923, and draws comparison between English and French practice.

Tidal Basin, Havre, France. The Extension of the Port of Havre (Les travaux d'aggrandissement du port du Havre), Ch. Dantin. Génie Civil, vol. 84, nos. 16 and 17, Apr. 19 and 26, 1924, pp. 369-374 and 393-399, 17 figs. partly on supp. plate. Tidal basin and Joannès-Couvert quay, and its construction; large drydock and surrounding works.

QUICKSILVER. See MERCURY.

R

RACE TRACKS

Automobile. Automobile Race Track at Miramas [L'autodrome de Miramas (Bouches-du-Rhone)], A. Cochet. Génie Civil, vol. 85, no. 2, July 12, 1924, pp. 29-34, 11 figs. Layout of track, details of construction, concrete track, profile of track, grand stand, etc.; length, 5000 m.

RADIATION

Black Bodies. Determination of the Constant ς of the Stefan-Boltzmann Law (Bestimmung der Konstanten σ des Stefan-Boltzmannschen Gesetzes), A. Kussmann. Zeit. für Physik, vol. 25, no. 1, June 24, 1924, pp. 58-82, 5 figs. Full and detailed account of author's 153 determinations of value of σ. Paper is divided into following sections: (1) historical sketch of methods; (2) arrangement of experiment; (3) preliminary experiments to ensure absence of systematic errors; (4) measurements and results; (5) corrections; (6) limits of error. Method employed is that of electrical compensation, which consists in having suitable black-body radiator which sends radiation through aperture of known size to receiving disk of metal of known size, temperature attained by disk being indicated by radiomicrometer.

Combustible Gases. See GASES, Radiation from.

Formula for. See HEATING AND VENTILATION, Radiation, Standard Formula for.

Heat. See HEAT, Radiation.

Soft, Production of. Methods of Production of Radiations Intermediate between Ultraviolet and X-Rays (Sur un nouveau mode de production des radiations comprises entre l'ultraviolet et les rayons X), G. Reboul and Bodin. Académie des Sciences—Comptes Rendus, vol. 179, no. 1, July 7, 1924, pp. 37-39. Results of experiments investigating large variety of chemical conductors, pulverized and pressed into tablet form, chiefly compounds of mercury, copper, iron, and tin; results are given in tabular form, indicating voltage necessary to produce radiation and intensity of latter in arbitrary units.

Study of. Radiation, W. P. Davey. Franklin Inst.—Jl., vol. 197, nos. 4 and 5, Apr. and May, 1924, pp. 439-478 and 629-666, 11 figs. Nature of atoms of material substances; effect of material substances in path of radiation; discusses Silberstein's "dart" theory, which is said to be consistent with all known experimental facts, except that of diffraction from Fresnel mirrors or from bi-prism. Bibliography.

RADIATORS

Airplane-Engine. See AIRPLANE ENGINES, Radiators.

Ammonia, Heat Transfer in Cast-Iron. Heat Transfer in Cast-Iron Radiator Sections for Ammonia, H. J. Macintyre. Ice & Refrigeration, vol. 67, no. 1, July 1924, pp. 42-43, 4 figs. Results of tests showing that cast iron may be made suitable for use on low-pressure side of ammonia cycle.

Automobile-Engine. See AUTOMOBILE ENGINES, Radiators.

Brass and Copper. See HEATING, STEAM, Unit Heaters.

Heat Emission and Costs. Comparative Costs and Heat Emission for Cast-Iron Direct Radiation, T. W. Reynolds. Heating & Vent. Mag., vol. 21, no. 10, Oct. 1924, pp. 41-45 and 57, 7 figs. With detailed data for eight different radiator heights and wall and window radiators.

The Investigation of Heat Emission from Radiators (Die Untersuchung der Wärmeabgabe von Radiatoren), E. Schmidt and A. Grossmann. Gesundheits-Ingenieur, vol. 47, no. 15, Apr. 12, 1924, pp. 121-123, 2 figs. New experimental arrangement for measurement of heat emission, and desiderata for measurement of heat-transmission coefficients of heaters.

Heat Output Control. Control of Heat Output from One-Pipe Radiators, S. H. Woodbridge. Heat. & Vent. Mag., vol. 21, no. 8, Aug. 1924, pp. 44-45, 1 fig. Details of method for fixing ratio of steam-filled space within radiator to air-filled space.

Sizes, Calculation of. A Speedy and Accurate Method of Figuring Radiator Sizes, P. R. Babcock. Heat. & Vent. Mag., vol. 21, no. 7, July 1924, pp. 53-54, 2 figs. Gives formulas and methods.

Traps. Operating Characteristics of Radiator Traps. Heat. & Vent. Mag., vol. 21, no. 4, Apr. 1924, pp. 57-60, 4 figs. What heating industry should expect of these devices in way of performancy. Symposium based upon recent tests conducted by Nat. Assn. Bldg. Owners and Mgrs.

RADIO COMMUNICATION

[See also RADIOTELEGRAPHY, RADIOTELEPHONY.]

Apparatus Manufacture. The Manufacture of Wireless Components. Eng. Production, vol. 7, no. 137, Feb. 1924, pp. 36-40, 33 figs. Describes tools and processes involved in their production.

Atmospherics. The Energy of Atmospherics, T. L. Eckersley. Electrician, vol. 93, no. 2412, Aug. 8, 1924, pp. 150-151 and 155, 2 figs. Discusses electric disturbances produced in receiving aerials, stray waves, etc., and their mathematical treatment.

Crystal Oscillation. The Crystodyne Principle. Radio News, vol. 6, no. 3, Sept. 1924, pp. 294-295 and 431, 5 figs. Details of Lossev's oscillating crystals and their application as substitute for vacuum tubes, leading to considerable simplification. Editorial, p. 292.

Mines. See MINES, Communication in.

Problems. Radioelectric Communications (L'évolution des communications radio-électriques), H. de Bellescize. Technique Modern, vol. 16, no. 8, Apr. 15, 1924, pp. 277-284, 3 figs. Notes on electromotive energy exerted by signals on receiving antenna and utilization of this electromotive energy; improvements of resonance methods and

their influence on evolution of technique; evolution of wavelengths.

Signal Measuring. A Method of Measuring Radio Field Intensities and Atmopsheric Disturbances, L. W. Austin and E. B. Judson. Inst. Radio Engrs.—Proc., vol. 12, no. 5, Oct. 1924, pp. 521-532, 7 figs. Method of measuring radio signals which depends on determination of equality of sound intensities in telephones from signal and from known alternating current preferably giving same tone; measured local current is taken from 1000-cycle tuning-fork oscillator and electromotive force impressed no telephones is controlled by voltage divider.

Survey of. Survey of the Field of Radio Communication, A. Gibbs. New Zealand Jl. Sci. & Technology, vol. 7, no. 2, July 1924, pp. 65-78. Forms of transmission, reception of electric waves, radiotelephone broadcasting, amateur stations, irregularities in medium, long-distance radiotelegraphic communication, New Zealand in relation to high-power development, and direction finding.

Underground Signaling. See MINE SIGNALING, Underground Radio Signaling.

RADIOACTIVITY

Heat from Radioactive Substances. Apparatus for Measuring the Heat Produced by Radioactive Substances (Sur un appareil à mésurer la chaleur dégagée par les corps radioactifs), D. Yovanovitch. Académie des Sciences—Comptes Rendus, vol. 179, no. 3, July 21, 1924, pp. 163-165, 1 fig. Two identical Dèwar flasks are placed in cylindrical cavities in block of iron, and cavities are filled with mercury and covered up; substance to be examined is placed in one of flasks, and in other is coil which can be heated by electric current; this is adjusted until temperature in two flasks remains permanently equal, as shown by a thermopile.

Theory. A Part-Theory of Radioactivity, F. H. Loring. Chem. News, vol. 128, no. 3333, Feb. 22, 1924, pp. 113-115. Following up the idea that radiation at its inception can encircle a positive nuclear part is in effect eliminated, or single electrons driven away from their binding nuclei by a blow directed from core of atom, electrons which are bound up with circular radiation, and produce it by their vibration, are dragged out of atomic system by attached radiation which sets off at a velocity characteristic of radiation.

RADIOGONIOMETERS. See DIRECTION FINDING, Radiogoniometer for.

RADIOMETERS

Improved Nichols. Improved Radiometer Construction, J. D. Tear. Physical Rev., vol. 23, no. 5, May 1924, pp. 641-648, 3 figs. Construction of more sensitive Nichols radiometer.

Theory. The Radiometer (Zur Theorie der Radiometerkräfte), A. Einstein. Zeit. für Physik, vol. 27, no. 1, Aug. 28, 1924, pp. 1-6. Calculation of forces based on schematic assumptions of mechanism of molecular movement in gases.

The Theory of the Radiometer (Zur Theorie des Radiometers), G. Hettner. Zeit. für Physik, vol. 27, no. 1, Aug. 28, 1924, pp. 12-22, 6 figs. When along surface of contact between gas and solid there is a temperature gradient, gas flows from regions of lower to regions of higher temperature; this thermal slip was predicted by Maxwell and independently deduced and verified by Knudsen; consequences of this slip serve to explain large group of radiometer phenomena.

RADIOTELEGRAPHY

Aerials. Receiving Aerials of Low Resistance, N. W. McLachlan. Experimental Wireless, vol. 1, no. 11, Aug. 1924, pp. 623-628, 3 figs. Deals with effect of ohmic resistance of antenna systems on reception.

Amplifiers. Amplification of Short Waves (Ueber die Verstärkung kurzer Wellen), H. Riegger and F. Trendelenburg. Zeit. für technische Physik, vol. 5, no. 11, 1924, pp. 495-500, 11 figs. Discusses measurements of degree of amplification in high-frequency amplifiers within range of $\lambda =$ 1000 m and $\lambda = 70$ m.

Antennas. Grounding of Antennas and Diminishing of Ground Losses (Die Erdungsfrage bei Antennen und die Verminderung der Erdverluste), Hamm. Elektrotechnische Zeit., vol. 45, no. 48, Nov. 27, 1924, pp. 1309-1312, 10 figs. Discusses methods for changing ground losses, application of multiple grounds and their effect, etc. Discusses as examples St. Assise and Nauen.

Atmospherics. Atmospherics in Radiotelegraphy (Les "atmosphériques" de la T. S. F.), R. Bureau. Nature, no. 2640, Nov. 8, 1924, pp. 301-303. Discusses relation between atmospherics and meteorologic disturbances and shows that meteorology and radiotelegraphy can serve each other successfully.

Recording Atmospheric Troubles by Vibration of Antennas (L'annonce des troubles atmosphériques par la vibration des conducteurs aériens), A. Nodon. Electricien, vol. 55, no. 1341, Feb. 1, 1924, pp. 49-51. Author describes interesting observations made by him during summer of 1923 of humming and buzzing in aerials, and gives theoretical solutions of causes.

Relation Between Certain Atmospherics and Meteorologic Phenomena (Relations entre certains atmosphériques et les phénomènes météorologiques), R. Bureau. Onde Electrique, vol. 3, no. 32, Aug. 1924, pp. 385-401, 8 figs. Meteorological phenomena to which atmospherics may be due; influence of mountains, etc.

Condensers. See CONDENSERS, ELECTRIC, Radiotelegraphic.

Development, History of. How Some Problems in Radio Have Been Solved, E. F. W. Alexanderson. Gen. Elec. Rev., vol. 27, no. 6, June 1924, pp. 373-379, 9 figs. Discusses efficiency and cost of radiation; wave propagation, absorption, and fading; atmospheric disturbances; and speed of commercial signalling.

The Development of Wireless Telegraphy, A. Fürst. Eng. Progress, vol. 4, no. 12, Dec. 1923, pp. 245-249, 9 figs. Traces development step by step from first Marconi demonstrations, making brief mention of most important discoveries and inventions which have influenced present development.

Differential Equations. Wireless Telegraph Theory, A. A. Robb. Electrician, vol. 92, no. 2386, Feb. 8, 1924, pp. 158-159, 5 figs. Graphical treatment of certain differential equations.

Direction Finding. See DIRECTION FINDING.

Electron Tubes. See ELECTRON TUBES, Calculation.

Equipment for Yacht. The Radio Equipment of the Steam Yacht "Elettra," E. A. Payne. Inst. Radio Engrs.—Proc., vol. 12, no. 1, Feb. 1924, pp. 9-27, 15 figs. Describes continuous wave telegraph, telephone, and main and emergency spark transmitters, and receivers and radio goniometer of yacht.

Field and Wave Deflection. Fluctuation of Strength of Field and Wave Deflection (Feldstärkeschwankungen und Wellenablenkung), S. Wiedenhoff. Elektrische Nachrichten-Technik, vol. 1, no. 3, Aug. 1924, pp. 64-67, 4 figs. Details of measurement of receiving intensities from European radio stations, fluctuations due to atmospheric phenomena, and lower intensity during daytime due to diffusion or deflection.

Fog Signals. Radio Fog Signals for the Pro-

tection of Navigation; Recent Progress, G. R. Putnam. Nat. Acad. Sciences—Proc., vol. 10, no. 6, June 1924, pp. 211-218. Describes uses, radio fog signal stations, and gives results of tests recently made by Lighthouse Service to obtain information and right effect.

Interference Prevention. The Prevention of Interference Between "Wired-Wireless" Circuits and Wireless Stations. Experimental Wireless, vol. 1, no. 10, July 1924, pp. 563-570, 9 figs. Gives details of methods which have been devised to eliminate interference from wireless stations.

Latticed Mast, Fiume Station. The Latticed Mast at the Radio Station of Fiume (L'albero a traliccio per la stazione R. T. di Fiume), P. Bertoglio. Rivista Marittima, vol. 57, no. 2, Feb. 1924, pp. 348-367, 11 figs. Details of calculations for a 164-ft. mast for supporting aerials.

Long-Distance. Long Distance Radio Transmission. Electrician, vol. 93, no. 2408, July 11, 1924, pp. 43-44. Discusses use of short waves in directional wireless telegraphy; apparatus used; short wave fallacies; effect of atmospherics; effect of using reflectors; energy magnification and high speed working made possible.

Long-Distance Telegraphy and Telephony (Die Technik der Telegraphie und Telephonie im Weitverkehr), F. Lüschen. Elektrotechnische Zeit., vol. 45, nos. 30 and 31, July 24 and 31, 1924, pp. 793-799 and 824-827, 22 figs. Discusses recent problems in long distance operating; describes Siemens and Halske rapid wire telegraphing system, radiotelegraphy, sending and receiving, atmospheric disturbances; cable telegraphy, wire telephony, multiple use of lines, wireless telephony, loud speakers, etc.

Notes on Wireless Matters, G. W. O. Howe. Electrician, vol. 93, nos. 2417 and 2421, Sept. 12 and Oct. 10, 1924, pp. 282-283 and 402-403, 6 figs. Discusses new theory of long distance radio communication; experiments confirming new theory.

Marine Station. The Cape Cod Marine System of the Radio Corporation of America, F. H. Kroger. Inst. Radio Engrs.—Proc., vol. 12, no. 3, June 1924, pp. 243-253, 9 figs. Outline of character of traffic handling required in modern marine radiotelegraph communication system; describes Cape Cod multiplex marine station and operating problems encountered in supplementing sparks transmitting sets with vacuum tube transmitters; transmitting and receiving equipment.

Poulsen Arc. The Poulsen Arc, D. G. Bower. Experimental Wireless, vol. 1, no. 11, Aug. 1924, pp. 652-655, 4 figs. Treats of function of arc as generator of continuous waves; outlines methods used at commercial stations.

Propagation Phenomena. On Propagation Phenomena and Disturbances of Reception in Radio Telegraphy, F. Kiebitz. Inst. Radio Engrs.—Proc., vol. 12, no. 3, June 1924, pp. 233-241. Study of propagation of electromagnetic waves over earth's surface, particularly for very long distance transmission, for which it is deduced that short waves are inherently unsuitable; methods of quantitatively determining strength of received signals are shown to be necessary; investigates simultaneous appearance of disturbances of reception at widely separated points and conclusions therefrom.

Receivers. Gridless Receiving and Amplifying Lamps with Control Plate [Ueber die gitterlose Empfangs- und Verstärkerlampe mit Steuerplatte (Plation)], H. Cohn. Zeit für technische Physik, vol. 5, no. 11, 1924, pp. 500-505, 12 figs. Describes lamp based on de Forest, in which cathode is between two plates, one electrode serving for control and other for electron current.

Reception. Periodic Trigger Reception, E. V. Appleton and F. S. Thompson. Instn. Elec. Engrs.—Jl., vol. 62, no. 326, Feb. 1924, pp. 181-186 and (discussion) 187-181, 8 figs. Theoretical discussion of phenomenon of oscillation hysteresis exhibited by simple triode generators; practical method of reception in which this phenomenon is utilized in periodic manner, which, for convenience, is termed periodic trriger reception, and is suitable for continuous-wave and spark signals.

The Relations between Damping and Speed in Wireless Reception, L. B. Turner. Instn. Elec. Engrs.—Jl., vol. 62, no. 326, Feb. 1924, pp. 192-201 and (discussion) 202-207, 17 figs. Examination of ordinary method of recorder working in radiotelegraph receivers, as affected by damping of receiver circuits; significances of decrement of any oscillatory system, and its bearing on possible speed of recording Morse signals; improved method of reception, called receiver curbing, is described and analyzed.

Ships. Wireless on Board Ship, J. A. Slee. Electrician, vol. 93, no. 2410, July 25, 1924, pp. 90-92, 5 figs. Recent progress in use and development of radio apparatus.

Short-Wave. Propagation of Electric Waves Over the Earth (Ausbreitung der elektrischen Wellen über die Erde), A. Meissner. Elektrotechnik u. Maschinenbau, vol. 42, no. 43, Oct. 26, 1924, pp. 625-630, 18 figs. See also Jahrbuch der drahtlosen Telegraphie u. Telephone, vol. 24, no. 4, 1924, pp. 85-92, 17 figs. Discusses new outlook due to short-wave operations, and hypotheses advanced. Concludes that Heavyside layer does not exist.

Results Obtained Over Very Long Distances by Short Wave Directional Wireless Telegraphy, More Generally Referred to as the Beam System, G. Marconi. Roy. Soc. of Arts—Jl., vol. 72, no. 3740, July 25, 1924, pp. 607-617 and (discussion) 617-621, 8 figs. Reviews developments, neglect of short waves; many problems can be solved only by short wave directional system; reflectors used in this system; successful tests carried out between Poldhu and Argentine.

Very Short Waves (Les ondes très courtes), M. Mesny. Onde Electrique, vol. 3, nos. 25 and 26, Jan. and Feb. 1924, pp. 25-37 and 99-110, 14 figs. Results of experiments with short waves carried out at laboratory of French Military Bur. of Telegraphy; describes arrangement employed for short waves; good results were obtained with waves only 2 m. long. Bibliography.

Stations. French 8 AE. Wireless Wld., vol. 14, no. 6, May 7, 1924, pp. 160-162, 3 figs. Describes successful transatlantic transmitting station installed by La T. S. F. Moderne at Rueil, near Paris.

Northolt Radio Station, A. C. Warren. Instn. Elec. Engrs.—Jl., vol. 62, no. 335, Nov. 1924, pp. 967-969, 4 figs. Describes equipment at Post Office radio station and gives survey of experimental investigations carried out at station.

Receiving at the Sambeek Station (La réception à la station de Sambeek), N. Koomans. Radioélectricité, vol. 5, no. 64, July 25, 1924, pp. 74-78, 3 figs. Describes and explains apparatus used for receiving from India and America. Translated from Radio-Nieuws.

The Coltano Radio Station (Il centro radiotelegrafico di Coltano), G. Vallauri. Elettrotecnica, vol. 11, nos. 1 and 2, Jan. 5 and 15, 1924, pp. 2-12 and 27-36, 35 figs. Details of generating plant, antennas, towers, etc., of a recently built high-power station near Leghorn Italy; one of most powerful stations in world, and is able to transmit 10,000 words a day.

The Controlling Spark-Receiving Station at Zehlendorf (Die Hauptfunkempfangsstelle Zehlendorf), Ferd. Eppen. Elektrotechnische Zeit., vol. 45, no. 24, June 12, 1924, pp. 615-619, 10 figs. Communication from German Telegraph Tech.

Bur. giving details of spark wireless arrangements throughout German Empire, of which main transmitting station is in Berlin and receiving station at Zehlendorf (near Berlin), for scheme of communication to every large German town for commercial and other purposes; illustrations and details of valve receiving apparatus, cabin, frame aerials and goniometric arrangements.

The Leafield Imperial Wireless Service, E. H. Shaughnessy. Wireless World, vol. 13, no. 14, Jan. 2, 1924, pp. 443-448 and discussion (Jan. 9, 1924) pp. 482-484, 8 figs. 250-kw. arc station. Principle on which arc works; difficulties experienced in getting station into a going concern.

The Monte Grande High-Power Wireless Station "LPZ." Elec. Rev., vol. 95, no. 2445, Oct. 3, 1924, p. 494. Station is situated 20 km. from city of Buenos Aires; details of construction.

The Rugby Wireless Station. Engineer, vol. 138, no. 3584, Sept. 5, 1924, pp. 262-264, 15 figs. Describes wireless station capable of direct communication with India, Australia and other distant parts, which is being erected by Post Office at Hillmorton, near Rugby, Eng. To have 12 masts, arranged in two groups.

Towers. The Development of the Standard Design for Self-Supporting Radio Towers for the United Fruit and Tropical Radio Telegraph Companies, A. W. Buel. Inst. Radio Engrs.—Proc., vol. 12, no. 1, Feb. 1924, pp. 29-64 and (discussion) 65-82, 33 figs. partly on supp. plates. Historical review of company's radio towers; origin of 1906 design for 200-ft. towers; 50-ft. extension added in 1910; hurricane wrecks in 1914, 1915 and 1916, data deduced from them, and reconstruction of towers; preliminary designs for three-legged towers made in 1915, and their economy and advantages over four-legged towers; design of Tegucigalpa (Honduras) towers, with antenna bridges; economic comparison of semi-guyed towers and guyed steel masts with self-supporting towers; preliminary design for 1000-ft. tower.

Trains. Wireless Telegraphy on Trains. Engineer, vol. 137, no. 3558, Mar. 7, 1924, pp. 262-263. Account of trials made by Great West. Ry. to test feasibility of transmitting telegrams to trains in motion by wire telegraphy; describes receiver for this purpose designed by C. H. Gardner.

Transformers. Designing Small Power Transformers, W. James. Wireless Wld., vol. 14, no. 22, Aug. 27, 1924, pp. 621-623, 6 figs. Gives principles underlying design of small power transformers, giving number of representative designs.

Transmission. The Problem of "Pulling" (Kritisches über das Problem des Ziehens und seine Literatur), W. Albersheim. Archiv für Elektrotechnik, vol. 14, no. 1, Nov. 7, 1924, pp. 23-41, 10 figs. Discusses pulling and jumping of frequencies and strength of current in connecting intermediate circuits, and summarizes literature on subject.

Transmission and Reception. The Progress of Radiotelegraphy (Les progrés de la radiotélégraphie), G. Malgorn. Génie Civil, vol. 84, nos. 12 and 13, Mar. 22 and 29, 1924, pp. 269-274 and 303-307, 27 figs. Modern methods of automatic transmission and recorded reception; methods and apparatus for recording wireless signals.

Transmitters. Harmonic Oscillations in Tube Senders (Oberschwingungen des Röhrensenders), W. Albersheim. Archiv für Elektrotechnik, vol. 14, no. 1, Nov. 7, 1924, pp. 42-74, 26 figs. Calculation of oscillating circuit in a direct-coupled tube sender, and approximate determination of first and higher harmonics.

Twenty-kilowatt Vacuum Tube Radio Telegraph Transmitter, P. R. Fortin and C. A. Priest. Gen. Elec. Rev., vol. 27, no. 1, Jan. 1924, pp. 61-73, 33 figs. Describes commercial radio equipment employing radiotrons as generators of high-frequency power recently built for United Fruit Co. and now in operation at Tegucigalpa, Honduras.

Vacuum Tubes. See VACUUM TUBES.

Wave Meters. A Self-Contained Standard Harmonic Wave-Meter, D. W. Dye. Roy. Soc. Lond. —Philosophical Trans., vol. 224, no. A622, 1924, pp. 259-299, 18 figs. Survey of the various methods of measuring radiofrequency; develops principles of a highly accurate standard harmonic wavemeter, essential principle of which is an arrangement of three-electrode valves, known as a multi-vibrator, invention of H. Abraham and E. Bloch.

Wired. See TELEPHONY, Wired Wireless.

Wireless Exhibition, London. The Wireless Exhibition. Engineer, vol. 138, no. 3588, Oct. 3, 1924, pp. 378-380, 10 figs. Exhibition reveals tendency on part of wireless manufacturers to employ resistance capacity couplings instead of iron-core transformers for coupling together valves; modern valves for reception and transmission; loud speakers, etc.

RADIOTELEPHONY

Airplanes. Air Mail Radio Equipment, I. F. Byrnes. Gen. Elec. Rev., vol. 27, no. 8, Aug. 1924, pp. 492-497, 16 figs. Details of transcontinental radio equipment and its installation in airplanes, consisting of transmitter, receiver, control box, dynamotor, fairlead, antenna reel and fish.

Amplification, Low-Frequency. The Measurement of Low-Frequency Amplification, R. L. Smith-Rose. Wireless Wld., vol. 13, nos. 23 and 24, Mar. 5 and 12, 1924, pp. 699-702 and 731-734, 7 figs. Describes method of measuring low-frequency amplification; results of tests with resistance capacity, reactance capacity, and transformer couplings are given.

Amplifiers. High Frequency Amplifiers, H. T. Friis and A. G. Jensen. Bell System Technical Jl., vol. 3, no. 2, Apr. 1924, pp. 181-205, 14 figs. A simplified mathematical treatment of theory of high-frequency amplifiers is presented, and theory is verified by experiment. Description of various methods for quantitatively determining amount of amplification at high frequencies.

High-Frequency Amplifiers (Das Wesen des Hochfrequenz-Verstärkers), E. F. Medinger. Elektrotechnik u. Maschinenbau, vol. 42, no. 38, Sept. 21, 1924, pp. 285-287 (Radiotechnik), 8 figs. Discusses Schrack tubes and Armstrong super-regenerative receiver, and their use.

Push-Pull Speech Amplifier, W. James. Wireless Wld., vol. 14, no. 10, June 4, 1924, pp. 271-277, 7 figs. A special transformer coupled speech frequency amplifier designed to eliminate distortion, and employing ordinary receiving valves.

Theory of Reaction Amplifiers (Contributo alla teoria degli amplificatori a reazione), G. Filippini. Elettrotecnica, vol. 11, no. 33, Nov. 15, 1924, pp. 914-922, 9 figs. Discusses coupling of incoming and outgoing circuits; calculation of numerical value of coefficient of total amplification, and application of theory to a thermionic amplifier with magnetic coupling.

Two Stages of High Frequency Amplification, R. H. Cook. Wireless Wld., vol. 14, no. 20, Aug. 13, 1924, pp. 565-569, 13 figs. Describes how to make useful high-frequency amplifier.

Antennas. Design and Working of Antennas (Wirkungsweise und Bau von Antennen), W. Burstyn. Elektrotechnische Zeit. (special radio no.), 1924, pp. 27-30, 5 figs. Shows how aerial works as receiver and transmitter and discusses factors governing design; earth and frame antennas are included in discussion.

The Beverage Aerial, T. Lydwell Eckersley.

Electrician, vol. 92, no. 2382, Jan. 11, 1924, pp. 39-41, 6 figs. Its directive properties; comparison of relative merits of Beverage aerial and spaced aerials and frames.

Wireless Aerials and Lightning (Von Hochantennen und Blitzableitern), F. Moench. Telegraphen- u. Fernsprech-Technik, vol. 13, no. 6, June 1924, pp. 80-81. Author calls attention to importance of properly grounding aerial when not in use and during thunderstorms, and at same time disconnecting it from receiving apparatus; care should be taken to run ground circuit so as to avoid combustible materials; supports of aerial, if metallic, should be grounded.

Apparatus. Modern Wireless Equipment. Electrician, vol. 92, nos. 2404 and 2406, June 13 and 27, 1924, pp. 728 and 796-798, 12 figs. Survey of wireless apparatus exhibited at British Empire Exhibition, including broadcast receiving apparatus, headphones, sectional sets, wireless beam transmitter, receiving valves, molecular vacuum pump, etc.

Wireless Apparatus. Engineer, vol. 137, no. 3570, May 30, 1924, pp. 558-589, 3 figs. Exhibits of Radio Communication Co. at Brit. Empire Exhibition.

Automobiles. Radiophone Receiving in Automobiles or Yachts (La réception des émissions radiophoniques en automobile ou en yacht), P. Hémardinquer. Nature (Paris), no. 2630, Aug. 30, 1924, pp. 133-137, 8 figs. Discusses high frequency and low frequency portable apparatus and its operation.

Broadcasting. Disturbance in Broad Cast Receiving Due to Street Car Operation and Their Elimination (Ueber Störungen des Rundspruchempfangs durch den Strassenbahnbetrieb und ihre Beseitigung), F. Eppen. Elektrotechnische Zeit., vol. 45, no. 31, July 31, 1924, pp. 817-819, 1 fig. Experiments show that disturbance is due not to traction current but to lighting current.

Faithful Reproduction by Broadcast, P. P. Eckersley. Wireless Wld., vol. 14, nos. 9 and 10, May 28 and June 4, 1924, pp. 250-254 and (discussion) 289-294, 9 figs. Gives author's experiences in connection with problems of distortion in broadcasting, both in transmission and reception, and shows lines of development adopted in research work undertaken by B. B. C.

Siemens Broadcasting Apparatus (Das Siemens-Rundfunkgerät), H. Mayer. Siemens-Zeit., vol. 4, no. 7, July 1924, pp. 197-202, 12 figs. Describes apparatus for wave lengths of 200 to 700 m., andion receiver, rectifier, low frequency and high frequency, amplifiers, etc.

Broadcasting Stations. KDKA, the Radio Telephone Broadcasting Station of the Westinghouse Electric and Manufacturing Company at East Pittsburgh, Pennsylvania, D. G. Little. Inst. Radio Engrs.—Proc., vol. 12, no. 3, June 1924, pp. 255-276, 25 figs. Describes three transmitting sets used, together with their auxiliary apparatus.

New Zurich Radio Broadcasting Station (La nouvelle station radiotéléphonique émettrice de Zurich). Schweiz. Elektrotechnischer Verein Bul., vol. 15, no. 9, Sept. 1924, pp. 475-479, 1 fig. Discusses development of broadcasting in Switzerland and foundation of Zurich Radio Assn. Description of new sending station.

Radio Broadcasting Station KGO, General Electric Company, Oakland, California, A. Stein, Jr. Gen. Elec. Rev., vol. 27, no. 3, Mar. 1924, pp. 151-163, 42 figs. Description of antenna system, power station, control room and studio.

Radio Station KFKK, D. G. Little and F. Falknor. Elec. Jl., vol. 21, no. 1, Jan. 1924, pp. 25-30, 14 figs. Details of repeating broadcasting station at Hastings, Nebr.

The Birmingham Broadcasting Station. A. E. Thompson. Elec. Communication, vol. 2, no. 3, Jan. 1924, pp. 168-182, 17 figs. Station is equipped with West. Elec. Co.'s No. 101-A radio telephone broadcasting set; details of studio, microphone transmitters, condenser transmitter amplifier, no. 373-W carbon transmitter, control apparatus, volume indicator, radio transmitter, etc.; wavelength and range; antenna system.

The Radio Society's Transmitting Station 6 XX, P. R. Coursey. Wireless Wld., vol. 14, no. 1, Apr. 2, 1924, pp. 2-8, 7 figs. Description of station of Radio Soc. of Great Britain in London.

Zurich Sending Station for Radiotelephony Zürcher Sendestation für Radiotelephonie). Schweizerische Bauzeitung, vol. 84, no. 9, Aug. 30, 1924, pp. 111-112, 1 fig. Details of station on Höngg Mountain for broadcasting working with 100 amp. and giving antenan energy of 500 watt; present wave length, 650 m.

Broadcasting, Wired. Broadcasting by Wired Radio, R. D. Duncan, Jr. Elec. Wld., vol. 84, no. 4, July 26, 1924, pp. 157-160, 6 figs. Survey of results obtained from two years' experimental work into possibilities of wired broadcasting over electric lighting distribution systems.

Chemical Aspects. Chemical Aspects of Radio, C. Marx. Chem. Age (N. Y.), vol. 32, nos. 5, 8, and 11, May, Aug., and Nov. 1924, pp. 237-239, 353-355, and 449-452. May: Contributions of chemist to development of radio telephony. Aug.: Methods and means for detecting electromagnetic waves; coherers; electrolytic detectors; crystal detectors; Piezo-electrical crystals; Nov.: Thermionic devices or electron tubes.

Cottrell Precipitator Disturbances. The Elimination of Radio Disturbances Caused by Cottrell Precipitators, R. E. Boehler. Elec. Jl., vol. 21, no. 9, Sept. 1924, pp. 422-424, 2 figs. Describes method of eliminating these disturbances which has proved very effective in its application to plants of Universal Portland Cement Co.

Crystals. Oscillating Crystals, O. Lossey. Wireless Wld., vol. 15, no. 4, Oct. 22, 1924, pp. 93-96, 8 figs. Observations on behavior of crystals while in an oscillating condition.

The Crystal as a Generator and Amplifier, V. Gabel. Wireless Wld., vol. 15, nos. 1 and 2, Oct. 1 and 8, 1924, pp. 2-5 and 47-50, 13 figs. Reviews all that has so far been recorded by way of observations on action of crystal and gives methods for testing crystals for oscillating properties, with practical details on how to prepare crystals for the purpose. Supplies a number of circuits and explains their operation.

Detectors. Crystal Detectors as Oscillators (Generateur-amplificateur sans lampe), I. Podliasky. Radioélectricité, vol. 5, no. 60, May 25, 1924, pp. 196-197, 3 figs. Capacity and inductance are connected in series with 12-volt battery and variable resistance of 1000 ohms; zincite-steel combination is placed as shunt across capacity and inductance; with suitable values point may be found on crystal which causes circuit to oscillate at frequency dependent on values of capacity and inductance; use of capacities and inductances of such a value as to give audible frequency is recommended as making a search for sensitive point on crystal much easier.

Effect of Pressure on the Operation of Solid Contact Detectors (Influence de la force pressante sur le fonctionnement des détecteurs à contact solide), J. Cayrel. Académie des Sciences—Comptes Rendus, vol. 179, no. 4, July 28, 1924, pp. 259-261. In order to verify conclusions reached in analytical work on theory of contact detectors, author has made experiments on effect of pressure between surfaces, and gives results obtained.

New Applications of the Sodion Detector. H. P. Donle. Inst. Radio Engrs.—Proc., vol. 12, no.

2, Apr. 1924, pp. 159-175, 18 figs. Describes tector; gives power chracteristics and indicates further improvements in new type of simple depossibilities of use of this device in various types of receiving circuit, and also in measurement of signal strength, such as for observations of fading.

Discharge Tubes. On Some Properties of Low-Tension Discharge Tubes, J. Taylor. Experimental Wireless, vol. 2, no. 13, Oct. 1924, pp. 41-47, 7 figs. Deals with volt-ampere characteristics of low-tension discharge tubes and gives an interpretation of different portions of them. How peculiarities of characteristics have been applied practically. Experiments on use of "Osglim" lamps for detection of wireless waves.

Duplex. Duplex Telephony, P. P. Eckersley. Experimental Wireless, vol. 2, no. 14, Nov. 1924, pp. 101-104, 5 figs. Outlines problems of Duplex radiotelephony and describes a few methods of achieving and operating it.

Grid Rectification. Grid Rectification. A Critical Examination of the Method, J. H. Reyner. Experimental Wireless, vol. 1, no. 9, June 1924, pp. 512-520, 12 figs. Describes method and investigates its action in detail, after which reference is made to limitations of system.

Head Telephones. The Manufacture of Head Telephones for Wireless Reception. Engineering, vol. 128, no. 3074, Nov. 28, 1924, p. 747. New design especially intended for reception of broadcast telephony, manufactured by Brit. Thomson-Huston Co.

High-Frequency Measurement. The Measurement of High Frequencies, F. E. Nancarrow. P. O. Elec. Engrs.' Jl., vol. 17, part 3, Oct. 1924, pp. 209-217, 6 figs. Accounts of measurements made at Radio Laboratory with piece of apparatus called Multivibrator, controlled by valve-maintained tuning fork.

High-Frequency Resistance. An Experimental Determination of High Frequency Resistance, W. G. White. Experimental Wireless, vol. 1, no. 12, Sept. 1924, pp. 735-737, 7 figs. Describes experiments on measurement of high-frequency resistance of copper wires.

Impedances. The Graphical Analysis of Composite Impedances, F. M. Colebrook. Experimental Wireless, vol. 2, no. 15, Dec. 1924, pp. 140-145, 15 figs. Considers some of the important arrangements of impedances met with in practical wireless telephony and telegraphy, and shows their characteristics graphically.

Interference. Effect of Interference on Reaction Receivers ("Influence du brouillage sur les récepteurs à réaction), L. Brillouin and E. Fromy. Onde Electrique, vol. 3, nos. 28, 29, and 30, Apr., May, and June 1924, pp. 181-189, 268-278, and 299-313, 15 figs. Results of experiments to determine effect of wave interference, or jamming with reaction receiver or receiver connected to amplifiers; study of receivers of one and several lamps.

Radio Interference Elimination, R. H. White. Elec. Rev., vol. 95, nos. 2444, 2447, and 2449, Sept. 26, Oct. 17, and 31, 1924, pp. 464-465, 565-567, and 644-645, 4 figs. Sept. 26: Methods which may be employed without altering any connections in existing receiver. Oct. 17: Finer methods of rejection of unwanted signals. Oct. 31: Filter circuits.

The Elimination of Static Interference, E. M. Terry. Wis. Engr., vol. 28, no. 8, May 1924, pp. 155-158 and 172, 4 figs. Discusses principal causes of disturbances and describes methods by which they can be partially eliminated.

See also Wave Propagation.

Lightships. Communication with Lightships. P. O. Elec. Engrs.—Jl., vol. 16, part 4, Jan. 1924, pp. 409-420, 9 figs. Particulars of communication established between North Goodwin Lightship and Ramsgate Post Office; describes aerial, transmitting and speaking devices, and transmitting and receiving apparatus for calling.

Long-Distance. See RADIOTELEGRAPHY, Long-Distance.

Loud-Speaker Horns. The Function and Design of Horns for Loud Speakers, C. R. Hanna and J. Slepian. Am. Inst. Elec. Engrs.—Jl., vol. 43, no. 3, Mar. 1924, pp. 250-256, 10 figs.; and (discussion) in vol. 43, no. 12, Dec. 1924, pp. 1191-1197, 3 figs. Discusses function of horn and design of horn to perform this function in best way; gives proof to show that exponential increase in section gives best results; appendix gives analytical solution of sound propagation in exponential horns; formulas are developed which make possible design of horns.

The Performance and Theory of Loud Speaker Horns, A. N. Goldsmith and J. P. Minton. Inst. Radio Engrs.—Proc., vol. 12, no 4, Aug. 1924, pp. 423-478, 11 figs. Details of tests at various frequencies carried out with conical horns used for receiving and transmitting; by measuring sound pressure at point on axis of horns about 15 cm. from mouth, curves show sound pressure in dynes at frequencies up to 4000 cycles.

Loud Speakers. Discussion on Loud-Speakers for Wireless and Other Purposes. Instn. Elec. Engrs.—Jl., vol. 62, no. 327, Mar. 1924. Contains following papers: General Principles Involved in the Accurate Reproduction of Sound by Means of a Loud-Speaker, A. O. Rankine, pp. 265-268; Theory of Loud-Speaker Design: Some Factors Affecting Faithful and Efficient Reproduction, L. C. Pocock, pp. 268-270, 2 figs. Sources of Distortion in the Amplifier, C. L. Fortescue, pp. 270-273, 8 figs.; Acoustic Problems of the Gramophone, H. L. Porter, pp. 273-274; Relative Importance of Each Frequency Region in the Audible Spectrum—Measurements on Loud-Speakers, E. K. Sandeman, pp. 275-278, 5 figs.; Overtones of the Diaphragm of a Telephone Receiver, J. T. MacGregor-Morris and E. Mallett, pp. 278-280, 2 figs.; Auditorium Acoustics and the Loud-Speaker, G. A. Sutherland, pp. 280-283, 7 figs.; Some Directions of Improvement in the Loud-Speaking Telephone, S. G. Brown, pp. 283-284; Characteristics of a New Type of Loud-Speaker, P. P. Eckersley, p. 284; discussions, pp. 285-298, 14 figs.

Loud-Speaking Telephone System for Addressing Large Audiences (Luidsprekend telefoonsysteem voor het toespreken van een groot auditorium), E. Wollner. Ingenieur, vol. 39, no. 45, Nov. 8, 1924, pp. 879-887, 19 figs. Loud-speaking systems for local uses; general arrangement, theory and design of condenser, microphone, and testing of same by means of pistophone or thermophone; Western Electric loud-speaking telephones; intensifiers; diagrams of connections. Loud-speaking systems for long-distance transmission. English and American loud-speaker designs.

Magnetophones. The Marconi-Sykes Magnetophone, H. J. Round. Wireless Wld., vol. 15, no. 9, Nov. 26, 1924, pp. 260-265, 11 figs. Description of microphone and associated equipment which is used extensively not only for broadcasting stations but also for public speech amplifying, distributing and amplifying band music, etc.

Modulation. Modulation in Radiotelephony (La modulation en Radio-téléphonie), P. Maurer. Electricien, vol. 55, no. 1359, Nov. 1, 1924, pp. 484-488, 18 figs. Discusses three-electrode tubes as generators, transmission of sustained waves of a given frequency without variation in power, modulators and their operation, direct and indirect use of microphones, etc.

Note on Systems of Modulation Employed in Radio Telephony, H. S. Walker. Experimental Wireless, vol. 1, no. 11, Aug. 1924, pp. 643-646,

3 figs. Gives notes on up-to-date practical systems employed to modulate valve transmitter for telephonic transmission; discusses choke and grid control systems and efficiencies of various methods compared.

Noise. Parasites in Radiotelephony and Their Elimination (Les parasites in T. S. F. et leur élimination), P. Maurer. Electricien, vol. 40, no. 1352, July 15, 1924, pp. 322-325, 11 figs. Discusses present state of question, and shows that total elimination is impossible; recommends use of receivers with special filtering and amplifying devices.

Numans Circuit. The Numans Oscillator, K. C. van Ryn. Experimental Wireless, vol. 2, no. 15, Dec. 1924, pp. 134-136, 5 figs. Describes a new valve circuit from Holland that may be used with either single or double-grid valves, and makes an effective wavemeter.

Poulsen Arc Operation. Poulsen Arc Operation on Coupled Circuits (Funzionamento dell'arco Poulsen su circuiti accoppiati), G. Pession. Elettrotecnica, vol. 10, no. 33, Nov. 25, 1923, pp. 800-803, 3 figs. Demonstrates that operation of Poulsen arc on coupled circuits is not substantially different in its results from operation of triod tubes. New theory based upon rational physical foundations and a series of tests that verify theoretical conclusions is reported and fully explained.

Public-Address System. Stevens' New Public Address System, L. C. W. Conrow. Stevens Indicator, vol. 41, no. 5, Oct. 15, 1924, pp. 122-123 and 134, 5 figs. Describes Western Electric public address system which provides means for amplifying and so distributing speech and sounds of ordinary audibility that they may be heard in natural tone by everyone in crowd of 2 or 3 thousand people.

Radio Frequency, Measurements at. Measurements at Radio Frequency, A. Hund. Elec. World, vol. 84, no. 19, Nov. 8, 1924, pp. 998-1000, 3 figs. Method for rapid determination of effective resistance and inductance of coils and straight conductors; uses variable condenser and resistor to replace variable inductor.

Receivers. A Four-Electrode Valve Receiver, G. L. Morrow. Experimental Wireless, vol. 1, no. 9, June 1924, pp 520-524, 5 figs. Describes four-electrode valve receiver; electrode system consists of cylindrical plate, outer grid of mesh construction and cylindrical shape, within which is inner grid of usual spiral form, plate and two grids being arranged in concentric assembly round straight filament.

A Four-Valve Dual Neutrodyne Receiver, W. James. Wireless World, vol. 13, nos. 18 and 19, Jan. 30 and Feb. 6, 1924, pp. 555-559 and 587-589, 8 figs. Describes receiver having two stages of high-frequency amplification, with first stage dualled, detector, and one stage of ordinary note magnification; operating particulars.

Atmospherics and Their Effect on Wireless Receivers, E. B. Moullin. Instn. Elec. Engrs.—Jl., vol. 62, no. 328, Apr. 1924, pp. 353-366 and (discussion) 366-372, 11 figs. Mathematical analysis of effect of atmospheric upon wireless receiver; calculation of effect of each of several wave forms and comparison of results; consideration of possible advantage from use of aperiodic antenna or of slightly distuned periodic circuit; comparison of rectified current produced by atmospheric with that produced by signal.

Broadcast Receiving sets, E. E. Barnett. S. African Inst. Elec. Engrs.—Trans., vol. 15, part 3, Mar. 1924, pp. 355-361, 4 figs. Outline of recent developments and indication of what is to be expected from different types of sets.

Self-Contained Three-Valve Receiver, W. F. Gildersleve. Wireless Wld., vol. 14, no. 1, Apr. 2, pp. 14-20, 10 figs. Consists of one stage of H. F. amplification, detector and one note magnifier; easy to construct and makes use of a minimum number of component instruments; easy manipulation.

Simplifications of the Superheterodyne (Les simplifications du dispositif superhétérodyne), P. Hémardinquer. Radioélectricité, vol. 5, no. 66, Aug. 25, 1924, pp. 216-218, 5 figs. Discusses principle of superheterodyne receiving, and gives details of simplified mounting methods.

The Problem of Current Supply for A. C. Receivers (Le problème de l'alimentation des récepteurs en alternatif), M. Barthelemy. Onde Electrique, vol. 3, no. 25, Jan. 1924, pp. 12-24, 11 figs. Result of author's investigation to find means of direct heating of receivers with alternating current.

The Super-Heterodyne—Its Origin, Development, and Some Recent Improvements, E. H. Armstrong. Inst. Radio Engrs.—Proc., vol. 12, no. 5, Oct. 1924, pp. 539-552, 13 figs. Describes development of superheterodyne receiver from wartime invention into commercial form of broadcast receiver apparatus now available to general public; success is due to low-filament-consumption vacuum tube and to reduction in number of tubes required by self-heterodyning, reflexing, and improvement in transformer design.

Theory and Construction of Radiotelegraph Receiving Apparatus (Theorie et construction des appareils récepteurs de la téléphonie sans fil), M. Veaux. Annales des Postes Telegraphes & Telephones, vol. 13, nos. 1, 2, 3, and 5, Jan., Feb., Mar., and May, 1924, pp. 1-20, 109-116, 225-240, and 457-465, 97 figs. For all waves, but especially for wave of 450 m. Jan.: Practical details of construction of receiving antenna. Feb.: Utilization of receiving frames. Mar.: Oscillating circuit. May: Definition of wavelength in propagation of electromagnetic waves; chart giving relation between wavelength, frequency and pulsation.

Receiving Apparatus, Screening. Some Experiments on the Screening of Radio Receiving Apparatus, R. H. Barfield. Instn. Elec. Engrs.—Jl., vol. 62, no. 327, Mar. 1924, pp. 249-262 and (discussion) 262-264, 13 figs. Investigation to obtain quantitative information on effect of screens, of which dimensions are small compared with length of waves they are intended to screen; measurements demonstrate important part played by closed circuits in screening magnetic field of radio waves, and show that effective screen may be constructed of wire netting; effect of screens on electric field of waves is measured; essential points to be observed in design of efficient screens for various purposes.

Receiving Circuits, Selective. Selective Receiving Circuits, N. W. McLachlan. Wireless Wld., vol. 15, no. 7, Nov. 12, 1924, pp. 189-193, 6 figs. Reviews conditions by which energy is set up and transferred in tuning system of a receiver.

Receiving Sets, Testing of. Some Methods of Testing Radio Receiving Sets, J. L. Preston and L. C. F. Horle. U. S. Bur. Standards—Technologic Papers, no. 256, Mar. 26, 1924, pp. 203-228, 8 figs. Describes methods of measurement of electrical characteristics of a radio receiving set and formulates statements of features which may be learned by an inspection of electrical and mechanical design of a set. Summary of data from measurements of sensitivity and selectivity or sharpness of resonance of 28 receiving sets of various types, made by 15 manufacturers, using methods described.

Reception. A New Invention for Selective Reception, J. Scott-Taggart. Radio News, vol. 5, no. 8, Feb. 1924, pp. 1056-1057, 1120, 1122, 1124, and 1126, 5 figs. With system described it will be possible to operate transmitters on waves with

difference of but a few meters of each other; outline of invention patented by author.

Conditions for Good Radiotelephonic Reception (Limiti e condizioni di una buona ricezione in radiotelefonia), O. M. Corbino. Elettrotecnica, vol. 11, no. 11, Apr. 15, 1924, pp. 239-240, 1 fig. Author calls attention to fact that in 1905 he demonstrated that modulated wave could be decomposed into two waves slightly different from one another; this observation has assumed today great importance in radiotelephony; advantage of relatively flat curves of resonance in receiver is emphasized.

Distortion-Free Reception and Reproduction of Speech and Music in Radiotelephony (Verzerrungsfreie Aufnahme und Wiedergabe von Sprache und Musik in der Radiotelephonie), J. Engl. Elektrotechnische Zeit. (special radio no.), 1924, pp. 11-14, 10 figs. Notes on conversion of sound energy in high-frequency energy in its separate phases, and characterization of conditions governing distortion-free reception of high-frequency energy for its re-conversion into sound energy.

On Optimum Heterodyne Reception, E. V. Appleton and Mary Taylor. Inst. Radio Engrs.—Proc., vol. 12, no. 3, June 1924, pp. 277-293, 4 figs. Use of triode for anode rectification and cumulative grid rectification in heterodyne reception is investigated theoretically and results given; optimum grid condenser value obtained theoretically is in good agreement with practical value.

Rectifiers for Battery Charging. See RECTIFIERS.

Regeneration in Coupled Circuits. Regeneration in Coupled Circuits, L. Chaffee. Inst. Radio Engrs.—Proc., vol. 12, no. 3, June 1924, pp. 299-350, 35 figs. Develops simple theory of regeneration in single oscillatory circuit, both when oscillatory element is in plate circuit and in grid circuit of regenerating tube; reviews theory of couple circuits having positive resistances; develops theory of regeneration in coupled circuits, and shows that regeneration in secondary circuit affects only impedance of that circuit and may make equivalent resistance of that circuit zero or negative.

Relation to Telephony. Radio and Its Relation to Telephony, W. B. Schulte. Telephony, vol. 86, no. 25, June 21, 1924, pp. 24-26. Magnitude of radio and opportunity offered; possibility of wired wireless for farm lines; broadcasting and toll revenues; merchandising of radio equipment.

Short Period Variations in Radio Reception, G. W. Pickard. Inst. Radio Engrs.—Proc., vol. 12, no. 2, Apr. 1924, pp. 119-158, 39 figs. Continuous records of electric-field intensity at distance of from 11 to 2600 km. from various broadcasting stations are made by amplifying and rectifying received current from open antenna, and recording galvanometer deflections produced by this current; these records show complex curve containing periodicities ranging from seconds to tens of minutes; transition from day to night conditions is shown; simultaneous records at separated receiving points are found to be dissimilar, and records of different distant stations taken at same receiving point are shown to be unlike; hypothesis for these fluctuations is advanced.

Short-Wave. Results Obtained Over Long Distances by Means of Directed Radiotelegraphy with Short Waves (Risultati ottenuti su lunghissime distanze mediante la radiotelegrafia direzionale ad onde corte, più genericamente nota come "il sistema a fascio"), G. Marconi. Telegrafi e Telefoni, vol. 5, no. 4, July-Aug. 1924, pp. 179-184. Discusses short wave developments and successful radiotelephony between England and Australia.

Signaling System. Radio Telephone Signaling, Chas. S. Demarest, M. L. Almquist and L. M. Clement. Am. Inst. Elec. Engrs.—Jl., vol. 43, no. 3, Mar. 1924, pp. 210-218, 26 figs. Describes signaling system which serves to extend to field of radiotelephony same sort of calling facilities as are now available in wire telephony; by its means radio attendants or subscribers are enabled to signal each other without requiring that called party should have to listen with receiver; system is intercommunicating with capacity for large number of stations on one wavelength; fields of usefulness, characteristics, and apparatus employed.

Sound-Transmission Systems. High Quality Transmission and Reproduction of Speech and Music, W. H. Martin and H. Fletcher. Am. Inst. Elec. Engrs.—Jl., vol. 43, no. 3, Mar. 1924, pp. 230-238, 10 figs. General requirements for such transmission systems, and factors to be considered in design and operation; extent to which desired results can be obtained with means now available.

Trains. Missouri Pacific Experiments with Train Radio, R. E. Krueger. Ry. Elec. Engr., vol. 15, no. 12, Dec. 1924, pp. 430-431, 1 fig. Account of experiences with radio equipment; antenna system; reception while standing still; results while moving; interference.

Radio Coach 6ZZ, P. R. Coursey. Wireless World, vol. 14, no. 16, July 16, 1924, pp. 446-451, 5 figs. Preliminary report of transmission and reception tests on express train. Tests were eminently satisfactory and shows that two-way communication with express train moving at high speed is possible, not only over very limited distances, but also over considerable ranges running upward of 100 mi.

Radio Telephony on Railway Trains, E. J. Collier. Elec. Rev., vol. 94, no. 2421, Apr. 18, 1924, pp. 612-613. Eperiments made by Great West. Ry. Co. on trains running between Paddington and Birmingham.

Report of the Committee on the Application of Radio to Moving Trains. Ry. Elec. Engr., vol. 15, no. 10, Oct. 1924, pp. 338-340, 3 figs. Installations and tests made on private cars on transcontinental runs.

Transformers. The Performance and Properties of Telephonic Frequency Intervalve Transformers, D. W. Dye. Experimental Wireless, vol. 1, no. 12, and vol. 2 nos. 13 and 14, Sept., Oct., and Nov. 1924, pp. 691-699, 12-21, and 74-84, 25 figs. Analyzes transformer experimentally and theoretically under conditions of use. Describes methods for measuring effective primary inductance and resistance of telephonic frequency transformers. Means of evaluating secondary inductance and self-capacity.

Transmission. Faithful Reproduction in Radio-Telephony, L. C. Pocock. Instn. Elec. Engrs.—Jl., vol. 62, no. 333, Sept. 1924, pp. 791-807 and (discussion) 807-815, 14 figs. Defines terms suitable to scientific study of faithful reproduction, analyzes into separate constituents types of distortion occurring, and lays down general principles and gives them as far as possible a mathematical form. Principal types of apparatus employed in radiotelephony. Bibliography.

Short Wavelength Transmission, W. James. Wireless World, vol. 13, nos. 13 and 14, Dec. 27, 1923, and Jan. 2, 1924, 9 figs. Describes master oscillator system.

Signal-to-Static Interference Ratio in Radio Telephony, M. Latour. Inst. Radio Engrs.—Proc., vol. 12, no. 3, June 1924, pp. 295-297, 3 figs. Describes system of twin side-band radiotelephonic transmission, wherein carrier component is suppressed, but which differs from other carrierless transmitting systems in that homodyne receiver is not required; this last peculiarity makes system particularly suitable for short wavelength transmission.

The Holweck Demountable Valve. Wireless Wld., vol. 14, no. 15, July 9, 1924, pp. 422-423, 3 figs. Recent improvements in valve intended for

transmission constructed so that it can be easily dismantled for fitting new filament or modifying arrangement of electrodes.

Transmitting Equipment for Radio Telephone Broadcasting, E. L. Nelson. Instn. Radio Engrs. —Proc., vol. 12, no. 5, Oct. 1924, pp. 553-577, 13 figs. Outlines general transmission considerations applying to any system for high-quality transmission of speech or music, and discusses specific requirements to be met by various apparatus units in radio broadcasting equipment; describes standard West. Elec. 500-w. broadcasting equipment, which has found application in some 50 of larger stations in United States and abroad.

Why Wireless Electric Rays Can Bend Round the Earth, Jos. Larmor. Nature (Lond.), vol. 114 no. 2870, Nov. 1, 1924, pp. 650-651. Gives what is supposed to be sufficient and rather striking cause for transmission of long waves horizontally round earth at great latitudes, though rays traveling at lower heights would be gradually quenched.

Transmitters. Output and Wavelength of Tube Senders with Internal Back Coupling (Leistung und Wellenlänge des Röhrensenders mit innerer Rückkopplung), E. Alberti and G. Zickner. Wissenschaftliche Abhandlungen der Physikalisch-Technischen Reichsanstalt, vol. 7, no. 2, 1924, pp. 247-258, 7 figs. Investigation of self-excitation in tube senders with back coupling over capacity between anode and grid, and with grid circuit capable of tuning.

Radio Set with Arc Transmitters. Eng. Progress, vol. 4, no. 12, Dec. 1924, pp. 250-253, 6 figs. Fundamental idea and development of apparatus; new transmitting method by means of magnetic control; Pungs' new method for arc telephony by means of microphone; 4-kw. Lorenz-Poulsen transmitter in Lingby, Denmark; most recent German arc transmitters.

Telephony and C. W. Transmitters for 100 Meters, G. E. Minvalla. Experimental Wireless, vol. 1, no. 11, Aug. 1924, pp. 629-631, 4 figs. Deals with elimination of losses which are likely to occur at very high frequencies.

The Design of Transmitting Valves, G. L. Morrow. Experimental Wireless, vol. 1, no. 10, July 1924, pp. 585-588, 3 figs. Gives fundamental principles underlying design of transmission valves.

The Mechanical Generation of Short Waves (Die maschinelle Erzeugung kleiner Wellen), K. Schmidt. Elektrotechnische Zeit. (special radio no.), 1924, pp. 22-26, 10 figs. Discusses basic principles of frequency multiplication, and manner of speed regulation of high-frequency transmitter sets, as developed by author.

Wireless Telephony, C. W. Kollatz. Eng. Progress, vol. 4, no. 12, Dec. 1924, pp. 259-265, 12 figs. Transmission of speech waves; transmitters for continuous waves; radiotelephony with arc transmitters, high-frequency machines, tube transmitters; reception.

Vacuum Tubes. See VACUUM TUBES.

Valves. See Receivers; Transmission.

Wave Meter. The Measurement of Radio- Frequency and Wave-Length. Elec. Rev., vol. 95, no. 2441, Sept. 5, 1924, pp. 351-352, 4 figs. Instrument is made up as three separate units, as follows: (a) compound multivibration unit, consisting of two multi-vibrators in cascade, mounted in one box together with controlling tuning fork, (b) selector circuit consisting of specially designed variable air condenser and six stranded wire inductance coils, (c) selective amplifier for amplifying interference tones resulting from interaction of selected harmonic and local or external radio-frequency source.

Wave Propagation and Interference. The Propagation of Electric Waves and Interferences (Ueber die Ausbreitungsvorgänge elektrischer Wellen und ihre Störungen), A. Esau. Elektrotechnische Zeit. (special radio no.), 1924, pp. 15-18, 8 figs. It is shown that atmosphere and surface conditions of earth have very great influence on propagation of electric waves, manifesting itself in changes of intensity and displacement of incidence direction of wave.

Wired. See TELEPHONY, Wired Wireless.

RADIUM

Alpha-Particles Emitted from. Number of α-Particles Emitted from Radium. Scintillation Method (Die Zahl der von Radium ausgesandten α-Teilchen), H. Geiger and A. Werner. Zeit. für Physik, vol. 21, no. 3, Feb. 8, 1924, pp. 187-203, 2 figs. R dermination by refined methods, according to which α-particles are counted by scintillation method and a value 3.40×10^{10} α-particles per gramme of Ra per sec. obtained; using this value and assuming Millikan's value for it, half-value period of radium is given as 1730 years.

Australia. Underground Riches of the Commonwealth. Indus. Australian & Min. Standard, vol. 71, no. 1836, Feb. 14, 1924, pp. 237-238, 2 figs. Particulars regarding stores of radium in South Australia; discovery of great scientific importance and practical value.

Emanation Measurement. Exact Measuring of Emanation of Radium (Uber die Präzisonsmessung der Radiumemanation), A. Becker. Zeit. für Physik, vol. 21, no. 5, Feb. 25, 1924, pp. 304-315, 2 figs. Discusses conditions under which exact measurement can be carried out by means of α rays, free from objections, and its practical realization.

Extraction from Ores. Experiments on the Extraction and Recovery of Radium from. Typical American Carnotite Ores, Including Contributions to Methods of Measuring Radium, H. H. Barker and H. Schlundt. Univ. of Mo.—Bul., vol. 24, no. 26, Eng. Experiment Station Series 23, Sept. 1923, 87 pp., 15 figs. Results of investigation undertaken to compare different methods of treating ores for extraction and recovery of radium, to test applicability of the various methods to different types of ores, to devise new methods of treatment and modifications of existing processes for extraction from virgin ore, to study and compare different methods for recovery of uranium and vanadium to determine their respective efficiency and quality of product obtained, and to study electrical and analytical methods involved in determining radium in the various products obtained in its commercial production.

Mexico. The Radium Ores of Mexico (Los minerales de radio en México), M. P. y Lasso. Ingeneria Internactional, vol. 12, no. 3, Sept. 1924, pp. 127-128, 1 fig. Geological details of ores in which radium is found and tests made to determine its quantity.

Russian Industry. The Radium Industry in Russia, S. Alkesandrov. Russian Min. Jl., vol. 100, no. 1, Jan. 1924, pp. 7-10. (In Russian.)

RAILLESS TRACTION

Rochester, N. Y. Rochester Trackless Trolley Construction. Elec. Ry. Jl., vol. 64, no. 1, July 5, 1924, pp. 11-13, 4 figs. Line is about 3 mi. long and runs through densely populated district; it crosses five electric car lines and one steam railroad at grade; some of overhead equipment is of special design.

Trolley Buses. See BUSES, Trolley.

RAILROAD; RAILROADS. See RAILWAY; RAILWAYS.

RAILS

Bonding. See ELECTRIC WELDING, ARC, Rail Bonds.

Conductor, Under Contact Type. Under-Contact Conductor Rails. Electrician, vol. 92, no. 2381, Jan. 4, 1924, pp. 10-11, 7 figs. Describes new design giving complete protection for high-tension traction.

Corrugation. How Rail Corrugation Has Been Eliminated in Pittsburgh, I. E. Church. Elec. Ry. Jl., vol. 64, no. 3, July 19, 1924, pp. 83-85. Results of investigations made of circumstances under which in past corrugation developed and track structure was designed to prevent its recurrence.

Investigation of Corrugation of Rails with Aid of Torsiograph (Untersuchung der Riffelbildung an Schienen mit Hilfe des Tersiographen), J. Geiger. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 12, Mar. 22, 1924, pp. 283-284, 7 figs. Measurement on rolling cars shows plainly that corrugation is due to frictional oscillations, resulting from irregular speeds of both wheels of same axis when traveling over curves.

Rail Corrugation Experience. Elec. Ry. Jl., vol. 63, no. 7, Feb. 16, 1924, pp. 255-260, 7 figs. Survey of railways in various parts of United States, giving new data as to extent of this trouble; practices followed in removing and cost, and comments as to causes.

Creeping. Creeping of Rails (Das Wandern der Schienen), M. Koenen. Zentralblatt der Bauverwaltung, vol. 44, no. 32, Aug. 6, 1924, pp. 270-271, 2 figs. Assumes creeping due to rotation of earth and makes calculations accordingly.

Longitudinal Dislocation or Creeping of Rails (O Deslocamento longitundinal ou Caminhamento dos Trilhos), J. C. de Andrade Pinto. Revista Brasileira de Engenharia, vol. 8, no. 3, Sept. 1924, pp. 73-78, 6 figs. Shows from experiments that creeping of rails can easily be avoided by using retaining plates explained.

Failure. Breaking of Rails; and Rail Joints, W. C. Cushing. Int. Ry. Congress Assn.—Bul., vol. 6, no. 10, Oct. 1924, pp. 677-792, 42 figs. Classification of rail failures, rail failure analysis, record of failures, breakages attributable to use to which rails are put and breakages attributable to defects in metal in rails, rail designs, specifications, chemistry and wear of rails, operating statistics, etc. Most economical and efficient arrangement of rail joints; types of joints; freedom for expansion of rails; quality of metal in fish-plates; first cost of installing and maintaining joints, and specifications for quenched-carbon, alloy, and high-carbon joint bars, and for coiled spring washers.

Broken Rails. Ry. & Locomotive Eng., vol. 37, no. 5, May 1924, pp. 150-152, 4 figs. Extracts from reports on broken rails that caused derailments and loss of life, published by Bur. Safety.

Rail Failure Statistics for 1922, J. B. Emerson. Am. Ry. Eng. Assn.—Bul., vol. 25, no. 263, Jan. 1924, pp. 393-402, 5 figs. partly on p. 391. Statistics collected for year ending Oct. 31, 1922, including rollings for 1917 and succeeding years. Tables.

Split Head Type of Rail Rupture. Railroad Herald, vol. 28, no. 6, May 1924, pp. 26-28, 2 figs. Abstract of report of J. E. Howard, on accident which occurred Nov. 21, 1923, on Phila. & Reading Ry., near Annville, Pa., which was due to fracture of a rail which displaced a split-head type of rupture.

Frogs. Finishing Steel Track Equipment, F. B. Jacobs. Iron Trade Rev., vol. 74, no. 26, June 26, 1924, pp. 1701-1702, 3 figs. Notes on methods and equipment used at plant of Indianapolis Switch & Frog Co., Springfield, Ohio, in production of solid manganese steel frogs, switches and crossings.

Wheel Guiding Flange Frogs for St. Louis Terminal. Eng. News-Rec., vol. 92, no. 26, June 26, 1924, pp. 1093-1094, 2 figs. Eliminates guard rails, thereby reducing track maintenance. Solid and built-up frogs.

Furnaces for Heating. See FURNACES, HEATING, Rail-Heating.

Grooved, Standardization of. International Standardization of Grooved Rails (Internationale Normung der Rillenschienen). Verkehrstechnik, no. 23, June 6, 1924, pp. 229-231, 3 figs. Proposed international profiles by Swiss Standard Assn. in agreement with international union of street cars and narrow gage lines.

Impact on, Otheograph Tests on. See ELECTRIC LOCOMOTIVES, Developments.

Inspection. Modern Methods and Results of Rail Inspection (Neuere Wege und Erbegnisse der Gleisuntersuchung), Stierl. Bautechnik, vol. 2, nos. 9 and 10, Feb. 29 and Mar. 14, 1924, pp. 66-68 and 82-85, 39 figs. Describes apparatus recently developed in Germany for inspection of rails and results obtained with them.

Joint-Grinding Machine. A New Rail Grinding Machine (Eine neuartige Schienen-Schleifmaschine(, M. König. Verkehrstechnik, no. 32, Aug. 8, 1924, pp. 335-337, 1 fig. Describes electric machine for grinding joints by means of corundum wheels, reducing cost for each joint over 80 per cent and producing more exact work.

Joints. A Non-Deflecting Rail Joint. Indian Eng., vol. 75, nos. 1 and 2, Jan. 5 and 12, 1924, pp. 10-11 and 24-25, 10 figs. on supp. plates. Details of joint proposed by Bradford Leslie.

Investigation of Seam Welded Rail Joints, R. B. Fehr. Am. Welding Soc.—Jl., vol. 3, no. 1, Jan. 1924, pp. 28-60, 17 figs. Results of investigation along following lines: Functions of seam welded rail joints and stresses to which they are subjected; improvements in joint structure and welding processes; development of practical method for making accelerated tests on seam-welded joints; and comparative tests on seam-welded joints in which variations have been made in either mechanical structure or welding process.

Progress Report No. 2 of Committee on Welded Rail Joints. Am. Welding Soc.—Jl., vol. 3, no. 2, Feb. 1924, pp. 48-88, 28 figs. Report of committee organized by Am. Elec. Ry. Assn. and Am. Bur. of Welding to investigate various types of welded rail joints in commercial use. Summary of tests.

Rail Joint Designs Presenting New Features. Eng. News-Rec., vol. 93, no. 14, Oct. 2, 1924, pp. 536-537, 4 figs. Describes five rail joints now in experimental service, viz., Hyle joint, with separate wearing plates, Neafie joint, having plain bars with joints not anchored to ties, Roach hinge joint, head-free joint, in which bars are without top contact, and 100 per cent joint.

Specifications for Quenched Carbon Steel Joint Bars. Am. Ry. Eng. Assn.—Bul., vol. 25, no. 263, Jan. 1924, pp. 406-408. Specification covering materials, chemical and physical requirements, design and tolerance, manufacture, inspection, and marking.

Welded Rail Joints for Street Railways, A. T. Spencer. Elec. News, vol. 33, no. 15, June 15, 1924, pp. 77-78. Describes various types in use and gives methods used by Toronto Transportation Commission.

Welding Rail Joints on Iron Railroad Bridges (Versuche mit geschweissten Schienenstössen auf eisernen Eisenbahnbrücken), J. Stern. Bautechnik, vol. 2, nos. 24 and 25, June 6 and 13, 1924, pp. 243-245 and 255-257, 6 figs. Describes in detail process of Electro-Thermit Co. in Berlin applied usually to street car tracks, in which joints are filled with mechanical mixture of aluminum and Fe_2O_3, and its successful application to railroad tracks on bridge over Oder at Steinau and under section Breslau-Glogau.

See also Failure; ELECTRIC WELDING, ARC, Rail Joints.

Laying. Canadian Pacific Lays 29.7 Miles of 85-lb. Rail in Two Days. Ry. Eng. & Maintenance, vol. 20, no. 9, Sept. 1924, pp. 342-344, 6 figs. Further developments of method permit of greater output of working forces; work consisted of two stretches of track 9 mi. apart on single-track line between Mattawamkeag, Me., and Brownville Junction and was done under light traffic.

Laying Rail with a Machine in India. Ry. Eng. & Maintenance, vol. 20, no. 4, Apr. 1924, pp. 157-159, 4 figs. Labor-saving equipment which may be applied to advantage even where wages are extremely low.

Life of. Mill Treatment Doubles the Life of Rail. Elec. Ry. Jl., vol. 64, no. 4, July 26, 1924, pp. 123-125, 1 fig. Service tests made by Boston Elevated Ry. show wear on Sandberg sorbitic rail to be only about one-half that on untreated rail in same track; cost of treated rail is slightly higher.

Securing the Maximum Life of Rail in Track, B. M. Cheney. Eng. & Contracting (Railways), vol. 62, no. 1, July 16, 1924, pp. 129-133. Average age of rail varied from 5.6 to 13.6 yr.; gives factors that determine length of service.

Low-Carbon. Low Carbon Rails Show Less Transverse Fissures, C. W. Gennet, Jr. Ry. Age, vol. 76, no. 2, Jan. 12, 1924, p. 186, 1 fig. Results of tests show that tendency for fissures to develop increases with carbon content of steel.

Manufacturing Practices. Report of Rail Committee, A. R. E. A. Ry. Rev., vol. 74, no. 11, Mar. 15, 1924, pp. 576-577, 4 figs. Study of rail manufacturing practices, including rail failures, desirable rail length, joint bars and method of treatment, rail sections, movement of contiguous rails through bolted joints, etc. (Abstract.)

Old, Rerolling into Bars and Shapes. Make Rail Steel Products in 8 States, E. C. Boehringer. Iron Trade Rev., vol. 74, no. 15, Aug. 10, 1924, pp. 979-981, 3 figs. Points out that there are 19 mills in United States and Canada engaged in conversion of old steel rails into bars and shapes; describes mill practice; physical properties of rail-steel bars.

Rerolling Old Railroad Rails Into Rods, A. Noell. Iron Age, vol. 113, no. 12, Mar. 20, 1924, pp. 866-869, 10 figs. Methods of operation in rolling with oblique pressure; reduction of sectional area in rolling; influence of steel strength. (Abstract.) Translated from Stahl u. Eisen.

Quality Improvement. How the Quality of Rails Can Be Improved, C. W. Gennet, Jr. Ry. Age, vol. 77, no. 2, July 12, 1924, pp. 63-65, 2 figs. Suggestions for changes in specifications to secure a better grade of steel.

Rail-Laying Machine. See Laying.

Rolling. Calculating Passes of Rails (Zur Berechnung von Schienenkalibrierungen), H. Cramer. Stahl u. Eisen, vol. 44, no. 34, Aug. 21, 1924, pp. 1012-1015, 7 figs. Discusses calculations to determine on straight passes, upset passes, etc., to obtain equal elongation of various parts of profiles.

Sections. Comparison of Standard A. R. A. and A. R. E. A. Rail Sections. Am. Ry. Eng. Assn.—Bul., vol. 25, no. 263, Jan. 1924, pp. 409-431. Forty-five diagrams of various rail sections with data comparing principal dimensions and features. See also recommended design for 150-lb. rail section, p. 392.

Slag, Corrosive Effect of. Corrosive Effect of Slag, W. R. Dunham. Elec. Ry. Jl., vol. 64, no. 17, Oct. 25, 1924, p. 732, 1 fig. Detroit investigation shows 54 per cent of base of rails eaten away in 21 years.

Steel, Milled-End. Late Developments in Steel Rail Practice, C. W. Gennet, Jr. Iron Age, vol. 113, no. 24, June 12, 1924, pp. 1721-1722. Lengths of 39 ft. with ends milled; tie plates, from steel from top of ingots; improved hot-bed treatment regarded important.

Wear. Causes of Wear of Rails (Les causes de l'usure des rails de chemins de fer). Génie Civil, vol. 85, no. 23, Dec. 6, 1924, pp. 521-523, 4 figs. Extract from book entitled Wear and Defects of Rails, by Ch. Fremont. Shows that wear is not due to abrasion but to crushing. Choice of steel for rails.

Welding. Thermit Process Gives Good Results in Youngstown, D. J. Graham. Elec. Ry. Jl., vol. 64, no. 20, Nov. 15, 1924, pp. 841-842, 10 figs. This method of welding is used in installation and repair of crossings, switches and mates, compromise joints and other special trackwork. Has been standard of Youngstown Mun. Ry. since 1916.

Welding Rails in Brooklyn. Reactions, vol. 17, no. 3, 1924, pp. 43-46, 8 figs. Brooklyn-Manhattan Transit Corpn. and Brooklyn City R. R. use thermit process on large proportion of its lines being reconstructed; advantages of thermit process.

Welding of Non-Imbedded Tracks (Schweissung freiliegender Gleise), Wattmann. Maschinenbau, vol. 3, no. 24, Sept. 22, 1924, pp. 902-904. Experiences in track welding and comparative cost of welded joints and fishjoints. See translation in Eng. Progress, vol. 5, no. 9, Sept. 1924, p. LIX, 1 fig.

Wheel Thrust on. Otheograph Records of Steam and Electric Locomotives, P. M. Gillilan. Gen. Elec. Rev., vol. 27, no. 3, Mar. 1924, pp. 179-181, 7 figs. Notes on a device for recording thrust on rails by each separate wheel of a locomotive or motor car; shows by a graphic record amplitude and characteristic of both vertical and transverse thrust of all wheels on each tie. Describes records made.

Otheographic Records of Wheel Effects on Rails. Eng. News-Rec., vol. 92, no. 11, Mar. 13, 1924, pp. 441-442, 5 figs. Tests of electric and steam locomotives; charts show load and lateral thrust imposed by each passing wheel.

The Otheograph of the General Electric Company. Ry. & Locomotive Eng., vol. 37, no. 6, June 1924, pp. 163-168, 5 figs. Instrument designed to measure lateral and vertical stresses imposed on rails.

RAILWAY CONSTRUCTION

Africa. Railway Building in Morocco. Ry. Gaz., vol. 40, no. 2, Jan. 11, 1924, pp. 46-48, 4 figs. Particulars of a system which will comprise 670 miles of railway, both broad and narrow gage, extending from Marrakesh at foot of Atlas Mts. in southwestern corner of French Protectorate, to Oudjda on border of Algeria, with a line running due north from Petitjean to Tangiers in Spanish Morocco.

Canada. A Larger Program of Railroad Building, C. S. Gzowski. Ry. Rev., vol. 75, no. 19, Nov. 8, 1924, pp. 683-690, 14 figs. Construction of lines which now make up Canadian national railways system in Western Canada.

Cut-Off Construction. A 3 1/3-Million Cubic Yard Job on the Burlington. Excavating Engr., vol. 18, no. 5, May 1924, pp. 174-180, 22 figs., partly on pp. 84-85. Description of Morris & Dougherty's big contract for construction of 18 miles of cut-off between Frederick and Vermont, Ill., on Chicago, Burlington & Quincy Railway. 13 shovels and one dragline excavator, in ad-

dition to a great fleet of locomotives and dump cars, employed.

Building the Waukegan Cutoff on the North Shore Line. Elec. Ry. Jl., vol. 64, no. 4, July 26, 1924, pp. 119-122, 5 figs. Initial 5-mile section to be operated by Chicago Rapid Transit Co.; grade separation at streets and railroad crossings insures fast schedule; use of automatic pumps solves difficult drainage problem; announcement of extension creates spectacular real estate boom.

New 17-Mile Cut-off Eliminates Pusher Service. Ry. Age, vol. 77, no. 11, Sept. 13, 1924, pp. 442-446, 10 figs. Details of construction work involved in project of Chicago, Burlington & Quincy to expedite coal traffic. Pusher grade opposing Burlington's heavy northbound coal movement from southern Illinois being eliminated. Comprises building of an alternate line on a practically continuous 25 per cent grade from point two miles north of Beardstown, Ill., to Vermont, at an estimated cost of about $143,000 per mile.

New York Central R. R. Completes Castleton Cut-Off. Ry. Rev., vol. 75, no. 26, Dec. 27, 1924, pp. 1015-1024, 20 figs. Construction details of huge project which has been under construction for two years and was officially opened Nov. 20, 1924; new line eliminates excessive grades, shortens distance, gives initial increase of yard capacity, permits efficient methods of yard operation, etc.

Grade Analysis. Analysis of Railroad Grades for Classification, S. Vilar Y Boy. Am. Soc. Civ. Engrs.—Proc., vol. 50, no. 3, Mar. 1924, pp. 255-263. Author seeks to solve general problem of grade analysis mathematically, giving results to fit any actual condition by simply substituting values in a general formula.

Hudson River Connecting R. R. Building the Hudson River Connecting Railroad. Eng. News-Rec., vol. 92, no. 3, Jan. 17, 1924, pp. 108-111, 7 figs. Need for new Hudson River crossing at Albany; economies to be effected by new line; details of great classification yard at Selkirk.

Improvement and Statistics, 1923. Improvement Is Present Keynote of American Railroads, E. E. R. Tratman. Eng. News-Rec., vol. 92, no. 1, Jan. 3, 1924, pp. 14-16. Double-tracking, grade reduction and line revision for efficiency in handling heavy traffic; grade separation in cities; enlarging yards, terminals and passing tracks.

Railway Construction Resumed on Large Scale. Ry. Age, vol. 76, no. 1, Jan. 5, 1924, pp. 50-58, 2 figs. Improvements during 1923 involved chiefly terminal, second track, and other operating necessities; statistics on railway construction in United States in 1923.

Santa Fe Ry., Kansas. Santa Fé Railway Builds Low-Grade Line in Kansas. Eng. News-Rec., vol. 92, no. 7, Feb. 14, 1924, pp. 275-279, 6 figs. New route permits increased train loads; diversion at Eldorado; construction methods in earthwork, concreting and structures.

Widening Work, England. Widening of the London and North Eastern Main Line. Ry. Gaz., vol. 40, no. 20, May 16, 1924, pp. 707-711, 16 figs., partly on pp. 705-706. Widening works on Great Northern section of L. N. E. R. at Huntingdon and Peterborough will, on completion, considerably improve facilities for working traffic by substituting 4-line for 2-line sections at these points; track rearrangement and bridges; engineering details; erecting steelwork.

RAILWAY ELECTRIFICATION

Advantages. Railroad Electrification, F. E. Wynne. Ry. Club Pittsburgh—Proc., vol. 23, no. 6, Apr. 24, 1924, pp. 140-158 and (discussion) 158-163. Advantages of railway electrification and details of accomplishments.

Africa. Cape Peninsula Railway Electrification. S. African Power Engr., vol. 9, nos. 77 and 78, Sept. and Oct. 1924, pp. 15-20 and 25-27, 1 fig. Report on electrification of Cape Town-Simons' Town, Monument-Sea Point, and Monument-Table Bay Docks lines. Estimates of capital outlay.

Austria. Electric Traction on the Austrian Federal Railway (Elektrische Zugförderung auf den österreichischen Bundesbahnen), P. Dittes. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 10, Mar. 8, 1924, pp. 233-240, 17 figs. Program for electrification of portion of network; electrification of Arlberg line Innsbruck-Landeck-Bludenz: hydroelectric plants, transmission lines, railway and overhead lines, electric locomotives, etc.; 73-km. electrified section between Innsbruck and Landeck is in operation since end of 1923 and Arlberg section to Bludenz will be in operation before end of 1924, thus completing electrification of 243 km.

Electrification of the Austrian Federal Railways, Jas. A. G. Pennington. Ry. Rev., vol. 75, nos. 13 and 14, Sept. 27, and Oct. 4, 1924, pp. 470-475, and 508-511, 7 figs. Present state of enterprise. Sept. 27: Operating characteristics and traffic density; conditions which necessitate change of motive power. Oct. 4: Hydroelectric plants, scheme of transmission and distribution, and motive power.

Brazil. Electric Operation of Paulista Railway in Brazil, G. Bellows. Ry. Age, vol. 76, no. 16, Mar. 22, 1924, pp. 789-791, 6 figs. Electrification shows large savings on road which must use wood or imported coal for fuel; locomotive performance.

British Empire Exhibition. First World Power Conference. Ry. Gaz., vol. 41, no. 4, July 25, 1924, pp. 121-124, 2 figs. Abstracts of papers on electrification of railways read at British Empire Exhibition. Electric Traction in Italy, F. Tajani; Electrification of Railways in Norway, H. J. Schreiner; Power Problems of Sweden Railways, I. Ofverholm.

British Railways. The Future of Main-Line Electrification on British Railways, H. E. O'Brien. Instn. Elec. Engrs.—Jl., vol. 62, no. 333, Sept. 1924, pp. 729-755 and (discussion) 755-781, 9 figs. Shows that probable density of traffic in ton-miles on main railway arteries is so great that cost of energy, including all capital charges, will not be prohibitive, also that cost of electric locomotives will not be a capital charge, and that when reductions in cost of locomotive operation and maintenance (due to simple construction of electric locomotive) are taken into account, total cost of locomotive operation is substantially less for electricity than for steam.

Chile. Electrification of the Chilean Section of the Transandian Railway Via Juncal (Informe sobre la electrificación de la sección chilena del transandino por Juncal), A. J. Fifer. Instituto de Ingenieros de Chile—Anales, vol. 24, no. 6, June 1924, pp. 340-367, 3 figs. Discusses line from Los Andes (Chile) to Mendoza (Argentina) of 133 km., rising from 834 meters above sea level to 3207 meters and terminating at 768 meters; traffic details, electric equipment and rolling stock proposed.

Coal Carriers. Electrification of Coal Carrying Railroads, T. C. Wurts. Modern Min., vol. 1, no. 1, Aug. 1924, pp. 2-4, 5 figs. Describes electric operation of Norfolk & West. Ry.; locomotives used are split-phase type; single-phase power, at potential of 11,000 volts, is collected from trolley wire and stepped down to operating potential by means of transformers mounted on locomotive.

Contact System. Contact System for Virginian Electrification, C. L. Hancock. Ry. Age, vol. 77, no. 14, Oct. 4, 1924, pp. 597-598, 12 figs. Virginian Ry. electrifying its lines between Mullins, W. Va., and Roanoke, Va. Entire construction including contact wire, messenger and fittings to be non-ferrous material.

Developments. The Electrification of Foreign Railways, Including Recent Developments and Projects, S. Parker Smith. World Power, vol. 2, nos. 1, 2, 4, and 11, Jan., Feb., Apr., and Nov. 1924, pp. 44-51, 111-116, 216-223, and 279-284, 5 figs. Jan.: Germany. Feb.: Austria and Hungary. Apr.: France and Holland. Nov.: Canada, Mexico, Brazil, Chile, Argentine, South Africa, India, Australia, New Zealand, Japan, and Spain.

Financial Aspects. The Financial Aspects of Main Line Electrification, Phil. Dawson. World Power, vol. 2, no. 11, Nov. 1924, pp. 274-278. Author seeks to disprove idea that only where water power is available, or in case of mountain lines, can complete electrification of railway system be justified.

France. Electrification of the French Midi Railway, A. Bachellery. Instn. Elec. Engrs.—Jl., vol. 62, no. 327, Mar. 1924, pp. 213-218 and (discussion) 218-231, 3 figs. Account of extensive electrification work now pursued by Midi Railway in accordance with new standard regulations of French Government, and of first results obtained on electrified lines.

Electrification of the Paris Suburban Lines of the State Railways (Note sur l'électrification des lignes de Banlieue des chemins de fer et l'état), M. C. Thomas. Revue générale des Chemins de Fer, vol. 43, nos. 1 and 2, July and Aug. 1924, pp. 3-25 and 109-119, 30 figs. Details of lines, generating stations, permanent way, traction and transformer substations, third-rail equipment; electric locomotives, rolling stock, motor coaches, etc.

Electrification of the Paris Suburban Lines of the State Railways (L'électrification des lignes de banlieue des Chemins de fer de l'Etat), P. Calfas. Génie Civil, vol. 85, no. 12, Sept. 20, 1924, pp. 245-251, 20 figs. Particulars of new rolling stock, railway motor cars, power houses, substations, and equipment.

Paris Suburban Lines Electrification. Elec. Ry. & Tramway Jl., vol. 49, no. 1206, Oct. 12, 1923, and vol. 50, no. 1219, Jan. 11, 1924, pp. 201-205 and 19-22, 14 figs. Changes in construction and general arrangement of St. Lazare station; describes electric motor car to be used on State Rys., designed for a strict minimum of stopping time at stations.

Germany. Electrification of the Berlin Elevated Railway (Betrachtungen zur Elektrisierung der Berliner Stadt- und Vorortbahnen), Schlemmer. Organ für die Fortschritte des Eisenbahnwesens, vol. 79, no. 9-10, Aug. 30, 1924, pp. 205-210, 8 figs., partly on supp. plate. Change from steam operation is discussed, electrical plants and equipment are described, and economical questions treated.

Holland. The Question of Electrification of the Dutch Railways (Die Elektrisierungsfrage in Holland), J. J. van L. Martinet and H. Ebert. Organ für die Fortschritte des Eisenbahnwesens, vol. 79, no. 9-10, Aug. 30, 1924, pp. 230-233, 2 figs. Single-phase current, 15,000 volts and 16 2/3 cycles is recommended. Power is generated at 50 cycles and transformed to lower frequency for railway operation.

Illinois Central. Electrification Progress on the I. C. R. R. Elec. Traction, vol. 20, no. 6, June 1924, pp. 256-257, 4 figs. Work on complete elimination of grade crossings from Chicago to Kankakee are well under way; next cars purchased will be completely equipped for electrical operation.

Italy. The Status of Railway Electrification in Italy (Der Stand der Elektrisierung in Italien), G. Huldschiner. Organ für die Fortschritte des Eisenbahnwesens, vol. 79, no. 9-10, Aug. 30, 1924, pp. 233-237, 6 figs., partly on supp. plate. Three-phase system, which is mostly used in Italy, is described and its advantages emphasized.

Japan. Electrification Program for Japanese Roads. Ry. Elec. Engr., vol. 15, no. 3, Mar. 1924, pp. 84-87, 17 figs. Abstract of report prepared by S. T. Dodd. Abundant water power and limited coal supply are powerful influences in developing electric traction.

London Metropolitan. The Electrification of the Metropolitan Railway. World Power, vol. 2, no. 11, Nov. 1924, pp. 305-309, 4 figs. Details of power station, permanent way, and rolling stock.

Norway. Electric Railway Operation in Norway (Elektrisk Jernbanedrift). Teknisk Ukeblad, vol. 71, nos. 33, 34, and 36, Sept. 16, 20, and 30, 1924, pp. 283-287, 295-297, and 308-311, 3 figs. Discussion at meeting of Railway Committee of Norwegian Engrs. Assn. on electrification of Norwegian railways. Experts favor a single-phase system of 15,000 volts and 15 cycles, similar to one adopted in Sweden. Electrification in other countries.

Pennsylvania. Electrification of the Ft. Washington Branch, P. R. R. Ry. Rev., vol. 74, no. 19, May 10, 1924, pp. 843-845, 5 figs. Previous electrical installation in Philadelphia suburban district extended over 6.2 mi. of single track.

Russia. See ELECTRICAL INDUSTRY, Russia.

South Africa. The Electrification of the South African Railways, W. Hoy. S. African Eng., vol. 35, no. 1, Jan. 1924, pp. 3-5, 6 figs. Main features of conversion from steam to electric operation of portion of line from Glencoe Junction to Pietermaritzburg, bringing progress of work up to November.

Spain. The 3000-volt Electrification of the Spanish Northern Railway, A. I. Totten and H. C. Hutchinson. Gen. Elec. Rev., vol. 27, no. 10, Oct. 1924, pp. 658-664, 11 figs. Section between Ujo and Busdongo now being electrified as initial step of extensive program. Describes this most recent substitution of electric locomotives for steam locomotives, locomotives themselves, motors, control, auxiliary equipment, substations, transformers, motor-generator sets, and overhead line construction.

Switzerland. Electrification of the Swiss Railways (Die Elektrisierung der Schweizer Bahnen), Tetzlaff. Organ für die Fortschritte des Eisenbahnwesens, vol. 79, no. 9-10, Aug. 30, 1924, pp. 218-229, 13 figs. Describes systems used, historic development, map of electrified roads, high-pressure hydraulic power plants, transmission lines, and various types of electric locomotives. Data on cost of electrification.

Main Line Railway Electrification, S. Parker Smith and Phil. Dawson. Engineer, vol. 137, nos. 3571, 3572, and 3573, June 6, 13, and 20, 1924, pp. 633-636, 653-654, and 684-685, 27 figs. June 6: Electrification of Swiss railways; reasons for electrification; choice of system; tabular data one electric rolling stock; present state of electrification; Berne-Loetschberg-Simplon railway; tabular data on supp. plate of different lines. June 13: Rhaetian railway; Swiss federal railways; single-phase lines. June 20: Simplon tunnel and Brique-Sitten 3-phase lines; Freiburg-Murten-Ins railway; Burgdorf-Thun railway.

Present Status of Railway Electrification of the Federal Swiss Railroad (L'Etat actuel de

l'électrification des Chemins de fer fédéraux suisses). Génie Civil, vol. 84, no. 26, June 28, 1924, pp. 609-614, 7 figs. See also Elec. Ry. & Tramway Jl., vol. 50, no. 1242, June 13, 1924, pp. 273-277, 6 figs. Progress in electrification; working current, single-phase 15,000-volt, 16 2/3 periods, generated in hydroelectric power stations; 525 out of 2900 km. are now electrified.

Railway Electrification Progress in Switzerland, A. Rohn. Eng. News-Rec., vol. 93, no. 1, July 3, 1924, pp. 18-19, 4 figs. Progress of electrification movement of Swiss Federal Railways. More than 400 km. of lines operating by electric power; will equip 1150 km. in next four years.

The Electrification of the Swiss Federal Railways. Int. Ry. Congress Assn.—Bul., vol. 6, no. 12, Dec. 1924, pp. 1122-1150, 19 figs. Progress of work of electrification; general scheme; cost of electrification; brief description of main installations; results of working.

United States. The Electrification of Railways in United States, Including Recent Developments and Projects, S. P. Smith. World Power, vol. 2, nos. 6 and 7, June and July 1924, pp. 338-346 and 38-44, 6 figs. Deals with roads electrified in America.

Virginian Ry. The Virginian Railway Electrification, H. K. Smith. Ry. Age, vol. 76, no. 27, June 7, 1924, pp. 1353-1358, 9 figs. See also Ry. Elec. Engr., vol. 15, no. 6, June 1924, pp. 169-174, 10 figs. Outline of conditions which caused management to adopt electric traction; electric locomotives; plan of operation with electric locomotives; power equipments; transmission and distribution system.

RAILWAY EQUIPMENT

British Empire Exhibition. British Empire Exhibition: Railway Material. Engineering, vol. 118, nos. 3061 and 3066, Aug. 29 and Oct. 3, 1924, pp. 279-284, and 475-479 and 488, 58 figs. partly on supp. plates. Aug. 29: Describes exhibits, including freight cars, car trucks, and a heavy 4-8-0 type superheater locomotive built for Buenos Ayres Great Southern Ry. Co., exhibited by W. G. Armstrong, Whitworth & Co. Oct. 3: Details of car built by Metropolitan Co. for King of Egypt for use on Egyptian State Rys.; other exhibits, including Reid-MacLeod geared steam-turbine locomotive.

Depreciation. Depreciation of Railway Equipment, J. E. Muhlfeld. Ry. & Locomotive Eng., vol. 37, no. 2, Feb. 1924, pp. 41-49, 5 figs. Depreciation accounts; physical condition of composite properties such as locomotives and cars.

Germany. Railway Session and Show at Seddin and the Technical High School of Charlottenburg (Rückblick auf die Eisenbahntechnische Tagung mit Ausstellungen in Seddin und in der Technischen Hochschule Charlottenburg), D. Przygode. Glasers Annalen, vol. 95, nos. 11 and 12, Dec. 1, and 15, 1924, pp. 283-300 and 303-323, 69 figs. Details of equipment exhibited, including rolling stock, locomotives, bearings, Knorr brake, Koppel cars, cranes, motors, etc.

Siemens Works at the Railway Show (Die Siemens-Werke auf der Eisenbahntechnischen Ausstellung). Siemens Zeit., vol. 4, no. 11-12, Nov.-Dec. 1924, pp. 402-433, 68 figs. Particulars of equipment exhibited at Seddin show, including mercury-vapor rectifiers, pantographs, storage-battery locomotives and motor cars, line masts, electric express locomotives, signaling equipment, measuring instruments, etc.

Technical Railway Exposition at Seddin (Die Eisenbahntechnische Ausstellung Seddin), W. Kraska. Elektrotechnische Zeit., vol. 45, nos. 48 and 50, Nov. 27, and Dec. 11, 1924, pp. 1301-1307 and 1377-1384, 51 figs. Particulars of exhibits, including mercury-vapor rectifiers, electric welding equipment, temperature and speed- measuring devices, signals, ticket-printing equipment, passenger and freight electric locomotives, etc.

Progress in 1923. Manufacturers Make Noteworthy Progress in 1923. Ry. Rev., vol. 74, no. 1, Jan. 5, 1924, pp. 85-93, 28 figs. Brief general description of outstanding achievements of equipment builders; coaling stations, cranes and ditchers, water valves, tractors and trailers, motor cars, and machine tools.

The Year's Tendencies in Equipment Design. Ry. Age, vol. 76, no. 1, Jan. 5, 1924, pp. 32-33, 2 figs. Three-cylinder locomotives; more powerful motor cars; individuality in inside finish of diners.

Train Ferries. See FERRIES, Train.

RAILWAY MAINTENANCE

Culvert Blocking, Prevention. Treatment to Prevent Blocking of Culverts by Debris. Ry. Rev., vol. 74, no. 13, Mar. 29, 1924, pp. 599-601, 3 figs. Also special treatment to prevent washing and deposits of debris by water in side ditches.

Equipment, Cost Accounting. Cost Accounting in the Mechanical Department, G. W. Armstrong. Ry. Age, vol. 77, no. 9, Aug. 30, 1924, pp. 363-367, 3 figs. Deals with cost account as related to maintenance of equipment. Cost knowledge and proper analysis of data will assist production control and develop economies.

Expense Analysis. Analysis of Equipment Maintenance Expenses, J. L. White. Ry. Age, vol. 76, no. 9, Mar. 1, 1924, pp. 507-510. Review of information available in accounts and explains methods for its use.

Labor-Saving Equipment. Organizing to Secure Economies from Labor Saving Equipment, W. J. Backes. Ry. Eng. & Maintenance, vol. 20, no. 3, Mar. 1924, pp. 93-95, 5 figs. Detailed work programs, supervision and repair facilities are necessary to get results.

Mechanical Equipment. Maintenance Requirements for the Mechanical Equipment of a Railroad, P. L. Battey. West. Soc. Engrs.—Jl., vol. 29, no. 11, Nov. 1924, pp. 405-415, 7 figs. Describes scope of analysis made for Receiver of Denver & Rio Grande West. R. R., so that he could include in his budget for general rehabilitation of railroad, the terminal facilities and repair shops for mechanical department necessary to maintain motive power and car equipment in first-class operating condition.

Methods, Lehigh Valley R. R. Maintenance Methods on the Lehigh Valley R. R., Geo. L. Moore. Ry. Rev., vol. 75, no. 21, Nov. 22, 1924, pp 824-826. Methods and practices used in connection with maintenance work, and reasons why some of them were adopted.

RAILWAY MANAGEMENT

Accounting. Labor-Saving Appliances in Accounting Work. Ry. Rev., vol. 75, no. 1, July 5, 1924, pp. 1-6, 11 figs. Varied uses of adding and calculating machines, billing machines, electric sorting and tabulating machines, loose-leaf devices, car index systems, etc., in railway accounting work, together with their possibilities in helping to effect greater economies in office operation.

Railway Accounting. Ry Age, vol. 77, no. 3, July 19, 1924, pp. 113-121. Abstracts of papers and reports presented at 36th annual meeting of Railway Accounting Officers Assn., held at San Francisco, Cal., dealing with efficient accounting, expense classification, statistics, and general, freight, passenger, and disbursement accounts.

The New Problems of the Accounting Officer, A. J. County. Ry. Age, vol. 77, no. 3, July 19, 1924, pp. 109-112. Reduction in statistical requirements and simplification offer greatest opportunity for study.

Budget System. See INDUSTRIAL MANAGEMENT, Budgeting.

Car-Department Service. The Meaning of Effective Car Department Service, L. K. Sillcox. Car Foremen's Assn.—Proc., vol. 19, no. 3, Dec. 1924, 39 pp. (including discussion), 8 figs. See also Ry. Age, vol. 77, nos. 24 and 25, Dec. 13 and 20, 1924, pp. 1075-1079 and 1121-1124, 7 figs. Discusses elements involved in organization of car department and presents valuable information as to actual work and methods pursued; deals with material and human elements, coördination of which builds organization for successful operation.

Employee Representation. See EMPLOYEES' REPRESENTATION.

Expense Classification. The Proposed Operating Expense Classification. Ry. Age, vol. 76, no. 5, Feb. 2, 1924, pp. 325-328. Tentative revision of classification circulated by Bur. of Accounts of Interstate Commerce Commission.

Forecasting Traffic. Forecasting Future Volume of Railway Traffic, J. B. Blood. Ry. Age, vol. 76, no. 6, Feb. 9, 1924, pp. 369-371, 3 figs. View presented on basis of mathematical study that recent estimates are not large enough.

Railroad Traffic and the Business Cycle, H. B. Vanderblue. Ry. Age, vol. 76, no 20, Apr. 19, 1924, pp. 987-990, 7 figs. Shows how individual carrier is assisted in forecasting tonnage volume; traffic of Southern Ry.

Mechanical Statistics. The Problem of Mechanical Statistics, J. E. Slater. Ry. Age, vol. 76, no. 31, June 14, 1924, pp. 1524-1525. Limitations of classification of operating expenses for purposes of adequate analysis. Cost of work performed.

Purchases and Stores. Purchases and Stores. Ry. Age (Daily Edition), vol. 76, no. 34, June 17, 1924, pp. 1641-1659, 6 figs. See also Ry. Rev., vol. 74, no. 25, June 21, 1924, pp. 1204-1211. Contains following articles: Purchasing Function of the Government, H. C. Smither; Committee recommendations: Stores Department Book of Rules; Method for Material Procurement, E. J. Remensnyder; Committee report on Material Accounting and Office Appliances; report of Committee on General Accounting; Bonus System for Efficient Stockmen, J. E. Mahaney; report on Department Buildings and Facilities; Duties of a Traveling Storekeeper, W. Dixon; and other addresses. Papers and reports presented before Am. Ry. Assn.

Stores Department. Soo Line Has Unique Stores Organization. Ry. Rev., vol. 75, no. 24, Dec. 13, 1924, pp. 943-948, 13 figs. Organization of stores department of Minneapolis, St. Paul & Sault Ste. Marie Ry.; general storekeeper controls supplies of commissary department and news agents, keeps time records and accounts of trainmen and enginemen; describes main store of Soo Line at Minneapolis.

Stores Department Activities on M.-K.-T. Lines. Ry. Rev., vol. 75, no. 14, Oct. 4, 1924, pp. 495-500, 14 figs. Large reclamation plant at Parsons, Kan., and supply train with special oil-car features.

The Evolution of a Stores Department, O. Nelson. Ry. Rev., vol. 74, no. 25, June 21, 1924, pp. 1169-1174, 12 figs. Practices followed in stores department of Union Pacific; office detail; operation of supply trains, material yards, and oil houses.

Supervisory Forces, Training of. Proper Training of Shop Supervisory Forces, L. W. Baldwin. Ry. Rev., vol. 74, no. 26, June 28, 1924, pp. 1256-1258. Discusses training of supervision and developing of men better fitted for mechanical positions. Systematic record of progressive steps should be kept and stipulated examinations at stated intervals should be given. From paper read before Am. Ry. Assn. annual convention.

RAILWAY MOTOR CARS

Bearings for. See BEARINGS, ROLLER, Railway Motor Cars.

Brill. Brill Builds Large Rail Motor Car. Ry. Age, vol. 77, no. 26, Dec. 27, 1924, pp. 1155-1157, 6 figs. Seats 59 passengers and is designed to haul trailer seating 60 additional persons; driven by 6-cylinder engine which develops 190 hp. at 1300 r.p.m.

New Gasoline Railcar Is Developed by J. G. Brill Co. Automotive Industries, vol. 50, no. 16, Apr. 17, 1924, pp. 860-863, 8 figs. Is mounted on two 4-wheel trucks, power being applied to all wheels of forward unit; semi-automatic air-braking system used; vehicle carries baggage as well as passengers; power plant mounted in front.

Development. Automotive Rail-Cars and Their Development. Soc. Automotive Engrs.—Jl., vol. 14, no. 6, June 1924. Contains following papers: The Modern Motor Rail-Car, M. L. McGrew, pp. 649-656, 4 figs.; Motorized Railroad Equipment, E. J. Brennan, pp. 656-659, 2 figs.; Motorization of "Light-Service" Rail-Transportation, E. Wanamaker, pp. 659-662. See also (discussion) vol. 15 no. 3, Sept. 1924, pp. 195-198.

Traction for Light Railways, H. O. Mance. Int. Ry. Congress Assn.—Bul., vol. 6, no. 11, Nov. 1924, pp. 1007-1028. Present situation as regards rail motor traction; traction for narrow-gage light railways, including steam locomotives, petrol-electric locomotives, and petrol tractors; road rail system, for dealing with problem of feeder lines for light traffic over difficult country.

Diesel-Electric. Construction of Railway Oil-Motor Cars (Der Bau der Eisenbahn-Oeltriebwagen), G. Soberski. Verkehrstechnik, no. 34, Aug. 22, 1924, pp. 355-358, 6 figs. Design, construction and equipment of cars, four-stroke, six-cylinder internal-combustion engine using light oil, 950 r.p.m., 75 hp. with coolers at each end of car, compressed air for speed change gear, storage battery for motor starting and car lighting.

Modern Railway Motor Car (Moderne Triebwagen), M. Rintelen. Fördertechnik u. Frachtverkehr, vol. 17, no. 12, June 18, 1924, pp. 161-162. Discusses Diesel-electric cars and new speed gears of A. E. G.

Drewry. A Double-Bogie Petrol Rail Car. Engineer, vol. 137, no. 3554, Feb. 8, 1924, pp. 152-153, 3 figs. Narrow-gage car built by Drewry Car Co. for Barbados Government Ry.

Drewry Motor Rail Vehicles. Motor Transport (Lond.), vol. 38, no. 1008, June 23, 1924, pp. 769-770, 4 figs. Three representative types for inspection and haulage work which were shown at British Empire exhibition.

Engines. See INTERNAL-COMBUSTION ENGINES, Railway Traction Application.

Four-Wheel Drive. Petrol Driven Rail Car with Four-Wheel Drive. Engineering, vol. 118, no. 3076, Dec. 12, 1924, pp. 817-818, 1 fig. Describes truck constructed by Four-Wheel Drive Lorry Co., Slough, Eng., for Norwegian State Rys.

Gasoline. Canadian National High Power Motor Coach. Ry. Age, vol. 76, no. 5, Feb. 2, 1924, pp. 329-330, 4 figs. Seats 55 passengers; driven

by 225-hp. Sterling motor; built by Nat. Steel Car Corpn.

Gasoline Motor Coaches, Missouri Pacific R. R. Ry. Rev., vol. 75, no. 9, Aug. 30, 1924, pp. 307-310, 4 figs. Three new gasoline motor coaches built by J. G. Brill Co., Phila., Pa., for Missouri Pacific Ry. are of model 55 combination type having passenger and baggage compartments and are being used in districts where passenger traffic is light.

Gasoline Railroad Cars, W. L. Bean. New York R. R. Club—Proc., vol. 34, no. 8, Sept. 19, 1924, pp. 7345-7357 and (discussion) 7357-7359, 6 figs Factors of design of cars for branches of trunk lines and for short-line roads.

New Swedish Rail Cars (Neue Autotriebwagen für Schweden), Breuer. Glasers Annalen, vol. 94, no. 10, May 15, 1924, pp. 133-134, 2 figs. One-man cars for operation on Swedish railways, built in Germany, equipped with Buessing gasoline motors and Jaeger roller bearings, and heated by exhaust gases.

Petrol Rail Car Development. Tramway & Ry. Wld., vol. 55, no. 30, June 19, 1924, pp. 290-293, 8 figs. Describes Brill model no. 55 gasoline rail car; overall length, 43 ft. 5 in.; width over posts, 8 ft. 4 in.; height from rail to top of roof, 10 ft. 5 in.; passenger compartment seats 46; engine is four-cylinder, four-cycle, heavy-duty type, developing 41.8 hp. at 800 r.p.m.

Tests With the De Dion Railway Motor Car on the Pau-Mauleon Line (Essais d'Automotrices à essence (Type De Dion) sur le réseau des Chemins de Fer de Pau-Oloron-Mauléon). Industrie des Tramways, vol. 18, no. 213, Sept. 1924, pp. 333-338, 7 figs. Results of operation of "autorail" cars and conditions necessary for their successful exploitation in localities with small traffic.

The Gasoline Railroad-Car for Branch Lines, W. L. Bean. Soc. Automotive Engrs.—Jl., vol. 15, no. 4, Oct. 1924, pp. 306-310, 7 figs. See also Ry. Age, vol. 77, no. 13, Sept. 27, 1924, pp. 535-539, 6 figs. Discusses principal factors of design. Weight-space and weight-power ratios of prime importance. Transmission systems compared.

Two Unit Gasoline Motor Train. Ry. & Locomotive Eng., vol. 37, no. 7, July 1924, pp. 195-196, 2 figs. Maryland and Delaware Coast Ry. equipping entire system with gasoline motor coaches and freight trucks. First to be put in operation between Queenstown, Md., and Lewes, Del., is two-car all-steel train consisting of motor trailer built by Four Wheel Drive Auto Co.

Two-Unit Motor Train for Mississippi Central. Ry. Elec. Engr., vol. 15, no. 2, Feb. 1924, pp. 43-45, 3 figs. Descriptive of two-car gasoline-driven train, built by Four Wheel Drive Auto Co., Clintonville, Wis., which will operate from Hattiesburg to Beaumont, Miss.; motor unit provides space for baggage and seats for 12 passengers, and trailer seats 34 passengers; electric lighting circuits patterned after standard automobile practice.

Gasoline-Electric. Application of Internal-Combustion Engines to Rail Traction (Applicazione dei motori a combustione interna alla trazione su rotaie), M. Mellini and M. Maggiorelli. Rivista Tecnica delle Ferrovie Italiane, vol. 26, nos. 1-2 and 3, July 15-Aug. 15, and Sept. 15, 1924, pp. 1-17 and 68-83, 22 figs. Discusses substitution of gasoline-electric for steam and its problems, and gives details of design and construction of principal types of railway motor cars, including A. E. G., Berliet, Deutsche Werke, Fiat, Renault, Scemia, Crochat, Sulzer-Brown-Boveri, etc.; also Diesel-steam equipment.

Distinctive Features Involved in New Gas-Electric Motor Rail Car. Ry. Rev., vol. 75, no. 10, Sept. 6, 1924, pp. 343-348, 8 figs. See also Ry. Mech. Engr., vol. 98, no. 10, Oct. 1924, pp. 599-601, 5 figs. Describes gas-electric motor rail car built by Electro-Motive Co. in shops of St. Louis Car Co. having six-cylinder, 175-hp. gasoline engine; discusses power plant, car construction, car body, etc.

Railcar Maintains Steam Train Schedule in Four Month Test. Automotive Industries, vol. 51, no. 10, Sept. 4, 1924, pp. 432-434, 6 figs. Describes powerful car built by Nat. Steel Car Co. for Can. Nat. Rys., operating on main line between Hamilton and Toronto, Canada. Designed primarily for carrying passengers, with baggage as a secondary consideration; all-steel construction; length, 55 ft. 9½ in.; width, 8 ft. 9 in.; floor height above rails, 3 ft. 9 5/8 in.; drives through mechanical gearing to one axle of each truck.

The Gas-Electric Motor Car Is Reinstated. Ry. Elec. Engr., vol. 15, no. 9, Sept. 1924, pp. 289-291, 5 figs. Also Ry. Age, vol. 77, no. 9, Aug. 30, 1924, pp. 371-378, 4 figs. No. Pacific & Chicago Great Western will use newly developed type of passenger car; cars are driven by 175-hp. gasoline engine, direct connected to 110-kw. 700-volt generator which supplies power to two railway motors mounted on power truck. Car weighs 35 tons and seats 59 persons.

The Gasoline-Electric Car, A. H. Candee. Elec. Jl., vol. 21, no. 10, Oct. 1924, pp. 481-483, 4 figs. Possibilities and developments.

German. Railway Motor Cars. Eng. Progress, vol. 5, no. 1, Jan. 1924, pp. 18-20, 4 figs. Cars designed by German Gen. Elec. Co. (AEG) in conjunction with Nat. Automobile Co. (NAG), Berlin, having 6-cylinder, 4-cycle engine with output of 50 to 75 hp. at 950 r.p.m.; advantages claimed for cars.

Holland. Railway Motor Car for the Dutch Railways (Ein Eisenbahn-Triebwagen für die holländischen Bahnen), P. Friedmann. Verkehrstechnik, vol. 41, no. 49, Dec. 5, 1924, pp. 633-637, 7 figs. Particulars of motor car built by Hanover A. G., with purely mechanical transmission; 100-hp. Daimler engine of 150 mm. bore and 170 mm. stroke.

Hydraulic-Drive. Gasoline Passenger Car with Hydraulic Drive. Ry. Age, vol. 76, no. 31, June 14, 1924, pp. 1507-1509, 5 figs. Combination passenger and baggage unit car propelled by 150-hp. Ricardo engine through transmission consisting of one hydraulic variable-delivery pump and two hydraulic variable-speed motors; in operation on New York, New Haven & Hartford.

Self-Propelled Passenger Car on N. Y., N. H. & H. Ry. Mech. Engr., vol. 98, no. 9, Sept. 1924, pp. 534-537, 5 figs. Describes combination passenger and baggage unit car, propelled by a 150-hp. Ricardo engine, through a transmission consisting of one Universal hydraulic variable-delivery pump, supplying oil to two Universal hydraulic variable-speed motors, one mounted on each truck frame.

Improvements. Improvements in Motor Car Design, H. Dubath. Elec. Ry. Jl., vol. 64, no. 7, Aug. 16, 1924, pp. 251-253. Trends in design of electric-railway rolling stock considered from standpoints of first cost and maintenance; bodies, running gear, ball and roller bearings, brakes and other parts discussed. Abstract of paper read before Union Internationale de Tramways, de Chemins de fer d'Intêrêt local et de Transports Publics Automobiles.

Inspection. A Motor Railway Inspection Car. Engineer, vol. 137, no. 3560, Mar. 21, 1924, pp. 315-316, 4 figs. Describes new type of motor railway inspection car ordered for use on Rho-

desian Railways, and built at works of Clayton Wagons, Ltd.

Italy. Italians Build Railcars to Meet Motor Bus Competition, F. A. Shepley. Automotive Industries, vol. 50, no. 25, June 19, 1924, pp. 1319-1320, 1 fig. Fitted with two 60-hp. engines, Westinghouse electrical equipment and air brakes; gear sets used provide four forward and reverse speeds of which maximum is 32 m.p.h.

Mack Truck. Mack Builds Railcar Which Will Make Railroad Coaches Convertible. Automotive Industries, vol. 50, no. 18, May 1, 1924, pp. 974-976, 6 figs. Develops electropneumatic remote control system which makes possible train of two or more cars operated by one crew; equal speeds in both directions attained; drive on each axle.

Motorized Passenger Coach. Gasoline Motorized Passenger Coach Minnesota Dakota & Western Ry. Ry. Rev., vol. 74, no. 21, May 24, 1924, pp. 934-935, 3 figs. Gasoline motor power equipment which may be applied to existing passenger coaches, accomplishing their conversion to efficient type of motor car.

Operation. Motor Rail-Cars, J. W. Cain. Soc. Automotive Engrs.—Jl., vol. 15, no. 4, Oct. 1924, pp. 317-319. Ascribes limited success of McKeen gasoline-driven car and one of gasoline-electric type that were introduced in early part of present century and were pioneers among self-propelled cars for railway use, to their excessive weight and to engine and transmission troubles. Present state of industry. Advantages of motorization.

Producer-Gas. Suction-Gas Motor Cars (Saug-gas-Triebwagen), D. Fleck. Verkehrstechnik, no. 27, July 4, 1924, pp. 279-284, 5 figs. Details of tests on line Vorwohle-Emmenthal with suction gas and with benzol drive; consumption of anthracite 1 kg. per 1 km., cost per km. was M.O.14 to M.O.20 for suction gas with benzol addition and benzol.

Rhodesian Railways. Rail Motor-Cars for the Rhodesian Railways. Ry. Gaz., vol. 41, no. 5, Aug. 1, 1924, pp. 146-148, 2 figs. New type rail motor-cars built by Clayton Wagons, Ltd., designed for service in tropical climate at altitudes varying up to 5000 ft. above sea level and maintains speed of 45 m.p.h. on level in calm weather at highest altitude with full load of passengers. Dorman engine has four cylinders, water-cooled, 95 mm. bore by 140 mm. stroke developing 25 b.hp. at 1000 r.p.m.

Specifications. American Gasoline Rail Car Specifications. Motor Transport (N. Y.), vol. 29, no. 12, Jan. 15, 1924, pp. 418-419. Specifications of different makes.

Steam. The "Sentinel-Cammell" Steam Rail Coach in Service. Ry. Gaz., vol. 40, no. 9, Feb. 29, 1924, pp. 277-279, 7 figs. Results of a demonstration carried out in system of Jersey Rys. & Tramways Co. on Feb. 20, 1924. Economies effected since its introduction.

Twin-Motor. Twin Motor Rail Car for the Burlington. Ry. Age, vol. 77, no. 23, Dec. 6, 1924, pp. 1013-1015, 4 figs. Independent power units on trucks permit economical operation under varying conditions.

Types. Motor Coaches for Railways, G. Soberski. Eng. Progress, vol. 5, no. 9, Sept. 1924, pp. 175-182, 23 figs. Development of railway motor cars; modern types—their advantages and disadvantages.

RAILWAY OPERATION

Branch Lines. Unprofitable Branch Railways. S. African Power Engr., vol. 9, no. 79, Nov. 1924, pp. 15, 17, and 19. Review of most recent development in locomotive equipment, with object of reducing working costs over unprofitable railway routes.

Car Switching. Switching Devices (Hilfsmittel zum Verschieben), Wernekke. Fördertechnik u. Frachtverkehr, vol. 17, no. 8, Apr. 30, 1924, pp. 103-105, 6 figs. Various devices for switching railway cars by means of wire ropes; for use in cases where use of switching locomotives would not be economical. Types of electric motors and controllers for devices.

Cinders Disposal. Report on the Handling and Disposing of Cinders. Ry. Eng. & Maintenance, vol. 20, no. 10, Oct. 1924, pp. 402-404. Discusses track layout and equipment for wasting; committee recommends more extensive use of cinders as ballast; equipment for handling direct from pit to point of use; storage of cinders. Committee report of Roadmasters & Maintenance of Way Assn.

Cost Control. Cost Control for the Mechanical Department, G. W. Armstrong. Ry. Mech. Engr., vol. 98, no. 8, Aug. 1924, pp. 459-463, 2 figs. Cost knowledge and production control bring about improvement in railroad operating costs.

Cost Index. A "Cost-of-Living" Index for Steam Railroads, J. C. Hooker. Jl. of Accountancy, vol. 38, no. 1, July 1924, pp. 22-30. Discusses base for railroad cost index, sources and specific character of data and railroad "cost of living" index compared with Department of Labor food index.

Employees-Management Coöperation. Practical Method of Securing Co-operation. Ry. Age, vol. 77, no. 11, Sept. 13, 1924, pp. 453-456. Underlying principles of method in effect on Pennsylvania Railroad System for bringing about co-operation between management and employees, and manner in which it operates.

Unions Essential in Any Co-operation Program, G. Soule. Ry. Age, vol. 77, no. 10, Sept. 6, 1924, pp. 411-412. Fundamentals between coöperation and employees. Shows that coöperation implies mutual education, not merely instruction for employees.

Express-Train Resistance. The Resistance for Express Trains, C. F. D. Marshall. Ry. Engr., vol. 45, no. 531, Apr. 1924, pp. 133-137, 3 figs. Natural wind; effect of direct wind; effect of wind gusts on frontal pressure; limiting speeds.

Forecasting Traffic. Forecasting Future Volume of Railway Traffic, L. E. Peabody. Ry. Age, vol. 76, no. 18, Apr. 5, 1924, pp. 899-900. Consideration of Blood's formula is said to lead to estimates that are too large; original article by J. B. Blood was printed in same journal (Feb. 9, 1923, p. 369).

Freight Handling. See FREIGHT HANDLING.

Freight Rolling Stock Distribution and Control. Increasing the Mobility of Freight Rolling-Stock. Ry. Gaz., vol. 40, no. 11, Mar. 14, 1924, pp. 363-374, 19 figs. Lond. & North East. Ry. now control distribution of whole of their freight rolling stock from a central control office at York, working through 24 district superintendents' offices and 120 sub-control stations. Explains means by which economy in wagon movement is effected and mobility of freight rolling stock increased.

Freight-Train Delays, Cost of. What Is Cost of Freight Delays?. Ry. Age, vol. 76, no. 19, Apr. 12, 1924, pp. 925-926. Committee of signal section, Am. Ry. Assn., analyzes charges and fixes average at $21.07 per hr.

Freight-Train Loading. Maximum Loading of Freight Trains. Ry. & Locomotive Eng., vol. 37, no. 9, Sept. 1924, pp. 278-280. Method of computing adjusted tonnage ratings for maximum freight-train loads.

Fuel Economy. Conservation of Fuel in Rail-

way Operation, W. E. Symons. Ry. & Locomotive Eng., vol. 37, no. 2, Feb. 1924, pp. 41-49, 5 figs. Comparison of statistical items of 30 steam railways; hours of time each day trains are earning revenue; locomotive improvements.

Hot-Box Prevention. Maintenance the Key to Hot Box Prevention, M. S. Roberts. Ry. Mech. Engr., vol. 98, no. 8, Aug. 1924, pp. 474-476, 4 figs. Discusses hot-box prevention, regular inspection of journals, bearings, boxes, wedges, etc.

Live-Stock Transportation. Live Stock Traffic on Argentine Railways. Ry. Gaz., vol. 41, no. 4, July 25, 1924, pp. 115-119, 10 figs. Study of Argentine live stock industry in general and of methods adopted by all great railways in dealing therewith. Discusses live stock traffic by rail, transport conditions, booking traffic and wagon supply, loading animals, despatch formalities and facilities in Buenos Ayres.

Loaded-Car Movement Delays. Some Causes of Delay to Loaded Car Movement, R. A. Munsch. Ry. Rev., vol. 74, no. 15, Apr. 12, 1924, pp. 681-683. Analyzes delays for which shipper is primarily responsible and those for which agent is responsible.

Loading Rules. Report of Committee on Loading Rules. Ry. Age (Daily Edition), vol. 76 no. 35, June 18, 1924, pp. 1684-1686, 2 figs. Rules formulated by committee and presented before Am. Ry. Assn.

Passenger-Train Handling. The Smooth Handling of Passenger Trains, E. R. Boa. Central Ry. Club—Proc., vol. 32, no. 4, Sept. 1924, pp. 1605-1609 and (discussion) 1609-1627. Discusses phases that are contributing factors and outlines manner in which air brake, throttle and reverse gear should be manipulated to insure smooth train handling.

Paulista Ry., Brazil. Electric Operation of Paulista Railway in Brazil, G. Bellows. Ry. Elec. Engr., vol. 15, no. 4, Apr. 1924, pp. 107-109, 6 figs. Electrification of section between Jundiahy and Campinas where wood and imported coal is used for fuel shows large savings. Service requirements, locomotive performance, and costs.

Personnel Work. How to Start Personnel Work on a Railroad, J. C. Clark. Ry. Age, vol. 76, no. 15, Mar. 15, 1924, pp. 745-746. Brief outline of various steps which must be taken to develop more efficient organization.

Point Operation and Control. Point Operation at Marshalling Yards. Ry. Gaz., vol. 40, no. 5, Feb. 1, 1924, pp. 137-143, 11 figs. Description of Aster electrical equipment installed at yards of Northern Railway of France, which insures rapid and economical shunting movements.

Psychology in. Psychology in Railway Operation (Ueber Psychologie und Eisenbahnwesen), K. Marbe. Archiv für Eisenbahnwesen, no. 5, Sept.-Oct. 1924, pp. 729-744. Paper read before psycho-technic committee of German Railways, discussing psychology in relation to train operation; accident prevention, change in work to relieve monotony; etc.

Radio Reception on Trains. See RADIOTELEGRAPHY, Trains.

Signaling. See RAILWAY SIGNALING.

Snow Fighting. How the Illinois Central Fights Snow in a Large Terminal, J. J. Desmond. Ry. Eng. & Maintenance, vol. 20, no. 12, Dec. 1924, pp. 483-486, 4 figs. Preparations which are made in advance to meet winter storms.

Statistics, 1923. Railway Statistics for Nineteen Twenty-three, J. H. Parmelee. Ry. Age, vol. 76, no. 1, Jan. 5, 1924, pp. 46-49, 3 figs. Summary of achievement; new equipment; record freight traffic; operating efficiency; financial results; operating revenues; employees and their wages.

Report Shows Improved Railroad Performance. Ry. Age, vol. 77, no. 7, Aug. 16, 1924, pp. 299-302, 4 figs. National Industrial Conference Board studies increased utilization of labor in train service.

Steep Gradients. Railway Operation on Steep Gradient with Rack Engines as Adhesive Engines (Der Eisenbahnbetrieb auf Steilrampen mit Zahnrad- oder Reibungs-Lokomotiven), M. Nordmann. Organ für die Fortschritte des Eisenbahnwesens, vol. 79, nos. 4 and 5, Apr. 15, and May 15, 1924, pp. 70-74 and 93-103, 2 figs. Discusses development of racks and rack engines, substitution of adhesive engines and their development. Details of tests with both types of locomotives.

Stopping and Starting Trains. Estimated Cost of Stopping and Starting Trains, O. O. Carr. Ry. Rev., vol. 74, no. 18, May 3, 1924, pp. 807-808. Tables giving estimated additional costs to stop and start trains.

Storerooms. Storeroom Improvements at Richmond Save Time and Money, J. Y. Bayliss. Elec. Ry. Jl., vol. 64, no. 21, Nov. 22, 1924, pp. 875-878, 12 figs. Details of stock-book systems adopted by Va. Ry. & Power Co. in one of its large storerooms. Installation involved changes in making and keeping record of stock and complete rearrangement of stock itself. Cost of installation $5400.

Switching. Switching Service for Railway Cars (Verschiebeanlagen für Eisenbahnwagen), R. Hänchen. Maschinenbau, vol. 3, no. 23, Sept. 11, 1924, pp. 852-857, 16 figs. Discusses switching methods and devices, including capstans, winches, endless rope device, and their operation.

Time Tables. Instructions for Determining the Schedule Times for Trains by the Graphic Method (Anweisungen für die Ermittlung der Fahrzeiten der Züge nach dem zeichnerischen Verfahren), M. Dittmann. Organ für die Fortschritte des Eisenbahnwesens), vol. 79, no. 6, June 15, 1924, pp. 117-129, 8 figs. Gives details of five different methods for given line and given locomotive and weight of train.

The Making of Time Tables and Some of Its Difficulties, T. Connell. Elec. Traction, vol. 20, no. 2, Feb. 1924, pp. 64-67, 5 figs. How it is done by Boston Elevated Ry.

Train Control. A Bibliography of Train Control. Ry. Signaling, vol. 17, no. 3, Mar. 1924, pp. 100-101. References to various articles published on developments and tests of train-control devices.

A Continuous Conductive System of Train Control. Ry. Rev., vol. 75, no. 14, Oct. 4, 1924, pp. 501-504, 1 fig. Clifford system of automatic train control gives continuous indication two blocks in advance of danger condition.

An Unusual Idea in Automatic Train Control. Ry. Rev., vol. 74, no. 16, Apr. 19, 1924, pp. 723-731, 14 figs. Describes train-control system of Indiana Equipment Corpn., designed and developed by C. F. Shadle, which is of the ramp or direct-contact type. Essential parts of device consist of wayside ramp, contact shoe having roller contact, neutral control relay, electro-pneumatic valve, automatic air-brake valve, and speed controller.

Automatic Cut-Off Control Tested in Service. Ry. Age, vol. 76, no. 21, Apr. 26, 1924, pp. 1033-1037, 9 figs. Describes control device and tells what its performance on two railroads has demonstrated.

Automatic Train-Control—Its Development and Status. Eng. News-Rec., vol. 92, no. 10, Mar. 6, 1924, pp. 390-394, 4 figs. Types of automatic

apparatus to stop trains or to lower speed being installed by railroads under current order of Interstate Commerce Commission.

Automatic Train Control on Missouri Pacific Ry. Ry. Rev., vol. 75, no. 21, Nov. 22, 1924, pp. 829-834, 8 figs. First installation ever made of automatic train control superimposed on controlled manual block.

Economic Advantages of Automatic Train Control, Jos. Beaumont. Ry. Rev., vol. 75, no. 14, Oct. 4, 1924, pp. 507-508. Information on direct saving which accrued by elimination of train stops on Chicago Rock, Island & Pac. Ry.; analysis of economic value of automatic train control.

G. R. S. Train Control Demonstrated on C. & N. W. Ry. Elec. Engr., vol. 15, no. 1, Jan. 1924, pp. 25-26, 6 figs. Results of actual service test made by Chicago & North West. between West Chicago, Ill., and Forris (Elgin), showing practicability of Gen. Ry. Signal Co.'s system of intermittent inductive tapered train control.

Hearing on Automatic Train Control at Washington. Ry. Rev., vol. 74, nos. 20 and 21, May 17 and 24, 1924, pp. 888-889 and 893-896, and 927-929 and 933-934. See also Ry. Age, vol. 76, nos. 23 and 25, May 10 and 24, 1924, pp. 1145-1148 and 1255-1258. Testimony of railroads, signal engineers, and representatives of manufacturers before Interstate Commerce Commission.

Making Brake Tests for Train Control, C. B. Miles. Ry. Signaling, vol. 17, no. 3, Mar. 1924, pp. 98-100, 4 figs. Relation of air brake to signal engineering from standpoint of air-brake engineer. Methods of making tests.

Miller Train Control Stop and Speed Equipment. Ry. Elec. Engr., vol. 15, no. 1, Jan. 1924, pp. 17-19, 3 figs. Describes equipment as in service on Chicago & Eastern Illinois; pneumatic manual release positive stop valve to be mounted outside locomotive cab, and reversing mechanism to give proper protection for either forward or backward movements among recent developments.

New Design of Brookins Train Control. Ry. Signaling, vol. 17, no. 6, June 1924, pp. 247-249, 7 figs. Features normally raised descending-type and flexible brush contact.

Pennsylvania's Experience with Automatic Stops, A. H. Rudd. Ry. Age, vol. 77, no. 15, Oct. 11, 1924, pp. 645-646. See also Ry. Signaling, vol. 17, no. 10, Oct. 1924, pp. 391-393; and Ry. Rev., vol. 75, no. 18, Nov. 1, 1924, pp. 654-657. Value of cab signal; effect on track capacity; conclusions. (Abstract.) Paper read before Am. Ry. Assn.

Progress on Automatic Train Control. Ry. Rev., vol. 74, no. 1, Jan. 5, 1924, pp. 75-76. Résumé of what has been accomplished to date, and prospect for 1924.

Service Tests of Automatic Cut-Off Control. Ry. Mech. Engr., vol. 98, no. 5, May 1924, pp. 267-272, 12 figs. Describes control device; what its performance on two railroads has demonstrated.

Study of Train Control Brought Up-to-Date. Ry. Age, vol. 77, no. 16, Oct. 18, 1924, pp. 687-693. Abstracts of following papers presented before Am. Ry. Assn.: Development of Ramp Type on the C. & O., B. T. Anderson; Miller Train Control on the C. & E. I., H. H. Orr; Regan System on 165 Miles, L. Wyant; Development and Tests on U. P. Lines, A. H. McKeen; reference to other train-control papers.

The Union Continuous Train Control Systems. Ry. Age, vol. 77, no. 10, Sept. 6, 1924, pp. 413-416, 2 figs. Automatic train control developed by Union Switch & Signal Co. as being installed on Atchison, Topeka & Santa Fe between Chicago and Shopton, Ia., provides engineman with a continuously-visible indicator on his locomotive from which he can at all times determine at what speed it is permissible to run. Development and operation of two-speed and three-speed apparatus.

Train Control Company Improves Air Apparatus. Ry. Elec. Engr., vol. 15, no. 3, Mar. 1924, pp. 81-83, 3 figs. Description of functions of the different pieces of pneumatic apparatus in train control system of Indiana Equipment Corpn., of Indianapolis, Ind.; develops valves to give graduated reduction of brake-pipe pressure.

Train Control Development on the C. & O., B. T. Anderson. Ry. Signaling, vol. 17, no. 10, Oct. 1924, pp. 394-397. Features of first installation; new features of system; failure of automatic-train-control devices; train-control organization; effect on track capacity; interchangeability.

Train Control in Service on the Rock Island. Ry. Elec. Engr., vol. 15, no. 1, Jan. 1924, pp. 5-10, 5 figs. See also Ry. Signaling, vol. 17, no. 1, Jan. 1924, pp. 9-13, 5 figs. Describes Regan Safety Devices Co. automatic train-control system, intermittent ramp contact type, with speed control, installed on double track main line of Chicago Rock Island & Pacific, between Blue Island (Chicago), Ill., and Rock Island, in compliance with Interstate Commerce Commission's order.

Train Control Test Engine on the U. P. Ry. Signaling, vol. 17, no. 3, Mar. 1924, pp. 102-103, 5 figs. Describes equipment of locomotive fitted by Union Pacific with three types of control equipment to determine device best suited to its conditions; installation made so that locomotive could be operated over adjacent territory on which the three types of road apparatus were installed.

Train Operation with Automatic Control, C. & O. Ry. Ry. Rev., vol. 74, no. 10, Mar. 8, 1924, pp. 449-461, 25 figs. Describes automatic train control, and signal system, both operated by alternating current; signals are three-indication color light automatic block signals of absolute-permissive type.

Wrecks Preventable by Train Control, G. E. Ellis. Ry. Signaling, vol. 17, no. 12, Dec. 1924, pp. 478-481. Analysis of statistics to show that only few accidents can be eliminated automatically.

See also RAILWAY SIGNALING, Controlled Manual Block.

Train Despatching. Modern Methods in Train Dispatching, J. C. Latham. Elec. Communication, vol. 3, no. 1, July 1924, pp. 57-68, 13 figs. Describes Western Electric selector, consisting of a simple electromagnetically operated stepping mechanism which permits calling of any station without affecting others; portable telephones supplied to crews of passenger and freight trains; describes selector train-despatching system on railroads in different parts of world.

Movement of Trains in a Railway System (La circulation des trains sur un grand réseau ferré), M. Bouvet. Technique Moderne, vol. 16, nos. 18 and 19, Sept. 15 and Oct. 1, 1924, pp. 597-603 and 633-644, 46 figs. Describes modern devices and arrangements for assuring regular running and safety of trains, particularly block systems.

Recent Developments in Telephone Train Dispatching Circuits, Wm. H. Capen. Ry. Signaling, vol. 17, no. 6, June 1924, pp. 253-256, 15 figs. Line-transmission equipment, train-despatching circuits and location of apparatus. (Abstract.) Paper presented before Telegraph and Telephone Section, Am. Ry. Assn.

The "Dispatching System" by Telephone on the Belgian State Railways, H. De Caesstecker. Int. Ry. Congress Assn.—Bul., vol. 6, no. 5, May 1924, pp. 331-395, 20 figs. New method of controlling running and composition of trains. Lines on which "dispatching system" is already in operation or on which its adoption has been decided upon or is under consideration; administrative organization of system; choice of staff; financial results.

Train Loads, Maximum. Maximum Train Loads. Ry. Rev., vol. 75, no. 6, Aug. 9, 1924, pp. 205-209. Report of committee for purpose of establishing quick and practicable method of adjusting tonnage ratings for various locomotives under different conditions of grade and alignment.

Work Trains. Report on Operation of Work Trains. Ry. Rev., vol. 75, no. 16, Oct. 18, 1924, pp. 575-577. When to eliminate and how to get greatest efficiency under varying conditions. Report of committee presented before Roadmasters' & Maintenance of Way Assn.

RAILWAY REPAIR SHOPS

Birmingham, Ala. Southern's New Shops Have Efficient Layout. Ry. Age, vol. 77, no. 26, Dec. 27, 1924, pp. 1159-1164, 13 figs. Modern units erected at Birmingham, Ala., for handling locomotive and car repairs; electrically driven equipment used practically throughout.

Box Cars, Rebuilding. Time Record in Rebuilding Box Cars, A. C. L. R. R., O. A. Wallace. Ry. Rev., vol. 75, no. 15, Oct. 11, 1924, pp. 533-537, 13 figs. Voluntary contest originated in four system shops demonstrates advantages obtained in progressive repair system.

Car-Repair Billing. A. R. A. Car Repair Billing, B. F. Jamison. Ry. Mech. Engr., vol. 98, no. 10, Oct. 1924, pp 610-613. Points out possibilities of individual roads saving, and conversely losing, probably millions of dollars depending upon whether or not they handle A. R. A. billing in a systematic manner in accordance with rules, employing constant checks of all kinds to maintain accuracy of work. Requirements of the various persons who have responsibility of executing system of car-repair billing. Handling of accident reports. Abstract of paper read before Chief Interchange Car Inspectors' and Car Foremen's Assn. of Am.

Car Repairs. A Constructive Study of Railroad Car Repairs. Ry. Rev., vol. 74, no. 23, June 7, 1924, pp. 989-999, 14 figs. Results of extended investigation of actual facilities with view to suggestions for introduction of economies and elimination of losses.

Car-Scheduling System. Systematic Car Repair Work at Kent, Ohio, G. W. Armstrong. Ry. Rev., vol. 74, no. 3, Jan. 19, 1924, pp. 133-136, 8 figs. Description of system of scheduling car repair work in Kent, Ohio, car shops of Erie Ry.

Car Work, Planning. See INDUSTRIAL MANAGEMENT, Planning.

Chicago, Burlington & Quincy R. R. Burlington's New Shops Greatly Increase Facilities. Ry. Rev., vol. 74, no. 1, Jan. 5, 1924, pp. 64-73, 17 figs. See also Ry. Jl., vol. 30, no. 1, Jan. 1924, pp. 22-26, 8 figs. Chicago, Burlington & Quincy R. R. has constructed a $3,000,000 repair plant at Utah Junction, near Denver, Col., to care for all heavy repairs on its western lines as well as for those of Colorado & Southern. Describes principal buildings erected as a preliminary unit, viz., machine and erecting shop, boiler shop, blacksmith shop, power plant, storehouse, and oil house, all of which are of most modern construction.

Cost-Reducing Equipment. Cutting Costs in the Soo Line Repair Shops, H. Campbell. Am. Mach., vol. 60, no. 2, Jan. 10, 1924, pp. 37-40, 14 figs. Special tools for saving time; quantity production in tool room; slotting attachment; punching holes in staybolts.

Delivery System. Transportation of Material in the Roanoke Shops, Jas. M. Thomas. Ry. Rev., vol. 74, no. 24, June 14, 1924, pp. 1126-1130, 9 figs. Describes delivery system of shops of Norfolk & West. Ry.; how materials are delivered to and from shops and yards; organization and system; schedules maintained and equipment used.

Design. Report on Design of Shops and Engine Terminals. Ry. Age, vol. 76, no. 30, June 13, 1924, pp. 1464-1468. Seven specific recommendations for freight-car and repair shops. Am. Ry. Assn. committee report and discussion.

Driving-Rod Repairs. Modern Practice in Driving Rod Repairs. Ry. Rev., vol. 75, no. 7, Aug. 16, 1924, pp. 236-244, 23 figs. Describes methods employed in various shops for manufacturing new rods, using some of the more modern machines, in connection with other practices following in repairing driving rods; installations of modern shop equipment tend to simplify maintenance operations.

Drypipes. The Inside and Outside Drypipe. Ry. & Locomotive Eng., vol. 37, no. 9, Sept. 1924, pp. 261-264, 6 figs. Describes method of repairing drypipe leakage.

Freight-Car. New Car Repair Facilities for the D. & R. G. W. Ry. Mech. Engr., vol. 98, no. 9, Sept. 1924, pp. 540-546, 21 figs. Describes modern shops of Denver & Rio Grande Western for repairing wood and steel freight cars. Organized with station-to-station method and balanced gangs. Methods of repairing.

Grand Rapids, Mich. How the Grand Rapids Shops were Modernized. Ry. Age, vol. 76, no. 31, June 14, 1924, pp. 1497-1502, 9 figs. See also Ry. Rev., vol. 74, no. 24, June 14, 1924, pp. 1108-1119, 16 figs. Details of reconstruction of general repair shops of Pere Marquette plant; method of handling locomotive repairs; improved arrangement of car-repair shops; power plant.

Locomotive. Albuquerque Shops of the Santa Fé, H. Campbell. Am. Mach., vol. 60, nos. 22 and 23, May 29 and June 5, 1924, pp. 799-801 and 847-850, 21 figs. Buildings and equipment of new shops of A. T. & S. F. R. R.; machinery grouped according to sequence-of-work plan; details of operation; scientific tool grinding by expert; equipment for tire and axle jobs; grinding; brazing equipment.

Classification of Locomotive Repair Shops, Geo. Armstrong. Ry. Mech. Engr., vol. 98, no. 1, Jan. 1924, pp. 41-46, 3 figs. Analysis of shop operations with object of reducing expenses and facilitating repairs.

Erie Completes Modern Addition to Hornell Shop. Ry. Age, vol. 76, no. 2, Jan. 12, 1924, pp. 181-185, 10 figs. Gap crane of 250 tons capacity comprises interesting feature of development.

Locomotive Repairs in New Burlington-Denver Shops, H. Campbell. Am. Mach., vol. 61, nos. 12 and 14, Sept. 18 and Oct. 2, 1924, pp. 447-450 and 531-533, 19 figs. New shops of C. B. & Q R. R. near Utah Junction, Denver, Col., now in operation. Time-saving and cost-lowering tools and fixtures. Details as to special tools and methods.

Locomotive Shops Reconstructed on D. & R. G. W. Ry. Mech. Engr., vol. 98, no. 8, Aug. 1924, pp. 491-496, 9 figs. Program includes additions to general repair plants at Denver and Salt Lake City.

Welding Standardization in Locomotive Shops,

J. S. Heaton. Ry. Mech. Engr., vol. 98, nos. 3 and 4, Mar. and Apr. 1924, pp. 176-178 and 231-234, 5 figs. Review of the various methods used on boilers, fireboxes, running gear, cylinders and reclamation work; proper care of equipment.

Locomotive-Boiler. See LOCOMOTIVE BOILERS, Repair Shop.

London Underground Railways. The Acton Works of the Underground Railways. Engineer, vol. 137, no. 3555, Feb. 15, 1924, pp. 172-174, 8 figs., partly on p. 176. See also Ry. Gaz., vol. 40, no. 7, Feb. 15, 1924, pp. 195-202, 18 figs.; and Engineering, vol. 117, nos. 3033 and 3034, Feb. 15 and 22, 1924, pp. 195-202, and 229-234 and 240, 53 figs., partly on p. 208 and supp. plate. Details of central repair shop which will eventually serve for overhauling of rolling stock belonging to Metro. District, London Elec. & City and South and Central London railways.

Machine Tools and Methods. Southern Pacific Repairs, H. Campbell. Am. Mach., vol. 60, no. 24, June 12, 1924, pp. 869-872, 14 figs. Saving time and work by use of air cylinders; ball-bearing roller tools; friction chuck for taps and reamers; turning lift shafts; other tools employed in repair shop at Houston, Tex.

Methods and Equipment. C. B. & Q. Shops at West Burlington, H. Campbell. Am. Mach., vol. 61, nos. 24 and 26, Dec. 11 and 25, 1924, pp. 905-909 and 989-992, and vol. 62, no. 1, Jan. 1, 1925, pp. 3-5, 33 figs. Time-saving methods and equipment in well-organized railway shops; group system of layout used; flue-shop layout and methods.

Organization. B. R. & P. Has Well Organized Production Shop (Du Bois, Pa.). Ry. Mech. Engr., vol. 98, no. 5, May 1924, pp. 295-299, 6 figs. Limited program of repairs facilitates efficient operation; routing of locomotives and parts; department organization and machine-tool operation; shop organization.

Steel Cars. Pennsylvania Builds Modern Steel Car Shops. Ry. Age, vol. 76, no. 22, May 3, 1924, pp. 1085-1088, 9 figs. Duplicate designs erected at Pitcairn and Enola to handle heavy repairs on Eastern and Central regions; capacity of each shop is 33 cars a day; each car-repair unit consists of rivet-cutting shed housing 8 cars at a time, repair shop with 36 tear-down and 18 set-up positions, combined storeroom, office and welfare building.

Street-Car. Repair Shops at Bathurst St., Toronto. Can. Engr., vol. 46, no. 1, Jan. 1, 1924, pp. 101-104, 5 figs. Description of new shops being built at Hillcrest by Toronto Transportation Commission; plant includes repair, assembly and subsidiary shops, large stores building, boiler house, office building, etc.

Shop and Storage for Eighth Avenue Road. Elec. Ry. Jl., vol. 63, no. 22, May 31, 1924, pp. 849-852, 7 figs. New York City line rebuilds old foundry for repair and inspection shops, at 155th Street and Eighth Ave.; storage yard for cars is without special trackwork on account of expensive conduit construction; transfer tables used as substitute; new type of slot track construction.

RAILWAY SHOPS

Blacksmith Shop. A Visit to a Well Organized Railroad Blacksmith Shop. Ry. Rev., vol. 75, nos. 8 and 10, Aug. 23 and Sept. 6, 1924, pp. 271-277 and 355-361, 28 figs. Study of equipment and activities in blacksmith shop of So. Louisville shops of Louisville & Nashville Ry.; equipment grouping and characteristic planning methods introduced.

Car-Building. Car Building Program in a Railroad Shop. Ry. Rev., vol. 74, no. 25, June 21, 1924, pp. 1177-1185, 19 figs. Describes production activities introduced in new Wyoming car shops of Pere Marquette Ry. at Grand Rapids, Mich., where 300 refrigerator cars are being built after production schedule at rate of 2½ cars per day.

Delivery of Material. Store Delivery of Material to Users at Shops, J. E. Peery. Ry. Rev., vol. 75, no. 5, Aug. 2, 1924, pp. 155-159, 5 figs. Results obtained on Southern Pacific system indicate possibilities of substantial savings through this service.

Design. Design of Shops and Locomotive Terminals Committee's Report. Can. Ry. & Mar. Wld., no. 317, July 1924, pp. 326-327. Report of Am. Ry. Assn. committee; recommended practice.

Some Questions in Modern Shop Design, E. Wanamaker. Ry. Mech. Engr., vol. 98, no. 8, Aug. 1924, pp. 486-488. Flexibility of arrangement with view to probable future expansion is important consideration.

Equipment Standardization. Standardized Shop Work at Topeka, F. H. Colvin. Am. Mach., vol. 61, no. 2, July 10, 1924, pp. 63-64, 1 fig. Outline of how equipment is standardized and manufactured at Topeka shops of Santa Fe, and economies effected by standardization.

Inspection Shops. Modern Inspection Facilities for the Interborough System. Elec. Ry. Jl., vol. 64, no. 9, Aug. 30, 1924, pp. 305-308, 6 figs. Describes two of six storage yards and inspection buildings being built by City of New York to provide for 2266 cars of Interborough Rapid Transit system.

Labor-Saving Devices. Devices Used in a Southern Pacific Shop, H. Campbell. Am. Mach., vol. 61, no. 11, Sept. 11, 1924, pp. 415-418, 13 figs. Details of labor-saving devices at El Paso shops of Southern Pacific Ry.

Lighting. Illumination of Railroad Shops and Roundhouses. Ry. Rev., vol. 75, no. 23, Dec. 6, 1924, pp. 915-919, 7 figs. Recommendations and standard practice to meet requirements of safety and efficiency. (Abstract.) Committee report before Assn. Ry. Elec. Engrs.

Locomotive. Locomotive Boiler Work in a Modern British Shop. Eng. Production, vol. 7, no. 140, May 1924, pp. 142-143, 5 figs. Notes on equipment and methods employed at Elswick Works of W. G. Armstrong, Whitworth & Co., Ltd., at Newcastle-on-Tyne.

Reinforced-Concrete Locomotive Works at Jungenthal (Vierschiffige Eisenbetonhalle der Lokomotivfabrik Arn. Jung in Jungenthal bei Siegen), H. Butzer. Deutsche Bauzeitung, vol. 58, no. 76, Sept. 20, 1924, pp. 153-158 (Konstruktion u. Bauausführung), 9 figs. Design and construction of a four-section locomotive works of 7600 sq. m. ground area; traveling crane and other equipment.

Machine Tools, Application of Modern. How Modern Machine Tools Cut Costs. Elec. Ry. Jl., vol. 63, no. 12, Mar. 22, 1924, pp. 444-454, 29 figs. Practices of some shops in application of modern machine tools and methods to electric railway work. How multiple cutting lathes reduce cost of axle machining; improvements in wheel lathes and boring mills; specal machines used in bearing work; etc.

Machine Tools for. See MACHINE TOOLS, Railway-Shop.

Materials Handling in. See MATERIALS HANDLING, Railway Shops.

Power Plant. See STEAM POWER PLANTS, Railway Shops.

Scrap Reclamation. The Disposition of Dis-

carded Material, H. C. Stevens. Ry. Rev., vol 75, no. 3, July 19, 1924, pp. 87-91, 17 figs. Discusses possibilities in reclamation of various items of scrap, by installation of modern labor-saving devices, together with possible savings, if importance of conservation and reclamation is recognized and conceded by placing work under supervision of aggressive, studious, mechanical man with proper material knowledge. Gives some methods employed by Wabash Ry.

The Rolling Mill in the Beech Grove Shops of the Big Four. Ry. Rev., vol. 74, no. 11, Mar. 15, 1924, pp. 561-563, 3 figs. Account of practice of Cleveland Cincinnati Chicago & St. Louis Ry. in rolling round stock from reclaimed scrap material, at its shops at Beech Grove, Ind. Describes equipment, and force employed in its operation, and gives data as to quality of material produced.

Stores Methods in. Store Methods on the Norfolk & Western, J. W. Wade. Ry. Age, vol. 77, no. 14, Oct. 4, 1924, pp. 605-608, 8 figs. Particulars of new stores-department methods which have brought about a large reduction in material investment.

Tire-Heating Plant. Electric Tyre Heating Plant at the Acton Works of the Metropolitan District Railway Company. Tramway & Ry. World, vol. 55, no. 3, Jan. 17, 1924, pp. 17-19, 6 figs. Comprises two Oerlikon tire heaters, each having rating of 60 kva.; heaters consist of a transformer with a single primary winding. Describes installation and its operation.

Training of Forces. The Training of Shop Supervisory Forces, L. W. Baldwin. Ry. Age (Daily Edition), vol. 76, no. 34, June 17, 1924, pp. 1627-1630. Selection of apprentices; supervision and encouragement of mechanic; selecting men for promotion; duties of foreman; study of new tools and appliances.

Welding in. See OXY-ACETYLENE WELDING, Railway Shops.

Wheel and Axle. An Interesting Wheel and Axle Shop. Ry. Rev., vol. 75, no. 25. Dec. 20. 1924, pp. 977-987, 21 figs. Equipment and methods used for handling wheels and axles in shops of Newport News Shipbldg. & Dry Dock Co., Newport News, Va.; introduction of mechanical materials-handling devices and refinement in present method of machine operation are result of comprehensive study.

RAILWAY SIGNALING

Automatic Block. The Application of Alternating Current Supply With Battery Reserve to Signal Systems, H. G. Morgan. Am. Ry. Assn., Signal Section—Proc., Mar. 1924, pp. 698-705. See also Ry. Signaling, vol. 17, no. 4, Apr. 1924, pp. 158-160, 1 fig. Discusses use of commercial power for railway signaling with emergency reserve battery; application of floating system on terminals; transmission for systems requiring more power; systems using power for all functions; signals lighted electrically.

The Automatic Block System (Le "block system" automatique), A. Bourgain. Nature, nos. 2638 and 2640, Oct. 25 and Nov. 8, 1924, pp. 262-267 and 293-298, 19 figs. Describes system in force in France; semaphores and colored lights, rail splices, relays for d.c. operation, a.c. automatic-block-system operation, etc.

Automatic, for Grade Crossing. Automatic Signals for a Railroad Grade Crossing. Ry. Age, vol. 76, no. 15, Mar. 15, 1924, pp. 735-738, 3 figs., and Ry. Signaling, vol. 17, no. 4, Apr. 1924, pp. 165-168, 3 figs. Satisfactory for thin traffic; home and distant signals arranged on "normal danger" plan.

Block. I. C. C. Issues Annual Signal Statistics. Ry. Signaling, vol. 17, no. 11, Nov. 1924, pp. 443-447, 3 figs. Yearly report shows increase of 1471 miles of automatic block during 1923.

Report on A. C. Block Signaling. Ry. Signaling, vol. 17, no. 3, Mar. 1924, pp. 126-128. Report of Am. Ry. Assn. committee on necessary modification of a.c. track circuits in detail or in principle to insure reliable protection of motor buses and motor cars, and availability of rectifiers for signal systems.

Brake-Distance Calculation. Calculating Brake Distance by Chart, C. A. Melhuish. Ry. Signaling, vol. 17, no. 5, May 1924, pp. 204-205, 2 figs. Chart for establishing overlap distances devised according to formulas.

Colored-Light Signals. Canadian National Color-Light Signals, T. A. Allen. Ry. Signaling, vol. 17, no. 7, July 1924, pp. 268-270, 6 figs. Expanded steel trusses in place of bridges save money; main line switches electrically lighted.

Color Light Signals on the I. C., H. G. Morgan. Ry. Signaling, vol. 17, no. 12, Dec. 1924, pp. 469-471, 7 figs. A. c. floating battery and primary battery used on different sections of 109-mi. installation in Kentucky and Tennessee.

New Signals on Burlington Expedite Traffic. Ry. Age, vol. 76, no. 25, May 24, 1924, pp. 1260-1262, 3 figs. Delays reduced from 15 min. to hour by replacing positive block with automatics; color-light automatic signal installation in service between Guernsey, Wyo., and Wendover.

See also Light Signals.

Construction, 1923. Signal Construction Shows Marked Increase, K. E. Kellenberger. Ry. Age, vol. 76, no. 1, Jan. 5, 1924, pp. 59-68. Remote-control switch installations grow in favor; statistics on automatic block signals and interlocking plants installed in 1923.

Controlled Manual Block. Controlled Manual Block with Train Control. Ry. Age, vol. 77, no. 19, Nov. 8, 1924, pp. 843-847, 9 figs. See also Ry. Signaling, vol. 17, no. 11, Nov. 1924, pp. 423-428, 12 figs. Missouri Pacific eliminates train orders by directing train movements with signals.

Direct-Current. D. C. Signal Construction on Frisco. Ry. Signaling, vol. 17, no. 11, Nov. 1924, pp. 421-422, 8 figs. Rapid progress and minimum train delay accomplished by systematized distribution of materials.

Report of Committee on D. C. Signaling. Ry. Signaling, vol. 17, no. 3, Mar. 1924, pp. 132-133. Report of Am. Ry. Assn. committee. Instructions for testing resistance of switch circuit controller, shunting circuits and contacts; maximum resistance for switch circuit controllers, shunting circuits and contacts; specification for bonding track circuits.

Double-Wire. The Double-Wire Working of Points and Signals. Ry. Engr., vol. 45, no. 535, Aug. 1924, pp. 283-285, 6 figs. Shows how first cost of signaling and of its subsequent maintenance may be reduced; points and signals are easier to move; signals are compensated when "on" and when "off," and they are definitely restored instead of going "on" by gravity; insures that signals do not stick "off."

Fixed Signals. Fixed Signals, W. H. Elliott. Int. Ry. Congress Assn.—Bul., vol. 6, no. 11, Nov. 1924, pp. 907-946, 27 figs. Principles of signaling for lines with dense traffic and for large stations; forms of day and night signals; signal lights; automatic block signals; etc.

Flagging. Why Continue Flagging in Automatic Territory?, J. L. White. Ry. Age, vol. 77, no. 4, July 26, 1924, pp. 149-151. Shows that in automatic-signal territory continued use of flagging rule creates a divided responsibility that causes

collisions; suggests that placing of responsibility squarely on engineman will to a large extent diminish rear-end collisions.

Gaging. Unit System Used for Gaging Signal Maintenance on Northern Pacific, C. A. Christofferson. Ry. Signaling, vol. 17, no. 12, Dec. 1924, pp. 482-483, 1 fig. Application of system to Fargo and Dakota divisions.

Hall System. Transmission by Wire for Long Distances or Under Difficulties and Use of Electric Signals (Note sur les transmissions par fils à longue distance ou difficiles et l'emploi de signaux à moteur). Revue Universelle des Transports, vol. 1, no. 11, Aug. 1, 1924, pp. 171-172, 2 figs. Details of Hall system of working railway signals by means of an electric storage-battery motor.

Increasing Track Capacity by. How Signals Increase Track Capacity. Ry. Signaling, vol. 17, no. 5, May 1924, pp. 198-200. Contest papers, sponsored by this journal, as follows: Increasing Track Capacity by Signaling, Geo. S. Pfasterer; Automatics Help on the I. C., C. W. Shaw; Signaling Delays Double Track on Branch of Pennsylvania, L. L. Banks; Signaling Postponed Heavier Expenditures on N. & W., R. H. Smith; Cash Saving Accomplished by Signals on the B. & O., J. C. Hoffman.

Interlocking. Automatic Interlockings on the G. N. Ry. Signaling, vol. 17, no. 12, Dec. 1924, pp. 475-477, 8 figs. Track-controlled plants without derails, installed by Great Northern, show saving that warrants extensive application of principle.

Low-Voltage Interlocking on C. & N. W., R. M. Phinney. Ry. Signaling, vol. 17, no. 11, Nov. 1924, pp. 429-430, 5 figs. Operator handles junction switch and signals by table levers; simplified locking circuits used.

Mechanical Interlocking. Ry. Engr., vol. 45, no. 536, Sept. 1924, pp. 309-310, 4 figs. Gives diagrams and locking lists of Baker Street and Wembley Park stations on Metropolitan Ry.

New Interlocking Construction Ideas, J. E. Jacobs. Ry. Signaling, vol. 17, no. 7, July 1924, pp. 271-274, 13 figs. Chicago & West. Indiana installs 120-lever plant using parkway cable, unique outlets, and novel charging apparatus.

New Interlocking Plant at Busy Terminal. Ry. Rev., vol. 75, no. 22, Nov. 29, 1924, pp. 861-866, 10 figs. Electro-pneumatic interlocking plant with a.c. control and unusual train-starting system.

New Low-Voltage Interlocking on the Delaware & Hudson, A. H. Rice. Ry. Signaling, vol. 17, no. 10, Oct. 1924, pp. 375-377, 6 figs. Points out that remote control of switches and signals, in connection with new coaling plant, permits high-speed movements.

New Plant on the Pennsylvania, F. A. Beck. Ry. Signaling, vol. 17, no. 5, May 1924, pp. 191-194, 8 figs. Installation of low-pressure electropneumatic interlocking at Aspinwall, Pa., replaces three old mechanical plants at saving of $36,690 per yr.

New Reading Interlocking at Camden, A. H. Yocum. Ry. Signaling, vol. 17, no. 9, Sept. 1924, pp. 338-341, 10 figs. Electropneumatic plant with alternating current control includes unique train starting system; describes tower and machine, alternating-current track circuits, air-line and conduit system, instrument and relay cases, etc.

N. P. Interlocking at Minneapolis, C. A. Christofferson. Ry. Signaling, vol. 17, no. 8, Aug. 1924, pp. 301-302, 7 figs. Floating charge reduces required battery capacity; locking and electric lighting circuits simplfied.

Light Signals. D. C. and A. C. Power for Light Signals, L. S. Dunham. Ry. Signaling, vol. 17, no. 3, Mar. 1924, pp. 113-115. Reliable, economical operation to be derived by different combinations of primary battery and a.c. supply.

115 Miles of Light Signals on Santa Fe, E. Winans. Ry. Signaling, vol. 17, no. 4, Apr. 1924, pp. 155-157, 8 figs. See also Ry. Age, vol. 76, no. 17, Mar. 29, 1924, pp. 843-844, 2 figs. Electrically lighted switch lamps and pumping-station motor fed from transmission line.

See also Colored-Light Signals.

The Baltimore & Ohio Railroad Company Color Position Light Signals, F. P. Patenall. Int. Ry. Congress Assn.—Bul., vol. 6, no. 12, Dec. 1924, pp. 1156-1160, 1 fig. Explains present system, combination of arms and colored lights, and describes proposed system, color position light signals for both day and night use.

Lock-and-Block System. Electrical Signaling Equipment on Railways, V. Mitchell. Instn. Elec. Engrs.—Jl., vol. 62, no. 335, Nov. 1924, pp. 954-956, 4 figs. Describes evolution of lock-and-block system of signaling and uses of track circuit as now employed on Midland section of Lond., Midland & Scottish Ry.

The "Syx" Improved Electric Lock-and-Block System. Ry. Gaz., vol. 40, no. 7, Feb. 15, 1924, pp. 203-204, 2 figs. Style L, type B apparatus.

Neon, Lamps for. Neon—A New Gas for Electrical Use, C. S. Treacy. Ry. Signaling, vol. 17, no. 7, July 1924, pp. 279-280, 1 fig. Development of new gas and its application to signal lights and lightning arresters.

New York, New Haven & Hartford. Signal Development in Connection with Single Phase Propulsion, W. F. Follett. Ry. Signaling, vol. 17, no. 8, Aug. 1924, pp. 315-319, 4 figs. Discusses alternating-current signaling to meet special characteristics caused by electric operation.

Patents. Railway Signals and Communicating Apparatus. Abridgments of Specifications (Lond.), Class 105, Period 1916-20, 1924, 111 pp. Patents for inventions.

Point Operation, Automatic. Automatic Operation of Railway Points. Ry. Engr., vol. 44, no. 527, Dec. 1923, pp. 473-474, 1 fig. Describes automatic signaling arrangement on Mersey Ry., England, first installation in world where trains make their own point movements; this permits two signal boxes to be closed.

Point Operation, Long-Distance. A New Method for the Long-Distance Operation of Points. Ry. Engr., vol. 45, no. 538, Nov. 1924, pp. 386-388, 4 figs. See also Ry. Gaz., vol. 41, 15, Oct. 10, 1924, pp. 476-478, 4 figs. At Charleville, on Great Southern & Western of Ireland, some facing points are being operated at over a mile from their lever; power is obtained through hand-operated generator, and this is first instance of such means being employed for point and signal operation.

Section Blocks. Separate Service for Section Block Areas (Die getrennte Bedienung der Streckenblockfelder einer Fahrrichtung), H. Möllering. Organ für die Fortschritte des Eisenbahnwesens, vol. 79, no. 5, May 15, 1924, pp. 103-108. Design and operation of Siemens & Halske a.c. system of quadruple block-field type.

Single-Line Switching-Out. Switching-Out Single-Line Token Instruments. Ry. Gaz., vol. 40, no. 4, Jan. 25, 1924, pp. 107-110, 6 figs. Describes simple means by which any number of intermediate single-line token stations may be switched out at times when traffic is light, and indicates in particular, how this has been effected on Lond. Midland & Scottish Ry.

Single-Track. Single Track Signaling on C. B. & Q. Ry. Signaling, vol. 17, no. 6, June 1924, pp. 230-233, 9 figs. Delco generator used as power source for a.c. floating system; unique control for tunnel protection.

Storage-Battery Maintenance and Operation. Report of Committee on Instruction. Ry. Signaling, vol. 17, no. 3, Mar. 1924, pp. 130-131, 1 fig. Report of Am. Ry. Assn. committee giving instructions on installation, maintenance and operation of storage batteries of both lead and nickel alkaline types, and care and installation of insulated wire.

Telegraph and Telephone Practice. Telegraph and Telephone Practice, Chas. S. Rhoads. Ry. Signaling, vol. 17, no. 4, Apr. 1924, pp. 173-175, 12 figs. West. Elec. Co. development of selectors, group type, intercalling and time sending.

Track Circuiting. Maintenance of D. C. Track Circuits, R. J. Cox. Ry. Signaling, vol. 17, no. 5, May 1924, pp. 205-206. Track-circuit troubles and their causes; bonding and track connection as cause of trouble.

Train Control. See RAILWAY OPERATION, Train Control.

Voltmeters in Signal Maintenance. See VOLTMETERS, Uses in Signal Maintenance.

RAILWAY STATIONS

Berlin. Reconstruction of the Railway Station at Friedrichstrasse in Berlin (Umbau des Bahnhofs Friedrichstrasse in Berlin), M. Brodführer. Bautechnik, vol. 2, no. 26, June 17, 1924, pp. 259-267, 22 figs. Details of new design of tracks, signal arrangements, administration buildings, etc., to provide for large increase in traffic.

Champaign, Ill. Station Designed for Occasional Crowds at Champaign. Eng. News-Rec., vol. 93, no. 8, Aug. 21, 1924, pp. 294-295, 3 figs. Illinois Central R. R. improves facilities at university city of Champaign, Ill., by elevation of its tracks and construction of new passenger station with unusual feature of having station tracks at two levels; high-level tracks with island platform between passenger tracks for regular and through service and ground-level tracks and platforms for use at times when great crowds assemble at university.

Stuttgart, Germany. Track Galleries of the New Main Railway Station at Stuttgart (Die Gleishallen des neuen Hauptbahnhofs zu Stuttgart), M. Schaechterle. Deutsche Bauzeitung, vol. 58, nos. 66 and 70, Aug. 16 and 30, 1924, pp. 129-132 and 142-143, 13 figs. Details of design and construction of track galleries of wood on iron frames in place of expensive arched halls; experience shows them to be satisfactory.

RAILWAY SWITCHES

Automatic Block. The Switches of Automatic Section-Block Installations (Die Schaltungen der selbsttätigen Streckenblockanlagen), Arndt. Siemens-Zeit., vol. 4, nos. 3 and 4-5, Mar. and Apr-May, 1924, pp. 89-93 and 108-112, 14 figs. Describes Siemens & Halske system.

Electric, Drives for. Drives for Electric Switches and Signals, Siemens & Halske Types (Antriebe für elektrische Weichen- und Signalstellung, Bauart Siemens u. Halske), K. Becker. Bautechnik, vol. 2, no. 49, Nov. 14, 1924, pp. 552-557, 11 figs. Discusses principles on which state regulations and designs are based, and gives diagrams of the various positions during operation.

Operation from Gate Tower. Canadian National Low-Voltage Plant, C. H. Tillet. Ry. Signaling, vol. 17, no. 12, Dec. 1924, pp. 463-465, 7 figs. Operating crossover and junction switches from gate tower, at Brantford, Ont., expedites traffic and effects economies.

Recommended Plans for. Detail Plans of Switches and Frogs, Crossings and Double Slip Switches. Am. Ry. Eng. Assn.—Bul., vol. 25, no. 263, Jan. 1924, pp. 451-452. Contains 14 plans, on supp. plates, recommended by Track Sub-Committee for adoption as recommended practice.

Spring. Spring Switches Reduce Delays on Santa Fe, D. K. Crawford. Ry. Age, vol. 76, no. 26, May 31, 1924, pp. 1313-1314, 3 figs. See also Ry. Eng. & Maintenance, vol. 20, no. 6, June 1924, pp. 222-223, 3 figs.; and Ry. Signaling, vol. 17, no. 6, June 1924, pp. 244-245, 5 figs. Installations at ends of passing tracks and yard outlets under signal protection prevent train stops.

RAILWAY TIES

Concrete. A New Design of Concrete Tie. Elec. Traction, vol. 20, no. 8, Aug. 1924, p. 369, 2 figs. Division engineer on British Ry. in India invents concrete tie of interesting type; consisting of two concrete blocks joined together by steel bar of small cross-section.

Concrete Ties for Light-Traffic Track in France, Adam. Eng. News-Rev., vol. 92, no. 18, May 1, 1924, p. 761, 1 fig. Reduction of maintenance forces and cost follows replacement of wood ties by concrete ties and pairs of blocks.

Railway Sleepers of Reinforced Concrete, W. Bockli. Commonwealth Engr., vol. 11, no. 7, Feb. 1, 1924, pp. 257-262, 4 figs. Particulars regarding Asbeston railway tie of Int. Siegwart Beam Co. of Lucerne, Switzerland.

The Utilization of Reinforced-Concrete Ties (Utilisation de traverses en béton de ciment armé), M. Adam. Revue Générale des Chemins de Fer, vol. 43, no. 2, Feb. 1924, pp. 105-113, 9 figs. Discusses their employment for reducing maintenance expenses of secondary lines; experiences of the Orléans Co. with concrete ties on 21-km. line section between Hautefort and Terrasson.

Forecasting Requirements for. How a Road Can Forecast Its Tie Requirements, E. Stimson. Ry. Age, vol. 76, no. 20, Apr. 19, 1924, pp. 993-994. See also Wood Preserving News, vol. 2, no. 7, July 1924, pp. 109-112. Average life for untreated ties is 9 1/3 yr. and 16 yr. for treated ties. Tables estimating cross-tie requirements of B. & O. for 1922 and 1923 and cross-tie renewal experience and projection for B. & O.

Preservative Treatment. Comparative Tests with Wooden Railway Ties Impregnated with Tar Oil or Basilite (Vergleichsversuche an Holzschwellen, die mit Teeröl oder Basilit getränkt sind), H. P. Maas-Geesteranus. Organ für die Fortschritte des Eisenbahnwesens, vol. 79, no. 4, Apr. 15, 1924, pp. 74-78. Results of tests with tar-oil ties and basilite ties after 10 years' service show basilite to be more economical as impregnating material. It consists of 89 sodium fluorite and 11 parts dinotrophenol-analine.

Improving Method of Treating Ties with Zinc Chloride, J. D. MacLean. Ry. Eng. & Maintenance, vol. 20, no. 4, Apr. 1924, pp. 160-162, 4 figs., 3 tables. Experiments show way to improve treatment, reduce fuel consumption and increase plant output.

New Tie-Treating Plant on the Oregon-Washington R. R. Eng. News-Rec., vol. 92, no. 21, May 22, 1924, pp. 894-896, 6 figs. Four retorts for zinc-chloride process; long narrow tie storage yard served by hammer-head gantry crane; methods of treatment.

Report of Committee on Wood Preservation, A.R.E.A. Ry. Rev., vol. 74, no. 11, Mar. 15,

1924, pp. 566-567. Because of difficulty in securing a creosote which will meet standard specifications of Am. Ry. Eng. Assn., there has been strong pressure brought to bear to have A.R.E.A. revise its specifications to extent which will allow creosotes of lower specific gravity than are permitted by present standard. (Abstract.)

Superiority of Treated Ties Proved by a Nine Years' Test on Chicago & North Western Railway. Wood Preserving News, vol. 2, no. 5, May 1924, pp. 72-73. Seven varieties of timber, untreated and treated by three standard processes, installed on eight divisions show great economy of tie preservation.

The Dhilwan Creosoting Plant, H. L. Woodhouse. Roy. Engrs. Jl., vol. 38, no. 2, June 1924, pp. 205-210. Discusses creosoting and creosoting plant of Northwestern Ry. of India, methods, costs, fire protection, etc.

Wood Preservers Show Economy of Treatment. Ry. Age, vol. 76, no. 3, Jan. 19, 1924, pp. 233-235, 1 fig. Results of tests and service records on use of creosote-petroleum oil mixture for treating ties; increases tie life; promises to cut cost. Abstract of Am. Wood-Preservers' Assn. report.

Size and Spacing. Preferences as to Tie Size and Spacing. Eng. & Contracting (Railways), vol. 61, no. 6, June 18, 1924, pp. 1351-1357. Reports of 92 roads aggregating 144,000 miles of track summarized in Appendix B of report of Committee on Ties, Am. Ry. Eng. Assn., submitted at annual convention of the association, Mar. 11-13, 1924.

Steel, Corrosion of. The Causes of Premature Failure of Ribbed Ties (Ueber die Ursachen der vorzeitigen Zerstörung von Rippenschwellen), R. Kühnel and G. Marzahn. Stahl u. Eisen, vol. 44, no. 7, Feb. 14, 1924, pp. 175-178, 4 figs. Describes nature of damages occurring in railway ties; chemical investigation; investigation of mechanical properties and of structure; main cause of corrosion is attributed to poor design; protection of ties against corrosion.

Tie Plates. Report of Committee on Track, A.R.E.A. Ry. Rev., vol. 74, no. 11, Mar. 15, 1924, pp. 523-524. Report on effect of brine drippings on tie plates, precurving rail, and resawing and reconditioning of rails (Abstract.)

Treating Plant. See MATERIALS HANDLING, Tie-Treating Plant.

Types, Comparison of. Railway Sleepers, F. H. Clark. Assn. Chinese & Am. Engrs.—Jl., vol. 4, no. 9, Nov. 1923, pp. 6-13. Present conditions in China; efforts made in other countries to secure better or less expensive supply of ties; how experience and research of other countries can be advantageously applied to conditions in China.

RAILWAY TRACK

Air Compressors and Track Work. See AIR COMPRESSORS, Development for Track Work.

Concrete Roadbed. Trials of Concrete Roadbed on Northern Pacific Ry. Eng. News-Rec., vol. 92, no. 20, May 15, 1924, p. 858. Three types of concrete slab base indicate higher maintenance cost than that for ordinary ballasted track construction.

Construction. Track Construction Differs from Practice Here. Elec. Ry. Jl., vol. 64, no. 12, Sept. 20, 1924, pp. 437-440, 7 figs. Particular features are absence of cross ties in concreted track, method of sealing rail against moisture and pressure system of thermit welding joints.

Crossing Dimensions. A Proposal as to Standard Formulae for Calculating Points and Crossing Dimensions, W. Hepworth. Ry. Engr., vol. 45, no. 529, Feb. 1924, pp. 54-56, 5 figs. Importance of establishment of a series of standard mathematical formulas, and a series of practical working rules deduced therefrom, applying at least to simple turnout.

Standard Formulae for Calculating Point and Crossing Dimensions, R. D. Walker. Ry. Engr., vol. 45, no. 537, Oct. 1924, pp. 339-340, 4 figs. Problems illustrating use of standard formulas as given for four methods, and more difficult problems.

Culverts. See CULVERTS.

Curves. Continuous Transition Curves and Their Diverse Applications (Les raccordements à courbure continue dans leurs diverses applications), P. de Bruyne. Assn. des Ingenieurs sortis des Ecoles spéciales de Gand—Annales, vol. 13, no. 4, 1923, pp. 351-437, 1 fig. Comparison of different curves which can be employed and their application in each particular case. Bibliography.

The Cubic Transition Railway Spiral, M. K. Rice-Oxley. Instn. Civ. Engrs.—Sessional Notices, no. 3, Feb. 1924, pp. 73-74. Author derives suitable curve and endeavors to show how it may be set out by rectangular offsets or by theodolite without use of tables or complicated formulas. (Abstract.)

Track Curves (Gleiskurven), E. Rauer. Bautechnik, vol. 2, no. 49, Nov. 14, 1924, pp. 557-559, 3 figs. Discusses problems of unequal movement of wheels on curves, and grinding of wheel flanges; and curves in which outer wheel flanges run on rails, for factory use, to dispense with a turntable.

Curves, Guard Rails for. Guard Rails on Sharp Curves, J. J. Burns. Ry. Rev., vol. 75, no. 9, Aug. 30, 1924, pp. 327-329, 5 figs. Louisville & Nashville Ry. uses new type of guard rail fastening on lines of sharp curvature and heavy traffic.

Depression and Elevation Combination. C. & N. W. Ry. Depresses Busy Main Line at Milwaukee. Eng. News-Rec., vol. 92, no. 14, Apr. 3, 1924, pp. 570-574, 8 figs. Grade-crossing elimination improves operating conditions; new four track line; one running track maintained during work; three types of monolithic and precast concrete walls.

Electric Railways. See ELECTRIC RAILWAYS, Track.

Elevation of. Important Track Elevation Work Completed at Elyria, Ohio. Ry. Rev., vol. 75, no. 9, Aug. 30, 1924, pp. 312-315, 8 figs. Completion of work gives New York Central four tracks through Elyria, eliminating seven crossings in heart or city.

Rogers Park Track Elevation, C. M. & St. P. Ry., T. H. Strate. Ry. Rev., vol. 74, no. 3, Jan. 19, 1924, pp. 140-145, 13 figs. Describes work of elevating Chicago & Evanston division between Irving Park boulevard and Howard street in Chicago, Ill., operated by Northwestern Elevated R. R. Co., eliminating grade crossing.

Track Elevation at Minneapolis, N. P. Ry. Ry. Rev., vol. 74, no. 18, May 3, 1924, pp. 801-802, 5 figs. Track-elevation program in Minneapolis, Minn., which covers period of 5 years and eliminates 17 crossings.

Four-Tracking and Grade Separation. Pennsylvania Completes New Four-Track Work. Ry. Age, vol. 77, no. 1, July 5, 1924, pp. 7-11, 9 figs. Project of four tracking and grade separation, known as Pittsburgh Northside improvements, recently carried forward by Pennsylvania railway in order to provide two tracks for operation as a through line for east and westbound traffic around Pittsburgh. Notes on how work was carried out.

Frogs. See RAILS, Frogs.

Gages. Railway Gauges, L. Wiener. Int. Ry. Congress Assn.—Bul., vol. 6, nos. 1, 2, and 3, Jan., Feb., and Mar. 1924, pp. 35-70, 87-120, and 163-206, 21 figs. Discusses main-line and secondary-line gages, and employment of different gages for railways in same country; comparison of gages; influence of gage on construction and operation of railways; trans-shipment; break of gage; conversion and standardization.

Grade Crossings. Can the Grade Crossing Be Made Less Dangerous. Ry. Age, vol. 76, no. 23, May 10, 1924, pp. 1137-1140. Railway and public authorities consider ways of reducing loss of life at crossings. Report of conference to discuss-grade crossing accident problem called at instance of Nat. Assn. Railroad & Utilities Commissioners.

Electrically Operated Gates at Mount Pleasant Crossing, Southampton, Southern Railway, W. J. Thorrowgood. Ry. Gaz., vol. 40, no. 25, June 20, 1924, pp. 879-882, 4 figs. Results of power tests of gates; describes operating mechanism; emergency arrangements.

Eliminating Grade Crossings by Highway Relocation, M. W. Torkelson. Eng. News-Rec., vol. 92, no. 10, Mar. 6, 1924, pp. 403-405, 1 fig. Wisconsin work in grade-crossing improvement; opposition of railroads; principles of cost apportionment should be established.

Kensington-Delavan Grade Crossing Elimination. Ry. Rev., vol. 75, no. 11, Sept. 13, 1924, pp. 383-389, 10 figs. Erie and Lackawanna Rys. jointly eliminate two important street crossings at grade at Buffalo, N. Y.

Report on Highway Crossing Protection. Ry. Signaling, vol. 17, no. 3, Mar. 1924, pp. 123 125, 2 figs. Report of Am. Ry. Assn. committee on requisites for automatic signals used for highway crossing protection, transmission values, reflectors, circuits, code on colors for traffic signals.

Grade Reduction vs. Heavier Power. Grade Reduction or Heavier Power. Ry. Rev., vol. 74, no. 11, Mar. 15, 1924, pp. 509-510. Appendix A, preliminary report of Committee on Economics of Railway Location, Am. Ry. Eng. Assn.

Grade Separation, Detroit. Grade Separation at Detroit, Grand Trunk Railway. Eng. News-Rec., vol. 93, no. 2, July 10, 1924, pp. 60-62, 4 figs. City to share expense of track depression with railroad. Four-track cut in right-of-way on public street requiring 22 bridges at consecutive streets.

Improvements, Pennsylvania Ry. Improving Cleveland-Pittsburgh Line—Pennsylvania R. R. Eng. News-Rec., vol. 92, no. 3, July 17, 1924, pp. 88-92, 6 figs. Grade reduction and line revision on heavy-traffic division increases train loads by 800 tons, reduces pusher engine mileage, and relieves congestion on adjacent division. Details of construction work and operating conditions, and economics of grade reduction.

Inspection Car. Track Inspection on the Erie R R. Ry. Rev., vol. 74, no. 11, Mar. 15, 1924, pp. 503-508, 11 figs. Describes special car designed and built for better track inspection, by reconstructing a passenger car, and fitted with instruments which record all low joints, line and surface, gage and lurches; charts made by car are blueprinted and copies of their respective sections sent to track foremen to locate and correct defects recorded.

Junctions with Curved Main Lines. Junctions with Curved Main Lines. Ry. Engr., vol. 45, no. 553, June 1924, pp. 218-219, 5 figs. Outline of method for calculating and setting up double line junctions with curved main lines.

Laying. Laying Railway Tracks in City Streets. Ry. Eng. & Maintenance, vol. 20, no. 5, May 1924, pp. 1924, pp. 188-191, 7 figs. Modern practice utilizes heavy girder rails and concrete-base construction for best results; Method employed on Delaware Ave., on Philadelphia waterfront.

Platelaying With the Anderson Rail Conveyor. Ry. Engr., vol. 45, no. 529, Feb. 1924, pp. 58-60, 5 figs. Account of track-laying work carried out on Bengal-Nagpur Ru. in India with aid of a simple machine invented by A. T. D. Anderson; description of machine.

Maintenance. Maintenance Methods on the Lehigh Valley R. R., G. L. Moore. Ry. Rev., vol. 74, no. 2, Jan. 12, 1924, pp. 101-103, 5 figs. Summary of results obtained by use of heavy rail and economy in labor.

Preservative Treatment. New Treating Plant Employs Modern Methods. Ry. Age, vol. 77, no. 9, Aug. 30, 1924, pp. 359-361, 6 figs. Describes tie and timber treating plant which Atchison, Topeka & Santa Fe is now completing at National City, Cal., for treatment of Douglas fir ties and timbers to be used on Santa Fe coast lines. Represents striking example of present-day tendencies in operating arrangements of such facilities.

Rail Canting. Canting of Rails Now Favored by Many Roads. Ry. Age, vol. 77, no. 10, Sept. 6, 1924, pp. 404-406, 1 fig. Developments which have taken place on 36 representative roads in United States and Canada on question of canting rail inward in order to provide a bearing surface more nearly coinciding with contour of car and locomotive wheels.

Rail Joints. See RAILS, Joints.

Rails. See RAILS.

Rails, Precurving. See RAILWAY TIES, Tie Plates.

Reconstruction. Rebuilding 178 Miles of Line in Four Months, W. S. Wollner. Ry. Age, vol. 77, no. 8, Aug. 23, 1924, pp. 319-322, 4 figs. Methods used by Western Pacific in overhauling its property in Nevada, in connection with agreement with Southern Pacific to operate their single track lines between Alazon and Weso, Nev., as a double track line.

See also VIADUCTS, Concrete-Arch.

Snow-Protecting Structures. Snow-Protecting Structures for High Altitude Railways (Sneforbygninger paa höifjeldsbaner), G. R. Lorange. Teknisk Ukeblad, vol. 71, nos. 5 and 6, Feb. 1 and 8, 1924, pp. 45-47 and 56-59, 17 figs. Describes a number of wooden structures designed to keep snow off railway tracks in very effective ways.

Street Railways. See STREET RAILWAYS, Track.

Stresses in. Relation of Track Stress to Locomotive Design, C. T. Ripley. Ry. Age (Daily Edition), vol. 76, no. 32, June 14, 1924, pp. 1457-1553 and (discussion) 1553-1558, 10 figs. History of study of track stresses; describes stremmatograph and its use in measuring rail stresses and gives results of number of tests run on A. T. & S. F.

Track Stresses, C. T. Ripley. Ry. & Locomotive Eng., vol. 37, no. 7, July 1924, pp. 208-210, 2 figs. Series of stremmatograph tests made on large electric locomotives. First series of tests made on and near horseshoe curve in New Mexico on tangent track and 6-deg. and 10-deg. curves, showed that some high stresses were obtained under these locomotives, especially on 10-deg. curves.

Switches. See RAILWAY SWITCHES.

Ties. See RAILWAY TIES.

Track-Bolt Specifications. Specifications for Quenched Carbon Steel and Alloy Steel Track

Bolts. Am. Ry. Eng. Assn.—Bul., vol. 25, no. 263, Jan. 1924, pp. 403-405. Specification covering materials, chemical and physical requirements, design and tolerance, manufacture, inspection, and marking.

Traversers. 35-Ton Electric "Surface" Traverser. Engineer, vol. 138, no. 3577, July 18, 1924, pp. 84-85, 2 figs. Describes traverser constructed by S. H. Heywood & Co., Ltd., Reddish, Eng., for Bengal-Nagpur Ry. Co.'s workshops at Khargpur, for transferring rolling stock on parallel tracks.

Turntables. New 85-Ft. Diameter Locomotive Turntables for the Bombay Baroda & Central India Railway Company. Ry. Gaz., vol. 41, no. 10, Sept. 5, 1924, pp. 310-311, 4 figs. Turntable has diameter of 85 ft. and is designed for 5 ft. 6 in.-gage locomotives weighing up to 200 tons; deck type with central balance.

Southern Pacific Renews Turntable in Record Time. Ry. Eng. & Maintenance, vol. 20, no. 9, Sept. 1924, pp. 356-358, 5 figs. Southern Pacific Ry. replaces old 35-ton, 70-ft. deck girder turntable with new 90-ton, 100-ft. half-through truss table in 1 hr. and 46 min.

Turntable Renewal is Accomplished Under Difficulty, R. C. Henderson. Ry. Eng. & Maintenance, vol. 20, no. 8, Aug. 1924, pp. 300-302, 7 figs. Baltimore & Ohio Ry., Lima, Ohio, replaced 90-ft. turntable by one having length of 100 ft.

Water Pick-Up Systems. Water Troughs on the Great Western Railway. Ry. Gaz., vol. 40, no. 6, Feb. 8, 1924, pp. 168-172, 6 figs. Standard permanent way with cross-ties used; troughs shaped with inturned edges at top to reduce splashing when water is being taken up by locomotive.

Weed Burners. Illinois Central Improves Equipment for Burning Weeds with Oil, C. R. Knowles. Ry. Eng. & Maintenance, vol. 20, no. 11, Nov. 1924, pp. 433-435, 5 figs. Economy and effectiveness of process augmented by atomizing oil with steam.

Welding. Manganese Special Work Welding, E. J. Shuler. Elec. Traction, vol. 20, no. 1, Jan. 1924, pp. 32-33, 4 figs. Progress in welding of manganese special work, such as solid manganese crossings, frogs and switch tongues, and manganese insert work, on lines of New Orleans Public Service Co.; shows many economies.

RAILWAY YARDS

Classification. Shunting, Marshalling and Sorting Yards, R. H. Nicholls. Ry. Gaz., vol. 41, nos. 24, 25, and 26, Dec. 12, 19, and 26, 1924, pp. 761-764, 791-794, and 818-821, 15 figs. Principles of location and design; yard site in relation to yard working; ideal layout; British and Dominion practice compared; gravitation shunting methods; layout of points and switches. (Abstract.) Report covering Great Britain, Northern Ireland, India, and British Dominions, Protectorates and Colonies, submitted to Int. Ry. Congress Assn.

Electric Switch Lighting. Electric Switch Lighting in Yards with Signals, Geo. S. Pflasterer. Ry. Signaling, vol. 17, no. 4, Apr. 1924, pp. 161-162, 3 figs. Use of commercial current in connection with signal feed line reduces cost one-half as compared with oil.

Flood Lighting. Floodlighting Railroad Yards, E. G. McAllister. Elec. World, vol. 83, no. 26, June 28, 1924, pp. 1329-1332, 6 figs. Adoption of this practice has materially increased operating efficiency and safety on Norfolk & West. R. R.; details of installation; costs and operating results.

Railroad Yard Lighting, W. C. Gilman. Ry. Elec. Engr., vol. 15, no. 6, June 1924, pp. 185-189, 6 figs. Discusses various methods of using floodlighting projectors, with advantages of each.

Freight. Markham Yard, W. P. Cronican. West. Soc. Engrs.—Jl., vol. 29, no. 6, June 1924, pp. 257-262. Principal features of design of new classification yard of Ill. Central R. R. Co. Will handle practically all freight entering or leaving Chicago district. See also paper by A. Bernard giving operating features, pp. 263-264.

Grade-Adjusting Device. Mechanical Adjustment of Grade for Gravity Switching. Eng. News-Rec., vol. 93, no. 7, Aug. 14, 1924, pp. 260-262, 4 figs. Describes "mechanical hump" for varying grade at summit of incline for gravity switching at Ecorse freight yard at new Detroit terminals of Pennsylvania-Detroit R. R.; table which forms summit of hump raised and lowered by jacks; starting grade varied from 1 to 3 per cent.

Gravity Tracks. Gravity Tracks of Switching Stations (Zur Gestaltung der Ablaufanlagen auf Verschiebebahnhöfen), A. Baumann. Organ für die Fortschritte des Eisenbahnwesens, vol. 79, no. 14, Oct. 30, 1924, pp. 316-325, 12 figs. Layout of yards and lines; location of hills; etc.

Lighting. See Flood Lighting; LIGHTING, Railway Yards.

Switching. A Proposed Catapult Switching Yard, F. W. Eagelston. Eng. & Contracting (Railways), vol. 61, no. 2, Feb. 20, 1924, pp. 409-414, 4 figs. Economic necessity of some radical improvement in present methods of switching freight cars. Description of novel process and means devised by author.

Shunting Yards, R. H. Nicholls. Int. Ry. Congress Assn.—Bul., vol. 6, no. 11, Nov. 1924, pp. 877-906, 15 figs. General principles of layout; details of layout and yard operations; yard and staff organization.

Shunting Yards, S. T. Wagner. Int. Ry. Congress Assn.—Bul., vol. 6, no. 10, Oct. 1924, pp. 793-846, 10 figs. Report illustrating practice on a number of leading railways in United States and Canada, information for which was obtained in response to a questionnaire intended to allow each railway to submit a type of yard which they considered representative and give data as to layout and organization.

RAILWAYS

American, Organization of. Present Day Organisation of American Railways, F. H. Budden. Inst. Transport—Jl., vol. 5, no. 6, Apr. 1924, pp. 279-289. Particulars regarding line and staff organization, departmental system, duties of officers on a division, Pennsylvania system, organization on N. Y. Central lines, etc.

Automobile Service. Automobile Traction for Railway Services (Utilisation de la traction automobile dans les services annexes des chemins de fer), M. De Lalande. Revue Générale des Chemins de Fer, vol. 43, no. 6, Dec. 1924, pp. 417-425, 7 figs. Discusses use of automobiles by railways in Paris and the provinces, including the various types employed, both for passenger and goods transportation.

Buildings. Specifications for Railway Buildings. Am. Ry. Eng. Assn.—Bul., vol. 26, no. 268, Aug. 1924, 122 pp., 20 figs. Specifications covering excavation, filling and backfilling; sewers and drainage; brickwork; carpentry and millwork; lathing and plastering; hardware; painting and glazing; plumbing; heating; stone masonry and cut stone work; clay hollow tile; marble and tile work; concrete roofing tile; clay tile roofing; electric light wiring; architectural terra cotta; concrete architectural stone; and floors.

Buildings, Floors for. Floors for Railway Buildings. Ry. Rev., vol. 74, no. 11, Mar. 15,

1924, pp. 498-499. See also Eng. & Contracting (Railways), vol. 61, no. 5, May 21, 1924, pp. 1120-1122. Report of Buildings Committee, Am. Ry. Eng. Assn., after investigation of 37 representative railways to determine type of floor most commonly used in the various kinds of buildings.

Buildings, Paints for. See PAINTS, Railway Buildings.

Central America. Central America's Largest Road American-Owned, F. J. Lisman. Ry. Age, vol. 77, nos. 9 and 10, Aug. 30 and Sept. 6, 1924, pp. 377-380 and 417-420, 12 figs. International Railways of Central America, with 600 miles of line, largest American-owned railroad enterprise outside of United States. General features, character of traffic, difficulties of construction, operating practices, etc.

China. The Peking-Mukden Railway, D. P. Ricketts. Ry. Gaz., vol. 40, no. 8, Feb. 22, 1924, pp. 234-236, 14 figs., partly on pp. 237-240. Discusses development and gives operating data.

Construction. See RAILWAY CONSTRUCTION.

Developments, 1923. Foreign Railway Developments in 1923. Ry. Age, vol. 76, no. 1, Jan. 5, 1924. Contains following articles: Great Britain, W. H. Fraser, pp. 99-102, 5 figs.; France, M. Peschaud, pp. 103-105, 2 figs.; Italy, A. Giordano, pp. 106-108, 5 figs.; Belgium, R. H. Sheffield, pp. 109-112, 3 figs.; The Netherlands, C. Schotel, pp. 113-114, 3 figs.; Danish Railways, A. Blichfeldt, pp. 115-116, 4 figs.; Polish Railways, G. M. Oehm, pp. 117-118, 1 fig.; Czechoslovak Railways, V. Partl, pp. 119-122, 7 figs.; Balkan Railways, Lazarovich-Hrebelianovich, pp. 122-128, 8 figs.; Austria, A. Niklitchek, pp. 134-136, 6 figs.; Germany and Some Other European Countries, pp. 137-138, 4 figs.; Egypt, pp. 139-142, 7 figs.; South African Railways, G. E. Chittenden, pp. 143-145, 8 figs.; Future of Railways in Turkey, A. Vahid Bey, pp. 146-150, 7 figs.; China, pp. 151-154, 7 figs.; Railways of Japan and South Manchuris, E. A. Simmons, pp. 155-158, 5 figs.; Australia, W. H. Newman, pp. 159-162, 6 figs.; India's Railways, pp. 163-165, 5 figs.; Railways of Argentina, M. T. Meadows, pp. 166-167, 1 fig.

Electric. See ELECTRIC RAILWAYS.

Electrification. See RAILWAY ELECTRIFICATION.

Elevated. See ELEVATED RAILWAYS.

Employee Ownership and Control. Railroad Ownership and Control by Employees, J. P. Muller. Ry. Age, vol. 77, no. 16, Oct. 18, 1924, pp. 681-682. Plan for achieving efficiency and "industrial democracy" under private ownership.

Equipment. See RAILWAY EQUIPMENT.

Funicular, Penang Island. The Penang Hills Railway. Engineering, vol. 118, nos. 3072, 3074, 3076, and 3078, Nov. 14, 28, Dec. 12 and 26, 1924, pp. 664-668 and 678, 726-730 and 740; 789-792 and 804, and 852-853, 81 figs. Funicular railway has total length of 1 mi. 435 yd., and upper station is situated 2381 ft. above sea level; construction consists of viaducts alternating with cuttings, and there is tunnel 258 ft. long which is one of steepest in world. Details of passenger cars. Describes winding engines or hoists. Electrical arrangements installed in connection with haulage-engine operation.

Germany. Technical Railway Session in Berlin (Die Eisenbahntechnische Tagung in Berlin), Baumann. Archiv für Eisenbahnwesen, no. 6, Nov.-Dec. 1924, pp. 915-937. See also Organ für Fortschritte des Eisenbahnwesens, vol. 79, no. 14, Oct. 30, 1924, pp. 307-315. Details of session and exposition at Seddin under auspices of State Ry. Administration and V. D. I., including railway cars and brakes, locomotives (except electric), electricity in railway operation, safety and signaling, permanent way and bridges, railway stations, workshops, etc.

The Berlin Congress and Exhibition for Railway Engineering. Eng. Progress, vol. 5, no. 12, Dec. 1924, pp. 261-264, 3 figs. Special events of congress, including brake-test trip, and practical demonstration of radiotelephony on Berlin-Wittenberge line; outstanding exhibits at Seddin.

Government Regulation. The Development of Railroad Regulation, F. McManamy. Ry. Age (Daily Edition), vol. 76, no. 34, June 17, 1924, pp. 1623-1627. See also Ry. & Locomotive Eng., vol. 37, no. 7, July 1924, pp. 215-219. Review of scope and effect of what U. S. Government has done in way of legislation affecting railroads; unification; provisions to stabilize credit.

Ice Houses and Icing Stations. Ice Houses and Icing Stations. Ry. Rev., vol. 74, no. 11, Mar. 15, 1924, pp. 556-557. Appendix A, report of Buildings Committee of Am. Ry. Eng. Assn. Presented for approval for publication in manual.

India. The East Indian Railway: Its Construction and Development. R. Highet. Ry. Gaz., vol. 40, no. 9, Feb. 29, 1924, pp. 266-276 and 280, 15 figs. Review of growth of this system and analysis of freight and passenger traffic; nearly 2500 miles in length.

The Khyber Railway. Ry. Gaz., vol. 40, no. 19, May 9, 1924, pp. 664-669, 17 figs. Notes regarding railway under construction which will connect India and Afghanistan, including data on construction.

Industrial. See INDUSTRIAL PLANTS, Railway Switching Equipment; Railways.

Interstate Commerce Commission Report. I. C. C. Annual Report to Congress. Ry. Age, vol. 77, no. 23, Dec. 6, 1924, pp. 1029-1034. See also Ry. Rev., vol. 75, no. 23, Dec. 6, 1924, pp. 908-911. Abstract of report of Interstate Commerce Commission making new recommendations for legislation; review of year's activities.

Italy. Progress in the Construction of the Direct Bologna-Florence Line (L'avanzamento della direttissima Bologna-Firenze). Rivista Tecnica delle Ferrovie Italiane, vol. 25, no. 6, June 15, 1924, pp. 190-200, 5 figs. Discusses resumption of construction interrupted by war, tunneling work, bridge construction, etc.

Japan. Railways in the Japanese Empire, S. T. Dodd. Gen. Elec. Rev., vol. 27, no. 4, Apr. 1924, pp. 227-237, 15 figs. Observations made during a years' study of Japanese railway system, before disastrous earthquake of Sept. 1, 1923. Historical notes; physical characteristics of Imperial Japanese Railways; difficulties encountered in building railways in Islands of Japan, and description of type of road bed, bridges, etc., comparison between Japanese and American rolling-stock practice and railway traffic density. A comprehensive scheme of electrification has been decided on with 1500 volts d.c. as standard, calling for total of 336 electric locomotives by the year 1928.

Railways of Japan (Die Eisenbahnen des japanischen Inselreichs), Baltzer. Organ für die Fortschritte des Eisenbahnwesens, vol. 79, no. 13, Oct. 15, 1924, pp. 287-292. Details of developments covering Tokaido, Shin-Etsu and Usui pass, Chuo or Nakasendo, Fukushima, Nippon, Sanyo and Kinshiu lines.

Location. Railway Location, C. S. Czowski. Can. Ry. Club—Proc., vol. 23, no. 9, Dec. 1924, pp. 20-42 and (discussion) 42-44, 4 figs. Points out that surveys can determine with reasonable accuracy how much line will cost built to certain standards; standards for construction may be grouped under four main headings: gradients to be employed, curvature, strength of track structure and bridges; permanence of materials used; factors which affect operating cost, and conse-

quently become factors in location of line are; gradients, rise and fall, curvature and distance.

Maintenance. See RAILWAY MAINTENANCE.

Management. See RAILWAY MANAGEMENT.

Motor Cars for. See RAILWAY MOTOR CARS.

Oil Houses. Model Oil House of Reinforced Concrete, P. & R. Ry., R. J. Stackhouse. Ry. Rev., vol. 74, no. 7, Feb. 16, 1924, pp. 288-290, 7 figs. See also Ry. Mech. Engr., vol. 98, no. 3, Mar. 1924, pp. 147-149, 6 figs. Description of house for oil storage, at Reading, Pa., designed to eliminate leakage and tank waste and insure good clean oil with maximum service at minimum cost.

Operation. See RAILWAY OPERATION.

Problems. The Ultimate Question About the Railroads, V. Jordan. Engrs. & Eng., vol. 41, no. 11, Nov. 1924, pp. 283-286. Extracts from discussion on railway performance at Nat. Indus. Conference Board; discusses problems of plant and equipment; reasons for increased performance; railway labor; coöperation of public.

Rack. Thirty Years of Barmen Mountain Railway (30 Jahre Barmer Bergbahn), E. Körne. Elektrotechnische Zeit., vol. 45, no. 36, Sept. 4, 1924, pp. 949-951, 4 figs. Describes rack railway from Barmen to Toelle tower, electric equipment, etc., using cars of capacity of 24 to 36 persons.

Repair Shops. See RAILWAY REPAIR SHOPS.

Scrap Utilization. Utilization of Discarded Railway Material (Die Altstoffwirtschaft in den Eisenbahnwerken), Haas. Glasers Annalen, vol. 95, nos. 10 and 11, Nov. 15 and Dec. 1, 1924, pp. 240-246 and 259-267, 30 figs. Economic losses in World War have led to a systematic utilization of discarded railway material for reasons of economy; methods and plants for such utilization; sorting and storing of scrap, wrecking locomotive boilers, etc.

Shops. See RAILWAY SHOPS.

Signaling. See RAILWAY SIGNALING.

Statistics, Development of. Development of Railway Statistics, A. E. Kirkus. Int. Ry. Congress Assn.—Bul., vol. 6, no. 11, Nov. 1924, pp. 947-1005. Deals with those statistics which are used for purpose of watching operating results, and makes brief reference to compilation of particulars which are not primarily operating statistics. Particulars of statistics compiled and changes made in individual countries.

Street. See STREET RAILWAYS.

Track. See RAILWAY TRACK.

Train Resistance to Motion. The Resistance of Express Trains, C. F. D. Marshall. Serial article in Ry. Engr., vol. 45, beginning Jan. and ending Nov. 1924, 44 figs., partly on supp. plate. Jan.: Critical discussion of present state of theory and practice of subject, and suggestions for development of former and improvement of latter. Feb.: Atmospheric resistance in a calm; resistance constants for carriages; effect of acceleration. Mar.: Effect of gradients; speeds on gradients; effect of curves. Apr.: Natural wind; effect of direct wind; effect of wind gusts on frontal pressures; limiting speeds. May: Resultant wind; angle of resultant for various wind angles; effect of speed on resultant wind; ratios of speed of resultant to that of travel. June: Effect of oblique winds; consideration of flange friction; lines of flow round train. July: Oblique winds and air resistance; effect for different kinds of train; effect of gusts on resultant wind; resistance of engines. Aug.: Consideration of tests conducted on Great Western and Lond. & North Western Rys.; use of speedometers and engine indicators. Sept.: Resistance of electric cars; results of tests on Berlin-Zossen line. Oct.: Question of shape; improvements to shape of smokebox and chimney; importance of reducing air reistance of outside details. Nov.: Extreme speeds; French treatise; summary of principal formulas.

Transportation. See TRANSPORTATION, Railway.

Valuation. Railroad Valuation, A Brief Survey, Wm. D. Pence. Eng. News-Rec., vol. 92, no. 10, Mar. 6, 1924, pp. 406-408. Outline sketch of origin and growth of valuation movement leading up to Federal Act; what has been achieved to date, and present-day prospects for useful outcome.

Yards. See RAILWAY YARDS.

RAINFALL

Data on. See DRAINAGE, Storm-Water Drains.

Determination. Determining the Mean Precipitation on a Drainage Basin, R. E. Horton. New England Water Wks. Assn.—Jl., vol. 38, no. 1, Mar. 1924, pp. 1-43 and (discussion) 44-47, 15 figs. partly on supp. plate. Supplementary data on methods of measurement of rainfall and snow, including application of rainfall data to determination of mean precipitation on a drainage basin. Means of making best possible or most probable determination of monthly, seasonal, annual, or mean precipitation over a drainage basin, with a minimum of labor.

Drainage and. See DRAINAGE, Rainfall and.

Intensity vs. Duration. Investigation of the Connection Between the Intensity and the Duration of Rain (Ett säreget bromontage), K. Kinch. Teknisk Tidskrift, vol. 54, no. 30, July 26, 1924, pp. 81-82 (väg- och vattenbyggnadskonst), 3 figs. Statistics show that longer duration of uninterrupted rain is less in its intensity.

Run-off. Precipitation and Runoff Near the Continental Divide, Rob. E. Horton. Eng. News-Rec., vol. 92, no. 9, Feb. 28, 1924, pp. 355-358, 4 figs. Study of records for basins mostly at elevation 9000 ft. on both slopes of Colorado Rockies indicate that orientation and snowfall largely account for greatest run-off.

Surface Yield from a Hydrographical Basin. Engineering, vol. 97, no. 3033, Feb. 15, 1924, pp. 193-195, 3 figs. Conditions which influence yield from basin; how rain falling on basin is disposed of; table giving approximate yields that may be anticipated in temperate and insular climates such as British Isles; comparison of yield from hydrographic basin with rain falling on it.

The Intensity of Rainfall, J. W. Meares. Engineering, vol. 117, no. 3028, Jan. 11, 1924, pp. 40-42, 1 fig. partly on supp. plate. Intensity of rainfall and consequent run-off from catchment.

Variation in Annual Run-Off in the Rocky Mountain Region, R. Follansbee. U. S. Geol. Surv.—Water Supply Paper 520-A, Dec. 21, 1923, pp. 1-14, 4 figs. partly on supp. plates. Influence of topography.

RAPID TRANSIT

Chicago. Rapid Transit and Interurban Transportation for Chicago, B. I. Budd. West. Soc. Engrs.—Jl., vol. 29, no. 3, Mar. 1924, pp. 142-147 and (discussion) 147-154. Present rapid transit facilities, and territory served; recommendations for improvement.

Financing of Systems. Detroit Rapid Transit Plant Financed by Direct Assessment. Eng. & Contracting (Railways), vol. 61, no. 1, Jan. 16, 1924, pp. 131-134. New basis for providing funds for proposed system of subways or elevated lines.

Suburban, New York City. Suburban Transit Plan Suggested for New York City. Eng. News-Rec., vol. 92, no. 19, May 8, 1924, pp. 818-820, 1 fig. Independent subway system to connect with trunk-line railways outside of Manhattan Island; new streets proposed.

RAZORS

Blades, Heat Treatment. See ELECTRIC FURNACES, Heat-Treating.

REACTORS

Current-Limiting. Current-Limiting Reactors, W. M. Dann. Am. Inst. Elec. Engrs.—Jl., vol. 43, no. 11, Nov. 1924, pp. 1050-1054, 6 figs. Considerations of factors affecting reliability; early weaknesses and means taken to eliminate them.

Direct-current Reactor Design, D. C. Prince. Gen. Elec. Rev., vol. 27, no. 6, June 1924, pp. 380-383, 8 figs. Discusses design of direct current, or smoothing, inductances. Use of such devices in a rectifier circuit reduces to a very considerable extent current variations.

Iron-Core. Theory of D-C Excited Iron-Core Reactors and Regulators, A. Boyajian. Am. Inst. Elec. Engrs.—Jl., vol. 43, no. 10, Oct. 1924, pp. 958-966, 46 figs. Application as frequency multiplier, as series current-limiting reactor, as feeder-voltage regulator, and as shunt reactor for power-factor control; ratio of controlling and controlled kva.

Saturated-Core. See VOLTAGE REGULATION, Regulators.

REAMERS

Inserted-Blade. Development of Tools Provides Simpler Ways for Performing Specific Operations, W. L. Carver. Automotive Industries, vol. 51, no. 12, Sept. 18, 1924, pp. 524-525, 8 figs. Describes reamer having die-cast head and high-speed steel cutter blades, new line of adjustable shell reamers which makes use of five sizes of blade, and improved system of jig bushings.

Taper. Taper Machine Reamers, F. Cooke. Machy. (Lond.), vol. 24, no. 613 and 615, June 26 and July 10, 1924, pp. 385-388 and 449-452, 13 figs. June 26: Deals with back piloting roughing reamers and finishing reamers; gives dimensions and formulas. July 10: Motion of a reamer; positive value; natural and negative value teeth; stability from spiral teeth.

RECLAMATION

British Columbia. Sumar Dyking and Reclamation Project of the B. C. Government, M. Montgomery. Contract Rec. & Eng. Rev., vol. 38, nos. 3 and 4, Jan. 16 and 23, 1924, pp. 48-50 and 74-76, 6 figs. Present status of scheme for reclaiming area known as Sumas Lake and protecting, by dyking, area known as Sumas Prairie, which had always been inundated when Fraser River was in flood. It is, in the main, a pumping proposition using special electrically-driven equipment; describes equipment.

California. California Reclamation District No. 2047, S. E. Gamble. Eng. & Contracting (Water Works), vol. 61, no. 1, Jan. 9, 1924, pp. 78-81, 3 figs. Particulars of drainage system in Glenn and Colusa counties in Sacramento Valley, supplemented by high-capacity pumping plant reversible for irrigation use.

Dredging and. Dredging and Land Reclamation, E. Latham. Engineering, vol. 138, no. 3065, Sept. 26, 1924, pp. 437-438. Methods and calculations for combined dredging and land reclamation; discusses whether it is cheaper to take sludge to sea or dump it ashore; scale of pay should be based on quantity of solid in proportion to quantity of water raised; examples of successes and failures.

Newlands Project, Drainage of. See DRAINAGE, Ditches.

Peat Land. The Swedish Peat Society and Its Work in Peat Land Reclamation, with Some Suggestions for Such Work in United States, H. Witte. Am. Peat Soc.—Jl., vol. 17, no. 1, Jan. 1924, pp. 9-14 and (discussion), 14-16. Rational utilization of peat bogs for agricultural purposes.

Swamp Land. Slag Is Scattered Hydraulically, J. D. Knox. Iron Trade Rev., vol. 74, no. 20, May 15, 1924, pp. 1301-1304, 6 figs. Swamp land of 150 acres in heart of iron and steel industry is being reclaimed by filling with granulated cinder; more than 150 hopper cars unloaded daily; hydraulic method employed.

Western United States. Notes on Western Reclamation, W. W. DeBerard. Eng. News-Rec., vol. 93, nos. 23 and 24, Dec. 4 and 11, 1924, pp. 898-900 and 948-950, 1 fig. Notes on changed conditions in reclamation. Dec. 4: Northern projects. Dec. 11: Southern projects.

RECTIFIERS

Argonal. Voltage Drop and Minimum Current in the Argonal Rectifier (Spannungsabfall und Minimalstromstärke des Argonal-Gleichrichters), M. Hellmuth. Elektrotechnische Zeit., vol. 45, no. 23, June 5, 1924, pp. 579-581, 3 figs. Gives characteristic curves for Argonal rectifier which works with an amalgam, containing sodium and potassium; this addition to mercury has effect of lowering value of minimum current with which rectifier can work, while glass is not attacked by alkali metals; figures and curves showing limiting values of current and voltage drop in Argonal type of rectifier.

Battery Charging with. See STORAGE BATTERIES, Charging.

Full-Wave. A Full Wave Rectifier, H. H. Dyer. Experimental Wireless, vol. 1, no. 12, Sept. 1924, pp. 728-730, 5 figs. Describes construction of full-wave rectifier from ex-W.D.D. III buzzer and gives details of operation.

Mercury-Vapor. Application of Mercury-Vapor Rectifiers to Traction (L'application des redresseurs à vapeur de mercure à la traction), J. Barthélémy. Revue Générale de l'Electricité, vol. 16, no. 12, Sept. 20, 1924, pp. 455-463, 9 figs. Particulars of Nation substation of Paris Metropolitan Railway Co., including electric equipment, distance control, and results of tests and operation under service conditions.

Development of Mercury-Vapor Current Rectifiers (Le développement industriel des redresseurs de courant à vapeur de mercure), F. Collin. Génie Civil, vol. 85, no. 8, Aug. 23, 1924, pp. 165-171, 17 figs. Discusses rectifiers for alternating current to direct current, including theory of monophase and polyphase rectifiers; details of construction and examples of application.

Effect of Direct Current Choking Coils on Power Factor of Alternating Current in Mercury-Vapor Rectifiers (Der Einfluss der Gleichstrom-Drosselspule auf den Leistungsfaktor des Wechselstromes beim Quecksilberdampf-Gleichrichter), W. Taeger. Elektrotechnische Zeit., vol. 45, no. 29, July 17, 1924, pp. 774-775, 1 fig. Shows that power factor of alternating current is not dependent in any way on size of cathode choking coils, but power factor changes with number of phases, is smaller in three-phase than in single-phase rectifiers.

High-Power Mercury-Arc Rectifiers, F. C. Bailey. Power, vol. 59, no. 4, Jan. 22, 1924, pp. 130-132, 6 figs. Construction and operation; auxiliary equipment; how rectifier is put into and taken out of service; parallel operation of rectifiers and rectifiers with other equipment; regulation, efficiency and power factor.

Large Scale Mercury-Vapor Rectifiers (Les redresseurs à vapeur de mercure à grand débit), H. Giroz. Revue Universelle des Mines, vol. 4, no. 5, Dec. 1, 1924, pp. 262-275, 6 figs. Discusses latest improvements in rectifiers and accessories and gives results obtained in operation, especially

in traction, rolling mill motors, hoisting apparatus, and d.c. transmission lines.

Mercury-Vapor Rectifiers (Les redresseurs à vapeur de mercure), M. Giroz. Société Française des Electriciens—Bul., vol. 4, no. 36, June 1924, pp. 463-513, 10 figs. Theory and operation; working in parallel of several groups; calculation of power factor; description of several plants of note. Bibliography.

Mercury-Vapor Rectifiers (Les Redresseurs à Vapeur de Mercure en verre), V. Sylvestre. Houille Blanche, vol. 23, nos. 87-88 and 91-92, Mar.-Apr. and July-Aug. 1924, pp. 52-57 and 117-132, 38 figs. Mar.-Apr.: Deals with low-capacity rectifiers, discussing regulation of tension, parallel operation, efficiency and power factor, applications and advantages. July-Aug.: Deals with high-capacity rectifiers, discussing accessories, including transformers, excitation, vacuum pumps, device for measuring vacuum, refrigeration, etc.; parallel working; regulation of tension; maintenance; efficiency and power factor. Contains table giving data on principal French installations of Brown-Boveri mercury-vapor rectifiers. Bibliography.

Method of Calculating Mercury-Vapor Rectifiers (Méthode générale de calcul des redresseurs à vapeur de mercure), M. Demontvignier. Revue Générale de l'Electricité, vol. 15, no. 12, Mar. 22, 1924, pp. 493-499, 1 fig. Author shows that it is possible to derive general equations of rectified current based on theory of rectifier; by making certain assumptions it is shown that equation of characteristic can be obtained in simple and sufficiently accurate form.

Overvoltages in Mercury-Vapor Rectifiers and Their Causes (Ueberspannungen an Quecksilberdampfgleichrichtern und ihre Ursache), A. Günther-Schulze. Zeit. für technische Physik, vol. 5, no. 4, 1924, pp. 132-135. Results of tests to determine cause of overvoltages occurring in rectifier installations in very cold rooms; disruptive strength of vapor increases as vapor pressure decreases; mercury flask therefore becomes harder and more liable to destruction by discharge as temperature falls.

Power Factor of Mercury Vapor Rectifiers (Der Leistungsfaktor der Quecksilberdampf-Gleichrichter), G. W. Müller. Elektrotechnische Zeit., vol. 45, no. 24, June 12, 1924, pp. 624-626, 14 figs. Explains and calculates power factors; gives curves of power factors based on measurements of existing mercury vapor rectifier plants.

Recent Mercury-Vapor Rectifier Plants (Neuere Quecksilberdampf-Gleichrichter-Anlagen), M. Hentschel. Glasers Annalen, vol. 95, no. 1, July 1, 1924, pp. 9-14, 14 figs. Details of construction of glass and metal rectifiers, single-phase and six-phase; 330 kw. rectifier plant for 700 volt; large scale rectifier plant of 720 kw. built by Siemens Schuckert.

Some Properties of Mercury-Vapor Rectifiers (Quelques propriétés des redresseurs à vapeur de mercure), M. Demontvignier. Revue Générale de l'Electricité, vol. 16, no. 13, Sept. 27, 1924, pp. 506-515, 16 figs. Examples of application of polyphase mercury-vapor rectifiers with symmetric magnetic coupling between anodes.

Rare-Gas-Filled Tubes as. Rare-Gas-Filled Tubes as Rectifiers (Die Verwendbarkeit von Edelgasgleichrichtern in der Schwachstromtechnik), K. Lorenz. Elektrotechnik u. Maschinenbau, vol. 42, no. 11, Mar. 16, 1924, pp. 157-160, 7 figs. Experimental research work by author has led to circuits containing two tubes, ordinary telephone condensers of 2 mf. and choke coils, which give in derivation of 110-volt or 220-volt a.c. supply a perfectly uniform direct current which may be used readily for operation of telegraphs or telephones instead of batteries; with proper adjustment of auxiliaries resulting current may supplant batteries even for closed-circuit systems.

Rectigon. Testing and Operation of Rectigon Rectifiers, S. B. Kraut. Elec. Jl., vol. 21, no. 8, Aug. 1924, pp. 363-368, 15 figs. Discusses application of rectigon rectifiers to charging radio, automobile and telephone batteries, for tripping circuit breakers, for operating electric hammers, time clocks, relays, etc.; difference in types of rectigons.

Rotary. A Simple Rotary Rectifier, A Butement. Experimental Wireless, vol. 1, no. 11, Aug. 1924, pp. 658-662, 9 figs. Describes rotary rectifier which is useful for obtaining direct current from alternating current mains for accumulator charging, etc.

Storage-Battery Charging. Rectifiers for Charging Small Accumulators (Raddrizzatori di corrente per carica di piccoli accumulatori), Regnoni and Faloci. Rivista Tecnica delle Ferrovie Italiane, vol. 26, no. 5, Nov. 15, 1924, pp. 146-157, 14 figs. Discusses types of rectifiers, including mechanical, electrolytic, mercury-vapor, and incandescent cathode, and application to charging of storage batteries.

Thermionic-Valve. Obtaining Steady High-Voltage Direct Current from a Thermionic Rectifier Without a Filter, F. W. Maxstadt. Am. Inst. Elec. Engrs.—Jl., vol. 43, no. 11, Nov. 1924, pp. 1055-1057, 5 figs. Describes special type of a.c. generator which gives proper low-voltage wave from rectification as a more nearly smooth direct potential.

Thermionic Valve Rectifiers, C. T. Melling. Engineer, vol. 137, no. 3571, June 6, 1924, p. 638, 5 figs. Shows how valves may be used for rectifying single and polyphase currents. (Abstract.) Metropolitan-Vickers Gaz., Apr. 1924.

Wave Forms. Rectifier Wave Forms, D. C. Prince. Gen. Elec. Rev., vol. 27, no. 9, Sept. 1924, pp. 608-615, 13 figs. Various factors influence output wave form of rectifiers, and a knowledge of how to adjust them properly is essential to obtain best service. Presents information to this end. Necessary fundamental formulas are supplemented by simple tables for convenience in calculation.

REDUCTION GEARS

Calculations. Reduction Gearing, M. Delaporte. Mar. Engr., vol. 47, no. 565, Oct. 1924, pp. 371-373, 6 figs. Some interesting opinions on the subject. (Abstract.) Translation of paper read before Association Technique Maritime et Aéronautique.

Lentz Hydraulic. See LOCOMOTIVES, Diesel-Engined.

Marine Steam-Turbine. Marine Turbine Reduction Gearing, Geo. G. Goodwin. Engineer, vol. 138, no. 3594, Nov. 14, 1924, pp. 548-549. (Abstract.) Lecture delivered before Instn. Mech. Engrs.

Turbine Reduction Gearing and Its Production, R. J. McLeod. Instn. Mech. Engrs.—Proc., no. 4, July 1924, pp. 633-659, 22 figs. Discusses general questions governing design and methods of production, from manufacturer's standpoint.

Shock-Absorbing. Shock-Absorbing and Concentric Speed Transformer. Engineering, vol. 117, no. 3038, Mar. 21, 1924, pp. 378, 7 figs. System combining speed reduction obtainable with epicyclic gear, with use of shock-absorbing characteristics of helical springs.

Stresses. Speed Reduction Gears (Considerations sur les réducteurs de vitesse à engrenages), M. Delaporte. Bul. Technique du Bureau Veritas, vol. 6, no. 9, Sept. 1924, pp. 176-179, 7 figs. Calculation of stresses, and shape of teeth; describes an elastic transmission to overcome torsional deformation.

Types. Transmitting Power Through Speed Reducers. Can. Machy., vol. 32, no. 21, Nov. 20,

1924, pp. 25-26, 7 figs. Describes worm, helical, herringbone, and spur gear reducers manufactured in Toronto plant of Hamilton Gear & Machine Co.

Worm. Worm Gear: Its Production and Efficiency and Its Application to Turbine Reduction Gearing, F. W. Lanchester. Engineering, vol. 117, no. 3031, Feb. 1, 1924, pp. 131-132. Author is not impressed with prospects of general use of worm gear as turbine reduction gearing. Report on efficiency tests made on work and worm wheel for Daimler Co. is appended.

REFLECTORS. See LIGHTING, Reflectors.

REFRACTORIES

Aluminous. The Laboratory Testing of Aluminous Refractories, R. F. Geller. Am. Ceramic Soc. —Jl., vol. 7, no. 9, Sept. 1924, pp. 663-669, 2 figs. Data obtained from tests on eight brands of high alumina refractories and two brands of fireclay refractories, used by the trade under conditions of service requiring resistance to corrosive action of lime and cement clinker at high temperatures.

Artificial Sillimanite. Artificial Sillimanite as a Refractory, H. Wilson, C. E. Sims and F. W. Schroeder. Am. Ceramic Soc.—Jl., vol. 7, nos. 11 and 12, Nov. and Dec. 1924, pp. 842-855 and 907-919, 12 figs. Mineralogical and chemical properties; past investigations of sillimanite; study of refractory properties of electrically-fused silica and alumina mixtures, including results of tests. Resistance of refractories to load at high temperatures. Pub. by permission U. S. Bur. Mines.

Preparation of Artificial Sillimanite for Refractory Uses, C. E. Sims, H. Wilson and H. C. Fisher. Am. Electrochem. Soc.—Advance Paper no. 22, for meeting Oct. 2-4, 1924, pp. 327-343, 8 figs. partly on supp. plates. Describes experimental work leading to adoption of a furnace for preparation of artificial sillimanite. Raw materials, and characteristics.

Brick. See BRICK, Refractory.

Carborundum. Physical Characteristics of Specialized Refractories—Thermal Conductivity of Carborundum Refractories, M. L. Hartmann and O. B. Westmont. Am. Electrochem. Soc.—Advance Paper no. 21, for meeting Oct. 2-4, 1924, pp. 287-312, 13 figs. Details of tests made.

Cement Kilns. See KILNS, Cement.

Cements. High Temperature Cements, J. H. Kruson. Combustion, vol. 11, no. 1, July 1924, pp. 51-56, 5 figs. Results of tests of 18 cements and 5 clays with relation to furnace requirements.

Checker Brick. Checker Brick for Resisting Alkaline Slags, M. C. Booze and F. C. Flint. Am. Ceramic Soc.—Jl., vol. 7, no. 8, Aug. 1924, pp. 594-598, 2 figs. In glass tank furnace, amount of corrosion varied directly with silica content of brick; those highest in alumina gave excellent service in regenerator operating at low temperature.

Chrome. See Open-Hearth Furnaces.

Clay. Progress in the Manufacture and Use of Clay Refractories, W. G. Owen. Am. Soc. for Steel Treating—Trans., vol. 6, no. 2, Aug. 1924, pp. 125-137. Discusses care in manufacture of brick, making brick to specific service requirements, brick for steel heat-treating furnaces.

See also CLAY, Refractory.

Coal Ash, Effect on. The Effect of Coal Ash on Refractories, J. J. Brennan. Combustion, vol. 10, no. 6, June 1924, pp. 418-422, 4 figs. Report of a series of experiments with ash from nine different coals in connection with various kinds of firebrick. Contains number of charts.

Coke-Oven. Fireproof Brick for Furnaces and Coke Ovens (Feuerfeste Baustoffe für Feuerungen und Koksöfen). W. Soherr. Glückauf, vol. 60, no. 46, Nov. 15, 1924, pp. 1055-1063, 25 figs. Discusses increased boiler temperature and consequent difficulties in construction of furnace arches; production of refractories; choice of raw materials; microstructure; clay as a binder, testing of refractories; etc.

Refractory Products for Coke Ovens (Les produits réfractaires pour fours à coke), V. Bodin. Chimie & Industrie, special no., May 1924, pp. 415-429, 11 figs. Requirements of refractories for coke ovens and methods of testing; results of tests show that no one category of products is superior to the others in all respects.

Conductivity and Specific Heat. Conductivity and Specific Heat of Refractories at High Temperatures, M. D. Hersey and E. W. Butzler. U. S. Bur. Mines—Reports of Investigations, no. 2564, Jan. 1924, 7 pp. General statement of problem, with results on Georgia firebrick to 1700 deg. fahr.

Dolomite. See DOLOMITE.

Drying. Improvements in Drying Refractories or Other Goods, J. Holland and W. J. Gardner. Ceramic Soc.—Trans., vol. 23, part 1, 1924, pp. 16-20 and (discussion) 20-25, 6 figs. Describes method of drying silica bricks, or other refractories, by means of a stove which is heated by gases and products of combustion radiating through floors and side walls, while goods are slowly transported through stove on wrought iron plates running over a tram-way, machinery for this motion being fixed at front of stove and worked by means of a worm shaft connected with main drive of mill.

Notes on the Proctor Dryer, A. H. Middleton. Ceramic Soc.—Trans., vol. 23, part 1, 1924, pp. 51-58 and (discussion) 58-60, 8 figs. Used for drying all sorts of materials such as soap, tobacco, and leather, as well as refractory materials. Is essentially a closed heated chamber, atmosphere of which is dry at one end and of high humidity at other; fresh atmospheric air is drawn in and dried goods are taken out at one end; wet goods are put in at other end and moisture-laden air from goods is drawn off some distance from this end.

Electric-Brass-Furnace. The Electric Brass Furnace Refractory Situation, H. W. Gillett and E. L. Mack. Am. Ceramic Soc.—Jl., vol. 7, no. 4, Apr. 1924, pp. 288-299, 5 figs. Describes the three prominent types of electric brass furnaces, and outlines conditions which they impose on refractories. Limitations which properties of refractories place on applicability of the various furnaces, and lines along which development and improvement are most likely to take place. (Pub. by permission U. S. Bur. Mines.)

Electric Resistivity. The Electrical Resistivity of Refractories, A. V. Henry. Am. Ceramic Soc. —Jl., vol. 7, no. 10, Oct. 1924, pp. 764-782, 13 figs. Determination of electrical resistivities of flint fireclay, kaolin, magnesite, sillimanite, silica, diaspore, and talcs at temperatures up to 1500 deg. cent.

Firebrick. See FIREBRICK.

Fireclays. See FIRECLAYS.

Furnace. See Coke-Oven.

Furnace Linings. See BOILER FURNACES, Linings.

Gas-House. Fireclay and Silica Brick as Gas House Refractories, A. F. Greaves-Walker. Gas Age-Rec., vol. 53, no. 17, Apr. 26, 1924, pp. 567-570. Notes on manufacturing methods, requirements of gas-house refractories, causes of air leaks and breaks, etc.

See also GAS MANUFACTURE, Retorts.

Glass-Furnace. Notes on the Behavior of Refractories in Glass Melting Furnaces, H. Insley. Am. Ceramic Soc.—Jl., vol. 7, no. 8, Aug. 1924,

pp. 583-593, 7 figs. Concludes that high alumina refractories would resist solvent action of glass and fluxing action of soda in furnace atmosphere better than fire clay refractories.

The Casting Process for Glass-house Refractories in German Glass Plants, K. Endell. Soc. Glass Technology—Jl., vol. 8, no. 29, Mar. 1924, pp. 57-66 and (discussion) 66-69, 3 figs. partly on supp. plate. What is being done in Europe in the matter of producing refractories for glass works by casting process.

High-Temperature, Bonding. Bonding High-Temperature Refractories, R. C. Gosreau. Chem. & Met. Eng., vol. 31, no. 18, Nov. 3, 1924, pp. 696-698. Results of practical study designed particularly to aid electric-furnace operator in selecting satisfactory bonding materials for use in patching, fettling, and making monolithic linings.

Oil-Gas Generators. Refractories for Oil Gas Generators, J. T. Creighton and M. J. Cereghino. Gas Age-Rec., vol. 54, nos. 24, 25, and 26, Dec. 13, 20, and 27, 1924, pp. 826-828, 860-862, and 894-896, 7 figs. Progress report of investigation made by California gas companies to determine chemical and physical characteristics of various kinds of firebrick, and relation of these characteristics to actual results realized in practice.

Open-Hearth Furnaces. Chrome Refractories for the Open Hearth, R. E. Griffith. Am. Ceramic Soc.—Jl., vol. 7, no. 9, Sept. 1924, pp. 690-698. Compilation of notes on chrome ore, and various forms in which it is used in open-hearth furnaces, with discussion of recent improvements in chrome brick that have permitted their broader use; performance data.

Observations on Requirements of Refractories for Open Hearth, F. W. Davis and G. A. Bole. Am. Inst. Min. & Met. Engrs.—Trans., no. 1312-S, Mar. 1924, 10 pp. Deals with certain of necessary requirements of refractories for open-hearth furnace; refractories in common use for different parts are discussed both as to service they are giving and their suitability to withstand existing chemical, thermal, and physical requirements; relation between service and allowable cost of refractory; suggestions on these points.

Roof Brick for the Open Hearth, H. C. Harrison. Am. Ceramic Soc.—Jl., vol. 7, no. 9, Sept. 1924, pp. 608-705. Considers conditions under which roof brick has to stand and possible means of improving refractories in common use; possibility of utilizing other available refractories.

Some Considerations Necessary in Selection of Refractories for the Open Hearth, S. Cornell. Am. Ceramic Soc.—Jl., vol. 7, no. 9, Sept. 1924, pp. 670-681. Discusses kind, quality, and quantity of refractory brick used in steel-plant furnaces, coke ovens, blast furnace, open-hearth, and auxiliaries; factors that influence life of refractory brick in open-hearth furnace, with economic situation indicated in monetary value.

Properties. Selection Factors in Choosing Refractories for Industrial Plant Use, O. A. Hougen. Chem. & Met. Eng., vol. 30, no. 19, May 12, 1924, pp. 737-741. Basic facts upon which engineer must base his choice of refractory; includes table giving physical and chemical properties of refractory materials.

Refractoriness and Composition, Relation of. The Relation between Ordinary Refractoriness, Under-load Refractoriness and Composition, Physical and Chemical, of Refractory Material, A. J. Dale. Ceramic Soc.—Trans., vol. 23, part 3, 1923-24, pp. 217-233, 11 figs. Details and results of experiments. Reprinted by permission Brit. Refractories Research Assn. from Bul. no. 5, Dec. 1923.

Refuse Firebrick, New Use for. New Use for Refuse Refractory Material, S. F. Walton. Iron Age, vol. 113, no. 11, Mar. 13, 1924, pp. 786-788, 4 figs. Old fireclay brickbats ground up with bond to form highly refractory mortar; cost reported low.

Research Committee Report. Report of Refractory Materials Joint Research Committee. Gas. Jl., vol. 167, no. 3191, July 9, 1924, pp. 17-36 and (discussion) 36-38 (supp.), Contains abstracts of following papers: Storage of Silica Refractories, W. J. Rees; Relation Between Ordinary Refractoriness, Under-Load Refractoriness, and Composition, Physical and Chemical, of Refractory Material, A. J. Dale, 11 figs.; Refractoriness Under Load, J. W. Mellor, 2 figs.; Sedimentation as a Means of Purifying Clay, S. R. Hind; Effect of Repeated Burning on Structure and Properties of Lime-Bonded Silica Bricks, W. Hugill and W. J. Rees, 10 figs.; Some Causes of Variation in Sizes of Refractories—Bricks and Block, J. W. Mellor, 3 figs.; Thermal Conductivity and Some Other Properties of Two Commercial, Heat-Insulating Bricks Used in Kiln Construction, A. T. Green, 5 figs.; Influence of Texture on Transmission of Heat Through Firebricks, A. T. Green, 12 figs.

Silica. Common Sense and Common Refractories, M. C. Booze. Chem. & Met. Eng., vol. 31, no. 26, Dec. 29, 1924, pp. 1003-1005, 1 fig. Analysis of possible future developments in fireclay and silica refractories; practical limitations on quality of product.

Silica Brick. See SILICA BRICK.

Sillimanite. See Artificial Sillimanite.

Testing. The Softening Test and Its Possibilities (Der Erweichungsversuch und seine Möglichkeiten), H. Hirsch. Berichte der Deutschen Keramischen Gesellschaft, vol. 5, no. 3, Sept. 1924, pp. 65-86, 23 figs. Describes methods and apparatus used in softening test as used in United States, England, and Germany, and gives examples.

Thermal Conductivity. Studies on the Thermal Conductivities of Some Refractory Materials. Am. Seramic Soc.—Jl., vol. 7, no. 1, Jan. 1924, pp. 19-28, 2 figs. Describes tests made for purpose of obtaining reliable conductivity coefficients on several types of refractory bricks made from ceramic bonded electric-furnace products, and results obtained; description of apparatus used.

Thermal Conductivity of Refractory Materials (Sur la conductibilité thérmique des matériaux refractaires), P. Gilard. Revue Universelle des Mines, vol. 4, no. 1, Oct. 1, 1924, pp. 34-50, 5 figs. Discusses heat transmission and its determination. Tests show that heat transmission increases with temperature. Bibliography.

Tube-Mill Lining. Domestic Tube-mill Lining Successfully Meets Foreign Competition, W. M. Weigel. Eng. & Min. Jl.-Press, vol. 118, no. 24, Dec. 13, 1924, pp. 925-928, 5 figs. Production of siliceous blocks for linings, at Jasper, Min., replacing product formerly imported from Europe, mostly from Belgium.

REFRIGERANTS

Ammonia. See AMMONIA.

Ethyl Chloride. The Thermal Properties of Ethyl Chloride, C. J. Jenkin and D. N. Shorthose. Refrig. Eng., vol. 10, no. 8, Feb. 1924, pp. 313-318, 3 figs. Results of research carried out at Eng. Lab. in Oxford for Eng. Committee of Food Investigation Board. From Special Report No. 14 of Dept. Sci. & Indus. Research of Great Britain. See also Ice & Refrigeration, vol. 66, no. 4, Apr. 1924, pp. 347-348.

Evaporating Systems for. Evaporating Systems for Refrigerants, W. F. Davis. Ice & Refrigeration, vol. 66, no. 1, Jan. 1924, pp. 7-10 and (discussion) 10-12. See also Refrig. World, vol. 59, no. 1, Jan. 1924, pp. 23-24. Past and present evaporators; details of design; foundation for evaporators; purifying refrigerant.

Low-Pressure. Low-Pressure Refrigerants, H. D. Edwards. Universal Engr., vol, 40, no. 5, Nov. 1924, pp. 24-27, 2 figs. Consideration of the different chemicals used, and of lubrication problem. Abstract of paper read before Nat. Assn. Practical Refrig. Engrs.

Methyl Chloride. A Heat Chart for Methyl Chloride, T. M. Gunn. Refrig. Wld., vol. 59, no. 7, July 1924, pp. 15-18. Advantages and properties of methyl chloride and explanation of chart; with diagram more common problems of refrigeration may be worked out almost without calculation.

Natural-Gas Gasoline. Use of Highly Volatile Natural Gas Gasoline as a Refrigerant, L. D. Wyant. South. Engr., vol. 42, no. 3, Nov. 1924, pp. 55-58, 2 figs. Results of experimental runs using gasoline as a refrigerant.

Organic Brines. Organic Refrigerating Brines, H. F. Zoller. Indus. & Eng. Chem., vol. 16, no. 10, Oct. 1924, pp. 1073-1075, 1 fig. Deals with non-aqueous and aqueous brines; factors affecting choice of brine; advantages of alcohol-water mixture; summarizes advantages of certain organic refrigerating brines of methyl-ethyl alcohol or glycerol type over inorganic chloride brines.

Properties. Properties of Refrigerants, H. D. Edwards. Refrig. Eng., vol. 11, no. 3, Sept. 1924, pp. 95-116, 20 figs. Report containing data on physical properties, effect on various lubricants, effect on human life or health, inflammability, explosive qualities, method of testing purity, precautions essential in handling, etc.

Sulphur Dioxide. Thermal Properties of Sulphur Dioxide, D. L. Fiske. Refrig. Eng., vol. 10, no. 6, Dec. 1923, pp. 197-200 and 204, 3 figs. Work undertaken to derive results to cover properties of superheated and saturated regions with a thermodynamically consistent set of equations.

Thermodynamics of. Comparison of Thermodynamic Characteristics of Various Refrigerating Fluids, W. H. Carrier and R. W. Waterfill. Refrig. Eng., vol. 10, no. 12, June 1924, pp. 415-424, 12 figs. Comparison and analysis of refrigerating cycles of various fluids using ideal Carnot cycle as standard, also their adaptibility for positive or centrifugal compression.

REFRIGERATING MACHINES

Absorption. The Absorption Ice Machine, H. A. Cranford. Southern Engr., vol. 40, no. 6, and vol. 41, nos. 1 and 2, Feb., Mar., and Apr., 1924, pp. 38-42, 38-40, and 57-59, 10 figs. Pointers on purchasing; the various apparatus comprising the system; handling aqua-ammonia pump; packing, gaskets and supplies. What to do when overhauling the system and how to handle the various apparatus.

Air. The Use of Cold Air as a Refrigerating Agent, M. Leblanc. Refrig. Eng., vol. 10, no. 8, Feb. 1924, pp. 309-313, 3 figs. Application to freezing of ice; decided departure from beaten path described and advantages of such a system enumerated and substantiated with figures. From Revue Générale du Froid, Dec. 1922.

Autofrigor. The "Autofrigor" Refrigerating Machine. Engineering, vol. 117, no. 3030, Jan. 25, 1924, p. 104, 4 figs. Small cold-storage apparatus suitable for private users, shopkeepers, etc.; is perfectly self-contained piece, electrically driven, and adaptable to practically any type of cold cupboard or chamber.

British Empire Exhibition. Refrigerating Machines at the British Empire Exhibition. Engineering, vol. 118, nos. 3068 and 3068, Oct. 17 and 24, 1924, pp. 559-563 and 594, 26 figs. Details of various types.

Compressors. Lubrication of Refrigeration Compressors, A. F. Brewer. Power, vol. 59, no. 14, Apr. 1, 1924, pp. 524-525. Discusses lubrication requirements of respective machinery of CO_2, sulphur dioxide, ethyl and methyl chlorides, and propane when used as refrigerants.

The Carbon Dioxide Compressor, H. J. Macintire. Refrig. Wld., vol. 59, no. 6, June 1924, pp. 16-18, 2 figs. Improvements in recent years have followed along same lines as in ammonia compressor design.

Compression. Recent Improvements in Refrigerating Apparatus, F. Ophuls and G. A. Horne. Refrig. Eng., vol. 2, no. 1, July 1924, pp. 1-13, 8 figs. Deals with that part of ammonia-compression refrigerating system in which ammonia is transferred to compressor, from there to condenser, then to receiver and finally liquid is returned to expansion, pressure reducing, or liquid regulating valves of system.

The Advent of the Compound Compression Refrigerating System, L. J. Sforzini. Power, vol. 60, no. 5, July 29, 1924, pp. 172-174, 4 figs. Describes one of the latest arrangements of compound compression system of refrigeration; shell-and-tube equipment employed for intercooler, gas precooler, condensers and brine coolers, all this apparatus proper being without a single gasketed joint. Notes on four other methods of compound compression. Condensing operation. Steam consumption with different pressures.

Ethyl-Chloride. An Ethyl Chloride Refrigerating Compressor, R. G. Reid. Ice & Cold Storage, vol. 27, no. 311, Feb. 1924, pp. 27-30, 3 figs. The ideal refrigerant; pros and cons of ethyl chloride; describes Peter Brotherhood, Ltd., vertical single-cylinder two-stage uniflow machine.

Packing for. Packing for Refrigerating Machines, B. E. Seamon. South. Engr., vol. 41, no. 7, Sept. 1924, pp. 39-41. Requirements of suitable packing for rod stuffing boxes on refrigerating machines.

Precooling in. Pre-Cooling by Primary Evaporation and Multiple Effect Compression, as Applied to CO_2 Refrigerating Machines, Henry Brier. Cold Storage, vol. 27, no. 315, June 19, 1924, pp. 246-248, 6 figs. Shows that multiple-effect compression is preëminently suited for dealing satisfactorily with two evaporations in closed cycle of CO_2 refrigerating plant arranged for precooling by partial or primary evaporation.

Sleeve-Valve. A New Standard in Compressor Design. Cold Storage, vol. 27, no. 320, Nov. 20, 1924, pp. 462-463. Describes refrigerating machine of entirely novel and revolutionary design, invented by E. Prestage, of London, and now being built by H. J. West & Co., Ltd., Lincoln, for which remarkable efficiency is reported; compressors are of vertical enclosed single-acting type.

Small Domestic. Small Domestic Refrigerating Machines, Chas. Schlumberger. Mech. Eng., vol. 46, no. 12, Dec. 1924, pp. 907-908. Describes types on European market as demonstration of his claim that problem of designing and building small domestic refrigerating machines has been solved.

Throttle Expansion. On the Coefficient of Performance of Refrigerating Machines employing Throttle Expansion, A. W. Porter. Lond., Edinburgh, & Dublin Philosophical Mag. & Jl. Sci., vol. 48, no. 287, Nov. 1924, pp. 1006-1010, 2 figs. When comparison is made between two cases of mechanical refrigeration in one of which cooling is produced by cylinder expansion and in other by throttle expansion, but all other conditions the same in both, coefficient of performance is less in throttle case than in other for two reasons: (1) more work is required to keep fluid in circulation, (2) less heat can be removed from cold stores.

Types. Modern Refrigerating Machines, R. G. Reid. Inst. Mar. Engrs.—Trans., vol. 35, Feb.

1924, pp. 570-601 and (discussion) 601-607, 6 figs. Shows factors which have influenced adoption of high-speed compressor, describes some particular machines, and presents summary of tests taken from such machines on test bed in actual service.

REFRIGERATING PLANTS

Automatic, Electricity in. Electricity in Automatic Refrigeration, W. Deans. Refrig. Eng., vol. 10, no. 9, Mar. 1924, pp. 335-344 and 348-349, 4 figs. Character of load on motor; types, selection, control, and protection of motors; describes automatic plant.

Brine Coolers. See AMMONIA CONDENSERS, Brine Coolers and.

Brine Hold-Over Tanks. Heat Transfer in Brine Hold-Over Tanks, Chas. H. Herter. Power, vol. 59, no. 15, Apr. 8, 1924, pp. 563-565, and Refrig. Eng., vol. 10, no. 10, Apr. 1924, pp. 370-371, and 375. Three types of hold-over tanks; how to calculate size of congealing tank.

Cooling Towers. See COOLING TOWERS.

Development. See ICE PLANTS, Development.

Electric Equipment Control. Control of Electrical Equipment in Refrigerating Plants, H. P. Hill. Ice & Refrigeration, vol. 66, no. 1, Jan. 1924, pp. 22-26, 3 figs. Discusses transformers, starting of synchronous motors, keeping ice plant in continuous operation, etc.

Equipment Specifications. Elimination of Defective Materials and Workmanship, W. H. Metcalf. Ice & Refrigeration, vol. 67, no. 2, Aug. 1924, pp. 87-90. Discusses lines on which specifications may be compiled to enable contractors to quote on their standard plant and to enable purchaser to make comparison.

Fish-Freezing. A Modern Fish Freezing Plant, P. W. Petersen. Refrig. Eng., vol. 10, no. 12, June 1924, pp. 425-431, 10 figs. Describes Petersen methods using brine tanks, the brine not coming in contact with the fish, however; gives results obtained. See also Ice & Refrigeration, vol. 67, no. 2, Aug. 1924, pp. 103-108, 10 figs. and Ice & Cold Storage, vol. 37, no. 317, Aug. 1924, pp. 207-212, 5 figs.

Heat Transmission in. Heat Transmission, A. G. Clausen. Cold Storage, vol. 27, no. 321, Dec. 18, 1924, pp. 503-505 (includes discussion), 3 figs. Efficiency factors in refrigerating system. Abstract of paper read before Brit. Cold Storage & Ice Assn.

High-Speed Compressor Installation. Refrigerating Plant with High-Speed Ammonia Compressors. Engineering, vol. 117, no. 3028, Jan. 11, 1924, pp. 42-43, 9 figs. partly on p. 50. New plant installed for Blackfriars Cold Storage Co. is said to be interesting not only because of great compactness of arrangement, but also in respect to design of compressors employed, of vertical high-speed type.

Ice-Cream. World's Largest Ice Cream Plant, T. Mitchell. Refrig. Wld., vol. 59, no. 7, July 1924, pp. 11-14 and 36, 15 figs. Illustrated description of Breyer Ice Cream Co.'s new plant in West Phila., Pa., equipped to make 14,000,000 gal. a year.

Pressures and Temperatures. Pressures and Temperatures in the Refrigerating Plant, G. Grow. Power, vol. 60, no. 20, Nov. 11, 1924, pp. 768-769, 2 figs. Shows influence of suction pressure on power required by compressor; points out that influence of superheat in suction is often ignored; discharge pressure is dependent upon temperature of cooling water.

Radiators, Cast-Iron Sections. Heat Transfer in Cast Iron Radiator Sections for Ammonia, H. J. MacIntire. Refrig. Eng., vol. 11, no. 6, Dec. 1924, pp. 195-199 and (discussion) 199 and 205-206, 6 figs. Account of tests on cold-storage box 12 ft. by 15 ft. with evaporative surface placed on side walls, in order to secure information as to relative advantages of cast-iron radiator sections as compared with piping.

Research Plant. Refrigeration for Research Work, S. R. Winters. Ice & Refrigeration, vol. 67, no. 1, July 1924, pp. 14-15, 2 figs. Describes experimental refrigerating plant at Bur. Animal Industry of U. S. Dept. Agriculture, Washington, D. C.; considerations of temperatures required; description of equipment; improvement of foods due to research work.

Rules and Formulas for. Some Rules and Formulae for the Refrigeration Engineer, W. H. Motz. Refrigerating Eng., vol. 11, no. 2, Aug. 1924, pp. 51-56 and (discussion) 56-60 and 64-65. Gives general rules and formulas concerning mechanical equipment of ice-making and refrigerating plants; rules pertain to displacements, speeds, and power requirements of compressors; heat removed in condensers; water and surface requirements for condensers; capacities of ammonia receivers; refrigerating coils in air, evaporators for refrigerating liquids; quantity of brine and power requirements of brine circulation systems; refrigeration pipe, cans per ton of ice.

Tests. Additional Data Regarding the Reliability of Fluid Meters in Refrigerating Tests, L. S. Morse. Refrig. Eng., vol. 10, no. 11, May 1924, pp. 385-398 and (discussion) 398-404, 12 figs. Results of comparisons and calculations of orifice, brine venturi, water venturi, and ammonia venturi meters.

REFRIGERATION

Absorption System. The Absorption Refrigerating System, H. J. MacIntire. Power, vol. 59, no. 11, Mar. 11, 1924, pp. 399-401. Competition of compression system; refrigeration calculations; heat taken up in absorber.

Air-Cooling Plant. See AIR COOLING.

Ammonia Chart. Refrigeration and the Ammonia Chart, D. L. Fiske. Ice & Refrigeration, vol. 66, nos. 1, 2, and 6, and vol. 67, no. 1, Jan., Feb., June, and July, 1924, pp. 86-78, 185-187, 543-545, and 36-37, 9 figs. Compound and multiple effect of compression; use of ammonia chart; testing of refrigeration machinery; rational basis for development of thermodynamic tables of properties of refrigerants; specific properties desired computed by thermodynamic laws; analysis of experimental data; properties of saturated and superheated vapors; development of equations; etc.

Ammonia Radiators. See RADIATORS, Ammonia.

Ammonia Tables, Use of. Using the Ammonia Tables, J. E. Starr. Power, vol. 60, no. 3, July 15, 1924, pp. 91-92. Gives tables showing properties of saturated and superheated ammonia—saturated-ammonia table containing also gage pressure—and explains their use.

Bakeries. See BAKERIES.

Brine and Direct-Expansion Cooling. Comparison of Direct Expansion and Brine in Applying Refrigeration, H. J. Macintire. Chem. & Met. Eng., vol. 30, no. 26, June 30, 1924, pp. 1027-1029, 4 figs. Conditions governing application of cooling by two methods, with particular emphasis on brine cooling.

Brine Spray Systems. Brine Spray Refrigerating Systems, S. C. Bloom. Ice & Refrigeration, vol. 66, no. 5, May 1924, pp. 476-478, 2 figs. Considerations pertaining to design and operation; types of brine systems; a typical plant. Abstract of paper read at Nat. Assn. Practical Refrig. Engrs. convention.

British Empire Exhibition. Refrigeration at Wembly. Power Engr., vol. 19, nos. 221 and 222, Aug. and Sept. 1924, pp. 308-311, and 346-348, 11 figs. Illustrated description of refrigerating plant actually performing useful functions at British exhibition.

Cold Storage. See COLD STORAGE.

Eggs. See EGGS, Preservation.

Electric. Electro-Mechanical Refrigeration, A. D. Mclay. Nat. Elec. Light Assn.—Bul., vol. 11, no. 3, Mar. 1924, pp. 155-158. Temperature observations of cellars and living rooms; summary of refrigerator temperature studies; vapair process; ice-cream cabinets; etc. Abstract of paper read before Nat. Elec. Light Assn.

Servicing Domestic Electric Refrigerators, H. E. Young. Elec. Wld., vol. 84, no. 22, Nov. 29, 1924, pp. 1149-1152. Experience data for 224 installations and factors involving successful promotion and sales methods, as reported to Nat. Elec. Light Assn.

Evaporated-Water. Refrigeration with Evaporated Water. Nautical Gaz., vol. 107, no. 3, July 19, 1924, p. 76 (tech. sec.), 3 figs. Details of new Westinghouse-Leblanc apparatus which does not require chemicals.

Food Industries. The Use of Refrigeration in the Food Industries (Köling anvendt i Levnedsmiddelindustrien), N. Jörgensen. Tekniske Forenings Tidsskrift, vol. 48, no. 11, Nov. 1, 1924, pp. 178-187, 8 figs. History. Description of various cooling systems and refrigerating machines, their use for cold storage and for manufacture of ice cream and chocolate. Refrigerator cars.

France. Some Recent Progress in the Refrigerating Industry in France (Sur quelques progrés récents de l'industrie frigorifique en France), L. Marchis. Technique Moderne, vol. 16, nos. 17 and 18, Sept. 1 and 15, 1924, pp. 565-577 and 604-615, 25 figs. Discusses compressors, including horizontal and vertical, single- and double-effect, rotary, multiple-stage, compressors for low-power refrigerators, high-power ammonia compressors, etc.; liquefiers and evaporators; flooded system, and liquid separators; insulators; transportation equipment used for importing and exporting cold-storage products; experiences on application of refrigeration to conservation of fish; Ottesen meat-freezing method; etc.

Fruits and Vegetables. Precooling of Fruits and Vegetables, J. W. Andrews. Ice & Refrigeration, vol. 67, no. 2, Aug. 1924, pp. 97-99, 1 fig. See also Refrig. Eng., vol. 11, no. 4, Oct. 1924, pp. 143-146 and 150, 1 fig. Discusses cooling before shipment, method and apparatus used.

Gas. Refrigerating With Gas, W. F. Schaphorst. Am. Gas Jl., vol. 121, no. 23, Nov. 8, 1924, pp. 1149-1150 and 1165-1167, 6 figs. Description of principles and practical installation.

Intermittent System. Intermittent System of Refrigeration, W. F. Schaphorst. Power Plant Eng., vol. 28, no. 6, Mar. 15, 1924, pp. 347-348, 2 figs. Describes refrigerating system which may be operated on off-peak boiler loads.

Liquid-Oxygen. See LIQUID OXYGEN.

Meat and Fish. New Investigations on the Preservation of Meat and Fish by the Freezing Process. Ice & Cold Storage, vol. 27, no. 314, May 1924, pp. 114-116, 8 figs. Changes on tissue of interior organs, heart, liver, kidneys, and spleen that result from freezing process. From article by E. Kallert in Zeit. für die Gesamte Kälte Industrie.

Milk-Bottling Plants. Refrigeration for Milk Bottling Plants, J. B. Williams. Ice & Refrigeration, vol. 67, nos. 2 and 3, Aug. and Sept. 1924, pp. 100-102 and 171-175, 9 figs. Discusses properties of milk, specific heat and freezing point, cooling and bottling, pasteurizing, refrigeration requirements in handling milk, refrigeration for storage rooms; diagrammatical representation of work of refrigerating plant and necessary refrigerating duty, analysis of various heat quantities, coils for milk storage room, brine storage tanks, brine coolers, mechanical equipment and power requirements.

Mine Ventilation, Use in. See MINES, Ventilation.

Non-Condensable Gases. Non-Condensable Gases, B. E. Hill. Refrig. Eng., vol. 10, no. 10, Apr. 1924, pp. 372-375, 1 fig. Their causes and effects upon economical and efficient operation of an ice-making or refrigerating system.

Oil-Refining Industry. Oil Refinery Refrigeration, C. H. Herter. Refrig. Wld., vol. 59, no. 3, Mar. 1924, pp. 13-16. Data on important applications of refrigeration in various industries treating oils, fats, and greases.

Power and. Power and Refrigeration, O. B. Goldman. Ice & Refrigeration, vol. 67, nos. 1, 2, 3, and 4, July, Aug., Sept., and Oct., 1924, pp. 38-41, 116-117, 169-170, and 231-232, 13 figs. July: Gas changes; constant weight and constant volume change, weight and pressure change, constant weight and temperature change, pressure and volume change, pressure and temperature change and adiabatic changes. Aug.: Specific heat of gases; discussion of elementary cycles; gas refrigerating cycles; power requirements, coefficients of performance, relative efficiencies. Sept.: Relation between coefficients of performance and efficiencies; practical examples on air compressors, gas-refrigerator and Otto gas-engine cycles. Oct.: Carnot cycle; power requirements; relation of pressures and volumes; heat expenditures.

Transit Temperatures. Low Temperature in Transit, M. E. Pennington. Ice & Refrigeration, vol. 67, no. 5, Nov. 1924, pp. 323-325. Some findings of pomologist, plant pathologists, bacteriologists, and bio-chemists in investigating relation of fruit and vegetable rots, disease and fungus infections to temperatures maintained in transit, and of low bacterial counts and retardation of chemical decomposition as determined in animal and fish products when well handled at adequately low temperatures.

REFUSE

Collection. Collecting City Refuse. Pub. Wks., vol. 55, no. 3, Mar. 1924, pp. 81-83, 1 fig. Traction physics, collection requirements, and designing of collecting vehicles. Experiences of four municipalities in use of electric trucks for refuse collection: Time test of collection in Pasadena.

Garbage and Trash Collection Methods, C. H. R. Fuller. Can. Engr., vol. 47, no. 16, Oct. 14, 1924, pp. 425-427. Methods employed in various cities. Sanitary fill; hog feeding; reduction; incineration; cost of operating Chatham incinerator.

Modern Methods of Refuse Collection, J. A. Priestley. Surveyor & Mun. & County Engr., vol. 66, no. 1700, Aug. 15, 1924, pp. 143-144. See also Can. Engr., vol. 47, no. 18, Oct. 28, 1924, pp. 457-458, and Contract Rec., vol. 38, nos. 42 and 44, Oct. 15 and 29, 1924, pp. 1024-1025 and 1082. Describes English practice, including types of receptacles, frequency of collection, dust prevention, transport methods and street refuse.

Refuse Collection and Disposal Arrangements on the Continent, F. W. Cable. Surveyor & Mun. & County Engr., vol. 65, no. 1684, Apr. 25, 1924, pp. 407-408. Report of a recent tour of investigation, describing methods adopted in Paris, Berlin, and Magdeburg.

The Pagefield System of Refuse Collection. Engineering, vol. 118, no. 3071, Nov. 7, 1924, pp.

655-656, 8 figs., partly on p. 646. Essential feature is combined use of horse and motor transport; motor vehicle does long trips from point to point and horses can be employed for slow house-to-house delivery or collection.

Disposal. See REFUSE DISPOSAL.

Utilization. Fertilizing Experiments with Fine Ground Refuse and Bulk Fertilizers as a Starting Point for More Economic Utilization of Municipal Refuse, etc. (Düngeversuche mit Feinmüll und Mengedünger als Ausgangspunkt für eine wirtschaftlichere Verwertung der städtischen Abfallstoffe Hausmüll und Klärschlamm), J. Bodler. Gesundheits-Ingenieur, vol. 47, no. 26, June 28, 1924, pp. 266-279, 6 figs. Discusses results of Bavarian experiments during last ten years and emphasizes successful fertilizing trials, of which tables are given.

Refuse Power Works and Steam Production From Refuse (Müllkraftwerke und Dampferzeugung aus Müll), A. Reich. Gesundheits-Ingenieur, vol. 47, no. 36, Sept. 6, 1924, pp. 394-397, 1 fig. Discusses effective use of refuse, especially if mxed with better fuel, and describes cascade grate, Martin patent, of Vesuvio A. G., and its advantages.

Thermotechnical Utilization of Refuse (Die wärmetechnische Ausnutzung des Mülls), H. Koschmieder. Brennstoff- und Wärmewirtschaft, vol. 6, nos. 10 and 11, Oct. and Nov. 1924, pp. 207-212 and 229-235, 5 figs. Discusses variety of refuse, composition and calorific value, and experiments in various German towns with refuse firing. Details of Dörr-Didier, Humboldt, and Herbertz systems of refuse firing.

REFUSE DISPOSAL

[See also GARBAGE DISPOSAL.]

American Practice. Résumé of American Practice in the Disposal of Refuse, S. A. Greeley. Surveyor & Mun. & County Engr., vol. 66, no. 1700, Aug. 15, 1924, pp. 149-150. See also Can. Engr., vol. 47, no. 10, Sept. 2, 1924, pp. 297-298. Describes methods more extensively used in America; reduction of garbage, hog feeding, incineration and comparison of methods. Abstract of paper read before Int. Conference on Sanitary Eng.

Birmingham, England. Refuse Utilisation Works: Birmingham. Ferro-Concrete, vol. 15, no. 12, June 1924, pp. 265-280, 3 figs. Description of Witton works recently opened for refuse disposal including two destructor units capable of burning to hard innocuous clinker 80 to 100 tons of house refuse per day; clinker crushing, grinding and sorting plant, magnetic separators, etc.

Destructors. Refuse Destructor with Unique Features. Contract Rec. & Eng. Rev., vol. 38, no. 26, June 25, 1924, pp. 641-644. Birmingham, England, has installed plant to handle 36,000 tons of refuse per year. Dust conveyed to barges by air pressure; special magnetic separator for cleaning clinker.

The First Step on the Production of Electric Power from the Destruction of City Refuse, K. Kishimoto. Denki Gakkwai Zasshi (Jl. Inst. Elec. Engrs. Japan), no. 431, June 1924, pp. 575-614, 14 figs. Analysis of city refuse as fuel, and results obtained with its use in testing installation; data and results of evaporation test. (In Japanese.)

Factory. Factory Refuse. Eng. & Boiler House Rev., vol. 38, no. 4, Oct. 1924, pp. 150, and 153-154, 2 figs. Author advocates systematic collection of factory refuse and burning it in steam boiler equipped on scientific lines, or in special refuse destructor so as to utilize all heat for some useful purpose.

Incinerator, Waste-Heat from. See WASTE HEAT, Utilization.

Incinerators. Wilmington's New Incinerator, H. L. Maier. Pub. Wks., vol. 55, no. 2, Feb. 1924, pp. 56-58, 1 fig. Description of three-unit plant with capacity of 25 tons a day; result of a test run of five weeks, and of twelve months of service operation.

See also Destructors.

Milwaukee, Wis. Refuse Disposal in Milwaukee. Pub. Wks., vol. 55, no. 10, Oct. 1924, pp. 303-304. Abstract of paper read by T. C. Hatton before Am. Soc. for Mun. Improvements, dealing with operation and results obtained by Milwaukee garbage disposal plant, which has been in continuous operation for 13 years, and collection of garbage and other refuse.

New Orleans. The Refuse Problem in New Orleans, C. Schneider. La. Eng. Soc.—Proc., vol. 10, no. 1, Feb. 1924, pp. 13-29 and (discussion) 30-45, 6 figs. partly on supp. plate. Outlines program proposed for future solution of problem, and briefly summarizes previous investigations that have led to adoption of this program.

Paris, France. Rational Treatment of Municipal Refuse (Traitement rationnel des résidus urbains), A. Bigot. Chimie & Industrie, vol. 11, no. 5, May 1924, pp. 857-872, 12 figs. Deals with collection, composition, sorting, drying and sterilization; manufacture of sand-lime brick and other ceramic products from mineral portion of refuse; all with special reference to Paris.

Plants, Electricity Generation at. See ELECTRIC POWER, Production.

Salvage Plant. New Refuse Salvage Works at Birmingham (England). Engineer, vol. 137, no. 3564, Apr. 18, 1924, pp. 419-421, 1 fig. Description of salvage plant, destructor and clinker plant. See also Surveyor, vol. 65, no. 1683, Apr. 18, 1924, pp. 377-380, 6 figs.

Separation and Salvage. Refuse Disposal by Separation and Salvage, J. Gair. Surveyor & Mun. & County Engr., vol. 66, no. 1702, Aug. 29, 1924, pp. 185-186. See also Can. Engr., vol. 47, no. 17, Oct. 21, 1924, pp. 444-445. Discusses disposal methods of Sheffield, Westminster, Newark, Birmingham, and Marylebon; steam from refuse. Abstract of paper read before Int. Conference on Sanitary Eng.

REGULATORS

Arca. Arca Regulators at the British Empire Exhibition. Engineering, vol. 117, no. 3048, May 30, 1924, pp. 714-716, 7 figs. Recent applications of system and improved forms of components lately introduced and shown by firm at Exhibition.

Oil-Pressure. The Working of a Generating Set Provided with an Oil-Pressure Regulator (Fonctionnement d'un groupe electrogène pourvu d'un regulateur à pression d'huile, sous la forme la plus générale), M. Barbillion. Revue de l'Industrie Minérale, no. 75, Feb. 1, 1924, pp. 69-76, 2 figs. Discusses working of a tachymetric oil-pressure regulator; design and calculation.

Polyphase Induction. Polyphase Induction Regulators, L. H. A. Carr. Elec. Rev., vol. 95, no. 2446, Oct. 10, 1924, pp. 528-530, 10 figs. Details of design and operation.

Pressure. An Automatic Pressure Regulator, L. E. Dawson. Indus. & Eng. Chem., vol. 16, no. 2, Feb. 1924, pp. 160-161, 1 fig. Apparatus satisfactorily maintains steady pressure for period of days with maximum variation of only 2 or 3 mm. of mercury when operating under 500 mm. vacuum.

Universal. A New Universal Regulator for the Control of Temperature, Pressure, Humidity, etc., T. Lindsay. Domestic Eng. (Lond.), vol. 44, nos.

3 and 4, Mar. and Apr. 1924, pp. 58-60 and 75-82, 20 figs. Description of a regulator which can be successfully applied to automatic control of practically any physical property; comprises a single-acting water pressure cylinder and a counterweight, water power being operating medium.

REHEATING. See CENTRAL STATIONS, Reheating in.

RELATIVITY

Electrodynamics. Principle of Relativity in Electrodynamics (Il principio di relatività nell'elettrodinamica), G. Corte. Rivista Marittima, vol. 57, no. 9, Sept. 1924, pp. 299-308. Discusses non-conformity of Maxwell's equations and classical mechanics, Lorentz transformations, validity of classical mechanics in case of small velocity of electrons, etc.

Origin and Nature of. The Origin, Nature and Influence of Relativity, G. D. Birkhoff. Sci. Monthly, vol. 18, no. 6, June 1924, pp. 616-624. Experimental tests of relativity.

RELAYS

Arc. Electro-Optic Application of Arc Relays (Sur quelques applications électro-optiques des relais à arc), L. Dunover and P. Toulon. Académe des Sciences—Comptes rendus des séances, vol. 179, no. 9, Sept. 1, 1924, pp. 461-464. Discusses use of relay for optic signaling, directed radiotelephony, recording and reproducing words, etc.

Bell Telephone System. Relays in the Bell System, S. P. Shackleton and H. W. Purcell. Bell System Tech. Jl., vol. 3, no. 1, Jan. 1924, pp. 1-42, 29 figs. Outlines relay developments leading up to and making possible present communication system, with particular reference to electromagnetic relays.

Control of Time Element. Controlling the Time Element of Relays (Beeinflussung der Schaltzeiten von Relais), E. Schulze. Zeit. für Fernmeldetechnik, vol. 5, nos. 4, 5, 6, 7, and 9, Apr. 16, May 16, June 16, July 16, and Sept. 16, 1924, pp. 28-32, 36-40, 41-48, 51-56, and 87-88, 46 figs. Discusses most important means to influence time or speed elements from theoretical and experimental standpoint; retarding action of relays by incandescent lamps, metal-filament lamps, short-circuit windings, etc.; concludes that parallel connection of thermically changeable resistances from metal-filament lamps to relay are best. See also article by same author entitled Control of Relays by Means of Condensers (Beeinflussung der Schaltzeiten von Relais durch Kondensatoren), in Elektrotechnik u. Maschinenbau, vol. 42, no. 35, Aug. 31, 1924, pp. 529-534, 5 figs.

Differentially-Connected, Testing of. Testing Differentially Connected Relays, C. M. King. Power, vol. 59, no. 14, Apr. 1, 1924, pp. 530-531, 3 figs. Instructions for making suitable tests before generator has been put into service and while generator is in operation, also how to make periodic tests.

Distance. Distance Relays for Selective Disconnection of Defective Sections (Zur Frage der Distanzrelais zum selektiven Abschalten beschädigter Netzteile), M. Schleicher. Elektrische Betrieb, vol. 22, no. 20, Oct. 24, 1924, pp. 205-211, 14 figs. Particulars of Westinghouse and A. E. G. distance relays. History and development of distance relays and their properties.

Electrostatic. Rectifying Action of So-called Electrostatic Relays and Explanation of Action of Contact Detectors (Die Gleichrichtwirkung des sogenannten elektrostatischen Relais und die Erklärung der Wirkungsweise der Kontaktdetektoren), W. Kramer. Zeit. für Physik, vol. 27, no. 1, 1924, pp. 74-82, 7 figs. Discusses theory of detector action, valve action of electrostatic relays, semi-conductors, arrangement of relays, etc.

Overload. Calibration of Induction-Type Overload Relays, R. A. Andrews. Elec. World, vol. 83, no. 25, June 21, 1924, pp. 1278-1280, 9 figs. Oscillographic study of electrical characteristics shows that iron saturation makes phantom testing unreliable.

Temperature Overload Relays, B. W. Jones. Gen. Elec. Rev., vol. 27, no. 5, May 1924, pp. 345-347, 5 figs. Describes two types, for protecting all kinds of electric motors, thermally lagged overload relay, and two-element temperature overload relays.

Protective. A Phase Balance Current Relay of the Negative Phase Sequence Type, J. V. Breisky. Elec. Jl., vol. 21, no. 2, Feb. 1924, pp. 77-81, 9 figs. Describes relay for protecting polyphase motors or rotary converters against running with phases unbalanced sufficiently to cause undue heating, with an open phase, or with a reversal of phases; operates successfully under all conditions of unbalance, and is sufficiently low in cost to make it suitable for extensive application; made possible by application of new theory dealing with solution of polyphase networks by means of symmetrical coördinates.

Application of Protective Relays, H. M. Rankin. Elec. Light & Power, vol. 2, no. 10, Oct. 1924, pp. 15-17 and 62, 5 figs. Review of modern practice.

Differentially Connected Relays for Protecting Electrical Machinery, C. M. King. Power, vol. 59, no. 6, Feb. 5, 1924, pp. 210-211, 3 figs. Explains how differentially connected relays operate when trouble occurs in equipment they are protecting, and conditions that cause relay action and oil switch to open.

Radio-Frequency. Sensitive Radio-Frequency Relay, Geo. Lewis. Am. Inst. Elec. Engrs.—Jl., vol. 43, no. 11, Nov. 1924, pp. 1031-1033, 4 figs. Theoretical properties, mechanical construction, and possible application of new electron relay, invented and developed by S. Ruben, of New York; its use is suggested in radio and carried-current systems, and where similar requirements are to be met.

Types. Relays for the Protection of Distribution Systems, H. E. Frey. Brown Boveri Rev., vol. 11, nos. 11 and 12, Nov. and Dec., 1924, pp. 235-242 and 273-281, 41 figs. Describes types of relays made by Brown Boveri Co.; over-current inverse time-limit relay; series definite time-limit relay; over-current definite time-limit relay; reverse-power relay; methods of tripping. Selective protection.

"Z"-Connected. Overload Protection by "Z" Connected Relays or Trip Coils. Elec. Rev., vol. 94, no. 2426, May 23, 1924, pp. 828-829, 8 figs. Describes "Z" method of connecting up relays and current transformers, which may be used on either three-phase three-wire, or three-phase four-wire systems with equal reliability. Examples showing current flowing through "Z" connected relays under normal conditions and also under varying conditions of overload.

RESEARCH

Agricultural Engineering. See AGRICULTURE, Farm Equipment, Research in.

Cement and Concrete. See CONCRETE, Research.

Electrical Engineering. Industrial Research, with Special Reference to Electrical Engineering Development, W. Wilson. Instn. Elec. Engrs.—Jl., vol. 62, no. 325, Jan. 1924, pp. 61-82 and (discussion) 83-107, 17 figs. Classes of research

work; need for technical development; causes of present position; functions of development department; recording and filing of results; indexes of literature and information; industrial research organizations in Great Britain. Bibliography.

Electrical Industry. The Field of Research in Industrial Institutions, E. W. Rice, Jr. Gen. Elec. Rev., vol. 27, no. 11, Nov. 1924, pp. 720-728. Consideration of field for research, especially in electrical industry.

The Influence of Research on the Electrical Industry, A. P. M. Fleming and J. G. Pearce. World Power (formerly Beama), vol. 1, no. 1, Jan. 1924, pp. 13-17. Illustrates progress through research; progress in materials; research and engineering developments; revolutionary and evolutionary research; research in industry; coöperative research.

Forest. See FORESTRY, Research.

Industrial. The Management of Industrial Research, J. M. Weiss and C. R. Downs. Chem. & Met. Eng., vol. 30, nos. 12, 13, and 14, Mar. 24, 31, and Apr. 7, 1924, pp. 475-478, 513-516, and 549-554. Mar. 24: Building of esprit de corps. Mar. 31: Kind of research organization necessary in special industry and relations with other departments of company. Apr. 7: Accounting system for development department and argument for its use.

Industrial, Utilization of Statistics in. The Utilization of Statistics, A New and Valuable Aid in Industrial Research and in the Evaluation of Test Data, K. H. Daeves. Testing, vol. 1, no. 3, Mar. 1924, pp. 173-189, 11 figs. Attempt is made to apply results of experience to industrial research; demonstration is given, by a number of examples, of how new "large figure research" may be applied to plant operation, to testing of materials, and control of services rendered, and how important conclusions may be drawn from the very simple application of method; relation is established in which this statistical research stands to pure science, its value to industrial research and operating engineer is demonstrated, and other fields of application are intimated.

Lighting. See LIGHTING, Research.

National Physical Laboratory. The Work of the National Physical Laboratory, F. Broadbent. World Power, vol. 2, no. 10, Oct. 1924, pp. 204-209. Review of annual report. Routine tests; research; radio apparatus; electrical instruments; cables; busbar rating; boundary lubrication; lubrication and superheat; mechanical properties of materials; 1,000,000-volt plant.

Patents and. See PATENTS, Research.

Statistical Methods, Application of. Some Applications of Statistical Methods to the Analysis of Physical and Engineering Data, W. A. Shewhart. Bell System Tech. Jl., vol. 3, no. 1, Jan. 1924, pp. 43-87, 13 figs. Deals with application of elementary statistical methods for finding best frequency distribution of deviations; points out limitations of theory of errors, based on normal law; points out advantages to be gained by physicist or engineer from an application of methods reviewed.

Steam. See STEAM, Research.

Technology Plan of Industrial Coöperation, M. I. T. Five Years of the Technology Plan. Technology Rev., vol. 27, no. 2, Dec. 1924, pp. 78-81. Essence of plan, now in existence 5 years, was coöperative arrangement whereby industrial concerns in search of aid in scientific research and investigation were to pay Mass. Inst. Technology stated sums of money as retainer fees in return for which research staff and facilities of Institute were to be placed with certain limitations at their disposal; how coöperative plan has fulfilled its promise; proposal for future.

RESERVOIRS

Calculation. Calculation of Water Reservoirs With Upper and Lower Storage Chamber (Zur Berechnung von Wasserschlössern mit oberer und unterer Speicherkammer), L. Mühlhofer. Zeit. des Oesterr. Ingenieur- u. Architekten-Vereines, vol. 76, nos. 45-46 and 47-48, Nov. 14 and 28, 1924, pp. 393-399 and 407-411, 6 figs. Discusses fundamental equations for movement of levels, sudden and complete shutting off of pressure conduit, sudden increase in load or of water drawn, etc. Gives practical examples.

Circular. Design of Reinforced Concrete Circular Reservoirs. Ferro-Concrete, vol. 16, nos. 1 and 3, July and Sept. 1924, pp. 9-12 and 61-64, 1 fig. Discusses new and more precise method of calculation. Translated from Constructeur de Ciment Armé.

Construction. Modern Methods of Constructing Reservoirs, R. E. McDonnell. Fire & Water Eng., vol. 76, no. 19, Nov. 5, 1924, pp. 1015-1016 and 1049, 7 figs. See also Eng. & Contracting (Water Wks.), vol. 62, no. 5, Nov. 12, 1924, pp. 1061-1065, 8 figs. Suggestions as to best types; proper size of reserve reservoir; advantages of covered style; making them watertight.

Modern Methods in Reservoir Building. Pub. Works, vol. 55, no. 9, Sept. 1924, pp. 289-292, 7 figs. Belt conveyors used for moving earth, aggregate, cement and concrete, over any distance and elevation desired; removing thin topsoil at minimum cost at Wanaque dam.

Failures. Failure of a Concrete Reservoir of Curious Design, J. C. Pinney. Eng. News-Rec., vol. 92, no. 7, Feb. 14, 1924, pp. 282-283, 4 figs. Four sides fall out of square structure at plant of Cudahy Bros. in Wisconsin; beam and side walls of reservoir were tied at corners by exposed diagonal rods.

Hume, Australia. See HYDROELECTRIC DEVELOPMENTS, Australia.

Remodeling. Repairing and Remodelling a Damaged Reservoir. Engineer, vol. 138, no. 3592, Oct. 31, 1924, pp. 493-494, 9 figs., partly on p. 496. Particulars of reconditioning reservoir which had original capacity of 4,250,000 gal., and is constructed on gravel foundation, with floor and walls of mass concrete.

Silting, Overcoming. Methods of Overcoming Silting of Reservoirs Outlined. Eng. News-Rec., vol. 93, no. 8, Aug. 21, 1924, p. 306. Four methods of overcoming trouble from silt, as given in studies of water power of Deep River in North Carolina, made by North Carolina Geol. & Economic Survey. Development of streams reduces trouble from silt.

Stillwater, N. Y. How a River Control District Is Building Its Reservoir, E. S. Cullings. Eng. News-Rec., vol. 92, no. 18, May 1, 1924, pp. 763-764, 2 figs. Organization of first river-regulating district under New York conservation law; details of Stillwater reservoir.

RESIN

Albertol Synthetic. Albertol, and the Present Statue of the German Synthetic Resin Industry ("Die Albertole," zugleich ein Bild des heutigen Standes der deutschen Kunstharzindustrie), E. Fonrobert. Kunststoffe, vol. 13, nos. 11-12, Nov.-Dec. 1923, pp. 109-122. See also (translation in abstract) Chem. Age (N. Y.), vol. 32, nos. 4 and 5, Apr. and May 1924, pp. 167-168 and 221-223. Describes synthetic resins manufactured in Kurt Albert Chemical Works and known under trade name of Albertol; different kinds of Albertols and their various uses.

Fossil. Fossil Gums, W. M. Myers. Chem. & Met. Eng., vol. 31, nos. 16, 17, and 18, Oct. 20, 27, and Nov. 3, 1924, pp. 617-618, 663-664, and 702. Oct. 20: Commercial recovery; occurrence

and mining of amber. Oct. 27: Production and use of kauri in New Zealand. Nov. 3: Copal gum.

Latin America. Gums and Resins of Latin America, O. Wilson. Chem. & Met. Eng., vol. 31, no. 10, Sept. 8, 1924, pp. 374-376, 5 figs. Chicle, elemi, manjak and many other materials of considerable industrial importance are available but await commercial exploitation.

RESONATORS. See ACOUSTICS, Resonators.

RETAINING WALLS

Calculation. Retaining Walls for Water (Sui muri dritti di ritenuta d'acqua), L. Conti. Annali dei Lavori Pubblici, vol. 62, no. 8, Aug. 1924, pp. 746-775, 1 fig. Discusses straight walls of triangular profiles, elasticity and stability, and makes calculations to determine most economic profile for given conditions.

Earth Pressure. See EARTH, Pressure.

Reinforced-Concrete. Reinforced Concrete Retaining Wall for Containing Gliding Ground (Muro de hormigón armada para contención de terrenos corredizos), C. M. Lahuerta. Revista de Obras Públicas, vol. 72, no. 17, Sept. 1, 1924, pp. 323-327, 8 figs. Details of construction of wall of railroad shops at Granada, (Sierra Nevada), and steel reinforcing of buttresses.

Step. Step-Retaining Walls at Astoria, Oregon, U. S. A. Engineering, vol. 117, no. 138, Feb. 1, 1924, pp. 138-139, 11 figs. partly on p. 146. Describes Aston type of step wall, of which 10,000 lin. ft. have been constructed at Astoria; its advantages and savings effected.

RHEOSTATS

Calculation. Calculation of Feeder Rheostats (Note sur le calcul des rhéostats de feeder), A. Castex. Industrie Electrique, vol. 33, no. 761, Mar. 10, 1924, pp. 85-90, 7 figs. Calculation of resistance of rheostat and graphical interpretation.

Starting. Calculation of Number of Contact Studs of a Motor Rheostat (Calcul du nombre de plots des rhéostats d'excitation), A. Léemann. Revue Générale de l'Electricité, vol. 16, no. 13, Sept. 27, 1924, pp. 501-505, 7 figs. Develops formulas for calculation which are more convenient than graphic method generally used.

Maintenance of Direct-Current Starting Rheostats, E. C. Parham. Nat. Engr., vol. 28, nos. 7, 8, 9, and 12, July, Aug., Sept., and Dec. 1924, pp. 329-331, 371-374, 442-444, and 595-597, 21 figs. Practical pointers on care, adjustment, testing and repair of direct-current rheostats that have their holding coils in series with shunt field circuit of motor; how to locate troubles, make necessary tests, and properly care for rheostats of this type; instructions for properly connecting rheostat to line and motor; troubles produced by making wrong connections, and how to detect them; non-voltage release coil troubles; testing rheostats.

RIFLES

Bolt Manufacture. Manufacture of the Bolt of the Springfield Rifle, E. McFarland. Mech. Eng., vol. 46, no. 8, Aug. 1924, pp. 463-470 and (discussion) 470-471, 19 figs. Methods employed in manufacture of bolt of Springfield rifle form an example of highly specialized use of tools, jigs, fixtures, and gages which is typical of gun-making industry. Describes a number of machining operations which are particularly adopted to gun manufacture, but which at same time may find some application in other lines of production. Particulars of system of gaging used.

RINGS

Steel, Shrinking on. Shrinking-On of Steel Rings (Aufschrumpfung von Stahlringen), E. Rosenberg. Elektrotechnische Zeit., vol. 45, no. 30, July 24, 1924, pp. 803-804, 4 figs. See also Elektrotechnik u. Maschinenbau, vol. 42, no. 30, July 27, 1924, pp. 468-470, 4 figs. Steel rings forming rotor of large hydro-turbo-generators are heated electrically and then shrunk onto shaft; advantages of electric heating, etc.

RIVER VESSELS

Harbor Work, Use for. River Steamers Used In Coast Service, C. H. Handy. Mar. Eng., vol. 29, no. 4, Apr. 1924, pp. 223-227, 4 figs. General details of two United States War Dept., 150-ft. river type steamers for harbor work, the General John McD. Hyde, for service on Long Island Sound, and the General Frank M. Coxe, sent to Pacific coast for station in San Francisco Harbor.

Model Experiments. Model Experiments on Rhine Ships, G. F. K. Wrobbel. Shipbldg. & Shipg. Rec., vol. 23, no. 14, Apr. 3, 1924, pp. 398-400, 5 figs. Comparison of normal with so-called "bridge construction" form. Abstracted translation of article published in Het Schip.

Propulsion. See SHIP PROPULSION, River Vessels.

Shallow-Draft Steamers. The Shallow Draught Steamer "Wanhsien." Engineering, vol. 137, no. 3027, Jan. 4, 1924, p. 10, 13 figs. on supp. plate. Steamer for service on Yangtze-Kiang, China, was designed to carry both passengers and cargo.

Superheaters for. See SUPERHEATERS, River Boats.

RIVERS

[See also INLAND WATERWAYS.]

Bank Protection. Chicago & Alton Defeats Missouri River by Narrow Margin. Ry. Eng. & Maintenance, vol. 20, no. 5, June 1924, pp. 231-232, 4 figs. Use of unusual methods holds banks of stream which threatened to cut railroad in two; measures employed included sinking of bodies of 110 steel gondola cars in stream, and placing of large masses of brush and rock between cars and banks.

Curbing a Threatened Diversion of the Missouri River. Eng. News-Rec., vol. 93, no. 10, Sept. 4, 1924, pp. 372-375, 5 figs. Destruction of railway and highway communications and disastrous results to river-front city all threatened in recent sudden erosion of south bank of Missouri River near Glasgow, Mo. Particulars of emergency protective work. Permanent protection work under way.

Brushwood Constructions. See HYDRAULICS, Engineering Problems.

Closing Break. Turning the Yellow River Back into Its Channel. Eng. News-Rec., vol. 92, no. 6, Feb. 7, 1924, pp. 224-227, 4 figs. Chinese River cuts 6000-ft. gap through main dike; new channel excavated and old channel closed by rock-fill dam; cost of excavation by Chinese labor.

Colorado. Engineering Opinions on Colorado Problem. Ariz. Min. Jl., vol. 8, no. 11, Nov. 1, 1924, pp. 33-39. Testimony of engineers before Committee on Irrigation and Reclamation of House of Representatives relative to projected plans for development of lower Colorado River Basin.

The Colorado River Problem, W. Kelly. Am. Soc. Civil Engrs.—Proc., vol. 50, no. 6, Aug. 1924, pp. 795-836, 11 figs. Offers impartial digest of published facts and estimate of probabilities, including unpublished studies on flood protection, water supply, irrigable areas, etc.; gives salient features of comprehensive scheme of development. See (discussion) in vol. 50, no. 9, Nov. 1924, pp. 1436-1499 and vol. 51, no. 2, Feb. 1925, pp. 262-288, 11 figs.

Control. The Economic Control of Rivers (L'Aménagement des Rivières), H. Lang. Annales des Ponts & Chaussées, vol. 94, no. 2, Mar.-Apr.

1924, pp. 197-208, 6 figs. Notes on conditioning rivers for navigation and method of determining characteristics of natural waterway.

Discharge, Measurements of. Recent Developments in Methods of Computation of River Discharge, C. H. Pierce. Cornell Civ. Engr., vol. 33, no. 1, Oct. 1924, pp. 9-12, 2 figs. New methods developed by U. S. Geol. Survey which are more accurate than old methods; describes discharge integrator, precision instrument so constructed as to make continuous application of rating curve to gage height graph throughout 24-hr. period or whatever period may be selected as unit of time, and which sums up in such a way as to show average rate of flow in cubic feet per second.

The Measurement of the Discharge of the Nile through the Sluices of the Assuan Dam, H. E. Hurst and D. A. F. Watt. Engineering, vol. 117, no. 3035, Feb. 29, 1924, p. 281. Describes first measurements of higher stages of Nile made by method depending ultimately on direct measurements of volume in masonry tank. . (Abstract.) Paper read before Instn. Civ. Engrs. See also abstract of paper by same authors on same page entitled, Similarity of Motion of Water through Slices and through Scale Models.

Diversion of Water from Great Lakes. Chicago's Diversion of Water from the Great Lakes. Eng. News-Rec., vol. 92, no. 1, Jan. 3, 1924, pp. 28-31. History of one of noted cases of water diversion with state, national, and international complications which is once more subject of possible litigation, federal legislation, and international agreement.

Experimental. An Experimental River. Engineer, vol. 137, no. 3565, Apr. 25, 1924, pp. 452-454, 3 figs. Devised and constructed at its Waterside works at Ipswich by Ransomes & Rapier, specialists in sluice work; model is constructed of concrete and consists of two arms of unequal length, one arranged at right angles to other; arrangements for measuring flow of water and ascertaining depth at various points.

Flood Control. See FLOOD CONTROL.

Floods. See FLOODS.

Flow in. See FLOW OF WATER, Rivers; STREAM FLOW.

Grand, Power Development. Grand River Conservation and Power Development, W. H. Breithaup. Eng. Jl., vol. 7, no. 9, Sept. 1924, pp. 604-606, 1 fig. Possibility of power development and its beneficial effect in preventing destructive floods.

Levees. Levees on Mississippi Tend to Lower River Bed, Chas. L. Potter. Eng. News-Rec., vol. 92, no. 7, Feb. 14, 1924, pp. 280-282, 1 fig. Low-water gage readings in Lower St. Francis and Reelfoot basins over long period of years submitted in proof of this contention.

Mississippi. The River and Harbor Problems of the Lower Mississippi—A Symposium. Am. Soc. Civ. Engrs.—Proc., vol. 50, no. 3, Mar. 1924, pp. 311-328, 4 figs. Discussion.

Mississippi, Transportation on. Upper Mississippi River Transportation, J. Brodie. Soc. Automotive Engrs.—Jl., vol. 14, no. 5, May 1924, pp. 516-521, 1 fig. Decline of water transportation; what river freight transportation requires; demand for water transportation of freight; type of boat required; use of internal-combustion engine; freight handling and protection.

Movement of Beds. Behavior of Movable Bed in Rivers Carrying Drift With Rising and Falling Level (Das Verhalten der beweglichen Sohle in geschiebeführenden Flüssen bei steigendem und fallendem Wasser), E. Faber. **Bautechnik, vol. 2,** no. 39, Sept. 12, 1924, pp. 426-430. Discusses variation of profile of surface of river beds with high and low water and cites various examples.

Pollution. See STREAM POLLUTION.

Rhine. Improvements of the Rhine Between Basel and Lake Constance (Der Ausbau des Rheins zwischen Basel und Bodensee), E. Mattern. Zeit. dess Vereines deutscher Ingenieure, vol. 68, nos. 29 and 30, July 19 and 26, 1924, pp. 752-756 and 774-776, 10 figs. Discusses various proposals to improve navigation; cost of production of water transportation and freights anticipated; harmonizing power developments with these improvements.

Rio Grande, Mexico. Hydrometric Service of the Rio Grande or Bravo (El servicio hidrométrico en el Rio Grande o Bravo del Norte), A. Santacruz, Jr. Revista Mexicana de Ingeniería y Arquitectura, vol. 2, no. 7, July 15, 1924, pp. 391-420, 7 figs. Details of hydrometric stations, observations and calculation of flow, sedimentation, etc.

St. Lawrence. The St. Lawrence River Problem, D. W. McLachlan. Eng. Jl., vol. 7, no. 3, Mar. 1924, pp. 119-141 and (discussion) 142-146, 25 figs. Important features of various projects for improvement of St. Lawrence River for power and navigation; international status; ice conditions; statement showing net heads obtainable in winter by various schemes considered; double development projects; possible modification of official plan; modification of plans for geographical system of dividing costs; economy of waterway project; practicability of waterway; calculations of future channel slopes in open season.

Sand Movement Along Channel. Some Model Investigations About the Motion of Sand Along a Self-Formed Channel, H. Nakayama. Tokyo Imperial University—Jl. of Faculty of Eng., vol. 13, no. 6, Mar. 1924, pp. 193-253, 46 figs., mainly on supp. plates. Model experiments carried out by author to ascertain change of forms of cross section, variation of slope of water surface, volume of sand carried along water course, relation between surface slope of water course at given point and volume of sand carried through that station.

Trent, England. Trent Navigation Improvement. Engineer, vol. 138, no. 3594, Nov. 14, 1924, p. 563, 10 figs., partly on supp. plate. Describes scheme of new locks and weirs now being carried out.

Yellow, China. The Improvement of the Yellow River, H. van der Veen. Assn. Chinese & Am. Engrs.—Jl., vol. 5, nos. 8 and 9, Aug. and Sept. 1924, pp. 1-8 and 9-21, 7 figs. on supp. plates. Characteristics of river, and present method of control. Explains principles underlying a radical improvement and proves their correctness, and proper methods to bring about desired result; advantages to be gained by improvement.

See also Closing Break.

RIVETED JOINTS

Frictional Resistance of. Determination of the Frictional Resistance of Rivet and Bolt Connections (Bestämning av glidmotståndet i nit- och bultförband), W. Weibull. Teknisk Tidskrift, vol. 54, nos. 3 and 7, Jan. 19 and Feb. 16, 1924, pp. 17-21 and 51-54 (Allmänna Avdelningen), 11 figs. Results of measurement of friction between steel plates; calculation of stresses in rivets. Diagrams and tables.

Rivet Arrangement, Effect of. The Influence of Rivet Arrangement upon Eccentricity in Asymmetrical Sections, G. D. Balsille. Commonwealth Engr., vol. 12, no. 2, Sept. 1, 1924, pp. 55-56, 1 fig. Investigation to determine effect of varying rivet arrangement, while still adhering to standard hole spacing, upon values of eccentricity factor.

Slip in Single and Repetitive Loading. Slip of Riveted Joints in Single and Repetitive Loading, D. H. Blakelock. Eng. News-Rec., vol. 92, no.

23, June 5, 1924, pp. 972-973, 3 figs. Results of 70 tests carried out at Cornell University on butt joints indicate first slip at average rivet shear of 5900 lb. per sq. in.

Stresses in. Stresses in the Riveted Joints of Steel Structures (Die Beanspruchung der Nietverbindungen bei Eisenkonstruktionen), Müllenhoff. Zentralblatt der Bauverwaltung, vol. 43, no. 101-102, Dec. 19, 1923, pp. 13 figs. Theoretical investigations and scientific measurements of stresses occurring. Great influence of quality of workmanship is emphasized.

RIVETING

Boiler. See BOILERMAKING, Riveting.

Machines for. Application of Work-Regulating Drive in Hydraulic Machines (Die Anwendung des Arbeitsreglerantriebes bei hydraulischen Maschinen), P. Hohnen. Maschinenbau, vol. 3, no. 23, Sept. 11, 1924, pp. 850-852, 3 figs. Describes A. E. G. automatically regulated electric motor and compares a riveting plant driven by such a motor with one having hydraulic drive.

Giant Portable Compressed Air Riveting Machine, J. C. Hanna. Compressed Air Mag., vol. 29, no. 5, May 1924, pp. 861-863, 4 figs. Description of 150-ton riveter designed and manufactured by Hanna Eng. Wks., Chicago, Ill.; makes use of compressed air in forming rivet heads, and compressed air is also drawn upon in rotating machine as well as in tilting it. Character of work that it performs.

Hydraulically Compressed Boiler Riveting (Hydraulisch gepresste Kesselnietung). Schiffbau, vol. 25, no. 12, Mar. 26, 1924, pp. 310-312, 6 figs. Describes stationary and portable types of hydraulic riveting machines and their operation.

Plate Tightening Before. See PNEUMATIC MACHINERY, Plate-Tightening Machine.

RIVETS

Cutting With Electric Arc. Rivet Cutting with an Electric Arc. Ry. Rev., vol. 74, no. 7, Feb. 16, 1924, pp. 290-292, 6 figs. Describes equipment in use for burning off of rivets on steel cars and locomotive boilers and tender tanks at Huntington, W. Va., shops of Chesapeake & Ohio Ry.

Heat Treating Steel for. Heat Treating Low-Carbon Bars for Rivets, C. B. Langstroth. Iron Age, vol. 113, no. 12, Mar. 20, 1924, pp. 849-850, 3 figs. Advantage derived from heat treating low-carbon steel as shown by some experience with rivets; cold working strains, as cause of broken heads, removed; properties of final product improved.

Red-Hot, Pneumatic Handling of. Pneumatic Handling of Red Hot Rivets, G. F. Zimmer. Indus. Mgmt. (Lond.), vol. 11, no. 1, Jan. 10, 1924, pp. 19-21, 3 figs. Furman method; describes Penflex rivet gun, its air consumption and working costs; conveying distance and speed.

Steel for, Endurance Tests on. See STEEL, Rivet.

ROAD CONSTRUCTION

[See also HIGHWAYS.]

Aggregates. Road and Pavement Aggregates, J. H. Bateman. Rock Products, vol. 27, no. 7, Apr. 5, 1924, pp. 32-33. Considerations affecting size and other properties of crushed stone, sand, and gravel used in construction of gravel roads, concrete pavements, and macadam roads. Abstract from Proc. of Ninth Annual Conference of Highway Eng.

City Paving Departments. See INDUSTRIAL ORGANIZATION, City Paving Departments.

Cliff Road. Building a Cliff Road to the Bear Mountain Bridge, J. M. Belknap. Eng. News-Rec., vol. 93, no. 19, Nov. 6, 1924, pp. 736-738, 4 figs. Shelf blasted out of Anthony's Nose and Manitou Cliffs and paved with concrete gives access to east bridgehead and by bridge to west side of Hudson River.

Cost Estimating. Notes on Estimating in Road Construction Work. Surveyor & Mun. & County Engr., vol. 65, no. 1687, May 16, 1924, pp. 465-467. Outlines a few examples illustrating how estimating prices are ascertained, and numerous items which have to be considered in deducing such prices.

England. Reviewing Modern Construction of Roads in England, F. G. Bailey. Highway Engr. & Contractor, vol. 10, no. 1, Jan. 1924, pp. 55-59, 9 figs. Present-day methods for construction of main and subsidiary roads.

Federal-Aid Highway System. Federal and State Policies in the Construction of the Federal Aid Highway System, T. H. MacDonald. Eng. & Contracting (Roads & Streets), vol. 61, no. 1, Jan. 2, 1924, pp. 26-33. Paper presented at convention of Am. Assn. State Highway Officials, Dec. 4, 1923.

Florida. Building a Motor Road Across the Florida Everglades, F. E. Lawrence and R. Y. Patterson. Eng. News-Rec., vol. 93, no. 11, Sept. 11, 1924, pp. 412-417, 7 figs. Construction details of private toll road being built through Everglades and along shores of Lake Okeechobee to afford a cross-state connection for lower Florida; it is 51 miles long, and has been entirely financed and built by W. J. Conners, of Buffalo, N. Y., at a cost of nearly $2,000,000; marl fill on marsh soil surfaced with crushed stone and oiled.

Grading. Preliminary Computation of Earthwork Quantities, F. M. Garnett. Eng. & Contracting (Roads & Streets), vol. 61, no. 4, Apr. 2, 1924, pp. 715-717, 4 figs. Rapid computation of earthwork quantities in highway grading by use of special tables.

The Cost of Grading With Fresnoes, J. L. Harrison. Pub. Roads, vol. 5, no. 8, Oct. 1924, pp. 10-15 and 23, 4 figs. Some suggestions as to common losses and how to avoid them.

The Effect of Haul on the Cost of Earthwork, J. L. Harrison. Pub. Roads, vol. 5, no. 7, Sept. 1924, pp. 14-17, 4 figs. Study conducted by Bur. Pub. Roads, and results.

Illinois. Building 1,000 Miles of Paved Road in One Season, C. M. Hathaway. Eng. News-Rec., vol. 92, no. 2, Jan. 10, 1924, pp. 63-65, 2 figs. Describes how Illinois built 741 mi. of hard-surfaced roads in 1922, and 1024 mi. in 1923.

Labor-Saving Machinery. Labor Saving Machinery for Street Construction Work. Gas Age.-Rec., vol. 54, no. 12, Sept. 20, 1924, pp. 391-393, Gives brief description of types of machines, their record of performance, and of savings which have been made. Abstract of paper read before Michigan Gas Assn. Convention.

Machinery for. See ROAD MACHINERY.

Methods and Costs. Business and Engineering of Road Construction. Eng. News-Rec., vol. 92, no. 3, Jan. 17, 1924, pp. 112-116, 2 figs. Contains abstracts of following papers read before Am. Road Bldrs. Assn.: Traffic Surveys, Methods and Costs, Geo. E. Hamlin; Simplified Practice—A Service to Road Builders, R. M. Hudson; Sand-Asphalt Road Construction Methods and Cost, E. R. Olbrich; Highway Traffic Accidents—Classification and Causes, N. M. Isabella.

Modern Methods of Road Maintenance and Construction, T. Somers. Surveyor & Mun. & County Engr., vol. 65, no. 1691, June 13, 1924, pp. 551-553. Subsoil and surface drainage; foundations; materials; rubber paving; tar and bituminous macadam; asphalt macadam; construction of new roads; etc.

Refined Tar in. Refined Tar in Highway Construction, J. S. Crandell. Can. Engr., vol. 47, no. 3, July 15, 1924, pp. 161-163, 3 figs. See also Eng. & Contracting (Roads & Streets), vol. 62, no. 2, Aug. 6, 1924, pp. 315-320, 6 figs. Subgrade must be carefully drained and prepared; laying wearing course; method of applying tarvia and finishing surface.

Spiral Curves, Use of. Spiral Curves Cut Costs of North Carolina Road Work, C. M. Pritchett. Eng. News-Rec., vol. 93, no. 4, July 24, 1924, pp. 132-135, 3 figs. Searle's railway spiral adapted to road work reduces surfacing and grading costs, simplifies field surveys, and cuts down office computations. Spiraling of highway curves has been adopted as standard practice by North Carolina State Highway Commission.

Subgrade-Soil Tests. Practical Field Tests for Subgrade Soils, A. C. Rose. Public Roads, vol. 5, no. 6, Aug. 1924, pp. 10-15, 12 figs. Suggested methods for measuring character of highway subgrades.

Surfacing. Economical Road Surfacing in a Sparsely Populated Semi-Arid Territory, J. L. Thayer. Eng. & Contracting (Roads & Streets), vol. 61, nos. 2 and 3, Feb. 6 and Mar. 5, 1924, pp. 317-326 and 503-509. Design, construction and maintenance of 14 typical examples. Portions of a thesis for degree fo C. E. submitted to State College of Wash., May 1, 1923.

Swamp. Construction of Highways Through Swamp Lands, J. M. Fourmy. Eng. & Contracting (Roads & Streets), vol. 61, no. 4, Apr. 2, 1924, pp. 722-725, 3 figs. Methods employed in Louisiana.

Swamp Road Building Among the Indiana Sand Dunes, H. M. Herald. Eng. News-Rec., vol. 92, no. 2, Jan. 10, 1924, pp. 58-60, 4 figs. Dragline half floating on soft marsh land builds parallel muck dikes and fills between them with sand.

Tractors, Use in. See TRACTORS, Caterpillar.

Tropics. Road Construction in the Tropics, J. P. Swettenham. Surveyor & Mun. & County Engr., vol. 65, no. 1668, Jan. 4, 1924, pp. 9-12. Discusses organization, pegging out, clearing, gradients, drainage, provision for storm water, road bridges, slopes, camber, road metal supplies, and transport of materials. Extracts from paper read before Eng. Assn. of Malaya.

ROAD MACHINERY

Rollers. Barford and Perkins' Road Rollers. Surveyor & Mun. & County Engr., vol. 65, no. 1677, Mar. 7, 1924, pp. 271-272, 4 figs. Describes a quick-reverse motor roller for use in laying of asphaltic and bituminous carpeting of road surfaces. Brief description of works of Barford & Perkins, Peterborough, Eng.

See also STEAM ROLLERS.

Tamping and Concrete-Breaking. Tamping and Concrete Breaking Machine. Engineer, vol. 137, no. 3557, Feb. 29, 1924, p. 236, 2 figs. Small machine intended for trenches up to 2 ft. wide; capable of breaking up 30 ft. run of concrete 2 ft. wide and 9 in. thick per hr.; can be mechanically propelled, and can be easily moved forward and operated by one man.

ROAD MATERIALS

Hydraulic Binders. Hydraulic Binders for Highways (Les liants hydrocarbonés pour le revêtement des routes), F. Mange. Génie Civil, vol. 85, no. 20, Nov. 15, 1924, pp. 446-451. Use of tars and bitumen, and their comparative advantages; mixing with sand; composition of aggregates, and proportioning of binder.

Rock Asphalt. Cold-Mix Rock Asphalt Production and Roadbuilding. Eng. News-Rec., vol. 92, no. 21, May 22, 1924, pp. 886-890, 8 figs. Kentucky rock asphalt distinguished by its silica aggregate and ability to bound without heating; gives best service under constant traffic.

ROAD ROLLERS. See ROAD MACHINERY, Rollers.

ROADS

[See also HIGHWAYS.]

Asphalt. See ROADS, ASPHALT.

Automobile Development and. See AUTOMOBILES, Roads, Influence on Development.

Bates Experimental. Results and Application of the Bates Road Tests, C. Older. West. Soc. Engrs.—Jl., vol. 29, no. 5, May 1924, pp. 225-240, 7 figs. Conclusions derived from experiments conducted by State Highway Department at Bates Test Road, extending over past 3 years.

See also HIGHWAYS, Research.

Bituminous. See ROADS, BITUMINOUS.

Bituminous Surface. Limitations of Bituminous Surface Treatments and Bituminous Macadam Pavements Under Modern Traffic, W. Patterson. Mun. & County Engr., vol. 66, no. 4, Apr. 1924, pp. 159-165. Lack of standardization. Discusses service rendered by both types of surfaces under modern traffic, and points out certain unfortunate circumstances surrounding construction and maintenance of these surfaces which may account for the extremely variable results which are so apparent.

What is the Correct Method of Maintaining Bituminous Surfaces? E. A. James. Contract Rec. & Eng. Rev., vol. 38, no. 10, Mar. 5, 1924, pp. 246-248. See also Can. Engr., vol. 46, no. 10, Mar. 4, 1924, pp. 299-300 and 303, 1 fig. Discusses surface treatment of macadam roads, surface maintenance of penetration roads, and surface maintenance of hot-top pavements.

Brick. See ROADS, BRICK.

Causeways. See CAUSEWAYS.

Concrete. See ROADS, CONCRETE.

Construction. See ROAD CONSTRUCTION.

Culverts. See CULVERTS.

Drainage. See DRAINAGE, Roadbed.

Earth. See ROADS, EARTH.

Flexible-Base. Flexible Base Pavements in the Northwest, K. C. Schmidt. Mun. & County Eng., vol. 67, no. 5, Nov. 1924, pp. 224-229. Advantages of flexible-base pavements, i.e., pavements whose bases are of either some form of crushed rock such as Telford and waterbound macadam, or asphaltic concrete; Minnesota's first black base; mineral grading specifications; etc.

Utility of Flexible Base Pavements, E. C. Schmidt. Can. Engr., vol. 47, no. 26, Dec. 23, 1924, pp. 625-627. Discusses their adaptability, particularly in Northwest. Advantages of asphaltic concrete. Improved grading specification for coarse asphaltic concrete mixtures.

Grade Changes, Calculation of. Easy Method of Calculating Highway Grade Changes, W. E. Jones. Eng. & Contracting (Roads & Streets), vol. 62, no. 4, Oct. 1, 1924, pp. 723-724, 5 figs. Easily applied plan used by road design department of Iowa State Highway Commission.

Gravel. See ROADS, GRAVEL.

Impact Tests. Status of the Motor Truck Impact Tests of the Bureau of Public Roads, C. A. Hogentogler. Pub. Roads, vol. 5, no. 9, Nov. 1924, pp. 11-14, 6 figs. Details of tests on slabs; particulars of investigation in which force of impact delivered by an actual truck to an actual road is measured simultaneously with effect of blow on road surface.

See also ACCELEROMETERS, Impact Tests on Roads.

Macadam. See ROADS, MACADAM.

Maintenance. Comparative Cost of Maintaining Dirt, Gravel and Concrete Roads, W. F. Rosenwald. Minnesota Federation Architectural & Eng. Soc. —Bul., vol. 9, no. 7, July 1924, pp. 11-15, 2 figs. Discusses varying conditions of traffic, factors affecting maintenance costs and traffic capacity, and gives some cost figures for dirt, gravel, and concrete roads.

The Maintenance of Roads in a Large City, J. R. Findlay. Surveyor & Mun. & County Engr., vol. 65, no. 1670, Jan. 18, 1924, pp. 49-51. Deals especially with road widenings and road surfaces. From paper read at Scottish Road Conference, Edinburgh.

Maintenance Cost Keeping. Establishing a Cost-Keeping System, J. L. Boulanger. Can. Engr., vol. 47, no. 1, July 1, 1924, pp. 113-115. Legislation and organization leading to establishment of accurate system of cost-keeping for road maintenance in Quebec province.

Materials for. See ROAD MATERIALS.

Pavements. See PAVEMENTS.

Redressed-Granite-Block. Redressed Granite Block Paving in Philadelphia, J. Adler. Eng. News-Rec., vol. 93, no. 15, Oct. 9, 1924, pp. 582-585, 4 figs. This class of pavement has given complete satisfaction. Uniformity of depth of block more important, with regard to wear, than side dressing and joints. Bituminous joint filler gives satisfaction.

Resurfacing. Pavement Resurfacing and Reconstruction, H. J. Baum. Eng. & Contracting (Buildings), vol. 62, no. 6, Dec. 3, 1924, pp. 1209-1212. Outlines problems of smaller cities.

Resurfacing and Surfacing Treatments and When They Are Justified, Wm. A. VanDuzer. Cornell Civ. Engr., vol. 32, no. 6, Mar. 1924, pp. 78-79 and VI-VIII. Factors in determining resurfacing; preliminary maintenance steps; resurfacing macadam road; application of bituminous material; unbound macadam.

Sand-Clay and Semi-Gravel. Sand-Clay and Semi-Gravel Roads Studied. Pub. Roads, vol. 5, no. 8, Oct. 1924, pp. 16-19. Progress report of coöperative research on selected roads in Georgia.

Smoothness Control by Vialog. New York Adopts Vialog Test for Smoothness Control. Eng. News-Rec., vol. 92, no. 2, Jan. 10, 1924, pp. 74-76, 3 figs. Instrument attached to automobile inscribes graphs of and adds up irregularities in road surface traveled over. Includes following articles: Smoothness Requirements in New York, F. S. Greene; Vialog Operation and Graphs, H. Dunbar; Discussion of Smoothness Surveys, furnished by Bur. of Roads, N. Y.

Subgrade, Capillary-Moisture Removal. Removal of Capillary Moisture in Highway Subgrades, Chas. M. Upham and H. F. Janda. Eng. News-Rec., vol. 93, no. 23, Dec. 4, 1924, pp. 912-913, 3 figs. Tests show drain tile ineffective; coarse layers check rise of moisture in fine soils; sand most effective agent.

Surfaces, Tractive Resistance of. Tractive Resistance and Related Characteristics of Roadway Surfaces, T. R. Agg. Iowa State College of Agriculture & Mechanic Arts, vol. 22, no. 36, Feb. 6, 1924, 62 pp., 33 figs. Discusses tractive resistance of self-propelled vehicles, especially interaction of tire and road surface; measuring of rolling resistance and its variations, relation between type of tire and rolling resistance, fuel consumption, etc.

Traffic Surveys. Methods and Costs of Traffic Surveys, G. E. Hamlin. Eng. & Contracting (Roads & Streets), vol. 61, no. 3, Mar. 5, 1924, pp. 535-540, 5 figs. See also Mun. & County Eng., vol. 66, no. 2, Feb. 1924, pp. 65-69. How traffic census were taken on Connecticut highway system.

ROADS, ASPHALT

Black-Base-Foundation. "Black Base" Construction in Mercer County, New Jersey, H. F. Harris. Eng. & Contracting (Roads & Streets), vol. 62, no. 1, July 2, 1924, pp. 39-42, 4 figs. Methods and cost of constructing bituminous base for sheet asphalt on heavy traffic highway.

Sand-Asphalt. Design and Construction of Sand Asphalt Pavements, S. R. Murray. Mun. & County Eng., vol. 66, no. 6, June 1924, pp. 253-256, 9 figs. In authors' opinion and based on his experience, this is least expensive type of durable road which can be built in sand community and should give good service for at least 12 to 15 years.

Sheet Asphalt on Concrete. City of Detroit Builds Heavy Traffic Pavements. Eng. News-Rec., vol. 93, no. 25, Dec. 18, 1924, pp. 987-988, 2 figs. New streets have 11½-in. sheet-asphalt-on-concrete pavements; specifications tightened up following expert study of materials and construction practice.

Shoving. Shoving of Asphalt Pavements Is Over-Criticised, P. Hubbard. Eng. News-Rec., vol. 93, no. 22, Nov. 27, 1924, pp. 862-864, 3 figs. Points out that shoving in true asphalt is only occasional; stability test for asphalt mixtures.

ROADS, BITUMINOUS

Construction. Bituminous Surface Treatment and Bituminous Macadam, I. W. Patterson. Eng. & Contracting (Roads & Streets), vol. 61, no. 5, May 7, 1924, pp. 1008-1013. Service rendered by these types of surfaces under modern traffic.

Maintenance. Methods of Maintaining Bituminous Roads, E. A. James. Eng. & Contracting (Roads & Streets), vol. 61, no. 4, Apr. 2, 1924, pp. 751-755, 2 figs. Experiences of Toronto and York Counties, Ontario, Roads Commission.

Service Rendered by. Bituminous Treatment Limitations, I. W. Patterson. Can. Engr., vol. 46, no. 25, June 17, 1924, pp. 621-625, 4 figs. Discussion of service rendered by surface treatments and bituminous macadam pavements under modern traffic; accounting for variable results.

Tar-Macadam Plant. Tar Macadam Plant with Scroll Drier and Cube Mixer. Engineering, vol. 117, no. 3048, May 30, 1924, pp. 700-702, 12 figs. Details of plant installed at Port Clarence Works of Wake & Co., where work is being carried out on large slag heap from which their aggregate is procured.

ROADS, BRICK

Florida. The Brick Roads of Florida, C. A. Hogentogler. Pub. Roads, vol. 5, no. 2, Apr. 1924, pp. 18-28, 29 figs. Observations of behavior of brick surfaces laid on confined sand subgrades.

ROADS, CONCRETE

[See also PAVEMENTS, CONCRETE.]

Aggregates, Weighing of. Weighing Aggregates for Concrete Highway Pavement, R. W. Crum. Eng. & Contracting (Roads & Streets), vol. 61, no. 4, Apr. 2, 1924, pp. 730-735, 6 figs. See also Highway Engr. & Contractor, vol. 2, no. 1, July 1924, pp. 57-59, 6 figs. Iowa Highway Commission has adopted actual weighing of aggregates on road pavement construction as standard practice. Discusses moisture content of aggregates and sand.

Construction. Concrete Roads in British Columbia. Contract Rec. & Eng. Rev., vol. 38, no. 4, Jan. 23, 1924, pp. 69-71, 7 figs. Construction methods used on Pacific Highway which links up Vancouver with international boundary.

Nashville-Springhope Highway, F. W. Skinner. Public Wks., vol. 55, no. 1, Jan. 1924, pp. 1-5, 4 figs. Fifteen miles of 16-ft. concrete surface laid on existing clay-gravel road in eight months; describes construction methods; hand work reduced to a minimum and close analysis of weekly reports to secure maximum efficiency.

Cracking. Checking of Concrete Road Surfaces, G. A. Macdonald. Can. Engr., vol. 47, no. 7, Aug. 12, 1924, pp. 235-239, 10 figs. Investigations into cause of cracking of concrete roads; details of experiments and conclusions drawn from results; suggested procedure to prevent cracking; concrete should be kept moist and covered with tarpaulins.

Crushing and Heaving of Bases. A Study of Crushing and Heaving of Concrete Pavement Bases, R. M. Green. Mun. & County Eng., vol. 66, no. 5, May 1924, pp. 216-219. Change in practice; effect of rise in temperature; effect of change in moisture content; results of tests and conclusions.

Curing. Cutting Down Curing Period for Concrete Roads, H. F. Clemmer. Eng. & Contracting (Roads & Streets), vol. 61, no. 2, Feb. 6, 1924, pp. 283-290, 5 figs. See also Eng. News-Rec., vol. 92, no. 14, Apr. 3, 1924, pp. 577-580, 10 figs. and Can. Engr., vol. 46, no. 17, Apr. 22, 1924, pp. 455-457, 3 figs. Results of investigation conducted by Bur. of Materials of Ill. Division of Highways on use of calcium chloride. Thousands of tests of concrete cured with calcium chloride indicate that it cuts normal curing time in two and does not injure strength or soundness.

See also CONCRETE, Curing.

Dam Top. Design of Paved Road for Dam Top Dayton Flood Works, C. S. Bennett. Eng. News-Rec., vol. 93, no. 17, Oct. 23, 1924, pp. 660-661, 1 fig. Concrete road with gutter to control run-off crowns hydraulic fill at Huffman dam; cured with calcium chloride.

Design. New Design Expected to Cut Cost of Concrete Roads. Eng. News-Rec., vol. 92, no. 15, Apr. 10, 1924, pp. 614-615, 1 fig. Edges thickened, edge and joint bars anchored, longitudinal joint doweled, traffic line inlaid, and yardage reduced in new design planned by Pa. Highway Dept.

Progress in Concrete Road Construction and Design in 1923. Concrete, vol. 24, no. 1, Jan. 1924, pp. 3-11, 24 figs. Discussions by different men covering outstanding developments of 1923, Missouri's design changes, new specifications in California, expension joint changes in Nevada, practice in Delaware, road reinforcing, practice in Michigan, subgrade support, practice in Utah, etc.

Reinforcing and the Subgrade as Factors in the Design of Concrete Pavements, J. T. Pauls. Pub. Roads, vol. 5, no. 8, Oct. 1924, pp. 1-9, 4 figs. A study of experimental sections of Columbia Pike, an experimental road constructed by U. S. Bur. Pub. Roads near Arlington, Va.

Tentative Conclusions on Design of Concrete, C. Older. Eng. & Contracting (Roads & Streets), vol. 61, no. 5, May 7, 1924, pp. 981-993, 8 figs. Developments of past year in Illinois highway research and their probable bearing on rural pavement design.

See also HIGHWAYS, Concrete.

Friction Test. Friction Test of Concrete on Various Subbases, A. T. Goldbeck. Good Roads, vol. 67, no. 3, Sept. 1924, pp. 79-81. Description of specimens and method of tests; shows that frictional resistance is lowered by wet subbase; lowering frictional resistance should reduce frequency of transverse cracks.

Impact Tests. Impact Tests on Concrete Pavement Slabs, L. W. Teller. Pub. Roads, vol. 5, no. 2, Apr. 1924, pp. 1-14, 22 figs. Details of tests made by U. S. Bur. Pub. Roads to determine resistance of various designs to impact of motor vehicles, and results obtained.

Inspection of. Some Essential Points on the Inspection of Concrete Highways, H. S. Mattimore. Good Roads, vol. 67, no. 1, July 1924, pp. 1-2 and 14, 4 figs. In order to give unbiased opinion in judging service value of any type of road surfacing, complete investigation or analysis of design and methods of construction are necessary. Discusses sub-grade condition and reinforcing concrete road slabs.

Jamaica Bay Boulevard. Plant for Jamaica Bay Boulevard Construction, F. W. Skinner. Concrete, vol. 25, no. 2, Aug. 1924, pp. 50-54, 5 figs. Particulars of construction methods and equipment employed in connection with highway now under construction by Borough of Queens, New York City.

Non-Uniformity of Concrete. Causes of Non-uniformity of Concrete. Pub. Roads, vol. 5, no. 8, Oct. 1924, pp. 20-21. Replies received from State highway departments and district offices to tabulation forwarded by Bur. Pub. Roads showing results of compression tests on cores drilled from several concrete pavements in each of four widely separated states, which indicated a lack of uniformity in strength of concrete, with suggestions as to ways and means of improving uniformity.

Paducah, Ky. Street Pavement Design Based on Bates Road Tests, J. C. Keeley. Eng. News-Rec., vol. 93, no. 8, Aug. 21, 1924, pp. 298-300, 4 figs. Design and construction of 65,000-sq. yd. 7-in. concrete pavement at Paducah, Ky., begun in 1923.

Pontam Construction. Pontam Reinforced Concrete Pavements in France. Highway Engr. & Contractor, vol. 2, no. 1, July 1924, pp. 45-46, 2 figs. Pontam is made of reinforced concrete and has been laid chiefly in pre-cast sections heretofore, but may also be laid in same manner that other paving is put down, that is, by continuous operation not limited to definite dimensions on areas. One of principal advantages of this method lies in fact that coefficient of wear of cast-iron braces is less than that of concrete between braces.

Reinforcement. Reinforcement Checks Cracking of Concrete Pavements, W. S. Edge. Eng. News-Rec., vol. 92, no. 5, Jan. 31, 1924, pp. 190-193, 3 figs. Weight and bond vital factors; location affects efficiency; faulty placing common; describes ideal construction.

Single-Track. Advantages of Single Track Concrete Roads, A. M. Jackson. Can. Engr., vol. 46, no. 10, Mar. 4, 1924, pp. 304-305. Principal features of a concrete road built in Brant county, Ont.; one-half concrete and other half gravel; construction methods; construction and maintenance costs. See also Can. Engr. vol. 38, no. 10, Mar. 5, 1924, pp. 241-243 and Eng. & Contracting (Roads & Streets), vol. 61, no. 4, Apr. 2, 1924, pp. 718-721.

Slab Reinforcement. New Type of Slab Reinforcement For Concrete Roads, C. N. Conner. Eng. News-Rec., vol 93, no. 24, Dec. 11, 1924, p. 954, 1 fig. Uniform mesh reinforcement strengthened at slag edges by second mesh in 18-in. strips; major members transverse.

Subgrade Insulating. A Method of Insulating the Subgrade of Concrete Roads, R. R. Dobelbower. Eng. & Contracting (Roads and Streets), vol. 61, no. 1, Jan. 2, 1924, pp. 55-56, 1 fig.

Surface Faults. Surface Faults in Concrete Roads, J. H. Walker. Surveyor & Mun. & County Engr., vol. 65, no. 1692, June 20, 1924, pp.

569-570, 12 figs. Causes of and remedy for grooving. Surface treatment of concrete.

Swamp Land. Piles Through Old Swamp Roadbed Carry Concrete Road, C. N. Conner. Eng. News-Rec., vol. 93, no. 22, Nov. 27, 1924, pp. 872-873, 3 figs. Describes unusual and satisfactory type of heavy roadway construction through swamp land designed and constructed in coastal plain of North Carolina; road was reinforced like flat slab floor in building.

Tests. Comparative Utility of Concrete Pavement Tests, J. G. Bragg. Eng. News-Rec., vol. 92, no. 24, June 12, 1924, pp. 1012-1014. Results and analyses of four methods of testing concrete pavement; control specimens save money, and give adequate information.

Static Load Tests on Pavement Slabs, J. T. Thompson. Pub. Roads, vol. 5, no. 9, Nov. 1924, pp. 1-6, 12 figs. See also Pub. Wks., vol. 55, no. 12, Dec. 1924, pp. 364-366, 6 figs. Conclusions from tests conducted by U. S. Bur. Pub. Roads during summer of 1924. Description of slabs, and test methods and apparatus. Effect on static resistance of character of subgrade, reinforcement, and bituminous top.

Wear of Concrete Pavements Tested, F. H. Jackson. Pub. Roads, vol. 5, no. 3, May 1924, pp. 1-19, 14 figs. See also (abstract) in Eng. News-Rec., vol. 92, no. 23, June 5, 1924, pp. 984-985, 1 fig. Report of accelerated tests by U. S. Bur. of Pub. Roads show (1) no wear from rubber-tired wheels; (2) no strength-wear relation.

White Joint Filler. White Joint Filler for Concrete Roads, L. G. Carmick. Pub. Roads, vol. 5, no. 3, May 1924, pp. 21-22, 4 figs. Two-years' trial shows value of new material.

ROADS, EARTH

Bituminized. A Practical Experiment in Bituminized Earth Road Construction, K. A. Clark. Contract Rec., vol. 38, no. 45, Nov. 5, 1924, pp. 1096-1098 and 1112, 3 figs. See also Eng. & Contracting (Roads & Streets), vol. 62, no. 4, Oct. 1, 1924, pp. 731-734, 2 figs. A 500-ft. section of a heavily travelled road near Edmonton, Alberta, was treated successfully with asphalt extracted from bituminous sand. No gross defects have appeared under traffic.

Oiled. Oil Test Roads Furnish Valuable Information in Illinois. H. F. Clemmer and F. L. Sperry. Highway Engr. & Contractor, vol. 10, no. 5, May 1924, pp. 37-40, 6 figs. See also Eng. News-Rec., vol. 92, no. 11, Mar. 13, 1924, pp. 446-447 and Eng. & Contracting (Roads & Streets), vol. 61, no. 3, Mar. 5, 1924, pp. 497-502, 3 figs. Details regarding tests made by Illinois State Division of Highways in spring of 1923 on Cambridge test road, 3 miles in length and divided into 15 separate sections, and on Rosemond road, divided into 16 sections. Physical and chemical characteristics of oils used on experimental roads; results with oil applied in varying quantities and number of treatments; preparation and shaping of road for oiling; drainage; application of oil; etc.

Points to Consider in the Successful Application of Road Oil, F. W. Padgett. Nat. Petroleum News, vol. 16, no. 12, Mar. 19, 1924, pp. 87-88. Discusses briefly methods of oiling, precautions to be observed, and selection of oils, for earth and gravel roads and streets.

ROADS, GRAVEL

Bituminous Surface Treatments. Service Tests of Bituminous Surface Treatments on Gravel Roads in Washtenaw County, Michigan, A. R. Bailey. Good Roads, vol. 66, no. 4, Apr. 1924, pp. 103-105. Describes experiments made, object of which was to obtain a dustless road at about same or slightly higher cost than was being experienced in usual gravel maintenance where dust laying was only partly accomplished.

Corrugations. Rhythmic Corrugations in Gravel Roads, Geo. E. Ladd. Pub. Roads, vol. 5, no. 7, Sept. 1924, pp. 18-20 and 22, 2 figs. Study of nature of "chatter bumps" and their relation to traffic.

The Prevention of Corrugations in Gravel Roads Carrying Heavy Traffic, A. H. Hinkle. Good Roads, vol. 67, no. 3, Sept. 1924, pp. 77-78. How corrugations are formed; necessity of maintenance; methods of reducing or preventing corrugations.

Maintenance. Gravel Road Maintenance in Michigan, G. C. Dillman. Can. Engr., vol. 46, no. 17, Apr. 22, 1924, pp. 453-454. Bituminous treatment for gravel surfaces; calcium chloride used extensively for dust laying.

Method for Maintaining Gravel Roads, P. D. Sargent. Can. Engr., vol. 47, no. 1, July 1, 1924, pp. 115-118. See also Eng. & Contracting (Roads & Streets), vol. 62, no. 2, Aug. 6, 1924, pp. 295-300. Outstanding method employed in Maine for maintaining gravel roads; maintenance by patrol method; standard practice and costs of maintenance.

The Construction and Maintenance of Gravel Roads, J. H. Mullen. Eng. & Contracting (Roads & Streets), vol. 61, no. 3, Mar. 5, 1924, pp. 518-521. Address before Am. Assn. State Highway Officials annual meeting.

Tar Surface. Tar Surface Treatments Preserve Gravel Roads, J. T. Donaghey. Eng. News-Rec., vol. 92, no. 2, Jan. 10, 1924, pp. 70-73, 3 figs. Economical where traffic exceeds 300 vehicles; method of application important.

ROADS, MACADAM

Bituminous. See ROADS, BITUMINOUS, Construction.

Penetration, Maintenance With Tarvia. City Street Maintenance with Tarvia, G. E. Martin. Eng. & Contracting (Roads and Streets), vol. 61, no. 1, Jan. 2, 1924, pp. 52-54, 4 figs. Methods employed at Jefferson City, Mo., in patching and surface treatment of penetration macadam streets.

ROADS, TARRED

Consistency of Tars. Further Notes on the Consistency of Road Tars, D. C. Broome. Chem. & Industry, vol. 43, no. 6, Feb. 8, 1924, pp. 25T-27T. Account of experiments carried out in order to throw further light on following problems: addition of powdered fillers; addition of bitumens; maintenance of tar at elevated temperature for long periods.

ROCK CRUSHING

Crushers. See CRUSHERS.

Plants. Duluth Crushed Stone Company's Plant, F. A. Alter. Rock Products, vol. 27, no. 13, June 28, 1924, pp. 39-42, 13 figs. Particulars of plant which has an unusual installation of crushers. Crushers designed by Allis-Chalmers Mfg. Co. and known as N Type; features are shorter shaft than usual and forced-feed lubricating system; plant has no elevators.

Modern Stone Crushing Plant at Dundas. Can. Engr., vol. 46, no. 3, Jan. 15, 1923, pp. 141-145, 9 figs. Describes new up-to-date plant of Canada Crushed Stone Corpn. Ltd., at Dundas, Ont.; primary crusher is a mammoth McCully with double discharge having 42 by 136-in. opening, driven by 250-hp. Westinghouse motor with English system rope drive; describes the various buildings.

New All-Steel Crushing Plant of Mid-West Crushed Stone Company, F. A. Alter. Rock Products, vol. 27, no. 18, Sept. 6, 1924, pp. 27-32, 18 figs. Describes all-steel plant built to replace wooden structure destroyed by fire; quarry operation, feeding crushers, crushing plant, etc.

Remarkable Side-Hill Rock-Crushing Plant, E. C. Barkstrom. Rock Products, vol. 27, no. 4, Feb. 23, 1924, pp. 30-37, 23 figs. Describes Graham Bros., Inc., plant on Santa Catalina Island, Cal.

ROCK DRILLS

Cost of Operation. Comparative Cost of Rock Drilling Underground, T. G. Hanton. Australasian Inst. Min. & Met.—Proc., no. 52, Dec. 31, 1923, pp. 267-285. Records of various types of rock drills in use at Mining Dept. of Zinc Corpn.; data on internal water-feed hammer drills when used for same work as older reciprocating drills for purpose of comparison.

Hammer Type. The New Hardy-Simplex Hammer Drill. Iron & Coal Trades Rev., vol. 109, no. 2956, Oct. 24, 1924, p. 663, 5 figs. New design introduces innovations in valve and ratchet device.

Leyner System. Preventing the Creation of Fine (or Phthisis Producing) Dust when Drilling Rock with Air Operated Machine Drills of "Leyner" Type, J. H. Veasey. S. African Instn. Engrs.—Jl., vol. 22, no. 10, May 1924, pp. 153-168, 13 figs. Development of Leyner's rock drill; long-piston hammer drills.

Problems. Rock Drill Troubles in Mining, H. L. Terwilliger. Min. & Metallurgy, vol. 5, no. 216, Dec. 1924, pp. 577-579. Advances made by Leyner machines; the Carr bit; best length for shanks.

Steel for. See STEEL, Rock-Drill.

ROLLER BEARINGS. See BEARINGS, ROLLER.

ROLLERS

Land. See FARM MACHINERY, Rollers.

Road. See ROAD MACHINERY, Rollers.

ROLLING MILLS

Adjustable-Speed Drives. Adjustable Speed Drives for Rolling Mills, L. A. Umansky. Iron & Steel Engr., vol. 1, no. 9, Sept. 1924, pp. 515-532, 27 figs. Discusses advantages to be derived from use of adjustable-speed drive, and necessary speed range and capacity; elementary cases of speed-regulation problems; comparison and selection of systems.

Alloy-Steel Rolling. Rolling Alloy Steel, J. Clausen. Blast Furnace & Steel Plant, vol. 12, no. 2, Feb. 1924, pp. 113-116 and 133, 5 figs. Practice at plant of Harrisburg Pipe & Bending Co.

Atlantic Steel Co., Atlanta, Ga. A Southern Rolling Mill, M. P. Lawton. Blast Furnace & Steel Plant, vol. 12, no. 6, June 1924, pp. 291-294 and 305, 9 figs. Equipment and methods of Atlantic Steel Co.'s plant, Atlanta, for manufacture of hoop and cotton ties.

Automatic Cooling Beds. German Practice in Automatic Cooling Beds, H. Hilterhaus. Iron & Coal Trades Rev., vol. 109, no. 2955, Oct. 17, 1924, pp. 632-633, 5 figs. Discusses modern trends and describes two types of automatic cooling beds which have become standard, namely, type fitted with racks that are raised and lowered; and type with rotary and swinging racks, the latter being American in conception.

Bearings. See BEARINGS, ROLLER, Rolling-Mill.

Billet Mill. New Inland Merchant and Billet Mills, G. L. Lacher. Iron Age, vol. 114, no. 6, Aug. 7, 1924, pp. 303-307, 6 figs. Bar mill stands connected with single lineshaft; Kraemer set drive largest yet built; hot bed will take billet from complete ingot, Inland Steel Co., Indiana Harbor, Ind.

Blooming Mills. Builds New Blooming Mill in France. Iron Trade Rev., vol. 74, no. 16, Apr. 17, 1924, pp. 1046-1047, 3 figs. Details of new blooming mill erected in works of Société des Acieries de Longwy, built by Maschinenfabrik Sack, Düsseldorf, Germany; used for breaking down ingots into blooms either for 38-in. two-high reversing shape mill or for other smaller section mills, and in addition serves as slabbing mill for rolling slabs for plate mills.

Mechanical and Electrical Analyses of 40 Inch Blooming Mill Screwdown, F. D. Egan. Iron & Steel Engr., vol. 1, no. 7, July 1924, pp. 371-379, 42 figs. Electrification of 40-in. blooming mill of Lackawanna plant of Bethlehem Steel Co., replacing all steam and hydraulic drives.

Breaking Spindles for Main Drive. Breaking Spindles for Main Roll Drives, J. H. Albrecht. Iron & Steel Engr., vol. 1, no. 12, Dec. 1924, pp. 634-635, 2 figs. Describes combination flexible coupling and breaking spindle installed on 84-in. plate mill, Youngstown Sheet & Tube Co.

Butt-Weld Pipe Mills. New Butt Weld Mills at Indiana Harbor. Iron Age, vol. 114, no. 1, July 3, 1924, pp. 1-4, 5 figs. Mills, which are part of expansion program of Youngstown Sheet & Tube Co., will roll pipe from 1/8 up to 3 in. and will produce 400 tons daily.

Cold-Rolling. Cold Rolling Steel for the Hardware Industry, H. C. Hatch. Can. Machy., vol. 32, no. 24, Dec. 11, 1924, pp. 19-21 and 22, 5 figs. Physical characteristics and manufacture in plant of Stanley Steel Co.; quality is said to be largely dependent on skill of roller and condition of surface of rolls; suitability for plating an important property of product.

Cold-Rolling Strip Mills. Acme Steel Expands Cold Strip Capacity, G. L. Lacher. Iron Age, vol. 113, no. 5, Jan. 31, 1924, pp. 353-358, 7 figs. See also Iron Trade Rev., vol. 74, no. 5, Jan. 31, 1924, pp. 359-362, 8 figs. Features include recoiler, cooling gas for annealing, automatic roll grinder; material-handling facilities.

Continuous. Continuous Rolling-Mills: Their Growth and Development, Jos. P. Bedson. Iron & Steel Inst.—Advance Paper no. 3, for meeting May 1924, 18 pp., 6 figs., partly on supp. plates. See (abstract) in Engineering, vol. 17, no. 3045, May 9, 1924, pp. 620-622, 7 figs; also Iron Age, vol. 113, no. 21, May 22, 1924, pp. 1493-1495. Art as it was practiced 140 years ago; history of development; modern examples of continuous system.

Cooling Beds. Automatic Cooling Beds (Automatische Kühlbetten), H. Hilterhaus. Stahl u. Eisen, vol. 44, no. 27, July 3, 1924, pp. 777-786, 8 figs. Discusses arrangement of cooling beds and describes various types, including the Morgan, Edwards and Teba.

Copper-Wire-Rod. Copper Wire Rolling Mill at Brockville. Can. Engr., vol. 47, no. 16, Oct. 14, 1924, pp. 411-415, 9 figs. First mill of its kind ever operated in Canada is most modern and efficient yet built. All-Canadian electrical wire produced in September 1924 for first time. Bars refined at Trail, B. C., from Canadian ore, are rolled at Brockville, Ont., and drawn into wire at Montreal.

Electric Drive. Electrically Driven Reversing Rolling Mills at the Angleur Steel Works (L' equipement électrique du train réversible des Aciéries d'Angleur), M. Odier. Association des Ingenieurs Electriciens sorti de l'Institut Elec-

trotechnique Montefiore—Bul., vol. 2, series 7, no. 6, June 1924, pp. 206-235, 21 figs. Following general notes on Ilgner method of driving reversing mills, detailed description is given of combined blooming and finishing rail mill driven by single motor, for control of which two fly-wheel sets are provided; one of these forms a spare set, but will be used later with small mill not yet installed; curves of power consumption are given; plant has proved reliable in operation, and stoppages during year's working have been less than 24 hours.

Large-Powered Rolling Mill Drives. Engineering, vol. 118, no. 3077, Dec. 19, 1924, p. 842, 1 fig. Describes electrically driven gear for rolling-mill drive and heavy flywheel for use on Ilgner system to balance load on electric motor, constructed by Scott & Hodgson, Manchester, Eng.

The Bar Mill and Structural Mill Electrification of the Phoenix Iron Company, J. S. Erichson. Elec. Jl., vol. 21, no. 9, Sept. 1924, pp. 403-407, 9 figs. Details of conversion from steam to electric drive, which consists of 3000-hp. 600-volt, compound-wound, compensated, adjustable-speed d.c. motor, driving through herringbone-gear unit.

The Electrical Drive of Rolling Mills, A. Hartmann. Brown Boveri Rev., vol. 11, nos. 2, 7, and 11, Feb., July, and Nov. 1924, pp. 31-37, 127-139, and 249-259, 58 figs. Discusses non-reversing rolling mills, motors, starters, regulating contrivances, rotary converters and commutator motors in cascade with main motor, conversion of 3-phase current to direct current. Nov.: Drive of non-reversing mills; advantages of electric drive.

Electric Motors. Rolling-Mill Motors With Double-Range Speed Regulation, A. Hartmann. Brown Boveri Rev., vol. 11, no. 6, June 1924, pp. 110-113, 7 figs. Discusses no-loss regulation systems developed by Brown Boveri & Co., especially Scherbius system in which commutator machine is connected in series with main motor.

Engines for. See STEAM ENGINES, Rolling-Mill.

Engines, Flywheels for. See FLYWHEELS, Rolling-Mill Engines.

Gear Drives. Gear Drives in the Sheet Mills, H. H. Talbot. Iron & Steel Engr., vol. 1, no. 12, Dec. 1924, pp. 607-612 and (discussion) 612-615, 15 figs. Discusses design of pinion stands and various types of units utilized for driving them; describes different types of drives.

Gripping of Rolls. The Gripping of Rolls at Variable Rolling Speed (Das Greifen von Walzen bei veränderlicher Walzgeschwindigkeit), W. Tabel and Er. Schneider. Stahl u. Eisen, vol. 44, no. 12, Mar. 20, 1924, pp. 305-309, 9 figs. Theory of gripping process; influence of quality of material; influence of rolling speed on coefficient of friction; critical speed for gripping; tests on smooth and rough rolls; most favorable rolling speed.

Hot Beds. New Type of Mechanical Hot Bed. Iron Age, vol. 114, no. 16, Oct. 16, 1924, pp. 990-991, 4 figs. See also Iron Trade Rev., vol. 75, no. 16, Oct. 16, 1924, pp. 1016-1017, 4 figs. Elliptical moving members insure proper advance of rails, billets, etc., with less direct transfer of heat, in hot bed developed by W. McKee, which represents radical change from present type.

Hot Strip Mills. A New 20-16 in. Hot Strip Mill, N. Jones and G. P. Wilson. Am. Inst. Elec. Engrs.—Jl., vol. 43, no. 8, Aug. 1924, pp. 710-715, 9 figs. Details of new plant of West Leechburg Steel Co., Pa., designed for thin strips, including outdoor substation equipment, with motors, speed regulations, etc.

New Sheet Bar and Hot Strip Mills, F. L. Prentiss. Iron Age, vol. 114, no. 18, Oct. 30, 1924, pp. 1141-1146, 9 figs. Otis strip mill continuous from furnace to coilers, without use of hot bed; electric drive throughout.

Oval Passes. Calculation of Oval Passes (Berechnung der Streckovalkaliber), E. Mercader. Stahl u. Eisen, vol. 44, no. 14, Apr. 3, 1924, pp. 361-363, 1 fig. Series of oval and square passes; processes in oval passes; measurement of oval and square passes.

Plate Mills. New Three-high Plate Mill at the Clydebridge Works of Messrs. David Colville & Sons, Ltd. English Elec. Jl., vol. 2, no. 6, Apr. 1924, pp. 311-319, 8 figs. Ilgner drive with slow-speed motor direct-coupled to mill and flywheel energy embodied in a separate motor-generator equalizer set. Plant designed to deal with 3000 tons of plates per week.

Power Consumption. Power Consumed in Rolling Steel, G. Fox. Iron & Coal Trade Rev., vol. 109, no. 2945, Aug. 8, 1924, pp. 235-236, 13 figs. See also Iron Age, vol. 113, no. 22, May 29, 1924, pp. 1564-1565, 1 fig.; and Iron Trade Rev., vol. 74, no. 22, May 29, 1924, pp. 1431-1433, 5 figs. Factors governing amount of power required for rolling steel; graphical presentation of power consumption as related to displacement of metal; load variation contingent upon rolling temperature.

Time Study and Measuring Power Consumption in Rolling Mills (Zeitstudien und Kraftverbrauchsmessungen im Walzwerk), G. Bulle. Stahl u. Eisen, vol. 44, no. 32, Aug. 7, 1924, pp. 937-941, 5 figs. Discusses formulation of rolling plan, determining times for rolling and handing by stop watch, training of workers, works inspection, furnace improvements, etc.

Pulverized Coal, Use in. See PULVERIZED COAL, Sheet Mills.

Rod Mills. Making Copper Rod From Ore Mined in Canada, H. C. Braund. Can. Machy., vol. 32, no. 21, Nov. 20, 1924, pp. 27-28 and 43. Describes plant of Eugene F. Phillips Elec. Wks., at Brockville, Ont., first and only copper rod rolling mill in operation in Canada. Capacity 120 tons a day.

Rolling Process. The Rolling Process with Special Consideration of Rolling Work and Flow Pressure (Einiges über den Fliessdruck), W. Tafel. Zeit. für Metallkunde, vol. 16, nos. 10 and 11, Oct. and Nov. 1924, pp. 391-395 and 430-432, 4 figs. Definition of "pushing force"; relation of flattening to radius of roll; increased speed of travel.

Rolls. See ROLLS.

Sheet Mills. Build Sheet Mill at Golden Gate. Iron Trade Rev., vol. 74, no. 21, May 22, 1924, pp. 1373-1375, 5 figs. Subsidiary of Metal & Thermit Corpn. completes new six-mill sheet plant at South San Francisco; oil fuel used in furnaces.

Detroit's New Automobile Sheet Plant. Iron Age, vol. 113, no. 1, Jan. 3, 1924, pp. 50-53, 8 figs. Features of works of Michigan Steel Corpn. include short hauls to and from rolls and quick drying of washed sheets.

Enlarges Semifinishing Capacity, J. D. Knox, Iron Trade Rev., vol. 75, no. 22, Nov. 27, 1924, pp. 1431-1433, 3 figs. How plant of United Alloy Steel Corpn., Canton, Ohio, increased production by combining discarded rolling equipment with 3-high sheet-bar mill; describes present layout.

Loose Rolling Gains Favor Among Sheetmakers, J. D. Knox. Iron Trade Rev., vol. 75, no. 26, Dec. 25, 1924, pp. 1706-1711 and 1722, 9 figs. Youngstown company installs new 8-mill plant for manufacture of high-grade automobile sheets.

Sheet Mill Represents Latest Practice, E. H. Werner. Forging—Stamping—Heat Treating, vol. 10, no. 4, Apr. 1924, pp. 153-158, 10 figs. New mill of Nat. Enameling & Stamping Co. at Granite City, Ill.; mill equipment and furnaces.

Sheet Steel Plant on Pacific Coast. Iron Age, vol. 113, no. 23, June 5, 1924, pp. 1650-1652, 5 figs. Six-mill installation put in operation by Pac. Sheet Steel Corpn. at South San Francisco, Cal.; blue annealed, black and galzanized sheets to suit local market.

Steam-Driven. Steam Engines for Driving Rolling-Mill Trains (Dampfmaschinen zum Antrieb von Walzenstrassen). Hanomag-Nachrichten, vol. 11, no. 129-130, July-Aug. 1924, pp. 116-121, 11 figs. Application of piston engines as flywheel engine and reversing engine for mill trains; details of engine with currents in same direction, combining greatest capacity for regulating with large excess load and highest economy.

Three-High Mills. Four-Roll System for Three High Mills (Das Vierwalzensystem für Triowalzwerke), H. Cramer. Berichte der Fachausschüsse des Vereins deutscher Eisenhüttenleute (Walzwerksausschuss), no. 34, Jan. 30, 1924, 4 pp., 4 figs. See also Stahl u. Eisen, vol. 44, no. 39, Sept. 25, 1924, pp. 1170-1172, 2 figs. Blind passes and how to avoid them; expediency of using a second middle roll; accurate control of rolls; etc.

Tolerances in Rolling Sheets. Tolerances in the Rolling of Steel Sheets. Iron Age, vol. 113, no. 7, Feb. 14, 1924, pp. 497-499. Causes of variations from gage and reasons for current practice presented from mill standpoint.

ROLLS

Alloy-Steel. Producing Hardened and Ground Rolls, J. R. Adams. Abrasive Industry, vol. 5, no. 7, July 1924, pp. 168-170, 6 figs. Discusses rolls of composition C 0.70 to 1.25, Mn 0.20 to 0.40, Si 0.15 to 0.30, Cr. 1.50 to 2.50 per cent, their production in electric furnace, hardening of surfaces, grinding; microscopic and scleroscopic and other tests.

Bearings for. Roll Bearings for Cold Rolling Mills, C. E. Davies. Engineering, vol. 118, nos. 3069, 3070, and 3071, Oct. 24, 31, and Nov. 7, 1924, pp. 569-571, 601, and 636-637, 23 figs. Reviews and compares various designs, materials, and lubrication systems for cold-roll bearings in general use in England and abroad.

Casting. Vertical Pouring of Rolling Mill Rolls (La coulée en chute appliquée aux cylindres de laminoirs). Fonderie Moderne, vol. 18, June 1924, pp. 143-146, 5 figs. Used in place of bottom casting in metal mold, with hottest part at top.

Electric Heating of. Electric Heating of Sheet and Tin Mill Rolls, G. Fox. Blast Furnace & Steel Plant, vol. 12, no. 11, Nov. 1924, pp. 493-496, 5 figs. Method and advantages of electric preheating of finishing rolls of sheet and tin mills.

Forged-Steel. Hardened and Ground Forged Steel Rolls, J. R. Adams. Forging—Stamping—Heat Treating, vol. 10, no. 7, July 1924, pp. 255-260, 10 figs. Discusses composition, melting and forging, annealing, machining, hardening, grinding, and use of rolls. Forged-steel rolls possess advantages over chilled-iron rolls of greater hardness, more homogeneous surface, greater strength and longer life.

Grinding. How Chilled Iron Rolls are Ground. Abrasive Industry, vol. 5, no. 5, May 1924, pp. 119-122, 5 figs. Special machines are provided for finishing steel-mill rolls. Value of grinding over turning.

Grooves, Filling. The Filling of Roll Grooves (Füllung der Walzkaliber), W. Tafel and H. Weiss. Stahl u. Eisen, vol. 44, no. 41, Oct. 9, 1924, pp. 1243-1245, 3 figs. Review of former attempts to correct deviation of computed and actual fillings of passes; describes two new methods which very nearly accomplish this purpose.

Hardened and Ground. Hardened and Ground Rolls, J. R. Adams. Iron Age, vol. 113, no. 22, May 29, 1924, pp. 1561-1563, 2 figs. See also Iron Trade Rev., vol. 74, no. 22, May 29, 1924, pp. 1426-1428, 6 figs.; and Foundry Trade Jl., vol. 30, no. 420, Sept. 4, 1924, pp. 200-201. History of development and use of forged steel rolls, hardened and drawn. (Abstract.) Paper read before Am. Iron & Steel Inst.

ROOF TRUSSES

Fink. The Fink Roof Truss and Its Problem, R. Fleming. Can. Engr., vol. 47, no. 11, Sept. 9, 1924, pp. 309-312, 6 figs. Various graphical solutions given of problem of Fink truss; methods of general case and their originators given.

ROOFING

Asphalt Tar for. See TAR, Asphalt for Roofing.

Slate. See SLATE, Roofing.

ROOFS

Asbestos Corrugated. Asbestos Corrugated Sheathing. Contract Rev. & Eng. Rev., vol. 38, no. 17, Apr. 23, 1924, pp. 403-404, 3 figs. Correct method of applying the material as roofing and siding; same labor as for corrugated iron.

Asphalt. Economic Factors in Roofing Manufacture, J. L. McK. Yardley. Chem. & Met. Eng., vol. 31, no. 17, Oct. 27, 1924, pp. 559-663, 3 figs Making granulated slate; how asphalt is obtained; roofing-mill operating costs.

Master Specification for Asphalt for Unsurfaced built-up Roofing. Eng. Wld., vol. 25, no. 5, Nov. 1924, pp. 309-311, 3 figs. Specification officially adopted by U. S. Bur. Standards Federal Specifications Board on June 1, 1924, for use of Departments and Independent Establishments of Government in purchase of asphalt for unsurfaced built-up roofing. Fed. Spec. Bd., Spec. no. 88.

United States Government Master Specification for Asphalt Primer for Roofing and Waterproofing. U. S. Bur. Standards—Circular no. 162, Master Specification no. 87, Apr. 8, 1924, 7 pp., 2 figs. Specification officially adopted by Federal Specifications Board on Dec. 29, 1923, for use of Departments and Independent Establishments of the Government in purchase of asphalt primer for roofing and waterproofing.

United States Government Master Specification for Asphalt for Mineral-Surfaced Roofing. U. S. Bur. Standards—Circular no. 159, Master Specification no. 84, Apr. 8, 1924, 10 pp., 3 figs. Specification officially adopted by Federal Specifications Board on Dec. 29, 1923, for use of Departments and Independent Establishments of the Government in purchase of asphalt for mineral-surfaced roofing.

See also ASPHALT, Roofing, Specifications.

Built-up, Roofing. United States Government Master Specification for the Construction of Built-Up Roofing, Types 3ACS and 5ACS. U. S. Bur. Standards—Circulars nos. 172 and 174, July 8, 1924, 3 pp. and 4 pp. Specifications adopted June 1, 1924, for built-up roofing types 3ACS and 5ACS covering material and workmanship, inspection, packing and marking, etc.

Coal-Tar Pitch for. United States Government Master Specification for Coal-Tar Pitch for Roofing. U. S. Bur. Standards—Circular no. 157, Master Specification no. 80, Apr. 8, 1924, 10 pp.,

3 figs. Specification officially adopted by Federal Specifications Board on Dec. 29, 1923, for use of Departments and Independent Establishments of the Government in purchase of coal-tar pitch for roofing.

Concrete Tile for. See TILE, Concrete Roofing.

Domed. A Domed Roof Construction. Am. Architect & Architectural Rev., vol. 126, no. 2462, Dec. 31, 1924, pp. 635-640, 6 figs. Notes on design and construction of dome of First Church of Christ, Scientist, University City, Mo. Span approximately 74 ft., inner and outer surfaces segmental in form with radii of 58 ft. 8 in. and 41 ft. respectively.

Felt, for Manufacture. Making Felt From Waste, A. W. Allen. Chem. & Met. Eng., vol. 30, no. 2, Jan. 14, 1924, pp. 45-48, 7 figs. Describes operation of plant that absorbs waste fabric of all descriptions from foreign and domestic sources; incorporated with manufacture of felt is byproduct of Californian petroleum refining, asphalt; layer of mineral surfacing and backing of mica are added, and finished product is sold in form of rolled sheets and as shingles.

Heat Insulation of. See INSULATION, HEAT, Roofs.

Prepared, Manufacture of. Some Relations between Maintenance and Operating Costs, J. L. McK. Yardley. Indus. Engr., vol. 82, no. 12, Dec. 1924, pp. 566-570 and 601, 4 figs. Equipment and operation of roofing felt mill; layout and operation of roofing mill; equipment required in roofing-asphalt refinery.

Reinforced-Concrete. Reinforced-Concrete Roof Covering [Couverture en ciment armé du quai nord-ouest du port de Sfax (Tunisie)], F. Willm. Génie Civil, vol. 85, no. 19, Nov. 8, 1924, pp. 424-426, 7 figs. Design and construction of roof covering over northwest quay of port of Sfax, Tunnis.

Sawtooth Construction. A Modern Type of Saw-Tooth Roof Construction. Am. Architect, vol. 126, no. 2449, July 2, 1924, pp. 25-29, 12 figs. Two sets of trusses are used, transverse and longitudinal. Illustrated by examples designed by Ballinger Co., Phila., Pa.

Trusses. See ROOF TRUSSES.

Zinc. Zinc Used for Roofing, Chas. E. van Barneveld. U. S. Bur. Mines—Report of Investigations, no. 2652, Nov. 1924, 10 pp., 5 figs. Information contained in report is by-product of studies concerning zinc, and is published in response to various inquiries for information as to suitability of zinc for roofing; available forms and advantages of zinc roofing; zinc-roof construction; zinc shingles.

ROPE

Manila. See BALLOONS, Manila Rope for.

Wire. See WIRE ROPE.

ROPEWAYS. See CABLEWAYS.

ROUNDHOUSES. See ENGINEHOUSES.

RUBBER

Absorption of Water by. The Rate of Absorption of Water by Rubber, D. H. Andrews and J. Johnston. Am. Chem. Soc.—Jl., vol. 46, no. 3, Mar. 1924, pp. 640-650, 2 figs. Investigation of described phenomenon as means of learning more about mechanism of absorption of water in rubber, and to be able to predict, from behavior of thin sheets, time required for given degree of saturation of thick sheet immersed in water.

Accelerators. Recent Developments in Rubber Accelerators, Julian F. Smith. Indus. & Eng. Chem., vol. 16, no. 10, Oct. 1924, pp. 1024-1026, 2 figs. Non-technical summary of various uses of accelerators.

Rubber Vulcanising Accelerators, G. C. Martin. Rubber Age, vol. 4, no. 11, Jan. 1924, pp. 609-614 and (discussion) 614-616. Classification of accelerators; conditions of curing; effect of resin acids; physical properties compared; potency of accelerators; vulcanization coefficients.

The Determination of the Activity of an Accelerator of Vulcanization, G. Martin and W. S. Davey. Chem. & Industry, vol. 43, no. 8, Feb. 22, 1924, pp. 31T-34T, 1 fig. Factors affecting activity of accelerator in mix containing rubber, sulphur, zinc oxide and accelerator are (1) purity, concentration, and specific surface of substances used, and (2) temperature of vulcanization.

The Use of Diphenylguanidine as an Accelerator of Vulcanization, W. M. Ames. Chem. & Industry, vol. 43, no. 17, Apr. 25, 1924, pp. 117T-124T, 4 figs. Study of properties of diphenylguanidine and summary of results.

Aging. The Aging of Rubber. India-Rubber Jl., vol. 67, no. 5, Feb. 2, 1924, pp. 17-18 and 21-22. Changes which take place during aging, means by which an estimate can be made of rate at which such changes will take place, and possible methods by which these changes can be prevented. See also discussion in no. 6, Feb. 9, 1924, pp. 15-18, by S. A. Brazier.

British Empire Exhibition. Rubber at the British Empire Exhibition. Rubber Age, vol. 5, nos. 4 and 5, June and July 1924, pp. 174-180 and 228-231, 15 figs. Account of the various rubber goods exhibited by different firms.

Coatings, Electrodeposition of. The Electrodeposition of Rubber Coatings. India-Rubber Jl., vol. 67, no. 9, Mar. 1, 1924, pp. 19-20, 1 fig. Patented method by which rubber coatings may be deposited and conditioned on articles having conducting surface.

Compounding Ingredients. Compounding Ingredients in Rubber Manufacture, H. T. Hewlett. India-Rubber Jl., vol. 68, no. 5, Aug. 2, 1924, pp. 115-117. Function of compounding ingredients; rubber substitute; pigments; zinc oxide and lithopone; ingredients employed for their resistant qualities; advance in knowledge of compounding ingredients.

Consistency. The Consistency of Rubber and Rubber Compounds, S. S. Pickles. India-Rubber Jl., vol. 67, nos. 2 and 3, Jan. 12 and 19, 1924, pp. 17-20 and 11-19 and (discussion) 19-21, 6 figs. See also Rubber Age, vol. 4, no. 12, Feb. 1924, pp. 662-674 and (discussion) 674-677, 6 figs. Hardness of raw rubber; consistence of vulcanized rubber and effects of accelerators; hardness of vulcanized rubber; softening of rubber and rubber softeners; grain effects in rubber; tearability of and knotting in rubber.

Cotton-Reinforced. The Development of Cotton Reinforced Rubber, J. H. Stedman. India Rubber World, vol. 69, no. 5, Feb. 1, 1924, pp. 289-290, 3 figs. Evolution of reinforced rubber; reinforced rubber in relation to rubber production; possibilities and advantages; extent of market; etc.

Disk-Spray Process. Disk-Spray Process Revolutionizes Rubber Industry, A. M. Hoffman. Compressed Air Mag., vol. 29, no. 10, Oct. 1924, pp. 1025-1026, 4 figs. Description of process which provides new and much improved method for mixing crude rubber with various ingredients which must be added to it during manufacture of basic rubber compounds required for making of different trade articles.

Gutta Percha. See GUTTA PERCHA.

Hand, Grinding, Safety in. See DUST, Explosion Prevention.

Kerbosch. Kerbosch Rubber, O. deVries. India-

Rubber Jl., vol. 68, no. 1, July 5, 1924, pp. 17-23. Describes experiments made in years 1914-1921 and data about keeping properties of crude and vulcanized product; results of tests and investigations of Kerbosch rubber.

Latex. Putting Rubber Latex to New Uses, R. Ditmar. Chem. & Met. Eng., vol. 30, no. 12, Mar. 24, 1924, p. 474. Brief outlines of methods for impregnation or coating of fabrics, wood, Stone, etc.

Rubber Latex: Its Properties and the Development of Its Industrial Applications, A. Van Rossem. India-Rubber Jl., vol. 68, nos. 22 and 23, Nov. 29 and Dec. 6, 1924, pp. 1081-1085 and 1123-1127, 1 fig. See also Rubber Age, vol. 5, no. 10, Dec. 1924, pp. 523-533 and (discussion) 533-538. Microscopical examination; physico-chemical properties; latex as a colloidal system; coagulation process; industrial applications in rubber industry and application in other industries; preservation and concentration of latex.

The Use of Rubber Latex, F. Kaye. Rubber Age, vol. 5, no. 1, Mar. 1924, pp. 17-21. See also India-Rubber Jl., vol. 67, no. 6, Feb. 9, 1924, pp. 19-22 and 24. Variation in qualities of latex; latex preservatives; results achieved in use of rubber latex in making of boards, leather substitutes, linoleum substitutes, etc.

Latex Coagulation. The Rôle of Enzymes in the Coagulation of Hevea Latex, O. DeVries. Rubber Age, vol. 5, no. 5, July 1924, pp. 241-243. Results of investigations made on coagulation phenomena in Hevea latex to elucidate rôle played by enzymes.

Machinery. The Trend of Development in Rubber Machinery and the Field for Innovation, H. C. Young. India-Rubber Jl., vol. 68, no. 5, Aug. 2, 1924, pp. 169-184, 28 figs. Notes on dust prevention; ventilation and heating; cooling waters; hydraulic and electrical machinery; internal mixers; calenders; future extruding machine; standard vulcanizing plant; labor-saving devices.

Mechanical Structure. The Mechanical Structure of Rubber, R. W. Lunn. India-Rubber Jl., vol. 67, nos. 12 and 13, Mar. 22 and 29, 1924, pp. 15-18, and 9-11 and (discussion) 11-12 and 15-16, 3 figs. See also Rubber Age, vol. 5, no. 2, Apr. 1924, pp. 68-75 and (discussion) 75-79, 3 figs. Discusses rubber in latex, mechanism of coagulation, structure indicated in technical manipulation, structure of vulcanized rubber in relation to its physical properties, structure in relation to thermal properties of vulcanized rubber, speculation on spheroidal theory, and abrasion resistance.

Plasticity. The Plasticity of Rubber and Its Measurements, I. Williams. Indus. & Eng. Chem., vol. 16, no. 4, Apr. 1924, pp. 362-364, 5 figs. Apparatus for measurement of plasticity consisting of two parallel plates between which sample is placed; curve showing thickness against time is obtained when plates are forced together by known weight.

Preparation, Fuel Economy in. See FUEL ECONOMY, Rubber Preparation.

Solvents. Nature and Uses of Rubber Solvents, R. M. Fitzpatrick. Rubber Age, vol. 5, no. 2, Apr. 1924, pp. 86-90, 5 figs. General discussion on nature, manufacture, and testing of solvents, and account of their action on rubber and their behavior in use.

Tensile Strength. The Tensile Strength of Rubber, O. de Vries. Chem. & Industry, vol. 43, no. 10, Mar. 7, 1924, pp. 47T-52T, 1 fig. Figures for tensile strength are influenced by length of time that rubber is heated during vulcanization; special experiments did not point with certainty to deteriorating influence of sea voyage on tensile strength of crepe rubber.

Testing. Physical Testing of Rubber and Factory Practice, P. Schidrowitz. Rubber Age, vol. 5, no. 3, May 1924, pp. 129-133 and (discussion) 133-137. Early researches; recent developments of physical testing; discusses plasticity, tensile, abrasion, tearability, hardness, rigidity, elasticity, hysteresis, traction, bending and compression, and other tests.

Uses. New Uses for Rubber, P. J. Burgess. Roy. Soc. Arts—Jl., vol. 72, no. 3721, Mar. 14, 1924, pp. 276-284 and (discussion) 284-287. Direct use of latex; use of crepe rubber for shoe and boot soles; tires; use for road surfaces and paving.

Vulcanization. A Contribution to the Study of the Vulcanization of Rubber in the Sol and Gel Form, F. Boiry. India-Rubber Jl., vol. 68, nos. 11, 12, 13, 14, and 15, Sept. 13, 20, 27, Oct. 4, and 11, 1924, pp. 7-10, 9-11, 9-10 and 13, 13-15, and 7-8. Sept. 13: Vulcanization of dilute rubber solutions. Sept. 20: Vulcanization of concentrated solutions. Sept. 27: Kinetics of vulcanization in concentrated solutions. Oct. 4: Microscopic examination of gels. Oct. 11: Nature of vulcanization. Translated from French.

The Acceleration of Vulcanization, L. B. Sebrell and W. W. Vogt. Indus. & Eng. Chem., vol. 16, no. 8, Aug. 1924, pp. 792-796, 5 figs. Influence of acetone-soluble constituents of rubber on physical and chemical properties of accelerated rubber stocks.

See also Accelerators.

RUBBER INDUSTRY

Italy. The Italian Rubber and Insulated Wire Industry, M. Luzzatto. India-Rubber Jl., vol. 68, no. 5, Aug. 2, 1924, pp. 151-152. History of industry; data on number of factories, production, exports and imports.

United States. The United States Rubber Industry. India Rubber Wld., vol. 70, no. 6, Sept. 1, 1924, pp. 789-790. Discusses home market; magnitude of industry; crude rubber consumption; tire industry; footwear manufacture; rubber hose and belting; heels and soles; world's dependence on rubber.

RUDDERS

Electrically-Driven. Electrically-Driven Rudders With Differential Gearing (Die elektrisch angetriebene Rudermaschine mit Differentialrädern), F. Grabe. Schiffbau, vol. 25, no. 23, Sept. 10, 1924, pp. 623-627. Details of Aegir rudder; improvements made and still to be made; power consumption of motors.

Flettner. The Flettner Rudder (Das Flettner-Ruder), W. Parey. Dinglers Polytechnisches Journal, vol. 339, no. 4, Feb. 1924, pp. 29-32, 4 figs. Details of principle of Flettner rudder, in which auxiliary smaller rudder is used for actuating main rudder; its advantages in saving space and cost, etc.

The New 3-Plane Flettner Rudder. Shipbldg. & Shipg. Rec., vol. 24, no. 13, Sept. 25, 1924, pp. 366-367, 4 figs. First practical application in 4500-ton deadweight motorship; successful demonstration on trial trip.

RULING MACHINES

Grating. Ruling 15,000 Lines per Inch, F. A. Stanley. Am. Mach., vol. 60, no. 5, Jan. 31, 1924, pp. 161-166, 11 figs. Machine for ruling gratings and how it was built; lapping lead screw to correct errors; testing corrections with interferometer.

RUST. See CORROSION, Iron and Steel; Rust Removal.

RUST PREVENTION. See PAINTS, Rust-Preventive.

S

SAFES

Bank-Vault Construction. Outwitting the Safe-Breaker, H. R. Simonds. Iron Trade Rev., vol. 74, no. 6, Feb. 7, 1924, pp. 415-419, 10 figs. By use of alloy and special steels impervious to attack by cutting torch, engineers have succeeded in building bank vaults which are impregnable; special machine tools and accurate finishing of work play important part.

Finishing. How Abrasive Processes Finish Bank Vaults and Safes, H. R. Simonds. Abrasive Industry, vol. 5, no. 8, Aug. 1924, pp. 201-205, 12 figs. Describes various abrasive operations pursued in manufacture of safes built by York Safe & Lock Co., York, Pa.

Reinforced-Concrete. The Fortis Reinforced Concrete Safes and Strong Room Doors. Engineering, vol. 117, no. 3029, Jan. 18, 1924, pp. 72-73, 8 figs. Describes safes in which reinforced concrete is used for whole body of safe, as well as doors.

SAFETY

Coal Mines. See COAL MINES, Safety.

Mine Hoists. See HOISTS, Mine, Safety Devices for.

Mining Industry. See MINES, Safety Problems.

SAFETY CODES

Aeronautical. The American Aeronautical Safety Code, A. Halsted. Nat. Safety News, vol. 10, no. 3, Sept. 1924, pp. 27-29, 4 figs. Purpose of code is to establish uniform safety standards for construction and maintenance of aircraft and for their operation and flight, especially at airdromes.

Coal-Mining. See COAL MINES, Safety.

Forging. See FORGING, Safety Code for.

Quarries. See QUARRIES, Safety Code for.

SAFETY LAMPS

Testing Tanks for Combustible Gases. Use of Koehler Safety Lamp in Testing Tanks for Combustible Gases or Vapors, Rob. E. Wilson and Rob. E. Wilkin. Indus. & Eng. Chem., vol. 16, no. 11, Nov. 1924, pp. 1154-1156, 2 figs Koehler lamp is recommended as means of testing tanks and other inclosed spaces for freedom from explosive concentrations of combustible gases; series of tests to determine effect of flame height on various concentrations of gasoline in air.

SALT

Malagash, Nova Scotia. The Salt Deposits of Malagash, Nova Scotia, A. R. Chambers. Can. Inst. Min. & Metallurgy—Bul., no. 145, May 1924, pp. 276-285, 4 figs. Notes on geology and mining.

Mining and Preparation, Kansas. Working the Kansas Salt Deposits, C. A. Lovell. Chem. & Met. Eng., vol. 30, no. 11, Mar. 17, 1924, pp. 426-429, 7 figs. How basic raw material of chemical industry is mined and prepared for user at plant of Carey Salt Co., Hutchinson, Kan.

Mining Plant. A Model Salt-mining Plant at Retsof, N. Y., A. B. Parsons. Eng. & Min. Jl.-Press, vol. 117, no. 25, June 21, 1924, pp. 997-1005, 25 figs. Plant with capacity for mining, hoisting, crushing, and sizing 3000 tons of rock salt per 8-hr. shift. Largest installation of its kind in world. Equipment much the same as that used in mining and milling metal and other non-metal ores.

Separation from Brines. Conquering Natural Brines for Commerce, C. T. Bragg and W. P. Putnam. Chem. & Met. Eng., vol. 31, no. 12, Sept. 22, 1924, pp. 468-469. Report of investigation of an ingenious process, patented by C. E. Dolbear, by which a complicated brine may be separated into its constituent salts.

SALTS

Melting Points. Some New Standard Melting Points at High Temperatures, H. S. Roberts. Physical Rev., vol. 23, no. 3, Mar. 1924, pp. 386-395, 5 figs. Melting points of salts for use as standard temperatures for thermocouples, 400 to 1100 deg. cent.; gives convenient method of using pure metal strips or wires in calibrating couples.

SAND

Bituminous. See BITUMINOUS SANDS.

Concrete. See CONCRETE, Sand, Selection of.

Filter. Filter Sand for Municipal Water Supply, W. M. Weigel. U. S. Bur. Mines—Reports of Investigations, no. 2622, July 1924, 6 pp. Study of sand for this purpose; requirements; chemical analysis; specifications; sources of supply; methods of mining and preparation. Bibliography.

Progress Report of Committee No. 18 on Filter Sand Analysis. Am. Water Wks. Assn.—Jl., vol. 11, no. 3, May 1924, pp. 677-690, 1 fig. Historical sketch of examination of filter sand; Hazen's method; Abram's fineness modulus; relative standardization of sieves; physical, chemical, and microscopic analysis of sand.

Molding. See SAND, MOLDING.

Sand-Blasting. Sand Blast Sand, W. M. Weigel. U. S. Bur. Mines—Reports of Investigations, serial no. 2615, June 1924, 6 pp. Discusses applications in foundries and for cleaning, screen sizes used, shapes of grain, mining and preparation, etc.

Special Sands. Special Sands, W. M. Weigel. U. S. Dept. Mines—Reports of Investigations, no. 2646, Oct. 1924, 9 figs. Include filter, sandblast, engine, abrasive, fire or furnace, special flooring, roofing, and pottery placing sand, definitions and properties of which are given.

Vienna, Austria. Characteristics of Some Vienna Building Sands (Charakteristik einiger Wiener Bausande nach äusseren Kennzeichen), R. Grengg and K. Kammel. Zeit. des Oesterr. Ingenieur- u. Architekten-Vereines, vol. 76, no. 43-44, Oct. 31, 1924, pp. 369-373, 2 figs. Contains tables of data on sands, giving shape and size of grain, kind of rock, weight, and principal uses.

SAND BLAST

Air and Sand Conditions. Compressed Air and Sand Conditions in Sand Blasts (Die Pressluft- und Sandverhältnisse bei Sandstrahlgebläsen), H. R. Karg. Praktischer Maschinen-Konstrukteur, vol. 57, nos. 6, 7, and 9, Feb. 15, 25, and Mar. 15, 1924, pp. 45-49, 62-65, and 105-107, 6 figs. Suggestions for establishing reliable operating data for sand blasts; deals with volume and temperature conditions; air and sand consumption.

Sand for. See SAND, Sand-Blasting.

SAND, MOLDING

Bonding Substance of. The Bonding Substance of Molding Sands, H. P. Hanley. Am. Foundrymen's Assn.—Bul., vol. 3, no. 2, Apr. 1924, pp. 6-10. Its composition, properties, and tests.

Brass-Foundry, Reclaiming. Reclaiming Brass Foundry Sands, F. L. Wolf and A. A. Grubb. Metal Industry (N. Y.), vol. 22, no. 11, Nov. 1924, pp. 438-441, 5 figs. Molding-sand reclamation and control experiments.

Experimental Examination. The Experimental Examination of Moulding Sand, A. Touflieb. Foundry Trade Jl., vol. 30, no. 436, Dec. 25, 1924, pp. 548-549, 7 figs. Indicates simple and direct experimental examinations that can be carried out in any foundry, at same time giving definite and useful information on quality and suitability of various sands employed. (Abstract.) Translated from paper presented to Assn. Technique de Fonderie.

Grading, Grain-Size. The Grain Size Grading of Moulding Sand, H. C. Dews. Foundry Trade Jl., vol. 30, no. 430, Nov. 13, 1924, pp. 413-415, 4 figs. Discusses three common methods of grading sand according to its grain size: screening, elutriation, and sedimentation.

Heat Effect on Clay Content. Effect of Heat on Clay Content of Molding Sand Shown by Dye Adsorption Test, R. F. Harrington, W. L. MacComb and M. A. Hosmer. Brass World, vol. 20, no. 12, Dec. 1924, pp. 421-422, 3 figs. Results of tests on samples of three different gravels of same geological formation.

Reclamation Tests. Reports on Sand Reclamation Tests. Foundry, vol. 52, no. 12, June 15, 1924, pp. 470-471. (Abstract.) Progress report of committee of Am. Foundrymen's Assn.

Steel Castings. Moulding Sands for Steel Castings, A. Rhydderch. Foundry Trade Jl., vol. 29, nos. 406 and 407, May 29 and June 5, 1924, pp. 445-448 and 460-463, 6 figs. Refractoriness, naturally-bonded sand, examination of clay grades, stripping properties of sands, "compos," mechanical strength and permeability, controlling variables, standardization of testing methods, preparation, strength as affected by milling, drying of sands and compo molds, etc.

Testing. Notes on Sand Test Methods, C. W. H. Holmes. Foundry, vol. 52, nos. 10 and 11, May 15 and June 1, 1924, pp. 385-388 and 435-438, 1 fig. May 15: Discusses formation of sand and chemical, mineral, and mechanical properties most desired for molding purposes; nature of bond. June 1: Results obtained with sieve test and elutriator compared, with special reference to distribution of bond; selecting and standardizing tests. (Abstract.) Paper presented at Paris meeting of Int. Foundry Congress.

Report on Molding Sand Tests. Foundry, vol. 52, nos. 17 and 18, Sept. 1 and 15, 1924, pp. 675-680 and 713-716, 4 figs. Report of joint committee on molding sand research, Am. Foundrymen's Assn., giving tests for determining fineness and dye absorption properties, and methods for sampling shipments of sand. Sept. 15: Chemical analysis.

See also FOUNDRY EQUIPMENT, Core and Sand Testing Equipment.

SANITARY WARE

Manufacture, America. The Sanitary Ware Industry in America, LeRoy H. Minton. Ceramist, vol. 4, no. 6, Sept. 1924, pp. 336-350, 6 figs. Development; kinds of ware; statistics; recent developments and improvements; new types of kilns.

SANITATION

Engineering Problems. Present Status of Sanitary Engineering; Suggestions for Objects and Aims of the Sanitary Engineering Division, H. P. Eddy. Am. Soc. Civ. Engrs.—Proc., vol. 50, no. 1, Jan. 1924, pp. 3-18, 1 fig. Deals with problems of water supply and purification; sewerage; drainage, sewage disposal, and disposal of industrial wastes; refuse collection and disposal; air supply and purification; etc.

Relation to Health. Sanitation—Its Relation to Health and Life, Geo. C. Whipple. Am. Soc. Civ. Engrs.—Proc., vol. 50, no. 4, Apr. 1924, pp. 490-502, 1 fig. Notes on environmental complements to health; nuisances and annoyances; sanitation and its administration; present status of sanitary engineering.

SAWMILLS

Coal Mines. The Equipment and Upkeep of the Colliery Saw Mill, A. Powis Bale. Colliery Eng., vol. 1, nos. 8 and 9, Oct. and Nov. 1924, pp. 371-373 and 407-408, 12 figs. Oct.: Suitable component machines for inclusion in modern mill. Nov.: Plane saws; care of bearings; tests for oil and grease; belt vs. electric drive.

SAWS

Circular. Recent Investigations of Cold Circular Sawing Machines and Circular Saw Blades (Neuere Untersuchungen an Kaltkreissägemaschinen und Kreissägeblättern), A. Stotz. Maschinenbau, vol. 3, no. 12, Mar. 27, 1924, pp. 404-408, 14 figs. Results of investigations demonstrate superiority of rapid blades over tool-steel full blades, and also show that cold circular saws can compete successfully with ripping process by means of toothless friction saws.

Hot. Operation of High-Power Hot Saws (Die günstigste Arbeitsweise der Hochleistungs-Heisssägen), L. Roth. Maschinenbau, vol. 3, no. 18, June 26, 1924, pp. 644-651, 10 figs. For cutting iron or steel bars coming from mill train; discusses main causes of appearance of cracks and explosion of disks, effect of Mn content, optimum tooth form, etc.

Mars Metal-Sawing Machine. The Mars Metal-Sawing Machine with Electric Feed ("Mars"-Metalltrennmaschine mit elektrischem Vorschub). Schiffbau, vol. 25, no. 10, Feb. 27, 1924, pp. 239-241, 4 figs. Describes machines made in Mars Works in Nuremburg-Doos for cutting off of steel and iron, with special reference to largest-size machine with electric feed used in shipyards.

SCALES

Computing. The Development of the Modern Computing Scale. Can. Machy., vol. 32, no. 11, Sept. 11, 1924, pp. 19-22, 4 figs. Brief outline of evolution of methods of weighing from shekels of silver of 1860 B. C. to products of Dayton Scale Works, Toronto, in 1924.

Locomotive. A Unique Locomotive Weighing Plant, C. C. Bailey. Baldwin Locomotives, vol. 2, no. 3, Jan. 1924, pp. 56-62, 7 figs. Comprises platform track scale of immense proportions, 24 individual wheel scales, concrete scale foundations of massive construction, and specially designed and well-equipped building which covers and protects scale and its mechanism.

SCHOOLS

Fireproof. See BUILDINGS, Schools.

Heating and Ventilating. See HEATING, ELECTRIC, Church and Schoolroom; HEATING AND VENTILATION, School Buildings.

Lighting. See LIGHTING, School Buildings.

SCIENTIFIC MANAGEMENT. See INDUSTRIAL MANAGEMENT.

SCLERON. See ALUMINUM ALLOYS, Scleron.

SCRAP

Briquetted Chips as. Using Briquetted Chips as Furnace Scrap. Iron Age, vol. 114, no. 24, Dec. 11, 1924, pp. 1537-1538, 4 figs. Compressed material turned out by machine of 6½ tons capacity per hr. at steel plant of Timken Roller Bearing Co., Canton, Ohio, method of gathering chips.

Chip-Handling Plant. What Becomes of the Chips?, C. J. Priebe. Am. Mach., vol. 60, no. 10, Mar. 6, 1924, pp. 361-363, 5 figs. Chip house at plant of LeBlond Machine Tool Co., Cincinnati; how chips are handled on production basis to facilitate shipment; plant for separating and filtering oil.

Electric Baling. Electric Scrap Baling. Blast Furnace & Steel Plant, vol. 12, no. 10, Oct. 1924, p. 450, 1 fig. New German method of simplifying production and meeting competition.

Railway, Reclamation of. See RAILWAY SHOPS, Scrap Reclamation.

Warship Hulls, Salvaging. Salvaging Hulls of Battleships, Chas. A. Barnes. Iron Trade Rev., vol. 74, no. 14, Apr. 3, 1924, pp. 932-934, 5 figs. About 10,000 tons of material heretofore lost in scrapping each ship now is reclaimed by method of cutting up hulls at navy yards; cost of work is comparatively low.

SCRAPERS

Wheel. The Economical Use of Wheel Scrapers, J. L. Harrison. Pub. Roads, vol. 5, no. 10, Dec. 1924, pp. 16-23, 6 figs. Significant differences between wheeler and fresno outfits; operating cost ratio, which is important factor in comparing fresno and wheeler operation, is affected by wages and size of outfit; effect of minor delays on output; how to schedule wheeler job.

SCREENS

Perforated Metalware Manufacture. Production of Perforated Metalware. Iron Age, vol. 113, no. 10, Mar. 6, 1924, pp. 701-705, 11 figs. Routing of materials and special punching arrangements features of Hendrick plant at Carbondale, Pa.; steel and manganese bronze principal materials.

Standardization. Standardization of Metal Fabrics (La standardisation des tissus métalliques), C. Ratel. Chimie & Industrie, vol. 12, no. 1, July 1924, pp. 16-30, 6 figs. Discusses various French, American, British, and German types of mesh for screening, and gives French equivalents for them; grinders and crushers, Rittinger law as basis for grinding diagrams, etc.

SCREW MACHINES

Automatic. National-Acme Five-Spindle Automatic. Machy. (N. Y.), vol. 30, no. 6, Feb. 1924, pp. 473-475, 4 figs. See also Machy. (Lond.), vol. 23, no. 597, Mar 6, 1924, pp. 752-754, 4 figs. Provision of five spindles instead of four permits distribution of cutting strains over larger number of tools, and as result, there is less tendency for strain to occur at points where heavy cuts are being taken. Among new features is exclusive use of right-hand tools, telescoping main tool carrier, improved type of spindle carrier, indexing mechanism for spindle carrier, stock feed in either first or fifth spindle, or both, centralized lubrication, etc.

Magazine Attachments. Design of Magazine Attachments, A. A. Dowd. Machy. (N. Y.), vol. 30, no. 10, June 1924, pp. 771-773, 4 figs. Problems of design; details of bar-stock magazine.

Tools. See TOOLS, Cross-Slide Facing.

SCREW THREADS

Comparators. The Wilson Projection Comparator for Screw Threads. Engineering, vol. 117, no. 3045, May 9, 1924, pp. 606-608, 6 figs. Devised for gaging screw threads and other similar solids of revolution.

Copper. Comparison Between Cold-Rolled and Cut Threads, Especially in Copper Screws (Vergleich zwischen kalt gerollten und geschnittenen Gewinden, besonders bei Kupferschrauben), M. v. Schwarz. Werkstattstechnik, vol. 18, no. 14, July 15, 1924, pp. 369-372, 10 figs. Discusses increased application of cold rolling instead of cutting, and its advantages in bending, not cutting, fiber; shown by micrographs.

Cutting. Threading Tool and Gage Forms for the New Screw Thread Standard, R. E. Flanders. Am. Mach., vol. 61, no. 13, Sept. 25, 1924, pp. 481-486, 15 figs. Consideration of important points in manufacture of threads conforming to new Am. (National) Screw Thread Standards. Shape of cutting edges for threading tools and taps; proper outlines for gage points; preparation of charts for inspection by optical projection; Hartness comparator.

Cutting Tools, Master, Manufacture of. Making Master Threading Tools, G. D. Hutchings. Machy. (N. Y.), vol. 31, no. 2, Oct. 1924, pp. 131-133, 7 figs. Formulas for use in making theoretically correct master tools for hobs or any similar thread-cutting tools.

Cutting Tools, Position of. Position of Thread-cutting Tool and Its Effect on Thread Form. Machy. (Lond.), vol. 24, no. 602, Apr. 10, 1924, pp. 54-55, 2 figs. Position of tool for external thread cutting; distortion produced in cutting internal threads; distortion of thread grooves having angular sides.

Dies. See DIES, Self-Opening; Screw-Cutting.

Measurement. Measuring Threads Accurately with Micrometers. Can. Machy., vol. 31, no. 18, May 1, 1924, pp. 31-32 and 51, 6 figs. Hints on accurate use of micrometers.

Rolling. Rolling Threads on Thin Brass Shells, W. P. Doolittle. Am. Mach., vol. 60, no. 22, May 29, 1924, pp. 793-794, 8 figs. Causes of troubles experienced in holding work to plug, or ring, thread gage, tools for thread rolling and beading.

Standards. American Standard Screw Threads. Am. Mach., vol. 61, nos. 10, 11, and 12, Sept. 4, 11, and 18, 1924, pp. 383-387, 421-422, and 457-460, 3 figs. Standardization and unification approved by Am. Eng. Standards Committee, May 1924, for bolts, machine screws, nuts and commercially tapped holes.

Fire-Hose Thread Standards. Iron Age, vol. 114, no. 16, Oct. 16, 1924, pp. 996-997. Characteristics of Nat. standard fire-hose coupling screw thread; limiting dimensions of threads and gages specified.

Stud Fitting. Modern Practice in Fitting Studs. Am. Mach., vol. 60, no. 9, Feb. 28, 1924, pp. 323-324. Résumé of methods used in securing satisfactory fits for studs in aluminum, bronze, cast iron, and steel.

Taps. See TAPS.

Worm. The Gauging of Finish-ground Worms by Cylinders, H. E. Merritt. Engineer, vol. 138, no. 3580, Aug. 8, 1924, pp. 162-163, 3 figs. Shows that from certain fundamental worm dimensions size and position of a cylinder to gage any point on thread contour may be calculated, and in spite of apparent difficulty of problem, solution is very simple and easy of application.

SCREWS

Lead-Screw, Chasing. Chasing-Lead-screws, Chas. O. Herb. Machy. (N. Y.), vol. 30, no. 11, July 1924, pp. 883-884, 2 figs. Practice of Am. Tool Works Co.

Threads. See SCREW THREADS.

Whitworth. Whitworth Screws, M. H. Sabine. Machy. (Lond.), vol. 24, no. 618, July 31, 1924, pp. 562-565, 1 fig. Details of dimensions, efficiency, and other data in tabular form.

Wood. Production Data in Manufacturing Wood Screws, W. Richards. Can. Machy., vol. 31, no. 27, July 3, 1924, pp. 25 and 43, 3 figs. Description of manufacture of steel wood screws and production data for every operation. All operations performed automatically. Machines of each class arranged in batteries to facilitate work.

SEAPLANES

All-Metal. Large All-Metal Seaplanes, Rohrbach. Roy. Aeronautical Soc.—Jl., vol. 28, no. 168, Dec. 1924, pp. 655-672, and (discussion) 672-675, 18 figs. Author gives his personal experience and opinions; general advantages of all-metal construction; advantage of heavily loaded airplane; comparison of biplane and monoplane; details of Ro II-type flying boat being built in Copenhagen.

Developments and Aims. The World Status of Seaplanes (L'Orientation actuelle de l'Hydraviation mondiale), Boutiron. Aéronautique, vol. 5, no. 55, Dec. 1924, pp. 517-525, 9 figs. Discusses tendencies and aims; evolution of shape and outline; increasing tonange; metallic construction; improvement of hull and fuselage; future province of marine planes.

Metal. The L.F.G.-V20a Commercial Airplane (Das Verkehrsflugzeug "L.F.G.-V20a), R. Roseph. Motorwagen, vol. 27, no. 13, May 10, 1924, pp. 223-224, 3 figs. Improved type of metal seaplane with empty weight of 1150 kg.

Navy Types. Navy Types of Heavier-than-Air Craft, E. E. Wilson. U. S. Nav. Inst.—Proc., vol. 50, no. 262, Dec. 1924, pp. 2029-2040, 9 figs. Classification of different types, pointing out means by which they may be readily recognized at distance.

PN-7 Boat. The PN-7 Boat Seaplane, E. E. Wilson. Am. Soc. Nav. Engrs.—Jl., vol. 36, no. 3, Aug. 1924, pp. 351-376, 13 figs. Twin-motored boat seaplane having gross load of 14,800 lb., max. speed of 105 m.p.h., and ceiling of 8000 ft.; propelling machinery consists of Wright T-2 engines rated at 525 hp. at 1800 r.p.m.

Static Stability. Static Stability of Seaplane Floats and Hulls, W. S. Diehl. Nat. Advisory Committee for Aeronautics—Tech. Notes, no. 183, Mar. 1924, 13 pp., 3 figs. Lateral stability—twin floats; longitudinal stability—single and twin floats; lateral stability—single float and boat-type seaplanes; application to design.

SEARCHLIGHTS

Diffusion of Beam. See LIGHT, Diffusion.

High-Intensity. See ELECTRIC ARC, High-Intensity.

Towers, Disappearing. Army Engineers Build Disappearing Searchlight Towers, E. D. Cummings. Eng. News-Rec., vol. 92, no. 6, Feb. 7, 1924, pp. 227-229, 3 figs. Supported on trunnion shafts; carefully balanced for quick operation; towers 45 ft. to 100 ft. high.

SEISMOPHYSICS. See EARTH, Interior of.

SELENIUM

Conductance of. Change of Conductance of Selenium Due to Electronic Bombardment, R. de L. Kronig. Physical Rev., vol. 24, no. 4, Oct. 1924, pp. 377-382, 4 figs. Results of experiments in which a low-resistance selenium cell about 1 in. square made by pressing Se between 20 double turns of fine Pt wire, was mounted in a vacuum tube with a grid and an oxide-coated, equipotential, electrically-heated cathode and subjected to bombardment by electron currents up to 400μ-amp. at potentials up to 95 volts.

Densimeter. The Selenium Optical Densimeter for Colorimetric Work, E. V. Hjort, A. Lowy and O. Blackwood. Optical Soc. America & Rev. Sci. Instruments—Jl., vol. 9, no. 1, July, 1924, pp. 43-51, 9 figs. Detail of new apparatus for measuring absorption of red, and to less degree of orange light, and its practical application to solutions of salts of copper and nickel.

SEMI-DIESEL ENGINES

Deutz Marine. The Deutz Marine Semi-Diesel Engine (Der Deutzer Schiffs-Semi-Dieselmotor). Motorwagen, vol. 27, no. 23, Aug. 20, 1924, pp. 408-411, 8 figs. Details of compressorless Diesel, its increased efficiency, smallest fuel consumption being 166 g. per hp-hr. at 320 effective hp.

Operation. Semi-Diesel Operation at All Load Ratings, H. F. Shepherd. Power, vol. 60, no. 10, Sept. 2, 1924, pp. 366-368, 3 figs. Discusses variable operating characteristics through load range and gives scavenging as most important factor in this variation. Calculations for a two-stroke engine with compression of 180 lb. gage.

SEMI-STEEL

Castings. The Making of Semi-Steel Castings, G. W. Gilderman. Foundry Trade Jl., vol. 30, no. 413, July 17, 1924, pp. 44-45. Discusses mixtures and charging, preparation of mold, pattern proportion, and alloys.

Characteristics. Semi-Steel. Metal Industry (Lond.), vol. 25, no. 18, Oct. 24, 1924, pp. 403-405. Points out that semi-steel is nothing more than a good cast iron; influence of steel on grain structure; advantages of semi-steel and difficulties of its manufacture; cost considerations; "sluggishness" and risk of imhomogeneity; hematite semi-steel mixtures and influence of phosphorous; influence of sulphur.

Manufacture. Semi-Steel, A. Campion. Foundry Trade Jl., vol. 29, no. 400, Apr. 17, 1924, pp. 316-318. Methods of manufacture, raw materials to be used, charging conditions, fluxing, etc.

SEPARATORS

Ash and Fuel. A New Fuel-Recovery Plant (Ash Washer) [Ein neuer Brennstoffrückgewinner (Schlackenwäscher)] H. Kiesel. Gas- u. Wasserfach, vol. 67, no. 12, Mar. 22, 1924, pp. 153-154, 2 figs. New type of ash separator, known as eukonomator, employed at gas works in Heilbronn, Germany, which has not heretofore been described. See description in English in Eng. Progress, vol. 5, no. 12, Dec. 1924, p. 266, 1 fig.

Recovering Fuel from Ashes, S. H. Bunnell. Iron Age, vol. 113, no. 19, May 8, 1924, p. 1368, 2 figs. Operation of Columbus coke separator, developed by Benno Schilde Machy. Co., Germany, and marketed by Ash Reclaiming Machy. Co. of New York.

Coal. See COAL, Dry Cleaning.

Magnetic. Magnetic Protection and Separation, E. A. Wilcox. Jl. Electricity, vol. 53, no. 9, Nov. 1, 1924, pp. 326-329, 2 figs. Deals with four general classifications of magnetic separators.

Magnetic Separator (Magnetscheider zum Aussondern von Eisen). Glasers Annalen, vol. 94, no. 10, May 15, 1924, pp. 130-133, 14 figs. Describes a magnetic separator in shape of a drum, which extracts magnetic impurities from any pulverized mixture.

New Magnetic Separators (Neue Magnetscheider für schwachmagnetische Erze, Kohle und Kali). Bergbau, vol. 37, no. 5, Mar. 5, 1924, pp. 65-66, 3 figs. By use of very strong and highly concentrated magnetic field it is possible to separate ores of low permeability or to segregate materials which differ only slightly in magnetic permeability; for finely divided material, up to 8 mm. diam., separator comprising shaking trough, with magnets and rotating disk beneath, deals with up to 1760 lb. of ore per hr.; larger material should be treated in drum-type separator; from 1 to 2 tons of ore can then be treated per hr. using two magnets, and from 3 to 4 tons using four magnets.

Tests with Davis Magnetic Ore Separators (Några försök med Davis' magnetiska separator), S. Schwartz. Jernkontorets Annaler, vol. 108, no. 10, 1924, pp. 534-549, 8 figs. Description of design of separator and comparative results obtained on a small Davis separator and on two and three drum-type separators. Davis separator appears superior for fine grain material; less so for coarser grains.

Oil. See LUBRICATING OILS, Purifier for.

Steam. See LOCOMOTIVES, Steam Separators.

SEWAGE

Activated Sludge as Fertilizer. See FERTILIZERS, Sewage Sludge as.

Analysis of. Sewage Works Analyses, C. B. O. Jones. Surveyor & Mun. & County Engr., vol. 65, no. 1684, Apr. 25, 1924, pp. 403-405. See also Can. Engr., vol. 47, no. 12, Sept. 16, 1924, pp. 337-339. Methods used in analyses of sewages and sewage effluents; need for greater accuracy.

Disposal. See SEWAGE DISPOSAL.

Irrigation. See IRRIGATION, Sewage.

Sludge as Fuel. See FUELS, Sewage Sludge.

Trade Wastes, Inflammable Liquids Separation from. Devices for Separating Inflammable and Explosive Liquids from Effluents (Einrichtungen zur Abscheidung von feuergefährlichen, explosiven Flüssigkeiten aus Abwässern), Hartleb. Gesundheits-Ingenieur, vol. 47, no. 45, Nov. 8, 1924, pp. 525-528, 7 figs. Describes apparatus for freeing effluent waters from benzine, petroleum, benzol, and other inflammable liquids to prevent accidents.

SEWAGE DISPOSAL

Activated Sludge. Dewatering Activated Sludge, L. Pearse. Public Works, vol. 55, no. 8, Aug. 1924, pp. 262-265. See also Eng. & Contracting (Water Works), vol. 62, no. 1, July 9, 1924, pp. 91-94, and Can. Engr., vol. 47, no. 7, Aug. 12, 1924, pp. 240-242. Apparatus and methods employed in United States and results obtained in operating and test plants. Difficulties of dewatering are chiefly due to physical condition of solids which retain very tenaciously water to large volume of sludge to be handled and to importance of removing practically all solids from sludge. Processes involved in primary and secondary removal of water. Abstract of paper read before Int. Conference on Sanitary Eng., London.

Elasticity of the Activated Sludge Process, J. Bolton. Surveyor & Mun. & County Engr., vol. 66, no. 1697, July 25, 1924, pp. 85-86. Experience gained from unavoidable stoppage of power to 50,000-gal. unit shows that process is very elastic.

Elasticity of Activated Sludge Process, J. Bolton. Can. Engr., vol. 47, no. 12 Sept. 23, 1924, pp. 355-356. See also Mun. & County Eng., vol. 67, no. 3, Sept. 1924, pp. 146-148. Results of experiments at a plant at Bury, Eng., to show effect on sludge after various periods of rest. From paper presented at Int. Conference of Sanitary Eng., Lond.

Experience in Dewatering Activated Sludge, L. Pearse. Mun. & County Eng., vol. 67, no. 1, July 1924, pp. 18-21. Discusses difficulties of dewatering, properly conditioning of sludge, comparison of press types, filtering, filtering with aid of additional pressure, vacuum filters, centrifuge, flotation, secondary removal of water, filter cloths and cost data.

Fertilizing Value of Activated Sludge, V. H. Kadish. Can. Engr., vol. 47, no. 11, Sept. 9, 1924, pp. 313-314. See also Eng. & Contracting (Water Works), vol. 62, no. 4, Oct. 8, 1924, pp. 817-820. Discusses investigations at Milwaukee, Wis.; sulphuric acid employed for chemical conditioning; successful experiments with sludge on truck farms and golf courses.

Four Activated-Sludge Plants in California, C. E. Grunsky, Jr., Eng. News-Rec., vol. 92, no. 22, May 29, 1924, pp. 937-939, 1 fig. Various systems of air distribution used include perforated pipes and Trent aerator on Barker-mill principle.

Milwaukee's Sewage Disposal Plant. Public Wks., vol. 55, no. 1, Jan. 1924, pp. 17-20, 2 figs. Detailed description of activated sludge plant under construction; will have two low-level and two high-level siphons, maximum capacity of the four siphons being 317,000,000 gal. daily.

Study of Activated Sludge (Contribution à l'étude des boues activées), L. Cavel. Académie des Sciences—Comptes Rendus, vol. 179, no. 20, Nov. 17, 1924, pp. 1095-1098. Concludes that presence of even traces of acid prevent nitrification and even very weakly-acid sewage should not be allowed in sludge purifying plants.

Tests of Air Pressure Losses in Activated-Sludge Plants, R. J. Bushee and S. L. Jack. Eng. News-Rec., vol. 93, no. 21, Nov. 20, 1924, pp. 823-824, 4 figs. Observations on cast-iron pipe, venturi air meters, check valve and three different makes of aeration plates.

The Filtration of Activated Sludge, F. W. Mohlman. Indus. & Eng. Chem., vol. 16, no. 3, Mar. 1924, pp. 225-227. Practical, simple method of treatment of activated sludge before filtration in use at plants and testing stations of Sanitary District of Chicago; procedure in use at each plant is discussed separately.

Chicago. The Sewage Disposal Problem of Chicago, L. Pearse. Eng. & Contracting (Water Works), vol. 62, no. 1, July 9, 1924, pp. 74-76. Discusses sewage treatment in Chicago. Review of developments and projects under way.

Development. Historical Development of Sewage Purification Processes, J. H. Garner. Surveyor & Mun. & County Engr., vol. 66, no. 1704, Sept. 12, 1924, pp. 213-216. Discusses land irrigation, intermittent filtration, artificial filters, rise of biological methods, contact beds, percolating filters, humus tanks, septic tank, travis hydrolytic tank, Imhoff tank and recent developments.

Direct Oxidation. Direct Oxidation Tests at Toronto, F. A. Dallyn, G. A. Johnson and A. V. Delaporte. Can. Engr., vol. 46, no. 8, Feb. 19, 1924, pp. 243-254, 6 figs. Carried out under direction of Provincial Board of Health of Ontario at Experimental Station, Toronto; description of plant and method of conducting tests; conclusions based on experiments.

Distributors, Power-Driven Sewage. Distributors for Percolating Sewage Purification Beds. Engineer, vol. 137, no. 3556, Feb. 22, 1924, pp. 206-208, 6 figs. Describes latest type of power-driven sewage distributors supplied by Hartley, Sons & Co. for new disposal works at Leeds.

Dosing Device for Filter Bed. Rotating Dosing Device for Sewage Filter Bed. Eng. News-Rec., vol. 92, no. 12, Mar. 20, 1924, pp. 496-497, 2 figs. Ship's propeller supplies driving force for mech-

anism set to operate on time rather than quantity basis.

Ejector System. Ejector System for Sewage Disposal, J. J. Taylor. Compressed Air Mag., vol. 29, no. 2, Feb. 1924, pp. 782-786, 5 figs. Advantages of pumping by compressed air in this manner; design and operation.

Emscher Tanks. Methane from Clarification Plants and Their Carbonic Acid Content (Sumpfgase aus Kläranlagen und deren Kohlensäuregehalt), G. Strassburger and M. Decker. Gesundheits-Ingenieur, vol. 47, no. 34, Aug. 23, 1924, pp. 369-370. Discusses experience at Erfurt with Emscher wells and Erfurt "funnels," and gives table of figures for CO_2 in methane gas, and shows advantages of Erfurt "funnels."

Experiment Station, N. J. Report to the Sanitary Engineering Division, Relative to the New Jersey State Sewage Experiment Station. Am. Soc. Civ. Engrs.—Proc., vol. 50, no. 3, Mar. 1924, pp. 255-258.

Fertilizer. See FERTILIZERS, Activated Sludge as.

Great Britain, 1923. Sanitary Engineering in 1923. Engineer, vol. 137, no. 3549, Jan. 4, 1924, pp. 10-11. London main drainage and sewage disposal; sewage treatment by agitation and aeration; Walshaw system of disposal; Manchester's new activated sludge plant; Leeds disposal works; works in hand and in contemplation.

Imhoff Tanks. Imhoff Tanks—Reasons for Differences in Behavior, H. P. Eddy. Am. Soc. Civ. Engrs.—Proc., vol. 50, no. 5, May 1924, pp. 616-645, and (discussion) 706-723, 14 figs. Investigation to ascertain reasons for differences in operating results obtained from Imhoff tanks, in order that requirements for satisfactory results might be better understood. See (discussion) in vol. 50, nos. 6, 7, and 9, Aug., Sept., and Nov. 1924, pp. 901-924, 1132-1136, and 1500-1510 11 figs.

New Design for Collecting Methane Gas from Imhoff Tanks, K. Imhoff. Eng. News-Rec., vol. 93, no. 15, Oct. 9, 1924, p. 585, 1 fig. How construction of early gas collectors used in two-story sewage sedimentation tanks in Ruhr District, in Germany, which were constructed so that scum could be removed, has been improved so that manual labor is no longer necessary. Translated from German.

Operation of Imhoff Sewage Tanks, E. L. Waterman. Can. Engr., vol. 46, no. 26, June 24, 1924, pp. 655-657. See also Am. City Mag., vol. 30, no. 3, Mar. 1924, pp. 256-260, 7 figs., and Mun. & County Eng., vol. 67, no. 2, Aug. 1924, pp. 101-104. Essential features of tank; utilization of gas; careful and systematic operation necessary to obtain satisfactory results; cleaning screens and grit chambers, cleaning sides and bottom of settling chamber, removing floating material from sedimentation chamber, treatment of scum on gas-vent chamber, observing depth of sludge, etc.

Industrial Wastes. Disposal of Industrial Wastes in U. S., H. P. Eddy. Can. Engr., vol. 47, no. 15, Oct. 7, 1924, pp. 395-397. Effect of animal, vegetable, and mineral wastes and methods of treatment commonly used. From paper presented at Int. Conference on Sanitary Eng.. Lond.

Experimental Work on the Purification of Trade Waste Waters, H. Kessener. Surveyor & Mun. & County Engr., vol. 66, no. 1705, Sept. 19, 1924, pp. 233-234. See also Eng. & Contracting (Water Works), vol. 62, no. 5, Nov. 12, 1924, pp. 1067-1070. Notes on experiments carried out in Holland in connection with dairy, sugar-factory, strawboard, and potato-flour wastes. Extracts from paper presented at Int. Conference on Sanitary Eng., Lond.

Lime in the Treatment of Trade Wastes, R. H. Ferguson. Chem. Age (N. Y.), vol. 32, no. 7, July 1924, pp. 301-304. See also Mun. & County Eng., vol. 67, no. 5, Nov. 1924, pp. 256-260. Discusses use of lime as precipitating and coagulating agent, as neutralizing agent for acid wastes, as agent to better physical condition of sludge, as alkali to give optimum pH, etc. Abstract of paper read before Nat. Lime Assn.

Treating Industrial Wastes, F. Bachmann and E. B. Besselievre. Chem. & Met. Eng., vol. 31, no. 10, Sept. 8, 1924, pp. 386-387. Treatment so that wastes are no longer injurious is becoming a legal necessity in most states. Describes one method of treatment. From paper read before Am. Inst. Chem. Engrs.

Plants. New Sewage Works at Tilbury. Engineer, vol. 138, no. 3583, Aug. 29, 1924, pp. 242-245, 8 figs. Description of new sewage disposal works of Thurrock, Grays and Tilbury Joint Sewerage Board, and difficulties which were encountered and overcome in carying out undertaking.

Operating Results of Baltimore Sewage-Works, 1919-22, C. E. Keefer. Eng. News-Rec., vol. 92, no. 6, Feb. 7, 1924, pp. 250-251, 17 figs. Graphical presentation on probability paper of range and frequency of chemical and bacterial data obtained.

Sewage Disposal at Hawick. Surveyor & Mun. & County Engr., vol. 65, no. 1692, June 20, 1924, pp. 571-573, 3 figs. Particulars of newly-constructed treatment works in Scotland. Designed to deal ultimately with a dry-weather flow of 3,000,000 gal. per day of average strength sewage, consisting largely of effluents from textile industries.

Sewage Disposal Works at Stratford, Ont., A. B. Manson. Can. Engr., vol. 46, no. 12, Mar. 18, 1924, pp. 335-336, 4 figs. Existing Imhoff tank system converted into an activated sludge plant to serve population of 18,000; nearly 2,000,000 gal. sewage per day handled; new feature embodied in construction of plant.

The Sewage Treatment Plants of Rochester, New York, J. F. Skinner. Am. City, vol. 30, no. 1, Jan. 1924, pp. 37-41, 3 figs. Details of each of three sewage-treatment plants serving city.

The Urbana-Champaign Sewage Treatment Plant, A. L. Tholin. Technograph, vol. 36, no. 11, Jan. 1924, pp. 71-73 and 101, 3 figs. Process consists of coarse screen, Imhoff tanks, sludge drying beds, sprinkling filters and secondary tanks; describes design and construction of plant.

Pumping Stations. The Design and Operation of Sewage Pumping-Stations, C. S. Timanus. Am. City Mag., vol. 30, no. 4, Apr. 1924, pp. 390-393, 1 fig. Capacities determination, selection of equipment, sewage ejectors, etc.

The New Sewage Pumping Station at Lincoln. Engineer, vol. 138, no. 3594, Nov. 14, 1924, pp. 546-548, 3 figs. Details of pumping machinery and storm-water pumps.

See also PUMPING STATIONS, Baltimore, Md.

Romford, England. The Riverside Sewerage Scheme of the Romford R. D. C. Engineer, vol. 138, no. 3585, Sept. 12, 1924, pp. 290-292, 9 figs. partly on p. 296. Discusses extension of sewer lines under authority of Romford District Council, and gives details of construction of new Riverside sewage works and new Eastern sewage works.

Sedimentation and Coagulating Basins. New Sedimentation and Coagulating Basins at Toledo, Geo. N. Schoonmaker. Eng. News-Rec., vol. 92, no. 11, Mar. 13, 1924, pp. 443-446, 6 figs. Experience with old basins utilized in design of new structure; non-baffled units with controlled supply.

Sheffield, England. Sewage Disposal in Sheffield, J. Haworth. Surveyor & Mun. & County Engr., vol. 16, no. 1694, July 4, 1924, pp. 15-16. Details of operation of sewage treatment plant of Tinsley district, including Bio-Aeration plant, its general layout and extension. Abstract of paper read before Instn. Municipal & County Engrs.

Sludge Digestion. Advantages of Separate Sludge Digestion, W. D. Vosbury. Contract Rec., vol. 38, no. 29, July 16, 1924, pp. 719-720, and Public Works, vol. 55, no. 6, June 1924, pp. 184-185. Compares relative merits of two processes of sludge digestion; gives some objectionable features inherent with tanks combining both sedimentation and sludge digestion; successful operation of separate system.

Separate Sludge-Digestion Sewage Plant, L. R. Howson and H. P. Letton. Eng. News-Rec., vol. 92, no. 15, Apr. 10, 1924, pp. 602-607, 9 figs. Single-story tanks at Lincoln, Neb., precede sprinkling filters in plant for sanitary district; muck bottom covered with concrete "raft"; high pump efficiencies.

Sludge Disposal by Digestion Process, J. Watson. Can. Engr., vol. 46, no. 19, May 6, 1924, pp. 499-501. See also Eng. & Contracting (Water Works), vol. 62, no. 1, July 9, 1924, pp. 85-87. Slow progress in sludge digestion processes; principal features of Travis hydrolytic and Imhoff tanks; development of hydrolytic tank at Birmingham.

Studies of Separate Sludge Digestion at Baltimore, T. C. Schaetzle. Eng. News-Rec., vol. 93, no. 23, Dec. 4, 1924, pp. 919-923, 5 figs. Three years' investigation at sewage works shows most rapid digestion in first few weeks; one-third seeding sludge and liquefaction by aerobes desirable features.

Sludge Disposal. Developments in Sludge Disposal, J. Haworth. Can. Engr., vol. 46, no. 18, Apr. 29, 1924, pp. 481-482. Difficulties of problem are nearer an economical solution; drying sludge on ash beds, gauze bands and with centrifuges.

Removal and Disposal of Air-Dried Sludge at Baltimore, J. H. Gregory and C. E. Keefer. Eng. News-Rec., vol. 93, no. 1, July 3, 1924, pp. 13-16, 3 figs. Settling tank sludge goes to separate digestion tanks, thence to drying beds, after which much of it is loaded on farmers' wagons free of charge.

Stream Pollution. See STREAM POLLUTION.

Treatment. Modern Sewage Treatment in the Sanitary District of Chicago, F. W. Mohlman. Armour Engr., vol. 16, no. 1, Nov. 1924, pp. 9-12 and 29-30, 3 figs. Treatment works; Imhoff tanks; sprinkling filters; activated sludge; sampling and analyses; control of operation; special problems; volume of air required for activation.

Some New Sewage Treatment Plant and Apparatus. Engineer, vol. 138, no. 3600, Dec. 26, 1924, pp. 731-732, 6 figs. partly on p. 726. Describes bio-aeration and two types of water-wheel-driven sewage distributors at Hanley sewage works, Stoke-on-Trent.

The Part Which Bio-Aeration May Yet Play in Purifying Sewage, J. D. Watson. Engineering, vol. 118, no. 3060, Aug. 15, 1924, pp. 241-242. Critical review of activated sludge and bio-aeration processes as applied by various English municipalities.

See also Activated Sludge, Chicago; Development; Emscher Tanks; Imhoff Tank; Industrial Wastes; Sheffield; Sludge Digestion.

Trickling-Filter Distributors. Trickling Filter Distributors at British Sewage-Works, T. Chalkley Hatton. Eng. News-Rec., vol. 93, no. 16, Oct. 16, 1924, pp. 624-626, 4 figs. Notes taken recently at sewage works of Birmingham, Bradford, and Leeds show that traveling distributors rather than fixed nozzles are main reliance.

Works, Power Plant. See STEAM POWER PLANTS, Sewage-Disposal Works.

SEWER CONSTRUCTION

Detroit, Mich. The Detroit Sewage Program. Excavating Engr., vol. 17, no. 12, Dec. 1923, and vol. 18, nos. 2 and 3, Feb. and Mar. 1924, pp. 409-412, 55-57, and 94-96, 21 figs. Describes construction methods and equipment used in connection with program for sewage improvement in Detroit; work done almost entirely by dragline excavators.

Trench Width and Pipe Load. Relation of Sewer Trench Width to Load on Pipe, Geo. C. D. Lenth. Eng. News-Rec., vol. 92, no. 13, Mar. 27, 1924, pp. 533-535, 14 figs. Wide trenches and poor bedding give high loading; definite figures for each condition make rational designs possible.

Winnipeg. Construction of Renfrew Street Sewer, W. Aldridge. Can. Engr., vol. 46, no. 25, June 17, 1924, pp. 626-627, 2 figs. Large main sewer, 72 in. diameter, constructed in Winnipeg to relieve unemployment in winter; construction carried out in zero weather; Ferguson segment vitrified clay block chosen for sewer; is not affected by alkali ground water.

SEWERAGE

Storm-Water Drainage. See DRAINAGE, City Areas, Storm-Water Discharge.

SEWERS

Backwater. See CONDUITS, Backwater and Drop-Down Curves.

Calculation. Dimensioning of Municipal Canalization (Die Dimensionierung städtischer Kanäle), E. Melli. Schweizerische Bauzeitung, vol. 84, no. 12, Sept. 20, 1924, pp. 137-141, 5 figs. Determination of rain precipitation and run-off; formulation of coefficient of run-off; comparison of high water formulas in use.

Tables for Most Suitable Form and Static Calculation of Structures (Zahlentafeln zur günstigsten Formgebung und statischen Berechnung von nach der Stützlinie geformten Bauwerken), F. Bülow. Gesundheits-Ingenieur, vol. 47, no. 23, June 7, 1924, pp. 221-224, 3 figs. Develops formulas and tables for obtaining quickly reliable data for most suitable shapes of profiles of water conduits for various loads.

Concrete. Making the Concrete Pipe for Los Angeles Outfall Sewer. Eng. News-Rec., vol. 93, no. 8, Aug. 21, 1924, pp. 296-298, 5 figs. Outfall will extend 5400 ft. into ocean and will consist of a reinforced-concrete pipe 7 ft. in diameter inside, which is being made in sections in a casting yard nearby; sections are 12 ft. 3 in. long and weigh 18 tons each. Describes design and manufacture of pipe.

Construction. See SEWER CONSTRUCTION.

Flow of Water in. A Comparative Test of the Flow of Water in 8-Inch Concrete and Vitrified Clay Sewer Pipe, E. R. Wilcox. Univ. Wash., Eng. Experiment Station—Bul., no. 27, Mar. 1, 1924, 42 pp. 30, figs. Methods used for and results of tests made on slopes from 0.005 to 0.004, and description of apparatus.

Hamilton, Canada. Homeside District Sewers, Hamilton, Ont., H. S. Philips and W. M. Johnston. Can. Engr., vol. 46, no. 18, Apr. 29, 1924, pp. 468-472, 14 figs. Description of sewerage system just completed and construction methods employed; storm water run-off coefficient studies; trunk system of sewers comprises five sections; reinforced-concrete and vitrified pipe employed; details of costs for different types of construction.

Los Angeles, Cal. Outfall Sewer Project of

Los Angeles, W. A. Scott. Eng. Wld., vol. 24, no. 3, Mar. 1924, pp. 139-142, 6 figs. Describes project comprising 87,236 lin. ft. of trunk sewer extending from southwestern part of city to treatment plant on ocean beach, and 5711 ft. of outfall pipe running from plant out into sea, giving construction data; description of sewage treatment plant.

Progress on North Outfall Sewer for City of Los Angeles, W. T. Knowlton. Eng. News- Rec., vol. 92, no. 17, Apr. 24, 1924, pp. 730-731, 3 figs. Work done under several contracts; largest pipe, 102 in. in diam.

Pipe for, Manufacture. Manufacturing Sewer Pipe, E. F. Clemens. Brick & Clay Rec., vol. 65, nos. 8, 9, 10, and 11, Oct. 14, 28, Nov. 11, and 25, 1924, pp. 530-532, 607-609, 688-689 and 692, 762-763, 10 figs. Oct. 14: Mining of raw material. Oct. 28: Advance press scheduling and drying problems. Nov. 11: Burners and burning. Nov. 25: Kilns and kiln construction.

Relief. The Design of Relief Sewers, A. W. Consoer. Mun. & County Eng., vol. 66, no. 2, Feb. 1924, pp. 89-90. Paper read at Ill. Soc. of Engrs. annual meeting.

Repairing. Sewer Repairing in Dayton, I. E. Houk. Pub. Wks., vol. 55, no. 3, Mar. 1924, pp. 87-89, 2 figs. Old brick sewers in unsafe condition repaired by lining invert with vitrified brick and reinforcing arch with gunite, with or without steel reinforcement.

Run-Off Coefficient. The Coefficient of Run-Off in Storm Sewer Design, Le Roy K. Sherman. Mun. & County Eng., vol. 66, no. 6, June 1924, pp. 297-301, 3 figs. Describes procedure for determining percentage "C" of rainfall run-off for sewered areas by rational method.

Velocity of Flow. On the Velocity of Flow in Sewers Partly Full, M. T. M. Ormsby. Surveyor & Min. & County Engr., vol. 65, no. 1679, Mar. 21, 1924, pp. 297-298, 1 fig. Gives diagram for finding velocity of flow in sewers when discharge is very much less than full capacity of sewer; intended to be read along with a table of usual form, giving discharge and velocity in a given sewer at a given gradient when flowing full. Curve is drawn for both circular and egg-shaped sewers, for comparison.

SEWING MACHINES

Manufacture. Dies for Producing a Complicated Sewing-Machine Part. Machy. (Lond.), vol. 24, no. 616, July 17, 1924, pp. 493-496, 6 figs. Details of design and work of dies for piercing and blanking, second forming operation, and final forming operation.

SHAFT SINKING

Air Compressors for. See AIR COMPRESSORS, Portable.

Cementation. Cemention of a Pit Shaft, M. B. Gardner. Iron & Coal Trades Rev., vol. 109, no. 2962, Dec. 5, 1924, p. 927, 1 fig. Relates to treatment of two shafts sunk about 50 years ago, and treated in latter part of 1917.

Cementation Process in a Nottinghamshire Sinking. Colliery Engr., vol. 1, no. 6, Aug. 1924, pp. 270-282, 19 figs. Describes and illustrates equipment and sinking operations in heavily watered strata undertaken at Ollerton by Butterley Co., Ltd.

Coal Mines. Sinking Shafts for Coal Mines. Can. Engr., vol. 47, no. 3, July 15, 1924, p. 163. Advantages of Francois cementation process for sinking shafts through water bearing ground; application of liquid cement.

Compressed-Air. Compressed Air Work in Mining and Iron Works (Ueber Anwendungen von Druckluftgründungen im Bergwerks- und Hüttenbetriebe), H. Butzer. Bautechnik, vol. 2, no. 47, Oct. 31, 1924, pp. 531-534, 7 figs. Compressed air application in concrete shaft construction; compressed air concrete work in construction of shafts for mine ventilation, and hydraulic mining, for foundations of electrode presses, and for well construction.

Freezing Process. Forty Years of Freezing Process in Shaft Sinking (40 Jahre Gefrierverfahren beim Schachtabteufen). Bergbau, vol. 37, nos. 23, 25, and 26, Oct. 23, Nov. 6 and 13, 1924, pp. 613-616, 658-661, and 678-680. Discusses preparatory work, borings, plumbing, brine and other pipe lines, refrigerating plant; freezing process, etc.

Freezing Process Enables Lessees to Sink Shafts in Deep Marsh Land of North Belgium, M. Biquet. Coal Age, vol. 25, no. 23, June 5, 1924, pp. 831-834, 3 figs. Describes sinking of two shafts by refrigeration nearly a mile deep; 46 beds aggregating over 100 ft. of coal made almost unapproachable by bogs thousands of feet deep; shafts sunk with protecting ice wall.

Shaft Sinking by the Freezing Process, D. Adam. Colliery Eng., vol. 1, no. 9, Nov. 1924, pp. 409-420 and 424, 30 figs. Illustrated account of shaft sinking in Belgian Campine with detailed description of telelinograph method of surveying freezing boreholes.

The Development of Shaft Sinking according to the Freezing Process in the Past Twenty Years (Die Entwicklung des Schachtabteufens nach dem Gefrierverfahren in den letzten zwanzig Jahren), Erlinghagen. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 16, Apr. 19, 1924, pp. 383-393, 16 figs. Application of freezing process in its early development; detailed description of process and its development.

Petrification Process. Shaft Sinking Through Quicksand by Means of a New Petrification Process (Schachtabteufen durch Schwimmsandschichten mit Hilfe eines neuen Versteinungsverfahrens), W. Gross. Glückauf, vol. 60, no. 27, July 5, 1924, pp. 559-561, 4 figs. See also Colliery Guardian, vol. 128, no. 3320, Aug. 15, 1924, pp. 414-415, 3 figs. Describes Sonnenschein process of making cavities in quicksand and filling them with cement to enable driving of shafts.

SHAFTING. See POWER TRANSMISSION, Shafting and Shaft Hangers; SHAFT.

SHAFTS

Collared, Forging. See FORGING, Collared Shafts.

Couplings for. See COUPLINGS, Shaft.

Flexible. Experimental Research on Flexible Shafting for Transmission (Ricerche sperimentali sugli alberi flessibili da trasmissione), A. Alpe. Industria, vol. 38, no. 10, May 31, 1924, pp. 269-274, 8 figs. Results of experiments; application of flexible shafting in operation of grinding wheels, dynamos, etc.

Mine. See MINE SHAFTS.

Stiffness. See AUTOMOBILES, Shafts, Stiffness of.

Torsional Strength. Torsional Strength of Keyway-cut Shafts, W. R. Needham. Machy. (Lond.), vol. 23, no. 596, Feb. 28, 1924, pp. 705-706, 2 figs. Discusses method of calculating polar moduli; includes table of torsional strength (polar values) of British standard sunk keyway shafts.

Torsional Stress Calculation. See BOLTS, Tension Calculation.

Vibrations. Bending Vibrations of Rotating Shafts (Biegungsschwingungen umlaufender Wellen), M. Ulrici. Dinglers Polytechnisches Jl., vol. 339, nos. 10 and 11, May and June 1924, pp. 89-92 and 99-102. Discusses behavior of shafts at critical speeds, balancing of shafts, cal-

culation of bending vibrations for shafts supported at either end, etc.

Whipping of. See ELECTRICAL MACHINERY, Shaft Whipping.

Whirling of. Internal Friction Theory of Shaft Whirling, A. L. Kimball, Jr. Gen. Elec. Rev., vol. 27, no. 4, Apr. 1924, pp. 244-251, 11 figs. Shows Kimball's theory of internal friction in shafts as cause of whirling; shows that internal friction due to bending may cause a shaft to whirl when rotating at any speed above first critical speed.

The Whirling of Shafts, J. Frith and F. Buckingham. Instn. Elec. Engrs.—Jl., vol. 62, no. 325, Jan. 1924, pp. 107-113, 8 figs. Seeks to explain phenomenon of whirling by proving that it is essentially case of vibration and obeys laws of vibration, especially those relating to phase change between disturbing force and resulting displacement; describes experimental verifications of theories put forward.

SHAPERS

New Type. New 10-inch Stroke Shaping Machine. Machy. (Lond.), vol. 24, no. 615, July 10, 1924, p. 463, 3 figs. Describes machine recently constructed by Ormerods' Tool Co., Ltd., Hebden Bridge, for use in Doncaster Technical College Workshop, embodying some rather unusual features introduced with specific object of increasing educational value of machine, and including in a traversing head machine certain features usually associated with pillar type.

Production-Work Equipment. Equipping the Shaper for Production Work, D. A. Hampson. Machy. (N. Y.), vol. 30, no. 6, Feb. 1924, pp. 419-421, 4 figs. Notes on name-stamping attachment for shaper; fixture for cutting evenly spaced lines; knurling operations; performing simple bending operations on shaper.

SHEARS

Regulation Without Flywheels. Shears, Etc., Without Flywheels (Der schwungradlose Arbeitsreglerantrieb für Scheren u. dergl.). Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 35, Aug. 30, 1924, p. 49 (advertising section), 2 figs. By use of variable-speed motor in conjunction with patented regulator, automatic variation in motor speed is secured which, it is claimed, is more effective than usual flywheel in reducing peak load of shears and similar machine tools.

Rolling-Mill. Large Shears for Cutting Sheets and Other Rolled Material (Grosse Scheren zum Zuschneiden von Blechen und anderem Walzgut). Kruppsche Monatshefte, vol. 5, July 1924, pp. 109-114, 10 figs. Details of various types of large-scale shears for cutting up rolling-mill products; 20-hp. electric motors for drive, 20 cuts per minute.

SHEET METAL

Deformation. Tension and Elastic Deformation in Uneven Membranes (Ueber Spannung und elastische Deformation von unebenen Membranen), M. Lagally. Zeit. für Angewandte Mathematik u. Mechanik, vol. 4, no. 5, Oct. 1924, pp. 377-383, 4 figs. Examines tensions in uneven membranes and metal sheets of small bending strength. Develops a method for calculating torsion and elastic displacement from distribution of tension.

Standardization. Standardization of Sheet Metal, L. D. Mercer. Sheet Metal Worker, vol. 15, no. 9, May 23, 1924, pp. 327-328 and 350. Facts about waste in this industry, with recommendations on its elimination and on expansion of business.

SHEET-METAL WORKING

Accuracy in. Using Cutting and Stamping in Shaping (Die Verwendung der Schnitte und Stanzen in der spanlosen Formung), M. Evers. Praktische Maschinen-Konstrukteur, vol. 57, no. 14, Apr. 22, 1924, pp. 191-194, 14 figs. Discusses more accurate production of sheet-metal parts by cutting and stamping.

Stamping. Widening Applications of Metal Stamping, R. I. Miner. Forging—Stamping—Heat Treating, vol. 10, no. 2, Feb. 1924, pp. 75-78, 6 figs. Describes applications of sheet-metal stamping, i. e., work of those industries in which sheet metal is forced to take a desired shape through action of properly designed tools or dies, operated in a mechanical press.

SHELLS

Blank Diameters. See DIES, Shell, Blank Diameters.

Cast-Steel. See STEEL CASTINGS, Shells.

Drawing. See METAL DRAWING, Shells.

Tapered, Machining. Difficulties in Making Tapered Shells, J. Williams. Am. Mach., vol. 60, no. 16, Apr. 17, 1924, pp. 583-585, 2 figs. Drawing shells with parallel sides; cause of buckling and wrinkling; flowage of molecules; variation in density of metal.

SHERARDIZING

Development. Sherardising: Its Inception and Development, S. Cowper-Coles. Engineering, vol. 118, no. 3061, Aug. 29, 1924, pp. 277-278, 3 figs.

SHIP CONSTRUCTION

Welding Arc. See ELECTRIC WELDING ARC, Ship Construction.

SHIP DESIGN

Admiralty Coefficients. The Admiralty Coefficients. Shipbldg. & Shipg. Rec., vol. 23, no. 1, Jan. 3, 1924, pp. 14-16. Historical points in connection with resistance of ships, and inception of coefficients.

Aeronautics Applied to. Aeronautics in Naval Architecture, J. C. Hunsaker. Soc. Nav. Architects & Mar. Engrs.—Advance Paper, no. 1, for meeting Nov. 13-14, 1924, 17 pp. Discusses aeronautical knowledge and practices which may usefully be applied in ship design; deals with warship design; aerodynamics; structural materials; ship form and steering; propeller design; dimensional analysis; wave-making and submerged resistance; etc. See (abstract) in Mar. Eng., vol. 29, no. 12, Dec. 1924, pp. 725-728; and in Engineering, vol. 118, no. 3073, Nov. 21, 1924, pp. 722-723.

Camber, Sheer and Bevel. A Deck Camber, Sheer and Bevel Nomogram, E. V. Telfer. Mar. Eng., vol. 29, no. 6, June 1924, pp. 362-363, 1 fig. Method for expressing mathematical relation for parabolic camber in nomographic form. Its application to ship joinery.

Corrugated Ship. The Monitor ship. Shipbldg. & Shipg. Rec., vol. 24, no. 14, Oct. 2, 1924, pp. 398-399, 1 fig. Analysis of claims put forward for corrugated or Monitor type of ship.

Curvature of Buttocks. High-Speed Forms and the Curvature of Buttocks, P. G. Rouse. Engineering, vol. 117, no. 3027, Jan. 4, 1924, pp. 3-5, 5 figs. Deals with drag in case of rather full-bodies craft driven at speeds excessive for their lengths.

Displacement-Draft. A Displacement-Draft Nomogram, E. V. Relfer. Shipbldg. & Shipg. Rec., vol. 24, no. 17, Oct. 23, 1924, pp. 493-494. States that work of Schmidt and Riddlesworth lends itself to nomographic development, and gives a displacement-draft nomogram, suggesting that it forms an interesting comparison with alternative cartesion diagrams published by Riddlesworth.

Displacement-Draught Fomulæ, W. H. Riddles-

worth. Instn. Nav. Architects, Instn. Engrs. & Shipbldrs. in Scotland, North East Coast Instn. Engrs. & Shipbldrs.—Advance Paper for joint meeting, June 27, 1924, 6 pp., 4 figs. See also Shipbldg. & Shipping Rec., vol. 24, no. 1, July 3, 1924, pp. 11-12 and 24, 3 figs. Results of study of block coefficient. Some formulas obtained have been in use at Fairfield Shipyard and have been included in lectures to students of Naval Architecture in Univ. of Glasgow.

Displacement and Stability Determination. The Mechanical Determination of Ship Displacement, Transverse and Longitudinal Stability, G. Kempf. Shipbldg. & Shipg. Rec., vol. 23, no. 20, May 15, 1924, pp. 580-582, 5 figs. Aims to reduce work involved in calculation of areas, ship displacement and stability, and to present stability problem to ships' officers in such a mechanical and simple form that they may be encouraged to interest themselves in stability of their ships. Abstracted translation of a paper read before Schiffbautechnische Gesellschaft.

Form, Selection of. Ships' Lines, J. Anderson. Shipbuilder, vol. 30, no. 163, Mar. 1924, pp. 189-192, 5 figs. Discussion of details of design; selection of form. Abstract of paper read before Glasgow Univ. Naval Architecture Soc.

Froude's Investigations. The Work of W. and R. E. Froude, A. W. Johns. Engineer, vol. 138, nos. 3598, 3599, and 3600, Dec. 12, 19, and 26, 1924, pp. 660-661, 687-689, and 715-717. Review of work of investigation of father and son, covering nearly 70 years, on phenomena attending all the phases of a ship's motion.

Girders. Girders in Ships, J. Foster-King. North-East Coast Instn. Engrs. & Shipbldrs.—Advance Paper, no. 2821S, for meeting Nov. 14, 1924, 10 pp., 5 figs. Discusses design and construction of girders or framework in ships and practical application of beam theories in relation to conditions of fixity which obtain in ship work; formulas derived from experiment; comparison of various methods of construction for plating support; aspects of application.

Passenger Ships. Passenger Ship Design from an Independent Point of View, J. Anderson and R. Steele. Engineering, vol. 117, no. 3052, June 27, 1924, pp. 839-840, 1 fig. New design mainly for intermediate class of Atlantic passenger boats, having superior stability and showing large saving in fuel.

Problems. Ship Design, J. Biles. Engineering, vol. 117, no. 3052, June 27, 1924, pp. 841-844, 2 figs. See also Shipbldg. & Shipg. Rec., vol. 23, no. 26, June 26, 1924, pp. 763-765, 1 fig. Discusses speed, strength, stability, safety at sea, subdivision, etc. Paper, abridged, read at joint meeting of Instn. Naval Architects, Instn. Engrs. & Shipbldrs. in Scotland, and North-East Coast Instn. Engrs. & Shipbldrs., in Lond.

Resistance. The Prediction of Critical Speeds in Ship Resistance, J. Tutin. North-East Coast Instn. Engrs. & Shipbldrs.—Advance Paper, for meeting Nov. 28, 1924, 12 pp. 13 figs. Deals with occurrence of "humps" and "hollows" on residuary resistance curves; geometrical method of locating humps and hollows on curve; reproduction and analysis of typical curves; calculation of "wave separation" for each vessel; chart for use in connection with analysis and prediction of critical speeds; effect of form and speed on wave separation.

The Resistance of Low and Average Speed Ships, J. C. Schokker. Mar. Eng. & Shipg. Age, vol. 29, no. 7, July 1924, pp. 432-434, 6 figs. Application of standard series experiments to present-day cargo-vessels; diagrams for calculating residual resistances.

Rolling Experiments. Results of Some Rolling Experiments on Ship Models, M. P. Payne. Engineering, vol. 117, nos. 3049 and 3050, June 6 and 13, 1924, pp. 745-749 and 777-780, 27 figs. Experiments to compare behavior of bulged and unbulged forms of vessels of Roy. Sovereign class as regards rolling, etc. (Abridged.) Paper read before Instn. Nav. Architects.

Skin Friction. The Effect of Length of the Skin Friction of Flat Surfaces, T. E. Stanton and D. Marshall. Engineering, vol. 117, no. 3048, May 30, 1924, pp. 718-719, 6 figs. Experiments undertaken to throw light on certain characteristics of distribution of friction over plane surfaces which are still obscure.

Stability. Stability and Rolling. Shipbldr., vol. 30, no. 165, May 1924. Contains following abstracts of papers delivered before different engineering institutions: Stability Within the Deck-Edge Range, W. R. G. Whiting, pp. 317-322, 9 figs.; Results of Some Rolling Experiments on Ship Models, M. P. Payne, pp. 322-329, 6 figs.; The Drift of Ships Caused by Rolling among Waves, K. Suyehiro, pp. 330-333, 3 figs.

Steel-Weight Nomogram. See ALIGNMENT CHARTS, Ship Steel Weights.

Strength. Strength of Ships. Shipbldr., vol. 30, no. 165, May 1924. Contains following abstracts of papers delivered before different engineering institutions: Development of Ships' Structural Design, H. W. Curchin, pp. 334-340, 10 figs.; Efficiency in Ship Construction from the Strength Point of View, J. Bruhn, pp. 340-344; High Elastic Limit Mild Steel and Its General Applications, G. W. Barr, F. G. Martin and A. T. Wall, pp. 344-345; Vibration of Ships, H. W. Nicholls, pp. 345-349, 1 fig.; Torsion of Ships, Gel. Vedeler, pp. 349-352, 2 figs.

Subdivision. The Subdivision of Passenger Ships, J. Foster King. Engineering, vol. 117, no. 3031, Feb. 1, 1924, pp. 157-159, 1 fig. See also Shipbldg. & Shipg. Rec., vol. 23, no. 5, Jan. 31, 1924, pp. 124-127 and 138. Corollary of paper by Archibald Denny read before Instn. Nav. Architects, Sept. 1923. Notes on possible subdivision methods; permeability factors; freeboard ratios. Proposed regulations for subdivision of passenger ships are given in Appendix.

Tank Model Experiments. Tank Model Experiments. Mar. Engr. & Motorship Bldr., vol. 47, no. 562, July 1924, pp. 269-270. Résumé of methods employed, together with suggestion for incorporation of certain results in form of nomogram.

Towing Resistance. The Towing Problem. Mar. Engr. & Nav. Architect, vol. 47, no. 556, Jan. 1924, pp. 17-19, 2 figs. Discusses experimental solution with special reference to German tank work. Article is based on articles by Dr. Kempf, published in Werft, Reederei, Hafen.

Wetted Surface. Wetted Surface. Shipbldg. & Shipg. Rec., vol. 24, no. 18, Oct. 30, 1924, pp. 518-519, 1 fig. A simple expression for approximate determination of minimum wetted surface.

SHIP PROPELLERS

Blade-Element Design Method. The Blade Element Method of Propeller Design. Mar. Engr., vol. 47, no. 559, Apr. 1924, pp. 143-146, 13 figs. Discusses some possible methods of increasing efficiency of marine propellers, in connection with blade element theory.

Calculation. Theoretic Application of Tests with Model Screw Propellers (Beiträge zur theoretischen Verwertung der Modellschraubenversuche), M. Pröll. Schiffbau, vol. 25, no. 17, June 11, 1924, pp. 460-470, 10 figs. Discusses use of empirical mathematical data for precalculation of propellers; mathematical treatment of flow and currents about propeller.

Cavitation. The Extent of Cavitation in U. S. Scouts and Destroyers, E. F. Eggert. Soc. Nav. Architects & Mar. Engrs.—Advance Paper, no. 5,

for meeting Nov. 13-14, 1924, 4 pp., 1 fig. on supp. plate. See also Mar. Eng., vol. 22, no. 12, Dec. 1924, pp. 744-746 and 748, 1 fig.; and Engineering, vol. 118, no. 3073, Nov. 21, 1924, pp. 717-718, 1 fig. Results of Model Basin experiments; introduction of air to propeller disk, through eddies forming behind struts, believed to be responsible for divergences between model and trial results rather than cavitation.

Contrapropellers. Distributors and Counter-propellers (''Distributeurs'' d'hélice et contre-hélices). Bul. Technique du Bureau Veritas, vol. 6, no. 4, Apr. 1924, pp. 70-76, 13 figs. Details of Hass fixed distributor, guiding water on its way to propeller, and Zeise counter-propeller situated between propeller and sternpost, and gives results of tests.

Propulsive Efficiency of Ships. Times Trade & Eng. Supp., vol. 13, no. 293, Feb. 16, 1924, p. 567, 1 fig. Describes new type of guide-blade apparatus, the Hass contrapropeller, in which guide blades are placed in front of revolving propeller and not behind it, as with normal Wagner type; results of tests made at Hamburg experimental tank on this apparatus and with new wake-using propellers for determining distribution of wake behind ship.

The Action of the Contrapropeller, O. Overgaard. Mar. Eng., vol. 29, no. 10, Oct. 1924, pp. 591-594, 5 figs. Principle upon which contra-propeller acts; Wagner and Hass types; method of calculation; results with S. S. Norfolk.

Design. Marine Propeller Design, H. G. Bader. Mar. Engr., vol. 46, no. 566, Nov. 1924, pp. 418-421, 7 figs. A method based upon airfoil theory, with actual design for propellers of motorships with either four- or two-stroke engines. Abstracted translation of article in Werft Reederei Hafen, no. 17, 1923.

Practical Propeller Design. Mar. Engr. & Naval Architect, vol. 47, no. 558, Mar. 1924, pp. 109-110, 2 figs. Description of improved method adopted by Hamburg Tank for designing a propeller, which enables wake to be accurately and simply determined. Translation of report by Hamburg Tank, Dec. 1923, prepared by G. Kempf and M. Popp.

Experimental Data. The Presentation of Propeller Experiment Data, E. V. Telfer. North-East Coast Instn. Engrs. & Shipbldrs.—Advance Paper. no. 2718S, for meeting Mar. 21, 1924, 16 pp., 4 figs. Attention is principally directed to ''open'' performance of screw, but necessary modifications in ''behind'' condition is briefly discussed; it is concluded that development of internally propelled model shows that isolated model and screw research have their limitations. Bibliography.

Guiding Devices. See Contrapropellers.

Hydraulic. Hotchkiss Hydraulic Propellers. Engineering, vol. 117, no. 3027, Jan. 4, 1924, p. 13, 10 figs. partly on p. 16. Details of propellers constructed for 40-ft. tug.

Manufacture. Making Propellers, B. Shaw and J. Edgar. Serial article in Foundry Trade Jl., vol. 30, beginning Sept. 25 and ending Dec. 4, 1924, 66 figs. Sept. 25: Patternmaking and molding practice usually adopted in British foundries in making screw propellers. Oct. 2 and 9: Small propellers. Oct. 16: Construction of races; rapid production of propellers. Nov. 6: Loam molds. Nov. 13 and 20: Boss patterns. Dec. 4: Loose blades.

Model Experiments. Comparison of Model Propeller Experiments in Three Nations, D. W. Taylor. Soc. Nav. Architects & Mar. Engrs.—Advance Paper, no. 4, for meeting Nov. 13-14, 1924, 15 pp., 9 figs. on supp. plates. Compares experiments of four comprehensive groups of systematic tests made during last 20 years, and derives from them composite or average results for practical use covering wider field than any set of experiments taken alone; reductions of Durand's, Taylor's, Froude's, and Shaffran's results.

Shafts, Vibrations in. Vibration and Resonance of Propeller Shafts (Vibration et résonance des arbres porte-hélices), A. Blondel. Académie des Sciences—Comptes Rendus, vol. 178, no. 17, Apr. 22, 1924, pp. 1406-1411. Investigation of excessive vibrations causing ruptures in shafts.

Theory. The Problem of Propelling Screws (Il problema dell' elica propulsiva), L. Benasso. Ingegneria, vol. 3, no. 6, June 1, 1924, pp. 201-203, 3 figs. Discusses complex action of propellers in water, develops formulas for calculating velocity, coefficient of suction, etc.

SHIP PROPULSION

Air-Steam-Turbine. Air-Steam Turbines for Motor-Ship Auxiliary Machinery, H. Melan. Mar. Engr. & Naval Architect, vol. 47, no. 558, Mar. 1924, p. 97. Particulars of new system of drive. Translated from Zeit. de Vereines deutscher Ingenieure, Jan. 12, 1924.

Cruisers. See WARSHIPS, Cruisers; Scout Cruisers.

Diesel-Electric. A 20,000 Ton Diesel-Electric Liner, P. J. Higgs. Inst. Mar. Engrs.—Trans., vol. 36, Aug. 1924, pp. 197-222 and (discussion) 222-234, 11 figs. Study of most efficient propelling machinery arrangement for 20,000-ton lines, as suitable for Trans-Atlantic trade. Abstract, with modifications, of thesis at Mass. Inst. Tech.

Diesel-Electric vs. Direct Diesel. Comparison of Diesel Electric and Direct Diesel Propelling Equipment, W. E. Thau and H. C. Coleman. Am. Mar. Engr., vol. 19, no. 10, Oct. 1924, pp. 14-19, 5 figs. See also Nautical Gaz., vol. 107, no. 14, Oct. 4, 1924, pp. 367 and 382-384, 3 figs.; Am. Shipg., vol. 18, no. 10, Oct. 1924, pp. 16-21, 5 figs., and Pac. Mar. Rev., vol. 21, no. 12, Dec. 1924, pp. 632-635, 5 figs. Results of studies made to determine most advantageous and satisfactory way of applying Diesel engine, with particular reference to conversion of present Shipping Board steam vessels to motorships, and conclusions reached.

Diesel-Engined Ships, Driving Gear. An Important Improvement in the Propulsion of Ships, A. Heller. Eng. Progress, vol. 5, no. 4, Apr. 1924, pp. 69-70, 1 fig. New Driving gear for ships designed by Vulkan Works, for Diesel-engined ships.

Diesel-Hydraulic. The Vulcan Diesel-Hydraulic Drive. Engineering, vol. 118, no. 3055, July 18, 1924, pp. 92-94, 8 figs. Describes system of ship propulsion, essentials of which comprise relatively high-speed Diesel engines, connected by means of oil-filled clutches to pinion shafts, geared (one on each side of a gear wheel) to propeller shaft which runs at speed of revolution most suitable to permit of maximum propulsive efficiency. Particulars of system as installed on ship ''Vulcan,'' of 2000 tons deadweight.

Trial Runs of the ''Vulcan Gear'' Ship (Probefahrten des ''Vulcangetriebeschiffes''). Schiffbau, vol. 25, no. 22, Aug. 27, 1924, pp. 602-604. Trial runs show efficiencies of 96½ per cent for combined gear; three main connections for driving and for reversing.

Diesel vs. Turbine. Diesel vs. Turbine on Hog Island Ships, A. H. Jansson. Mar. Rev., vol. 54, no. 4, Apr. 1924, pp. 119-126, 10 figs. Comparison of performance of motorship Seekonk and steamship Hog Island.

Operating Costs of Diesel Electric and Geared Turbine Drives Compared. Nautical Gaz., vol. 107, no. 4, July 26, 1924, pp. 104-105, 1 fig. Comparison of Diesel electric drive and geared

turbine drive; economies compared and fuel comparison.

Electric. Electricity as the Motive Power for Ships, L. Rothera. Inst. Mar. Engrs.—Trans., vol. 36, June 1924, pp. 37-94, 15 figs. Discusses possible forms of drive and their limits; Diesel-electric and steam-electric drive; comparison of d.c. and a.c. for operating.

Motors for Ship Propulsion, L. J. Hunt. Electrician, vol. 93, no. 2410, July 25, 1924, pp. 93-94, 3 figs. Discusses simple method of speed control; objections to use of d.c. system; developments in alternator design.

Ferries. See FERRIES, Electric Propulsion.

Internal-Combustion Engines, Application. See INTERNAL-COMBUSTION ENGINES, Railway Traction.

Nodal Drive for Geared Turbines. The Nodal Drive for Geared Turbine Ships, J. H. Smith and J. Wilkie. Instn. Mech. Engrs—Proc., no. 4, July 1924, pp. 661-671, 8 figs. Explains nodal drive by means of illustrations; considers reasons which have been given for failure of double-reduction gearing.

Progress. The Progress in Marine Propulsion during the Last Ten Years and Some of Its Possibilities, A. C. Ross. North-East Coast Instn. Engrs. & Shipbldrs.—Advance Paper for meeting June 27, 1924, 6 pp. Review of developments.

Resistance and. Resistance and Propulsion. Shipbldr., vol. 30, no. 165, May 1924. Contains following abstracts of papers delivered before different engineering institutions: Essential Factors in Ship Propeller Design, A. F. Ainslie, pp. 369-372, 4 figs.; Influence of Propeller Revolutions upon the Propulsive Efficiency of Merchant Ships, K. Schaffran, pp. 372-381, 8 figs. Presentation of Propeller Experiment Data, E. V. Telfer, pp. 381-383, 1 fig.; Effect of Wind and Waves on the Propulsion of Ships, J. L. Kent, pp. 383-388, 3 figs.; Effect of Length on the Skin Friction of Flat Surfaces, T. E. Stanton and D. Marshall, pp. 389-391, 2 figs.; Skin Friction Resistance and Law of Comparison, A. Shigemitsu, pp. 392-395, 2 figs.; Analysis of Ship Resistance, J. Tutin, pp. 395-402, 1 fig.

River Vessels. Turbine Drive for River Steamers (Der Turboantrieb von Flussdampfern), E. A. Kraft. Gewerbefleiss, vol. 103, no. 8, Aug. 1924, pp. 125-129, 3 figs. Details of A. E. G. turbines for driving freight steamers Duisburg and Düsseldorf, of Hamburg-Amerika line, double-screw vessels of 1500 tons carrying capacity.

Superheated Steam in. See SUPERHEATED STEAM, Advantages.

Turbine. Ship Drive by Means of Ljungström or "Stal" Turbine (Schiffsantrieb mit Ljungström- oder Stalturbinen), S. Bock. Schiffbau, vol. 25, nos. 22 and 23, Aug. 27 and Sept. 10, 1924, pp. 597-601 and 627-632, 8 figs. Details of Stal turbine, radial steam turbine which is directly coupled to propeller shaft by gearing, resulting in maximum reduction of losses. Comparative fuel consumption. Comparison of Diesel engine and Stal turbine.

Turbo-electric. Electric Transmission of Power for Propelling Machinery, W. J. Belsey. Mar. Engr. & Motorship Bldr., vol. 47, no. 564, Sept. 1924, pp. 334-335, 3 figs. Discusses turbo- and Diesel-electric drives, their characteristics and advantages. Abstract of paper read at First World Power Conference.

Types. Power for Ship Propulsion, H. G. Hammar. Engineering, vol. 118, no. 3056; July 25, 1924, p. 148. Discusses recent advance in turbine operation, Ljungström and deLaval types and installations, Scotch boilers for Swedish Merchant Marine, air-preheaters, reversible propellers, Diesel engines, etc. Abstract of paper read before World Power Conference.

Various Types of Propulsion, D. G. Taylor. Pac. Mar. Rev., vol. 21, no. 7, July 1924, pp. 366-370. Comparison of overall economy of geared turbine, turbo-electric, Diesel-electric, direct Diesel, and reciprocating steam-engine plants in diverse services.

Wind. See SHIPS, Flettner Rotor.

Wind and Waves, Effect of. Effect of Wind and Waves on Propulsion of Ships, J. L. Kent. Mar. Eng. & Shipg. Age, vol. 29, no. 9, Sept. 1924, pp. 536-542, 4 figs. Deals with observations of weather encountered and behavior of different types of vessels on ocean voyages to determine causes of loss of speed in ships at sea.

The Effect of Wind and Waves on the Propulsion of Ships. Shipbldg. & Shipping Rec., vol. 24, no. 5, July 31, 1924, pp. 142-146, 3 figs. Discusses percentage of increase in power due to wind and waves, analysis for wake, propulsive efficiencies at sea, sea speeds and admiralty constants, resistance and thrusts in tons, etc., with reference to Kent's paper at Naval Architects' meetings.

SHIP SALVAGE

German Fleet. The Salvage of the German Fleet at Scapa Flow. Engineering, vol. 118, no. 3059, Aug. 15, 1924, pp. 233-235, 9 figs. partly on p. 236. How floating dock, used for testing submarines by German naval authorities, was converted for use in raising the various units of ex-German fleet.

Methods. The Salvage of Stranded and Sunken Ships, Ch. Wall. Shipbldg. & Shipg. Rec., vol. 23, no. 10, Mar. 6, 1924, pp. 283-284. Material used in the various operations; physiology of diver; salvage pumping; salvage vessels; refloating by means of pontoons; salvage in shallow water; refloating by cofferdam. Abstract of paper read before Assn. Technique Maritime.

SHIP WRECKING

Warships. Scrapping Warships, H. E. Rossell. Soc. Nav. Architects & Mar. Engrs.—Advance Paper no. 9, for meeting Nov. 13-14, 1924, 11 pp., 11 figs. on supp. plates. See (abstract) in Mar. Eng., vol. 29, no. 12, Dec. 1924, pp. 733-735; and Shipbldg. & Shipg. Rec., vol. 24, no. 23, Dec. 4, 1924, pp. 657-663, 10 figs. Details obtained principally through experience of Philadelphia Navy Yard in making five battleships unsuitable for warlike purposes and in cutting up for scrap two partially completed battle cruisers on building ways, and five complete battleships afloat; also information from New York Navy Yard and five private plants.

SHIPBUILDING

Channel Steel Construction. Build Ships of Steel Channels. Mar. Rev., vol. 54, no. 3, Mar. 1924, pp. 92-94, 4 figs. Describes channel steel construction system for ships, developed by Channel Steel Barge Co., Inc., Rome, N. Y., principal feature of which is that outer skin of vessel is made entirely of standard steel channels which run lengthwise of hull with flanges turned upward. Particularly adapted for inland waterway vessels of any type and small steamers or motorships operating on Great Lakes and coast.

Costs Reduction. How to Reduce Shipbuilding Costs. Shipbldg. & Shipg. Rec., Special No., Jan. 2, 1924, pp. 47-48, 3 figs., partly on supp. plates. Considers evils to be overcome and improvements which can be effected to enable shipbuilder to secure an economical production cost.

Efficiency. Efficiency in Ship Construction from the Strength Point of View, J. Bruhn. Shipbldg. & Shipg. Rec., vol. 23, no. 11, Mar. 13, 1924, pp.

309-311. Draws attention to fact that factors affecting efficiency of a ship's construction, which are determined by trade vessel is engaged in, seems to a large extent to have been ignored, compared with factors associated with distribution of material. Abstract of paper read before Inst. Engrs. & Shipbldrs. in Scotland.

Europe, 1923. Shipbuilding in 1923. Shipbldr., vol. 30, no. 161, Jan. 1924, pp. 81-89, 2 figs. Shipbuilding in Germany, France, Holland, and Italy.

Great Britain, 1923. British Shipbuilding in 1923 and the Coming Year. Shipbldr., vol. 30, no. 161, Jan. 1924, pp. 69-81, 20 figs. Year's output and prospects for 1924.

Merchant. Merchant Shipbuilding and Sea Transport. Shipbldr., vol. 30, no. 165, May 1924. Contains following abstracts of papers delivered before different engineering institutions: Foreign Trade and Shipbuilding, R. Y. Sanders, pp. 297-302, 2 figs.; Sea-Borne Coastal Trade, A. H. Read, pp. 302-305; Future of Sea Transport, A. Hurd, pp. 306-308; Development of the Airship with Special Reference to Transport, C. D. Burney; Influence of Type of Propelling Machinery on Running Costs of Ships, W. G. A. Perring, pp. 311-316, 6 figs.

Roller Bearings in. See BEARINGS, ROLLER, Shipbuilding.

U. S. Merchant Marine. The Future of the United States Merchant Marine, A. C. Holzapfel. Pac. Mar. Rev., vol. 21, nos. 2 and 3, Feb. and Mar. 1924, pp. 108-109, and 163, 38 and 43. Feb.: Necessity for increased efficiency and subsidy; Diesel-electric drive; hydraulic transmission. Mar.: Insurance factor and suggestions for mutual coöperative insurance; recommends method of curing handicap of high wages by using naval crews and officers.

World's Output. Mercantile Shipbuilding in 1923. Shipbldg. & Shipg. Rec., vol. 23, no. 4, Jan. 24, 1924, pp. 103-109, 1 fig. Lloyd's Register, annual survey of world's shipbuilding.

The World's Shipbuilding. Engineering, vol. 117, no. 3030, Jan. 25, 1924, pp. 106-107. Number and tonnage of merchant vesesls of 100 tons gross and upward launched in various countries of world during years 1892-1923.

SHIPS

Aircraft Carriers. See NAVAL AIRCRAFT, Carriers.

Aluminum and Its Alloys, Use on. See ALUMINUM ALLOYS, Use on Board Ship.

Auxiliaries, Electric Drive for. A New Electric Drive for Ship and Other Auxiliaries, G. Austin. Shipbldg. & Shipg. Rec., vol. 24, no. 21, Nov. 20, 1924, pp. 595-596, 2 figs. Describes developments which are result of investigation to determine whether it would be possible to improve performance of electric motor by production of a motor which would, in operation, function in a simialr way to steam engine, which have all been tested for a prolonged period on a sufficiently large workshop scale to be convincing. Abstract of paper read before Instn. Engrs. & Shipbldrs. in Scotland.

The Austin Constant-Current Motor for Ship Auxiliaries. Engineering, vol. 118, no. 3074, Nov. 28, 1924, pp. 734-735, 2 figs. Essential feature of Austin system of drive lies in use of constant-current motor in place of constant-voltage motor of current practice; details of d.c. generator and motor.

The Electric Motor Drive for Auxiliary Machines on Board Ship, L. Miller. Inst. Mar. Engrs.—Trans., vol. 35, Aug. 1924, pp. 234-290 and (discussion) 290-306, 35 figs. Reviews position of electric-motor drive of auxiliary machinery and considers advantages to be obtained from adoption of this type of drive.

Auxiliaries, Water Rates and Steam Consumption. Water Rates and Steam Consumption of Auxiliaries, E. A. Stevens, Jr., and H. E. Brelsford. Mar. Eng., vol. 29, nos. 10 and 11, Oct. and Nov. 1924, pp. 611-616 and 676-681, and vol. 30, no. 1, Jan. 1925, pp. 52-54 and 57, 7 figs. Oct.: Steam for galley, pantry and heating; make-up feedwater; total steam consumption. Nov.: Steam consumption of auxiliaries in port; cargo handling and bunkering; problems showing calculated and actua lresults. Jan.: Formulas and values to be used in short-cut method of making approximate or preliminary calculations.

Cable-Laying. The Cable-Laying and Repairing Steamer "Edouard Suenson." Engineering, vol. 118, nos. 3058 and 3060, Aug. 8 and 22, 1924, pp. 196-197 and 269-270, 17 figs. partly on supp. plates and p. 262. Details of design and construction of steamer constructed at Royal Dockyard, Copenhagen; length, 71.5 m.; displacement, loaded, 2520 tons; speed, 11 knots; oil fuel equipment.

The Twin-Screw Cable Steamship "Cyrus Field." Shipbldr., vol. 31, no. 169, Sept. 1924, pp. 123-128, 10 figs. partly on supp. plate. Describes twin-screw cable-laying and repairing steamship built by Société Anonyme des Chantier et Ateliers de Saint Nazaire Penhoët for Western Union Telegraph Co.; length between perpendiculars, 211 ft.; breadth, molded, 34 ft.; depth, molded to upper deck, 18 ft. 6 in.; propelling machinery consists of two sets of triple-expansion engines of direct-acting surface-condensing type, designed for working pressure of 180 lb. per sq. in. and for 135 r.p.m.

Cargo. Australian Commonwealth Liner T. SS. "Fordsdale." Shipbldg. & Shipg. Rec., vol. 24, no. 14, Oct. 2, 1924, pp. 395-397, 3 figs. Refrigerated cargo steamer of 12-700 tons deadweight; largest merchant ship built in Australia.

Cargo Steamer of 9,200 Tons D. W. Shipbldg. & Shipg. Rec., vol. 23, no. 6, Feb. 7, 1924, pp. 155-159, 9 figs. partly on supp. plate. Description of British Monarch, built for Monarch Steamship Co., Glasgow; length between perpendiculars, 420 ft.; breadth, molded, 54 ft.; depth, molded, 31 ft. 6 in.; net tonnage, 3538; service speed, 13½ knots; fitted with set of Brown-Curtis double-reduction geared turbines.

8,800-Ton Deadweight Cargo Steamers for the Hamburg-Amerika Line. Shipbldg. & Shipg. Rec., vol. 23, no. 7, Feb. 14, 1924, pp. 188-190, 4 figs. SS. Idarwald, built by Deutsche Werft, Hamburg, and fitted with Hass patent propeller guide blades.

Great Lakes Grain-Carrying Steamer of 2400 Tons D. W. Shipbldg. & Shipg. Rec., vol. 23, no. 14, Apr. 3, 1924, pp. 391-392 and 397, 2 figs. Particulars of single-screw steamer Norman P. Clement, built for East. Steamship Co., Ltd., Port Colborne, Can.; length overall, 258 ft.; breadth, molded, 43 ft. 1 in. depth, molded, 20 ft.; draft, loaded, 14 ft.

Performance Tests of Steamship Charles M. Schwab. Mar. Eng., vol. 29, no. 5, May 1924, pp. 278-284, 5 figs. Principal data and results of tests carried out on new Great Lakes bulk freight; length, overall, 600 ft.; breadth, molded, 60 ft.; depth, 32 ft.; displacement, 17,000 tons.

Self-Unloading Bulk Cargo Vessels of the Great Lakes, H. Penton and H. C. Sadler. Soc. Nav. Architects & Mar. Engrs.—Advance Paper, no. 3, for meeting Nov. 13-14, 1924, 8 pp., 9 figs. on supp. plates. Outline of method of solving problems involved and description of leading features of vessels. See (abstract) in Engineering, vol. 118, no. 3073, Nov. 21, 1924, pp. 723-724, 4 figs.

The Turbine-Driven Steamers "Principessa Giovanna" and "Principessa Maria." Engineering, vol. 117, no. 3052, June 27, 1924, pp. 821-822, 15 figs. partly on supp. plates and p. 828. Particulars of cargo sister ships built in 1923 at Taranto shipyard belonging to Franco Tosi for Lloyd Sabaudo Co., Genoa. Steel twin-screw ships of awning-deck type, propelling machinery being geared turbines supplied with steam from cylindrical boilers fitted for burning either coal or oil fuel. Length, overall, 460 ft.; extreme breadth, 59 ft.; deadweight, 10,500 summer, and 10,000 winter.

Toledo Shipbuilding Company Completes Modern Bulk Freighter William K. Field for Reiss Steamship Company. Mar. Eng., vol. 29, no. 4, Apr. 1924, pp. 216-222, 8 figs. Particulars of single-screw vessel of 8000 gross tons; single deck type built on arch and web frame system; length, overall, 604 ft.; beam, molded, 60 ft.; depth, molded, 32 ft.

Cattle. See Passenger-Cargo.

Colliers. Self-Trimming Collier of 3,300 Tons Deadweight. Shipbldg. & Shipg. Rec., vol. 23, no. 25, June 19, 1924, pp. 731-733, 2 figs. SS. "Dashwood" built and engined by Vickers, Ltd., for Wm. France, Fenwick & Co., Ltd., London. Length, 281 ft.; breadth, 40 ft.; depth, molded, 20 ft. 11 in.; draft, 19 ft.; gross tonnage, 2181 tons.

Compasses. See COMPASSES.

Construction. See SHIPBUILDING.

Container. Rail and Water Transport in Containers, H. Schlatter. Indus. Mgmt. (Lond.), vol. 11, no. 3, Feb. 7, 1924, pp. 81-83, 1 fig. Use of strongly-built containers as buoyancy chambers, saving incorporation of such chambers in body of craft; describes container ship designed in accordance with this idea, consisting of floating compartments at stem and stern, supporting an intermediate openwork truss structure to receive containers, which can also be accommodated in end compartments if necessary. From Schiffbau.

Corrosion in. How the Ravages of Corrosion Can Be Reduced, C. A. McAllister. Mar. Eng., vol. 29, no. 11, Nov. 1924, pp. 663-664. Bottom plates of Leviathan, containing 1.67 per cent of copper, show surprising resistance to corrosion. Where increased cost of copper-bearing steels is justified in shipbuilding.

Design. See SHIP DESIGN.

Electric Equipment for. Marine Electrical Equipment. Steamship, vol. 36, no. 423, Sept. 1924, pp. 92-95, 4 figs. Describes auxiliary turbo-generator sets, auxiliary engine-driven generators, motors and winches made by Metropolitan-Vickers Electrical Co.

Fishing Boats. See FISHING BOATS.

Flettner Rotor. Flettner's Sailless Ship Explained. Power, vol. 60, no. 27, Dec. 30, 1924, pp. 1054-1056, 7 figs. Employs principle of curving baseball; spinning cylinders distort wind currents; resultant driving force ten times that of same sail area; maneuvering simpler than with sails; inventor predicts use as auxiliary to engine drive.

Jubilee Meeting of the German Shipbuilding Society (Die Jubiläumsversammlung der Schiffbautechnischen Gesselschaft). Schiffbau, vol. 25, no. 29, Dec. 10, 1924, pp. 841-855, 15 figs. Contains paper by Flettner on Application of Our Knowledge of Aerodynamics to Wind Drive of Ships; theory of rotor ship.

Problem of the Wind-Power Ship (Das Problem des Windkraftschiffes), W. Buchmann. Dinglers Polytechnisches Jl., vol. 339, no. 22, Nov. 1924, pp. 221-223, 5 figs. Principles of Flettner rotor ship and their application.

The Flettner Rotor Ship (Das Walzensegel von Flettner). Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 47, Nov. 22, 1924, p. 1218, 7 figs. See also Engineer, vol. 138, no. 3596, Nov. 28, 1924, p. 608, 1 fig. Discusses principles upon which design is based.

See also AERODYNAMICS, Magnus Effect; AIRPLANES, Flettner Principle, Application of.

Guiding by Radio Signals. See DIRECTION FINDING.

Hoisting Apparatus. Hoisting Apparatus on Board Ship (Note sur les appareils de levage à bord des navires). Bul. Technique du Bureau Veritas, vol. 6, no. 11, Nov. 1924, pp. 201-205, 6 figs. Deals with steam and electric winches, pumping machinery, cranes, etc., their efficiency, power consumption, etc.

Inspection. General Rules and Regulations Prescribed by the Board of Supervising Inspectors. U. S. Dept. Commerce, Steamboat Inspection Service, form 801C, Apr. 4, 1924, 154 pp. Details of amendments of rules and regulations for bays, sounds, and lakes other than Great Lakes made by Board of Supervising Inspectors, covering boilers, fire apparatus, inspection of vessels, ferry boats, barges, etc., and instruments, machines, and equipments approved for use on vessels.

Lake Vessels. Safety Factors in Lake Ships, A. Lindblad. Mar. Rev., vol. 54, no. 2, Feb. 1924, pp. 58-62, 5 figs. Discusses sheer, bulkheads and bilging calculations as adapted for lake vessels; rolling periods.

See also Cargo.

Lifeboats. See LIFEBOATS; MOTOR BOATS, Lifeboats.

Lighting. Lighting System of the S. S. "Leviathan," W. N. Zippler. Illuminating Eng. Soc.—Trans., vol. 19, no. 1, Jan. 1924, pp. 28-42, 4 figs. Description of system installed at time of rebuilding for use of U. S. Shipg. Board. Describes wiring system and difficulties encountered in reconditioning vessels due to faults in original installation.

Lightships. See LIGHTSHIPS.

Liners. See Passenger; Passenger-Cargo.

Loading. See CARGO HANDLING.

Machinery Developments. Marine Engineering Progress in 1923. Shipbldg. & Shipg. Rec., Special No., Jan. 2, 1924, pp. 57-58, 10 figs. on pp. 49-56. Review of some of the principal developments which have taken place in marine engines, steam, oil and turbines, in boilers, and auxiliary machinery.

Machinery, Effect of Sea Water on. Effect of Sea Water on Development of Machinery on Board Ship (Der Einfluss des Seewasers auf die Entwicklung der Maschinenanlagen an Bord von Seeschiffen), Schulz. Brennstoff- u. Wärmewirtschaft, vol. 6, no. 11, Nov. 1924, pp. 226-229. Discusses boilers, condensers, feedwater producers, pipe lines, etc., subject to corrosion, and developments to reduce it.

Marine Borers, Protection Against. See MARINE BORERS, Protection Against.

Motorships. See MOTORSHIPS.

Oil-Burning. Experiences with Oil-Fired Installations on Board Ship (Betriebserfahrungen mit Oelfeuerungsanlagen an Bord), P. Müller. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 18, May 3, 1924, pp. 442-449, 25 figs. Describes oil-furnace installations of steamers of Hamburg-South American Steamship Co.; practical experiences gathered in past two years; damages and their prevention; mean values obtained on steamers Cap Norte and La Coruña during sixth voyage; summary of main advantages of oil firing over coal firing on ships.

Individual Forced Draft Fuel Oil Burners, A. M. Charlton. Am. Soc. Naval Engrs.—Jl., vol. 36, no. 2, May 1924, pp. 208-243, 17 figs. Details of design and operation. Describes installations on some vessels.

Oil Burning in Passenger-Carrying Steamships. Mar. Engr. & Naval Architect, vol. 47, no. 558, Mar. 1924, p. 95. British Board of Trade Committee's recommendations in view of recent experience.

Oil-Fuel Handling. Handling Fuel Oil Aboardship, J. Heckling. Mar. Eng. and Shipg. Age, vol. 29, no. 7, July 1924, pp. 423-426, 6 figs. Methods of conserving fuel oil and promoting safety by proper storage and pumping facilities.

Oil Tankers. Extinguishing Oil Fires by Using Liquid Carbon Dioxide, W. H. Freygang. Pac. Mar. Rev., vol. 21, no. 8, Aug. 1924, pp. 423-424, 2 figs. Details of Lux system of extinguishing oil fires by not permitting liquefied carbon dioxide to boil until it is discharged from conveying pipe into atmosphere.

Notes on Cleaning of Tankers, H. Barringer. Instn. Petroleum Technologists—Jl., vol. 10, no. 46, Nov. 1924, pp. 810-811. Briefly summarizes methods employed at present time under various conditions, of cleaning of tank vessels after carriage of various liquids.

Oil Transport: The Oil Tank Ship, H. Barringer. Instn. Petroleum Technologists—Jl., vol. 10, no. 44, July 1924, pp. 560-581 and (discussion) 582-583, 7 figs. Earlier transport of oil and different stages of development which have led to adoption of present design; description of modern oil tanker.

See also COMPASSES, Radio; MOTORSHIPS, Oil Tankers.

Paddle-Wheel. See Passenger.

Painting. See PAINTING, Ships.

Passenger. Anchor-Donaldson Line Places New Intermediate Type Liner in Glasgow and Montreal Passenger Service. Mar. Eng. & Shipg. Age, vol. 29, no. 3, Mar. 1924, pp. 149-154, 3 figs. Description of twin-screw geared turbine cabin and third class passenger liner Athenia; overall length, 538 ft. 2 in.; breadth, 66 ft.; depth, 50 ft. 3 in.; gross tonnage, 12,000 two sets Brown-Curtis turbines of 8700 s.hp.

Express Passenger Steamer Catalina, L. E. Caverly. Pacific Mar. Rev., vol. 21, no. 4, Apr. 1924, pp. 218-220, 3 figs. Particulars of steel twin-screw vessel built for Wilmington Transportation Co., designed for daylight excursion service between Los Angeles Harbor, Cal., and Avalon, Catalina Island; two sets 3-cylinder triple-expansion engines; length, overall, 301 ft. 7½ in.; breadth, molded at main deck, 52 ft.; depth, molded, 21 ft.; displacement at 3 ft. 6 in. draft, 2390 tons.

French-Built Intermediate Liner for South American Trade. Shipbldg. & Shipg. Rec., vol. 23, no. 2, Jan. 10, 1924, pp. 38 and 48, 1 fig. on supp. plate. Describes T.SS Lipari, built by Société des Ateliers et Chantiers de la Loire for Compagnie des Chargeurs Réunis for Buenos Aires service; length between perpendiculars, 479 ft.; length, overall, 500 ft.; breadth, molded, 59 ft. 3 in.; depth, molded, 38 ft.; net tonnage, 6116; propelling machinery, two sets turbines driving twin screws through double-reduction gearing.

New Steamship Boston Goes Into Service. Mar. Eng. and Shipg. Age, vol. 29, no. 7, July 1924, pp. 399-407, 23 figs. First of two express sister ships placed on New York-Boston run by Eastern Steamship Co. Length, overall, 402 ft.; beam, molded, 71 ft. 2 in.; depth, molded to main deck, 23 ft. 9 in.; net tonnage, 2703; steel, twin-screw passenger steamer with sponsoned hull and four-deck, steel and wood superstructure.

Oil-Burning Cross-Channel Steamers. Mar. Engr., vol. 47, no. 566, Nov. 1924, pp. 409-415, 13 figs. See also Shipbldg. & Shipg. Rec., vol. 24, no. 18, Oct. 30, 1924, pp. 512-515, 8 figs., partly on supp. plate. Particulars of "Dinard" and "St. Briac," built and engined by Wm. Denny & Bros. for South. Ry. Co. for services to France and Channel Islands from Southampton, Eng. Length, overall, 325 ft.; breadth, molded 41 ft.; depth, molded to main deck, 16 ft.; gross tonnage, 2291 tons.

S. S. Alexander Hamilton Joins Hudson River Fleet. Mar. Eng. & Shipg. Age, vol. 29, no. 8, Aug. 1924, pp. 459-465, 19 figs. New oil-burning steamer built by Bethlehem Shipbldg. Corpn. for Hudson River Day Line carries over 4000 passengers; length, overall, 348 ft.; beam, molded, 42 ft.; depth, molded, 13 ft. 8 in.; load draft, 8 ft. 1 in.; propelling machinery consists of inclined, triple-expansion engine having cylinders 36½ in., 57 in. and 85 in. in diameter by 72 in. stroke.

The Anchor Liner "California." Shipbldr., vol. 30, no. 161, Jan. 1924, pp. 10-19, 12 figs. partly on supp. plates. Has gross tonnage of 16,792 and accommodations for 1760 passengers; details of machinery and equipment.

The Atlantic Transport Liner Minnetonka. Engineer, vol. 137, no. 3566, May 2, 1924, pp. 485-486, 6 figs. partly on p. 480. See also Shipbldg. & Shipg. Rec., vol. 23, no. 18, May 1, 1924, pp. 522-527, 9 figs. Sister ship of Minnewaska has single-reduction Brown-Curtis turbines and oil-fired water-tube boilers; extensive adoption of electric auxiliaries and cargo-handling gear; gross tonnage 20,000 tons; built by Harland & Wolff.

The Largest Paddle Steamers Ever Built. Mar. Eng., vol. 29, no. 11, Nov. 1924, pp. 642-648, 13 figs. Particulars of Great Lakes steamers Greater Buffalo and Greater Detroit, built by Am. Ship Bldg. Co., Cleveland, Ohio, for Detroit & Cleveland Navigation Co. Length, overall, 535 ft.; beam, molded, 58 ft.; depth, molded, 23 ft. 7 in.

The Twin-Screw Geared Turbine Orient Liner "Orama." Engineering, vol. 118, nos. 3068 and 3070, Oct. 17 and 31, 1924, pp. 543-545 and 601-604, 29 figs. partly on supp. plates. See also Engineer, vol. 137, no. 3569, May 23, 1924, p. 567, 5 figs., partly on supp. plate. Details of 20,000-ton passenger and mail steamer constructed by Vickers Ltd.

Twenty-One Knot Turbo-Electric Liner. Shipbldg. & Shipg. Rec., vol. 23, no. 25, June 19, 1924, p. 735, 1 fig. Particulars of proposed all-electric express passenger liner for San Francisco-Honolulu service of Matson Navigation Co., San Francisco. Length, oyerall, 578 ft.; beam, molded, 75 ft.; depth, molded to shelter deck, 45 ft.; displacement, 18,000 tons; speed service of 21 knots; propelled by turbo-electric installation of about 24,000 hp., steam being supplied by 12 oil-fired boilers.

Passenger-Cargo. A New Passenger and Cargo Liner for the British India Steam Navigation Company. Mar. Engr. & Motorship Bldr., vol. 47, no. 562, July 1924, pp. 259-264, 14 figs. Particulars of "Tilawa" built and engined by R. & W. Hawthorn, Leslie & Co., Ltd., Eng., for service in India and Far East trade. Fitted with single set of quadruple-expansion engines developing 5000 i.hp. at 85 r.p.m. Scotch boilers. Length, overall, 467 ft.; breadth, molded, 59.5 ft.; depth, molded, 40 ft.; net tonnage, 6153 tons.

Passenger and Cargo Liner "Chantilly." Shipbldg. & Shipg. Rec., vol. 24, no. 2, July 10, 1924, pp. 45-46, and 49, 6 figs. on supp. plate. Twin-

screw passenger and cargo liner built and engined by Ateliers et Chantiers de la Loire for services contractuels des Messageries Maritimes; length, overall, 501 ft.; breadth, 59.2 ft.; depth, 38 ft.; displacement, loaded, 16,137 tons; maximum speed, 16 knots; propelling machinery consists of two sets of Parsons impulse-reaction type turbines, each set driving its propeller shaft through double-reduction gearing.

The British India Passenger and Cargo Liner "Tairea." Mar. Engr., vol. 47, no. 565, Oct. 1924, pp. 382-387, 14 figs. Contrasts the "Tilawa" and the "Tairea," two new classes of passenger-cargo steamers recently added to Far Eastern services of British Steam Navigation Co., and describes latter. Length between perpendiculars, 450 ft.; breadth, molded, 60 ft.; depth, molded to upper deck, 41 ft.; gross tonnage, 8000 tons.

The Latest Cunard Cabin-Class Liner. Shipbldg. & Shipg. Rec., vol. 24, no. 12, Sept. 18, 1924, pp. 337-345, 11 figs. Twin-screw passenger and cargo liner built by Swan, Hunter & Wigham Richardson and engined by Wallsend Shipway & Eng. Co.; gross tonnage, 14,000 tons; speed, 14 knots.

The New German Liner "Columbus." Shipbldg. & Shipg. Rec., vol. 23, no. 3, Jan. 17, 1924, pp. 69-73, 3 figs. See also Mar. Eng. & Shipg. Age, vol. 29, no. 2, Feb. 1924, pp. 81-89, 11 figs. Built and engined by F. Schichau, Danzig, for Norddeutscher Lloyd; length overall, 386.2 meters; length between perpendiculars, 228.67 m.; beam, 25.3 m.; depth to main deck, 16.46 m.; deadweight capacity, 10,000 tons.

The Passenger, Cargo and Cattle Steamship "St. Magnus." Shipbuilder, vol. 31, no. 171, Nov. 1924, pp. 225-231, 6 figs. partly on supp. plates. Particulars of vessel built to order of of North of Scotland and Orkney and Shetland Steam Navigation Co. Ltd., for their trade between Leith, Aberdeen, and Orkney and Shetland Islands; length, overall, 250 ft.; breadth, molded, 35 ft.; depth, molded to upper deck, 18 ft.; load, deadweight, 1260 tons; triple-expansion engines.

United American Liner "Cleveland." Shipbldg. & Shipg. Rec., vol. 23, no. 19, May 8, 1924, pp. 549-553, 6 figs. Reconditioned and converted to oil burning; length, overall, 597 ft.; breadth, 65 ft. 3 in.; depth, molded, 46 ft. 9 in.; displacement, 23,000 tons; maximum speed, 16 knots; 11,500 i.hp.; propelled by 2 quadruple-expansion engined balanced on Yarrow, Schlick & Tweedy system.

Performance Standards. Application of Fuel Conservation and Engineering Performance Standards to Shipping Board Vessels, C. J. Jefferson. Soc. Nav. Architects & Mar. Engrs.—Advance Paper, no. 8, for meeting Nov. 13-14, 1924, 9 pp., 5 figs. on supp. plates. Voyage reports; education of operating personnel; equipment modifications; methods employed and results obtained; sea and port performance; total fuel savings.

Propellers. See SHIP PROPELLERS.

Propelling Machinery. The Trend of Development of Marine Propelling Machinery, Geo. G. Goodwin. Instn. Mech. Engrs.—Proc., no. 5, 1924, pp. 823-853, 1 fig. Conclusions are that (1) reciprocating steam engine will continue to be most common engine in use in mercantile marine for some years, but its predominance in number and in tonnage of ships in which it is fitted will gradually be reduced; (2) steam turbine of geared type must continue to be engine for all ships of highest power, as in Navy; (3) heavy oil engine will be propelling engine of increasing number of cargo ships and ships of low and moderate power, but its rate of increase of use will be retarded while its cost remains high.

Propelling Machinery and Running Costs. Influence of Type of Propelling Machinery on the Running Costs of Ships, W. G. A. Perring. North-East Coast Instn. Engrs. & Shipbldrs.—Advance Paper for meeting Jan. 18, 1924, 20 pp., 11 figs. Author attempts to set out various items that go to make up running costs of ship and to ascertain how these are affected by type of propelling machinery.

Propulsion. See SHIP PROPULSION.

Radio Apparatus for. See RADIOTELEGRAPHY, Ships.

Reconditioning of Leviathan. Problems in Repairing the Leviathan. Iron Age, vol. 113, no. 17, Apr. 24, 1924, pp. 1215-1216, 7 figs. partly on p. 1217. How Boston Navy Yard accomplished machining operations of unusual magnitude by special rigging of existing machines.

Refrigerator. The Design and Construction of Refrigerated Ships, L. Williams. Soc. Nav. Architects & Mar. Engrs.—Advance Paper, no. 7, for meeting Nov. 13-14, 12 pp., 16 figs. on supp. plates. See also Mar. News, vol. 11, no. 7, Dec. 1924, pp. 137-141 and 147, and Mar. Eng., vol. 29, no. 12, Dec. 1924, pp. 713-719, 14 figs. Features which author considers desirable to incorporate in design and construction of vessel intended to carry perishable cargoes under mechanical refrigeration.

Repair, Foundry Equipment of. Will Make Castings at Sea, A. M. Charlton. Foundry, vol. 52, no. 21, Nov. 15, 1924, pp. 877-880, 4 figs. U. S. S. Medusa has modern equipment for making much of major repair work needed by fleet; two cupolas and four tilting crucible furnaces used; pattern shop also provided.

River Vessels. See RIVER VESSELS.

Route-Recording Instrument. Instrument for Tracing Route of Ships (Le traceur de route ou nautographe, système Baule). Bul. Technique du Bur. Veritas, vol. 6, no. 3, Mar. 1924, pp. 46-48, 4 figs. Describes Baule system and apparatus for automatically and continuously recording movement of ships.

Rudder Manipulation. Rudder Manipulation for Efficient Ship Operation, Elmer A. Sperry. Mar. Eng. & Shipg. Age, vol. 29, no. 1, Jan. 1924, pp. 31-35, 8 figs. Describes gyroscopic roll, pitch, and rudder angle recorder; comparison between hand and gyro pilot steering; improving steering in bad weather.

Rudders. See RUDDERS.

Salvage. See SHIP SALVAGE.

Sea-Depth Recording Machine. New Machine Traces Record of Sea Depths. Mar. Rev., vol. 54, no. 11, Nov. 1924, pp. 431-433, 6 figs. Principle of operation, and construction of machine known as Haynes type, object sought being to secure a continuous sounding beneath bottom of a vessel while traveling at regular rate of speed and in this way do away with outside strandings, and to place indication of this sounding in pilot house at any convenient point so that officer in charge may readily see record of depth through which he is traveling.

Speed Measurement. New Method for Determining Speed of a Ship on a Trial Base (Nouvelle Méthode pour la détermination de la vitesse d'un navire sur les bases), H. Brillié. Génie Civil, vol. 85, no. 14, Oct. 4, 1924, pp. 293-296, 5 figs. Details of method of determining speed on a run length of which is known, ship making two successive trips.

Speeds in Shallow Water. Economical Speeds in Shallow Water, G. Kempf. Shipbldg. & Shipg. Rec., vol. 23, no. 23, June 5, 1924, pp. 671-672,

5 figs. Translation of article in Werft Reederei Hafen, Dec. 7, 1923.

Stability. The Stability of Ships as Concerning the Naval Architect and the Shipmaster, I. C. Commentz. Shipbldr., vol. 31, nos. 167 and 168, July and Aug. 1924, pp. 16-23 and 74-79, 21 figs. Principles governing stability calculations, and application by shipmaster, giving tabular statement of results of stability calculations for important cases of stowage.

Stability Determining Device. Device for Determining Ship's Stability. Nautical Gaz., vol. 106, no. 23, June 7, 1924, pp. 636-637, 1 fig. Description of device which enables degree of stability to be determined when height fo center of gravity of system is known.

Stability Indicators. Some New Instruments for Calculations Relating to Ship Forms, including Transverse and Longitudinal Stability, G. Kempf. Shipbldr., vol. 31, no. 170, Oct. 1924, pp. 185-188, 5 figs. Describes new types of stability indicators. (Abstract.) Translated from German.

Stabilizers. The Gyroscopic Stabilizer (Le stabilisateur gyroscopique, sa détermination), M. Batestini. Bul. Technique du Bureau Veritas, vol. 6, no. 8, Aug. 1924, pp. 152-155. Calculation of stabilizing power of a gyroscope and its application to Sperry gyroscope.

See also GYROSCOPES, Ship Stabilizing.

Towing. See TOWING.

Tugs. See TUGS.

Unloading. Stachelhaus Ship Unloading System (Das Schiffsentladeverfahren Stachelhaus), Teubert. Schiffbau, vol. 25, no. 28, Nov. 19, 1924, pp. 807-810, 4 figs. Details of system designed to avoid losses by more careful handling, by running a belt conveyor length of ship; used especially for briquets.

Ventilation. Ventilating Passenger and Crew Accommodations, W. E. Spofford. Mar. Eng. and Shipg. Age, vol. 29, no. 7, July 1924, pp. 412-417, 6 figs. Factors determining number of air changes necessary and details of ventilating requirements of United States lines.

Vibrations. The Natural Periods of Vibration of Ships, E. H. Rigg. Mar. Eng., vol. 29, no. 5, May 1924, pp. 301-302. Short cut method for determining frequency period of vertical vibration due to bending only.

Wake and Thrust. The Wake and Thrust Deduction of Self-Propelled Single-Screw Models, E. M. Bragg. Soc. Nov. Architects & Mar. Engrs. —Advance Paper, no. 6, for meeting Nov. 13-14, 1924, 6 pp., 8 figs. on supp. plates. Shows to what extent wake of towed models may be used to predict wake of self-propelled models.

The Wake of a Ship in Relation to that of Its Model, F. Kempf. Shipbldg. & Shipg. Rec., vol. 23, no. 7, Feb. 14, 1924, pp. 194-196, 3 figs. Attempt to show how solution of problem of possible maximum difference between wake of ship and that of model is obtained.

Waves Produced by. Theories of the Waves Produced by the Movement of a Ship (Ueber die Theorie der Schiffswellen und des Schiffswellenwiderstandes), E. Hogner. Ingenieur, vol. 39, no. 41, Oct. 11, 1924, pp. 806-807. Discussion of the various theories which have been evolved to explain generation of waves by movement of a ship and to calculate resistance to movement of ships due to existence of such waves.

Wood Cargoes, Measurement. Measurement of Props and Pulpwood. Shipbldg. & Shipg. Rec., vol. 24, no. 24, Dec. 11, 1924, p. 685. A review of the various methods adopted for measurement of wood cargoes. Discusses scale or solid measures, and pile measure.

SHIPYARDS

Accidents in. Accidents in Shipyards. Shipbldg. & Shipg. Rec., vol. 24, no. 10, Sept. 4, 1924, pp. 285-286. Gives summary of recommendations.

Construction Shed. Shipbuilding Shed for Large Ships in the German Shipyards (Deutsche Werft), Hamburg (Die Grosschiffbauhalle der Deutschen Werft in Hamburg), H. Schmuckler. Bautechnik, vol. 2, no. 17, Apr. 18, 1924, pp. 174-178, 12 figs. Details of layout and equipment of largest structure of shipyard.

Electric Drive in. See ELECTRIC DRIVE, Shipyard.

Kiel. The Reconstruction of the Kiel Shipyard of the Deutsche Werke Corpn. (Die Umstellung der Werft Kiel der Deutsche Werke Aktiengesellschaft in baulicher Beziehung), S. Kiehne. Bauingenieur, vol. 5, no. 5, Mar. 15, 1924, pp. 97-102, 7 figs. Describes structural changes made in former German naval shipyard when it was taken over in 1920 by newly formed shipbuilding company.

SHOE INDUSTRY

Management in. See INDUSTRIAL MANAGEMENT, Shoe Factories.

SHOVELS

Diesel-Engine-Driven. Building the Olympic Highway with a Diesel Shovel. Oil Engine Power, vol. 2, no. 5, May 1924, pp. 250-254, 3 figs. Diesel-powered shovel used by contractor of highway in State of Washington handles 600 yards of rocky soil on consumption of 14 gal. of 9-cent fuel.

Mechanical. A New and Novel Shoveloder, D. P. Rohlfing. Salt Lake Min. Rev., vol. 26, no. 18, Dec. 30, 1924, pp. 9-10, 2 figs. A rotary shovel, with only a few moving parts; capacity may be made to suit any requirement; author believes it will shovel material at a much lower installation and operating cost than is possible with any other known loading device.

Power Shovels Save Drudgery of Hand Mucking. Coal Age, vol. 25, no. 8, Feb. 21, 1924, pp. 277-278, 1 fig. Labor scarcity renders mechanical loading necessary; power shovels enable bigger cuts to be pulled and obviate blockholing; specially designed rock cars facilitate tunnel driving.

The Clere Mechanical Shovel. Engineering, vol. 117, no. 3042, Apr. 18, 1924, pp. 495-496, 6 figs., partly on p. 498. Designed for excavation work as rapid and continuous process, to eliminate waste of time in slewing, hoisting, and depositing load which is common to machines of bucket and grab type.

Steam. See STEAM SHOVELS.

Trench Pull. The Northwest Trench Pull Shovel. Engineering, vol. 117, no. 3043, Apr. 25, 1924, pp. 519-520, 2 figs. Shovel manufactured by Northwest Eng. Co., Chicago, which, instead of crowding digger bucket into soil ahead of it, digs following trench, bucket being pulled toward machine instead of thrust away from it.

SIDEWALKS

Elevated. Second Story Sidewalks, J. H. Sawyer. West. Soc. Engrs.—Jl., vol. 29, no. 3, Mar. 1924, pp. 87-97, 4 figs. Number of traffic accidents in Loop district of Chicago; separation of pedestrian and street traffic urged as one of the most important measures for relief of traffic congestion, and one of the ways of doing this is to place pedestrians on a different level. Suggested design for elevated sidewalks, together with estimated cost.

Subsidewalks. Sidewalk Subways for Downtown Chicago, T. L. Condron and C. L. Post. West. Soc. Engrs.—Jl., vol. 29, no 3, Mar 1924, pp. 98-101, 3 figs. Placing of sidewalks under ground suggested for relief of traffic conditions in Loop district in Chicago.

SIGNALING

Alarm. See ALARM SIGNALING.

Beacon Lights. See LIGHTING, Beacon.

Mine. See MINE SIGNALING.

Radio. See DIRECTION FINDING; RADIO COMMUNICATION, Signal Measuring; RADIOTELEPHONY, Signaling System.

Shop. See MACHINE SHOPS, Signaling System.

Street. Street Traffic Regulation by Means of Coloured Signals, W. R. Manning. Surveyor & Mun. & County Engr., vol. 16, no. 1694, July 4, 1924, pp. 21-22. Details of traffic signal systems having green lights for right of way in main thoroughfares and yellow lights for intersecting streets. Abstract of paper read before Instn. Municipal & County Engrs.

Submarine. See SUBMARINE SIGNALING.

SILICA

Diatomaceous Earths. Kieselguhr (Le Kieselguhr), C. Ratel. Vie Technique et Industrielle, vol. 5, no. 56, May 1924, pp. 96-99, 2 figs. Discusses kieselguhr, infusorial fossil and other earths; gives analyses, properties, and uses.

Fused. Fused Silica, R. Paget. Nature (Lond.), vol. 113, no. 2847, May 24, pp. 748-752, 6 figs. Early experiments in silica fusion and developments; most important property is said to be its low coefficient of expansion, practical effect of which is demonstrated; physical and optical properties.

The History, Development and Commercial Uses of Fused Silica, R. A. S. Paget. Roy. Soc. Arts—Jl., vol. 72, no. 3724, Apr. 4, 1924, pp. 323-336, and (discussion) 336-339, 14 figs. Development of fused silica and fusing methods; properties and uses.

Pennsylvania. Quarrying Silica in Pennsylvania. Cement, Mill & Quarry, vol. 25, no. 1, July 5, 1924, pp. 31-33. Describes quarrying operations, haulage, relative advantages in quarrying floe and ledge rock.

SILICA BRICK

Grading of. The Grading of Silica Bricks, P. B. Robinson and W. J. Rees. Ceramic Soc.—Trans., vol. 23, part 1, 1924, pp. 1-12, 2 figs. Results of investigation of properties of bricks in "green" state and of burned bricks from same batch, to discover types of grading which resulted from ordinary process of grading as practiced by makers and points essential to production of a mechanically strong, even-textured, sound brick.

Manufacture. Silica Bricks and Wilputte Coke Ovens. Colliery Engr., vol. 1, no. 4, June 1924, pp. 170-189 and 195, 34 figs. Describes silica brick plant of Consett Iron Co. Ltd., at Templeton, and their manufacturing methods; Wilputte ovens installed.

Quicklime and Hydrated Lime Specification. Recommended Specification for Quicklime and Hydrated Lime for the Manufacture of Silica Brick. U. S. Bur. Standards—Circular no. 153, Dec. 27, 1923, 7 pp. Brief description of way in which lime is used in manufacture of silica brick, and general statement as to quality of lime required; directions for sampling and testing.

Resistance. Factors Affecting the Resistance of Silica Refractories to Abrasion, F. A. Harvey and E. N. McGee. Am. Ceramic Soc.—Jl., vol. 7, no. 12, Dec. 1924, pp. 895-906, 4 figs. Resistance to abrasion is tested by grinding a groove in surface of refractory by means of carborundum wheel with suitable mounting; other methods used in tests; factors affecting resistance of silica brick to abrasion are porosity and degree of burn; porosity is affected by grind, quality of ganister, per cent lime and workmanship; relation between length of groove, porosity and burn.

Tests. Investigations of Silica Brick (Untersuchungen über Silikasteine), E. Steinhoff. Stahl u. Eisen, vol. 44, no. 42, Oct. 16, 1924, pp. 1277-1283, 19 figs. partly on supp. plate. Progress of investigations in experimental station of Dortmunder Union; influence of more-or-less complete changes after burning on stability in furnace; suggestions for further research work.

SILICATES

Dehydration. Determination of Temperatures of Dehydration of Silicates (Sur la détermination des températures de départ de l'eau dans les silicates), J. Orcel. Académie des Sciences—Comptes Rendus, vol. 179, no. 20, Nov. 17, 1924, pp. 1056-1059, 1 fig. Describes method employed; temperature-pressure curves indicate whether water is lost gradually, as in case of mechanically retained moisture, or irregularly at certain definite temperatures; method overcomes errors due to oxidation by air which is usually present when other methods are used.

SILICIC ACID

Determination in Ores and Refractories. Critical Investigation of the Determination of Silicic Acid in Ores, Slags and Refractory Materials (Kritische Untersuchung der Bestimmung der Kieselsäure in Erzen, Schlacken, Zuschlägen und feuerfesten Baustoffen), A. Stadeler. Stahl u. Eisen, vol. 44, no. 47, Nov. 20, 1924, pp. 1477-1481. Solubility of silicic acid in hydrochloric acid and water; method of making silicic acid insoluble; experimental results from refractories, slags, ores, and limestone.

SILICON STEEL

Annealing, Effect of. Effect of Annealing on the Magnetic Properties of Sheets of Silicon-Steel Employed in Electrical Construction (Influence du recuit sur les propriétés magnétiques des tôles au silicium employées dans la construction électrique), R. Cazaud. Académie des Sciences—Comptes Rendus des Seances, vol. 178, no. 20, May 12, 1924, pp. 1610-1611. Results of a study of effect of varying conditions of annealing of rolled sheets of steel containing various percentages of silicon, on magnetic permeability, hysteresis losses, reluctivity, and Foucault losses.

Crystals. See CRYSTALS, Silicon-Steel.

Transformer Sheets. See TRANSFORMERS, Silicon Steel in.

SILK

Artificial. Making Artificial Silk by the Cuprammonium Process, L. S. Fryer. Chem. & Met. Eng., vol. 30, no. 19, May 12, 1924, pp. 743-748, 11 figs. Although successfully applied in Europe, method has met with many reverses in United States, due largely to lack of knowledge of its fundamental chemical engineering; details of process and properties of finished product.

Minute Structure of Artificial Silks (Ueber den Feinbau der Kunstseide), R. O. Herzog and H. W. Gonell. Kolloid-Zeit., vol. 35, no. 4, Oct. 1924, pp. 201-202. Contrary to previous impressions, it is now established that all artificial silk fibers, with exception of those of cellulose acetate, show when examined with X-rays the spectro-

graphic diagram of crystalline structure symmetrically disposed.

The Artificial-Silk Industry (L'industrie de la soie artificielle), E. Grandmougin. Génie Civil, vol. 84, nos. 1, 2, and 3, Jan. 5, 12, and 19, pp. 8-10, 33-36, and 57-60, 4 figs. Historical review; examination of four processes, namely, viscose, cellulose-acetate, nitro-cellulose, and cupric ammoniac.

Raw, Cohesion in. Cohesion in Raw Silk, W. P. Seem. Textile World, vol. 65, no. 3, Jan. 19, 1924, pp. 65 and 67. What quality known as cohesion in raw silk consists of and how it is measured; qualities of different silks; emulsion for raw weaving; value of tests to superintendent; consideration of whether it is necessary to consider cohesion in buying thrown silk.

SILLIMANITE. See REFRACTORIES, Artificial Sillimanite.

SILOS

Coal, Reinforced-Concrete. Reinforced Concrete Coal Silos, J. P. Bambach. Coal Trade Jl., vol. 55, no. 43, Oct. 22, 1924, pp. 937-939, 9 figs. Discusses difference between cinder-full and drive-under silo and advantages of more expensive one.

Grain. The Storage of Grain in Mills (Die Lagerung des Getreides in Mühlen), F. Baumgartner. Fördertechnik u. Frachtverkehr, vol. 17, no. 4, Feb. 21, 1924, pp. 48-52, 7 figs. Describes different systems of storing grain and points out advantages of grain silos.

Reinforced-Concrete. Reinforced Silos for Alumina (Tonerdesilo in Eisenbeton für die Innwerk, Bayer. Aluminium A. G. in Töging a. Inn), K. Specker. Beton u. Eisen, vol. 23, no. 21, Nov. 5, 1924, pp. 277-280, 6 figs. Design and construction of silo of Bavarian Aluminum Co.; ground surface 29 by 15 m.; divided into eight main silo cells, 7 by 7 m. and 11 m. in height, with superstructure of storage silo, and dust collection silo.

Reinforcing. See STAVES, Concrete.

Silage Cutters. Testing the Efficiency of Silage Cutters, F. W. Duffee. Agricultural Eng., vol. 5, no. 1, Jan. 1924, pp. 3-6, 2 figs. Tests carried out at University of Wisconsin on efficiency of silo-filling equipment; results show that light-draft machine is more a matter of perfection of design than of type.

SILUMIN. See AIRCRAFT CONSTRUCTION MATERIALS, Light Metals.

SILVER

Alloys. See ALLOYS, Silver.

Casting Methods. Silver Metals or Alloys for Casting, W. J. May. English Mechanics, vol. 99, no. 3069, Jan. 18, 1924, p. 3. Information upon silver alloys and casting methods.

Deposits. See SILVER DEPOSITS.

Metallurgy. See SILVER METALLURGY.

Mines. See SILVER MINES.

Soldering. See SOLDERING, Gold and Silver.

Specific Heat. See METALS, Specific Heats.

Tarnishing and Detarnishing. The Tarnishing and Detarnishing of Silver, G. W. Vinal and G. N. Schramm. Metal Industry (N. Y.), vol. 22, nos. 1, 3, 4, and 6, Jan., Mar., Apr., and June), 1924, pp. 15-17, 110-111, 151-152, and 231-233, 20 figs. Causes of tarnishing and comparison of methods of removal; properties of Moss silver. (Pub. by permission U. S. Bur. Standards.)

SILVER DEPOSITS

Australia. New Silver-Lead Discoveries in Northern Queensland, W. J. Morley. Min. Mag., vol. 30, no. 1, Jan. 1924, pp. 17-24, 5 figs. Particulars of two deposits, the Nightflower near Chillagoe and the Mount Isa near Cloncurry.

The Mount Isa Silver-Lead Field Australia's Newest Find, A. W. Newberry. Eng. & Min. Jl.-Press, vol. 118, no. 5, Aug. 2, 1924, pp. 165-171, 10 figs. Account of visit to Cloncurry district, Queensland, with description of unique cobalt mine near Selwyn.

Canada. Geology of the Mine Workings of Cobalt and South Lorrain Silver Areas, by C. W. Knight, together with description of Milling and Metallurgical Practice in Treatment of Silver Ores at Cobalt, by F. D. Reid, J. J. Denney and R. H. Hutchison. Ontario Dept. Mines, vol. 31, part 2, 1924, 358 pp., 51 figs., partly on supp. plates. Contains also bibliography of milling practice at Cobalt, and review of literature on geology of these areas.

Silver Lead Deposits of Beaver River Area, Yukon, W. E. Cockfield. Can. Dept. Mines—Geol. Survey, no. 2031, summary report, 1923, part A, pp. 22A-28A, 2 figs. Topography; general geology; ore deposits.

South Lorrain Silver District, Ontario, J. M. Bell. Am. Inst. Min. & Met. Engrs.—Trans., no. 1286-M, Jan. 1924, 9 pp., 4 figs., also (abstract) Min. & Metallurgy, vol. 5, no. 205, Jan. 1924, p. 33. History of South Lorrain mining camp and comparisons between local topography and general geology of this camp and that of Cobalt camp; character of silver-bearing veins and their analogy to those of Cobalt, and theory regarding cause of deep seated oxidation in South Lorrain, particularly at Keeley Mine; describes oreshoots, and conditions governing their occurrence and position; mining and metallurgical practice.

Colorado. Observations on the Rich Silver Ores of Aspen, Colorado, E. S. Bastin. U. S. Geol. Survey—Bul., no. 750-C, Sept. 19, 1924, pp. 41-62, 11 figs. Geologic features; mineralogy of ores; primary lead and silver ores; secondary ore minerals; depth of oxidation; descending mine waters.

Transvaal. A Transvaal Silver-Lead Deposit, P. A. Wagner. Economic Geology, vol. 19, no. 7, Nov. 1924, pp. 651-667, 2 figs. Describes deposit situated in Central Transvaal and explains rather remarkable features presented by its oxidized zone, and relation of oxidation to climatic changes.

SILVER METALLURGY

Chloride Blast Roasting and Leaching. Laboratory Tests for Chloride Blast Roasting and Leaching, T. P. Holt. Eng. & Min. Jl.-Press, vol. 117, no. 23, June 7, 1924, pp. 922-925, 5 figs. Describes practice as now followed, method of analysis used, and gives metallurgical notes bearing on adaptability of ores in general to this treatment.

Chloride Volatilization. Silver in Chloride Volatilization, C. M. Bouton, W. C. Riddell and L. H. Duschak. U. S. Bur. Mines—Technical Paper no. 317, 1924, 56 pp., 3 figs. Study of possible causes for low extraction of silver during chloride volatilization. Hydrolysis of silver chloride at high temperatures; behavior of silver compounds on heating; vapor pressure of silver chloride; research on silver silicate; partial vapor pressures of water and of HCl above HCl solutions; volatilization of silver in assaying.

Chlorination. Chlorine, Chlorination and Chlorides, L. Balliet. Salt Lake Min. Rev., vol. 26, no. 2, Apr. 30, 1924, pp. 11-13. Gives notes on old and new processes of chlorination of ores, and points out chemical reactions to show, among other things, what part chlorine and sodium played in genesis of ore deposits.

Cobalt, Canada. See SILVER DEPOSITS, Canada.

Cyanide Mills. Design and Operation of the United Comstock Mill, B. P. Little. Eng. & Min. Jl.-Press, vol. 117, nos. 13 and 14, Mar. 29 and Apr. 5, 1924, pp. 516-522 and 559-564, 12 figs. Construction details of milling plant of United Comstock Mines Co. for treatment of silver ore; how problems of crushing, grinding, and concentration were solved; discusses cyanide treatment, including sand leaching and use of Moore filters.

Ore Treatment. Montesinos on Silver Metallurgy, R. E. Carr. Min. Mag., vol. 31, no. 2, Aug. 1924, pp. 82-87. Account of an old Peruvian treatise by Fernando Montesinos, on occurrence, description, and treatment of silver ores.

Roasting. Causes of Silver Losses in Oxidizing Roasting (Untersuchungen über die Ursachen der Silberverluste bei der oxydierenden Röstung), K. Hessner. Metall u. Erz, vol. 21, no. 24, 2nd Dec. no. 1924, pp. 565-581, 19 figs. Effect of temperature, time, grain size, and thickness of layer on silver losses in oxidizing roasting of argentiferous ores. Bibliography.

SILVER MINES

Arizona. Origin of Certain Rich Silver Ores Near Chloride and Kingman, Arizona, E. S. Bastin. U. S. Geol. Survey—Bul. 750-B, Feb. 23, 1924, pp. 17-39, 11 figs. General features of area; description of the different mines.

British Columbia. The B. C. Silver Mine, V. Dolmage. Can. Min. Jl., vol. 45, no. 30, July 25, 1924, pp. 711-712, 3 figs. Microscopic examination of specimen of exceptionally high grade ore.

Mexico. Pachuca: Home of the Patio Process, B. Burwell. Eng. & Min. Jl.-Press, vol. 118, no. 19, Nov. 8, 1924, pp. 725-730, 10 figs. Worked by Spaniards in 1522, now world's largest producer of silver. Notes on geology and mining.

Nevada. Nevada's Newest Silver Producer—The Betty O'Neal Mine, W. S. Palmer. Eng. & Min. Jl-Press, vol. 117, no. 11, Mar. 15, 1924, pp. 449-452, 3 figs. Description of property, mine surface plant, and mill, including operations.

Tonopah, Nevada's Best-Known Silver District, D. Budelman. Eng. & Min. Jl.-Press, vol. 118, no. 1, July 5, 1924, pp. 5-10, 6 figs. Description of mine, mining methods, and geology.

Ontario, Can. Cobalt: Bonanza Silver District of Ontario, A. A. Cole. Eng. & Min. Jl.-Press, vol. 118, no. 9, Aug. 30, 1924, pp. 325-330, 7 figs. Notes on geology, ores, costs, sampling, concentration, etc. Has averaged two tons of fine silver per day for 20 years.

The South Lorrain Silver Area, C. W. Knight. Ontario Dept. Mines—Bul. no. 48, 1923, 55 pp., 19 figs., partly on supp. plates. Production, geology, and description of properties.

Utah. Tintic, Utah: Active Since 1870, H. E. Havenor. Eng. & Min. Jl.-Press, vol. 117, no. 9, Mar. 1, 1924, pp. 355-361, 10 figs. Is essentially a producer of silver and lead, but contains large amounts of gold and copper and some zinc; is largest silver producing district in United States. Describes operations.

SILVER MINING

Methods. Mining Methods in Mogollon District, New Mexico, S. J. Kidder. Am. Inst. Min. & Met. Engrs.—Trans., no. 1314-M, Mar. 1924, 21 pp., 8 figs.; and (abstract) in Min. & Metallurgy, vol. 5, no. 207, Mar. 1924, pp. 142-143. Application of shrinkage stoping methods, without filling, in mining of large silver-gold orebodies in district where ore is hard and wall rocks stand well without timbering and where veins make little water; vertical and inclined shafts in use with both surface and underground hoisting stations; power generation; transportation.

SILVER PLATING

Carbonates, Action of. Silver Baths and Carbonates. Metal Industry (Lond.), vol. 24, no. 13, Mar. 28, 1924, pp. 325-326. Action of carbonates, prussic acid, barium and calcium cyanide; an efficient decarbonator.

SILVERWARE

Manufacture. Manufacture of Plated Table Silverware (La fabrication des couverts en métal argenté), J. Larde. Arts et Métiers, vol. 77, no. 49, Oct. 1924, pp. 383-386, 4 figs. Discusses alloys used; rolling, and stamping of spoon and fork blanks; etc.

SINE BARS. See GAGES, Sine-Bar.

SIPHONS

Irrigation, Discharge of. Discharge of Irrigation Siphons in California, L. Standish Hall. Eng. News-Rec., vol. 93, no. 26, Dec. 25, 1924, pp. 1024-1025, 1 fig. Tests of 8- to 12-in. asphalt-coated riveted steel pipes under low heads show high friction losses.

Nicholson Thermic. See LOCOMOTIVE BOILERS, Siphons.

Sewerage. Siphon for the Passage of the Tor di Valle Stream Under the Sewers of Rome at the Left of the Tevere River (Il sifone pel passaggio del fosso di Tor di Valle sotto il collettore basso delle fogne di Roma in sinistra del Tevere), G. Corsetti. Annali dei Lavori Pubblici, vol. 62, no. 9, Sept. 1924, pp. 847-855, 9 figs. Details of construction work to give passage to two united torrential streams under sewer to river.

SKYLIGHTS

Crystal-Glass. Luxfer Glass Construction (Luxfer-Glasbau). Bautechnik, vol. 2, no. 40, Sept. 16, 1924, pp. 473-475, 7 figs. Details of glass-reinforced concrete construction by Keppler system for skylights, windows, etc., intensifying natural light by means of glass prisms.

SLAG

Basic, Constitution. The Constitution of Basic Slag, T. P. Colclough. Chem. Age (Lond.), vol. 11, no. 273, Sept. 6, 1924, pp. 18-19, 2 figs. Draws attention to leading part which slag plays in guiding operations of steelmaker; considers constitution of slag, relation between varying slags, and rate of various actions that take place.

Blast-Furnace. Color Classification of Blast Furnace Slags, W. G. Imhoff. Blast Furnace & Steel Plant, vol. 12, nos. 7 and 8, July and Aug. 1924, pp. 310-313 and 362-367, 12 figs. Underlying principles which result in definite slag characteristics.

Constitution of Blast Furnace Slags, R. S. McCaffery. Iron Age, vol. 114, no. 18, Oct. 30, 1924, pp. 1130-1131, 2 figs. Scientific explanation of their constitution based on study at metallurgical laboratory of Univ. of Wis. (Abstract.) Paper read before Am. Iron & Steel Inst.

Electric Conductivity of Fused Slag (La conductibilité électrique des laitiers fondus), F. Farup, W. Fleischer and E. Holtan. Chimie & Industrie, vol. 12, no. 1, July 1924, pp. 11-15, 8 figs. Discusses experiments with binary (silica-lime) and ternary (silica, lime and alumina) slags to determine electra conductivity.

Slag Brick and Other Slag Products, C. E. Ireland. Iron Age, vol. 114, no. 18, Oct. 30, 1924, pp. 1131 and 1179. Treats of blast-furnace slag, development of its manufacture in Birming-

ham, Ala., district, and its uses and adaptability as aggregate in concrete products. (Abstract.) Paper read before Am. Iron. & Steel. Inst.

Slag Sand as Aggregate for Concrete and Reinforced Concrete (Schlackensand als Zuschlagstoff für Beton und Eisenbeton), H. Burchartz. Stahl u. Eisen, vol. 44, no. 23, June 5, 1924, pp. 650-657, 2 figs. Purpose of tests, method of conducting, and results; following conclusions are reached: satisfactory concrete and reinforced concrete can be made from both light and heavy slag sand; concrete from slag sand used in reinforced-concrete structures should be prepared only in thick mixture (such as 1:2:3) which ensures rust-proof covering of the iron. Report on investigation of use of blast-furnace slag for concrete.

Suggestions for the Production and Delivery of Blast-Furnace Slag as Aggregate for Concrete and Reinforced Concrete (Richtlinien für die Herstellung und Lieferung von Hochofenschlacke als Zuschlagstoff für Beton und Eisenbeton). Stahl u. Eisen, vol. 44, no. 21, May 22, 1924, pp. 590-591. Recommendations of committee of German Iron & Steel Inst. for investigation of utility of blast-furnace slag.

The Constitution of Iron Blast Furnace Slags, R. S. McCaffery. Wis. Engr., vol. 29, no. 2, Nov. 1924, pp. 19-21, 5 figs. Based on study of composition, scientific explanation is given of constitution of blast-furnace slags that fits in with known facts.

Brick. See Blast-Furnace.

Cement Mortars and Concretes, Use in. Comparative Tests of Slag With Pittsburgh Sand and Gravel, C. K. Whitehead. Pit & Quarry, vol. 9, no. 2, Oct. 15, 1924, pp. 95-101. Describes tests made of fine and coarse aggregate for cement mortars and concretes, also similar tests made simultaneously with local sands and gravel.

Functions of. On the Working Slags in Ferrous Processes, J. E. Fletcher. Foundry Trade Jl., vol. 29, nos. 404 and 405, May 15 and 22, 1924, pp. 395-398, and 429-430 and 432, 11 figs. Outlines functions of slag in ferrous processes. Mechanism of formation of slags; blast-furnace, cupola, refinery, Bessemer converter, basic Bessemer, open-hearth, basic hearth, and puddling slags.

Lime-Silica, Softening Point. The Influence of Certain Fluxes on the Softening Temperature and Fluidity of a Monosilicate Mixture of Lime and Silica, W. S. Patterson and P. F. Summers. Instn. Min. & Metallurgy—Bul., nos. 233 and 234, Feb. and Mar. 1924, 15 pp. and 7 pp., 5 figs. Work carried out to investigate influence of different bases upon softening point and fluidity of a lime-silica slag.

Products. See Blast-Furnace.

Tests. A Quantitative Laboratory Slag Test, F. H. Norton. Am. Ceramic Soc.—Jl., vol. 7, no. 8, Aug. 1924, pp. 599-602, 4 figs. Describes laboratory test capable of giving quantitatively resistance of refractories to slags.

SLATE

Mining. Technical Progress in Slate Mining, O. Bowles. Eng. & Min. Jl.-Press, vol. 117, no. 15, Apr. 12, 1924, pp. 605-609, 6 figs. Improvement in equipment and methods and in utilization of waste.

Roofing. The Quarrying and Manufacture of Roofing Slates: With Their Characteristics and Tests, M. I. Williams-Ellis. Quarry & Surveyors' & Contractors Jl., no. 328, June 1924, pp. 159-164, 4 figs. Discusses slate in its geolic formation and its composition; classification of slate quarries and slate mines; methods of slate block extraction; making slates from blocks; machinery used; characteristics of No. Wales slate; its properties as roofing material.

SLOTTING MACHINES

Use of. Tooling Reciprocating Machine Tools. Eng. Production, vol. 7, no. 141, June 1924, pp. 166-169, 6 figs. Various methods of extending utility and scope of slotting machines.

SMELTERS

Copper. See COPPER METALLURGY, Smelting.

Enamel. See ENAMELING, Smelters.

SMOKE

Abatement. Atmospheric Pollution and Smoke Abatement in London, Glasgow and Hamburg, J. B. C. Kershaw. Combustion, vol. 11, no. 6, Dec. 1924, pp. 442-444, 2 figs. See also Engineer, vol. 138, no. 3594, Nov. 14, 1924, pp. 545-546, 2 figs. Facts and figures extracted from report of Committee on Atmospheric Pollution, London, and of Verein für Rauchbekämpfung, Hamburg, relating to progress of smoke-abatement movement in those cities.

Economy through Smoke Abatement. H. B. Meller. Indus. & Eng. Chem., vol. 16, no. 10, Oct. 1924, pp. 1049-1051. Present-day conditions respecting smoke abatement; results of investigation of smoke and dust problem of Pittsburgh.

Methods of Preventing Smoke in Small Steam Plants, and Cheap Furnaces That Will Do It, O. H. Wood. Southern Engr., vol. 40, no. 5, Jan. 1924, pp. 84-87, 4 figs. Human element a factor, also design of furnace, and grates.

Smoke Abatement, H. B. Meller. Combustion, vol. 11, no. 3, Sept. 1924, pp. 217-219. Discusses municipal smoke ordinances, conditions causing smoke, and means of eliminating them.

Smoke Abatement Congress. Times Trade & Eng. Supp., vol. 15, no. 331, Nov. 8, 1924, p. 177. Review of improved systems discusses at conference held in Manchester, Eng.

See also BOILER PLANTS, Smoke-Abatement Equipment.

Air Pollution by, Measurement of. See AIR, Pollution by Smoke.

Analysis. The Analysis of Smoke (Ueber die Analyse von Rauch), H. Salmang. Zeit. für angewandte Chemie, vol. 37, no. 8, Feb. 21, 1924, pp. 97-98, 1 fig. Method of determining solid and liquid components in smoke and fog.

Smoke-Preventing Apparatus. See BOILER FURNACES, Smoke Preventer.

SNOW REMOVAL

Cost and Methods. Methods and Cost of Snow Removal, F. F. Rogers. Mun. & County Eng., vol. 66, no. 1, Jan. 1924, pp. 12-16. Deals with snow removal in Michigan.

Highways. Keeping Trunk Line Highways Open in Winter, E. E. Reed. Eng. & Contracting (Roads & Streets), vol. 61, no. 3, Mar. 5, 1924, pp. 531-534, 3 figs. Organization, methods, and equipment of New Jersey Highway Dept.

Practices. Making Ready for Winter Service, R. E. Plimpton. Bus Transportation, vol. 3, no. 9, Sept. 1924, pp. 415-418, 4 figs. Practices followed by many companies are brought out in nation-wide survey; faster snow removal is demanded; precautions to be taken with motor equipment.

SOAP

Manufacture. Innovations and Progress in the Soap Industry (Neuerungen und Forschritte auf dem Gebiete der Seifenindustrie), E. L. Lederer.

Zeit. für angewandte Chemie, vol. 37, no. 34, Aug. 21, 1924, pp. 637-642. Review of apparatus construction, raw materials, processes of saponification, additions and substitutes, etc.

Technology. Innovations in Germany Soap Technology, E. L. Lederer. Chem. Age (N. Y.), vol. 32, no. 10, Oct. 1924, pp. 419-421. Improvements in apparatus; raw materials; methods of manufacture; addition materials and soap substitutes. (Abstract.) Translated from Zeit. für angewandte Chemie, 1924, p. 637.

SOAPSTONE

Canada. Wabigoon and Trap Lake Soapstone Deposits, Ontario, J. F. Wright. Can. Min. Jl., vol. 45, no. 36, Sept. 5, 1924, pp. 871-872. Geology of Wabigoon Lake basin, geology of soapstone prospects, petrography of soapstone and associated rocks; origin of soapstone and economic possibilities.

SOCIETIES

A.A.A.S. The Organization, Work and Purposes of the American Association for the Advancement of Science, B. E. Livingston. Science, vol. 59, no. 1518, Feb. 1, 1924, pp. 113-119.

SODA

Caustic, Electric Conductivity of. Electric Conductivity of Fused Caustic Soda (Die elektrische Leitfähigkeit von geschmolzenem Atznatron), K. Arndt and G. Ploetz. Zeit. für Physikalische Chemie, vol. 109, June 25, 1924, pp. 237-242, 5 figs. Results of experiments up to 460 deg., using silver crucible with silver disk as inner electrode and high-frequency machine for current.

Caustic, Electrolytic. See ELECTROLYTIC CELLS, Types.

Manufacture. The Electrolytic Caustic Soda and Solvay Processes, P. Parrish. Chem. Age (Lond.), vol. 10, no. 263, and vol. 11, no. 268, June 28 and Aug. 2, 1924, pp. 666-668 and 114-117, 8 figs. June: Reviews efficiency of electrolytic and Solvay processes for production of soda in view of suggested supersession of last named by more recently developed method. Aug.: Details of utilization of by-products.

SODIUM

Salts, Western Canada. Sodium and Magnesium Salts of Western Canada, L. H. Cole. Can. Inst. Min. & Metallurgy—Bul., no. 143, Mar. 1924, pp. 100-128, 8 figs. Mode of occurrence; chemical composition; methods of examination; apparatus and methods; deposits of natural sodium sulphate and natural soda; technology and uses of sodium and magnesium salts; drying processes.

SODIUM CYANIDE

Recovery. See COKE MANUFACTURE, By-Product Coke.

SOLDERING

Aluminum. See ALUMINUM, Soldering.

Fluxes for. Fluxes for Soft Soldering, T. B. Crow. Metal Industry (Lond.), vol. 25, no. 10, Sept. 5, 1924, pp. 224-226, 9 figs. Definitions; theory of soldering; experimental work carried out in connection with cleaning and protective properties of various fluxes, efficiency in causing solder to wet surface, efficiencies of tallow and resin as fluxes, influence of flux on surface tension of solder; tests under hydrogen. Contribution to a general discussion on Fluxes and Slags in Metal Melting and Working held by Faraday Soc. and Inst. of Metals with coöperation of British Non-Ferrous Metals Research Assn. and Inst. Brit. Foundrymen.

Gold and Silver. The Soldering and Finishing of Precious Metals. English Mechanics, vol. 98, no. 3067, Jan. 4, 1924, pp. 342-343. Useful information on soldering of gold and silver, and on finishing processes.

SOLIDS

Density, Determination of. The Density of Liquid and Solid Substances (Sur la densité des corps liquides et solides), A. Damiens. Société Chimique de France—Bul., vol. 35-36, no. 4, Apr. 1924, pp. 455-463, 5 figs. Simple and accurate method of determination developed by author; apparatus employed.

Internal Pressures of. The Internal Pressures of Solids, T. W. Richards. Am. Chem. Soc.—Jl., vol. 46, no. 6, June 1924, pp. 1419-1436, 1 fig. Brief analysis of nature of an approximate hyperbolic pressure-volume equation for solids; relation of this hyperbolic equation to an equation of state, in which each of the quantities has definite physical meaning; method which gives a plausible means of calculating internal pressure of isotropic elements from coefficient of expansion by means of a certain equation.

Internal Stresses. See STRESSES, Internal.

Mixing Apparatus. See LIQUIDS, Mixing Apparatus.

Specific Inductive Capacity. Specific Inductive Capacity in Solids (L'état solide envisagé du point de vue électrique: dispersion dans le domaine hertzien), J. Errera. Académie des Sciences—Comptes Rendus, vol. 179, no. 3, July 21, 1924, pp. 155-158, 1 fig. It appears there are two phenomena causing specific inductive capacity to be distinguished: (1) movement of particles (atoms, molecules, ions), determined by applied field, by elastic forces, or by thermal agitation, by inertia of particles and by viscous resistances; and (2) movement of electrons within each particle, producing or modifying state of polarization. Specific inductive capacity falls off, like specific heat, as temperature is reduced.

SOLUTIONS

Foaming Power. Foam Systems (Ueber Schaumsysteme), O. Bartsch. Kolloidchemische Beihefte, vol. 20, no. 1-5, Oct. 15, 1924, pp. 1-49, 5 figs. Foaming power of simple solutions of surface-active substances is greatest in dilute solutions and increases with surface activity of dissolved substance; solutions of maximum foaming power show approximately equal surface tensions; protective colloids prevent formation of aggregates at gas-liquid surfaces and destroy 3-phase foams; their relative effects are roughly proportional to their "gold values."

Gas Law and. Extension of the Gas Law to Superficial Solutions (Extension de l'application de la loi des gaz aux solutions superficielles), A. Marcelin. Académie des Sciences—Comptes Rendus, vol. 179, no. 1, July 7, 1924, pp. 33-35. Results of further experiments on layer of oleic acid on water.

SOOT BLOWERS

Mechanical. Tests of Diamond Soot Blowers, H. H. Norton. Am. Soc. Nav. Engrs.—Jl., vol. 36, no. 1, Feb. 1924, pp. 42-54, 13 figs. Results of official tests conducted for purpose of determining efficacy of mechanical soot blowers in cleaning water-tube boiler fired with oil fuel, and to ascertain boiler and furnace efficiencies under certain conditions.

Tests of Mechanical Soot Blowers, R. June. Power, vol. 60, no. 9, Aug. 26, 1924, pp. 326-328, 4 figs. Describes tests made on an oil-fired horizontal water-tube boiler and on 12,000-sq. ft. boilers. They confirm some of the general claims

that have been made from a strictly fuel-saving point of view.

Savings Effected by. Tests Showing Mechanical Soot Blower Savings, R. June. Power House, vol. 17, no. 20, Oct. 20, 1924, pp. 82-84, 4 figs. Data obtained from tests in operating departments of public utility stations, showing fuel economy this type of power-plant equipment effects.

Types. Soot and Soot Blowers. Southern Engr., vol. 40, no. 5, Jan. 1924, pp. 29-37, 30 figs. Why soot accumulates on boiler tubes; cost of soot accumulation, methods of removing it and application of various types of soot blowers to different kinds of boilers.

SOUND

Acoustics of Ear. See ACOUSTICS, Ear.

Echo of Ultra-Sounds, Utilization of. Ultra-Sounds and the Utilization of Their Echo (Note sur les ultra-sons et l'utilisation de leur écho). Bul. Technique du Bur. Veritas, vol. 6, no. 2, Feb. 1924, pp. 29-31, 4 figs. Discusses development of apparatus for detection of submarines and mines, making use of echoes of ultra-sounds produced in water; description of apparatus invented by Langevin during war.

Quantitative Testing of. The Quantitative Testing of Sound, C. E. Noël-Storr. Testing, vol. 1, no. 3, Mar. 1924, pp. 227-246, 9 figs. Reviews gradual development of sound testing instruments as applied to engineering. Some of the methods which have been devised and which have proved efficient in practical use.

Recording. Recording of Sounds by Means of a Condenser Microphone (Objektive Klangaufzeichnung mittels des Kondensatormikrophones), F. Trendelenburg. Zeit. für Technische Physik, vol. 5, no. 6, 1924, pp. 236-250, 6 figs. Describes arrangement by means of which sound produced may be recorded and minute structure of these sounds analyzed.

Speech, Nature and Reproduction of. The Nature and Reproduction of Speech Sounds (Vowels), R. Paget. Instn. Elec. Engrs.—Jl., vol. 62, no. 335, Nov. 1924, pp. 963-966, 3 figs. Points out that almost all languages still consist of jumble of voiced and unvoiced sounds, which differ enormously in carrying power; experiments show that in general effect of voicing vowel sound is to increase its carrying power from 10 to 20 times, as compared with range of corresponding whispered or unvoiced sound.

Transmission Systems. See RADIOTELEPHONY, Sound-Transmission Systems.

Velocity in Gases. See GASES, Velocity of Sound in.

Velocity in Sea Water. Velocity of Sound in Sea Water, N. H. Heck and J. H. Service. U. S. Coast & Geodetic Survey—Spec. Pub. no. 108, serial no. 278, 1924, 27 pp., 3 figs. Résumé of existing information on velocity of sound; theory; method of preparing velocity tables; adiabatic corrections to velocity; comparsion of computed velocity with directly measured velocities; sources of error; and applicability of computed velocities to acoustic sounding.

Velocity, Relation to Height. The Relation of Sound Velocity to Height, W. J. Humphreys. Franklin Inst.—Jl., vol. 197, no. 6, June 1924, pp. 821-824, 1 fig. Points out that, in general, velocity of sound in atmosphere decreases 4 meters per sec., roughly, per km. increase of height throughout troposphere, and is nearly constant, through given range of level, witnin stratosphere.

SOUND RANGING

Submarine Ship Detectors. The Fathometer. Mar. Eng., vol. 29, no. 10, Oct. 1924, pp. 588-589, 3 figs. Describes instrument by which vibrator is set in motion and stopped, return sound to microphone received and corresponding depth, as measured by time interval between these two events, is indicated. Results obtained with demonstration set on S. S. Berkshire.

SOUNDING

Ocean-Depth. Measuring Ocean Depths by Acoustical Methods, H. C. Hayes. Franklin Inst.—Jl., vol. 197, no. 3, Mar. 1924, pp. 323-354, 14 figs. Brief description of different devices and methods for taking depth soundings.

Sounding by Means of Echoes, Behm System (Le sondage par écho, système Behm). Bul. Technique du Bureau Veritas, vol. 6, no. 9, Sept. 1924, pp. 161-165, 6 figs. Describes Behm system of measuring depth of water by means of sound emitted at one side of ship and received on other side as reflected from bottom of ocean.

The Acoustic Method of Depth Sounding for Navigation Purposes. Nature (Lond.), vol. 113, no. 2839, Mar. 29, 1924, pp. 463-465, 3 figs. Account of development, both in Great Britain and abroad, of what is now commonly known as echo method of depth sounding, referring particularly to type of apparatus developed under Admiralty, and results which have been obtained with such apparatus, when used at sea under practical conditions.

See also SUBMARINE SIGNALING.

Recorder. See SHIPS, Sea-Depths Recording Machine.

SPARK GAPS

Ball, Theory of. The Theory of Ball Spark Gaps (Beitrag zur Theorie der Kugelfunkenstrecken), M. Donath. Elektrotechnische Zeit., vol. 45, no. 14, Apr. 3, 1924, pp. 297-300, 6 figs. Determines influence of certain relations of potentials governing the two equally large balls of a spark gap on maximum field intensities and loads of balls; investigation of spark gap connected with two phases of a 3-phase system leads to remarkable new results.

Electrode Temperature. The Effect of Electrode Temperature on the Sparking Voltage of Short Spark Gaps, F. B. Silsbee. U. S. Nat. Advisory Committee for Aeronautics—Report, no. 179, 1923, 10 pp., 4 figs. Investigation shows quite definitely that voltage required to produce spark across short spark gap is appreciably reduced by raising temperature of one electrode.

SPARK PLUGS

Selection and Position. Sparking Plugs, A.C. Burgoine. Automobile Engr., vol. 14, no. 194, Oct. 1924, pp. 301-304, 2 figs. Brief review of present position; standardization; threads and hexagons; reach of plugs; projection; terminals; plug troubles; dual ignition; overoiling of plugs.

SPECIFIC HEAT

Gases. See GASES, Specific Heat.

Liquid and Its Vapor. The Difference of the Specific Heats, at Constant Volume of a Liquid and Its Vapor (Ueber die Differenz der spezifischen Wärmen, bei konstantem Volumen, einer Flüssigkeit und ihres Dampfes), A. Brandt. Annalen der Physik, vol. 73, no. 5-6, Feb. 1924, pp. 412-414. Shows that specific heat at constant volume consists of two quantities: (a) constant specific heat; (b) varying quantity of heat which on raising temperature 1 deg. cent. is used up in dissociation.

Metals. See METALS, Specific Heats.

Nitrogen and Oxygen. The Ratio of the Specific Heats of Nitrogen and of Oxygen, J. R. Partington and A. B. Howe. Roy. Soc.—Proc.,

vol. 105, no. A730, Feb. 1, 1924, pp. 225-243, 2 figs. Method and results of investigation.

Organic Liquids. The Specific Heats of Certain Organic Liquids at Elevated Temperatures, J. W. Williams and F. Daniels. Am. Chem. Soc.—Jl., vol. 46, no. 4, Apr. 1924, pp. 903-917, 7 figs. Describes adiabatic calorimeter for measuring specific heats of liquids accurately at elevated temperatures; determination of specific heats of 15 liquids over small temperature intervals from 30 to nearly 80 deg.; tabulation of other physical properties of these liquids, related to heat capacity.

SPECIFICATIONS

Asphalt for Roofing. See ROOFS, Asphalt.

Car Wheels. See CAR WHEELS, Specifications.

Cement. See CEMENT, PORTLAND, Specifications.

Centrifugal Pumps. See PUMPS, CENTRIFUGAL, Specifications.

Coal Mines, Rock Dusting. See COAL MINES, Rock Dusting.

Concrete. See CONCRETE, Specifications.

Fuel Oil. See LUBRICANTS, Specifications.

Glass, Glazing. See GLASS, Glazing, Specifications for.

Highways. See HIGHWAYS, Specifications.

Lime. See LIME, Specifications.

Lubricants. See LUBRICANTS, Specifications; Standardization.

Railway Buildings. See RAILWAYS, Buildings.

Railway Motor Cars. See RAILWAY MOTOR CARS, Specifications.

Reinforced Concrete. See CONCRETE, Specifications.

Roofing, Built-up. See ROOFS, Built-up Roofing.

Steel Highway Bridges. See BRIDGES, HIGHWAY, Steel.

Tank Cars. See CARS, TANK, Specifications.

SPECTRA

Arc, between Metals. Arc Spectra between Metals in Different Mediums and in Vacuum (Sur les spectres de l'arc entre métaux, dans différents milieux et dans le vide), St. Procopiu. Annales de Physique, vol. 1 (Series 10), Jan.-Feb. 1924, pp. 89-133, 11 figs. Describes mercury arc in water, illuminating gas, hydrogen, across a Bunsen flame, in vacuum, similarly with zinc and other metals.

Electric Arcs. See ELECTRIC ARC, Spectra.

Hydrogen. See HYDROGEN, Line Spectrum.

Iron. Regularities in the Arc Spectrum of Iron, F. M. Walters, Jr. Jl. Optical Soc. of Am. & Rev. Sci. Instruments, vol. 8, no. 2, Feb. 1924, pp. 245-274, 1 fig. Theoretical considerations; results of investigation; notes on polyfold levels; gives energy level diagram. (Pub. by permission U. S. Bur. Standards.)

Structure of Iron Spectrum (Die Strukture des Eisenspektrums), O. Laporte. Zeit. für Physik, vol. 23, no. 3-4, Apr. 19, 1924, pp. 135-175, 3 figs. Series of new triplet and quintet terms are completed, and number of iron lines have received interpretation; very complete tables are included.

Measurements. See INTERFEROMETERS.

Spark, Ultra-Violet. See ELEMENTS, Spectra, Ultra-Violet.

Ultra-Violet. Extension of Extreme Ultra-Violet Spectra of Lead, Bismuth, Antimony, and Thallium (Extension des spectres d'étincelle du plomb, du bismuth, de l'antimoine et du thallium dans l'ultraviolet extrême), L. and E. Bloch. Académie des Sciences—Comptes Rendus, vol. 178, no. 5, Jan. 28, 1924, pp. 472-474. Tables are given of 23 new lines for lead, 11 for bismuth, 20 for antimony, and 14 for thallium; certain number of lines appear to be spontaneously reversible, most of which seem to coincide with arc lines found by McLennan; suggests that for the time being such reversibility be used as test for arc lines in this region.

Vanadium. Absorption Spectra of Vanadium, Titanium and Scandium (Die Absorptionsspektren von Vanadium, Titan und Scandium), H. Gieseler and W. Grotrian. Zeit. für Physik, vol. 25, no. 4-6, Aug. 4, 1924, pp. 342-366. Determines absorption lines of vapors of vanadium, tintanium, and scandium at 2000 deg. cent.

X-Ray, Absorption. See X-RAYS, Absorption Spectra.

SPECTROGRAPHS

X-Ray. The Müller X-Ray Spectrograph. Engineering, vol. 117, no. 3028, Jan. 11, 1924, pp. 46-47, 9 figs. Differs from other spectrographs by its wide range of applicability and its extreme compactness; can be utilized for work by several of chief photographic methods now in use.

SPECTROSCOPY

Atomic Structure and. See ATOMS, Structure of.

SPEECH

Frequency Limits of. Frequency Limits of Speech and Music (Der Frequenzbereich von Sprache und Musik), K. W. Wagner. Elektrotechnische Zeit. (special radio no.), 1924, pp. 5-10, 20 figs. Oscillographic investigations disclose character of vowels, consonants, and different musical instruments; ordinary telephones and telephone lines must carry and reproduce faithfully waves up to about 19,000 cycles in order to insure intelligent speech communication; very much wider limits have to be set for good transmission of music, such as, for example, for radio broadcasting of musical programs.

Physics of Hearing and. The Nature of Language, R. L. Jones. Am. Inst. Elec. Engrs.—Jl., vol. 43, no. 4, Apr. 1924, pp. 321-328, 9 figs. Résumé of recent work on physics of speech and hearing.

SPEED INDICATORS

Stroboscopic. The Stroboscopic Speed Indicator. Practical Engr., vol. 67, no. 1874, Jan. 25, 1923, pp. 49-50, 3 figs. Describes Crompton-Roberton stroboscopic vibrator having two similar vibrating bars clamped to base, and electromagnet arranged so that it can set bars in state of vibration.

SPEEDOMETERS

Automobile. The Fitting of the Speedometer and the Arrangement of the Driving Mechanism. Auto-Motor Jl., vol. 29, no. 8, Feb. 21, 1924, pp. 167-168, 8 figs. Latest methods of driving speedometer.

SPHERES

Air Resistance of. See WIND TUNNELS, Resistance of Spheres.

SPINNING

Aluminum, Sheet. See ALUMINUM WARE, Manufacture.

Metals. See METALS, Spinning.

SPRINGS

Air. See AUTOMOBILES, Riding Qualities.

A. S. M. E. Research Report. Preliminary Progress Report of the A. S. M. E. Special Re-

search Committee on Metal Springs. Mech. Eng., vol. 46, no. 11a, Mid-Nov. issue, 1924, pp. 793-795. Deals with present status of spring technique; definitions and historical notes; theoretical aspects; uses and materials of various types of springs; outline of future progress reports.

Annular. Annular Springs (Die Ringfeder, ein neues Maschinenelement), C. Wetzel. Schweizerische Bauzeitung, vol. 84, no. 3, July 19, 1924, pp. 33-35, 3 figs. Describes new machine element, giving examples of its application and table for calculating number of springs for given load.

Characteristics of the Ring Spring, O. R. Wikander. Am. Mach., vol. 60, no. 7, Feb. 14, 1924, pp. 253-254, 2 figs. Recently developed spring; material stressed in pure tension and compression under load; calculations for theoretical pressure; test results in railway work.

Automobile. Making Springs for Motor Vehicles, F. H. Colvin. Am. Mach., vol. 60, no. 14, Apr. 3, 1924, pp. 509-511, 10 figs. Testing steel and finding best heat treatment for it; methods of forming eyes and bending curves; assembling and testing springs for deflection.

Supplementary Air Spring Designed by Great Pianist. Automotive Industries, vol. 50, no. 18, May 1, 1924, p. 958, 1 fig. Supplementary springs of pneumatic type manufactured by Stevens Mfg. Co., Lowell, Mass., and invented by Josef Hofmann; 10,000 of which are said to be in use in Europe.

Coil. Coil Spring Calculations, J. W. Rockefeller, Jr. Machy. (N. Y.), vol. 30, no. 11, July 1924, pp. 874-875, 3 figs., and Machy. (Lond.), vol. 24, no. 618, July 31, 1924, pp. 566-567, 3 figs. Discusses calculation of springs for measuring instruments for valves used in internal-combustion engines; gives chart for design of coil springs of circular-section wire.

Study on Coiled Springs (Une étude sur les ressorts enroulés), D. Landau. Technique Automobile et Aérienne, vol. 15, no. 125, 1924, pp. 47-49, 2 figs. Discusses helical, conical, and spiral springs, and gives formulas for calculating tensile and bending stresses for various cross-sections and a table of coefficients.

Failures. Causes of Spring Failures. Machy. (Lond.), vol. 24, no. 262, Aug. 28, 1924, pp. 698-699, 3 figs., and Machy. (N. Y.), vol. 30, no. 12, Aug. 1924, pp. 965-966, 3 figs. Fatigue as a cause of failure; designing a spring to lift a dead weight; failure due to faulty material.

Heat Treatment. See STEEL, HEAT TREATMENT OF, Dies; Springs.

Helical. Buckling Stress of Helical Springs (Die Knickung von Schraubenfedern), R. Grammel. Zeit. für Angewandte Mathematik u. Mechanik, vol. 4, no. 5, Oct. 1924, pp. 384-389, 5 figs. Calculation of helical springs; discusses static bases, buckling load, buckling moment, and danger of buckling in vibration.

Design of Helical Springs, J. W. Rockefeller, Jr. Machy (N. Y.), vol. 31, no. 3, Nov. 1924, pp. 205-206, 3 figs. Deflection; how to calculate spring of varying coil diameter; determining maximum fiber stress.

Leaf. Leaf Springs (Les ressorts à lames), P. Ravigneaux. Technique Automobile et Aérienne, vols. 14 and 15, nos. 122, 123, 124, 125, and 126, 1923 and 1924, pp. 65-74, 111-127, 27-31, 55-63, and 80-84, 66 figs. Discusses elastic fixed springs, their deformation and fatigue; formulas for single and double leaf springs; determination of thickness and number of leaves; spring steels; manufacture of springs; cantilever springs.

Railway and Automotive Leaf Springs, Jos. K. Wood. Am. Mach., vol. 61, no. 19, Nov. 6, 1924, pp. 719-721, 4 figs. Fundamental principles underlying design; leaf springs as beams; springs as shock absorbers; new formulas and their application.

Suspension. Automobile Engr., vol. 14, no. 189, May 1924, pp. 135-140, 30 figs. Recent improvements in laminated springs.

Manufacture. Quality a Vital Factor in Spring Manufacture, H. P. Armson. Can. Machy., vol. 31, no. 25, June 19, 1924, pp. 19-21 and 42, 4 figs. Practice at Hamilton plant of Wallace Barnes Co.; work facilitated by equipment of specialized nature; unusual variety of sizes and materials in industry.

Material, Selection of. How to Select a Spring Material, Jos. K. Wood. Am. Mach., vol. 60, no. 2, Jan. 10, 1924, pp. 49-52. Quantitative method for determining proper spring material; load deflection rate; effect of temperature on modulus of elasticity; maximum safe range of deflection.

Material Testing. What Are the Best Mechanical Tests for Spring Materials? W. Rosenhain. Automotive Industries, vol. 50, no. 6, Feb. 7, 1924, pp. 278-280. Difficult to determine quantitative relation between various qualities such as strength, hardness, resistance to shock, etc.; actual value of test results should be considered; author claims adequate specifications are still lacking.

Railway-Car. Bending, Tensile and Compression Springs for Car Body Support (Biegungs-, Zug- und Druckfedern in bezug auf Fahrzeugabfederung), E. Kreissig. Glasers Annalen, vol. 95, no. 6, Sept. 15, 1924, pp. 114-120, 23 figs. Analyzes stresses occurring in various designs of leaf springs for car body support, and gives brief description of Uerdingen ring spring.

Release of. Effect Produced by the Release of Springs (Les effets produits par la détente d'un ressort), C. Reynal. Arts et Métiers, vol. 77, no. 47, Aug. 1924, pp. 312-317, 6 figs. Discusses rectilinear and curvilinear motion of springs on release, velocity of release, and develops formulas for calculating forces exerted.

Ring. See Annular.

STACKS

[See also CHIMNEYS.]

Glass-Furnace. See GLASS MANUFACTURE, Furnaces.

Locomotive. See LOCOMOTIVES, Stacks.

Reinforced-Concrete. Reinforced-Concrete Stacks of Lupescu System, German Patent 326,196 (Eisenbetonschornstein "System Lupescu" D. R. P. 326-196, erbaut für die Firma Klein, Schanzlin & Becker A.-G., Frankenthal, durch die firma Wayss & Freytag A.-G., Frankfurt, A. Main), A. Koppenhöfer. Bauingenieur, vol. 5, no. 12, June 30, 1924, pp. 368-371, 7 figs. Height 100 m. serving 6 boilers, diameters at bottom 5.9:4.4 m., at top 3.16:2.5 m.; circular foundation 14 m. giving entire satisfaction.

Stacks of Reinforced Concrete (Schornsteine aus Eisenbeton), Chr. Riekhof. Beton u. Eisen, vol. 23, no. 18, Sept. 20, pp. 247-249, 5 figs. Discusses effect of temperature differences between gases and atmosphere, protective linings, calculation of stresses, etc.

STADIUMS

Concrete. See CONCRETE CONSTRUCTION, REINFORCED, Grandstands.

Draining. See DRAINAGE, California Stadium Field.

Nebraska Memorial. Structural Features in the New Stadium, J. G. Mason. Nebraska Blue Print, vol. 23, no. 3, Mar. 1924, pp. 5-7 and 10-11, 1 fig. Analysis of possible loadings on continuous cantilever-ended floor joists, or riser, of Nebraska Memorial Stadium.

Paris. The Colombes Olympic Stadium near Paris (Le stade olympique de Colombes, près de Paris), F. Rod. Génie Civil, vol. 85, no. 6, Aug. 9, 1924, pp. 125-131, 12 figs. Details of design and construction in reinforced concrete, capacity of 60,000, of which 20,000 seats are under cover.

Purdue University. Design Features of the New Ross-Ade Stadium, E. I. Erikson. Purdue Eng. Rev., vol. 20, no. 1, Nov. 1924, pp. 5, 8, and 14, 2 figs., one on cover sheet. Type chosen was U-shaped structure with two straight sides enclosed at north end by half circle.

Wembley and Los Angeles. Stadia, R. L. Morin. Am. Architect & Architectural Rev., vol. 125, no. 2445, May 7, 1924, pp. 427-434, 9 figs. Wembley Park Stadium, Lond., Eng., and Los Angeles Coliseum.

STAIRS

Reinforced-Concrete. See BUILDING CONSTRUCTION, Stairs.

STAIRWAYS

Steps. See CONCRETE CONSTRUCTION, REINFORCED, Stairway Steps.

Stresses. Self-Contained Straight Ashlar Flights of Stairs (Der freitragende, gerade Werkstein-Treppenlauf), H. Friesecke. Bauingenieur, vol. 5, no. 18, Sept. 30, 1924, pp. 578-586, 12 figs. Discusses stresses in stairs and gives details of four extensive tests, conclusions to be drawn from them for propagation of load and approximate calculation, with examples.

STAMPING

Aluminum. See ALUMINUM WARE, Manufacture.

Equipment for. See FORGING, Equipment for.

STANDARDIZATION

Advantages to Industry. Advantages of Standardization to Industry, F. J. Schlink. Mgmt. & Administration, vol. 8, no. 5, Nov. 1924, p. 496. Statement of advantages which accrue to industry by adoption of standards, compiled by Am. Eng. Standards Committee.

Austria. Industrial Standardization in Austria (Die Normung in Oesterreichs Industrie und Gewerbe). Zeit. des Oesterr. Ingenieur- u. Architekten-Vereines, vol. 76, no. 3-4, Jan. 25, 1924. Contains introductory article, by J. Tomaides, pp. 23-24, and following articles: Standardization of Building Construction (Baunormung), S. Theiss, pp. 24-25; Standardization in Bridge Building (Normung im Brückenbau), K. Haberkalt, pp. 25-26; Standardization in Sewer Construction (Normung auf dem Gebiete des Kanalisationswesens), W. Voit, pp. 26-27; Standardization of Building Material (Baustoffnormung), O. Stern, pp. 27-28; Standardization of Load Regulations for Buildings (Die Standsicherheitsnormen im Hochbau), R. Saliger, pp. 28-30; Calculation of Buckling Strength of Beams and Girders (Berechnung gedrückter Tragwerksteile mit Rücksicht auf Knickung), pp. 30-34, 16 figs.

See also STANDARDS, Austrian O. N. I. G. Reports.

Automobile Parts. Advantages of Standardization in the Automobile Indutsry (Kraftfahrer und Normung), P. Grodzinski. Allgemeine Automobil-Zeitung, vol. 25, nos. 49 and 49a, Dec. 6 and 10, 1924, pp. 58-60 and 69-70, 7 figs. Points out advantages of standardization of parts, such as tires, pistons and piston rings, valves, spark plugs, wheels and wheel hubs, bodies, etc.; aim and purpose of standardization; comparison of German with American conditions.

Boilers. See BOILERS, STANDARDIZATION.

Bolts and Nuts. See BOLTS, Standardization.

Canada. Engineering Standards Work in Canada in 1924, R. J. Durley. Can. Machy., vol. 32, no. 26, Dec. 25, 1924, pp. 154-156. During year Can. Eng. Standards Assn. issued six new publications; report on gasoline; steel wire strands; concrete and cedar poles; road-construction work; etc.

Cutting-Tool Angles. See CUTTING TOOLS, Standardization.

Electric Insulating Materials. See INSULATING MATERIALS, ELECTRIC, Standardization.

Electrical Machinery. See ELECTRICAL MACHINERY, Standardization.

Germany. An Example of Standardization in German Industry, G. Leifer and H. Goller. Mech. Eng., vol. 46, no. 1, Jan. 1924, pp. 54-55, 3 figs. Notes on manner in which standardization is practiced in the "Wernerwerk," a Siemens & Halske factory employing 18,000 men and producing electrical machinery, illustrating very close coöperation existing between German industry and the German Industrial Standards Committee (DIN).

Standardization in Germany (Die Normung in Deutschland), F. Neuhaus. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 41, Oct. 11, 1924, pp. 1065-1070, 12 figs. See also Engineering, vol. 118, no. 3056, July 25, 1924, pp. 149-151. Describes in detail inauguration and work of Standards Committee of the German Industry (N. D. I.) of establishing fundamental standards, and refers briefly to several cases of special and international standardization. Paper, abridged, contributed to World Power Conference.

See also STANDARDS, German N. D. I. Reports.

Machine Tools. See MACHINE TOOLS, Standardization.

Methods. Contribution to Methods of Standardization (Beschouwingen over Normalisatiemethodiek), J. Goudriaan, Jr. Ingenieur, vol. 39, no. 3, Jan. 19, 1924, pp. 33-38, 6 figs. Theoretical investigation of most economical steps between successive sizes in series of standardized units. For practical reasons larger steps may be preferable.

Progress, 1923. Engineering and Industrial Standardization. Mech. Eng., vol. 46, no. 4, Apr. 1924, pp. 230-231. Standardization of bolts and nuts; year's progress in industrial standardization.

Simplification and. Simplification and Standardization, R. M. Hudson. Am. Soc. Steel Treating—Trans., vol. 5, no. 3, Mar. 1924, pp. 276-284. Reviews work of Division of Simplified Practice, Dept. of Commerce, together with many associations, societies, and individual producers, in bringing about standardization of materials produced, as well as effecting reduction in number of types, grades, brands, finishes, and sizes; author brings out that much progress has been made in this work.

STANDARDS

Austrian Oe. N. I. G. Reports. Proposed Standards (Oesterr. Normenausschuss für Industrie und Gewerbe). Sparwirtschaft, nos. 9-10 and 11-12, May and June 1924, pp. 45-51 and 53-60. May: Proposals for earthenware, drain pipes bends, branchings, unions, etc.; single and double wrenches. June: Proposals for hexagonal and square nuts and screws, wing nuts, and spring rings of square and rectangular cross-section.

Report of Austrian Industrial Standards Committee (Oesterr. Normenausschuss für Industrie und Gewerbe). Sparwirtschaft, nos. 13-14, 15-16, 17-18, 19-20, and 21-24, July, Aug., Sept., Oct., and Nov.-Dec., 1924, pp. 61-65, 69, 73 and 76; 81-82; 93; and 105-114 (OeNIG Section), 10 figs. July: Proposed standards regarding classification of iron and steel, asbestos-cement, slate, analysis of

pig iron, and linoleum. Aug.: Drawings, dimensions and data on nut locks, copper rivets and wood screws with square head. Sept.: Proposals for standards for screws for forging onto round bars, turn buckles, belt rivets, belt screws, and graphic symbols for denoting surfaces. Oct.: Proposal for standards for leaf springs and their parts; letter heads for business correspondence. Nov.-Dec.: Proposed standards for testing materials, tensile strength and bending tests, Brinell ball pressure tests and cone pressure tests.

Standard Proposals (Normblattentwürfe). Elektrotechnik u. Maschinenbau, vol. 42, nos. 28 and 30, July 13 and 27, 1924, pp. 449-452 and 472-476. July 13: Details of proposals covering electric machines, rotary current motors, d.c. motors, belt pulleys, etc. July 27: Proposals on electric machinery supplied without bearings, with bracket bearings, horizontal bearing cups, vertical shafts, and motor generators.

Electrical. See ELECTRICAL MACHINERY, Standards.

European. European Engineering Standards Issued in 1923. Am. Mach., vol. 60, no. 15, Apr. 10, 1924, p. 538. List of standards issued during 1923 by European Standardizing bodies, which have been received by Am. Eng. Standards Committee, copies of which can be furnished or which may be consulted at offices of Committee.

German N. D. I. Reports. Report of the German Industrial Standards Committee (NDI-Mitteilungen), vol. 3, no. 8, Jan. 24, 1924, pp. N43-N48, 1 fig. Proposed standard for tangenital grooves; reports on transmission, standardization in boiler design, fits, cutting tools, screws, etc.

Report of the German Industrial Standards Committee (NDI-Mitteilungen). Maschinenbau, vol. 3, no. 9, Feb. 14, 1924, pp. 261-268, 5 figs. Proposed standard for rough and semi-finished hexagonal nuts. Changes in standard sheets. Reports of committees on testing methods, iron and steel, railway building materials, bar and section iron, plates and tubes, forged steel, and gears.

Report of the German Industrial Standards Committee (NDI-Mitteilungen). Maschinenbau, vol. 3, no. 10, Feb. 28, 1924, pp. N57-N66, 15 figs. Proposed standards for unalloyed forged steel. Notes on standardization of tool steel, welding-on plates, etc.

Report of the German Industrial Standards Committee (NDI-Mitteilungen). Maschinenbau, vol. 3, no. 12, Mar. 27, 1924, pp. 421-428 (N73-N80), 6 figs. Tentative proposals for standards of rolled high-carbon steel—section and bar iron, flat billets, screw and rivet iron; proposed standards for steel castings, flat slide valves, oval valves with flanged ends and socket ends and circular slide valves.

Report of the German Industrial Standards Committee (NDI-Mitteilungen). Maschinenbau, vol. 3, no. 16, May 22, 1924, pp. N103-N108. Proposals for folding of drawings.

Report of the German Industrial Standards Committee (NDI-Mitteilungen). Maschinenbau, vol. 3, no. 17, June 12, 1924, pp. N100-N116, 14 figs. Proposals for rope pulleys for lifting machines, pipe threads, screwed pipe couplings, screw caps.

Report of the German Industrial Standards Committee (NDI-Mitteilungen). Maschinenbau, vol. 3, no. 18, June 26, 1924, pp. N117-N122. Proposals for electric traveling cranes of 5 to 100 tons capacity; periodicals and type forms.

Report of the German Industrial Standards Committee (NDI-Mitteilungen). Maschinenbau, vol. 3, no. 19, July 10, 1924, pp. N123-N130. Square-head screws, parallel measures, screw micrometer, linear measures.

Report of the German Industrial Standards Committee (NDI-Mitteilungen). Maschinenbau, vol. 3, no. 22, Aug. 28, 1924, pp. N131-N138, 4 figs. Proposals for standards for seamless drawn brass tubes for stuffing boxes, graphic symbols for pipe lines.

Report of the German Industrial Standards Committee (NDI-Mitteilungen). Maschinenbau, vol, 3, no. 23, Sept. 11, 1924, pp. 875-880, 6 figs. Details of proposals for screws with conical square head and with point and hexagonal head; size of letters and figures for marking castings, etc.; colors for distinguishing pipe lines; forged flanges for shafts.

Report of the German Industrial Standards Committee (NDI-Mitteilungen). Maschinenbau, vol. 3, no. 25, Oct. 9, 1924, pp. 963-970, 3 figs. V- and flatted V-threads for bolts and nuts.

Report of the German Industrial Standards Committee (NDI-Mitteilungen). Maschinenbau, vol. 3, no. 26, Oct. 23, 1924, pp. N163-N165, 6 figs. Proposed standards for cylindrical and angular milling cutters, electric insulator tubes, spools and brackets.

Report of the German Industrial Standards Committee (NDI-Mitteilungen). Maschinenbau, vol. 3, no. 27, Nov. 13, 1924, pp. 1051-1061, 12 figs. Proposed standards for window envelopes, dead centers, ball joints, milling cutters of various types, cocks without and with stuffing box, and screw-in thermometers.

Report of the German Industrial Standards Committee (NDI-Mitteilungen). Maschinenbau, vol. 3, no. 28, Nov. 27, 1924, pp. 1107-1110. Proposed standards for paper (material, strength, and use), and microphotographic pictures (magnification, size, etc.).

Report of the German Industrial Standards Committee (NDI-Mitteilungen). Maschinenbau, vol. 3, no. 29, Dec. 11, 1924, pp. 1147-1154, 8 figs. Proposed standards for direction of motions on machine tools (lathes, boring and milling machines); units of fits and of accuracy for rolled, forged, pressed or drawn goods; round copper wire for electric purposes; and angle iron with rounded edges.

Report of the German Industrial Standards Committee (NDI-Mitteilungen). Maschinenbau, vol. 3, no. 30, Dec. 24, 1924, pp. 1195-1202, 7 figs. Proposed standards for bronzes and red brass, running wheels in disk form and with spokes, light and heavy guide pulleys.

Report of the German Industrial Standards Committee (NDI-Mitteilungen). Bauingenieur, vol. 5, no. 19, Oct. 1924, pp. 37-40 (Baunormung), 3 figs. Proposed standards for drain pipe of burned clay, hook eyes for crane hooks, and designations for steels and irons.

German V.D.E. Latest Regulations and Standards of the German Electric Association (Die neuesten Vorschriften und Normen des VDE), A. Molly. Elektrotechnische Zeit., vol. 45, no. 39, Sept. 25, 1924, pp. 1017-1018. Summary of work done at 1924 general meeting at Dresden.

Most Important Changes in German Electric Association Rules on Machines and Transformers (Ueber die wichtigsten Aenderungen der Verbandsbestimmungen, betreffend Maschinen und Transformatoren), G. Dettmar. Elektrotechnische Zeit., vol. 45, no. 39, Sept. 25, 1924, pp. 1018-1021. Developments of VDE regulations for last 23 years and differences of latest regulations compared with previous ones.

Lighting. See LIGHTING, Nomenclature and Standards.

Screw-Thread. See SCREW THREADS, Standards.

STATISTICS

Presentation and Use. Research Based on Masses of Numbers (Grosszahlforschung), K.

Daeves. Berichte der Fachausschüsse des Vereins deutscher Eisenhüttenleute (Werkstoffausschuss), no. 43, Apr. 16, 1924, 25 pp., 40 figs. Discusses mathematical probability, laws of masses of numbers, frequency and other curves, graphic presentation, and applications in engineering, with examples.

STAVES

Concrete. The Concrete Stave and Its Possibilities, W. G. Kaiser. Cement & Eng. News, vol. 36, no. 2, Feb. 1924, pp. 37-40 and 53, 7 figs. Its prospects discussed at length; how silos are reinforced; results of tests; concrete corn cribs.

STAYBOLTS

Locomotive-Boiler. See LOCOMOTIVE BOILERS, Staybolts.

STEAM

Accumulators. See STEAM ACCUMULATORS.

Binary Cycles Using Mercury and. The Binary Cycles Using Mercury and Steam, A. M. Greene, Jr. Mech. Eng., vol. 46, no. 3, Mar. 1924, pp. 142-144, 3 figs. It is shown why mercury is a better substance thermodynamically than water at certain points; presents diagrams of temperature and entropy.

Calorimetric Examination. A Calorimetric Method of Surveying the Behavior of Steam, N. S. Osborne. Mech. Eng., vol. 46, no. 2, Feb. 1924, pp. 88-90, 2 figs. Describes elements of method forming basis of experimental program on properties of steam upon which Bur. of Standards is engaged.

"Critical," Generation of. Experiments on the Generation of "Critical" Steam, J. F. Overwyn. Power, vol. 60, no. 18, Oct. 28, 1924, pp. 693-694, 2 figs. Experiments made in attempt to develop extremely light steam power plant for use in airplanes and other vehicles.

Discharge Computations. Simplifying Steam-Discharge Computations, S. D. Barclay. Power, vol. 60, no. 16, Oct. 14, 1924, pp. 613-614, 5 figs. Presents curves which have proved to be quick and convenient method for finding areas for given discharges or amount of steam discharged for given conditions when area is known.

Dry, Boiler for. See BOILERS, High-Pressure, Dry-Steam Production in.

Engines. See STEAM ENGINES.

Flow of. See FLOW OF STEAM.

Generation. See STEAM GENERATION.

Geothermal. See Natural; Volcanic.

Heat of Vaporization. See EVAPORATION, Heat of.

High-Pressure. Extra-High Pressure Steam. Power Engr., vol. 19, no. 220, July 1924, pp. 247-250, 4 figs. Study of technology and economics of new development in power plant practice, abstracted from Münzinger's recent book.

High-Pressure Steam at the V.D.I. High-Pressure Session (Hochdruckdampf nach dem Stande der Hochdrucktagung des V.D.I.), Berner. Braunkohle, vol. 23, nos. 22 and 24, Aug. 30 and Sept. 13, 1924, pp. 425-430 and 462-466, 16 figs. Articles on properties and application of high-pressure steam (50 atmos. and higher), boiler materials, and boiler construction. Experiences and requirements in practical boiler operation; views on maximum-pressure steam. See also Mech. Eng., vol. 46, no. 4, Apr. 1924, pp. 219-220, 1 fig.

Properties and Utilization of High- and Maximum-Pressure Steam (Eigenschaften und Verwertung von Hoch- und Höchstdruckdampf), E. Josse. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 4, Jan. 26, 1924, pp. 65-71, 20 figs. Properties of steam; treatment of maximum-pressure steam in reciprocating engines (Borsig) and steam turbines (de Laval, Brown-Boveri & Cie, Erste Brünner); feedwater heating through tapping steam; utilization of excess flue-gas heat.

Recent Development in the Use of High-Pressure and Superheated Steam, B. N. Broido. Engrs.' Soc. West. Pa.—Proc., vol. 40, no. 9, Dec. 1924, pp. 299-330 and (discussion) 331-338, 20 figs. Shows practical difficulties with high pressure and what has been done up to date in order to overcome them; touches on theoretical advantages of high pressure and how it can be applied in practice. See also (abstract) in Combustion, vol. 12, no. 2, Feb. 1925, pp. 120-124, 8 figs.; and Power Plant Eng., vol. 29, no. 2, Jan. 15, 1925, pp. 130-133.

Steam Generation at Extra High Pressures, V. Blomquist. Power, vol. 60, no. 19, Nov. 4, 1924, p. 745, 2 figs. Discusses economy of power generated by back-pressure turbine; improvements in economy which can be produced by bleeding steam for heating feedwater; points out that rotating tube boiler is practical solution of problem of high-pressure steam generation. (Abstract.) Paper presented at World Power Conference.

The Influence of High-Pressure Steam on the Development of Industrial Steam Plants (Der Einfluss des Hochdruckdampfs auf die Entwicklung industrieller Dampfanlagen), Chr. Eberle. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 39, Sept. 27, 1924, pp. 1009-1016, 17 figs. Investigations on influence of heat consumption of steam engine on steam pressure and feedwater temperature show that in condensing engine even with pressure of 30 atmos., influence is very slight, whereas heat consumption of back-pressure engine is favorably affected by initial pressure, even at much higher pressures; points out measures which should be taken for utilizing this advantage of high-pressure steam.

What the Boiler Owner Should Know about High-Pressure Steam (Was soll der Kesselbesitzer über Hochdruckdampf wissen?), L. Schneider. Zeit. des Bayerischen Revisions-Vereins, vol. 28, no. 6, Mar. 31, 1924, pp. 41-44, 7 figs. Discusses properties of high-pressure steam up to 100 atmos., and points out that number of auxiliary arrangements are required for its use; difficulties of its generation, complicated design of plants and frequent lack of economic inducements are some of drawbacks counteracting advantages of high-pressure steam.

Maximum-Pressure. The Technical and Economic Prospects of Maximum-Pressure Steam (Die technischen und wirtschaftlichen Aussichten von Höchstdruckdampf), F. Münzinger. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 7, Feb. 16, 1924, pp. 137-146, 16 figs. Calculation of heating surfaces of boiler, superheater, and economizer; generation of maximum-pressure steam; behavior of maximum-pressure boilers in operation; dependence of boiler feedwater on steam pressure; new heat-economic problems.

See also High-Pressure.

Meters. See STEAM METERS.

Natural, Sources and Utilization. Industrial Utilization of Natural Steam (Sur l'utilisation industrielle des manifestations thermiques terrestres), Ginori-Conti. Chimie & Industrie, special no., May 1924, pp. 80-102, 54 figs. Distribution of volcanic-steam regions in the world; geothermal plant at Larderello, Italy; physical researches; temperature and pressure; composition of natural steam; approximate calculation of quantity of steam available; purification of natural steam; other natural-steam sources in Italy, California, Alaska, South America, Japan, and New Zealand.

Physical Properties. Study of the Physical Properties of Steam (Etude sur les propriétés

physiques de la vapeur d'eau), C. Roszak. Chaleur & Industrie, vol. 5, nos. 49, 50, and 52, May, June, and Aug. 1924, pp. 213-223, 283-292, and 402-407, 25 figs. Part I: Saturated steam: determination of heating temperature of water, total heat of saturated steam and of heat of evaporation; specific heats; relation between temperature and pressure of water; volume and specific heat and condensity; conduction. Part II: Superheated steam: specific heat and constant pressure; total and superheated steam; specific volume and characteristic equation. Part III: Discussion of work at University of Munich. Part IV: Determination of heat of vaporization. Part V: Specific heat. Part VI: Relation between temperature and saturation pressure of water. Part VII: Volume and specific weight in saturated water-steam mixture. Part VIII: Conductivity. Part IX: Total heat of superheated steam, Knoblauch-Raisch-Hansen formulas.

Power and Process Work, Use for. Generating Mechanical Energy in Works Using Heating Steam. Sulzer Tech. Rev., no. 1, 1924, pp. 7-14, 10 figs. Advantages of installing steam plant arranged for exhaust or extracted steam utilization in industrial plants; field of application of back-pressure engine; back-pressure engine working in conjunction with another power source; steam-extraction plant; Sulzer oil-operated steam-pressure regulator.

Pressure Equation. Steam Pressure Equation at Low Temperatures (Ueber die Dampfspannungsgleichung bei tiefen Temperaturen), V. Fischer. Zeit. für technische Physik, vol. 5, no. 5, 1924, pp. 187-192. Deduction of equation by means of MacLaurin series.

Pressure Reduction. Steam Pressure Reduction (Dampfdruckminderung), F. Hermenau. Archiv für Wärmewirtschaft, vol. 5, no. 6, June 1924, pp. 107-109, 1 fig. Discusses steam pressure control similar to that of electric current control, reducing or stepping down steam pressure for industrial application, steam supply of large or small capacity combined with large or small range or regularity.

Pressure Regulators. See HEATING, STEAM, Pressure Regulators.

Pressure-Volume-Temperature Relation. M.I.T. Investigates Pressure-Volume-Temperature Relation of Steam, P. W. Swain. Power, vol. 60, no. 8, Aug. 19, 1924, pp. 284-286, 5 figs. Describes apparatus and methods employed at Mass. Inst. Technology for determining volume of water at various temperatures and relation between pressure, temperature, and volume of saturated and superheated steam.

Production, Effect of Sulphur on. The Effect of Sulphur on Steam Production, T. A. Marsh. Combustion, vol. 10, no. 2, Feb. 1924, pp. 123-124. The serious increase in cost of steam due to necessity for combating effect of this element in coal.

Production from Byproduct Producer Gas. Power and Process Steam From Byproduct Producer Gas, C. H. S. Tupholme. Chem. & Met. Eng., vol. 31, no. 8, Aug. 25, 1924, pp. 300-303, 6 figs. Description of a highly efficient combination system evolved for plants using steam in course of production.

Reheating Methods. Possible Methods of Reheating Steam, J. R. McDermet. Power, vol. 60, no. 26, Dec. 23, 1924, pp. 1014-1016. Consideration of all possible methods of reheating, with view to improving conventional methods; points out possibilities and disadvantages of such mediums of heat transfer as radiant energy, heated gas, oil, melted salt mixtures, organic liquids, and mercury vapor.

Research. Progress in Steam Research. Mech. Eng., vol. 46, no. 2, Feb. 1924, pp. 81-87 and 108, 13 figs. Contains following reports in abstract: Report on Progress in Steam Research at the Bureau of Standards, N. S. Osborne and H. F. Stimson; Progress of the M.I.T. Portion of the Steam Investigation, F. G. Keyes; Progress Report on Work at Harvard University on the Joule-Thomson Effect, R. V. Kleinschmidt; Progress Report on the Joule-Thomson Effect, R. V. Kleinschmidt; Progress Report on the Joule-Thomson Effect, H. M. Davis.

Separators. See LOCOMOTIVES, Steam Separators.

Specific Heat. The Specific Heat of Steam, H. L. Callendar. World Power, vol. 1, nos. 5 and 6, May and June 1924, pp. 274-280 and 324-328, 1 fig. May: Explains principles of new methods of research, and illustrates difficulties to be encountered in neighborhood of saturation, which have led to abandonment of many of older methods. June: Rational equation for steam up to its critical point; comparison with experimental results for CO_2.

Storage. See BOILERS, Large-Capacity; STEAM ACCUMULATORS.

Superheated. See SUPERHEATED STEAM.

Tables, Callendar. The Enlarged Callendar Steam Tables, W. M. Selvey. Elec. Times, vol. 66, no. 1725, Nov. 6, 1924, pp. 533-534. Examines a case by means of new tables which, in their new form, are said to be of greatly enhanced value to designers.

Tables, Research for Extension of. See Research.

Thermal vs. Commercial Efficiency. Thermal Versus Commercial Efficiency, W. G. Diman. Power, vol. 60, no. 20, Nov. 11, 1924, pp. 764-765. Points out that solution of troubles does not lie with superpower, nor in all cases with isolated plant; rather, a combination of two with proper consideration given to both power and heating, as well as use of steam for industrial purposes. (Abstract.) Paper read before Nat. Assn. Stationary Engrs.

Volcanic. The Utilisation of Volcanic Steam in Italy. Nature (Lond.), vol. 113, no. 2828, Jan. 12, 1924, pp. 54-55, 3 figs. Efforts made in Italy to utilize natural steam which emerges from earth in volcanic districts for production of power.

See also Natural.

Waste, Utilization of. See WASTE STEAM, Utilization.

Wet. What is Wet Steam? (Was ist nasser Damps?), H. Voges. Zeit. des Oesterr. Ingenieur- u. Architekten-Vereines, vol. 76, no. 31-32, Aug. 8, 1924, pp. 279-280. Discusses damage caused by wet and impure steam in operations and remedial measures for same.

STEAM ACCUMULATORS

Design and Possibilities. The Steam Accumulator, F. Münzinger. Combustion, vol. 10, no. 6, Dec. 1924, pp. 430-435, 11 figs. How load curve of boilers affects capital outlay; load curve and fuel consumption; effect on production; thermal principles on which design of accumulators is based; accumulators in power stations with high steam pressures; relation between steam economy and production.

Ruths. Experiences and Tests of a Ruths Steam Accumulator Plant in Germany (Erste Erfahrungen und Versuche an einer Dr.-Ruths-Speicheranlage in Deutschland), R. Schulze. Wärme- u. Kälte-Technik, vol. 26, no. 16, Aug. 15, 1924, pp. 135-138, 6 figs. Connection and method of operation of Ruths accumulators; insulation and heat losses; accumulator capacity; boiler-plant efficiency with and without accumulators; use of accumulators in factors; development into a heating plant.

First Experience and Trials with a Ruths Steam Accumulator Plant in Germany (Erste Erfahrungen und Versuche an einer Dr. Ruths-Speicheranlage

in Deutschland), R. Schulze. Wärme, vol. 47, nos. 23 and 24, June 6 and 13, 1924, pp. 261-264 and 274-276, 14 figs. Discusses operation of accumulators, heat losses, efficiency of boiler plant with and without accumulator. June 13: Storage capacity, efficiency of boiler plant.

Ruths Accumulators in Dyeing Plants (Die Bedeutung des Ruths-Speichers für Färbereien), W. Christ. Wärme, vol. 47, nos. 46 and 47, Nov. 14 and 21, 1924, pp. 548-550 and 562-566, 18 figs. Details of Ruths accumulator plant and its operation at plant of Textilausrüstungs Co. in Krefeld.

Ruths Accumulators for Steam Storage, A. J. T. Taylor. Can. Engr., vol. 47, no. 26, Dec. 23, 1924, pp. 631-633, 4 figs. Practical method of meeting variation in rate of steam production and consumption. Particularly valuable for pulp and paper, sugar and textile industries, and as standby and peak reducer for hydroelectric installations.

Steam Accumulation, J. Ruths. Engineering, vol. 118, no. 3054, July 11, 1924, pp. 68-69, 3 figs. Equalizing ability of steam boilers of various types as compared with that of accumulators; description of accumulator; special uses of accumulator in power plant, and results obtained in practice. Paper, abridged, contributed to World Power Conference.

Steam Accumulators As a Factor in Power Costs, A. J. T. Taylor. Power House, vol. 17, no. 20, Oct. 20, 1924, pp. 31-34, 5 figs. Describes invention of Johannes Ruths, for storing steam, in use in pulp and paper industry of Sweden, Holland, and other European countries.

Steam Turbine and Steam Accumulator at the Tuborg Works (Tuborgs Fabrikkers nye Dampturbine og Dampakkumulatoranlaeg), T. E. Thomsen. Ingeniören, vol. 33, no. 12, Mar. 22, 1924, pp. 134-143, 9 figs. Describes installation of accumulator of Ruths type, and new turbines; claimed to be a highly economical method of increasing capacity of power station.

Thermotechnical and Practical Advantages of the Ruths Accumulator (Wärme- und betriebswirtschaftliche Vorteile des Ruths-Speichers), C. Bientzle. Glasers Annalen, vol. 94, no. 7, Apr. 1, 1924, pp. 75-80 and (discussion) 80-84, 7 figs. Points out its important influence on production, through saving in time, by shortening of working process, saving in fuel by reduction of cooling-off losses, better control of whole operation, and improvement of quality of products.

Workings of Ruths' Steam Accumulator. Paper, vol. 34, no. 15, July 31, 1924, pp. 662-664, 4 figs. Description of installation of Ruths' steam accumulator in Lessebo sulphite and paper mills, Lessebo, Sweden, showing results obtained by regulating variations in steam pressure and consumption. Translated from article by M. Kreyssig in Wochenblatt für Papierfabrikation.

Types. High-, Medium- and Low-Pressure Accumulators (Der Gefällespeicher für Hoch-, Mittel-, und Niederdruck), C. Hiesselbach. Wärme, vol. 47, no. 17, Apr. 25, 1924, pp. 175-177, 4 figs. Discusses necessary conditions for economic working, describes Ruths and other types, also new type said to fill requirements.

Steam Storage (Dampfspeicherung), H. Herbst. Sparwirtschaft, vol. 1, nos. 21-24, Nov.-Dec. 1924, pp. 103-107 (GW), 8 figs. Discusses Ruths, Rateau, Halpin, Kiesselbach, and other types of steam accumulators, including their application and efficiency.

STEAM-ELECTRIC PLANTS

Coal-Mine. A Modern Colliery Power Plant, E. L. Hann. S. Wales Inst. Engrs.—Proc., vol. 39, no. 5, Jan. 12, 1924, pp. 583-631, 29 figs. partly on supp. plates. Description of power scheme, of Powell Duffryn Steam Coal Co., Ltd., which has been installed in Rhymney Valley for purpose of providing a cheap power supply in such quantity as to enable machine mining to be developed to its fullest extent, and electrical drives to be employed in all cases in which it appears to be economically correct to do so.

Germany. Modern Improvements in Steam Engineering and Its Effect on Electricity Supply (Neuzeitliche Bestrebungen in der Dampftechnik in ihrer Auswirkung auf die öffentliche Elektrizitätsversorgung), H. Gleichmann. Elektro-Journal, vol. 4, no. 10, Oct. 1924, pp. 267-273, 5 figs. Discusses improvements in boiler house, equalizing of boiler performance, use of regenerative process, increase in initial pressure and superheat, use of turbines with high-grade high-pressure parts, systematic and central control, etc.

Mine-Mouth. Electrical Features of Pine Grove Station, C. D. Gray and M. M. Samuels. Elec. Wld., vol. 84, no. 2, July 12, 1924, pp. 56-62, 13 figs. How electrical features of a large steam plant, built at mouth of a mine, remote from load center, differ from those of large city plant. Power house of East Penn Elec. Co., on Swatara Creek at Pine Grove, Pa., used to illustrate the various electrical features involved.

Tests. Tests of a Steam Generating Unit at a Municipal Power Plant, J. E. Woodwell. Power, vol. 60, no. 12, Sept. 16, 1924, pp. 346-450, 24 figs. Results of a series of tests of a complete steam generating unit of Moores Park Station for City of Lansing, conducted jointly by equipment manufacturers, owners and consulting engineer. Principal results are presented graphically and in tabular form.

STEAM ENGINES

Admission and Exhaust in. The Zeuner Valve Diagram, H. Smith. Pacific Mar. Rev., vol. 21, no. 5, May 1924, pp. 269-270, 1 fig. Practical use and solution of Zeuner diagram, a method by which a study of the various conditions governing admission and exhaust of steam can be made, in order to obtain a more thorough knowledge of events which take place inside cylinder. Relation to valve positions and indicator diagram.

Bleeding Type. Engines in Combined Power and Process Steam Plants, J. Cassidy. Power, vol. 60, no. 19, Nov. 4, 1924, pp. 724-725, 1 fig. Describes bleeding-type tandem steam engine developed in England.

The Extraction Steam Engine, T. B. Morley. Power Engr., vol. 19, no. 223, Oct. 1924, pp. 382-385, 4 figs. General principles and modern developments.

Corliss. Erecting a Corliss Engine, G. Edwards. Southern Engr., vol. 40, no. 6, and vol. 41, no. 1, Feb. and Mar. 1924, pp. 49-51 and 54-57, 12 figs. Feb.: Finishing erection and setting valves. Mar.: Final preparations and breaking in the engine.

Cylinder Lubrication. Cylinder Lubrication When Using Saturated and Superheated Steam, J. D. Morgan. Power, vol. 59, no. 16, Apr. 15, 1924, p. 607. Atomization of oil basic requirement in steam-cylinder lubrication; using low flash-point oils; lubrication of special engines.

Cylinders, Heat Transmission in. Heat Transmission in the Cylinders of Reciprocating Engines (Ueber den Wärmeübergang im Zylinder von Kolbenmaschinen), K. F. Herzfeld. Zeit. für Angewandte Mathematik u. Mechanik, vol. 4, no. 5, Oct. 1924, pp. 405-411. Discusses heat transmission between gases in motion and solid walls, and makes calculations based on limit layer theory in which a distinction is made between general gas flow and layers at walls.

Development, Line of. See POWER, Development.

Extraction. See Bleeding Type.

Flywheels. See FLYWHEELS.

Governors. Rules for Selecting a Spring Governor (Anleitung zur Wahl eines Feder-Reglers), F. Stiessberger. Praktische Maschinen-Konstrukteur, vol. 57, nos. 17 and 18, May 13 and 20, 1924, pp. 234-236 and 252, 1 fig. Formulas for mathematical calculation.

See also GOVERNORS.

Indicator Diagrams. Study of Indicator Diagrams Made Easy, E. K. Benedek. Power, vol. 60, no. 7, Aug. 12, 1924, pp. 255-256, 6 figs. Discusses construction of characteristic lines and gives simple method of diagram analysis.

Value of Steam-Engine Indicator Diagrams (Wert des Indizierens von Dampfmaschinen). Zeit. des Bayerischen Revisions-Vereins, vol. 28, nos. 16, 17, and 18, Aug. 31, Sept. 15, and 30, 1924, pp. 143-144, 157-158, and 166-167, 19 figs. Points out necessity of periodical inspection of steam engines with aid of indicator diagrams. Examples of diagrams from different types of engines.

Lubrication. Formation of Residues in Steam Engines and Internal-Combustion Engines and Their Prevention (Die Rückstandsbildung in Heissdampfmaschinen und Verbrennungskraftmaschinen und ihre Verhütung), G. Spettmann. Praktische Maschinen-Kontsrukteur, vol. 57, nos. 21 and 22, June 10 and 17, 1924, pp. 293-294 and 309-310. Discusses formation of residue due mainly to low-grade lubricating oils and advocates use of high-grade oils.

See also LUBRICATION, Prime Movers.

Maintenance. Maintenance and Adjustment of Steam Engines, W. E. Biggs and W. R. Woolrich. Nat. Engr., vol. 28, no. 4, Apr. 1924, pp. 166-169, 5 figs. Practical instructions on adjustments, alignment, and general repairs.

Marine. See MARINE ENGINES.

Power Calculation. New Method for Calculating Power of Reciprocating Engines (Méthode nouvelle pour calculer la puissance de la machine à piston), E. Tournier. Académie des Sciences—Comptes rendus des séances, vol. 179, no. 2, July 16, 1924, pp. 101-102. Gives formula for calculating hp. from weight of dry steam, adiabatic drop per unit weight of steam, actual condenser pressure, loss of steam, and maximum efficiency of engine.

Power Plants, Efficient Use in. Steam Engine Utility in Modern Power Plants, A. Murphy. Power House, vol. 17, no. 6, Mar. 20, 1924, pp. 21-24 and 46, 6 figs. Plain slide valve, automatic high speed, Corliss and uniflow types still used efficiently in Canadian field despite hydroelectric development; discussion of different types and how to secure efficiency.

Pumping Engines. See PUMPING ENGINES.

Rolling-Mill. British Rolling Mill Engine Design, Johnstone-Taylor. Iron Age, vol. 113, no. 24, June 12, 1924, pp. 1717-1719, 5 figs. Large and massive engines of marine type with special features; both horizontal and vertical 3-cylinder designs.

See also ROLLING MILLS, Steam-Driven.

Stops, Standardization of. A. I. & S. E. E. General Specifications for Construction and Installation of Automatic Engine Stops. Iron & Steel Engr., vol. 1, no. 3, Mar. 1924, pp. 135-136. Specifications adopted as standard, Sept. 24, 1923, which shall apply to all automatic engine stops of whatever kind or method. See also article, by W. Greenwood, entitled Standardization of Engine Stops, pp. 136-139.

Thermal Efficiency. Standards of Comparison for Steam Engines. Engineer, vol. 138, no. 3599, Dec. 19, 1924, pp. 689-690. Review of discussion at meeting of joint committee on tabulating results of heat engine and boiler trials on suggested improved standard of comparison for thermal efficiency of steam engines.

The Thermal Efficiency of Steam Engines, H. Riall Sankey. Engineering, vol. 118, no. 3076, Dec. 12, 1924, pp. 818-820, 2 figs. Standards of comparison in connection with thermal efficiency.

Triple-Expansion. An Experimental Triple Expansion Engine. Power Engr., vol. 19, no. 222, Sept. 1924, pp. 351-352, 1 fig. Experimental steam engine and accessories which have recently been supplied to Corpn. of City of Cardiff and installed at Technical College, by W. Sisson & Co., Ltd.

Uniflow. Action of Unaflow Engine Governor Eccentrics, W. Turnwald. Power, vol. 59, no. 3, Jan. 15, 1924, pp. 94-96, 8 figs. Effect of excessive lead at light loads; types of governor eccentrics and influence on lead; variation of lead with change in cut-off.

Auxiliary Exhaust Valves Versus Additional Clearance in Back-Pressure Unaflow Engines, P. Langer. Power, vol. 59, no. 24, June 10, 1924, pp. 937-939, 6 figs. States that uniflow engine with normal clearance and exhaust valves will give larger output from given amount of steam at greater economy under all conditions of back pressure than uniflow engine with additional clearance space.

Comparison of Four-Valve and Two-Valve Unaflow Engines, M. L. Barker. Power, vol. 60, no. 8, Aug. 19, 1924, pp. 289-290, 4 figs. Results of tests.

The Carmichael Uniflow Steam Engine. Engineering, vol. 117, no. 3051, June 20, 1924, pp. 808-810, 4 figs. Particulars of engine exhibited at British Empire Exhibition, developing 115 b.hp. at 180 r.p.m.; cylinder has a bore of 15 in. and a stroke of 18 in.; works condensing, a jet condenser being fitted beneath it and air pump being operated from crankshaft.

The Uniflow or Central Exhaust Engine, E. Dickinson. Inst. Mar. Engrs.—Trans., Mar. 1924, pp. 627-642, 11 figs. Principle and important features of engine; consideration of parts.

Valve Gears. See VALVE GEARS.

Valves. See VALVES, Superheated-Steam and High-Pressure.

STEAM GENERATION

Cost. Cost of Generating Steam, E. Winholt. Nat. Engr., vol. 28, no. 3, Mar. 1924, pp. 115-116, 2 figs. Describes simple methods by which records can be kept and costs determined. Simple forms shown for tabulating data and deriving total figures.

United States Practice. Present Practice in Steam Generation in the United States, D. S. Jacobus. Power, vol. 60, no. 10, Sept. 2, 1924, pp. 368-370. Effect of many passes, use of air heaters, relation of efficiency to furnace temperature, etc. Extract of paper read before First World Power Conference, Lond.

STEAM GENERATORS

[See also BOILERS.]

Design Tendencies. Present Tendencies of Steam Generation, Jas. Kemmal. Inst. Mar. Engrs.—Trans., vol. 36, Nov. 1924, pp. 437-447 and (discussion) 447-462, 6 figs. Deals with improvements in boiler construction resulting from adaptation of steam turbines to higher pressures and higher superheats.

Electric. Determination of Hydrogen, C. Dantsizen and E. H. Horstkotte. Paper Trade Jl., vol. 79, no. 24, Dec. 11, 1924, pp. 43-44, 2 figs. Results of test made on a unit rated 5000 kw. 3-phase 60-cycle 6600 volts, operating at 100 lb. gage, installed at plant of Union Bag & Paper

Corpn., Hudson Falls, N. Y., to determine amount of hydrogen liberated in an electric steam generator under actual operating conditions.

Electric Steam Generators, L. G. de Kermor. Eng. Jl., vol. 7, no. 11, Nov. 1924, pp. 673-677, 9 figs. Their development, efficiency, and operating costs; how they solve problem of utilization of surplus and off-peak energy.

Extra-High-Pressure. Steam generation at Extra-High Pressures, V. Blomquist. Engineering, vol. 138, no. 3064, Sept. 19, 1924, pp. 432-433. Economical advantages that may be gained with steam of extra-high pressures. Conditions to be complied with when designing an extra-high-pressure steam generator affording a satisfactory margin of safety. Paper, abridged, contributed to World Power Conference.

High-Pressure. See BOILERS, Bensor High-Pressure.

STEAM METERS

Electric Flowmeter. Installing the Electric Steam-Flow Meter, J. M. Spitzglass. Power, vol. 60, no. 19, Nov. 4, 1924, pp. 746-747, 2 figs. How velocity pressure is obtained; differentiation between close tap and far tap; limitations imposed by bends and elbows; guarding against leaks. (Abstract.) Paper read before Nat. Assn. Stationary Engrs.

Types and Characteristics. Meter Types and Their Characteristics, C. D. Zimmerman. Power Plant Eng., vol. 28, no. 13, July 1, 1924, pp. 696-698. Temperature recorders; instruments for boilers in small boiler plants and power plants; economizer instruments, turbine and miscellaneous instruments; improvements.

STEAM PIPES

Alignment Charts for. Alinement Charts for Piping Problems, L. E. Partch. Power Plant Eng., vol. 28, no. 23, Dec. 1, 1924, pp. 1215-1216, 3 figs. Steam velocities and pipe sizes, equivalent areas and boiler efficiencies calculated graphically.

Calculation. Calculation of Steam Piping (Berechnung von Dampfleitungen), Praktische Maschinen-Konstrukteur, vol. 57, no. 10, Mar. 25, 1924, pp. 118-121, 6 figs. Method for determination of pressure and heat losses in steam pipes.

Coverings. See PIPE COVERINGS.

Coverings, Heat Loss Through. Heat Loss Through Insulating Materials, R. H. Heilman. Power Plant Eng., vol. 28, no. 14, July 15, 1924, pp. 742-745, 1 fig. Method for calculating heat loss through pipe covering used for high steam temperatures.

Design of Parts. The Construction of Steam Pipes (Bau von Dampfrohrleitungen), F. Kaiser. Zeit. des Bayerischen Revisions-Vereins, vol. 28, nos. 9, 10, 11, and 12, May 15, 31, June 15, and 30, 1924, pp. 76-79, 85-87, 96-99, and 108-111, 34 figs. Based on practical observations, suggestions are made for selection of construction materials, design of joints, pipe supports, fulcrums, expansion pipes, stop valves, insulators, etc.; general layout of line.

Dimensioning. The Correct Dimensioning of Steam Pipes on the Basis of Heat Economy (Die richtige Bemessung von Dampfrohrleitungen auf Grund der besten Wärme-Oekonomie), A. Sachs. Schweizerische Bauzeitung, vol. 83, no. 18, May 3, 1924, pp. 203-205, 2 figs. Numerical and graphical determination of best pipe diameter in which sum of radiation loss and loss due to pressure drop is a minimum.

Expansion. Compensation of the Linear Expansion of Steam Pipes, H. Menk. Eng. Progress, vol. 5, no. 7, July 1924, pp. 128-138, 8 figs. Discusses heat expansion of long piping; use of compensators between sections of pipe line; flexible compensating pipe; jointed compensation; pipe glands, etc.

Fittings for High Pressures and Temperatures. Piping Materials, Valves and Gaskets for High Pressures and Temperatures, J. D. Morgan. Power, vol. 59, no. 23, June 3, 1924, pp. 907-908. Data on pipe fittings and materials for extremes of pressures and temperatures; relative elasticity of pipe bends; nickel in high-temperature valves; causes of failures of cast-iron fittings.

Fittings, Specifications for. Specifications for Pipe Fittings, H. E. Collins. Mgmt. & Administration, vol. 8, no. 1, July 1924, pp. 83-87, 1 fig. Notes on American standard for flanged fittings; kind and quality; valves. Tables giving dimensions for standard weight fittings and extra-heavy fittings.

Heat Transmission from. See HEAT TRANSMISSION, Problems.

High-Pressure. Calculation of Pressure Piping for Saturated and Superheated Steam (Die Berechnung der Kraftleitungen für Sattdampf und Heissdampf), O. Denecke. Wärme, vol. 47, nos. 39, 40, 41, and 42, Sept. 26, Oct. 3, 10, and 17, 1924, pp. 451-454, 468-469, 484-485, and 494-497, 6 figs. Formulas for calculation; most economic diameter for constant and variable loads; lines with fixed initial pressure and free end pressure; examples of calculation; installation costs.

High-Pressure Steam Line 3,600 Feet in Length, E. E. Scott. Power, vol. 59, no. 6, Feb. 5, 1924, p. 216, 3 figs. Line being successfully operated by Pittsfield (Mass.) Elec. Co. operates at 195 lbs., and carries steam from company's Silver Lake plant to down-town station, where it furnishes energy for operating 750-kw. turbo-generator.

Piping for High Pressure and Temperature, R. A. Fiske. Power Plant Eng., vol. 28, no. 8, Apr. 15, 1924, pp. 424-427, 5 figs. Shows effect of temperature upon tensile strength of 15 to 36-point carbon steel and on wrought-iron pipe; friction losses in superheated lines; pressure drop in fittings; heat transmission through pipe walls; joints for high-pressure steam lines.

Piping Specifications, H. W. Brooks. Power, vol. 59, no. 13, Mar. 25, 1924, pp. 505-506. Gives specifications on high-pressure steam header for Batavia power house of Chicago, Aurora & Elgin Railroad Co., as an example of specifications prepared from purchaser's viewpoint.

Progress in High Pressure Piping Details. Power Plant Eng., vol. 28, no. 12, June 15, 1924, pp. 656-657. Recent tests show effects of expansion stresses in pipe; progress being made in flange-bolt materials and design. (Abstract.) Report of Prime Movers Committee of N. E. L. A.

Insulation. See INSULATORS, Steam-Pipe.

Joints. Pipe Joints for High Pressures and Temperatures. Power, vol. 60, no. 11, Sept. 9, 1924, pp. 396-397, 8 figs. Describes various types.

The Victaulic System of Pipe Jointing. Engineering, vol. 117, no. 3033, Feb. 15, 1924, pp. 205-206, 4 figs. Describes modifications in Victaulic joint since first put on market and its advantageous features, among which are its flexibility.

Losses in. Pressure, Heat and Temperature Loss in Steam Pipe (Druck-, Wärme- und Temperaturverlust in Dampfrohrleitungen), W. Haeder. Kraftmaschine, vol. 21, no. 16, Aug. 25, 1924, pp. 161-164, 2 figs. Formula and tables for saturated and superheated steam; equivalent pipe lengths for valves and bends; heat-transmission coefficient; heat-conduction coefficient; formulas

and tables for bare and covered pipes; efficiency of covering; tables for specific heat.

STEAM POWER PLANTS

[See also STEAM-ELECTRIC PLANTS.]

Ash Handling. See ASH HANDLING.

Automobile Body Plant. Steam Plant of Fisher Body Corporation, C. K. Little. Power, vol. 60, no. 7, Aug. 12, 1924, pp. 240-243, 3 figs. Discusses 30,000 sq. ft. plant of automobile body manufacturer; fuel is mixture of coal and lumber scrap resulting in saving.

Auxiliaries. Energy Supply for Station Auxiliaries, F. M. Billheimer. Elec. World, vol. 83, no. 8, Feb. 23, 1924, pp. 377-380, 10 figs. Reliable service under all operating conditions sought; effect of heat balance and bleeding on layouts; discussion of systems proposed and used.

Power Plant Auxiliaries and Their Relation to Heat Balance, A. L. Penniman, Jr. Am. Inst. Elec. Engrs.—Jl., vol. 43, no. 2, Feb. 1924, pp. 118-121, 1 fig. Points out economy of stage bleeding together with electric drive, and describes use of auxiliary generator connected to and driven by main turbine.

Boiler Furnaces. See BOILER FURNACES.

Boilers. See BOILERS.

Bonus Systems for. Practical Bonus Systems for Power Plants, G. Burgess. Nat. Engr., vol. 28, no. 6, June 1924, pp. 255-258, 4 figs. Outline of bonus system methods for average power plant. Value of a bonus system in increasing interest of operators and efficiency of plant.

British Empire Exhibition. The Power Station of the British Empire Exhibition. Engineering, vol. 117, nos. 3037, 3038, 3039, 3040, 3041, and 3042, Mar. 14, 21, 28, Apr. 4, 11, and 18, 1924, pp. 330-335, 363-364, 387-391, 424-428, 455-458, and 490-491, 72 figs. partly on supp. plates. General arrangement of power station and details of machinery and equipment of engine room and boiler plant. See also Engineer, vol. 137, no. 3558, Mar. 7, 1924, pp. 251-253, 2 figs.

Carolina Power & Light Co. Cape Fear Steam Plant of Carolina Power and Light Co. So. Engr., vol. 41, no. 6, Aug. 1924, pp. 35-42, 16 figs. Describes plant of ultimate capacity of 60,000 kw.; present installation: one 15,000 kw. turbo-generator, three 11,360-sq.-ft. water-tube boilers; pressure, 325 lb.; superheat, 210 to 240 deg. fahr.

Central Stations. See CENTRAL STATIONS.

Coal Handling. See COAL HANDLING, Power Plants.

Coal-Mine. See COAL MINES, Power Plants.

Combined Diesel and Boiler Plant. Oil Engines Practical Even if Process Steam Be Needed, J. S. Le Clercq. Power, vol. 59, no. 9, Feb. 26, 1924, pp. 322-323, 2 figs. Dallas Oil & Refining Co. uses Diesel for power and boilers for process steam; results show considerable saving in power costs.

Combined Heating and Generating. Small Industrial Plant Generates Current at Low Cost. Power, vol. 60, no. 19, Nov. 4, 1924, pp. 754-756, 3 figs. Cincinnati factory of Am. Can Co. used combined heating and generating plant; uniflow engines produce current for less than one cent per kw-hr.; labor reduced to minimum.

Condensers. See CONDENSERS.

Condensing Plants. Thermo-economic Operation of Condensing Plants (Wärmewirtschaftliche Betriebsführung von Kondensationsanlagen), L. Heuser. Wärme, vol. 46, no. 47, Nov. 14, 1924, pp. 537-540, 4 figs. Discusses operating vacuum, thermo-economic measuring instruments, reasons for poor vacuum and remedies, cooling tower question, condensers, air pumps, cooling water heat utilization, etc.

Cooling Towers. See COOLING TOWERS.

Design. Designing a 500-Horsepower Steam Power Plant, C. L. Hubbard. South. Engr., vol. 42, nos. 2, 3, and 4, Oct., Nov., and Dec. 1924, pp. 47-50, 40-43, and 35-39, 8 figs. Design of a steam power plant for an industrial establishment of medium size. Oct.: Determining power requirements, types of motors, prime movers, lighting, ventilating, and elevators and hoists. Nov.: Steam for heating and ventilating, types of prime movers, operating non-condensing and condensing. Dec.: Extraction of bleeder steam turbine as a means of supplying low-pressure steam.

Detroit Lubricator Co. Power Plant of the Detroit Lubricator Company, C. K. Little. Power, vol. 59, no. 9, Feb. 26, 1924, pp. 316-321, 6 figs. New plant has two bent-tube boilers of 2360 sq. ft. of heating surface each, which are on second floor of building, with inside coal storage directly above stokers; details of cooling-water supply; cost of machinery.

Developments. A Résumé of Recent Power-Station Developments, J. H. Lawrence. Mech. Eng., vol. 46, no. 3, Mar. 1924, pp. 144-145; Brief review of important developments.

Two Score Years in Power Development, F. R. Low. Nat. Engr., vol. 28, no. 10, Oct. 1924, pp. 473-478, 5 figs. Review of developments in power-plant engineering.

Economic Operation. Efficiency in Steam Power Plant Operation, L. M. Arkley. Eng. Jl., vol. 7, no. 10, Oct. 1924, pp. 635-638, 2 figs. Discusses possibility of effecting economy in operation of steam plants; preparations for boiler tests; heat losses; Orsat apparatus; causes of low percentage of CO_2; summary of procedure to ascertain causes of low boiler efficiency; CO_2 recorders.

Economizers. See ECONOMIZERS.

Electrically Driven Auxiliaries. Electrically Driven Auxiliaries for Steam Generating Stations. Nat. Elec. Light Assn.—Serial Report (Elec. Apparatus Committee), publication no. 24-34, Dec. 1924, 132 pp., 95 figs. Operating requirements of auxiliaries both as to speed range and necessity for continuous operation; types of motors and control available for driving these auxiliaries; methods of supplying electric power to these motors. Includes four appendices on application of motor-driven circulating pumps; camparison of methods of driving forced-draft fans; mechanical stokers; and typical motor installation for coal-handling equipment. Bibliography.

Equipment. A Compendium of Modern Power Plant Equipment, Jas. T. Beard, 2nd. Indus. Mgmt. (N. Y.), vol. 68, no. 56, Dec. 1924, pp. 331-335. Defines power apparatus and appliances and shows their relation to cost sheet.

Management in Power Plant Building, F. S. Clark. Mgmt. & Administration, vol. 8, no. 6, Dec. 1924, pp. 585-588, 7 figs. Methods and equipment at Pittsburgh Plate Glass Co.'s power house at Kokomo.

Savings Produced by Power Equipment, Geo. E. Hagemann. Mgmt. & Administration, vol. 8, no. 6, Dec. 1924, pp. 627-630. Experience data from typical indstrial plants; notes on steam flow meters; boiler-room meters; oil purifiers.

Equipment, British Empire Exhibition. Power Plant Exhibits at Wembley, J. B. C. Kershaw. Power, vol. 60, nos. 3 and 4, July 15 and 22, 1924, pp. 82-86 and 131-134, 17 figs. Boilers, economizers, air preheaters, dust collectors, deaerators, steam turbines, etc.

Feedwater Heaters. See FEEDWATER HEATERS.

Ford Motor Co. of Canada. See AUTOMOBILE MANUFACTURING PLANTS.

Heat-Head Utilization. The Utilization of Heat Head, A. G. Christie. Power, vol. 60, no. 23, Dec. 2, 1924, pp. 892-893. In case of high pressure and highly superheated steam, heat head may be considered as heat available from adiabatic expansion from initial conditions at superheater outlet down to final exhaust pressure or vacuum; heat head for any conditions can be readily found from Mollier diagram; utilization of continuous blowdown.

High-Pressure. High-Pressure Steam Power Plants Utilizing Waste Steam (Hochdruckdampf-Kraftanlagen mit Abdampfverwertung), F. Langen. Archiv für Wärmewirtschaft, vol. 5, no. 9, Sept. 1924, pp. 165-173, 25 figs. Describes plant of 25 atmos. working pressure with superheating steam and utilizing exhaust steam. Explains proposed completion as a maximum pressure plant.

High Pressure Steam at Weymouth, I. E. Moultrop. Stone & Webster Jl., vol. 35, no. 3, Sept. 1924, pp. 309-317, 3 figs. Description of design and equipment of Weymouth power station of Edison Elec. Illuminating Co. of Boston, highest commercial steam power plant in world.

Layout and Operation of 1200-lb. Steam Plant. Power Plant Eng., vol. 28, no. 15, Aug. 1, 1924, pp. 805-806, 2 figs. Particulars of high-pressure power plant installed at Weymouth power station of Edison Elec. Illuminating Co. of Boston. Steam is initially raised to 1200 lb. and 700 deg. fahr. and used in a 3150-kw. turbine which operates with a 350-lb. back pressure.

Steam at 1,200 Deg. F. in a Unique Power Plant. Power, vol. 60, no. 1, Sept. 9, 1924, pp. 405-406, 1 fig. A turbine for 1200 deg. fahr., 350 lb., supplied by a boiler where fuel and water are intimately mixed, at high combustion efficiency, used for propelling torpedoes. Features suggest possibilities for more economical stationary practice.

High Pressure, Reheating and Regenerating. High Pressure, Reheating, and Regenerating for Steam Power Plants, C. F. Hirschfeld and F. O. Ellenwood. Mech. Eng., vol. 46, no. 4, Apr. 1924, pp. 179-183 and 225, 14 figs. Authors discuss relative thermal and investment costs involved in modern turbo-generator station, as determined by consideration of steam pressures from 200 to 1200 lb. per sq. in., steam temperatures of 700 and 800 deg. fahr., and six different cycles of operation in which reheating and regenerating are involved in various degrees. (Abridged.)

High Pressure, Superheat, and Reheating in. Pressure, Superheat, Steam Extraction and Reheating as Affecting Power Plant Economy, Eskil Berg. Franklin Inst.—Jl., vol. 197, no. 6, June 1924, pp. 727-739, 8 figs. Notes on gain by high steam pressure; high superheat; gain by high steam pressure and superheat combined; steam extraction; reheating; capacity rating; high pressure and high steam temperature.

High Pressures and Superheats. High Pressures and High Superheats, W. G. Noack. Brown Boveri Rev., vol. 11, nos. 2 and 3, Feb. and Mar. 1924, pp. 23-30 and 54-63, 22 figs. Their evolution and application in steam power plants. Possible improvement of efficiency of ideal steam engine by increasing initial pressure and temperature; regenerative feedwater heating with steam bled from intermediate stages of turbine; turbines for high pressures and superheats; governing; steam generators and accessories for high pressures.

Isolated Plant vs. Centralized Power. Slow-speed Steam Engines for Industrial Purposes, D. S. Capper. World Power, vol. 1, no. 6, June 1924, pp. 353-357, 6 figs. Deals with factors which combine to determine best method of power supply, namely, first cost, working cost, suitability for particular work, liability to stoppage, and insurance risk.

Laundry. A Modern Laundry Power Plant. Power, vol. 59, no. 5, Jan. 29, 1924, pp. 162-164, 3 figs. Describes new plant of Great West. Laundry Co., Chicago, in which problem was to balance power-steam with exhaust-steam requirements for heating laundry water; in boiler-room fuel spreaders and unusual methods of controlling automatically feed of coal and water are features.

Lumber Mills. 18,000-Kw. Plant Serves Lumber Company. Power, vol. 60, no. 17, Oct. 21, 1924, pp. 638-641, 5 figs. Long-Bell Lumber Co. operates its Longview (Washington) properties from its own central plant of 18,000-kw. present capacity; conveyor system delivers hogged fuel to Stirling-type boilers, provided with extension furnaces; ashes are removed by sluicing; electric drive is used extensively throughout plant.

Mercury Vapor-Steam System. Binary Fluid System Using Mercury Vapor Expected to Cut Power Costs, P. M. Heldt. Automotive Industries, vol. 50, no. 1, Jan. 3, 1924, pp. 20-21. Gen. Elec. Co. responsible for development of new method which bids fair to result in more economical utilization of fuel; efficiency obtained by recovering some of latent heat.

One New Industrial Power Plant Replaces Seven, C. B. Gorton and F. R. Innes. Power Plant Eng., vol. 28, no. 15, Aug. 1, 1924, pp. 784-791, 16 figs. Electrification of lumber mill of Crossett Lumber Co., of Crossett, Ark., necessitated scrapping 24 old boilers and an old generator. Details of equipment and materials used.

Modern Economical Developments. The Influence of Modern Thermotechnical Development on Power-Plant Design (Der Einfluss der neueren wärmetechnischen Entwicklung auf den Kraftwerksbau), F. Ohlmüller. Elektrotechnische Zeit., vol. 45, no. 17, Apr. 24, 1924, pp. 385-389, 9 figs. It is shown that modern furnace types permit development of larger boiler units, and larger boilers permit savings in cost of installation; position and arrangement of economizer has great bearing on design and costs of boiler houses; the Benson process; design and advantages of multi-cylinder Brünner-type turbines.

Montaup Elec. Co., Mass. Cost Estimate of Montaup Plant Initial Development. Elec. World, vol. 83, no. 10, Mar. 8, 1924, pp. 475-476, 1 fig. One 30,000-kw. unit and three 1500 hp., 400-lb. boilers, giving temperature of 700 deg. fahr., constitute first step.

Oil Refinery. Vacuum Oil Co. Plant at Paulsboro, N. J. Power Plant Eng., vol. 28, no. 12, June 15, 1924, pp. 631-636, 9 figs. All electric power used in refining processes is generated at plant by turbo-generators at potential of 2300 volts; all turbines operate non-condensing against back pressure of about 20 lb.; details of boiler room and furnace design.

Paper Mills. Methods of Operation at the Paterson Parchment Paper Co. Power Plant Eng., vol. 28, no. 18, Sept. 15, 1924, pp. 932-936, 10 figs. Operation of plant is characterized by engineering qualities of high excellence. Describes methods of determining coal consumption, boiler operation, engine equipment, and gives details of maintenance and operation.

New Power Plant of the Bryant Paper Co. Power, vol. 59, no. 19, May 6, 1924, pp. 710-715, 6 figs. Central plant of 8000-kw. ultimate capacity, designed to supply power, steam and hot water to four divisions of large paper mill in Kalamazoo, Mich., replaces combination of individual boiler plants and scattered engine units; special features are balancing of power and heat-

ing steam, special coal- and ash-handling, automatic control and complete metering facilities.

Piping. See STEAM PIPES.

Power, Purchase of. The Purchasing of Power, A. Ulmann, Jr. Power, vol. 60, no. 12, Sept. 16, 1924, pp. 454-456, 2 figs. When to buy power; classification of industries as to whether or no they should purchase power; discusses functions of an operating engineer who finds himself in charge of equipment of a plant operating on purchased power.

Prime Movers for. Prime Movers for Industrial Plants, J. F. Ferguson. Power, vol. 59, no. 20, May 13, 1924, pp. 766-768, 1 fig. Comparison of various types of engines and turbines for use in industrial plants, with summary on economies and relative advantages.

Prime Movers, Progress in. Progress in Prime Movers, Wm. H. Patchell. Engineer, vol. 137, no. 3561, Mar. 28, 1924, pp. 332-334, 3 figs. See also Power Plant Eng., vol. 28, no. 11, June 1, 1924, pp. 611-612. Review of developments and progress in size of units and pressure; direction in which progress points at present, with mention of some limitations. (Abstract.) Address before Instn. Mech. Engrs.

Process Steam. Process Steam as a Power Plant Product, Miles Sampson. Textile World, vol. 65, no. 1, Jan. 5, 1924, pp. 81-82 and 85, 3 figs. Points out that in mill finishing its own goods, process steam may become principal product of power plant; factors in problem of maintaining adequate steam supply at pressures demanded and economically balancing this load with power requirements.

Pulverized Anthracite Slush, Burning. Pulverized Anthracite Slush Burned at Lykens (Pa.). Power, vol. 60, no. 1, July 1, 1924, pp. 2-7, 9 figs. See also Coal Age, vol. 26, no. 8, Aug. 21, 1924, pp. 253-257, 10 figs. One of first power plants to utilize anthracite slush in pulverized form; coal mixed with 75 per cent water pumped 2500 ft. under 400 ft. head and dewatered at plant; boiler plant contains six 5000 and six 6000-sq. ft. water-tube boilers; present generating capacity 6400 kw.

Pulverized Coal in. See PULVERIZED COAL, Boiler Firing; Steam Power Plants.

Railway Shops. C. B. & Q. Builds Model Coal Burning Power Plant. Ry. Elec. Engr., vol. 15, no. 12, Dec. 1924, pp. 413-418, 12 figs. Also Ry. Age, vol. 77, no. 22, Nov. 29, 1924, pp. 989-992, 5 figs. Details of plant for serving needs of new Chicago, Burlington & Quincy shops at Denver; steam generated for shop requirements and for compressing air; electric power is purchased.

Reconstruction of. Rebuilding an Old Steam Engine Plant. Power Plant Eng., vol. 28, no. 14, July 15, 1924, pp. 746-748, 7 figs. Description of plant of Stearns Light & Power Co., Ludington, Mich., which is being rebuilt. Bought steam under contract, used it to generate electric power and then sold steam back to original owners after it had served its purpose.

Sewage-Disposal Works. Power Plant of Milwaukee Sewage Disposal Works. Power, vol. 60, no. 9, Aug. 26, 1924, pp. 316-322, 7 figs. Describes modern plant designed to supply electrical energy, compressed air and heating steam for operation of an activated sewage disposal plant. Steam supply for heating sludge and recovery of heat from purified sewage made interesting problem in design.

Small Industrial Plant. A Model Small Industrial Plant. Power, vol. 60, no. 13, Sept. 23, 1924, pp. 484-486, 3 figs. Describes plant of Froedtert Grain & Malting Co., Milwaukee, Wis., an attractive small plant in which cleanliness is watchword, and tells how remodeling of boiler room at a cost of $35,000 effected a saving of $20,670 a year.

Small, Smoke Abatement in. See SMOKE, Abatement.

Steam Costs. Comparative Analysis of Steam Costs, C. J. Mason. Nat. Engr., vol. 28, no. 3, Mar. 1924, pp. 108-109, 1 fig. How to determine whether privately generated or purchased steam is more economical.

Steam Engines. See STEAM ENGINES.

Steam Turbines. See STEAM TURBINES.

Steel Works. Steel Company Builds New Power Plant. Power Plant Eng., vol. 28, no. 20, Oct. 15, 1924, pp. 1034-1041, 9 figs. Details of power plant of new blast furnace and coke plant of Columbia Steel Corpn. at Provo, Utah; tabular data on equipment used.

Stokers. See STOKERS.

Store Works. Power for the Bridge & Beach Mfg. Co. Power Plant Eng., vol. 28, no. 5, Mar. 1, 1924, pp. 267-271, 8 figs. New power plant of stove manufacturing plant in St. Louis as example of small power-plant construction; steam is generated in three O'Brien, Heine-type boilers equipped with Laclede-Christy chain-grate stokers; electric power is generated by two 440-volt, 3-phase a.c. generators.

Testing, Continuous. Continuous Power-Plant Testing, T. Maynz. Power, vol. 59, nos. 6, 9 and 12, Feb. 5, 26 and Mar. 18, 1924, pp. 205-208, 324-325 and 450-452, 10 figs. Feb. 5: How efficiency of plant can be found each day; examples of necessary log data together with simple process of making calculations. Feb. 29: Checking performance of turbine room. Mar. 18: Making power-plant heat balance.

Tests. Regulations for Efficiency Tests of Steam Power Plants (Regeln für Leistungsversuche an Dampfanlagen), W. Pauer. Archiv für Wärmewirtschaft, vol. 5, no. 11, Nov. 1924, pp. 205-207. Compares proposed German and American (A. S. M. E. 1923) rules for efficiency tests and acceptance tests and offers criticism.

Textile Mill. Modern Power Plant in a Textile Factory. Power Engr., vol. 19, no. 221, Aug. 1924, pp. 296-301, 12 figs. Describes power plant of H. Holdsworth & Co.; plant has uniflow steam engine as its prime mover and steel belts to transmit heaviest drives.

Thermal Efficiency. Power Plant Simplification, H. D. Fisher. Combustion, vol. 10, no. 4, Apr. 1924, pp. 262-264. Deals with question of how far it is practicable or advisable for an industrial power plant to follow trend of central station to obtain greatest possible thermal efficiency.

Waste-Heat Utilization. Choice of Initial State of Steam in Power Plants Utilizing Waste Heat (Ueber die Wahl des Dampf-Anfangszustandes bei Kraftanlagen mit Abwärmeverwertung), Bente. Siemens-Zeit., vol. 4, no. 10, Oct. 1924, pp. 340-344, 10 figs. Discusses use of steam for manufacturing. Determination of initial steam condition for various turbine efficiencies and performances by means of curves starting from waste-steam condition.

Wood-Refuse Burning. New Plant of American Seating Co. Burns Wood Refuse. Power, vol. 59, no. 23, June 3, 1924, pp. 892-897, 8 figs. Model 1500-kw. industrial plant employing condensing turbo-generators with bleeder connections to balance exhaust-steam demands; high-pressure steam supplied to manufacturing departments.

Working Costs. Working Costs in Small Power Plants, T. E. Love. Instn. Engrs. (India)—Jl., vol. 4, Apr. 1924, pp. 160-168, 3 charts on supp. plates. Deals with capital charges which include depreciation and interest on capital expenditure;

and running charges which include cost of fuel, lubricating oil, water supply, labor and stores and repairs.

STEAM ROLLERS

Design. Technical Viewpoints in Steam Roller Construction (Maschinentechnische Gesichtspunkte bei Dampfstrassenwalzen), W. Voight. Bautechnik, vol. 2, nos. 30 and 31, July 11 and 18, 1924, pp. 340-342 and 347-348, 5 figs. Discusses developments leading to modern types with road breaker attached.

STEAM SEPARATORS. See LOCOMOTIVES, Steam Separators.

STEAM SHOVELS

Superheater. Superheated Steam Shovel, H. B. Oatley. Min. Congress Jl., vol. 10, no. 4, Apr. 1924, pp. 176-177. Discusses value of application of superheater process applied to steam shovel.

Tunnel Mucking by. Tunnel Mucking Performed by Power Shovels for the First Time. Contract Rec., vol. 38, no. 44, Oct. 29, 1924, pp. 1070-1072, 7 figs. Unusual use for steam shovels demonstrated by tunnel project put through by Niagara Power Co. of Niagara Falls, viz., driving 36-ft. diameter tunnel, 4300 ft. long, through solid rock. Entire clean-up was handled by five specially prepared shovels.

STEAM TRAPS

Applications. Principles and Applications of Modern Steam Traps, W. E. Biggs and W. R. Woolrich. Nat. Engr., vol. 28, no. 2, Feb. 1924, pp. 56-58, 2 figs. Factors to be considered in selection of a steam trap for a given purpose; classification and applications of different types with suggestions for their installation and operation.

Design and Use. Design and Use of Steam Traps (Konstruktion und Verwendung der Wasserableiter), A. Gramberg. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 39, Sept. 27, 1924, pp. 1037-1040, 9 figs. Discusses details of commercial types and their effectiveness in combination with regulation of heat supply; proper installation.

Testing. Traps Should Be Tested for Heat Loss, G. E. Gaster. Power Plant Eng., vol. 28, no. 18, Sept. 15, 1924, pp. 942-943, 1 fig. Method of determining weight of water passing through trap and steam used.

Types. Steam Traps of Various Makes and Their Operation. Southern Engr., vol. 40, no. 5, Jan. 1924, pp. 51-63, 29 figs. Describes briefly some designs, together with something regarding manner in which they perform their work.

STEAM TURBINES

Acceptance Tests. Acceptance Tests of Steam Turbines (Abnahmeversuche an Dampfturbinen), H. Rollwagen. Archiv für Wärmewirtschaft, vol. 5, no. 6, June 1924, pp. 101-106, 5 figs. Results of tests of 22 types of various kinds; comparison between ideal efficiency based on steam properties and real efficiency based on measurements on generator; advantage of electric drive for condenser pumps.

Assembling Runners. Assembling 15,000-Horsepower Impulse-Turbine Runners, Ralph Brown. Power, vol. 59, no. 22, May 27, 1924, pp. 867-868, 3 figs. Methods employed in assembling rotor spiders for 22,222-kva. generator.

Auxiliaries, Electrically Operated. Improving Steam Turbine Operations, J. M. Drabelle. Power Plant Eng., vol. 28, no. 9, May 1, 1924, pp. 478-480, 7 figs. Steam turbine with electrically operated auxiliaries at Boone Station is reputed to have high economy.

Motor Drives for Turbine Auxiliaries, H. W. Smith. Power Plant Eng., vol. 28, no. 15, Aug. 1, 1924, pp. 807-810, 5 figs. Modern practice in application and control of motors for auxiliary drives.

Back-Pressure. Performance Tests on a Back-Pressure Turbine in a German Sugar Refinery (Leistungsversuche an einer Gegendruckturbine der ersten Brünner Maschinenfabriks-Gesellschaft in der Nestomitzer Zuckerraffinerie in Nestomitz a. E.), E. Josse and A. Stodola. Zeit. des Vereines deutscher Ingenieure, vol. 67,, no. 52, Dec. 29, 1923, pp. 1163-1168, 1 fig. Describes notable improvement in design of high-pressure turbines; results of tests on turbine built by Brünner Maschinenfabriks Gesellschaft show efficiency of 85 per cent.

The Back Pressure Process and Its Application in Steam Turbines (Das Gegendruckverfahren und seine Anwendung bei der Dampfturbine), G. Zerkowitz. Zeit. des Vereines deutscher Ingenieure, vol. 68, nos. 7, 39, and 42, Feb. 16, Sept. 27, and Oct. 18, 1924, pp. 147-152, 11 figs.; 1026-1030, 10 figs.; and 1093-1096, 6 figs. Feb. 16: Thermotechnical principles; general formulas are derived for evaluation of back-pressure and supply engines, especially for steam turbines; investigation of back pressure and initial pressure; back-pressure installation in connection with a Ruths steam accumulator. Sept. 27: New types of back-pressure turbines. Oct. 18: Back-pressure process as regenerative process; examples of new plants, making use of regenerative process.

Bearings. See BEARINGS, Steam-Turbine, Remetalled, Boring of.

Blading. Corrosion and Erosion of Steam Turbine Blading, E. Honegger. Brown Boveri Rev., vol. 11, no. 12, Dec. 1924, pp. 263-268, 7 figs. Deals with question of blade wear separately in high-pressure and low-pressure portions of turbine.

Steam Turbine Blading. Power, vol. 59, nos. 6, 7, 8, and 9, Feb. 5, 12, 19, and 26, 1924, pp. 200-204, 11 figs.; 251-254, 9 figs.; 293-296, 6 figs.; and 329-330, 2 figs. Describes commercial turbine blading, telling how to distinguish impulse from reaction types, why some impulse blades are unsymmetrical and what general conditions govern blading materials; different types of blading, and recent improvements.

Steam Turbines, F. Hodgkinson. Power, vol. 60, no. 14, Sept. 30, 1924, pp. 533-535, 2 figs. Discusses high-and low-pressure blading and a novel means intended to free turbine from part of water in low-pressure region. Abstract of paper read at World Power Conference, Lond.

See also DeLaval; Impulse Blades and Nozzles; Jet Action on Blading; STEEL, HEAT TREATMENT OF, Turbine Blading.

Bleeder. Industrial Use of the Bleeder Turbine, Claude C. Brown. Power Plant Eng., vol. 28, no. 22, Nov. 15, 1924, pp. 1134-1135, 3 figs. Bleeder capacity is main consideration; power is by-product, but efficiency is important.

Steam Extraction or Pass-out Steam Turbines, W. S. Burge and J. P. Chittenden. Engineer, vol. 138, no. 3599, Dec. 19, 1924, pp. 702-704, 8 figs. Outline of method of obtaining steam-consumption curves for pass-out turbine; how main admission valve and low-pressure or pass-through valves must operate to fulfill requirements of pass-out turbine under actual running conditions; types of control gear. (Abstract.) Paper read before Instn. Mech. Engrs.

Brown-Boveri. See High-Pressure.

Brünner. Brünner High-Pressure Turbine Shows Improved Economy. Power, vol. 60, no. 13, Sept.

23, 1924, pp. 498-500, 4 figs. Steam velocities below those of usual practice are among refinements contributing to an efficiency, when noncondensing, comparable with uniflow engine.

Brush-Ljungström. Brush-Ljungström Turbines. Elecn., vol. 93, no. 2427, Nov. 21, 1924, pp. 582-583, 3 figs. Their manufacture at Loughborough, England; how economy in time and labor is obtained.

Brush-Ljungström Turbines at a Cement Works. Power Engr., vol. 19, no. 222, Sept. 1924, pp. 331-345, 23 figs. Describes lay out of power plant erected at Rhoose works at Aberthaw & Bristol Channel Portland Cement Co. Ltd.; detailed information as to equipment; describes turbine plant.

5,000-Kw. Brush-Ljungström Turbine at the British Empire Exhibition. Engineering, vol. 118, no. 3054, July 11, 1924, p. 71, 4 figs. Particulars of 5,000-kw. machine exhibited by Brush Elec. Eng. Co., Ltd., Loughborough, and notes on its advantages.

The Manufacture of the Brush-Ljungström Turbine. Engineering, vol. 118, no. 3073, Nov. 21, 1924, pp. 699-700, 7 figs., partly on supp. plate. Description of new shop and machinery.

Characteristic Curves. Characteristic Curves of Steam Turbines, J. Y. Dahlstrand. Power Plant Eng., vol. 28, no. 15, Aug. 1, 1924, pp. 797-799, 7 figs. Understanding of fundamentals and factory test curves will enable one to figure effects of changed operating conditions.

Checking Condition. Maintaining Impulse-Turbine Efficiency by Checking the Condition Curve, Rob. R. Walden. Power, vol. 59, no. 21, May 20, 1924, pp. 823-825, 2 figs. Various stage pressures at normal load indicate if turbine is in efficient state, or whether internal damage or undue wear will alter these from normal.

Control, Hydraulic Relay for. Turbine Controlled by Temperature or Pressure. Power Plant Eng., vol. 28, no. 2, Jan. 15, 1924, pp. 162-163, 2 figs. Describes hydraulic relay device which will transmit impulses from thermostat or pressure diagram to distance and at same time magnify power of these impulses so that they will control turbine governor with positiveness.

Cross-Compound. Cross-Compound Impulse Turbine Geared to 4,000-kw. D.-C. Generator. Power, vol. 60, no. 10, Sept. 2, 1924, pp. 360-362, 3 figs. Describes De Laval units installed for auxiliary drive in Trenton Channel Plant of Detroit Edison Co.; each unit contains two d.-c. generators operating in parallel at 250 volts, capable of delivering 4000 kw. at normal load and 6000 at maximum. Reduction gears used between turbine and generator, and principle is developed so as to include both high- and low-pressure turbines, driving a common gear through individual pinions. Advantages thus obtained.

50,000 Kw. Compound Parsons Turbine for the Crawford Avenue Station, Chas. Parsons. Power, vol. 60, no. 19, Nov. 4, 1924, pp. 728-730, 3 figs. Unit, recently completed in England and shipped to Chicago, contains three turbine elements and three generators; thermal efficiency of 27.8 per cent from coal to steam is expected. (Abstract.) Paper presented at World Power Conference.

The Cross-Compound Turbine Adaptable to a Variety of Conditions, E. H. Thompson. Power, vol. 60, no. 2, July 8, 1924, pp. 50-51, 1 fig. Applications of cross-compound principle indicate a growing appreciation of desirable characteristics of this type. Consideration of such units of today brings to light a number of ways in which this construction may be utilized and suggests an increasingly important field in future.

De Laval. Blading Effects in a De Laval Turbine, D. S. Anderson. Instn. Mech. Engrs.—Proc., no. 4, July 1924, pp. 687-702, 8 figs. Results of nozzle tests to determine efficiency; preliminary survey of tests; tests to determine relative angle of outlet; final analysis of steam tests.

See also Cross-Compound; High-Pressure.

Design. Modern Large Steam Turbines. Power, vol. 59, no. 14, Apr. 1, 1924, pp. 543-544, 5 figs. Abstract of lecture delivered by L. Helander before Providence Eng. Soc., Jan. 4, 1924, in which he described conditions governing design and operation of large steam turbines.

Steam Turbines and Condensing Equipment, F. Hodgkinson. Elec. Jl., vol. 21, nos. 11 and 12, Nov. and Dec. 1924, pp. 505-513 and 548-559, 27 figs. Nov.: Developments and present tendencies; modern types. Dec.: Blading and blade fastening; blade materials; balancing; turbine costs; condensers and auxiliaries. (Abstract.) Paper presented before World Power Conference.

Tendencies in Steam Turbine Construction. Power Plant Eng., vol. 28, no. 23, Dec. 1, 1924, pp. 1183-1186, 5 figs. Trouble is not anticipated with operating pressures as high as 1200 lb.; temperatures will not go above 850 deg. fahr.

Development, Lines of. See POWER, Developments.

Developments. Developments in Steam-Turbine Field, E. H. Brown. Power, vol. 59, no. 25, June 17, 1924, pp. 989-992, 2 figs. Steam turbine from its inception in 1884, with particular reference to recent developments in American and European practice, such as general application of stage heating, use of high pressures with resuperheating, and improvements designed to give high efficiency at moderate peripheral velocities for rotating parts.

Evolution of Steam Turbines (L'évolution de la turbine à vapeur), C. Monteil. Technique Moderne, vol. 16, nos. 14 and 16, July 15 and Aug. 15, 1924, pp. 469-474 and 533-541, 22 figs. July 15: Discusses reaction in hydraulics and in steam turbines, Brown-Boveri-Parsons turbines; stages of speed and multiple turbine wheels, etc. Aug. 15: Discusses adaptability of steam turbines for high pressures, power factors, difficulties of last wheel; describes 40,000 kw. turbines of 1500 r.p.m., 12,000 to 15,000 kw. of 3000 r.p.m.; application of low-power turbines, use of high pressures and high superheating.

Steam-Turbine Development Influenced by Higher Pressures and Reheating. Power, vol. 59, no. 1, Jan. 1, 1924, pp. 9-11, 4 figs. Review of developments; house turbines; small steam turbines; condenser development.

The Modern Steam Turbine on Land and Sea, C. A. Parsons. Power House, vol. 17, no. 16, Aug. 20, 1924, pp. 25-29, 4 figs. Turbo-electric generating units now being built up to 60,000 kw.; thermal efficiency over all, coal to electricity, of 27.80 per cent expected in recent installations; mechanical gearing, reheating steam, etc. Abstract of paper read at World Power Conference, Eng.

The Steam Turbine, C. A. Parsons. Engineering, vol. 138, no. 3065, Sept. 26, 1924, pp. 469-470. Correlates certain well-known principles of thermodynamics with practical progress of steam turbine and with important advances that are being made at present time.

Diaphragm Blades. Making Steam Turbine Diaphragm Blades. Iron Age, vol. 114, no. 17, Oct. 23, 1924, pp. 1047-1051, 10 figs. Steel-foundry practice at Schenectady works of Gen. Elec. Co.; novel planer fixture permits planing at several angles with one clamping; centrifugal babbitting of large bearings; unusual radius tool.

Disks, Protection from Axial Vibration. The Protection of Steam Turbine Disk Wheels From

Axial Vibration, W. Campbell. Gen. Elec. Rev., vol. 27, nos. 6, 7, and 8, June, July, and Aug. 1924, pp. 352-360, 459-484, and 511-535, 99 figs. See also (abstract) Power, vol. 60, no. 3, July 15, 1924, pp. 94-99, 13 figs. June: Troubles which gave rise to investigation made by Gen. Elec. Co., and preliminary work which led to discovery of cause of difficulty. July: Nature and theory of vibration in turbine wheels, and reasons for necessity of placing reliance on actual tests in addition to purely analytical methods. Aug.: Methods of design and testing for protection of turbine bucket wheels from axial vibration.

Extra-High-Pressure. Extra High-Pressure Steam Turbines, V. Nordström. Engineering, vol. 118, no. 3057, Aug. 1, 1924, pp. 178-179. Discusses recent developments to obtain better utilization of working power of steam by means of increased steam pressure, contemplating 30 kg. per sq. cm. and even 50 to 100 kg. per sq. cm., also activity of De Laval Co. Abstract of paper of World Power Conference.

Extraction. See Bleeder.

Foundations. Checking Foundations for Large Turbines. Power, vol. 69, no. 4, Jan. 22, 1924, pp. 135-137, 2 figs. Discusses requirements for foundations for Westinghouse turbines, as well as inspections before installing unit, such as ordinarily devolve upon service engineer in charge of erecting work.

Steam Turbine Foundations (Dampfturbinen-Fundamente), E. Rausch. Bauingenieur, vol. 5, no. 23, Dec. 10, 1924, pp. 772-775, 3 figs. Explains action of forces and especially dynamic effects, and gives new rules for foundation work of a lighter type.

Geared. Geared Turbines of the English Electric Company. Engineering, vol. 118, nos. 3073 and 3075, Nov. 21 and Dec. 5, 1924, pp. 698-699 and 760-763, 14 figs. partly on supp. plate. Discusses factors upon which efficiency depends, and describes geared turbines of Eng. Elec. Co.

High-Pressure. High-pressure Turbines. Engineer, vol. 137, no. 3566, May 2, 1924, pp. 489-490, 5 figs. Special turbines developed by Brown, Boveri & Co.

High Pressures and High Superheats in Modern Steam-Power Plant Practice, W. G. Noack. Mech. Eng., vol. 46, no. 1, Jan. 1924, pp. 40-42, 5 figs. Describes Brown-Boveri turbine for high-pressure steam, which consists of high-pressure or series turbine, and low-pressure turbine designed for ordinary steam pressures. Translated from pamphlet published by Brown, Boveri & Cie, Baden, Switzerland.

New High Pressure Turbine. Pac. Mar. Rev., vol. 21, no. 7, July 1924, pp. 384-385, 5 figs. Describes new velocity stage turbine developed by DeLaval Steam Turbine Co., Trenton, N. J., especially adapted to modern practice in high-pressure, high-temperature steam.

Steam Turbines at Very High Pressure (Les machines à vapeur à très haute pression), A. Troller. Nature (Paris), no. 2618, June 7, 1924, pp. 364-368, 5 figs. Discusses Gennevilliers 45,000-hp. equipment, Brown Boveri high-pressure turbines and data, Blomquist boilers, etc.

Steam Turbines for High Pressures, C. F. Stork. Engineering, vol. 118, no. 3054, July 11, 1924, pp. 69-70, 1 fig. Details of design and construction of high pressure steam turbine made by Erste Brünner Maschinenfabrik on principle that heat consumption can be improved mainly by increasing heat drop in area of high pressure and by building very economical turbine for this area. Abstract of paper read before World Power Conference.

What the World Power Conference Showed About Modern Steam Turbines and Their Design. Elec. Wld., vol. 84, no. 14, Oct. 4, 1924, pp. 737-740. Abstracts of four authoritative papers on high pressure showing general lines of development in Great Britain, Holland, Sweden, and United States.

See also Brünner; Extra High Pressure.

High Pressure, Superheat, and Vacuum. The Effect of High Pressure, Superheat and Vacuum on the Efficiency of Large Turbines, C. Sylvester. Elec. Times, vol. 65, no. 1692, Mar. 20, 1924, pp. 327-328, 3 figs. Effects above-mentioned are illustrated by diagrams.

High Pressures and Temperatures. Tendencies in Steam Turbine Plant, Eskil Berg. Power Plant Eng., vol. 28, no. 11, June 1, 1924, pp. 592-594, 8 figs. High pressures and temperatures; stage extraction and reheating.

Improvements. Improvements in Steam-Turbine Construction (Neuerungen im Dampfturbinenbau), R. Palm. Glückauf, vol. 60, no. 9, Mar. 1, 1924, pp. 152-156, 3 figs. Comparison of different turbine types and discussion of new possible applications; details of recent improvements in turbine and auxiliary machines, and most important improvements in condenser plants.

Improving Efficiency of. Steam Turbines, C. Parsons. Engineer, vol. 138, no. 3579, Aug. 1, 1924, pp. 140-142, 4 figs. Describes four methods of improving thermal efficiency of thermodynamic cycle without going to higher maximum temperature, and their application in turbine plant of 50,000-kw. power station to be erected at Crawford Avenue, Chicago, now nearing completion at Newcastle-on-Tyne. Abstract of paper read at World Power Conference.

Impulse. Stage Efficiencies of Impulse Turbines, L. J. Levit. Power, vol. 60, no. 21, Nov. 18, 1924, pp. 809-810, 4 figs. Manner of plotting condition curve so that pressures to be expected in impulse turbine might be roughly determined.

Impulse Blades and Nozzles. The Proportioning of Impulse Blades and Nozzles, G. Stoney. Engineering, vol. 118, no. 3066, Oct. 3, 1924, p. 473, 3 figs. Consideration of effect of each factor involved in proportioning of blades and nozzles, and investigation of influence that error in assumed values of these factors has on final results.

Isolated Plants. Applications of Steam Turbines for Isolated Plants, C. L. Hubbard. Nat. Engr., vol. 28, no. 1, Jan. 1924, pp. 14-17, 7 figs. Description of the different types of steam turbines and their operating principles; camparative advantages of turbines and reciprocating engines; comparative performance of engines and turbines; factors to be considered in selection of a prime mover.

Jet Action in Blading. A Note on Jet Action in Turbine Blading, Wm. Kerr. Instn. Mech. Engrs.—Proc., no. 4, July 1924, pp. 673-686, 6 figs. Deals only with special aspect of problem, arising out of certain peculiar results obtained in investigation on outlet jet directions from blading of single-row wheel while stationary and using different kinds of nozzles.

Limiting Vacuum, Determination of. Determining the Leaving Loss and Limiting Vacuum of a Steam Turbine, B. C. Sprague. Power, vol. 60, no. 25, Dec. 16, 1924, pp. 976-977, 2 figs. Points out that economical turbine operation depends to large extent on supplying degree of vacuum conducive to best overall plant efficiency.

Locomotives with. See LOCOMOTIVES, Steam-Turbine.

Lubricating-Oil Consumption. Consumption of Lubricating Oil on Turbines, W. O. Andrews. S. African Instn. Engrs.—Jl., vol. 22, no. 7, Feb. 1924, pp. 103-107, 1 fig. Summary of investiga-

tion and its practical bearing on economical use of oil for turbine lubrication; results were obtained on 31 turbo-generators and turbo-compressors ranging from 3000 to 12,000 kw.

Lubricating Oils for. See LUBRICATING OILS, Steam-Turbine.

Lubrication. Correct Lubrication for the Steam Turbine, C. C. Brown. Power Plant Eng., vol. 28, no. 6, Mar. 15, 1924, pp. 323-325. Operating methods, causes for breaking down of oil, and specifications for suitable oils are discussed.

Improving the Lubrication System of Steam Turbines, C. C. Brown. Power, vol. 60, no. 11, Sept. 9, 1924, pp. 420-422, 1 fig. Describes oil troubles, their causes in steam turbines, and how application of a cooling coil and a slow reciprocating steam pump eliminated them from a continuous filtration system.

Turbine Lubrication, N. E. Funk. Indus. & Eng. Chem., vol. 16, no. 10, Oct. 1924, pp. 1080-1084, 4 figs. Discusses difficulties experienced in applying many lubricating oils that are considered by refiners to be high-grade products; problems of turbine lubrication; action of oil as heat-dissipating agent; destruction of oil in operation; effects produced by destructive agents; care of lubricant in service.

See also LUBRICATION, Prime Movers.

Marine. See MARINE STEAM TURBINES.

Metropolitan-Vickers. Recent Developments in Large Turbine Practice. World Power, vol. 1, no. 4, Apr. 1924, pp. 243-248, 6 figs. Improvements in design and construction introduced by Metropolitan-Vickers Elec. Co., tending to reduce steam consumption to minimum.

Mixed-Pressure. Mixed-Pressure Turbine versus a New Steam Plant, F. S. Yontsey. Power, vol. 59, no. 24, June 10, 1924, pp. 934-936, 3 figs. To supply power to new mine 4½ mi. distant, mixed-pressure turbine in home plant was selected in preference to steam plant at new mine or additional high-pressure capacity in original plant; salient features are condenser and cooling-water installations.

Nozzle-Loss Analysis. Turbine Nozzle Loss Analyzed by Air-Flow Measurement. Power, vol. 60, no. 23, Dec. 2, 1924, pp. 875-877, 7 figs. Wind tunnel is utilized in principle for investigating suitability of turbine nozzles, valves, buckets, or other parts for transmitting steam efficiency.

Nozzle Regulator. An Automatic Nozzle Regulator for Steam Turbines. Eng. Progress, vol. 5, no. 3, Mar. 1924, pp. 54-55, 3 figs. Consists of number of double-beat drop valves, controlled by one common spindle; each single valve controls steam admission to nozzle, or group of nozzles, of first stage; made by Bergmann Elec. Works, Berlin.

Nozzles. See NOZZLES, Steam, Design of.

Operation. Operating Instructions for Large Turbines. Power, vol. 59, no. 13, Mar. 25, 1924, pp. 490-491. Rules of procedure in starting up and getting turbine under way; taken from instructions of Westinghouse Elec. & Mfg. Co.

The Control of Power Production, Chas. L. Hubbard. Factory, vol. 32, no. 1, Jan. 1924, pp. 27-29, 64, 66, 68 and 70, 23 figs. Principles of steam-turbine operation.

See also Design.

Parsons. Steam Turbines, C. A. Parsons. Engineering, vol. 118, no. 3054, July 11, 1924, pp. 63-67, 4 figs. Describes 50,000 kw. turbine plant for Crawford Ave. Power Station, Chicago, Ill. embodying principles of increased feedwater temperature, increased boiler pressure, reheating of steam after partial expansion and increased vacuum and means to utilize it efficiently. Abstract of paper read before World Power Conference.

See also Cross-Compound.

Parsons Line. Is the Parsons Line Straight or Curved? C. F. Merriam. Power, vol. 60, no. 1, July 1, 1924, pp. 8-10, 4 figs. Shows fallacy of assuming that Parsons line is necessarily straight.

Pass-Out. See Bleeder.

Performance Determination. Turbine Performance from Steam-Quality Measurements, N. L. Johnson. Power, vol. 60, no. 18, Oct. 28, 1924, pp. 691-692, 1 fig. Points out that Thomas meter makes it possible to extend determination of turbine performance by measurements of steam quality to cases where exhaust steam is wet.

Periodic Examination. Periodic Examinations of Steam Turbines. Power, vol. 59, no. 15, Apr. 8, 1924, pp. 562-563. Instructions of Westinghouse Elec. & Mfg. Co. on details which should be critically observed in periodic examinations.

Pressure and Velocity. Relation of Pressure and Velocity in Various Types of Steam Turbines, F. P. Hodgkinson. Power, vol. 59, no. 12, Mar. 18, 1924, pp. 444-445, 3 figs. Describes variation in steam pressures and velocity for various types of turbine stages.

Radial-Flow. How the Radial-Flow Turbine Compares with the Axial-Flow Type. Power, vol. 59, no. 2, Jan. 8, 1924, pp. 50-53, 4 figs. It is shown that radial-flow turbine in double rotation is equivalent to single-rotation turbine of double speed.

Reaction. Largest Straight Reaction Turbine—How Internal Conditions Vary with Load, E. H. Thompson. Power, vol. 59, no. 26, June 24, 1924, pp. 1016-1019, 6 figs. Turbine of Brooklyn Edison Co.'s Hudson Ave. station contains no impulse velocity wheel and is entirely a reaction type; it is served by largest surface condenser so far constructed; conical cylinder bores give improved efficiency.

Rotors, Balancing. See BALANCING, Turbine Rotors.

60,000-Kw. Sixty Thousand Kilowatt General Electric Turbine for Commonwealth Edison Co. Power, vol. 60, no. 4, July 22, 1924, pp. 151-152, 3 figs. Particulars of unit being built by Gen. Elec. Co. for Crawford Ave. station of Commonwealth Edison Co., of Chicago. Is a cross-compound assembly, being made up of a high-pressure turbo-generator and a low-pressure turbo-generator into which high-pressure exhaust enters after being resuperheated.

Small-Plant. Application of Turbines to Small Plants, A. Iddles. Power Plant Eng., vol. 28, no. 23, Dec. 1, 1924, pp. 1186-1190, 6 figs. Use of high pressures and regenerative cycles; combinations of various types possible in industrial plants.

Steam-Air Drive for Motorship Auxiliaries. Steam-Air Turbines for Auxiliary-Engine Drive, Especially on Motorships (Dampf-Luft-Turbinen für Hilfsmaschinenantrieb, insbesondere auf Motorschiffen), M. Melan. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 2, Jan. 12, 1924, p. 28, 1 fig. Deals with drive of auxiliary engines on motor tank ships; steam, air, and steam-air drive; tests at Kiel shipyard of the Deutsche Werke on reciprocating engines and turbines; graphic reproduction of results with steam-air turbines; conclusions.

Steam-Flow Calculation. Calculating Steam Flow for Turbines, J. Y. Dahlstrand. Power Plant Eng., vol. 28, no. 18, Sept. 15, 1924, pp. 945-946, 1 fig. Method by which steam consumption of a turbine may be calculated.

Stork-Erste-Brünner. The Stork-Erste-Brünner Steam Turbine (La turbine à vapeur système

"Stork-Erste Brünner"), D. C. Tiekink. Revue Universelle des Mines, vol. 4, no. 6, Dec. 15, 1924, pp. 302-314, 9 figs. Discusses steam consumption, improving curve of steam consumption as a function of load, safety in operation and application in new turbine.

Tests. Tests of a 7,000-Kw. Steam Turbine Generator at the Bristol Electricity Works. Engineering, vol. 118, no. 3060, Aug. 22, 1924, pp. 253-255, 6 figs. Report of exhaustive tests of a 7,000-kw. machine at Bristol, Eng., which have been carried out by Metropolitan-Vickers Elec. Co., Ltd., Manchester; main object of test was to establish by actual figures real efficiency of multiple exhaust arrangement, which is now embodied in all large turbines constructed by firm in question.

Tests on a Richardsons, Westgarth and Co.'s Steam Turbine. Engineering, vol. 118, no. 3072, Nov. 14, 1924, pp. 668-669. Particulars of tests carried out, periods extending over three years.

Types and Selection. The Control of Power Production, Chas. L. Hubbard. Factory, vol. 32, no. 2, Feb. 1924, pp. 166-169, 204, 206, and 208, 18 figs. Types of steam turbines and their selection.

Wheels, Bucket Wear in. Bucket Wear in Modern Steam Turbine Wheels, R. M. Norstrom. Nat. Engr., vol. 28, no. 5, May 1924, pp. 214-215, 6 figs. Factors in design and construction of modern steam turbines affecting wear and efficiency of buckets. Relative advantages of pressure-stage versus velocity-stage turbines in this respect.

STEEL

Abrasion, Resistance to. Brinell's Researches on the Resistance of Iron, Steel and Some Other Materials to Wear, H. A. Holz. Testing, vol. 1, no. 2, Feb. 1924, pp. 104-146, 21 figs. Review of researches and test data, largely based upon translation of Brinell's original paper in Swedish.

Alloy. See ALLOY STEELS.

Annealed Carbon, Strength of. Elastic Limit and Resistance of Annealed Mild Steels in Combined Elongation and Torsion Test (Limite élastique et résistance des aciers doux recruits dans le cas d'efforts combinés de traction et de torsion), M. Seigle and M. Cretin. Académie des Sciences —Comptes rendus des séances, vol. 179, no. 4, July 28, 1924, pp. 253-256. Experiments with circular bars of 2.5 mm. cross-section for elastic and permanent deformation by elongation and torsion to establish curves of deformation.

Arsenic Penetration, Effect of. Some Effects of the Penetration of Arsenic and Sulphur into Steel, W. N. Hindley. Iron & Steel Inst.—Advance Paper, no. 8, for meeting May 1924, 12 pp., 12 figs. It is shown that arsenic combines with iron forming compound Fe_2As at temperatures of 700 deg. and over, and this compound diffuses into iron or steel forming solid solutions; presence of arsenic in solid solution, although not preventing corrosion in moist air, retards this action to some extent.

Automobile. Automobile Sheet Steel Specifications, H. M. Williams. Am. Soc. Steel Treating —Trans., vol. 5, no. 1, Jan. 1924, pp. 82-88. Salient factors in connection with chemical and physical specifications and inspection of sheet steel for automotive and other similar industrial purposes; tentative specifications of Gen. Motors Co. on cold-rolled strip steel and sheet steel, including physical and chemical tests applied to these materials.

Stainless Steel for Automobiles. Automobile Engr., vol. 14, no. 191, July 1924, pp. 201-202, 1 fig. Discusses properties, heat treatment, advantages, and disadvantages of stainless steel.

Basic and Acid, Comparison. Comparative Investigation of Basic and Acid Steels. Foundry Trade Jl., vol. 29, no. 394, Mar. 6, 1924, pp. 200-201. Also Iron & Coal Trades Rev., vol. 108, no. 2922, Feb. 29, 1924, p. 352. Abstract of paper by F. Schmitz published in recent issue of Stahl u. Eisen, giving details of tests made by author, using new method of comparing basic and acid steels.

Blowholes. An Hypothesis on the Origin of Blowholes in Steel Ingots (Une hypothèse relative à l'origine des ruchages de soufflures dans les lingots d'acier), K.-G. Troubine. Revue de Métallurgie, vol. 21, no. 5, May 1924, pp. 288-294, 6 figs. Author propounds theory on origin of blowholes. Translated from Russian.

Brittleness. See Fractures.

Bronze, Penetration by. Penetration of Steel by Bronze at High Temperature (La pénétration dans l'acier du bronze à haute température), R. Perrin. Revue de Métallurgie, vol. 29, no. 9, Sept. 1924, pp. 531-538, 18 figs. Discusses lining of steel by means of bronze in which mutual penetration takes place as in cementation and gives experiments with carbon, nickel, chrome-nickel and other steels.

Calorizing. Making Edge Layers on Iron Heat Resistant by Diffusion (Hitzebeständige Randschichten auf Eisen durch Alitierung), A. Fry. Werkstattstechnik, vol. 18, no. 21, Nov. 1, 1924, pp. 614-616, 7 figs. Describes process of making surfaces of iron and steel heat resistant by diffusion with aluminum, patented by Krupp A. G.

Carbon. Iron-Carbon Diagram and Most Important Structural Elements of Carbon Steels (Das Eisen-Kohlenstoff-Diagramm und die wichtigsten Gefügebestandteile der Kohlenstoffstähle), K. Daeves. Berichte der Fachausschüsse des Vereins deutscher Eisenhüttenleute (Werkstoffausschuss), no. 42, Apr. 4, 1924, 10 pp., 20 figs. Critical points, significance of lines and points in diagram, changes in very rapid cooling and hardening, structural elements, etc.

The Structure of Troostite and Sorbite, O. V. Greene. Iron Age, vol. 114, no. 11, Sept. 11, 1924, pp. 615-617 and 670, 10 figs. Results of investigation whose purpose was development of actual structures of complex constituents of carbon steels; steels used were quenched and drawn at various temperatures that had been arranged with a view of producing troostite and sorbite in them; physical tests were used to correlate microstructure with physical properties.

See also Composition.

Carbon-Content Determination. Rapid Determination of Carbon Content in Steel by Measuring Electric Resistance According to Enlund (Ueber die Kohlenstoffschnellbestimmung im Stahl durch Elektrische Widerstandsmessung nach Enlund). G. Linke. Zeit. für Elektrochemie, vol. 30, no. 7, July 1924, pp. 319-322, 2 figs. Based on fact that equivalent quantities of substances dissolved in iron increase its resistance to conductivity by same amount.

The Carbometer, A Direct-Reading Apparatus for the Rapid and Accurate Determination of the Carbon Content of Steels in Open Hearth Steel Works, R. J. Eddy. Testing, vol. 1, nos. 1 and 2, Jan. and Feb., pp. 49-57 and 160-163, 9 figs. Apparatus by means of which percentage of carbon in steel bath may be rapidly and accurately determined through magnetic analysis.

The Determination of Carbon in Pig Iron, Steel and Ferroalloys by Means of Burning in Oxygen Current (Die Bestimmung des Kohlenstoffs in Roheisen, Stahl und Ferrolegierungen durch Verbrennen im Sauerstoffstrom), H. J. van Royen. Stahl u. Eisen, vol. 44, no. 15, Apr. 10, 1924, pp. 393-397, 1 fig. Investigations of weight-

analytical carbon determination; completeness of combustion; combustion products; influence of size of cuttings; behavior of sulphur and phosphorus; determination of minimum working temperature; velocity of oxygen current; experimental equipment.

Carbon, Magnetism of Annealed. The Magnetism of Annealed Carbon Steels, S. W. J. Smith and W. V. Mayneord. Physical Soc. Lond.—Proc., vol. 37, no. 206, Dec. 15, 1924, pp. 1-14, 5 figs. Details of experiments regarding constitution of annealed carbon steels, residual magnetism of annealed steel rods, cause of change in sign of residual moment; experimental proof that reversal does not occur when laminations are absent, and practical applications; dependence of reversed moment upon percentage of carbon present, and upon dimension-ratio of rod; and dependence of reversed moment in a laminated rod upon magnetizing field.

Castings. See STEEL CASTINGS.

Cementation. Influence of Nitrogenated Cements on the Cementation of Steel (L'influence des céments azotés dans la cémentation des aciers), J. Musatti and M. Croce. Chimie & Industrie, special no., May 1924, pp. 319-337, 14 figs. Rôle of solid cementation powders in process of steel cementation; results of tests.

Cementite. Free and Pearlitic Cementite (Ueber freien und perlitischen Zementit), E. Maurer and F. Stäblein. Zeit. für anorganische u. allgemeine Chemie, vol. 137, no. 1-2, July 7, 1924, pp. 115-124, 5 figs. Specific electrical resistance of steel with variation in carbon content between 0 and 1.6 per cent is determined, and results after correction for effects of other alloying elements shown graphically and in tabular form; specific resistance of iron carbide was found to be between 0.8 and 0.9; using this value it is shown that curve of resistance of steel is approximately that of mechanical mixture of two constituents.

Influence of Different Constituents of Alloys on Caking of Cementite (Der Einfluss verschiedener Legierungselemente auf das Zusammenballen des Zementits), E. Piwowarsky. Berichte der Fachausschüsse des Vereins deutscher Eisenhüttenleute, no. 33, 1924, 4 pp., 12 figs. Discusses effect of foreign bodies on caking of carbide in hyper-pearlitic steels, peculiar carbide formation in hypo-pearlitic steels and their relation to annealing and hardening.

Chrome. See CHROME STEEL.

Chrome-Nickel. See CHROME-NICKEL STEEL.

Chromium and Vanadium Determination in. Determination of Chromium and Vanadium in Steel, L. Lindemann. Indus. & Eng. Chem., vol. 16, no. 12, Dec. 1924, pp. 1271-1272. Method is based upon oxidation of chromium from trivalent to hexavalent condition in dilute sulphuric-acid solution by means of persulphate and permanganic acid, reduction of chromic acid and vanadic acid by means of ferrous sulphate, estimation of slight excess of ferrous sulphate by means of standard chromic-acid solution, followed by titration of vanadyl to vanadic acid by means of standard potassium permanganate solution.

Chromium Plating. See ELECTROPLATING, Chromium Plating of Steel.

Cobalt. See COBALT STEEL.

Cold-Rolled Strip. Cold Rolled Strip Steel, M. Farmer. Am. Soc. for Steel Treating—Trans., vol. 5, no. 6, June 1924, pp. 590-598. See also Forging—Stamping—Heat Treating, vol. 10, no. 8, Aug. 1924, pp. 295-297. Deals with production of cold-rolled strip steel, discussing the numerous factors which enter into manufacture of this product. Discusses casting temperatures, segregation of elements within ingots, rolling of ingots into billets and slabs and high-speed rolling of billets, pickling, and subsequent cold rolling operations. Review of the various grades of cold tempered strip steel. Discusses strips for special types of work.

Cold-Worked, Crystal Deformation in. Crystal Deformation in Cold-Worked Steel, H. H. Lester. Army Ordnance, vol. 5, no. 25, July-Aug. 1924, pp. 455-458, 44 figs. Preliminary study of behavior of atoms within iron crystal as it occurs in steel when metal is stressed up to and beyond elastic limit and up to and beyond yield point.

Cold Working. Cold-Working Steel Bars and Strips, S. Ashton Hand. Am. Mach., vol. 61, no. 17, Oct. 23, 1924, pp. 637-639, 6 figs. Annealing methods and temperatures at plant of Lancaster Steel Products Corpn., Lancaster, Pa.; pickling, and neutralizing effect of acid; machines for drawing, straightening, and cutting round stock; slitting and rolling strip steel.

Combined Iron and. Notes on Combined Iron and Steel, H. H. Shepherd. Metal Industry (Lond.), vol. 24, no. 24, June 13, 1924, pp. 577-578 and 588, 3 figs. Uses; composition; testing. Author's experience with "combined iron and steel" and "composite steel" is that failures of these materials are due chiefly to faults in manufacture of ingots or billets.

Composition. Common Elements in Plain Carbon Steel, V. E. Hillman and F. L. Coonan. Forging—Stamping—Heat Treating, vol. 10, no. 2, Feb. 1924, pp. 66-68. A non-technical discussion of properties imparted to steel by common elements entering into its composition; carbon plays most important rôle.

Copper. See ALLOY STEELS, Copper Steel.

Corrosion. Effect of Alkaline Solutions on the Corrosion of Steel Immersed in Water, F. N. Speller and C. R. Texter. Indus. & Eng. Chem., vol. 16, no. 4, Apr. 1924, pp. 393-397, 10 figs. It is shown that rate of corrosion in steel pipe is decreased in closed system by increasing concentrations of alkali; system of testing used measures average rate of corrosion at any time, but does not indicate pitting; initial rate of corrosion is shown to be nearly independent of alkalinity of water within limits of experiments.

How to Correct and Prevent Corrosion of Steel, T. A. Smith. Concrete, vol. 25, no. 3, Sept. 1924, pp. 79-81, 6 figs. Deals with weathering qualities of exterior face of reinforced concrete buildings. Discusses protection of steel reinforcement and of exposed steel work. From Turner Constructor.

The Natural Water Corrosion of Steel in Contact with Copper, W. G. Whitman and R. P. Russell. Indus. & Eng. Chem., vol. 16, no. 3, Mar. 1924, pp. 276-279, 1 fig. Experiments wherein natural-water corrosion of steel in contact with metal lower in electromotive series has been quantitatively determined; emphasizes importance of these quantitative data in deciding as to mechanism of corrosion of steel from both theoretical and practical viewpoints.

See also CORROSION, Iron and Steel.

Crystal Structure. Crystal Structure of Hard Steel, K. Heindlhofer. Physical Rev., vol. 24, no. 4, Oct. 1924, pp. 426-438, 5 figs. Theories of hardness of metals. Using an X-ray spectrometer with ionization chamber and reflecting Mo $K\alpha$ and $K\beta$ rays from small blocks of steel, spectra were determined for 0.80 and 1.31 per cent carbon steels both in coarse and in fine martensitic condition.

Crystal Structure, X-Ray Analysis of. X-Ray Investigations of the Crystal Structure of Steel

(Röntgenundersökningar över stålets kristallstruktur), A. Westgren and G. Phragmén. Jernkontorets Annaler, vol. 107, no. 12, 1923, pp. 449-466, 12 figs. Method of taking X-ray photograms of rotating iron crystals and analysis of same confirming known theories regarding cubical structure of such crystals.

X-Ray Studies on the Crystal Structure of Steel, A. Westgren and G. Prhagmén. Iron & Steel Inst.—Advance Paper no. 16, for meeting May 1924, 14 pp., 8 figs. Crystal structure of iron modifications; crystal shape of cementite; structure of austenite.

Damascene. Damascene Steel and Damascene Blades (Du damassé et des lames de Damas), B. Zschokke. Revue de Métallurgie, vol. 21, no. 11, Nov. 1924, pp. 639-669, 21 figs. Discusses ancient methods of production and gives micrographic details, composition, Brinell hardness, etc., of Damascene and Solingen blades.

Damascene Steels (Beitrag zur Frage des Damaszenerstahls), K. Harnecker. Stahl u. Eisen, vol. 44, no. 45, Nov. 6, 1924, pp. 1409-1411, 17 figs. on supp. plates. Discusses attempts to produce it from cementation steel and cast steel.

Dephosphorizing. Dephosphorizing in Open-Hearth and Electric Furnaces by Means of the Basic Process (Defosforazione al forno Martin ed al forno elettrico col processo basico), E. De-Luisi. Rassegna Mineraria Metallurgica e Chimica, vol. 61, no. 2, Aug. 15, 1924, pp. 29-34. Details of oxidizing agents and reactions, composition of slag, etc.

Die. See DIES, Blanking and Extruding, Steel for; Forging.

Drill, Defects in. See DRILLS, Steel for, Defects in.

Elastic Limit. Determination of the Elastic Limit of Steels (Détermination industrielle de la limite élastique des aciers), J. Durand. Génie Civil, vol. 84, no. 9, Mar. 1, 1924, pp. 205-208, 3 figs. Discusses three methods of determining elastic limit of steel for industrial uses; comparison of results.

High Elastic Limit of Mild Steel and Its General Applications, G. W. Barr, F. G. Martin and A. T. Wall. Engineering, vol. 117, no. 3042, Apr. 18, 1924, pp. 510-511, 4 figs. See also Engineer, vol. 137, no. 3565, Apr. 25, 1924, pp. 443-444, 4 figs. Describes new mild steel which possesses very high elastic limit, and discusses some of its possibilities.

Elastic State, Magnetic Determination of. Magnetic Determination of the Elastic State, A. V. de Forest. Am. Soc. Steel Treating—Trans., vol. 6, no. 6, Dec. 1924, pp. 653-668, 8 figs. Discusses relations between stress and certain magnetic properties; describes method of a.c. magnetic measurements which gives critical determination of elastic limit; relation between elastic and fatigue properties is illustrated by means of Jenkin model and magnetic results interpreted from that point of view.

Electric, Testing of. B. D. Enlund Process of Electric Testing of Steel (Elektrische Stahlprüfungs-Verfahren von B. D. Enlund), B. Jkerrman. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 24, June 14, 1924, pp. 629-631, 7 figs. Shows that by measuring resistance in test bars, carbon content and total of other ingredients can be determined during decarbonization in simplest way.

Fatigue. Recent English Endurance Tests of Steel and Other Metals. Eng. News-Rec., vol. 93, no. 18, Oct. 30, 1924, pp. 709-710. Comparison of endurance limit and static strength; effect of temperature and viscosity of material. Tests carried out at Nat. Physical Laboratory, London.

Strength at Fatigue in High-Frequency Loading (Ermüdungsfestigkeit bei hohen Beanspruchungsfrequenzen), W. Hort. Zeit. für technische Physik, vol. 5, no. 10, 1924, pp. 433-436, 6 figs. See also Maschinenbau, vol. 3, no. 27, Nov. 13, 1924, pp. 1038-1040, 6 figs. Describes new method of testing and gives numerical results of tests with turbine blades.

See also IRON AND STEEL, Fatigue.

Finishing Melting Temperatures. Finishing Melting Temperatures of Simple Ingot Steels, H. D. Hibbard. Am. Inst. Min. & Met. Engrs.—Trans., no. 1384-C, Dec. 1924, 13 pp. Information regarding temperatures of molten steels, covering all carbon contents up to 1.5 per cent.

Forging Temperature. On the Forging Temperature of Steels, Kôtarô Honda. Iron & Steel Inst.—Advance Paper no. 9, for meeting May 1924, 5 pp., 4 figs. See also Tôkohu Imperial Univ.—Sci. Repts., vol. 13, no. 1, Oct. 1924, pp. 21-25, 5 figs. Investigation shows that in case of carbon steels, elongation-temperature curve has generally maxima and minima, and hence in process of forging low-carbon steels it is better to take every precaution against fall of temperature to 900 deg., where elongation is at minimum; in case of carbon steels, as elongation at ordinary temperature is greater than that at 200 to 300 deg., process of slowly stretching or bending a sample at room temperature rather than at 200 to 300 deg. is safeguard against fracturing.

Foundries. See FOUNDRIES, Steel.

Fractures. Black Fracture (Ueber Schwarzbruch), F. Rapatz and H. Pollack. Stahl u. Eisen, vol. 44, no. 48, Nov. 27, 1924, pp. 1509-1514, 18 figs. General conditions for separation of graphite; origin of black fracture; explanation of different formations; removal of black fracture.

Intercrystalline Fracture in Steel, R. S. Williams and V. O. Homerberg. Am. Soc. Steel Treating—Trans., vol. 5, no. 4, Apr. 1924, pp. 399-412, 30 figs. Discusses abnormal type of failure in mild steel characterized by intercrystalline cracking and produced by action of cathodic hydrogen or caustic soda solutions; effect of hydrogen on steel under tension and action of alkaline solutions on inclusions of known chemical composition artificially introduced.

Temper Brittleness in Steel (Anlassprödigkeit in Stahl), Geo. Wazau. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 46, Nov. 15, 1924, pp. 1185-1190, 24 figs. Investigation of certain cases of extraordinary brittleness of steel products with aid of the Fry lines of force; causes of fracture are traced to superimposing of "cold working" and "tempering."

Gage. See GAGES, Steels for.

Grain Growth. An Occurrence of Grain Growth in Steel, A. A. Blue. Iron Age, vol. 113, nos. 10 and 18, Mar. 6 and May 1, 1924, pp. 716-718 and 1271-1273, 17 figs. Mar. 6: Carbonizing under certain conditions weakens steel; carbon shell causes internal pressure and weak ferrite bands. May 1: Further results of carbonizing, hardening and drawing back; comparison with double quenching and drawing; band formations.

Hardened, Fundamental Defects. Some Fundamental Defects of Hardened Steels, L. Aitchison. Am. Soc. Steel Treating—Trans., vol. 5, no. 5, May 1924, pp. 491-503, 3 figs. Deals with certain properties of fully hardened steels that can only be regarded as being of nature of defects; discusses two such defects, namely, abnormally low value of limit of proportionality (elastic limit), and instability of volume which characterizes hardened steels; gives values of limit of proportionality in different hardened steels, and shows that there is very large difference between actual stress which produces some permanent deforma-

tion in steel, and stress which is generally called yield point.

Heat Treatment of. See STEEL, HEAT TREATMENT OF.

High Pressures and Temperatures. Steel for Higher Pressures and Elevated Temperatures, V. T. Malcolm. Power, vol. 59, no. 26, June 24, 1924, pp. 1020-1021, 3 figs. Physical properties resulting from fine, dense structure.

High-Speed. See STEEL, HIGH-SPEED.

High-Sulphur. Effect of Zirconium on Hot Rolling Properties of High-sulphur Steels and the Occurrence of Zirconium Sulfide, A. L. Field. Am. Inst. Min. & Met. Engrs.—Trans., no. 1306-S, Feb. 1924, 17 pp., 10 figs. Describes hot-rolling properties of series of high-sulphur steels; shows how zirconium reacts with sulphur content of molten steel.

High Temperature, Effect on Stresses. The Effect of High Temperature on the Range of Repetition Stresses on Steel, F. C. Lea and H. P. Budgen. Engineering, vol. 118, nos. 3066 and 3067, Oct. 3 and 10, 1924, pp. 500 and 532-534, 8 figs. Describes experiments carried out to determine ranges of stress for various mean stresses that certain steels would withstand when tested under 2000 cycles per min. and at temperatures varying from 15 deg. to 800 deg. cent.

Hot Pressing of. Hot-pressing Steel Parts, E. W. Zeh. Machy. (N. Y.), vol. 30, no. 6, Feb. 1924, pp. 434-435, 3 figs. Machy. (Lond.), vol. 24, no. 622, Aug. 28, 1924, pp. 681-682, 4 figs. New application of a process heretofore employed only in manufacturing parts from softer metals. Now possible to hot-press steel parts in an almost endless variety of shapes. Briefly, process consists of heating slugs of steel to about 1800 deg. fahr. and then pressing them to desired shape in tungsten-steel dies having cavities corresponding to outside of desired part.

Hot Rolling, Effect of. Rolling Refines Grain Structure, W. J. Crook. Iron Trade Rev., vol. 75, no. 21, Nov. 20, 1924, pp. 1365-1369, 12 figs. Hot rolling reduces grain size of low-carbon steel; further refinement is afforded by annealing; experiments contradict theory that no change in size occurs below transformation point.

Identification by Emery-Wheel Sparks. Differentiation of Steels by Examination of Emery-Wheel Sparks in Air and in Oxygen (Différenciation des aciers par l'examen des étincelles de meulage dans l'air et dans l'oxygène), E. Pitois. Académie des Sciences—Comptes Rendus, vol. 178, no. 11, Mar. 10, 1924, pp. 942-944. By placing sheet of glass in path of sparks and examining incrustations so obtained, it is found that, in air, most of particles obtained by grinding from ordinary steels undergo fusion; these incrustations are not wholly pearlitic, but exhibit wide regions of ferrite resulting from decarburization, latter becoming complete in atmosphere of oxygen; photographic representations of sparks were obtained; this method of examination is of special value for valve steels.

Impact Resistance. Effect of Temperature on the Impact Resistance of Low-Carbon Steel Deformed at Different Temperatures, N. Richardson and E. K. MacNutt. Am. Soc. Steel Treating—Trans., vol. 5, no. 4, Apr. 1924, pp. 348-360, 10 figs. Results of tests show that material of described type deformed at temperature from — 58 to 700 deg. fahr., when tested at normal atmospheric temperatures, has about 7 to 14 per cent of impact resistance shown by annealed non-deformed material; material deformed at 570 deg. fahr. "blue-brittle" temperature has lower impact value when tested at temperatures between — 58 to 700 deg., than non-deformed material; etc.

Iron Alloys. See IRON ALLOYS.

Iron and. See IRON AND STEEL.

Macroscopic Examination. The Macroscopic Examination of Steel, V. O. Homerberg. Am. Soc. Steel Treating—Trans., vol. 6, no. 3, Sept. 1924, pp. 295-314, 30 figs. Explains manner in which segregation takes place in steel; method of preparing specimens; formulas of etching reagents, together with directions for their use and necessary precautions to be taken; macrographs are included to illustrate results obtained from use of these different reagents.

Magnet. A Study of the Old and the New Magnet Steels, E. Gumlich. Testing, vol. 1, no. 3, Mar. 1924, pp. 194-222, 10 figs. Deductions, based mostly on investigations undertaken in Magnetic Laboratory of Physico-Technical Govt. Inst. (Phys. Techn. Reichsanstalt) at Charlottenburg, reviewing what a permanent magnet is able and is required to accomplish, and which of the older and newer kinds of steel are meeting the respective requirements.

Magnet Steel, with Special Consideration of the Relations Between Carbon and the Magnetic Properties (Ueber Magnetstahl unter besonderer Berücksichtigung der Beziehungen zwischen Kohlenstoff und den magnetischen Eigenschaften), Geo. Hannack. Stahl u. Eisen, vol. 44, no. 41, Oct. 9, 1924, pp. 1237-1243, 4 figs. Historical review of tungsten and chrome steel; influence of treatment; treatment and hardening temperature; carbon content; cobalt magnet steel.

See also COBALT STEEL.

Magnetic Analysis. Exploring Within the Steel, A. G. Ingalls. Sci. Am., vol. 130, no. 5, May 1924, pp. 316-317 and 366-367, 6 figs. How magnetic analysis indicates presence of flaws in rails and beams and hoisting cables.

See also MAGNETIC ANALYSIS.

Magnetic Properties. The Dependence of Coercive Force and the Remanence on the Magnetizing Field Strength (Die Abhängigkeit der Koerzitivkraft und der Remanenz von der Magnetisierungsfeldstärke), J. Würschmidt. Kruppsche Monatshefte, vol. 5, Jan. 1924, pp. 10-11, 2 figs. Results of measurements carried out on a cobalt-manganese-chrome and a tungsten steel.

The Effect of Changes in Total Carbon and in the Condition of Carbides on the Magnetic Properties of Steel, A. W. Smith, E. D. Campbell and Wm. L. Fink. Physical Rev., vol. 23, no. 3, Mar. 1924, pp. 377-385, 7 figs. Variation of magnetic properties of carbon steel and chrome steel with per cent carbon, for annealed and quenched samples; magnetic potentiometer method of determining normal magnetization curves for short bars.

Magnetic Testing of. Field of Magnetic Testing Broad. Iron Trade Rev., vol. 75, no. 11, Sept. 11, 1924, pp. 663-665, 4 figs. Developments in magnetic method of examining steel open way to many new applications, particularly in case of irregular shapes; employment of method on regular shapes commercialized.

The Magnetic Testing of Small Specimens, T. F. Wall. Engineering, vol. 117, no. 3036, Mar. 7, 1924, pp. 293-295, 7 figs. Method for testing magnetic qualities of specimen up to 2000 gausses, leading advantage of which is that closed magnetic circuit is used.

Magnetization Produced by Stress. Magnetization of Steel Under Tensile Stress (Aimantation de l'acier à la traction), L. Fraichet. Technique Moderne, vol. 16, no. 16, Aug. 15, 1924, pp. 541-547, 14 figs., and Génie Civil, vol. 8, no. 21, May 24, 1924, pp. 495-498, 8 figs. Discusses apparatus for recording variation of magnetization of bar when under tensile stress, and results

of tests carried out with it, showing that magnetization curves give more accurate indication as to nature and treatment of metal.

Manganese. See MANGANESE STEEL.

Manufacture. See STEEL MANUFACTURE.

Martensitic Structure. Nature of Martensitic Structure of Steel (Ueber die Natur des martensitischen Gefügebildes), F. Sauerwald and G. Jackwirth. Zeit. für anorganische u. allgemeine Chemie, vol. 140, no. 4, Nov. 17, 1924, pp. 391-398, 7 figs. on supp. plate. It appears that appearance of martensite in connection with etching of steel is caused by slip phenomena induced by stresses set up during quenching and that characteristic lines of structure are edges of slip planes; that structure is in no way dependent on carbon content of steel is shown by fact that it is present in pure nickel-iron alloys both on quenching and after slow cooling.

Mechanical Properties. The Dependence of the Mechanical Properties of Sub-Pearlitic Carbon Steels on Their Carbon Content, Forging Temperature and Heat Treatment (Die Abhängigkeit der mechanischen Eigenschaften unterperlitischer Kohlenstoffstähle von ihrem Kohlenstoffgehalte, der Schmiedetemperatur und der Wärmebehandlung), F. Schmitz. Berichte der Fachausschüsse des Vereins deutscher Eisenhüttenleute, Werkstoffausschuss, report no. 29, 1924, 8 pp., 7 figs. Recrystallization phenomena of austenite, ferrite and pearlite and their influence on notch action; practical application of results obtained.

Melting in Cupola. Melting Steel in a Cupola, J. Grennan. Am. Foundrymen's Assn.—Preprint no. 411, for meeting Oct. 11-16, 1924, 17 pp., 11 figs. Data of experiments conducted with a view to observing what actually happens to steel when it is melted in a cupola and to compare melting of steel with that of pig iron and scrap cast iron.

Metallurgical Defects, Detection of. Detecting Metallurgical Defects in Steel, F. C. Thompson. Metal Industry (Lond.), vol. 24, nos. 10 and 11, Mar. 7 and 14, 1924, pp. 229-230 and 261-262, 4 figs. Methods of examination, and causes of troubles occurring.

Micrographic Study. Micrographic Study of Plain Carbon Steel, R. Rimbach. Forging—Stamping—Heat Treating, vol. 10, no. 1, Jan. 1924, pp. 46-50, 33 figs. Presents very complete set of microphotographs showing effect of various heat treatments on 1.12 carbon steel.

Molybdenum. See MOLYBDENUM STEEL.

Nickel. See NICKEL STEEL.

Nickel-Copper. The Properties of Nickel-Copper Steel, J. A. Jones. Can. Chem. & Metallurgy, vol. 8, no. 11, Nov. 1924, pp. 264-265. Results of tests show that addition of copper up to 0.6 per cent, while not detrimental, does not produce marked beneficial effects.

Nitrogen in. Nitrogen in Steel—Prevention or Cure?, J. Kent Smith. Iron Age, vol. 114, no. 19, Nov. 6, 1924, pp. 1209-1210. Its removal facilitated by various additions; low-temperature production of iron in blast furnace advocated as preventive.

Osmondite. Osmondite (Ueber den Osmondit), E. Maurer. Stahl u. Eisen, vol. 44, no. 22, May 29, 1924, pp. 622-624, 6 figs. Osmondite is name given by Heyn and Bauer to troostite which is formed by tempering of steel with 0.95 up to 400 deg. cent.; characteristics of metal.

Oxy-Acetylene Flame Applied to. Steel under the Oxy-Acetylene Flame, A. S. Kinsey. Am. Soc. Steel Treating—Trans., vol. 6, no. 4, Oct. 1924, pp. 515-524, 2 figs. Points out that in burning of oxy-acetylene flame, which produces temperature of about 6300 deg. fahr., border combustion occurs which makes it possible to melt steel without oxidizing it; odd shapes and sizes of steel to be hardened, tempered or annealed, may easily be heated with oxy-acetylene torch, which has additional advantage of being adaptable to confined areas; economy and efficiency of oxy-acetylene flame is largely attributable to remarkable purity of 99.5-per cent oxygen, now commercially available.

Oxygen and Red Shortness. Oxygen and the Red Shortness of Steel, H. Monden. Iron Age, vol. 114, no. 21, Nov. 20, 1924, pp. 1338-1340, 3 figs. German investigation of effect of gases on rolling qualities; low-carbon basic open-hearth practice in Germany. Translated from Stahl u. Eisen, 1923, June 7 and 14. See reference to original article in Eng. Index 1923, p. 486, under heading OPEN-HEARTH FURNACES, Basic.

Partly-Killed. Partly Killed Simple Steels, H. D. Hibbard. Iron Age, vol. 114, nos. 10 and 11, Sept. 4 and 11, 1924, pp. 565 and 599-600, and 631-633. Comparison with killed and effervescing steels; gas holes and their effects; advantages of two heatings and rollings; settling and rising low-carbon and medium steels; steel for structural uses and for rails.

Pearlite. Pearlite, Troostite and Sorbite (Ueber den Perlit, Troostit und Sorbit), A. Schrader. Stahl u. Eisen, vol. 44, no. 12, Mar. 20, 1924, pp. 309-311, 5 figs. Results of microscopic investigations.

Perforation, Effect of. Influence of the Method of Punching Holes in Steel Bars (Note sur l'influence du mode de perçage des trous dans les barres en acier), A. de Marneffe. Revue Universelle des Mines, vol. 67, no. 1, Apr. 1, 1924, pp. 42-48, 7 figs. Results of tests carried out by author on samples with holes punched according to different methods, to determine effect of perforation on resistance of metal.

Phosphorus Segregations. "Phosphor Prints," Rob. H. Canfield. Chem. & Met. Eng., vol. 30, no. 12, Mar. 24, 1924, p. 470. New method of detecting phosphorus segregations in steel.

Pickling. Pickling; Or, the Action of Acid Solutions on Mild Steel on the Diffusion of Hydrogen Through the Metal, C. A. Edwards. Iron & Steel Inst.—Advance Paper no. 4, for meeting Sept. 1924, 36 pp., 15 figs. partly on supp. plates. Describes experiments.

Plates, Corrosion-Resistance Tests. Tests Steel Plates of Leviathan, G. B. Waterhouse. Iron Trade Rev., vol. 75, no. 4, July 24, 1924, pp. 229-230, 8 figs. Chemical and physical tests made by author on samples of original German plates and English plates which had been installed in 1919 fail to show clearly why German steel resisted corrosion more successfully during 10 years of service than other steel in 5 years. Copper present and banded structure may explain resistance.

Pressed. Redevelopment in Pressed Steel Practice, M. R. Innes. Forging—Stamping—Heat Treating, vol. 10, no. 7, July 1924, pp. 262-264, 6 figs. Pressed metal has many advantages over other methods of production, but common sense must prevent detrimental effect caused by making wild claims.

See also PRESSWORK, Pressed Steel, Application of.

Properties at Highest Temperatures. Steel at Highest Working Temperatures, P. Eyermann. Iron Age, vol. 114, no. 20, Nov. 13, 1924, pp. 1270-1273, 8 figs. Changes in strength and other properties of carbon and alloy steels at 500 to 1200 deg.; range of "reduced malleability" in hot working: results of tensile tests on eight steels.

Rerolled Bars. Rerolled Reinforcement Strong But Not Ductile, J. B. Kommers. Eng. News-Rec., vol. 93, no. 4, July 24, 1924, pp. 146-147. Results of tests comparing strength and ductility of new billet steel and rerolled steel reinforcing bars, made at Eng. Experiment Station, Univ. of Wis. Suggested improvements in rerolled material.

Rivet. Effect of Sulfur on Endurance Properties of Rivet Steel. Am. Soc. for Testing Matls.—Preprint no. 4a, for meeting June 24-27, 1924, 15 pp., 9 figs. Third preliminary report of Joint Committee on Investigation of Phosphorus and Sulphur in Steel. Describes endurance tests made at U. S. Naval Eng. Experiment Station, and results obtained.

Metallographic Investigation of Effect of Sulfur on Rivet Steel. Am. Soc. for Testing Matls.—Preprint no. 4b, for meeting June 24-27, 1924, 75 pp., 85 figs. partly on supp. plates. Fourth preliminary report of Joint Committee on Investigation of Phosphorus and Sulphur in Steel. Results of macroscopic investigation, investigation of non-metallic inclusions, and investigation of microstructure.

Rock-Drill. Rock-Drill Steel Problem in Australia, With Some Suggested Steps to Its Solution, G. L. Thirkell. Australasian Inst. Min. & Met.—Proc., no. 52, Dec. 31, 1923, pp. 79-128, 19 figs. Discusses properties of steel and their modifications, stresses to withstand, heat treatment, troubles with drill steels and their remedies, etc.

Rolling, Power Required for. See ROLLING MILLS, Power Consumption.

Sheet, Electric. Effect of Punching Strains on the Magnetic Properties of Electrical Sheet Steel, G. H. Cole. Elec. Jl., vol. 21, no. 2, Feb. 1924, pp. 55-61, 16 figs. Quantitative information concerning increase in hysteresis loss, decrease in permeability, and change in microstructure caused by punching operation, such as that used in production of armature stampings and certain transformer laminae. Studies included three classes of electrical sheet steel of eight different gages and efficacy of annealing in removing effects of punching stresses.

On the Influences of the Cold Rolling on the Properties of Electrical Sheet Steel and the Effects of Annealing, Y. Niwa and J. Minamizawa. Denki Gakkwai Zasshi (Inst. Elec. Engrs. of Japan—Jl.), no. 428, Mar. 1924, pp. 236-249, 15 figs. Silicon steel of 0.46 mm. and ordinary steel of 0.39 mm. are subjected to cold rolling down to 0.08 mm. and electric, magnetic, mechanic, and microscopic properties are tested at each step. Similarly, with annealed specimens shows steel increase in hysteresis loss is nearly proportional to reduction of thickness, etc. (In Japanese.)

The Influence of Grain Size on Losses from Generator and Transformer Plates (Der Einfluss der Korngrösse auf die Verlustziffern von Dynamo- und Transformatorenblechen), K. Daeves. Stahl u. Eisen, vol. 44, no. 42, Oct. 16, 1924, pp. 1283-1286. Shows influence of grain size on watt-loss coefficients; influence of C, P, Mn and Si on losses within certain boundaries; shows also that rolling pressures and heatings occurring in process of rolling from ingot to finished plate have great bearing on loss coefficients of finished plate.

Sheet, Lithographing. See LITHOGRAPHING, Steel Sheets and Tin Plate.

Sheet, Season Cracking of. The Embrittling Action of Some Salt Solutions on Mild Steel, T. Swinden. Birmingham Met. Soc.—Jl., vol. 8, no. 10, pp. 469-477. Discusses "season cracking," in particular relation to mild steel, under certain conditions. Effect of certain nitrate solutions on mild steel; examples of season cracking; theoretical considerations; suggestions for minimizing effect of nitrates on steel plates for concentrating pans.

Sheet, Standardization of. Why Not Simplification in Steel Sheets? Iron Age, vol. 113, no. 12, Mar. 20, 1924, pp. 874-876. Economies that would accrue to manufacturers and consumers of sheets by eliminating some of the grades, finishes, and sizes in which sheets are made.

Silico-Manganese. See MANGANESE STEEL, Silico.

Silicon. See SILICON STEEL.

Sorbite. See Carbon; Pearlite.

Special Metallurgy of. Modern Developments in the Metallurgy of Special Steels, W. H. Hatfield. Iron & Coal Trades Rev., vol. 108, no. 2938, June 20, 1924, pp. 1055-1057. Discusses improvement in process of manufacture and manipulation resulting in increased reliability, modified and new compositions resulting in improved or new properties, and more intimate knowledge of properties of steel from designer's viewpoint. From paper read before Iron & Steel Sec., Empire Min. & Met. Congress.

Specific Resistance and Magnetic Properties. The Effect of Changes in Total Carbon and in the Condition of Carbides on the Specific Resistance and on Some Magnetic Properties of Steel, E. D. Campbell and G. W. Whitney. Iron & Steel Inst.—Advance Paper no. 3, for meeting Sept. 1924, 21 pp., 2 figs. Outlines method for preparing, on a laboratory scale, small steel bars differing only in carbon content and, to a negligible extent, in sulphur, and gives results of measurements of specific resistance and some magnetic measurements on annealed and oil-hardened bars.

Specifications. Requirements and Properties of Steels (Konstruktionsforderungen und Eigenschaften des Stahles), K. Wendt. Praktische Maschinen-Konstrukteur, vol. 57, nos. 28, 29, 30, 32, 33, 34, 37, 41, and 42, July 29, Aug. 5, 12, 26, Sept. 2, 9, 30, Oct. 28 and Nov. 4, 1924, pp. 393-397, 410, 417-420, 444-446, 458-460, 471-472, 505-508, 551-554, and 563-566, 94 figs. Development of high-grade steels; mechanical, physical, chemical and complex loading; behavior at high and low temperatures; different states of steels and their properties; heat treatment and alloying; formation of crystals; pipes, bubbles, stresses; forged and rolled steels; acceptance tests; standards; coöperation between contractors and metallurgists.

Spheroidized Cementite in Hypoeutectoid. Spheroidized Cementite in Hypoeutectoid Steel, R. S. MacPherran and J. F. Harper. Am. Soc. Steel Treating—Trans., vol. 6, no. 3, Sept. 1924, pp. 341-374, 20 figs. Results of authors' experience in method of heat treating large forgings; results obtained by spheroidization of cementite of pearlitic constituent seem to warrant treatment given; treatment applied to cast steel results in corresponding improvement of physical properties. Photomicrographs.

Stainless. Metallurgical Data on Stainless Steels, H. H. Abram. Chem. & Met. Eng., vol. 30, no. 11, Mar. 17, 1924, pp. 430-431. Results of careful investigation of properties; tells how properties most desired in any particular case may be obtained by means of heat treatment.

Stainless Steel and Stainless Iron, O. K. Parmiter. Am. Soc. Steel Treating—Trans., vol. 6, no. 3, Sept. 1924, pp. 315-340. Reviews history and development of stainless steel and stainless iron of 13 per cent chromium type; problems involved in manufacture of this material, its composition and effect of various elements upon it;

heat treatment, forging, normalizing, annealing, and hardening; physical properties; general properties of stainless steel; applications and possibilities of stainless iron.

Stainless Steels and their Practical Manipulation. Metal Industry (Lond.), vol. 25, no. 16, Oct. 17, 1924, pp. 379-381. Discusses many misconceptions that exist in regard to stainless steels, and advises correct method of working so as to obtain best results.

The "Stainless" Chromium Steels, W. H. Hatfield. Am. Electrochem. Soc.—Advance Paper no. 5, for meeting Oct. 2-4, 1924, pp. 63-73. Interesting aspects of influence of corroding media upon stainless chromium steels. Article confined to stainless steels in which 12 to 16 per cent of chromium is essential alloyed element.

See also Automobile; ALLOY STEELS, Corrosion-and-Heat-Resistant.

Standards for. Standards for Steel and Iron (Werkstoffnormen Stahl und Eisen). Stahl u. Eisen, vol. 44, no. 48, Nov. 27, 1924, pp. 1519-1522. List and discussion of standard sheets on steel and iron developed by German Industrial Standards Committee up to end of September 1924.

Strength at High Temperatures. See IRON AND STEEL, Strength at High Temperatures.

Strip. See Cold-Rolled Strip.

Strip, Cleaning. Continuous Cleaning of Strip Steel. Iron Age, vol. 113, no. 19, May 8, 1924, pp. 1358-1359, 2 figs. 16-block unit of Trumbull Steel Co., Warren, Ohio, has capacity of 50 tons per day.

Structural. See STRUCTURAL STEEL.

Submerged Corrosion. Effect of Hydrogen-Ion Concentration on the Submerged Corrosion of Steel, G. W. Whitman, R. P. Russell and V. J. Altieri. Indus. & Eng. Chem., vol. 16, no. 7, July 1924, pp. 665-670, 6 figs. Main factors are protectiveness of films of corrosion products and rate of oxygen diffusion, film protectiveness being largely determined by pH of solution adjacent to corroding metal.

Sulphur and Carbon Determination. The Simultaneous Determination of Sulphur and Carbon in Steel, Pig Iron and Ferroalloys by Means of Burning in Oxygen Current (Die gleichzeitige Bestimmung des Schwefels und Kohlenstoffs in Stahl, Roheisen und Ferrolegierungen durch Verbrennung im Sauerstoffstrom), C. Holthaus. Berichte der Fachausschüsse des Vereins deutscher Eisenhüttenleute, no. 41, Apr. 16, 1924, 5 pp., 2 figs. Stahl u. Eisen, vol. 44, no. 48, Nov. 27, 1924, pp. 1514-1519, 2 figs. Describes apparatus and method for rapid and accurate determination of sulphur and carbon through burning in oxygen current, followed by titration.

See also IRON, Sulphur Determination.

Temper Colors on. Note on "Temper" Colours, R. C. Gale. Chem. & Industry, vol. 43, no. 50, Dec. 12, 1924, pp. 349T-352T, 2 figs. Possible explanations of cause of color in films when piece of polished hardened steel is tempered by reheating; results of author's experiments to determine thicknesses of "temper" color films on steel.

Temperatures, Tapping and Pouring. Tapping and Pouring Temperatures of Open-Hearth Steel Melts (Abstich- und Vergiesstemperaturen von Martinstahlschmelzungen), C. Popp. Berichte der Fachausschüsse des Vereins deutscher Eisenhüttenleute, no. 46, July 17, 1924, 5 pp., 8 figs. Results of measurements made at Thyssen works on a large number of melts by means of Holborn & Kurlbaum optical pyrometers.

Terminology. See IRON, Terminology.

Test Bars. Notes on Composition and Structure of A.S.T.M. Bar, J. W. Bolton. Am. Foundrymen's Assn.—Preprint no. 420, for meeting October 11-16, 1924, 27 pp., 32 figs. Effects of variation in composition and structure on properties of standard A.S.T.M. test bar. Extensive tests of bars from various mixtures studied, and results obtained compared from all angles. Concludes that until a very great deal more research data are available, it is best to stick to present standard bar. Effects of elements.

Testing. Dynamic Testing of Steels at the Higher Temperatures (Dynamische Prüfung des Stahles bei höheren Temperaturen), F. Körber and I. B. Simonsen. Mitteilungen aus dem Kaiser-Wilhelm-Institut für Eisenforschung zu Düsseldorf, vol. 5, 1924, pp. 21-35, 9 figs. Results of dynamic hardness and fracture tests on carbon, tool, and high-speed steels, and their variation with temperature.

Inspects Stock by Brinell Test. Iron Trade Rev., vol. 75, no. 11, Sept. 11, 1924, pp. 666-667, 7 figs. Notes on special test developed in laboratories of Steel Products Co., Cleveland, Ohio, which is applied to inspection of material purchased for either hot or cold heading and subject to surface seams, pits, cracks, laps, improper anneal, etc.; developed as result of experiments to determine relative qualities of electric furnace and crucible steel for automotive poppet valves. Hardened cone used instead of ball.

Tests. What is Steel? A. Sauveur. Am. Inst. Min. & Met. Engrs.—Trans., Advance Paper no. 1338-S, May 1924, 22 pp., 15 figs. Results of experiments conducted in Metallurgical Laboratory of Harvard University, in which twisting and tensile stresses were applied to iron and steel bars heated at middle to predetermined temperatures, temperature falling gradually toward both ends of bars.

Thermal Expansion. Thermal Expansion of Soft and Hardened Steel (Thermische Ausdehnung von weichem und gehärtetem Stahl), A. Werner. Zeit. für Instrumentenkunde, vol. 44, no. 7, July 1924, pp. 315-320. Results of experiments with 34 samples of soft and hardened steels at temperatures from — 200 deg. to + 150 deg. cent., details of expansions, effect of chemical composition, etc.

Tool. See TOOL STEEL.

Troostite. See Carbon; Pearlite.

Welding. See ELECTRIC WELDING, ARC, Low-Carbon Steel; OXY-ACETYLENE WELDING, Medium High-Carbon Steel.

Welding Heat, Behavior at. The Behavior of Low-Carbon Sheet Iron at Welding Heat (Das Verhalten von Flusseisenblechen in der Schweisshitze), H. Schottky. Kruppsche Monatshefte, vol. 5, Jan. 1924, pp. 1-6, 11 figs. Through tests with series of silicon-free plates, it is shown that bending test at maximum temperatures—1350 to 1450 deg.—gives good idea of resistivity of low-carbon steel at welding heat.

Wire, Strength of. See WIRE, Steel.

Work-Hardening of. Influence of Temperature on the Work-Hardening of Metals, E. G. Herbert. Engineer, vol. 137, no. 3562, Apr. 4, 1924, pp. 356-357, 6 figs. Tests for measuring work-hardening properties of mild steel at succession of temperatures such as might be expected to be generated by action of cutting tool.

Works. See STEEL WORKS.

World Production. See IRON, PIG, World Production.

X-Ray Examination. Examination of Steel by X-Ray, L. C. Breed. Blast Furnace & Steel Plant, vol. 12, no. 11, Nov. 1924, pp. 517-518. Report

on spectrometer equipment at government arsenal, Watertown, Mass.

STEEL CASTINGS

Aluminum and Titanium as Deoxidizers. Aluminum and Titanium as Deoxidizers, Geo. F. Comstock. Iron Age, vol. 114, no. 23, Dec. 4, 1924, pp. 1477-1479, 10 figs. Comparative effect on acid electric steel castings; physical and photomicrographic results.

Annealing. Annealing Castings Electrically. Iron Trade Rev., vol. 75, no. 19, Nov. 6, 1924, pp. 1225-1227, 5 figs. Milwaukee manufacturer of steel castings adopts electric heat for annealing and heat treating product; variable-input arrangement conserves power; transfer table and storage track facilitate handling of cars.

Annealing Steel Castings and Its Importance to Consumers, H. A. Neel. Ry. & Locomotive Eng., vol. 37, no. 12, Dec. 1924, pp. 375-376. Benefits of steel castings from annealing are (1) increased physical properties; (2) relief of strains set up in cooling and in welding operation; and (3) increased machinability.

Carbon-Vanadium. Carbon and Carbon-Vanadium Steel Castings—A Comparison, J. M. Lessells. Am. Soc. Steel Treating—Trans., vol. 5, no. 2, Feb. 1924, pp. 144-152 and (discussion) 152-157, 7 figs. Physical properties of carbon and carbon-vanadium steel castings as obtained from coupon test pieces in cast, annealed, and normalized conditions; evidence is given to show that addition of vanadium as alloying element greatly improves quality of material.

Cleaning. Cleaning Steel Castings Economically. Abrasive Industry, vol. 5, no. 8, Aug. 1924, pp. 198-200, 6 figs. See also Foundry, vol. 52, no. 17, Sept. 1, 1924, pp. 688-690, 6 figs. Describes cleaning-room operations, consisting of sandblasting, tumbling, removing gates and risers, grinding, chipping, polishing, and inspecting, of Ohio Steel Foundry Co., Springfield, Ohio.

Cleaning-Cost Records. Keeps Record of Cleaning Costs, B. K. Price. Iron Trade Rev., vol. 74, no. 18, May 1, 1924, pp. 1165-1166 and 1169, 4 figs. Steel foundry pays grinder hands according to amount of metal removed; castings weighed before being delivered to grinder and again after being ground; production and wages stimulated.

Defects. Some Steel Foundry Experiences, H. V. Fell. Foundry Trade Jl., vol. 30, no. 422, Sept. 18, 1924, pp. 239-240, 19 figs. Describes steel castings made by author and indicates their defects and means by which they were overcome.

Design. Designing Steel Castings, E. R. Young. Machy. (N. Y.), vol. 30, nos. 9 and 10, May and June 1924, pp. 701-703 and 790-792, 8 figs., and Machy. (Lond.), vol. 24, no. 616 and 617, July 17 and 24, 1924, pp. 501-503 and 538-540, 8 figs. Problems encountered in production. May: Pattern design; effect of dry sand and green sand molds on shrinkage; cores; rip design; size and shape of castings; chemical composition; finish allowances. June: Engineering or structural design; castings of intricate design; fatigue strength of castings.

Hawse Pipes, Leviathan. Cast Large Steel Hawse Pipe. Foundry, vol. 52, no. 10, May 15, 1924, pp. 381-384, 7 figs. To replace Leviathan's defective cast-iron hawse pipes; steel castings required to resist heavy stress.

Heat Treatment. Making Steel Castings as Tough as Forgings, L. R. Mann. Can. Foundryman, vol. 15, no. 1, Jan. 1924, pp. 16-17, 2 figs. Proper heat treatment insures properties being imparted to metal which are comparable to those found in best forged steel. Extracts from paper read before Wis. Foundrymen's Assn.

Italian Industry. See IRON AND STEEL, Italian Industry.

Manganese-Steel. See MANGANESE STEEL, Casting.

Manufacture. Cast Steel, Its Manufacture, Qualities and Defects (L'Acier Moulé, sa Fabrication—Ses Qualités—ses Défauts), A. Pertus. Fonderie Moderne, vol. 18, Feb., Mar., and Apr. 1924, pp. 33-39, 39-76, and 93-97, 5 figs. Manufacture of steel castings: composition of metal; molding and casting.

Liquid Steel for Castings, T. E. Hull. Foundry Trade Jl., vol. 29, no. 396, Mar. 20, 1924, pp. 238-240. Deals with subject of liquid steel as required for sand molds in production of steel castings. Control of slag; slag inclusions; influence of dissolved or occluded gases; shrinkage; liquidity and fluidity of steel; chemical composition.

Liquid Steel for Light Castings, J. A. Holden. Foundry Trade Jl., vol. 29, no. 402, May 1, 1924, pp. 367-368. Shows that "Stock" plant, in addition to turning out mild steel of good quality, can be adapted for making many types of special steels. Probable cause of porosity in electric process of manufacture.

Manufacture of Steel Castings, G. Varley. Mech. Wld., vol. 75, nos. 1947, 1949, 1951, and 1952, Apr. 25, May 9, 23 and 30, 1924, pp. 260-261, 290-291, 322-323, and 339-340, 12 figs. Discussion of the different processes; teeming; molding; annealing; failures in manufacture. Reprinted from Trans. Liverpool Eng. Soc.

Speeding Up the Production of Large and Superior Steel Castings, S. G. Roberts. Compressed Air Mag., vol. 29, no. 1, Jan. 1924, pp. 731-736, 16 figs. Use of compressed air and pneumatic tools in plant of Wheeling Mold & Foundry Co., Wheeling, W. Va.; time and money saved, and large castings of a complicated character can be turned out rapidly with assurance of success.

The Manufacture of American Steel Castings, W. H. Woodhall. Foundry Trade Jl., vol. 29, no. 404, pp. 399-401. Molding methods, acid or basic melting, physical properties and tests, dirty versus clean steel, sampling, cleaning and inspection, annealing furnaces, annealing period, etc.

The Production of a Large Steel Casting, H. V. Fell. Foundry Trade Jl., vol. 30, no. 416, Aug. 7, 1924, pp. 114-116, 18 figs. Describes an example of this class of work as carried out by a large British firm, especially molding operations.

Properties and Uses. Broadening the Field for Steel Castings Through the Use of Alloys and Heat Treatment, F. Grotts. Am. Foundrymen's Assn.—Preprint no. 416, for meeting Oct. 11-16, 1924, 15 pp., 10 figs. Points out some of the possibilities for broadening field of steel castings by use of different special alloys and by suitable heat treatments. States that proof of this lies in fact that greater strength, resistance to shock and wearing qualities can be obtained with small costs and practically no change in machinability. Low carbon, medium carbon, and high carbon steels are discussed in relation to their uses and physical proptrties.

Shells. Production of an Electric Shell at a Steel Foundry (Die Entstehung eines Polgehäuses in der Stahlgiesserei), K. Stoll. Giesserei-Zeitung, vol. 21, no. 13, July 1, 1924, pp. 273-276, 8 figs. Discusses team work of foundry and model makers; explains details of work of model makers, molders and cleaners, and follows production of cast-steel shell for an electric machine.

Sink Heads. Proportioning and Shaping of Sink Heads, J. H. Hall. Iron Age, vol. 114, no. 14, Oct. 2, 1924, pp. 822-823. How not only a saving of metal can be secured, but a lowering of cost of steel, if proportioning and shaping of risers is carefully studied. Advantages of use of a comparatively new kind of riser which is cone shaped.

Temperature, Influence of. Influence of Temperature on the Strength of Properties of Cast Steel (Einfluss der Temperatur auf die Festigkeitseigenschaften von Stahlguss), F. Körber. Stahl u. Eisen, vol. 44, no. 52, Dec. 25, 1924, pp. 1765-1771, 19 figs. partly on supp. plate. Importance of testing cast steel at high temperatures; notched-bar tests on cast and annealed Bessemer, open-hearth, and electric steel up to 500 deg. cent.; practical conclusions; relation of temperature to notched-bar toughness in low-carbon steel after different pre-treating methods.

Testing. See FORGINGS, Steel, Testing of.

Valves. Valve Castings Made in Steel, P. Dwyer. Foundry, vol. 52, no. 15, Aug. 1, 1924, pp. 579-583 and 605, 8 figs. Various component parts of valves for nearly every purpose beyond capacity of cast iron are poured from steel melted in electric furnace.

X-Ray Examination. Technic of X-Ray Is Improving. Iron Trade Rev., vol. 75, no. 11, Sept. 11, 1924, pp. 668-671, 7 figs. Experience at Watertown arsenal, Watertown, Mass., in application of X-ray process to steel castings, yields more accurate and definite results. Interpretation of radiographs are reduced to formulas.

Using X-Rays to Detect Hidden Dangers in Plant Equipmnet, H. H. Lester, E. C. Herthel, Wm. Mendius and Wm. V. Ischie. Chem. & Met. Eng., vol. 31, no. 16, Oct. 20, 1924, pp. 619-622, 13 figs. Points out that defects in castings used in high-pressure stills, overlooked in inspection by usual method, are easily seen in radiograph.

X-Ray Tests Applied to the Problems of the Steel Industry, H. H. Lester. Am. Soc. Steel Treating—Trans., vol. 6, no. 5, Nov. 1924, pp. 575-603 and (discussion) 603-605, 28 figs. X-ray tests with collateral analyses indicate that defects in steel castings fall into relatively few classes traceable to definite and simple causes most or all of which are removable; when defects are detected by X-ray examination and corrected by changing castings technique, they tend to stay corrected; it is possible by this method to eliminate from 70 to 90 per cent of major defects; metal sections up to 3 in. in thickness may be examined.

STEEL, HEAT TREATMENT OF

Alloy Steels. See STEEL MANUFACTURE, Alloy Steel.

Annealing. Annealing, Hardening and Reheating of Refined Steel (Ueber Glühen, Härten und Vergüten von Edelstählen), F. Rapatz. Werkstattstechnik, vol. 18, no. 21, Nov. 1, 1924, pp. 616-619, 7 figs. The iron-carbon diagram of state and its change due to alloying metals. Structural elements; volume change in hardening; etc.

Annealing Suitable for Steels Generally Used by the State Railways (La ricottura di qualità che più giova agli acciai usati comunemente dalle FF. SS.), P. Forcella. Rivista Tecnica delle Ferrovie Italiane, vol. 25, no. 6, June 15, 1924, pp. 204-207, 17 figs. Discusses variation of mechanic and dynamic properties of 5 per cent nickel steels at annealing temperatures of 750 deg. to 1100 deg., also microstructural characteristics.

Annealing, Sheet Metal. Annealing of Plates Used in Electrical Construction (Le recuit des tôles utilisées dans la construction électrique), R. Cazaud. Revue de Métallurgie, vol. 21, no. 8, Aug. 1924, pp. 473-483, 18 figs. Requirements of thin sheets used in electric machines; effect of mechanical treatment on magnetic qualities; effect of temperature, silicon content, atmosphere, etc.

Automobile Parts. The Heat Treatment of Automobile Parts, J. M. Watson. Am. Soc. Steel Treating—Trans., vol. 6, no. 6, Dec. 1924, pp. 716-723 and (discussion) 723-727, 6 figs. Methods and heating equipment used in modern automobile factory; furnaces of automatic type especially designed to meet requirements of materials being heat treated; they are of oil-fired conveyor type.

Ball Bearings. See BEARINGS, BALL, Heat Treatment.

Brazed and Welded Steel. Some Effects of Brazing and Welding, H. C. Knerr. Forging—Stamping—Heat Treating, vol. 10, no. 1, Jan. 1924, pp. 33-37, 20 figs. Application of heat as in brazing and welding removes strength produced by cold working; effect of heat treatment on brazed and welded steel.

Carbon and High Speed Tools. Effect of Heat Treatment on the Cutting Capacity of High-Speed Steels (Influence du traitement thermique sur la capacité de coupe des aciers rapides), H. Pommerenke and R. Dewert. Revue de Métallurgie, vol. 21, no. 7, July 1924, pp. 371-395, 134 figs. Gives results of tests to find simple, rapid, and inexpensive method of hardness testing, based on tests with Herbert machine, including micrographic examination of structure.

Heat Treatment of Carbon and High-Speed Steel Tools, Jos. K. Wood. Am. Mach., vol. 61, no. 21, Nov. 20, 1924, pp. 791-793. Determining factors in development of metal-cutting tools; heat treatment for carbon-steel tools; compositions and heat treatment for high-speed steel tools.

Carburizing. Heat-treatment of Steel with Special Reference to Production, J. W. Urquhart. Machy. (Lond.), vol. 23, no. 596, Feb. 28, 1924, pp. 707-711, 4 figs. Carbon concentration and core condition; deep penetration; wasteful carburization; distortion factor; heating for quenching.

Practical Views on Carburizing, J. Sorenson. Fuels & Furnaces, vol. 2, no. 6, June 1924, pp. 583-584 and 587-588, 2 figs. Outlines the various thermal treatments in carburizing and results to be secured with each.

Case-Carburizing. See CASE-HARDENING.

Cast Steel. Heat-Treatment of Steel with Special Reference to Production, J. W. Urguhart. Machy. (Lond.), vol. 24, no. 616, July 17, 1924, pp. 497-499. Discusses steel castings, their heat treatment, annealing and its effects, correct furnace design, cracked castings.

Defects Caused by Errors in. Observations on Some Causes and Remedies for Defects in Steel With Special Reference to Practical Application of Heat Treatment, R. H. Harriss. S. African Instn. Engrs., vol. 23, no. 4, Nov. 1924, pp. 288-320, 47 figs. Starts from ingot and traces origin and cause of defects in steel brought about by errors in heat treatment and cooling in ingot stage.

Definitions. Comparison of Heat-Treatment Definitions. Mech. Eng., vol. 46, no. 7, July 1924, p. 435. Varying views held by committees of Am. Soc. Steel Treating, Soc. Automotive Engrs., and Am. Soc. Testing Matls.

Dies. Heat Treating High Speed Steel Dies, G. C. Davis. Forging—Stamping—Heat Treating, vol. 10, no. 9, Sept. 1924, pp. 360-362, 3 figs. Description of heat-treating department at plant of Gray & Davis, Inc., Cambridge, Mass. Heat treatment of high-speed steel blanking dies that do not readily lend themselves to grinding after treatment offer many difficult problems.

Heat-treatment of Steel with Special Reference to Production, J. W. Urquhart. Machy. (Lond.), vol. 24, nos. 612, 621, and 623, June 19, Aug. 21 and Sept. 4, 1924, pp. 361-362, 649-652 and 709-712. June 19: Quarter-elliptical automobile spring. Aug. 21: Treatment of die blocks; carburizing; hardening of mild steel dies. Sept. 4: Composite steel dies; best hardening procedure; rehardening.

Electric Furnaces. See ELECTRIC FURNACES, Heat-Treating.

Fatigue Resistance, Effect on. Experiments on the Fatigue of Steel, A. Ono. Kyushu Imperial Univ., College of Eng—Memoirs, vol. 3, no. 2, 1924, pp. 51-85, 21 figs. Deals with effect of heat treatment on fatigue resistance of steel, especially nickel-chrome steel. Results of fatigue, statical, and impact tests.

Fundamental Principles. Heat Treatment and Metallography of Steel, H. C. Knerr. Forging—Stamping—Heat Treating, vol. 10, nos. 9, 10, 11, and 12, Sept., Oct., Nov., and Dec., 1924, pp. 319-321, 385-392, 419-430, and 459-460, 44 figs. A practical course in elements of physical metallurgy. Basis of a series of lectures given by author in connection with course in heat treatment and metallography of steel at Temple Univ., Phila., Pa., under auspices of Phila. Chapter, Am. Soc. for Steel Treating.

Furnaces. See FURNACES, HEAT-TREATING.

Gear Blanks. Heat Treating Gear Blanks, R. L. Manier. Fuels & Furnaces, vol. 2, no. 2, Feb. 1924, pp. 161-163, 2 figs. Automatic proportioning system used in firing normalizing and carburizing furnaces at New Process Gear Corpn.

Hardening. A Shop Talk on Selective Hardening Methods. Can. Machy., vol. 31, no. 9, Feb. 28, 1924, pp. 23 and 36, 2 figs. Discusses methods available, viz., selective quenching, selective heating, and selective surface exposure.

Development of a Novel Cyanide Hardening Process, C. Ringstrom. Gas Age-Rec., vol. 53, no. 25, June 21, 1924, pp. 871-873, 3 figs. Describes new and economical process where use of proper fuel has proved necessary for complete success.

The Hardening of Steel, W. Rosenhain. Iron & Steel Inst.—Advance Paper no. 8, for meeting Sept. 1924, 17 pp., 9 figs. partly on supp. plate. Describes some of the outstanding phenomena connected with hardening and tempering of certain non-ferrous alloys, in order to show analogy which exists between these phenomena and well-known behavior of iron-carbon alloys, and considers its applicability to particular case of steel.

See also Annealing.

High-Speed Steel. See STEEL, HIGH-SPEED, Forging and Tempering; Hardening; Properties and Treatment.

Liquid Heating. Advantages of Uniformity in Heat Treatment, A. E. Bellis. Can. Machy., vol. 31, no. 4, Jan. 24, 1924, pp. 17-18, 4 figs. Notes on method of heat treating using a liquid heating medium; its advantages; possibilities of overcoming temperature troubles by using this method becoming more widely recognized.

Mild Steel. The Heat Treatment of Mild Steel, R. T. Rolfe. Metal Industry (Lond.), vol. 24, nos. 1, 2, and 3, Jan. 4, 11, and 18, 1924, pp. 9-10, 33-34, and 57-59, 10 figs. Structure of mild steel; need for heat treatment of mild steel; heat treating castings; mechanism of heat treatment; burnt steel; typical range of properties obtainable; heat-treating forgings; work hardening; breaking-down of pearlite; etc.

Motor-Truck Parts. System as Applied to the Control of Furnace Temperatures and Heat Treatment of Automobile Truck Parts, J. Sorenson. Am. Soc. for Steel Treating—Trans., vol. 6, no. 1, July 1924, pp. 77-83, 1 fig. Discusses adequate control system in inspecting raw materials and subsequent heat treatment of parts; accurate heat treatment, laboratory control in receiving of material and inspection of final product.

Nickel-Steel Carburization. Heat-treatment of Steel with Special Reference to Production, J. W. Urquhart. Machy. (Lond.), vol. 23, no. 595, Feb. 21, 1924, pp. 681-684, 4 figs. Carburization of nickel steels.

Permanent Magnets. Investigation of the Treatment of Steel for Permanent Magnets. R. L. Dowdell. Am. Soc. Steel Treating—Trans., vol. 5, no. 1, Jan. 1924, pp. 27-65, 17 figs. Deals with various treatments of tungsten, chromium, cobalt-chrome and miscellaneous magnet steels in order to give them greatest permanence; explains simple but accurate testing apparatus for bar magnets; compares new type of coercive force called open-circuit with usual coercive force; gives magnetic saturation curves, and natural and artificial aging curves for different treatments.

Piston Pins and Shackle Bolts. Individual Heat Treatment Will Improve Quality of Product, C. N. Dawes. Automotive Industries, vol. 50, no. 4, Jan. 24, 1924, p. 177, 2 figs. Special furnaces developed for handling of piston pins and shackle bolts make it possible to treat each part separately; specific requirements should determine furnace type used.

Practice. Heat-treated Steel, J. W. Urquhart. Mech. Wld., vol. 74, no. 1925, vol. 75, nos. 1931, 1936, 1938, 1944, 1950, and 1955, and vol. 76, nos. 1960, 1963, 1972, and 1973, Nov. 23, 1923, Jan. 4, Feb. 8, 22, Apr. 4, May 16, June 20, July 25, Aug. 15, Oct. 17 and 24, 1924, pp. 321-323, 5-7, 81-82, 117-118, 212-214, 311-312, 385-386, 57-58, 105-106, 252, and 267-268, 10 figs. General outline of present-day practice followed in work of conditioning steel before it can be used in construction of various productions of mechanical engineer, efficiency of which depends upon maximum tensile strength allied with minimum weight and bulk. Diagrammatic representation of steel structure; pearlite; magnetic susceptibility; temperature testings; limitation of magnetic control; dynamic versus static qualities; heat-treating operations; toughening steel.

Principles and Applications. See HEAT TREATING, Principles and Applications.

Problems. Heat-treatment of Steel with Special Reference to Production, J. W. Urquhart. Machy. (Lond.), vol. 23, no. 600, Mar. 27, 1924, pp. 832-835, 6 figs., and vol. 24, no. 608, May 22, 1924, pp. 230-233. Mar. 27: Machining difficulties with mild steels; difficulties resulting from high and deep carbon casings; typical case in carburizing steels; when double quench is necessary; micrographs; French and American high-temperature initial quenching; distinction between second quenching and hardening; destructive effect of excessive temperature; structure of carbon steel gears. May 22: Locomotive and car-axle treatments; mild treatment; production of unequal stresses; importance of reduction forging and steel selection for this work; quenching media; dynamic endurance and tensile strength; quenching of coreless pieces.

Problems of the Heat Treater as Influenced by the Pre-Natal History of the Material, P. E. McKinney. Am. Soc. for Steel Treating—Trans., vol. 6, no. 1, July 1924, pp. 51-65, 14 figs. Discusses melting and refining processes and suggests (1) classification of material based on character of service for which intended, without regard to composition, (2) establishment of recommended practices for production of ingot material, similar to heat treatment, (3) develop-

ment of methods for testing which will detect inherent defects.

Quenching. Effect of Repeated Quenching on Hardness, A. Katto. Forging—Stamping—Heat Treating, vol. 10, no. 3, Mar. 1924, pp. 126-129, 6 figs. Points out that many steels not sufficiently hardened after first quenching frequently develop cracks if quenching is repeated, due to excessive hardening.

Quenching Diagrams for Carbon Steels in Relation to Some Quenching Media for Heat Treatment, H. J. French and O. Z. Klopsch. Am. Soc. Steel Treating—Trans., vol. 6, no. 3, Sept. 1924, pp. 251-294, 22 figs. Gives quenching diagrams for carbon steels containing from 0.25 to 1.25 per cent carbon; in these are shown relations between Rockwell hardness, microstructure, thermal transformations and cooling velocity determined at 720 deg. cent.; general relations between quenching diagrams and various quenching media for heat treatment. Bibliography.

The Calculation of Quenching Stresses in Steel by Using Direct Measurements, T. McL. Jasper. Engineering, vol. 138, no. 3062, Sept. 5, 1924, pp. 343-344, 6 figs. Description of a method of determining quantitatively internal stresses set up by quenching, and distribution of these stresses in cross-section of a series of heat-treated bars, together with a discussion of their relative importance.

The Quenching Bath. Machy. (Lond.), vol. 23; no. 597, Mar. 6, 1924, pp. 741-742, 1 fig. Facts concerning rate of cooling; effect of specific heat of bath.

Railway Shops. Heat Treatment of Steel. Ry. Jl., vol. 30, no. 10, Oct. 1924, pp. 22-24, 3 figs. Deals with handling of different tools, heat treatment of same in tool-tempering room of Atchison, Topeka & Santa Fe shops at Topeka, Kan.

Rear-Axle Shafts. Special Equipment Used in Heat Treating Rear Axle Main Shafts, H. O. Lang. Fuels & Furnaces, vol. 2, no. 12, Dec. 1924, pp. 1241-1245, 6 figs. Describes complete unit for heating, quenching and drawing rear-axle main shafts.

Salt Baths. Salt Baths, S. Tour. Am. Soc. for Steel Treating—Trans., vol. 6, no. 2, Aug. 1924, pp. 171-186, 2 figs. See also Am. Mach., vol. 61, no 14, Oct. 2, 1924, pp. 525-529, 2 figs. Discusses reasons for employing liquid heating mediums; design of furnaces and containers for melting salt baths; gives tables of composition of salt mixtures, salt baths for carbon tool steels, alloy tool steels and high-speed steels, etc.

Salt Baths and Containers for Hardening, Sam Tour. Am. Soc. Steel Treating—Trans., vol. 5, no. 1, Jan. 1924, pp. 7-19 and (discussion) 19-26, 7 figs. Discusses salt baths for heating of steel tools and parts and gives simple method of desulphurizing salt bath; decarburizing effects of chloride salt baths at 1600 deg. fahr., upon materials being treated; photomicrographs of steels heated in various types of salt baths; principles in regard to design of furnaces.

Shop for. Modernizes Heat Treating Shop, E. F. Ross. Iron Trade Rev., vol. 74, no. 8, Feb. 21, 1924, pp. 541-545, 6 figs. Rochester gear manufacturer installs new high-temperature continuous automatic electric furnace for hardening high-speed gear-cutting tools.

Springs. Heat Treatment of Steel Springs, J. K. Wood. Am. Mach., vol. 61, no. 12, Sept. 18, 1924, pp. 443-446. Commercial considerations; general requirements for a spring; spring steels and their compositions; coiling, forming, and heat treating helical and leaf springs.

Heat-treatment of Steel Springs, J. W. Rockefeller, Jr. Machy. (N. Y.), vol. 31, no. 1, Sept. 1924, pp. 4-5, 2 figs. Factors that affect heat treatment; recommended heat treatments. Deals also with heat treatment for alloy steel springs.

Temperature Distribution. Temperature Distribution in Steel Bodies Heated at a Constant Heat Potential, E. J. Janitzky. Am. Soc. Steel Treating—Trans., vol. 6, no. 5, Nov. 1924, pp. 619-622, 1 fig. Contentions set forth in previous article, entitled Characteristics of Heating Curves (published in Feb. 1924 issue of Trans.) are extended to temperature distribution in steel bodies heated at constant heat potential.

Tempering. Kinetics of Tempering Process in Steel (Zur Kinetik der Anlassvorgänge im Stahl), W. Fraenkel and E. Heymann. Zeit. für anorganische u. allgemeine Chemie, vol. 134, no. 2-3, Apr. 8, 1924, pp. 137-171, 8 figs. Experiments following temper reactions of carbon steel plunged into water by measuring resistance and density, showing that speed of tempering between 78 deg. and 360 deg. depends very much on temperature, etc.

Modification of Oil Tempering Bath Makes It a Success, E. Ogur. Fuels & Furnaces, vol. 2, no. 7, July 1924, pp. 647-649, 3 figs. Electric heaters at bottom of bath did not heat oil uniformly. Oil is now pumped through cylinder where it is brought to temperature by electrically heated grids.

Theories. The Heat Treatment of Steel, F. B. Foley. Fuels & Furnaces, vol. 2, no. 9, Sept. 1924, pp. 889-920 and 925-936, 20 figs. A treatise presenting latest theories for changes occurring in steel during its heat treatment. Discusses crystal structure of steel, hardening, hot working, annealing of hot-worked steel, drawing, case-hardening, heat treatment of case-carburized parts, quenching media, furnaces, and pyrometry.

Turbine Blading. Heat Treatment of Nickel Steel Turbine Blading, Carlos Bean. Am. Soc. Nav. Engrs.—Jl., vol. 36, no. 3, Aug. 1924, pp. 494-512, 6 figs. Determination of critical temperature of nickel steel; electric furnace; forms of test specimens; results of various forms of heat treatment; method of forging blades.

Volume Changes During. The Changes of Volume of Steels During Heat Treatment, L. Aitchison and G. R. Woodvine. Iron & Steel Inst.—Advance Paper no. 1, for meeting Sept. 1924, 14 pp., 9 figs. Results of investigation to determine (1) whether lateral expansion and contraction of metal is equal to longitudinal, (2) whether any difference is produced in behavior of specimens cooled slowly in dilatometer as compared with those hardened in air outside instrument, and (3) effect of cooling steel from different temperatures.

STEEL, HIGH-SPEED

Akrit. Experience with Akrit (Erfahrungen mit "Akrit"), C. W. Drescher. Maschinenbau, vol. 3, no. 28, Nov. 27, 1924, pp. 1087-1089, 7 figs. Details of efficiency tests made with akrit steel, a kind of stellite steel; use in cutting tools.

Applications. Cast Steel, High-Speed Steel or Stellite? (Gussstahl, Schnellstahl oder Stellit?), Staufer. Maschinenbau, vol. 3, no. 28, Nov. 27, 1924, pp. 1079-1084, 6 figs. Discusses feeds and speeds, field of application of various steels, and lathe work.

Cast Tools. Casting High Speed Tools, J. M. Quinn. Iron Trade Rev., vol. 75, no. 3, Jan. 17, 1924, pp. 226-230, 6 figs. See also Automotive Industries, vol. 50, no. 1, Jan. 3, 1924, pp. 13-17. Methods and theories by two firms manufacturing tools cast to approximate size and shape; how properties of tools can be controlled.

Chromium in. The Nature of the Function of Chromium in High Speed Steel, E. C. Bain and

M. A. Grossmann. Am. Soc. Steel Treating—Trans., vol. 6, no. 4, Oct. 1924, pp. 430-442, 17 figs. Results of measurement of effect of heat treatment upon hardness, impact strength and volume change in case of four high-tungsten steels; data, in some measure, reveal function of chromium in high-speed steel; photomicrographs show principal structural changes responsible for effect of heat treatment upon properties.

Cobalt and Vanadium Additions. The Influence of Cobalt and Vanadium on the Properties of High-Speed Steel (Beitrag zur Kenntnis des Einflusses von Kobalt und Vanadin auf die Eigenschaften von Schnellarbeitsstahl), W. Oertel and F. Pölzguter. Stahl u. Eisen, vol. 44, no. 39, Sept. 25, 1924, pp. 1165-1169, 14 figs. partly on supp. plate. Performance tests with high-speed tool steels alloyed with tungtesn and molybdenum; influence of tungsten and vanadium; tests with annealed chisels; hardness tests; melting points; investigation of structure.

Cutting-Tool. Influence of Ledeburite Structural Elements in the Production and Treatment of Cutting Steels (Der Einfluss der ledeburitischen Gefügebestandteile bei der Erzeugung und Behandlung von Dreh- und Schnittstählen), F. Rapatz. Berichte der Fachausschüsse des Vereins deutscher Eisenhüttenleute (Werkstoffausschuss), no. 41, Apr. 4, 1924, 7 pp., 13 figs. See also Stahl u. Eisen, vol. 44, no. 38, Sept. 18, 1924, pp. 1133-1138, 2 figs. Details of ledeburite steels, composition and size of net structure, decrease of hardening capacity by overloading with alloy metals, effect of velocity of solidification, etc.

Forging and Tempering. Forging and Tempering High-Speed and Carbon Tool Steels. Ry. Rev., vol. 75, no. 8, Aug. 23, 1924, pp. 282-283. Tool standards of Atchison, Topeka & Santa Fe Ry. are maintained by instructions in regard to proper methods for various classes of work.

Hardening. Difficulties in Hardening High-speed Steel. Machy. (Lond.), vol. 31, no. 630, Oct. 23, 1924, pp. 102-103, 1 fig. Experiments indicate that mere heating of some makes of high-speed steel to certain temperatures, and cooling, will not harden them; and that some steels will remain soft when heated to so-called hardening temperature in presence of CO gas and cooled in oil.

Hardness, Brinell and Rockwell. Comparison of Brinell and Rockwell Hardness of Hardened High Speed Steel, S. C. Spalding. Am. Soc. Steel Treating—Trans., vol. 6, no. 4, Oct. 1924, pp. 499-504, 6 figs. Steels were treated under varying temperatures and both Rockwell and Brinell hardness numbers were obtained; these are tabulated and shown in accompanying curves.

Nature of. On the Nature of High-Speed Steel, M. A. Grossmann and E. C. Bain. Iron & Steel Inst.—Advance Paper no. 6, for meeting Sept. 1924, 24 pp., 23 figs. partly on supp. plates. Account of physical phenomena occurring in high-speed steel from time of casting homogeneous melt to production of hardened tools, so far as changes in nature, amounts, and distributions of well-known constituents of such steels are concerned.

Properties and Treatment. High Speed Steel, A. R. Page. Birmingham Met. Soc.—Jl., vol. 8, no. 10, pp. 447-463 and (discussion) 463-468, 14 figs. partly on supp. plate. Composition; theory of high-speed steel; microstructure; heat treatment; testing.

High-Speed Steels and Cutting Steels (Schnellstahl und Schneidmetall), F. Rapatz. Maschinenbau, vol. 3, no. 28, Nov. 27, 1924, pp. 1076-1078, 5 figs. Discusses properties, hardness, resistance and toughness, structure of hardened steels, etc.

STEEL INDUSTRY

Canada. See IRON AND STEEL, Canadian Industry; IRON INDUSTRY, Canada.

Nova Scotia. See COAL INDUSTRY, Nova Scotia.

Power in. See IRON INDUSTRY, Power in.

Sheet Steel. Sheet Steel Industry, W. S. Horner. Blast Furnace & Steel Plant, vol. 12, no. 7, July 1924, pp. 319-325. Address of president of Nat. Assn. Sheet and Tin Plate Mfrs. before second annual meeting of sheet steel executives at White Sulphur Springs, W. Va., May 13, 1924.

U. S. Steel Corpn., 1923. Prosperous Year of U. S. Steel Corporation. Iron Age, vol. 113, no. 13, Mar. 27, 1924, pp. 937-940, 1 fig. See also Iron Trade Rev., vol. 74, no. 13, Mar. 27, 1924, pp. 843-845. Company's 22d annual report shows large increase in production and earnings; heavier payroll and larger number of employees. Part of report dealing with subject of employees and wages.

Western States. Steel Industry Expands on Coast, Don Partridge. Iron Trade Rev., vol. 74, no. 1, Jan. 3, 1924, pp. 40-44, 7 figs. Demand for finished products for export during war and inability of eastern mills to supply material created incentive to produce steel in western states; local market absorbs output.

STEEL MANUFACTURE

Acid Bessemer. Acid Bessemer Practice in Sweden. Iron Age, vol. 114, no. 11, Sept. 11, 1924, pp. 637-638, 4 figs. Process carried out without final additions; converters distinctly unique; heat balance and composition of iron and steel. Abstract from article by R. von Seth in Jernkontorets Annaler, no. 1, 1924.

Acid Charge, Sulphur Content of. The Sulphur Content of the Acid Charge, J. H. Whiteley. West of Scotland Iron & Steel Inst.—Jl., vol. 31, part 3, Dec. 1923, pp. 42-47 and (discussion) 48-51. Notes relating to its variability during the process.

Alabama. Steel Making in Alabama, Jas. Bowron. Min. & Metallurgy, vol. 5, no. 215, Nov. 1924, pp. 522-525. History of development; first successful steel made in 1890; first successful steel plant; other developments.

Alloy Steel. Manufacturing and Heat Treating Alloy Steel, M. A. Grossmann. Iron Trade Rev., vol. 75, nos. 3 and 4, July 17 and 24, 1924, pp. 168-172 and 215-218, 9 figs. July 17: Development of alloyed steel industry, uses of alloy steels, and manufacturing methods. July 24: Factors influencing heat treatment.

Austria. Böhler Steel, H. Obermeyer and A. L. Greene. Blast Furnace & Steel Plant, vol. 12, no. 6, June 1924, pp. 281-284, 4 figs. Practice and equipment of steel works of Böhler Bros. & Co. in Austria.

Basic. Examination of Metallurgical Processes in the Basic Process According to the Flame Gases (Beurteilung der metallurgischen Prozesse beim Thomasverfahren nach den Flammengasen), G. Bulle. Stahl u. Eisen, vol. 44, no. 1, Jan. 3, 1924, pp. 9-11 and (discussion) 11-14, 8 figs. Flame gases in open-hearth and basic processes; practical examples with Thomas converter; conclusions; measuring device.

Basic Open-Hearth. See STEEL, Oxygen and Red Shortness.

Basic Steel, Metal-Mixer Practice for. Metal Mixer Practice and Basic Steel Making, T. P. Colclough. Chem. Age (Lond.), vol. 10, no. 246, Mar. 1, 1924, pp. 18-19. Advantages derived from use of mixer. Used as preliminary refining furnaces, limestone, and oxide of iron, in form of iron ore or tap cinder, being charged as required, and in this way a large proportion of

impurities is removed; effects of this purification of pig iron on operation of open-hearth furnaces.

Bessemer and Basic Processes. An Investigation of the Bessemer and Basic Processes (En studie över bessemer- och thomasprocesserna), R. von Seth. Jernkontorets Annaler, vol. 108, no. 1, 1924, pp. 1-93, 45 figs. Chemical transformations, heat generation and absorption, and temperature variations during both processes are carefully studied and recorded in numerous tables and diagrams.

Blast-Furnace Process. Effect of Sulfur on Blast-furnace Process, T. L. Joseph. Am. Inst. Min. & Met. Engrs.—Trans., Advance Paper no. 1374-S, Sept. 1924, 11 pp., 3 figs. Points out distribution of this impurity in blast-furnace materials and indicates how its presence alters composition, quantity, and free-running or critical temperature of slag, and relation between these factors, fuel economy, and cost of iron. Pub. by permission U. S. Bur. Mines.

Blast Furnaces. See BLAST FURNACES.

Chemical Dissociation. Importance of Dissociation of Chemical Compounds in Steel Making, J. Kent Smith. Chem. & Met. Eng., vol. 30, no. 2, Jan. 14, 1924, pp. 49-50. Observations on use of carbonless alloys for introducing alloying metal into steel show significance of chemical dissociation to metallurgists.

Cost and Practice Chart. The A. I. and S. E. E. Iron and Steel Cost and Practice Chart. Iron & Steel Engr., vol. 1, no. 3, Mar. 1924, supp. loose folder containing cost data on coke ovens, blast furnaces, open hearth, blooming mill and electric power, compiled by B. R. Shover.

Electric and Open-Hearth Processes. Quality of Electric and Open-Hearth Steels, B. E. L. de Maré. Iron Age, vol. 113, no. 5, Jan. 31, 1924, pp. 379-381. Metallurgical conditions during settling-up period compared; basic and acid slags; factors favoring clean steel.

Electric-Furnace. Progress in the Production of Electric Steel (Die Fortschritte der Elektrostahlerzeugung), F. Sommer. Berichte der Fachausschüsse des Vereins deutscher Eisenhüttenleute, Stahlwerksausschuss, report no. 77, Jan. 30, 1924, 18 pp. including discussion. Statistical data; arc and induction furnaces; economic and metallurgical advantages.

See also ELECTRIC FURNACES, Acid; Steel.

High-Quality Steel. Fundamentals Essential to Improved Quality Steel Production, Em. Gathmann. Am. Soc. Steel Treating—Trans., vol. 5, no. 2, Feb. 1924, pp. 158-168, 4 figs. Fundamentals essential to high-quality steel production and certain improved ingot molds and appliances, whereby tonnage production of sound steel has been made possible and practicable; in author's belief, one of fundamentals is use of big-end-up or inverted pyramidal ingot, in combination with other fundamental practice as described in detail.

Molybdenum as Deoxidizer. See MOLYBDENUM, Deoxidizer, Use as.

Open-Hearth-Furnace. Absorption of Sulfur from Producer Gas in Open-hearth Furnaces, J. H. Nead. Am. Inst. Min. & Met. Engrs.—Trans., no. 1298-S, Feb. 1924, 10 pp., 2 figs. Results obtained from two Armco ingot-iron heats; absorption occurs during melting-down stage.

Ordnance Steel. Making Steel for Ordnance Use, J. B. Rhodes. Iron Trade Rev., vol. 74, no. 22, May 29, 1924, pp. 1429-1430 and 1433. Points out that reduction of iron oxide to minimum is essential; sulphur and phosphorus should be eliminated; steel quality affected by slag; shop-practice instructions are suggested. (Abstract.) Paper presented before Am. Iron & Steel Inst. See also Forging—Stamping—Heat Treating, vol. 10, no. 10, Oct. 1924, pp. 380-383.

Rate of Cooling in Ingot Molds. Effect on Steel of Variations in Rate of Cooling in Ingot Molds, W. J. Priestley. Am. Instn. Min. & Met. Engrs.—Trans., no. 1236-S, Feb. 1924, 56 pp., 49 figs. Shows, by practical experiments, how rate of cooling steel in mold governs ingotism, segregation, formation of dendrites, and distribution of intergranular material, and resulting effect these conditions have on physical qualities of steel before annealing, after annealing, and after forging. How structure of steel is affected by design of mold and method of pouring.

Thomas Process. The Future of the Thomas Process (Vue sur l'avenir technique du procédé Thomas), M. Platon. Revue de Métallurgie, vol. 21, no. 10, Oct. 1924, pp. 628-633. Comparison of quality of open-hearth and Thomas steels; discusses oxygen in steels, difficulties of Thomas operation, and bettering of blowing arrangements.

STEEL WORKS

Bethlehem, Pa. Brief Description of the Bethlehem Steel Co.'s Plant. Min. & Metallurgy, vol. 5, no. 208, Apr. 1924, pp. 168-171, 4 figs. Divisions of plant; railroad facilities; power plants; blast-furnace department; open-hearth and bessemer departments; rolling mills, foundries and forge departments; machine shops, etc.; products of plant.

Blast-Furnace Gas Utilization. The Importance of Blast Furnace Gas for the Heat Economy of British Iron and Steel Works, R. Herzfeld. Eng. Progress, vol. 5, no. 7, July 1924, pp. 121-127, 3 figs. Discusses use in Cowpers, by hoists and bells, by blowing engines, and balance available for power; cleaning of blast-furnace gas; use of gas engines for generating blast; etc.

See also BLAST-FURNACE GAS, Steel Works.

Boiler Plants. See BOILER PLANTS, Iron and Steel Industry.

Central-Station Power for. Power Service for the Steel Industry in the Pittsburgh District, Chas. R. Riker. Elec. Jl., vol. 21, no. 9, Sept. 1924, pp. 442-445. Review of existing and potential relationship between central-station companies and steel industry.

Coal-Dust Firing in. See COAL DUST, Firing with.

Cold-Drawing Plants. Operates New Cold Drawing Plant, J. D. Knox. Iron Trade Rev., vol. 75, no. 7, Aug. 14, 1924, pp. 423-427, 8 figs. Modern works of Anchor Drawn Steel Co., at Latrobe, Pa., 38 miles east of Pittsburgh. Various departments are laid out for straight-line production; primary annealing of coils is executed in gas-fired lead pots; description of cold-drawing process.

Developments, 1923. Increase Mill Capacity in 1923, John D. Knox. Iron Trade Rev., vol. 74, no. 1, Jan. 3, 1924, pp. 50-53. Decline in open-hearth-furnace which began six years ago, is checked; sheet and strip mills lead in construction of new rolling units; extensive additions proposed.

Electric Drive. Electricity's Contribution to the Steel Industry, K. A. Pauly. Am. Inst. Elec. Engrs.—Jl., vol. 43, no. 9, Sept. 1924, pp. 831-839, 4 figs. Outline of processes involved in production of steel, followed by a discussion of characteristics of the various rolling mills and types of motors used to drive them. Considerations affecting choice of frequency. Author believes that greatest contribution of electricity to steel industry is providing a means for economically using waste gases from blast furnaces. Points out importance, as a conservation measure, of utilization of blast-furnace gas and other sources of by-product power.

Electrification of Tata Iron Works at Jamshedpur, India, S. Ghosh. Iron & Steel Engr., vol.

1, no. 10, Oct. 1924, pp. 545-552, 30 figs. Details of electrical machinery and equipment installed.

Electrifying Ten-Inch Merchant Mill, M. J. Wohlgemuth and M. H. Morgan, Jr. Elec. Wld., vol. 84, no. 10, Sept. 6, 1924, pp. 465-468, 6 figs. How electric drive replaces engine drive at McKeesport, Pa., works of Firth-Sterling Steel Co., to produce cutlery without marking and without reheating. Details of installation and control.

Inland Steel Electrically Operated, F. J. Crolius. Blast Furnace & Steep Plant, vol. 12, nos. 2 and 3, Feb. and Mar. 1924, pp. 90-93 and 142-147, 8 figs. Feb.: By-product coke plant and replacement of steam-driven units by electrical equipment at Indiana Harbor plant of Inland Steel Co. Mar.: Elecrtrical equipment in various departments of the two plants.

Electric Power Stations for, Automatic. Automatic Electric Stations for Steel Mills, C. Lichtenberg. Iron & Steel Engr., vol. 1, no. 5, May 1924, pp. 252-256, 6 figs. Review indicating briefly operation of a typical automatic station and application of some of the equipments. Mentions several unique designs which are especially adapted for steel-mill service.

Electrical Equipment. Electrical Engineering as a Leading Factor in the Development of Modern Steelworks, W. Geyer. Iron & Coal Trades Rev., vol. 109, no. 2943, July 25, 1924, pp. 153-154. Discusses electric motors, cranes and transporters, auxiliary machines; power production, compressed-air supply, rolling mills, steel production in electric furnaces. Abstract of paper read before World Power Conference.

The Rehabilitation of Steel Mills, J. M. Moore and H. M. McLain. Elec. Jl., vol. 21, no. 9, Sept. 1924, pp. 424-427, 7 figs. Points out advantages of electrification and necessity for formulating definite plan for rehabilitation of existing plant equipment.

Fuel Economy in. See FUEL ECONOMY, Steel Works.

Furnaces. See FURNACES.

Gas Engines in. See GAS ENGINES, Steel Works.

Granite City, Ill. Expanding from Kitchen Ware to Ingots, G. L. Lacher. Iron Age, vol. 113, no. 11, Mar. 13, 1924, pp. 773-778, 8 figs. Latest additions to Granite City works of Nat. Enameling & Stamping Co. include plate mill, regenerative-type slab-heating furnace and large sheet plant.

Interconnection. See CENTRAL STATIONS, Interconnection with Steel Mills.

Italy. The Lombardi Iron and Steel Works. Iron & Coal Trades Rev., vol. 108, no. 2915, Jan. 11, 1924, pp. 50-51, 19 figs. partly on pp. 61-64. Describes Sesto San Giovanni, Milan, Vobarno, and Dongo works of Società Anonima Acciaierie e Ferriere Lombarde. See also description of Sesto San Giovanni works in Foundry Trade Jl., vol. 29, no. 388, Jan. 24, 1924, pp. 71-74, 5 figs.

Works of Acciaierie Elettriche Cogne Girod in Aosta (Gli stabilimenti della Soc. Anonima "Acciaierie Elettriche Cogne Girod," Aosta), F. Giolitti. Metallurgia Italiana, vol. 16, no. 10, Oct. 1924, pp. 438-445, 10 figs. partly on supp. plates. Details of Heroult furnaces, rolling-mill equipment, gas heating furnaces, annealing furnace, and other equipment.

Works of Ansaldo Cogne Company, Aosta (Notizie sugli impianti della Soc. Anonima "Ansaldo Cogne" in Valle di Aosta), G. Brezzi. Metallurgia Italiana, vol. 16, no. 10, Oct. 1924, pp. 431-438, 8 figs. Details of mines and mining operations, hydroelectric plants, and electric steel works and its equipment.

Lighting. Steel Works Lighting, D. W. Blakeslee. Iron & Stel Engr., vol. 1, no. 3, Mar. 1924, pp. 111-115. Design, installation, and maintenance of lighting systems in steel and iron works.

Lubrication in. Lubrication in the Steel Industry. Lubrication, vol. 10, nos. 5 and 7, May and July 1924, pp. 49-60 and 73-84, 37 figs. May: Discusses lubrication of equipment employed in smelting and refining, viz., blast furnace, mixer, Bessemer converters, open-hearth furnaces, and electric furnace. July: Soaking pits, rolling mills, lubrication, accessory equipment, and power equipment.

Motors for. See ELECTRIC MOTORS, A.C., Synchronous.

Oil Reclamation in. See LUBRICATING OILS, Reclamation.

Open-Hearth, Car Upkeep. Reducing Open Hearth Car Upkeep, C. L. Newby. Blast Furnace & Steel Plant, vol. 12, no. 7, July 1924, pp. 331-333, 7 figs. Anti-friction bearings now an important factor in production.

Open-Hearth Furnaces. See OPEN-HEARTH FURNACES.

Operation Problems. Problems of Steel Mill Operation, A. J. Whitcomb. Industrial Engr., vol. 82, no. 9, Sept. 1924, pp. 408-416, 456 and 457, 25 figs. Involves use of electrical and mechanical power-drive equipment, together with tendencies in power generation, distribution and application.

Pig-Iron Mixer. Thermal Study of a Cylindrical Pig-Iron Mixer (Etude thermique d'un mélangeur), J. Welter. Chaleur & Industrie, vol. 5, no. 47, Mar. 1924, pp. 105-109, 3 figs. Results of study carried out at large steel works in the Saar during 1922, following temperature losses of pig iron from tap hole to converter; knowing exact temperature of pig before entering and after leaving mixer, attempt was made to assemble for given period all elements influencing thermal state of this apparatus, and to construct thermal balance showing relative value of diverse factors.

Power Organization. Power Organization in the Steel Industry, B. Bannister and F. M. van Deventer. Mech. Eng., vol. 46, no. 5, May 1924, pp. 248-250. Author shows by comparison that value of fuels used and complexity of problems incident to operation of power system of representative steel works are of greater magnitude than for representative central station; these facts warrant existence of highly qualified organization for steel company in nature of power department; description of such organization and enumeration of benefits which should result.

Power Plant. See STEAM POWER PLANTS, Steel Works.

Rolling Mills. See ROLLING MILLS.

Sweden. Bofors.—The Famous Swedish Steel Works. Forging—Stamping—Heat Treating, vol. 10, no. 3, Mar. 1924, pp. 119-121, 7 figs. Details of Bofors work, founded in 1646, for making fine steel and guns; includes two blast furnaces, steel works with 3 open-hearth furnaces, rolling mills, steel foundry, pig-iron and brass foundry, laboratory and testing department, pressing and forging departments, machine shops, etc.

Sweden's Largest Industrial Company, A. B. Sloane. Iron Age, vol. 114, no. 13, Sept. 26, 1924, pp. 751-754, 9 figs. Stora Kopparbergs Bergslags Aktiebolag (Big Copper Mountain's Min. Co.), abbreviated "Bergslaget," world's oldest enterprise, was organized in thirteenth century and includes a dozen of the leading indus-

tries of Sweden. Extent of company's activities and welfare work.

Temperature Control. See PYROMETRY, Steel-Works.

STELLITE

[See also IRON ALLOYS, Stellite and Similar.]

Properties. The Hard Metal "Stellite" (Das Hartmetall "Stellit"), A. Märkle. Maschinenbau, vol. 3, no. 28, Nov. 27, 1924, pp. 1078-1079. Discusses principal properties, proper treatment, working, uses, and production of tools and their efficiency.

Tools. See TOOLS, Stellite.

STEREOAUTOGRAPHS. See MAPPING, France.

STEREOPHOTOGRAPHY. See MAPPING, Aerial.

STEREOPLANIGRAPH. See SURVEYING, Photographic.

STEREOPTICONS

Lantern Slides. See LANTERN SLIDES.

STEREOTOPOGRAPHY. See SURVEYING, Stereotopography.

STERILIZERS

Hospital. Sterilizers, E. W. Riesbeck. Domestic Eng. (Chicago), vol. 106, no. 12, Mar. 22, 1924, pp. 27-32, 4 figs. Operating principles, connections, etc., of utensil, instrument, water, dressing, and bed-pan sterilizers used in hospitals.

STETHOSCOPES

Electrical. "The Stethophone," An Electrical Stethoscope, H. A. Frederick and H. F. Dodge. Bell System Technical Jl., vol. 3, no. 4, Oct. 1924, pp. 531-549, 11 figs. Acoustic stethoscopes; early development of electrical stethoscope; description and summary of applications and limitations of a new form of electrical stethoscope.

STOKERS

Automatic. Mechanical Automatic Stokers. Southern Engr., vol. 40, no. 5, Jan. 1924, pp. 74-83, 23 figs. Necessity of mechanical stoker from standpoint of capacity and economy; several types of stokers.

Automatic Kiln. Further Development of an Automatic Kiln Stoker, J. D. Martin. Am. Ceramic Soc.—Jl., vol. 7, no. 12, Dec. 1924, pp. 878-884 and (discussion) 884-888. Describes practical experiences with stoker installation and savings effected; low grade of coal is burned in stoker.

Control of. The Control of Power Production, Chas. L. Hubbard. Factory, vol. 33, no. 5, Nov. 1924, pp. 667-670, 688, 692, and 696, 17 figs. Stokers and forced-draft equipment.

Developments. Activity in Stoker Field Shows Results, Jos. G. Worker. Power Plant Eng., vol. 28, no. 23, Dec. 1, 1924, pp. 1196-1198, 5 figs. Use of longer stokers and water walls have increased boiler output; better heat utilization shown.

Early History of. The Early History of Mechanical Stoking, D. Brownlie. Combustion, vol. 10, nos. 1 and 5, and vol. 11, no. 3, Jan., May, and Sept. 1924, pp. 41-47, 342-346, and 202-206, 17 figs. Jan.: Discussion of developments prior to James Watt's patents of 1785. May: James Watt's smoke preventer of 1785, first embryonic mechanical stoker. Sept.: Period to 1816 including work of Robertsons, Tindall, Hawkins and Dawson, and Gregson.

Efficiency, Computation of. Computing Guaranteed Stoker Efficiency, H. F. Gauss. Power, vol. 59, nos. 21 and 22, May 20 and 27, 1924, pp. 813-815 and 858-860, 4 figs. May 20: Computing stoker efficiency for given fuel, with discussion of various factors entering into problem; typical examples and convenient charts to facilitate work. May 27: Deals with unaccountable losses, moisture in coal, available hydrogen content, and combustible matter in ash.

Electric Drive for. Motors and Control for Stoker Drive, R. Kelly. Elec. Jl., vol. 21, no. 5, May 1924, pp. 221-224, 7 figs. Discusses factors in selection of motors and control equipment.

What Type of Stoker Drive Should Be Used? Power Plant Eng., vol. 28, no. 7, Apr. 1, 1924, pp. 374-377, 4 figs. Relative advantages of engine, turbine, a.c. and d.c. motor drives.

Hand. Hand Stokers Reduce Operating Labor. Power Plant Eng., vol. 28, no. 1, Jan. 1, 1924, pp. 47-49, 9 figs. Field of application; general description of action; details of construction of different makes.

Lubrication of. Lubrication of the Automatic Stoker. Lubrication, vol. 10, no. 8, Aug. 1924, pp. 85-96, 11 figs. Discusses types of stokers, stoker drives, stoker lubrication and construction, design, and operating features involved.

Planning Installations. Planning Modern Stoker Installations, Jos. G. Worker. Blast Furnace & Steel Plant, vol. 10, no. 12, Dec. 1924, pp. 559-561, 7 figs. Résumé and analysis of combustion problem; includes review of modern stoker installations.

Savings with Small Boilers. Mechanical Stoker Savings with Small Boilers, R. June. Power House, vol. 17, no. 16, Aug. 20, 1924, pp. 23-24, 2 figs. Reduction in costs of producing steam, increase in efficiency and availability of cheaper grades of fuel, among factors which prove installation economical.

Speed Control. Drive and Speed Control of Mechanical Stokers. Power Plant Eng., vol. 28, no. 1, Jan. 1, 1924, pp. 52-55, 8 figs. Speed-controlling devices are often actuated by air-supply mechanism to give correct proportioning of air to fuel.

Steam Engine as Drive. The Steam Engine as a Stoker Drive. Power Plant Eng., vol. 28, no. 19, Oct. 1, 1924, pp. 1000-1002, 4 figs. Slow speed, continuous range and automatic torque-speed adjustment are among desirable characteristics.

Types. Mechanical Stokers for the Power Plant. Power Plant Eng., vol. 28, no. 1, Jan. 1, 1924, pp. 56-62, 24 figs. Descriptions of stoker types which meet requirements of present-day steam production.

See also BOILER FURNACES, Design.

Underfeed. How the Modern Underfeed Stoker Works, and Why, Jos. G. Worker. Coal Age, vol. 25, no. 10, Mar. 6, 1924, pp. 347-349, 5 figs. See also Combustion, vol. 10, no. 3, Mar. 1924, pp. 206-208, 4 figs. Number of underfeed stokers has increased rapidly; what special features in design have been introduced for burning Western coals; progress of ash in fire must be given serious consideration. (Abstract.) Paper read before Chicago Section, A. S. M. E.

How to Regulate Underfeed Stokers, J. E. Richardson. Power, vol. 60, no. 11, Sept. 9, 1924, pp. 401-402, 1 fig. Practical points on reducing combustible in ash, balancing stack loss against ashpit loss, proper speed for clinker grinders and other conditions bearing on efficiency of combustion.

Underfeed Stokers, J. G. Worker. Refrig. Eng., vol. 10, no. 8, Feb. 1924, pp. 295-304 and (discussion) 304-305 and 309, 21 figs. Description of some types (both multiple- and single-retort)

now being used in United States; performance and coal conditions; height to set boilers.

Underfeed Stokers and Economy in Coal, Jos. G. Worker. Mgmt. & Adminstration, vol. 7, no. 3, Mar. 1924, pp. 287-290, 7 figs. Development, operating principles, and applications to power production. (Abstract.) Address before Chicago Section of A. S. M. E.

Water-Tube and Cylindrical Boilers. Mechanical Stokers and Boiler Furnaces. Eng. & Boiler House Rev., vol. 37, no. 11, June 1924, 18 pp. between pp. 397-422, 19 figs. Notes on present-day practice describing some leading types in use for water-tube and cylindrical boilers.

STONE, CRUSHED

Industry, Electricity Applications in. The Application of Electricity in the Crushed Stone Industry, E. W. Pilgrim. Rock Products, vol. 27, no. 5, Mar. 8, 1924, pp. 83-86, 5 figs. Application to lighting, conveyors, crushers, quarry machines and transportation.

STORAGE BATTERIES

Cadmium Testing of. Cadmium Testing of Storage Batteries. Power Engr., vol. 19, no. 217, Apr. 1924, pp. 143-144. Explanation of reasons for and practice of cadmium testing.

Central Stations. Semi-Automatic Storage Battery Installation (Une installation semi-automatique de batterie d'accumulateurs), V. Candie. Revue Générale de l'Electricité, vol. 15, no. 25, June 21, 1924, pp. 1166-1169, 7 figs. Describes storage-battery plant of Société du Gaz of Nice for peak load during certain hours in winter, capacity 10,000 a.h.; details of arrangement and operation.

Charging. Battery Charging with Rectigon Rectifiers, E. W. Breisch. Elec. Jl., vol. 21, no. 4, Apr. 1924, pp. 155-159, 10 figs. Describes rectigon bulb and transformers; operation; describes portable and public-garage rectigons.

Charging Devices for Storage Batteries (Ladevorrichtungen für Akkumulatoren), R. Schwabe. Elektrotechnischer Anzeiger, vol. 41, nos. 84 and 85-86, May 24 and 28, 1924, pp. 425-428 and 433-435, 15 figs. Describes various types of apparatus for d.c. charging and rectifiers for a.c. made by Werner, Hydra Works, AEG.

Charging Equipment. Electric Truck Battery Charging Equipment, O. Sarvas. Elec. Jl., vol. 21, no. 4, Apr. 1924, pp. 136-139, 8 figs. Discusses battery equipment for industrial trucks, street trucks, and locomotives.

Drive for Vehicles. Storage Batteries for Economic Drive of Vehicles (Der elektrische Speicher als wirtschaftliche Antriebsquelle für Fahrzeuge), H. R. Müller. Fördertechnik u. Frachtverkehr, vol. 17, no. 22, Nov. 18, 1924, pp. 307-312, 14 figs. Use of storage batteries for driving locomotives and other track vehicles of large and small size, and for driving trackless vehicles of all kinds.

Edison. Maintaining Edison Car Lighting Batteries. Ry. Elec. Engr., vol. 15, no. 8, Aug. 1924, pp. 253-254, 6 figs. Methods used on Union Pacific are highly effective and labor required is reduced to minimum.

Electrolytes. Effect of Certain Impurities in Storage Battery Electrolytes, G. W. Vinal and F. W. Altrup. Am. Inst. Elec. Engrs.—Jl., vol. 43, no. 4, Apr. 1924, pp. 313-320, 12 figs. Extension of work carried out at Bur. of Standards where new method for measuring rate of sulphation of storage-battery plates was devised, consisting of periodic weighings of plates suspended in electrolyte; results of experiments indicate that reactions of manganese compounds in battery are somewhat different from previously accepted theories.

Grid Casting. See CASTING, Lead Alloys.

Improvements. Electric Storage Batteries According to Recent Patents (Les accumulateurs électriques d'après les brevets récents), L. Jumau. Revue Générale de l'Electricité, vol. 16, nos. 20 and 21, Nov. 15 and 22, 1924, pp. 790-798 and 827-836, 44 figs. Discusses lead storage batteries, dealing with electrodes, active mass, accessories and mounting. Reviews improvements in iron-nickel and other batteries. Describes various new applications of storage batteries.

Lead. Lead Storage Batteries without Sulphate (Accumulateur au plomb insulfatable), Ch. Féry. Académie des Sciences—Comptes Rendus, vol. 179, no. 21, Nov. 24, 1924, pp. 1153-1156, 1 fig. Proves by reversible reaction of lead accumulators that no lead sulphate is formed. Particulars of new battery retaining 83 per cent of charge after four months.

Maintenance and Operation. See RAILWAY SIGNALING, Storage-Battery Maintenance and Operation.

Mine-Locomotive. How to Proportion a Locomotive Storage Battery, B. B. Minnium. Modern Min., vol. 1, no. 4, Nov. 1924, pp. 101-103. Detailed explanation of method used in approximating size of battery necessary to perform certain amount of work.

Rectifiers. See RECTIFIERS.

STREAM FLOW

Measurement. Records of Stream Flow and Methods of Obtaining Them, C. C. Covert. Assn. Chinese & Am. Engrs.—Jl., vol. 5, no. 6, June 1924, pp. 1-8, 9 figs. Discusses location of gaging stations, types of gages, making discharge measurement, measuring small stream, obtaining winter record.

Using Observations Made with Movable Barrage Dams for Determining the Supply Diagram (Utilisation des Observations faites aux Barrages à Fermettes pour la détermination du diagramme des débits), F. Charles. Revue Universelle des Mines, vol. 3, no. 1, series 7, July 1, 1924, pp. 26-34, 11 figs. Applies this method for determining flow of River Meuse.

STREAM POLLUTION

Control. Progress Report on Agencies for the Control of Pollution by Industrial Wastes. Am. Water Wks. Assn.—Jl., vol. 11, no. 3, May 1924, pp. 628-648. State and federal authorities on stream pollution control; joint undertakings along sanitary lines, within separate states; European boards for control of stream pollution; international aspects of problem of pollution of waters; conferences on industrial wastes pollution; legislation.

Effects on Stream Life. Effects of Sewage and Various Trades Wastes on Stream Life, W. Rushton. Surveyors & Mun. & County Engr., vol. 65, no. 1673, Feb. 8, 1924, pp. 179-181. Life contents of a stream; how sewage affects a stream; effects of distillery wastes, and jam works, tinplate works, paper mill, and gasworks effluents.

Industrial Wastes. Conference on Pollution of Streams, Especially with Reference to Pollution Due to Industrial Waste. Engrs. & Eng., vol. 41, nos. 1, 2, and 3, Jan., Feb., and Mar. 1924, pp. 11-17, 40-50, and 74-87. Held at Engrs. Club of Phila., Oct. 16, 1923. Contains following papers: Government Control of Pollution, C. A. Emerson, Jr.; Stream Line Filters, G. W. Fuller; Stream Pollution as Affecting Navigation, F. C. Boggs; Industrial Wastes in Relation to Water Supply, A. L. Fales; Coal Mine Drainage Contamination of Water Supplies, J. W. Ledoux; Effect of Pollution on Oyster Industry, C. E. Wheeler.

Recovering Pickling Acid Waste, R. M. Crawford. Iron Trade Rev., vol. 75, no. 15, Oct. 9, 1924, p. 948. Recovery of copperas from waste sulphuric acid pickling solutions, as a means for preventing pollutions of streams by pickle wastes, unattractive because unprofitable. Calcining to iron oxide yields blast-furnace material. Why pickling solution prevents streams from oxidizing impurities.

STREET CLEANING

Methods. Modern Street Cleansing, A. L. Thomson. Surveyor & Mun. & County Engr., vol. 65, no. 1693, June 27, 1924, pp. 603-605. Discusses hand and machine sweeping and flushing methods; data of street-cleaning systems in 18 towns.

Motor Vehicles for. Automobilizing the Street-Cleaning Machinery (Die Automobilisierung der Strassenreinigungsmaschinen), H. Frenssen. Städtereinigung, vol. 16, no. 18, Sept. 15, 1924, pp. 172-173, 4 figs. Details of various types of trucks for refuse collection, sprinkling, etc., for large towns.

The Motorization of Street Cleaning and Refuse Removal in Chicago, W. J. Galligan. Mun. & County Eng., vol. 67, no. 4, Oct. 1924, pp. 198-203, 4 figs. See also Pub. Wks., vol. 55, nos. 11 and 12, Nov. and Dec. 1924, pp. 334-336 and 378-380, 3 figs. Describes flushers, sweepers, tractors, trailers, caterpillars, and snow plows and loaders used.

Philadelphia. Municipal Street Cleaning in Philadelphia, C. A. Howland. Pub. Wks., vol. 55, nos. 10 and 11, Oct. and Nov. 1924, pp. 299-302 and 354-357, 9 figs. Cleaning methods employed, refuse collection, and disposal of refuse, new Harrowgate incinerator, etc.

Sprinklers, Tractor-Hauled. A Tractor-Hauled Street Sprinkler. Motor Transport (Lond.), vol. 39, no. 1015, Aug. 11, 1924, p. 182, 1 fig. Adaptable unit for municipal work; low capital cost makes attractive proposition for small local authorities.

STREET RAILWAYS

Attaching Span Wires to Buildings. Eliminating Poles in El Paso. Elec. Ry. Jl., vol. 63, no. 13, Mar. 29, 1924, pp. 499-500, 5 figs. European method of attaching span wires directly to buildings, which is being employed with marked success.

Car Equipment. Trends in Electric Railway Equipment, G. M. Woods. Elec. Ry. Jl., vol. 64, no. 1, July 5, 1924, pp. 9-10, 7 figs. Smaller wheel sizes, double-end control, double trucks, four motors per car, lower weight per car, and smaller size motors are trends shown by motor sales.

Car Heating. See CAR HEATING.

Car Houses. See CAR HOUSES.

Car Lubrication. Lubricating Practice for Electric Cars. Elec. Ry. Jl., vol. 63, no. 20, May 17, 1924, pp. 763-766, 4 figs. Analysis of quantity of lubricant used, period of oiling, and methods of applying lubricants as found from a study covering 57 electric railway properties.

Car Maintenance. 217-728 Car-Miles per Pull-In, Robert M. O'Brien. Elec. Ry. Jl., vol. 63, no. 25, June 21, 1924, pp. 969-971, 5 figs. Well-organized system of inspection and repair has enabled New Orleans Public Service, Inc., in 3½ years to eliminate 95 per cent of pull-ins and cut maintenance costs to half.

Car Materials. New Materials in Car Body Construction, J. A. Dewhurst. Elec. Ry. Jl., vol. 64, no. 14, Oct. 4, 1924, pp. 549-552, 5 figs. Points out that development of steel-covered laminated wood panels has made possible construction of type of side girder which has strength and rigidity of steel and at same time gives better insulation, less noise, and reduced weight.

Car Shops. See RAILWAY REPAIR SHOPS, Street-Car.

Cars. Articulated Cars for Baltimore. Elec. Traction, vol. 20, no. 12, Dec. 1924, pp. 582-583, 3 figs. United Rys. & Elec. Co. adopts jointed 2-car units as result of studies on other properties.

Brooklyn's "Duplex Car" Placed in Service. Elec. Ry. Jl., vol. 63, no. 7, Feb. 16, 1924, pp. 252-255, 8 figs. Two-unit, three-truck car, 63 ft. 10 in. overall, built by Brooklyn-Manhattan Transit Corpn.; has novel center construction with weather-tight drum to permit free passage between the two sections.

Double-Truck Cars Weight 564 lb. per Seat. Elec. Ry. Jl., vol. 64, no. 2, July 12, 1924, pp. 49-50, 3 figs. Unique arrangement is made for separation of races on new side-entrance cars of Birmingham Elec. Co., Birmingham, Ala.; are of light-weight steel construction and seat 62 passengers.

Improvements in Motor Cars from the Viewpoint of Initial Cost, Upkeep and Consumption (Perfectionnements apportés aux voitures motrices au point de vue des dépenses de premier établissement, d'entretien et de consommation), H. Dubath. Industrie des Tramways, vol. 18, no. 214, Oct. 1924, pp. 392-419, 35 figs. Discusses design and construction, including chassis, suspension, ball and roller bearings, mechanical brakes, bodies, reduction of weight, etc.

Light Metal as a Material of Construction for Cars (Leichtmetall als Konstruktionsmaterial für den Waggonbau), G. Ehrhardt. Verkehrstechnik, no. 35a, Sept. 1924, pp. 403-406, 1 fig. Discusses possibility of using light metals, suitable alloys, advantages of light metals in car construction, and comparative cost.

New Chicago Multiple-Unit Cars Have Automatic Exit Doors. Elec. Ry. Jl., vol. 64, no. 20, Nov. 15, 1924, pp. 837-841, 8 figs. Describes new type cars of Chicago Surface Lines, designed to give maximum flexibility either as single units or in two-car trains; arranged for double-end operation and equipped with two 65-hp. motors per car mounted on maximum traction trucks.

Rear Exit Expedites Passenger Movement. Elec. Ry. Jl., vol. 63, no. 18, May 3, 1924, pp. 693-695, 5 figs. Describes one-man double-truck light-weight cars recently placed in service in Fort Wayne by Indiana Service Corpn.; rear exit and inclosed steps.

Reducing Weight of Rapid Transit Cars Saves $108,000 a Year, J. Lindall. Elec. Ry. Jl., vol. 64, no. 8, Aug. 23, 1924, pp. 269-274, 7 figs. Steps by which weight was reduced, carrying capacity increased and strength maintained in new rolling stock for East Boston service; electric door openers give good results.

Rider Comfort Features Interurban Car. Elec. Ry. Jl., vol. 63, no. 24, June 14, 1924, pp. 931-933, 2 figs. New type of car developed by Indiana Service Corpn. for intercity traffic; riding quality and passenger comfort first consideration in construction; simplicity of design of both interior and exterior, producing attractiveness; 50-passenger car weighs 51,700 lb.

Sacramento Modernizes. Elec. Traction, vol. 20, no. 8, Aug. 1924, pp. 351-352, 2 figs. Old California type city cars rebuilt into modern suburban equipment, for multiple-unit control in train service, by Sacramento Northern Ry.

Cars, Energy Consumption. Energy Consumption of Interurban Cars. Elec. Ry. Jl., vol. 63, no. 5, Feb. 2, 1924, pp. 171-173, 8 figs. Tests made to allocate energy used between cars of Detroit United Ry. and Detroit Street Ry. when operating on tracks of latter indicate average consumption of 120.4 watt-hr. per ton-mile; heater energy also measured.

Cars, German. New German Cars Have Unique Features. Elec. Ry. Jl., vol. 63, no. 15, Apr. 12, 1924, pp. 574-575, 3 figs. New cars added to rolling stock of Krefeld Street Ry. system, Germany; thin castings for truck side frames; special leaf springs; all bearings roller type; air for motors taken in at roof; doors on ball bearings. From Verkehrstechnik, Sept. 7, 1923.

Cars, Jolting of. Vertical Oscillation or Jolting of Street Cars (Das Nicken bei Strassenbahnwagen), F. Hartmann. Verkehrstechnik, no. 22, May 30, 1924, pp. 222-223, 5 figs. Discusses oscillation of cars due to unevenness of track and effect of position of center of gravity.

Cars, One-Man. A New Idea in One-Man Operation. Elec. Traction, vol. 20, no. 7, July 1924, pp. 293-295, 3 figs. Washington Ry. & Elec. Co. develops automatic step treadle for rear exit operation to gain stamp of public approval for one-man car.

Light-Weight Cars for Racine and Kenosha. Elec. Ry. Jl., vol. 64, no. 9, Aug. 30, 1924, pp. 313-315, 5 figs. New one-man equipment of Milwaukee Elec. Ry. & Light Co. is designed to meet needs of smaller cities and at same time give desirable riding qualities of double trucks.

One-Man Cars in Holland, P. M. Nieuwenhuis. Elec. Ry. & Tramway Jl., vol. 50, no. 1223, Feb. 8, 1924, pp. 71-74, 3 figs. Experiences and results at Arnhem.

Rear-Entrance, Front-Exit, One-Man Car in Toledo. Elec. Ry. Jl., vol. 64, no. 8, Aug. 23, 1924, p. 279, 4 figs. No difficulty has been found with loss of fares on double-truck cars without turnstiles on belt line.

Cars for Parcel Post Package Haulage. Electric Cars Haul Parcel Post Packages in Berlin, E. Kindler. Elec. Ry. Jl., vol. 64, no. 10, Sept. 6, 1924, p. 346, 2 figs. Trains have replaced horse-drawn vans with profit to post office department and to railway system.

Diesel-Engine Plant. See DIESEL ENGINES, Street-Car Power.

Illinois. Rehabilitated Property Attracts Increased Patronage. Elec. Ry. Jl., vol. 63, no. 15, Apr. 12, 1924, pp. 569-573, 6 figs. Extensive rehabilitation, accomplished in 5 months' time, has transformed bankrupt Aurora, Elgin & Chicago, Fox River Division, into a modern electric railway property; particulars of new cars and power facilities.

Japan and China. Electric Traction Progress in the Orient, I. Takano and H. M. Fleming. Elec. Traction, vol. 20, no. 2, Feb. 1924, pp. 68-69. Tokio Mun. Ry. decides to inaugurate package freight service; Japanese interurban properties to be improved; Pekin, China, will have modern street car system.

Line Practices. Line Practices on Pittsburgh Railways, H. A. Pharo. Elec. Ry. Jl., vol. 63, no. 12, Mar. 22, 1924, pp. 469-472, 6 figs. Discusses materials, construction, and equipment used by this large city system, together with maintenance and emergency organization employed.

London, England. Latest Developments on London's Street Car System. Elec. Traction, vol. 20, no. 7, July 1924, pp. 297-301, 5 figs. Cars are of double-deck type with covered roof, seating 78 passengers; describes Charlton car shops, blacksmith shop, wheel shop, magnetic brake shoes, machine and truck shop and Greenwich power station.

Marseilles, France. Street Railway Systems in Marseilles (Le Réseau des Tramways de Marseille), M. Bertrand. Industrie des Tramways, vol. 18, no. 214, Oct. 1924, pp. 372-383, 21 figs. Particulars of layout, rolling stock, car barns, tracks, overhead lines, electric welding, traffic, etc.

Noise Elimination. Elimination of Noise, C. L. Van Auken. Elec. Traction, vol. 20, no. 9, Sept. 1924, pp. 405-412, 13 figs. Deals with track, wheel, wheel and track, journal, brake, truck, gear, compressor, motor, body, roof, trolley and other noises in operation of street cars.

Operation in Medium-Sized Cities. The Operation of an Electric Railway in a Medium Sized City, A. H. Foster. Elec. News, vol. 33, nos. 14 and 17, July 15 and Sept. 1, 1924, pp. 58-60 and 54-55. How ingenuity and resourcefulness overcome difficulties met on smaller systems.

Overhead Equipment. Overhead Equipment, W. Nairn. Tramway & Ry. Wld., vol. 55, no. 30, June 19, 1924, pp. 303-304. Deals with materials and design of items of tramway overhead equipment based on experiences of past 28 yrs.; poles and pole fittings; insulation; trolley wires; percentage of scrap; shape of conductor; overhead line fittings; types of collectors and construction and trolley feed cables.

Overhead Trolley Suspension. Trolley Breaks Cut Over 70 Per Cent. Elec. Ry. Jl., vol. 64, no. 3, July 19, 1924, pp. 87-89, 4 figs. Investigations in Detroit into means of flexible suspension; drop forgings still used for overhead material; electric switches have been changed to power on type.

Pneumatic Body Suspension. The Holden Suspension. Elec. Ry. & Tramway Jl., vol. 50, no. 1219, Jan. 11, 1924, pp. 33-34 and 36, 5 figs. Description of a low-pressure system of pneumatic suspension suitable for all classes of vehicles (buses, trams and the like), placed on market by Holden Suspension Co., Ltd., Manchester, Eng.

Rail Crossings, Thermit-Welded. Thermit Welded Crossings for Tramways. Tramway & Ry. Wld., vol. 56, no. 25, Nov. 20, 1924, pp. 263-264, 3 figs. By its use rails of any British standard specification or section can be spliced at any angle, no expensive patterns required, and after fitting is finished Thermit weld is made and band of Thermit metal completely covers all joints of rails; result is a crossing in one solid piece. Greater economy effected.

Reconstruction. Rebuilding a Section of Street Railway at Milwaukee. Eng. News-Rec., vol. 92, no. 8, Feb. 21, 1924, pp. 310-312, 3 figs. Methods and equipment used in reconstruction of track and paving; reinforced-concrete paving general and special vibrolithic test section; labor-saving machinery.

Regenerative Braking. See BRAKING, Regenerative.

Scandinavia. Electric Street Railways in the Principal Scandinavian Cities. Teknisk Tidskrift, vol. 64, no. 47½, Nov. 22, 1924, pp. 205-226, 15 figs. Issue devoted to subject of electric street railways in Scandinavia containing articles by different authors, describing present systems and plans for extensions and discussing trolleys and ground currents.

Street Opening, Control of. Control of Street Openings and Methods of Restoration, W. Graves. Engrs. & Eng., vol. 41, no. 11, Nov. 1924, pp. 296-297. Solution of problem, author believes, is based primarily on coöperation between city authorities and railway company, and putting into effect certain arrangements which are outlined.

Substations, Automatic. See SUBSTATIONS, Automatic.

Three-Car Articulated Trains. Detroit Operates New Three-car Articulated Train, A. C. Colby. Gen. Elec. Rev., vol. 27, no. 7, July 1924, pp. 441-448, 10 figs. Three-car articulated unit placed in operation on Woodward Ave. line by Dept. Street Rys., designed to handle heavy passenger traffic on this route.

Three-Car Articulated Train for Detroit, A. C. Colby. Elec. Ry. Jl., vol. 63, no. 10, Mar. 8, 1924, pp. 357-362, 12 figs. Articulated construction reduces weight and cost and also gives improved riding qualities; seating capacity is 140 passengers; many unusual features of design.

Track. Better Concrete Results from Field Tests. Elec. Ry. Jl., vol. 64, no. 3, July 19, 1924, pp. 85-87, 6 figs. Capital Traction Co. has improved quality of concrete pavement in Washington by careful measurement of quantities of materials used; track structure consists of T-rails on rock-ballasted chestnut ties.

Effects of Street-Car Tracks on Roadway and Its Surfacing (Die Wirkungen der Strasseneisenbahngleise im Strassenkörper und in seiner Oberflächenbefestigung), D. Sperber. Bauingenieur, vol. 5, no. 22, Nov. 25, 1924, pp. 732-735, 2 figs. Deals with elastic and rigid foundations, construction of joints, welding, corrugation on rail surfaces, method of constructing roadbed and tracks, etc.

Paving Troubles Along the Rail, W. S. Godwin. Elec. Ry. Jl., vol. 63, no. 3, Jan. 19, 1924, pp. 101-103, 9 figs. Discusses various causes of failure of bond between paving and rail under traffic, and suggests method for permitting rail movement while preserving bond and strengthening paving edge.

Rigid Track Experience in Kansas City, A. E. Harvey. Elec. Ry. Jl., vol. 64, no. 17, Oct. 25, 1924, pp. 730-731, 5 figs. Approximately 46 mi. of track built in solid concrete with various types of paving; both wood and steel ties have been used; thermit joints have stood up well.

Track Construction, C. F. Gailor. Elec. Ry. Jl., vol. 64, no. 13, Sept. 27, 1924, pp. 501-504, 5 figs. Use of T-rail in paved streets; modern practice in joint welding; advantages of adopting standard track design.

Track Maintenance and Reconstruction. Keeping Track Machinery "on the Job." Elec. Ry. Jl., vol. 63, no. 12, Mar. 22, 1924, pp. 463-469, 11 figs. How track maintenance and reconstruction are expedited by use of large variety of machine equipment, by Milwaukee Elec. Ry. & Light Co.

How New Orleans Is Rebuilding Track. Elec. Ry. Jl., vol. 63, no. 20, May 17, 1924, pp. 773-776, 21 figs. Aim has been a substantial structure that will last well in spite of poor drainage and unfavorable climatic conditions; special effort has been made to give mobility to track machinery.

New Rail on Old Steel Ties and Concrete. Elec. Traction, vol. 20, no. 8, Aug. 1924, pp. 366-368, 4 figs. How Cleveland Rys. renews track and utilizes old steel ties and concrete foundation; easy and economical renewal method developed.

Portable Pneumatic Equipment Reduces Track Reconstruction Cost, C. A. Elliott. Elec. Ry. Jl., vol. 63, no. 16, Apr. 19, 1924, pp. 613-615, 6 figs. Pneumatic tie tamping and pavement cutting tools used in reconstruction of one of Pacific Elec. Ry. Co.'s lines in downtown congested district of Los Angeles.

Traffic Congestion Relief, Chicago. Chicago Loop Rerouting Would Increase Capacity for Cars 30%. Elec. Ry. Jl., vol. 63, no. 18, May 3, 1924, pp. 683-687, 8 figs. Proposed plan for rerouting of street railway lines in downtown Loop district of Chicago to relieve traffic congestion.

Trolley Derailments. Trolley Derail Prevents Accidents, O. S. Lamb. Elec. Traction, vol. 20, no. 7, July 1924, p. 323, 2 figs. Kansas City, Kaw Valley & West. Ry. have constructed device which works in conjunction with order board, making it impossible for trainmen to proceed in disregard of orders.

Trolley Wires, Steel. Overcoming Current-Collection Troubles on Steel Wire, H. M. Robinson. Elec. Ry. Jl., vol. 63, no. 20, May 17, 1924, pp. 767-769, 3 figs. Investigations made at Fort Worth, Tex., where much of overhead construction is of this material, demonstrated superiority of trolley shoes under those conditions; methods of lubricating trolley wire.

STREETS

[See also PAVEMENTS; ROADS.]

Automobile Traffic. Adaptation of Streets to Motor Bus Traffic (Die Anpassung der Strassen an den Kraftwagenverkehr), E. Neumann. Verkehrstechnik, vol. 41, no. 46, Nov. 14, 1924, pp. 586-590, 3 figs. Provision of special roads for automotive traffic is recommended. Wide streets should be subdivided, refuge islands should be provided, and sharp curves eliminated.

Chicago, Improvement. See VIADUCTS, Double-Decked Street Improvement, Chicago.

Cleaning. See STREET CLEANING.

Lighting. See LIGHTING, Street.

Paving. See PAVEMENTS.

Planning. See CITY PLANNING, Highways and Traffic; Street Planning.

Widening. Street Widening Methods with Particular Reference to Distributing the Cost, H. Bartholomew. Mun. & County Eng., vol. 61, no. 1, July 1924, pp. 33-41. Discusses requisite legal authority, conditions in Toledo, Memphis, and Wisconsin, authority for proper appraisal of damages and determination of benefit assessments and districts, etc.

STREMMATOGRAPH. See RAILWAY TRACK, Stresses in.

STRESSES

After-Effect Phenomenon. Elastic After-effect, Elastic Hysteresis and Internal Friction (Ueber elastische Nachwirkung, elastische Hysteresis und innere Reibung), K. Bennewitz. Physikalische Zeit., vol. 25, no. 17, Sept. 1, 1924, pp. 417-431, 4 figs. Shows that after-effect phenomenon does not start from internal friction, but is an internal sublimation; after-effect hysteresis, and internal friction can therefore be traced back to recrystallization.

Elastic. Volume Changes in Elastically Loaded Bodies (Ueber die Volumenänderung eines elastisch beanspruchten Körpers), G. Masing. Zeit. für technische Physik, vol. 5, no. 10, 1924, pp. 430-433, 4 figs. Deduces a general relation between distribution of exterior forces and elastic volume change, with aid of principle of virtual displacement; no change in volume due to natural stresses.

Expansion. Tension Due to Expansion (Wärmespannungen), H. Winkel. Praktische Maschinen-Konstrukteur, vol. 57, nos. 26, 27, and 28, July 15, 22, and 29, 1924, pp. 369-371, 384-386, and 398, 11 figs. Develops fundamental formula for stresses due to temperature increase in member fixed at both ends so that natural expansion cannot take place. Application to non-uniform heating in hollow cylinders.

Internal. Internal Stresses Rendered Visible (Les tensions intérieures rendues visibles), A. Mesnager. Technique Moderne, vol. 16, no. 6, Mar. 15, 1924, pp. 161-171, 52 figs. Discusses method based on theory of polarization which permits accurate measurements of internal stresses of a solid; applications of method.

Links. The Stresses in Links, and Their Alteration in Length Under Load, A. J. S. Pippard and Chas. V. Miller. Instn. Mech. Engrs. Proc., vol. 2, no. 6, 1923, pp. 1153-1167, 7 figs. Calculations of alteration in length under load were made for several different shaped links which were afterwards tested to justify method;

solution is given for general case of link having only one axis of symmetry.

Machine Parts. Optical Investigation. See MACHINERY, Stress in Parts.

Measurement of. See TELEMETERS.

Permissible. Factor of Safety and Permissible Stresses (Säkerhetsgrad och tilläten påkänning), A. F. Samsioe. Teknisk Tidskrift, vol. 54, no. 29, July 19, 1924, pp. 263-266 (Mekanik). Proposes use of "permissible stresses" instead of "safety factor" in mechanical constructions.

Photoelastic Analysis. See ELECTRIC MOTORS, Railway.

Riveted Tension Members. Net Section of Riveted Tension Members, T. R. Loudon. Can. Engr., vol. 47, no. 9, Aug. 26, 1924, pp. 269-271, 7 figs. Many specifications for calculating net sections are inadequate; investigations being conducted in photo-elastic laboratory of University of Toronto may develop new theory of stress distribution in riveted members.

Rotating Gear Pinions. See ELECTRIC MOTORS, Railway.

Shearing, on Flat Elastic Strips. On the Stability under Shearing Forces of a Flat Elastic Strip, R. V. Southwell and S. W. Skan. Royal Soc.—Proc., vol. 105, no. A 733, May 1, 1924, pp. 582-607, 6 figs. Investigation relating to a flat elastic strip, of uniform breadth, thickness, and material upon which a uniform shear is imposed by tangential tractions applied at its edges and in its plane.

Steel Structures. Investigation of Stresses in Corner Plates of Steel Structures (Bidrag till undersökning av påkänningar i knutplåtar för järnfackverk), T. Wyss. Teknisk Tidskrift, vol. 54, no. 12, Mar. 22, 1924, pp. 25-29 (Väg- och Vattenbyggnadskonst), 8 figs. Expansions under load in different points were measured by means of an instrument designed by Okhuizen in Haag; comparisons between calculated and measured stresses are tabulated, and formulas are derived for computation of maximum occurring stresses.

STRIKES

U. S. Coal Commission Report. Comments on the Work and Reports of the United States Coal Commission, E. W. Parker. Min. & Metallurgy, vol. 5, no. 209, May 1924, pp. 223-230. Points out that Commission report is equally unsatisfactory to operators and miners and recommendations are unjust.

STROBOSCOPES

Apparatus Embodying. Intermittent Illumination in Industry, With Special Reference to Its Use for the Examination of Moving Bodies, J. F. Crowley. Illuminating Engr., vol. 16, no. 8-9, Aug.-Sept. 1923, pp. 189-211, 31 figs. Discusses apparatus that have been evolved on principle of stroboscope and their application to industry, and physiological principles on which they are based.

Registration of Starting and Stopping Curves. The Registration of Starting and Inertia Curves with the Stroboscopic Disk (Die Aufnahme von Anfahr- oder Auslaufkurven mit der stroboskopischen Scheibe), K. Obermoser. Elektrotechnische Zeit., vol. 45, no. 18, May 1, 1924, pp. 428-430, 4 figs. Stroboscopic method of point registration of curves, which indicates speed of rotating masses when gradually starting or stopping.

Vibrant-Cord. A Stroboscope with Vibrant Cord for Study of Objects in Motion (Stroboscope à corde vibrante pour l'étude des pièces en mouvement), A. Bertrand. Revue Générale de l'Electricité, vol. 15, no. 19, May 10, 1924, pp. 848-850, 4 figs. Principle upon which design of stroboscope devised by A. Guillet is based; operation of apparatus and application to measurement of rotation speed of a motor.

STRUCTOLITE. See BUILDING MATERIALS, Structolite.

STRUCTURAL STEEL

Buckling Strength. Formula for Buckling Strength in Structural Steel (Eine Gebrauchsformel für Knickstäbe im Eisenhochbau), D. Mörike. Zentralblatt der Bauverwaltung, vol. 44, no. 31, July 30, 1924, pp. 260-263, 3 figs. Discusses Enler and Tetmajer formulas, safety factor, and gives examples of calculation.

Channels, Bending. See DIES, Bending.

Compression Members. Calculation of Compression Members, Formula for Buckling (Berechnung von Druckstäben, Gebrauchsformel für Knickung), Kommerell. Bauingenieur, vol. 5, no. 6, Mar. 31, 1924, pp. 150-153, 1 fig. Recommendations for changing line of permissible buckling stresses in German State Railway regulations.

Construction Code. Standard Practice in Steel Construction. Contract Rec., vol. 38, nos. 48, 49 and 50, Nov. 26, Dec. 3 and 10, 1924, pp. 1168-1170, 1194-1196 and 1210-1212. Code drawn up by Am. Inst. Steel Construction with a view to establishing uniform practice in fabrication and erection of structural steel and eliminating inconsistencies that have come into existence.

Erecting Cost Estimation. Estimating the Cost of Erecting Structural Steel and Iron Work, C. F. Dingman. Contract Rec. & Eng. Rev., vol. 38, no. 7, Feb. 13, 1924, pp. 155-157. Practical data that will enable contractor to bid intelligently on steel erection; cost of installing and glazing steel sash; method of listing items.

German Specification. L H L Structural Steel [L H L-Hochbaustahl (DIN 1000 St. < 58)], P. Pieper. Bautechnik, vol. 2, no. 43, Oct. 3, 1924, pp. 490-494, 11 figs. partly on supp. plates. New steel recently adopted by German Railway Minister for building and bridge construction, of 31 kg. per sq. mm. elastic limit, 48-58 kg. per. sq. mm. breaking strength, and minimum elongation of 20 per cent linear, made by Lauchhammer A. G. at Riesa. Details of construction of sections 8 and 9 at Leipzig fair with this steel.

High-Strength. Exhibition Hall of High-Strength Structural Steel, G. Hulsmeier. Eng. News-Rec., vol. 93, no. 26, Dec. 25, 1924, p. 1026, 3 figs. Saving of 10 per cent in weight of steel frame obtained by use of metal one-third stronger than soft steel. Abstracted and translated from Bauingenieur, Oct. 25, 1924.

Reinforced with Concrete. Steel Reinforced with Concrete, O. Faber. Concrete & Constr. Eng., vol. 19, no. 12, Dec. 1924, pp. 755-757, 1 fig. Results of tests on steel joists cased in concrete and tested in compression as stanchions, and tests on slabs composed of steel joists filled in with concrete.

Shearing Center. The Problem of Shearing Center (Zur Frage des Schubmittelpunktes), A. Eggenschwyler. Schweizerische Bauzeitung, vol. 83, no. 22, May 3, 1924, pp. 259-262, 10 figs. Critical discussion of articles by R. Maillart and A. Rohn in Mar. 8 and 22 issues of same journal; includes reply by R. Maillart.

St. 58. Nature and Significance of High-Grade Building Steel St. 58 (Einige Leitsätze über das Wesen und die Bedeutung des hochwertigen Baustahles St. 58), W. Gehler. Bauingenieur, vol. 5, no. 19, Oct. 1924, pp. 630-635, 2 figs. Discusses development of high-quality steels, including those for Manhattan Bridge and Hell Gate; German ingot steel of normal quality;

nickel versus carbon steels; properties of St. 58 steel, a refinement of normal steel.

Welding. See ELECTRIC WELDING, ARC, Structural Steel.

Yield-Point Data. Progress Report of the Special Committee on Stresses in Structural Steel. Am. Soc. Civ. Engrs.—Proc., vol. 50, no. 3, Mar. 1924, pp. 263-271, 6 figs. Data on yield point.

STRUCTURES

Circular, Calculation of. Calculation of Circular Structures (Om beregning av cirkelformede konstruksjoner), C. Raestad. Teknisk Ukeblad, vol. 71, nos. 2 and 3, Jan. 11 and 18, 1924, pp. 18-20 and 28-29, 4 figs. Theory of stresses occurring in circular or tubular structures when subjected to loads of different nature.

Effect of Wind on. Modern Ideas on Wind Force and Roof Truss Design, A. Tomlinson. Commonwealth Engr., vol. 11, no. 10, May 1, 1924, pp. 398-401, 1 fig. Discusses ordinary theory of wind pressure on roof, modern theory of wind pressure and result of investigations. Abstract of paper read before Instn. Engrs., Australia.

Framed, Vibration. See VIBRATIONS, Framed Structures.

Statically-Indeterminate. Automatic Calculation of Statically Indeterminate Structures (Automatische Berechnung statisch unbestimmter Tragwerke), O. Gottschalk. Bauingenieur, vol. 5, no. 9, May 15, 1924, pp. 263-272, 12 figs. Description of "continostat," by means of which large number of mechanical problems are solved. It consists of flexible steel straight edge, which is deflected by means of various pins, representing forces acting upon beam. Theoretical analysis and table of formulae.

Resistant Supporting Structure Over *n* Openings (Der biegungsfeste Stabzug über *n* Oeffnungen), J. Berlowitz. Zeit. für Angewandte Mathematik u. Mechanik, vol. 4, no. 3, June 1924, pp. 231-241, 13 figs. Develops elasticity equations for statically indeterminate frames with any load and of any form and compares them with Bleich and Ratzersdorf equations.

Use of Integrals and Determination of Displacement in Statically Indeterminate Supporting Structures (Zur Integralauswertung und Ermittelung von Verschiebungsgrössen bei statisch unbestimmten Tragwerken), L. David. Bauingenieur, vol. 5, no. 10, May 31, 1924, pp. 311-312, 3 figs. Discusses calculation of statically indeterminate supporting structures by means of equations of elasticity and rapid use of integrals.

Strength vs. Size. Mechanical Strength in Its Relation to Absolute Size, H. E. Eisenmenger. Gen. Elec. Rev., vol. 27, no. 5, May 1924, pp. 328-333. Shows why mechanical strength and other quantities are dependent on absolute size and not on relative size. Covers wide range of subjects in making point clear, including mechanical constructions, insects, Babylonians, the earth, Einstein's theory, Bronto-saurians, absolute unit system, etc.

STUCCO

Portland-Cement. Portland Cement Stucco, S. Warren. Am. Architect, vol. 126, nos. 2454, 2455, 2456, and 2457, Sept. 10, 24, Oct. 8, and 22, 1924, pp. 225-228, 269-272, 319-324, and 365-372, 32 figs. Discusses application of stucco to various surfaces and describes a proper method. Illustrates, from viewpoint of craftsman, manipulative methods employed to secure those various qualities of texture to which cement stucco readily lends itself. Presents exhaustively subject of color in stucco and explains how best and most lasting effects may be secured.

SUBMARINE CABLES. See CABLES, ELECTRIC, Submarine.

SUBMARINE SIGNALING

Sonic Depth Finder. The Sonic Depth Finder, H. C. Hayes. Am. Philosophical Soc.—Proc., vol. 63, no. 1, 1924, pp. 134-151. Details of sonic depth-finding, apparatus consisting of submarine sound transmitter, submarine sound receiver, and sonic depth finder, last serving to measure accurately time interval between sending of submarine sound signal and return of its echo from sea-bottom, etc.

Sound Transmitters. Present State of Acoustic Soundng Apparatus (Stato attuale del problema dello scandaglio acustico), M. Tenani. Rivista Marittima, vol. 57, no. 11, Nov. 1924, pp. 319-332, 30 figs. Historical data and present position of problem. Description of methods and instruments used. Velocity of sound in sea water. Bibliography.

Submarine Bells. Signaling by Means of Sound Below Water Surface (Das Signalisieren mit Schall unter Wasser), Hentschel. Glasers Annalen, vol. 95, no. 11, Dec. 1, 1924, pp. 267-275, 15 figs. Details of bells suspended from light ships or placed on bottom of ocean, driven by compressed air or electricity, and radio plants for aids in navigation; receiving apparatus on board.

Submarine Signalling, R. L. Williams. Tech. Eng. News, vol. 5, no. 1, Apr. 1924, pp. 10-11, 36 and 38, 2 figs. Describes submarine bell, and the oscilator, a more powerful sender invented by R. A. Fessenden; binaural system of determining direction of submarine sounds; multispot system of determining direction of submarine sounds; etc.

SUBMARINES

German Design. German Submarine Designs. Engineering, vol. 118, no. 3077, Dec. 19, 1924, pp. 837-838, 1 fig. Review of paper by Oswald Flamm published in Marine Rundschau under title of The Problem of Large Submarines.

Hulls, Strength of. Strength of Hollow Cylinders Reinforced Transversely and Subjected to Uniform External Pressure (Sul problema della robustezza di cilindri cavi rinforzati trasversalmente sottoposti da ogni parte a pressione uniforme esterna). Rivista Marittima, vol. 57, no. 1, Jan. 1924, pp. 49-69, 6 figs. Experiments with models of hulls of submarines; theory; practical examples.

Multiple Attack by. Multiple Attack by a Submarine (Lancio multiplo dai sommergibili), A. G. Chinaglia. Rivista Marittima, vol. 57, no. 3, March 1924, pp. 543-548. Mathematical discussion, dealing with speeds, inertia of submarines, etc.

SUBSTATIONS

Automatic. A 500-Kilowatt Automatic Substation. Engineer, vol. 138, no. 3595, Nov. 21, 1924, pp. 590-591, 3 figs. Substation exhibited at Brit. Empire Exhibition by Brit. Thompson-Houston Co., designed for d.c. output of 500 kw. at pressure of 550 volts.

Automatic Alternating-Current Substation, C. E. Schnell. Elec. World, vol. 83, no. 6, Feb. 9, 1924, pp. 279-281, 5 figs. Station used for lightly loaded but rapidly developing district; conditions to be met by automatic stations; details of installation and operation.

Automatic Substations, R. F. Wensley. Iron & Steel Engr., vol. 1, no. 1, Jan. 1924, pp. 1-4 and (discussion) 4-8, 9 figs. Discussion of automatic control devices used, and functions which they perform.

Automatic Sub-Stations at Manchester. Elec. Rev., vol. 95, nos. 2444 and 2445, Sept. 26 and Oct. 3, 1924, pp. 456-458 and 519-520, 6 figs. Details of layout of equipment; sequence of operation; starting for inspection; shutting down; hand control and protection.

Automatic Substations for Industrial Plants, C. Lichtenberg. Am. Inst. Elec. Engrs.—Jl., vol. 43, no. 5, May, pp. 411-415, 7 figs. Principal types of electric-power transforming equipment to which automatic switching has been applied; automatic control of synchronous condensers, motor generators, converters, hydrolectric generators and feeders is treated in such manner as to furnish industrial engineers with data upon which to base designs of automatic stations for factories, mills, mines, shops and other kinds of industrial power supply.

New Features of St. Louis Automatics. Elec. Ry. Jl., vol. 63, no. 7, Feb. 16, 1924, pp. 249-252, 4 figs. Particulars of five substations installed by United Rys. of St. Louis; forced ventilation and duplicate power lines; units chosen for full-load operation with provision for exchanging equipment to obtain future increased capacity.

Progress in Noiseless Substation Design, L. J. Turley. Elec. Ry. Jl., vol. 63, no. 17, Apr. 26, 1924, pp. 645-651, 14 figs. Data on the five automatic substations placed in service by Los Angeles Ry. within last three years, and new one proposed; company has developed buildings to harmonize with surroundings in residential districts; use of automatics has produced satisfactory operating results and substantial economies; methods of eliminating noise.

The Application of Automatic Control to Mine Substations, C. E. H. von Sothen. Am. Inst. Elec. Engrs.—Jl., vol. 43, no. 8, Aug. 1924, pp. 729-735, 8 figs. Brief outline of method of operation and protection provided for both synchronous converter and synchronous motor-generator equipments.

The Peebles-Reyrolle Automatic Substation. Engineering, vol. 138, no. 3062, Sept. 5, 1924, pp. 323-327, 7 figs. Describes completely automatic substation capable of performing all functions which usually demand intervention of a skilled operator, produced as result of collaboration of two firms of A. Rayrolle & Co., Ltd., and Bruce, Peebles, & Co., Ltd. Reyrolle's metal-clad switchgear has been applied in connection with standard motor-converting machinery of Bruce, Peebles, & Co.

See also Railway.

Central-Station Service, Application to. Application of Automatic Substations to Central Station Service in Metropolitan Districts, C. W. Place. Am. Inst. Elec. Engrs.—Jl., vol. 43, no. 7, July 1924, pp. 634-641, 16 figs. Present trend to interconnection and installation of large-capacity stations, with changing character of city load, make relief of operating crew of a system of greatest importance. This can best be done by use of automatically-controlled substations in the various types of service. Equipment for each class of service is in successful operation showing great dependability and any particular problem of operating companies can be attacked, keeping in mind certain fundamentals of design, construction and application.

Coal-Mine. Motor-Generator Sets in Two Substations Operated In Parallel and Controlled from Surface, R. B. Wagner. Coal Age, vol. 25, no. 17, Apr. 24, 1924, pp. 593-598, 8 figs. At Dorrance Colliery of Lehigh Valley Coal Co., Wilkes-Barre, Pa., substations have been equipped with semi-automatic substation equipment to supply d.c. energy for typical mine load, but in unusual way; greater part of control equipment is placed in separate building on surface.

The Application of Automatic Control to Mine Substations, C. E. H. Von Sothen. Coal Industry, vol. 7, no. 4, Apr. 1924, pp. 143-149, 3 figs. Methods of meeting substation problem at mines; outline of method of operation and conclusions as to advantages of automatic equipment.

Combined Railway and Power. Railway and Power Substations Combined for Economical Operation. Elec. Ry. Jl., vol. 63, no. 19, May 10, 1924, pp. 729-731, 4 figs. Cicero (Ill.) substation of Chicago Rapid Transit Co. and Pub. Service Co. of Northern Illinois presents example of coördinated efforts to reduce maintenance and operating costs. Details of installations.

Design. Substation Design to Meet Space Limits, J. C. Gaylord. Elec. World, vol. 84, no. 19, Nov. 8, 1924, pp. 989-992, 5 figs. Unusual conditions on Southern Cal. Edison system lead to innovations in plans; transformer cooling coils are placed on roof of building; special arrangement of equipment necessary.

The Design of Static Sub-Stations, With Some Notes on Their Equipment, N. Thornton. Jr. Instn. Engrs., vol. 35, part. 2, Nov. 1924, pp. 37-72, 25 figs. Considers requirements and objects of a substation, reviews the different forms of equipment to be accommodated, their effect on substation design, and considers actual substation design by means of several typical examples.

Elevated-Railway. Supervisory Controlled Substation on Chicago Elevated, D. L. Smith. Elec. Ry. Jl., vol. 64, no. 19, Nov. 8, 1924, pp. 795-798, 6 figs. Describes new substation of Chicago Rapid Transit Co. at Central Street, Evanston, at junction with North Shore & Milwaukee R. R.; 2000-kw. machine has full automatic features; building located in residential section, necessitating artistic design.

High-Voltage. The Charleroi Substation of the West Penn Power Company, Geo. S. Humphrey. Elec. Jl., vol. 21, no. 11, Nov. 1924, pp. 498-504, 17 figs. Discusses high-voltage substations, transmission problems, and manner in which these problems were solved; describes main features of Charleroi substation.

Large-Capacity for City Distribution. Substations for Present-Day Requirements, L. C. Williams. Elec. Wld., vol. 84, no. 23, Dec. 6, 1924, pp. 1195-1199, 11 figs. Unit system employed in large-capacity substation for city distribution; latest practice as embodied by city of Los Angeles; describes typical substation.

Machinery, Ventilation and Noise Control. Ventilation and Noise Control of Sub-Station Machinery, F. T. Hague. Elec. Jl., vol. 21, no. 3, Mar. 1924, pp. 106-111, 5 figs. Enclosure of synchronous converters and motor-generator sets; methods of reducing noise.

Mercury-Vapor-Rectifier. The Mercury Arc Rectifier Substations of the Midi Railway, W. Walty. Brown Boveri Rev., vol. 11, no. 9, Sept. 1924, pp. 191-205, 23 figs. Describes equipment of substations, diagram of connections, transformers, absorption choke coils, vacuum pump, protecting screen, cooling system, layout of plants, acceptance tests and results with rectifiers in service.

Motor-Generator. Automatic Motor-Generator Station (Eine selbsttätige Umformeranlage), P. v.d. Sterr. Elektrotechnische Zeit., vol. 45, no. 16, Apr. 17, 1924, pp. 361-364, 6 figs. Describes fully automatic substation containing several large motor-generator sets which has been in successful operation for last 13 years; sets are started from direct-current side, are brought up to proper speed and voltage and are synchronized to buses; motors are 240-volt direct current, generators giving 3000-volt single-phase current.

Outdoor. New Types of Outdoor Substations. C. D. Gray and M. M. Samuels. Elec. Wld., vol.

84, nos. 5 and 6, Aug. 2 and 9, 1924, pp. 208-210, and 263-267, 10 figs. Structural details; use of motor-operated disconnecting switches; description of new type of "disconnect"; lighting and control features; specific installation details for modern step-in and step-down outdoor substations; securing safety and economy without decreasing reliability.

Outdoor Traction Sub-stations. Engineer, vol. 138, no. 3594, Nov. 14, 1924, pp. 561-563, 7 figs. partly on p. 556. Describes substation at Olten, Switzerland, supplying current for lines of Swiss Fed. Rys.; details of equipment.

See also Railway.

Portable. Portable Substation with Telescopic Tower. Elec. Ry. Jl., vol. 64, no. 9, Aug. 30, 1924, pp. 309-310, 4 figs. Suitable spacing for 33,000-volt outdoor apparatus and overhead clearance when station is moving over right-of-way are obtained by telescoping arrangement employed on interstate 300-kw. portable.

Railway. Automatic Sub-Station for the Hendon-Edgware Extension Railway. Engineering, vol. 118, no. 3059, Aug. 15, 1924, pp. 227-228, 4 figs. partly on p. 230. Describes substation which supplies electric power for operating trains on extension of Lond. Elec. Ry.; largest automatic substation in Great Britain, and also first to be installed for electric traction purposes; building designed to accommodate three 1200-kw. rotary converters with their control gear and accessories. Describes also method of operation.

Automatic Substations for Supplying 1500 Volts Direct Current to Suburban Railways, C. A. Butcher. Am. Inst. Elec. Engrs.—Jl., vol. 43, no. 7, July 1924, pp. 622-626, 3 figs. Important points which should be given careful consideration by those contemplating electrification.

New Automatic Substation for Vancouver. Elec. Traction, vol. 20, no. 3, Mar. 1924, pp. 145-146, 2 figs. Description of Bodwell substation of British Columbia Elec. Ry. Co., installed to improve trolley voltage conditions and to mitigate electrolysis condition.

The Olten Outdoor Substation of the Swiss Federal Railways (Das Freiluft-Unterwerk Olten der Schweizer Bundesbahnen), E. Heusser. Elektrotechnik u. Maschinenbau, vol. 42, no. 44, Nov. 2, 1924, pp. 637-640, 5 figs. Describes general switching arrangement; single-phase current, 15 kv. at 16 2/3 per. per sec., transformed to 60 kv.

Rectifiers for. See RECTIFIERS, Mercury-Vapor.

Remote-Control. Remote Control for Sub-Stations, C. J. Sargeant and T. N. Riley. Electrician, vol. 93, no. 2407, July 4, 1924, pp. 12-13, 4 figs. Details of use of supervisory telephone systems for control of substations from central stations.

Supervisory Systems for Control and Indication of Remote Power Equipment, C. E. Stewart and J. C. Field. Gen. Elec. Rev., vol. 27, no. 2, Feb. 1924, pp. 121-129, 12 figs. "Supervisory system" as applied to power distribution field is defined as one which gives a load dispatcher direct control over rotating or switching equipment of a power network and a continuous visual indication of operating position of such equipment. Describes distributor, selector, and cable systems.

Saxony. See ELECTRIC TRANSMISSION LINES, 100-Kv. System.

Semi-Automatic. Semi-Automatic Substation at Concord. Elec. Ry. Jl., vol. 63, no. 9, Mar. 1, 1924, pp. 321-323, 7 figs. Describes installation of Concord Elec. Rys., Concord, N. H., an improvement over earlier one of smaller capacity destroyed by fire; has rating of 500 kw.; needs only to be started in morning.

60,000-Kva. Features of 60,000-Kva. Substation, J. E. Goodale. Elec. World, vol. 84, no. 17, Oct. 25, 1924, pp. 881-884, 5 figs. Underground feeders at 13,200 volts and 26,400 volts supply Metropolitan substation of N. Y. & Queens Elec. Light & Power Co. at Maspeth; multiple-voltage transformer banks used; details of switch and bus structures.

South Africa. The Automatic Sub-Station in South Africa. S. African Power Engr., vol. 9, nos. 78 and 79, Oct. and Nov. 1924, pp. 13-15, 17, 19 and 21, and 20-21, 4 figs. Account of first automatic substations erected in South Africa by Durban Municipality, explaining also their working.

Standardization. Standardizing Small Substations, J. C. Gaylord. Elec. Wld., vol. 84, no. 8, Aug. 23, 1924, pp. 357-359, 7 figs. Describes three types standard stations developed by South. Cal. Edison Co. for 2200-volt or 4000-volt distribution with capacity up to 6000 kva.

12,000-Kw. The Cleveland Heights Substation of the Cleveland Electric Illuminating Company, H. L. Wallau. Am. Inst. Elec. Engrs.—Jl., vol. 43, no. 6, June 1924, pp. 555-556, 6 figs. A.c. station having ultimate capacity of 12,000 kw..

SUBWAYS

Berlin, Germany. Construction of the New North and South Subway in Berlin, Germany, M. A. R. Brunner. Elec. Traction, vol. 20, no. 1, Jan. 1924, pp. 15-16, 4 figs. Technical difficulties.

Calcutta, India. Tube Railways for Calcutta, Dalrymple Hay. Elec. Ry. & Tramway Jl., vol. 50, no. 1219, Jan. 11, 1924, pp. 23-25. A comprehensive scheme. Surface stations, including booking halls, stairs, escalator machinery chambers, etc.; preliminary estimate of cost of construction; future railways; general observations and recommendations.

Camden, N. J. Jackson Street Subway, Camden Terminal. Ry. Rev., vol. 75, no. 8, Aug. 23, 1924, pp. 279-281, 5 figs. Describes structure, part of large project, which was built with simple but effective and efficient construction methods.

Cars. New Cars of the North-South Railway in Berlin (Neue Wagen der Berliner Nordsüdbahn), Kemmann. Verkehrstechnik, vol. 41, no. 13, Mar. 28, 1924, pp. 115-118, 5 figs. Have three doors on each side and longitudinal seats between doors, leaving very liberal standing space; motors have automatic ventilation and are equipped with precision roller bearings.

Construction. Constructing A Difficult Subway With Consummate Skil, A. S. Taylor. Compressed Air Mag., vol. 29, no. 6, June 1924, pp. 897-902, 23 figs. Work in connection with construction of Queensboro Subway extension in New York City.

Construction Methods on the Rochester Subway. Eng. News-Rec., vol. 92, no. 9, Feb. 28, 1924, pp. 350-354, 11 figs. In converting old Erie Canal bed for passenger subway, line drilling was economic substitute for channeling; dry-batch haulage to mixing and chuting plant on car; excavation methods; concrete subway construction.

London, England. London's North to South Tube Railway. Tramway & Ry. Wld., vol. 56, no. 30, Dec. 18, 1924, pp. 313-320, 17 figs. Particulars of extensions made by City Railway; details of enlargement of tunnels, improved stations, permanent way and signaling, and rolling stock.

The Camden Town Extension, London Electric Railways. Engineer, vol. 137, no. 3559, Mar. 14, 1924, pp. 288-289, 6 figs. Length of underground extension is 1.8 mi. and its construction was made

unusually difficult by presence of two connecting tube tunnels for Highgate line at Camden Town.

Los Angeles, Cal. Los Angeles Builds a Subway. Elec. Traction, vol. 20, no. 8, Aug. 1924, pp. 343-345, 4 figs. Pacific Elec. Ry. Co. will have extensive underground transportation facilities with completion of new tunnel.

Madrid, Spain. Construction of the Alfonso XIII Metropolitan (Las obras del Metropolitano Alfonso XIII), M. Otamendi. Revista de Obras Públicas, vol. 72, no. 12, June 15, 1924, pp. 221-225, 7 figs. Details of East-West line between stations of Ventas and Sol recently opened for traffic; details of layout and construction work, including tunneling, station facilities, etc.

New York City. See RAPID TRANSIT, Suburban, New York City.

Repair-Shop Methods. Keeping Subway Trains on Schedule, F. H. Colvin. Am. Mach., vol. 66, nos. 14 and 16, Apr. 3 and 17, 1924; pp. 491-493 and 587-589, 16 figs. Methods of handling motive power in exacting service. Apr. 3: Wheels, tires and journal bearings. Apr. 17: How motor pinions are removed and armatures taken out of motors; method of testing pinions for cracks.

Train-Movement Noise, Reduction of. Reducing Noise in Train Operation. Elec. Ry. Jl., vol. 63, no. 4, Jan. 26, 1924, pp. 135-138. Results of extended series of tests made by Underground Elec. Rys. of Lond. Methods developed for preventing noise from entering cars; sound-absorbing material placed in roof, walls and floor; heavy closed windows, special ventilators and shrouding of trucks are principal features incorporated in new cars.

SUGAR

Beet Molasses Desugarizing. Barium Process Shows Interesting Possibilities for Desugarizing Beet Molasses, H. W. Dahlberg. Chem. & Met. Eng., vol. 31, no. 3, July 21, 1924, pp. 100-103, 3 figs. Describes process for recovery of sugar, based on reaction between barium hydrate or oxide and sugar, whereby an insoluble monosaccharate is formed. This extremely efficient method, commercial development of which has been retarded by high cost of barium hydrate, is able to operate successfully under Italian conditions.

Beet-Sugar Industry, Japan. Beet Sugar Industry in Japan, H. C. Huggins. La. Planter & Sugar Mfr., vol. 72, no. 1, Jan. 5, 1924, pp. 7-8. Cultivation of sugar beets; factories; method of refining.

Beet-Sugar Manufacture. A Problem in Beet Sugar Production—Improvements in Hot Saccharate Process, R. W. Shafor. Chem. & Met. Eng., vol. 31, no. 3, July 21, 1924, pp. 107-110, 6 figs. Chemical engineering involved in recovering last 10 per cent of sugar as carried out in four plants.

What the Beet-Sugar Industry Has Learned About Filtration, J. Maudru. Chem. & Met. Eng., vol. 31, no. 3, July 21, 1924, pp. 111-115, 6 figs. Operating practice and trend of recent developments in modern plant reveal progressive attitude toward industry's outstanding chemical engineering problem.

Cane Factory, Steam Consumption in. The Steam Consumption of Cane Sugar Factories, P. H. Parr. Int. Sugar Jl., vol. 26, no. 301, Jan. 1924, pp. 12-18. Suggestions with reference to estimation of probable steam consumption in given case; results of calculation on lines indicated are said to be usually quite close to actual requirements in practice.

Cane-Juice Clarification. The Petree Process for the Clarification of Cane Juices, E. E. Hartmann. Indus. & Eng. Chem., vol. 16, no. 11, Nov. 1924, pp. 1178-1180, 3 figs. Process is new development in clarification of sugar-cane juices resulting in reduction of sugar losses during manufacture; compact equipment used in process reduces operating costs and minimizes space requirements.

Cane-Planting Machine. A New Cane Planting Machine. West. Machy. Wld., vol. 15, no. 10, Oct. 1924, pp. 348 and 352, 3 figs. Describes a machine which has been devised on Lihue Plantation of Island of Kauai, Hawaii, where it is in successful operation. An average of 6 acres a day is being made by it.

Cane-Sugar Machines. American Machinery for the Manufacture of Cane Sugar, C. A. Handschin. West. Machy. Wld., vol. 15, nos. 6, 7, and 8, June, July, and Aug. 1924, pp. 183-186, 211-215, and 265-267, 33 figs. June: Field equipment used by Hawaiian planters for cultivating and harvesting sugar cane. July: Modern methods used for unloading cane as it arrives at factory, and modern machinery built by Honolulu Iron Works for extraction of juice. Aug.: Brief description of boiler-house equipment for evaporation of juice to syrup and for separation of crystals.

Machines for Producing Cane Sugar, F. Mertz. Eng. Progress, vol. 5, no. 2, Feb. 1924, pp. 23-25, 6 figs. Description of crushing mill made at Krupp's Gruson Works; utilization of crushed cane; heat economy.

Cane-Sugar Manufacture. Cane Sugar in Cuba, A. M. Young. Chem. & Met. Eng., vol. 30, nos. 22 and 23, June 2 and 9, 1924, pp. 857-861 and 902-906, 20 figs. Conditions under which cane is cultivated and chemical engineering of raw-sugar production. June 2: Process through defecation of juice. June 9: New equipment for clarifying juice: Dorr clarifier; Petree process; concentration of juice; sugar boiling; separation of crystals; packing sugar; chemical control; definition of terms used in control work.

Carbonatation Process. The Case for the Carbonatation Process in the Manufacture of White Sugars, F. Maxwell. Int. Sugar Jl., vol. 26, no. 301, Jan. 1924, pp. 22-26. With particular reference to South Africa. Deals with capital expenditure entailed in acquiring and erecting necessary installation.

Chilean Industry. Beet Sugar Industry (Industria del azúcar de betarraga), F. Busse. Sociedad de Fomento Fabril—Boletín, vol. 41, no. 6, June 1924, pp. 395-399. Details as to economic production of sugar, and beet-sugar factory equipment and costs.

Colloids in Manufacture of. See COLLOIDS, Sugar Manufacture.

Darco as Refining Charcoal. Darco, a Boneblack, Is a New Product of Lignite, H. C. Marshall. Coal Age, vol. 26, no. 10, Sept. 4, 1924, p. 334. Darco Corporation of Wilmington, Del., a subsidiary of Atlas Powder Co., with a plant and mines at Marshall, Tex., to manufacture Darco, a decolorizing and deodorizing carbon which they claim will take place of boneblack in refining of sugar.

Evaporators. Principles of Evaporation and Sugar Mill Evaporators, J. O. Frazier. Nat. Engr., vol. 28, no. 6, June 1924, pp. 273-276, 3 figs. Film evaporators, their operating principles and construction details. Kestner film evaporator. Vital factors in evaporation.

See also EVAPORATORS, Sugar-factory.

Factory Equipment Standardization. Standardization of Sugar Factory Equipment, G. H. W. Barnhart. La. Planter & Sugar Mfr., vol. 72, no. 14, Apr. 5, 1924, pp. 294-295. Requirements

of different equipment as indicated on three different occasions. Presents standards for certain cane sugar factory equipment which can be adopted and used in comparing equipment of factories handling cane juices of very different characteristics.

Manufacture, Corrosion Problems in. Corrosion Dragon in the Sugar Industry. Chem. & Met. Eng., vol. 31, no. 2, July 14, 1924, pp. 58-60, 6 figs. Corrosion problems encountered in refining of cane sugar and in production of beet sugar, and some of the construction materials used in combating them.

Milling and Clarifying Equipment. Report on Milling and Clarifying Equipment in Hawaii. Int. Sugar Jl., vol. 26, no. 302, Feb. 1924, pp. 88-91, 4 figs. Searby shredders; unstrained juice pulp; maceration distributor; strainers.

Mills, Furnace Heat Losses. A Study of Heat Losses in Sugar Mill Furnace Gases, J. O. Frazier. Nat. Engr., vol. 28, no. 2, Feb. 1924, pp. 64-66. Suggestion on how to recover heat lost from moisture in fuel; analysis of heat losses in modern boiler furnace operation and suggestions for most effective means of recovering waste heat; records of economizer performance in a large boiler plant.

Petree Process. Report on the Petree Process at Puunene and Paia, T. H., S. S. Peck. Int. Sugar Jl., vol. 26, no. 303, Mar. 1924, pp. 133-138. Effect on mill rollers and on extraction; question of fuel economy; recovery comparisons; etc. Includes letter by E. E. Hartmann dealing with effect on sucrose value, and factors responsible for improved recovery.

Refining and Manufacture. Process of Sugar Refining and Manufacturing. La. Planter & Sugar Mfr., vol. 72, no. 1, Jan. 5, 1924, pp. 10-13. Patented invention by Roy D. Elliott, relating to improved process of sugar manufacture and refining, and recovery of by-products.

Waste Disposal, Beet-Sugar. Disposal of Waste from the Beet Sugar Industry, E. Bartow. Chem. Age (N. Y.), vol. 32, no. 9, Sept. 1924, pp. 373-375. Classification of beet-sugar wastes; German patents on molasses utilization and associated subjects; disposal of the Steffen's waste.

SULPHUR

Industrial Uses. New Uses for Sulfur in Industry, W. H. Kobbé. Indus. & Eng. Chem., vol. 16, no. 10, Oct. 1924, pp. 1026-1028. Deals with materials which have been impregnated with molten sulphur by simple immersion in bath of this substance, such as diatomaceous earth, concrete, building brick, bifrous materials, various asbestos products, sandstone, fiber board, etc.

Production and Use. Production and Use of Refined Sulphur, C. A. Newhall. Chem. & Met. Eng., vol. 31, no. 4, July 28, 1924, pp. 144-149, 10 figs. Discussion of technology of manufacturing refined sulphur and of advantages and methods of commercial utilization. From paper read before Am. Inst. Chem. Engrs., July 1924.

Sulphur, Nev. A Novel Sulphur Enterprise in Nevada, A. J. Crowley. Eng. & Min. Jl.-Press, vol. 118, no. 20, Nov. 15, 1924, pp. 774-776, 4 figs. Notes on sulphur deposits at Sulphur, Nev., owned and operated by Humboldt Sulphur Co., mining, and metallurgical practice. Ore mined from surface and underground; ingenious process for steaming out sulphur.

Technology and Uses. Technology and Commercial Applications of Sulphur, H. H. Wilkinson. Chem. Age (N. Y.), vol. 32, nos. 1, 2, and 3, Jan., Feb., and Mar., 1924, pp. 22-24, 60-62, and 140-145. Résumé of diversified uses of sulphur, free and uncombined, in various arts.

Thermal Properties. See REFRIGERANTS, Sulphur Dioxide.

SULPHURIC ACID

Chamber Process. Are Lead Chamber Processes Reversible? (Sur la réversibilité des réactions de formation de l'acide sulfurique dans le procédé des chambres de plomb), A. Graire. Académie des Sciences—Comptes Rendus, vol. 179, no. 7, Aug. 18, 1924, pp. 397-400; also (translation) in Chem. & Met. Eng., vol. 31, no. 23, Dec. 8, 1924, pp. 892-893. Indicates that chamber-process reactions are reversible reactions.

Contact Process. Equipment Developments in the Contact Sulphuric Acid Process, F. C. Zeisberg. Chem. & Met. Eng., vol. 30, no. 21, May 26, 1924, pp. 829-831, 2 figs. Describes and evaluates marked changes that have taken place during 25 years of life of process.

Present Status of the Contact Sulphuric Acid Industry In Russia, J. R. Minevitch and W. M. Malisoff. Chem. & Met. Eng., vol. 30, no. 10, Mar. 10, 1924, pp. 384-388, 2 figs. Historical account of development reveals interesting application of modern processes and equipment in growing heavy chemical industry.

Fuming, Vapor Pressures of. The Vapour Pressures of Fuming Sulphuric Acid, and Their Application to the Problem of the Absorption of Sulphur Trioxide, J. W. McDavid. Chem. & Industry, vol. 43, no. 12, Mar. 21, 1924, pp. 57T-61T, 1 fig. Describes method of calculation employed to determine conditions governing production of oleum, shows how conditions may be varied to meet any particular case, and indicates how closely actual practice approximates to theory.

Manufacture. Industrial Production of Sulphuric Acid (La préparation industrielle de l'acide sulfurique), M. Bouleau. Vie Technique & Industrielle, vol. 5, nos. 59 and 61, Aug. and Oct. 1924, pp. 293-296 and 445-448, 8 figs. Details of lead chamber process and apparatus used. Cost data.

Sulphuric-Acid Manufacture According to the Gaillard System (La fabrication de l'acide sulfurique par le procédé E. A. Gaillard), P. Le Breton. Chimie & Industrie, vol. 11, no. 4, Apr. 1924, pp. 662-664, 5 figs. See also (translation) in Chem. Trade Jl. & Chem. Engr., vol. 74, no. 1934, June 13, 1924, p. 711. Intensive system of manufacture as practiced in plant in Spain; efficiency figures obtained in practice; use of empty Glover and Gay-Lussac towers; mechanical devices.

Sulphuric Acid Plants—Old and New, P. Parrish. Chem. Age (Lond.), vol. 10, no. 250, Mar. 29, 1924, pp. 316-318, 4 figs. Developments in manufacture of sulphuric acid. Summary of lecture delivered before Jr. Instn. Engrs.

SULPHUROUS ACID

Distillation. Distillation of Sulphurous Acid Dissolved in Water (Destillation av svavelsyrlighet i vattenlösning), E. Oeman. Teknisk Tidskrift, vol. 54, no. 45, Nov. 8, 1924, pp. 81-85 (Kemi), 10 figs. Experimental determination of quantities of sulphurous acid dissolved in water at different temperatures and pressures. Results of practical distillation of same from solutions in water.

SUPERHEATED STEAM

Advantages. Convenient Analysis of Modern Plant and Application to Ship Propulsion. Power, vol. 60, no. 1, July 1, 1924, pp. 18-20, 7 figs. Net plant efficiencies with stage bleeding or reheating which may be quickly obtained from simple diagrams with appropriate corrections.

Closed Heaters, Direct Use in. Superheated Steam Used Directly in Closed Heaters, B. C. Sprague. Power, vol. 59, no. 5, Jan. 29, 1924, pp. 160-161, 1 fig. Author has conducted tests under various conditions, indicating that heat

transfer is same with both saturated and superheated steam of same pressure, while temperature of tube is below that of saturation; explains that heat transfers per sq. ft. per hr. should be equal.

Heat Content, Measurement of. Direct Measurement of the Heat Content of Superheated Steam, N. S. Osborne. Mech. Eng., vol. 46, no. 11a, mid-Nov. issue, 1924, pp. 808-809. Calorimetric method of surveying behavior of superheated steam by employing isothermal throttling in saturated-steam calorimeter.

Insulation. Superheated Steam Insulation Pays, R. H. Heilman. Chem. & Met. Eng., vol. 31, no. 24, Dec. 15, 1924, pp. 934-936. Shows relatively short time required to repay original cost of installations and relatively large return per year on investment that can be effected by proper insulation of superheated steam surfaces. (Abstract.) Paper read before Am. Inst. Chem. Engrs.

Regenerative Feed Heating by. Regenerated Feed Heating by Superheated Steam, Thos. B. Morley. Engineer, vol. 138, no. 3594, Nov. 14, 1924, pp. 544-545, 2 figs. Author seeks to demonstrate fallacy of statement that use of superheated steam extracted from higher pressure stages of turbine for feed heating is essentially uneconomical on purely thermodynamic grounds; discusses process of regenerative feed heating in general with reference to steam-turbine plant.

Research. Harvard Throttling Experiments Extend Data on Superheated Steam, P. W. Swain. Power, vol. 60, no. 9, Aug. 26, 1924, pp. 329-332, 4 figs. Work being done by Prof. Davis and Dr. Kleinschmidt at Harvard, where extremely accurate measurements are being made of Joule-Thomson effect.

SUPERHEATERS

Detachable-Tube. A New Detachable Tube Superheater. Engineer, vol. 137, no. 3572, June 13, 1924, pp. 667-668, 4 figs. Improved form evolved by Thos. Sugden.

Developments. Superheaters and their Latest Developments, B. N. Broido. Combustion, vol. 11, no. 1, July 1924, pp. 42-45, 4 figs. Developments in design of superheaters to meet demands of modern power plants.

Heat Exchange in. Heat Exchange in Steam Superheaters (Ueber den Wärmeaustausch in Dampfüberhitzern), C. Rühl. Wärme- u. Kälte-Technik, vol. 26, no. 14, July 22, 1924, pp. 115-118, 11 figs. Discusses heat transmission and describes patented pipe with interior partition having heat transmission of 1.2 times that of ordinary pipes.

Locomotive. Criticism of Locomotive Superheaters (Zur Kritik des Lokomotivüberhitzers), R. P. Wagner. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 37, Sept. 13, 1924, pp. 951-956, 29 figs. Requirements of steam superheaters, types used in Germany, possibilities of developments, bases for calculations.

Locomotive Superheaters. Ry. Gaz., vol. 41, no. 7, Aug. 15, 1924, p. 224, 2 figs. Describes return bend evolved by Northeastern Mar. Eng. Co., Ltd., to meet most exacting conditions of service.

Locomotive Superheaters. Superheater Co. (Locomotive Superheaters)—Bul. 11. Description, operation and maintenance of Elesco type "A" locomotive superheater.

Locomotive Superheaters, R. T. Wagner. Mech. Eng., vol. 46, no. 12, Dec. 1924, pp. 905-906, 6 figs. Examines 12 types of superheaters used or tried on German railways. (Abstract.) Translated from Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 37, Sept. 13, 1924, p. 951.

The Manufacture of Locomotive Superheaters. Ry. Engr., vol. 45, no. 539, Dec. 1924, pp. 420-422, 9 figs. Methods and equipment of superheater shops at Wallsend Works of North Eastern Mar. Eng. Co.

Operation and Types. See BOILERS, Operation and Types.

Radiant-Heat. Operation of Radiant Heat Superheaters. Power Plant Eng., vol. 28, no. 10, May 15, 1924, pp. 528-529, 1 fig. Steam temperature varies slightly with percentage of CO_2; advantages of two-stage superheating.

River Boats. Superheated Steam for River Boats. Superheater Co. (Marine Superheaters)—Bul. M-7. Points out special advantages of Elesco superheaters for Mississippi River-type boilers; description of superheaters; lubrication and operation; results of tests on river boats equipped with superheaters.

Sectional. A New Sectional Superheater. Power Engr., vol. 19, no. 214, Jan. 1924, p. 24, 2 figs. Describes sectional modification of Adamson-Cruse accumulator-superheater.

SUPERPOWER

Fuel Economy Through. Fuel Economy Through Interconnection, N. G. Reinicker. Engrs. & Eng., vol. 41, no. 4, Apr. 1924, pp. 97-99. Paper read at conference on Economy in the Use of Fuel, held at Engrs. Club of Phila., Jan. 15, 1924.

Interconnected System, Pacific Coast. Physical Aspects of the Pacific Coast Interconnected System. Jl. Electricity, vol. 52, no. 3, Feb. 1, 1924, pp. 100-101, 1 fig. Survey shows that two small gaps, one in Oregon and other in Washington, remain before complete tie-in of lines serving California, Oregon, Washington and Montana can be effected; with these closed, system that has no parallel in any part of world would then exist.

Interconnection and. Superpower and Interconnection, Herbert Hoover. Elec. World, vol. 83, no. 21, May 24, 1924, pp. 1078-1080. Points out that economical expansion is possible in these twin developments and shows necessity of keeping initiative free from deadening influence both of bureaucracy and of socialistic experiment. (Abstract.) Address before Nat. Elec. Light Assn.

Interconnection, Southeastern States. Interchange of Power in the Southeastern States, J. M. Oliver. Iron & Steel Engr., vol. 1, no. 11, Nov. 1924, pp. 573-575, 5 figs. Virtual super-power system has been in existence in South for several years covering Alabama, Georgia, Tennessee, North and South Carolina; consists of interconnected systems of seven independent companies.

Interconnection of Power Systems in the Southeastern States, W. E. Mitchell. Am. Inst. Elec. Engrs.—Jl., vol. 43, no. 12, Dec. 1924, pp. 1150-1153. Problems of interconnection, power interchange and operation of interconnected systems. (Abridgment.)

The Interconnected Power Systems of the Southeast, Chas. G. Adsit. Am. Soc. Civ. Engrs.—Proc., vol. 50, no. 8, Oct. 1924, pp. 1286-1302, 2 figs. Describes system of Georgia Railway and Power Company, which is said to be typical of other companies connected with interconnected transmission systems of Southeast.

Isolated Station vs. Superpower vs. Coal Conservation, E. Douglas. Power, vol. 59, no. 12, Mar. 18, 1924, pp. 448-449. Points out that panacea of all troubles does not lie with superpower, nor will isolated plant be best solution in all cases, but a combination of the two with proper consideration given to both power and heating, as well as use of steam for industrial purposes, will be intelligent solution. (Abstract.) Paper read before Wis. Eng. Soc.

Northeastern United States, Survey of. Northeast Power in 1930. Elec. Wld., vol. 84, no. 5, Aug. 2, 1924, pp. 205-207, 4 figs. Estimated power demand in 1930; committee advocates large steam stations and development of water power.

Northeast Superpower Studies Completed. Power, vol. 60, no. 5, July 29, 1924, pp. 179-182, 6 figs. Also Eng. Wld., vol. 25, no. 2, Aug. 1924, pp. 77-79, 1 fig. Abstract of report covering present and future power requirements of the ten Northeastern states and part of Ohio, Virginia, and West Virginia, with special reference to cost of delivering hydroelectric power. Report indicates growth in use of electrical power for industrial and other purposes; recommends extension of interconnection between different systems, construction of large steam plants strategically located, and development of large hydroelectric projects. See also Engineers' Committee Report on Northeastern Super-Power, Eng. News-Rec., vol. 93, no. 5, July 31, 1924, pp. 186-188, 3 figs., giving comparative costs of power through combination of different sources.

Regulation. Superpower and Its Public Relations, H. W. Hoover. Military Engr., vol. 16, no. 88, July-Aug. 1924, pp. 278-282, 11 figs. partly on supp. plates. Discusses increase and development of power systems, and its three cardinal factors, viz., service, conservation, and low cost; coördinate regulation by states with coöperation of federal government.

Significance of. The Significance and Status of Super Power Development in the United States, E. B. Whitman. Mfrs. Rec., vol. 85, no. 13, Mar. 27, 1924, pp. 79-81, 1 fig. Résumé of what it is hoped will be eventually accomplished for the entire country.

Stations. See CENTRAL STATIONS, Superpower.

SURVEYING

Aerial. Aeroplane Surveying, H. L. Cooke. Eng. Jl., vol. 7, no. 9, Sept. 1924, pp. 599-602. Progress in preparation of contoured maps from air photographs.

Present State of Aerial Photography for Topographic Surveying (Lo stato attuale dei metodi di rilevamento topografico dagli aerei), G. Cassinis. Ingegneria, vol. 3, no. 9, Sept. 1, 1924, pp. 306-317, 22 figs. Details of various types of cameras, theodolites, etc., including those of Zeiss, Nistri and Heyde.

The Use of the Aeroplane in Surveying and Engineering, E. Wilson. Eng. Jl., vol. 7, no. 1, Jan. 1924, pp. 3-7, 4 figs. Its application to engineering works, with special reference to forest surveys and right-of-way reconnaissance surveys.

Transmission Line Work Aided by Aerial Survey, F. A. Allner and J. R. Baker. Eng. News-Rec., vol. 92, no. 9, Feb. 28, 1924, pp. 360-363, 1 fig. Advantages and limitations of air mapping accurately evaluated in two high-tension lines in Pennsylvania; aerial survey cost less than $50 per mi.

Aerial Photographic. See AERIAL PHOTOGRAPHY, Surveys; MAPPING, Aerial Photography in.

Geodetic. A Simple Form for the Azimuth Equation, L. B. Stewart. Can. Engr., vol. 46, no. 18, Apr. 29, 1924, pp. 475-477, 1 fig. By "azimuth equation" is meant equation used in reducing an observation of Polaris to determine azimuth of a direction, observation being taken at any time. Operation of finding pole star in daylight; taking observation; formulas for reducing, suitable for most precise geodetic observations, or those taken with engineer's transit.

The Function of Geodesy in Surveying, W. Bowie. Military Engr., vol. 16, no. 86, Mar.-Apr. 1924, pp. 140-143, 7 figs. Discusses geodetic surveys of U. S. A., work and accuracy of triangulation astronomic observations, isostatic investigations, instruments used.

Hydrographic, Sounding Tube for. New Sounding Tube Devised for Hydrographic Surveying, G. T. Rude. Eng. News-Rec., vol. 92, no. 19, May 8, 1924, pp. 806-807, 1 fig. Capillary block is added feature which gives device developed by U. S. Coast & Geodetic Survey accuracy in measuring water depth.

Instruments. Design and Construction of Surveying Instruments, W. H. Connell. Surveyor, vol. 34, no. 5, May 1924, pp. 270-277, 5 figs. Progress in construction of instruments; introduction of labor-saving devices, better workmanship, better guarding of vulnerable parts, reduction in dimensions and weight, greater rigidity, etc.

Manufacture of Surveying Instruments, W. L. Egy. Can. Engr., vol. 47, no. 10, Sept. 2, 1924, pp. 299-302, 3 figs. Discusses development of surveying and other engineering instruments; principle has not changed much but refinements in material and construction have been introduced. Abstract of paper read before Am. Water Works Assn.

New Instruments and Apparatus for Surveys. Eng. & Contracting (Water Works), vol. 61, no. 5, May 14, 1924, pp. 1085-1089, 6 figs. Recent developments of U. S. Coast and Geodetic Survey.

Land. Curve Problem Met in Land Surveying, J. T. Ransom. Can. Engr., vol. 46, no. 16, Apr. 15, 1924, pp. 430-431, 2 figs. New ready simple method for computing curved or chord frontages for a lot or series of lots of equal or varying widths with parallel sides on new subdivision surveys.

Leveling. See LEVELING.

Mapping. See MAPPING.

Mine. See MINES, Surveying.

North Carolina. Precise Triangulation, Traverse, and Leveling in North Carolina, W. D. Sutcliffe and H. G. Avers. U. S. Coast & Geodetic Survey—Special Pub. no. 101, Serial no. 260, 1924, 184 pp., 17 figs. partly on supp. plates. Results of all precise triangulation, precise traverse, and precise leveling which constitute horizontal and vertical control for North Carolina. Gives all data ordinarily needed for control of local surveys, describes methods employed in making triangulation and traverse observations, and discusses office computation, including final rigid least squares adjustment.

Photographic. See MAPPING, Photographic.

Photographic, Stereoscopic Plotting Machines. Stereoscopic Plotting Machines for Use in Photographic Surveying, H. St. J. L. Winterbotham. Roy. Engrs. Jl., vol. 38, no. 1, Mar. 1924, pp. 68-86, 20 figs. partly on supp. plates. Describes camera plastica, Nistri photocartograph, photogoniometer, autocartograph, and stereoplanigraph.

Stadia. See TACHEOMETRY.

Stereotopography. Stereotopography and Its Recent Progress (La stéréotopographie et ses récents progrés), J. Boyer. Nature (Paris), no. 2614, May 10, 1924, pp. 299-304, 7 figs. Discusses development of stereophotogrammetry by Pulfrich, and describes stereocomparator, and Orel stereoautograph; advantages of stereoautogrammetry.

Theodolites. A New Recording Theodolite (Ein neuer Registrier-Theodolit), F. Hennig. Deutsche Optische Wochenschrift, vol. 10, no. 27, July 6, 1924, pp. 348-349, 4 figs. Details of Hahn-Goerz apparatus so arranged that single observer can follow pilot balloon with microscope of theodolite.

The Illumination of Geodetic Measuring Instruments (Einige Mitteilungen über die Entwicklung der Beleuchtung von Messstellen an geodätischen Vermessungs-Instrumenten), K. Lüdemann. Zeit. für Instrumentenkunde, vol. 44, no. 2, Feb. 1924, pp. 33-43, 7 figs. Review of developments, with special reference to theodolites constructed by firm of M. Hildebrand, Freiberg. Bibliography.

See also MINES, Surveying Instruments.

Transits. Transits Without Stadia Wires, E. S. M. Lovelace. Can. Engr., vol. 47, no. 13, Sept. 23, 1924, pp. 365-366. Method of using a transit not fitted with stadia wires but having a vertical arc. Main requirements of proposed new instruments.

Triangulation. Practical Compensation for Accuracy of Trigonometric Nets (Compensazione pratica di precisione delle reti trigonometriche), G. Ferrario. Annali dei Lavori Pubblici, vol. 62, no. 4, Apr. 1924, pp. 309-326. Discusses divergence of triangulation work of Milan, doubt as to method of least squares, and proposes method for compensating errors of observation in triangulation.

SWAGING

Cranks. See AUTOMOBILES, Parts, Swaging of.

SWIMMING POOLS

Design. Designing Swimming Pools With Reference to Operation and Sanitation, J. J. Himman, Jr. Mun. & County Eng., vol. 66, no. 2, Feb. 1924, pp. 77-82. Explains why the ordinary tank is not a satisfactory swimming pool, and discusses some of the features which should be taken into account in design of this type of equipment.

Outdoor. Plans and Specifications for Outdoor Swimming Pools. Concrete Products, vol. 27, no. 1, July 1924, pp. 35-39, 10 figs. Discusses design of pools, materials, measuring and mixing, construction, concrete walls and floor, and surface finish.

Water Filtration. Continuous Filtration of the Bath Water of Swimming Baths, T. Thomas. Domestic Eng. (Lond.), vol. 44, no. 1, Jan. 1924, pp. 14-16. Description of three filtration plants; factors which should be considered in selection of filter. Abstract of paper read before 34th Congress of Roy. Sanitary Inst.

Operating Experiences With Regenerated Water at the Frankfort Public Baths (Betriebserfahrungen mit regeneriertem Badewasser im Frankfurter Hallenschwimmbad), M. Nowotny. Gesundheits-Ingenieur, vol. 47, no. 37, Sept. 13, 1924, pp. 405-407, 5 figs. Discusses developments since 1913 reducing water consumption to one-tenth and coal consumption to one-fifth. Cost data.

SWITCHBOARDS

Armorclad. Armourclad Compound-filled Switchgear Units. World Power, vol. 1, no. 2, Feb. 1924, pp. 124-126, 4 figs. Describes Ferguson-Pailin 3-phase unit for 300 amperes at 33,000 volts, consisting of two oil circuit breakers mounted together on one base and capable of being connected to either or both sets of duplicate busbars.

Design. Notes on the Design of Power Switchboards, E. G. Bern. Power Plant Eng., vol. 28, no. 5, Mar. 1, 1924, pp. 285-286, 3 figs. Discusses problem of design from point where system of connection has been drawn and equipment selected.

Safe Switchgear (Betriebssichere elektrische Schaltgeräte), W. Höpp. Elektrotechnische Zeit., vol. 45, no. 5, Jan. 31, 1924, pp. 69-74 and 91-98, 16 figs. Shows great value of mathematical analysis in correct design of different types of switches; for every switch mechanism a simple and transparent mathematical formula may be established which will give most efficient and dependable solution for particular device under consideration; notes on catch mechanism, toggle joints, and other mechanical releases found on all automatic breakers, showing best solutions for every case.

Erskine-Heap. Erskine Heap Switchgear. Engineering, vol. 118, no. 3055, July 18, 1924, pp. 106-108, 5 figs. Describes switchgear exhibited at British Empire Exhibition, by Erskine, Heap & Co., Ltd., Manchester, Eng. Panel is built of ironwork throughout, and truck portion carries a three-phase oil circuit breaker and potential and current transformers for instruments and trip coils.

High-Voltage. Switchgear and Induction Regulators. Engineering, vol. 118, no. 3057, Aug. 1, 1924, pp. 180-181, 5 figs. Details of Wembley Exposition of three-panel board for pressures up to 3300 volts and line currents up to 60 amperes; oil-immersed gate-end switches fitted with limited overload protection, draw-out truck type switchgear for three-phase working.

Ironclad. New E. H. T. Ironclad Switchgear. Power Engr., vol. 19, no. 215, Feb. 1924, pp. 66-67, 2 figs. New design of 6600-volt, 3-phase switchgear for currents up to 25 amperes intended for use in substations in outlying districts and in consumers' works.

Neasden Power Plant, England. New Switchgear at the Neasden Power Station. Engineer, vol. 137, no. 3551, Jan. 18, 1924, pp. 74-75, 9 figs. partly on p. 70. Describes switchgear, contact for which was carried out by Gen. Elec. Co., of Witton, Birmingham, for Neasden station of Metropolitan Ry.

Non-Ignitible. See INSULATING MATERIALS, ELECTRIC, Boards and Moldings.

Panels, Truck-Type. English-Electric Truck-Type Switchgear. Elec. Rev., vol. 94, no. 2416, Mar. 14, 1924, p. 435, 2 figs. New iron-clad truck type of "draw-out" switchgear for use in substations and also in generating stations.

Removable Truck Type Panels, H. E. Starbuck. Gen. Elec. Rev., vol. 27, no. 5, May 1924, pp. 293-297, 7 figs. Describes panels for power-house switchboards.

Testing. Checking Switchboard-Instrument Connections, R. Brown. Power, vol. 60, no. 7, Aug. 12, 1924, pp. 253-254, 8 figs. Gives diagrams of methods for checking instrument connections and explains application.

SWITCHES

Electric. See ELECTRIC SWITCHES.

Railway. See RAILWAY SWITCHES.

SYMBOLS

Engineering, French. See ABBREVIATIONS.

SYNCHRONOSCOPE. See ELECTRIC MEASURING INSTRUMENTS, Synchronoscope.

T

TABULATING MACHINES

Improved Type. A New Type of Tabulating Machine. Engineer, vol. 137, no. 3559, Mar. 14, 1924, pp. 274-276, 4 figs. Describes improved type of machine, by which mechanical accountancy and statistical analysis have been made all but independent of human element.

TACHEOMETERS

Kourkene. The Kourkene Tacheometer (Le tachéomètre, système Kourkène). Génie Civil, vol. 85, no. 7, Aug. 16, 1924, pp. 154-157, 9 figs. Design and construction of direct-reading apparatus made by Précision Moderne at Paris, measuring heights as well as distances.

TACHEOMETRY

Horizontal. Horizontal Tacheometry, C. H. Ley, Engineering, vol. 118, no. 3067, Oct. 10, 1924, pp. 505-507, 9 figs. Describes experiments carried out in Palestine; refers to taking of readings for range on tacheometric staff of two stadia lines at fixed distance apart in diaphragm of tacheometer; also to method invented by Prof. Oltay of Budapest, by which reading of single central line in diaphragm can be shifted through necessary optical interval by means of prism hinged in front of object glass of instrument.

TACHOMETERS

Speed-Indicating-and-Recording. Speed Indicating and Recording. Shipbldg. & Shipg. Rec., vol. 24, no. 6, Aug. 7, 1924, p. 171, 2 figs. Description of electrical tachometer equipment.

TACKS

Manufacture. Making Plain and Headless Tacks, H. R. Simonds. Iron Trade Rev., vol. 74, no. 13, Mar. 27, 1924, pp. 861-865, 7 figs. Traces history of tack manufacture, and describes some operations.

TALC

Use in Paper Making. See PAPER MANUFACTURE, Talc, Use in.

TANKS

Horizontal, Contents Determination. A Quick and Useful Horizontal Tank Chart, W. F. Schaphorst. West. Machy. Wld., vol. 15, no. 7, July 1924, pp. 227-228, 1 fig. Chart gives gallons of liquid in any horizontal tank without use of tables, formulas, figures, or computations of any kind. Inversely, chart may be used for determining length of tank necessary to hold given number of gallons where diameter of tank and depth of liquid are known.

How to Find the Contents of Horizontal Storage Tanks, Jos. B. Reynolds, and Sam Cottrell. Chem. & Met. Eng., vol. 31, no. 17, Oct. 27, 1924, pp. 665-667, 1 fig. Table and explanation that simplifies calculation for one type of tank and can be easily applied to other types.

Military. See TANKS, MILITARY.

Oil. See OIL TANKS.

Reinforced-Concrete. Molasses Tank of the Kronos Factory in Eleusis near Athens (Die Melassebehälter der Fabrikanlage "Kronos" in Eleusis bei Athen), P. P. Santo Rini. Beton u. Eisen, vol. 23 no. 15, Aug. 5, 1924, pp. 193-197, 10 figs. Details of tank construction and system of reinforcing, tank capacity 4000 cu. m. or 6000 tons molasses.

TANKS, MILITARY

Developments. The Tank, A. C. Cron. Coast Artillery Jl., vol. 61, no. 5, Nov. 1924, pp. 383-395, 7 figs. British, French, German, and American tanks in world war; post-war development; organization; tank tactics.

TANNING. See LEATHER, Tanning; Tanning Materials.

TAPS

Breakage, Prevention of. See MACHINE TOOLS, Safety Tapping Mechanisms.

Manufacture. Taps and Tapping, H. Appleyard. Mech. Wld., vol. 75, no. 1954, June 13, 1924, pp. 366-367, 11 figs. Description of how taps are made.

Standard Tolerances for. Standardizing Tolerances for Taps, Chas. C. Winter. Am. Mach., vol. 60, no. 16, Apr. 17, 1924, pp. 593-594. Discussion of article by W. Daley published in same journal, vol. 60, no. 16, p. 217.

See also TOLERANCES, Taps, Standardization for.

TAR

Asphalt, for Roofing. Flow of Asphalt Tar (Goudron), K. S. Zarembo. Petroleum & Oil-Shale Industry, vol. 5, no. 7-8, July-Aug. 1923, pp. 95-99, 3 figs. Method of determining flow of asphalt tar, as this property has special bearing on manufacture of so-called improved tar roofing materials. (In Russian.)

Distillation. Tar Distillation—Crude Derivatives and Uses, J. H. Readio. Gas Age-Rec., vol. 53, nos. 8 and 9, Feb. 23 and Mar. 1, 1924, pp. 213-218 and 224, and 251-254 and 259-260, 15 figs. Historical references to use of tar; sources and types of tar and peculiarities of type; values of tars to refiners; tar dehydration; tar refinery; use of tar products and their distinctive properties.

Lignite. Examination and Treatment of Lignite Tar (Untersuchung und Aufarbeitung von Braunkohlenteeren), W. Franckenstein. Zeit. für angewandte Chemie, vol. 37, no. 45, Nov. 6, 1924, pp. 878-882. Discusses methods of distillation, including vacuum and steam distillation, and gives a tabular statement of products resulting.

See also LIGNITE, Oil Recovery from.

Road. See ROADS, TARRED, Consistency of Tars.

Waste Emulsions, Dehydration of. Dehydrating Waste Emulsions, G. A. Simmons. Gas Age-Rec., vol. 54, no. 25, Dec. 20, 1924, pp. 859 and 864, 1 fig. Describes new method by which waste emulsions other than those of coal gas tar are successfully dehydrated.

Water Content. Water Content of Tar (Der Wassergehalt im Teer), O. Pfeiffer. Gas- u. Wasserfach, vol. 67, no. 35, Aug. 30, 1924, pp. 521-523. Three samples of tar from same gas works, containing respectively 3, 4, and 13.8 per cent of water, were subjected to distillation test and also examined for free carbon; average sample was then agitated with water and allowed to settle for 3 days, and samples from various depths were subjected to similar tests; results show fall in specific gravity, slight rise in constituents of lower boiling point, and rise in free-carbon content with increase in proportion of water present; analyses sufficiently explain unsatisfactory results of attempts to separate this water by centrifuging.

TAXICABS

Brakes. See AUTOMOBILES, Four-Wheel Brakes.

TELEGRAPH LINES

Earthquake Damages, Japan. A Brief Description of the Damages Done by the Earthquake to the Wired and Wireless Telegraph and Telephone Installations of Japan, S. Inada. Elec. Communication, vol. 3, no. 2, Oct. 1924, pp. 79-102, 21 figs. Damages to telegraph installations, telephone, radio stations, laboratory installations; lessons learned from disaster. Program of reconstruction executed and otherwise.

Inductive Interference. See TELEPHONE LINES, Inductive Interference.

Interference, Power-Circuit. Power Circuit Interference with Telegraphs and Telephones, S. C. Bartholomew. Instn. Elec. Engrs.—Jl., vol. 62, no. 334, Oct. 1924, pp. 817-858 and (discussion) 858-878, 52 figs. General survey of position, describing features in modern generation and distribution of electrical energy which are responsible for interference with telegraph and telephone circuits, emphasizing importance of harmonics in this connection, and indicating some known reme-

dies applicable to power plant at its source when trouble is experienced; review of problem and general experience in England. Appendix, describing method of removing ripples from mercury-arc rectifiers. Bibliography.

Railway Construction, 1923. Telegraph and Telephone Construction, J. H. Dunn. Ry. Age, vol. 76, no. 1, Jan. 5, 1924, pp. 73-75. Pole-line reconstruction and telephone dispatching and message circuits leading activities.

TELEGRAPHY

A.C. Over Underground Cables. A. C. Telegraphy Over Underground Cables (Wechselstrom-Telegraphie auf Kabeln). Siemens-Zeit., vol. 4, no. 1, Jan. 1924, pp. 27-30, 4 figs. Describes system of a.c. multiplex telegraphy developed in Werner Works laboratory of Siemens & Halske Corpn.

Baudot Apparatus. See Printing Systems.

Cables. See CABLES, ELECTRIC, Telegraph.

Carrier-Current. Telegraph Systems, F. J. Singer. Wis. Engr., vol. 28, no. 6, Mar. 1924, pp. 111-113, 1 fig. Discusses carrier-current systems in general, and describes multiplex carrier-current telegraphy; application of carrier telegraphy in Bell system.

Electromagnets. Improvement of Electromagnets Used in Telegraphy and Telephony (Amélioration des électro-aimants employés en télégraphie ou en téléphonie), J.-H. Gosselin. Annales des Postes Télégraphes et Téléphones, vol. 13, no. 10, Oct. 1924, pp. 1028-1040, 7 figs. Discusses theory, magnetic flux, increase of attraction, decrease of adhesion due to residual magnetism, relays, etc.

Minniotti Automotic System. The Minniotti Telegraph System, V. Castelli. Telegraph & Telephone Jl., vol. 10, no. 108, Mar. 1924, pp. 92-93, 1 fig. Describes new system of automatic telegraph transmission, invention of G. Miniotti, an Italian, in which process is same as with perforated slip with exception that signals are mechanically stored by use of balls which, once having effected transmission, return to be re-accumulated for further signals.

Multiplex. Multiplex Telegraphy and Telephony at Carrier Frequencies (Mehrfach-Telegraphie und Telephonie mit Trägerfrequenzen), E. Gendriess. Elektrotechnischer Anzeiger, vol. 41, nos. 170-171 and 172, Oct. 23 and 25, 1924, pp. 949-950 and 957-958, 3 figs. Discusses sextuplex telegraphy at voice frequencies and gives wiring diagrams for sending and receiving.

Oscillations in Circuits. Forced Oscillations in Two Tuned Circuits Coupled by Iron Core Coils (Erzwungene Schwingungen in zwei abgestimmten Schwingungskreisen, die durch Eisenkernspulen gekoppelt sind), L. Casper, K. Hubmann and J. Zenneck. Jahrbuch der drahtlosen Telegraphie u. Telephonie, vol. 24, no. 4, 1924, pp. 79-84, 9 figs. Examines forced oscillations in condenser circuits and their resonance curves.

Printing Systems. The Teletype, Description and Operation (Le télétype, description et fonctionnement). Annales des Postes Télégraphes et Téléphones, vol. 13, no. 8, Aug. 1924, pp. 911-925, 7 figs. Details of design of Baudot apparatus, formation and transmission of signs, printing mechanism, translating figures into letters and vice versa.

Transmission by Means of Perforated Slip and Page Reception with Baudot Apparatus, J. Jacob. Post Office. Engrs.' Jl., vol. 17, Part 2, July 1924, pp. 97-110. Demonstrates origin and peculiarities of 5-impulse codes and points out that with use of perforated slips choice of so-called "universal" keyboard becomes as important as that of unique code. From Technique Moderne, nos. 8 and 9, Apr. 24, 1924.

Railway. Telegraph and Telephone Practice, Chas. S. Rhoads. Ry. Signaling, vol. 17, nos. 5 and 6, May and June 1924, pp. 212-214 and 250-252, 9 figs. May: Special circuits and applications of Western Electric selectors for railroad communication. June: Western Electric selectors for time sending with branch-line connection.

Speed Factors. Certain Factors Affecting Telegraph Speed, H. Nyquist. Am. Inst. Elec. Engrs. —Jl., vol. 43, no. 2, Feb. 1924, pp. 124-130, 3 figs. Discusses following factors: (1) signal shaping, i.e., giving signals best wave shape before impressing them on transmitting medium; and (2) choice of codes so as to transmit maximum amount of intelligence with given number of signal elements; also discusses certain telegraph systems which have been advocated.

Stations. Lowestoft Telegraph Repeater Station (LWV) (England), J. A. S. Martin. Post Office Elec. Engrs.' Jl., vol. 16, Pt. 4, Jan. 1924, pp. 295-300, 4 figs. Is relaying point for three Dutch and two German cables; description of equipment.

Submarine. Rapid Telegraphy With Ocean Cables (Schnelltelegraphie auf Ozeankabeln), K. W. Wagner. Elektrische Nachrichten-Technik, vol. 1, no. 4, Oct. 1924, pp. 114-137, 34 figs. Deals with Thomson and Krarup cables. Construction of Krarup cables for rapid operation; Krarup sheaths of nickel-iron alloys; velocity of telegraphing. Duplex operation.

Wired Wireless. See TELEPHONY, Wired Wireless.

Wireless. See RADIOTELEGRAPHY.

TELEMETERS

Electrical. A New Electrical Telemeter, B. McCollum and O. S. Peters. U. S. Bur. Standards—Technologic Papers, no. 247, Jan. 4, 1924, pp. 737-777, 24 figs., partly on supp. plates. Fundamental principles and applications of instrument for measurement of strains, forces, displacements, and accelerations; can be made remote reading or remote recording, and adapted to measurement of quantities that are rapidly varying in value.

TELEPHONE LINES

Construction. The Telephone Pole Line, P. K. Higgins. Telephone Engr., vol. 28, no. 5, May 1924, pp. 17-20, 4 figs. Fittings, setting of poles, guying, weight and strength of wire, factors affecting pole lines, insulator facts; stringing line; collection of valuable pole data.

Disturbances. Cross-Talk in Duplex Telephone Lines (Oeverhörning i duplicerade telefonkablar), A. Engelhardt. Teknisk Tidskrift, vol. 54, no. 1, Jan. 5, 1924, pp. 12-14 (Elektroteknik), 6 figs. Short review of disturbances which occur in telephone cables with duplex circuits and most important of the available means for elimination of these disturbances.

Earthquake Damages, Japan. See TELEGRAPH LINES, Earthquake Damages, Japan.

Impedance. Impedance of Loaded Lines, and Design of Simulating and Compensating Networks, R. S. Hoyt. Bell System Technical Jl., vol. 3, no. 3, July 1924, pp. 414-467, 22 figs. Discusses impedance of non-dissipated loaded lines as function of frequency and line contacts, and networks for simulating and compensating impedance of loaded lines.

Inductive Interference. Communication Circuits. Electrician, vol. 92, no. 2394, Apr. 4, 1924, pp. 420-421, 4 figs. Electrostatic and electromagnetic disturbances that occur in telephone and telegraph lines in proximity to single-phase power circuits. From article by A. Holmgren in Teknisk Tidskrift, Apr. 1923.

Influence of Three-Phase Transmission Lines on Telephone Circuits (Beeinflussung von Schwachstromleitung durch Drehstromleitungen), Odenbach. Organ für die Fortschritte des Eisenbahnwesens, vol. 79, no. 12, Sept. 30, 1924, pp. 276-278, 11 figs. on supp. plate. Report on extensive tests carried out by German Nat. Rys. Diagrams of connections, and oscillograms.

Telegraphy and Telephony. Sci. Abstracts, vol. 27, part 6, June 25, 1924, pp. 317-328. Details of investigation by Swedish Telegraph Administration into interference by single-phase railway power lines with special reference to Stockholm-Göteborg electrification, telephone lines to be moved 200 m. from power line.

See also ELECTRIC TRANSMISSION LINES, Inductive Interference.

Interference. See TELEGRAPH LINES, Interference, Power-Circuit.

Poles. Telephone Pole Line Data, P. K. Higgins. Telephone Engr., vol. 28, no. 8, Aug. 1924, pp. 18-20, 5 figs. Importance of good guying calls for some additional information on that subject; factors affecting its efficiency; some typical guying conditions described; special guying problems.

Testing. Electrical Tests and Their Applications in the Maintenance of Telephone Transmission, W. H. Harden. Bell System Technical Jl., vol. 3, no. 3, July 1924, pp. 353-392, 32 figs. Details of more important electric testing methods and their application in maintaining transmission efficiency, including d.c. and a.c. methods.

Wire. Tells of "Happy Medium" Wire, P. K. Higgins. Telephone Engr., vol. 28, no. 10, Oct. 1924, pp. 28, 30, 32 and 34. Performance of copper-clad wire and characteristics of product. Method of welding copper and steel. Aluminum wire data.

Wire for. See WIRE, Telephone.

TELEPHONY

Amplifiers. Development and Present Status of Amplifiers in Germany (Entwicklung und gegenwärtiger Stand der Verstärkertechnik in Deutschland), K. Höpfner. Elektrotechnische Zeit., vol. 45, no. 7, Feb. 14, 1924, pp. 109-113, 10 figs. Describes amplifier tubes, connections, etc., used in Germany; and shows how amplifiers in 2-phase and 4-phase system in long-distance cable network are arranged in order to obtain a good connection.

The Interior Arrangement of an Amplifier Station (Innere Einrichtung eines Verstärkeramts), K. Höpfner. Elektrotechnische Zeit., vol. 45, no. 9, Feb. 28, 1924, pp. 156-158, 7 figs. Describes necessary equipment of amplifier station and arrangement of different apparatus in building.

Transmission of Speech over Long Cable Lines (Sprachübertragung in langen Fernkabelleitungen), K. Höpfner and B. Pohlmann. Elektrotechnische Zeit., vol. 45, no. 8, Feb. 21, 1924, pp. 135-137, 3 figs. Describes use of amplifiers for increasing audibility over long-distance lines.

Apparatus Construction. See INSTRUMENTS, Design and Construction.

Atmospheric Conditions, Effect of. Humidity Recorders, E. B. Wheeler. Bell System Technical Jl., vol. 3, no. 2, Apr. 1924, pp. 238-258, 14 figs. Outline of some of the work which has been done in an effort to obtain information showing character of atmospheric conditions which exist in typical localities where telephone equipment is installed so that effects of these conditions on proposed designs may be studied under carefully controlled similar conditions in laboratory "humidity rooms." Development of a recording hygrometer. Laboratory tests and field trials. A new direct-reading humidity recorder.

Automatic. Automatic Switching of Toll Traffic, A. B. Smith. West. Soc. Engrs.—Jl., vol. 29, no. 2, Feb. 1924, pp. 45-64, 24 figs. Means which are used in setting up toll telephone connections by automatic switches; historical development, and present status of this branch of telephony.

Automatic Telephony Impulses, C. W. Brown. Post Office Elec. Engrs.' Jl., vol. 17, part 2, July 1924, pp. 128-134, 7 figs. Results of investigations by Research Sec., Engineer-in-Chief's Dept., British Post Office, into question of distortion of impulses transmitted over lines with different local conditions.

Bases of Automatic Connection and Its Effect on the Form of the System (Die Grundlagen des Selbstanschlussbetriebs und sein Einfluss auf die Netzgestaltung), A. Kruckow. Telegraphen- u. Fernsprech- Technik, vol. 13, no. 5, May 1924, pp. 53-68, 22 figs. Discusses systems of selection and successive steps in connecting, semi-automatic and fully automatic; cost of plants, slowness in adoption, details of Berlin and Hamburg dialing system with A, B, C, etc., for central stations, application of system to provinces, etc.

Dundee and Broughty Ferry Automatic Exchanges, W. Ireland and F. A. Ellson. Post Office Elec. Engrs.' Jl., vol. 16, Pt. 4, Jan. 1924, pp. 322-345, 20 figs. Description of new automatic telephone system developed by Gen. Elec. Co. for use in England, based on that of North Elec. Co., Galion, Ohio, U. S. A.

Post Office Exhibit. British Empire Exhibition, Wembley, F. I. Ray and W. E. Hudson. P. O. Elec. Engrs.' Jl., vol. 17, part 3, Oct. 1924, pp. 185-197, 3 figs. The A. T. M.'s coder call indicator; considers problem of dealing with calls to manual exchanges when multi-office area is being changed from manual to automatic operation.

"Relay" Private Automatic Branch Exchange for Debenhams, Ltd., London. Telegraph & Telephone Jl., vol. 10, no. 107, Feb. 1924, pp. 83-84, 4 figs. Has initial equipment of 400 lines and an ultimate capacity of 1270; description of installation and equipment.

Some Notes on the Use of the Probability Theory to Determine the Number of Switches in an Automatic Telephone Exchange, M. Merker. Post Office Elec. Engrs.' Jl., vol. 16, Pt. 4, and vol. 17, Pt. 1, Jan. and Apr. 1924, pp. 347-362 and 27-50, 4 figs. Calculations. See also Annales des Postes Télégraphes & Téléphones, vol. 13, no. 3, Mar. 1924, pp. 299-345, 4 figs.

Strowger Automatic in Canal Zone, H. E. Clapham. Telephony, vol. 87, no. 3, July 19, 1924, pp. 32-34, 4 figs. Complete conversion of Canal Zone telephone system to Strowger automatic operation; initial installation will have capacity of approximately 3000 lines distributed among four central offices.

Strowger Director System in Havana, H. E. Clapham. Telephone Engr., vol. 28, no. 12, Dec. 1924, pp. 38-39, 6 figs. See also Telephony, vol. 87, no. 24, Dec. 13, 1924, pp. 25-28, 8 figs. Director trunking in Havana network meets with gratifying success. Notes on what director accomplishes and how it simplifies trunking plan of a large city network.

See also Brussels.

Berlin. Traffic, Technics, Operation and Personnel of Berlin Trunk Line Office (Verkehr, Technik, Betrieb und Personal beim Fernamt Berlin), W. Schneider. Telegraphen- u. Fernsprech-Technik, vol. 13, no. 10, Oct. 1924, pp. 141-158, 7 figs. Details of traffic development during 1912-1924 in curves. Technical equipment of Berlin office, operations, interruption service, instruction of operators, etc.

British Empire Exhibition. P. O. Telephone Exhibit at the British Empire Exhibition. Post Office

Elec. Engrs.' Jl., vol. 17, part 2, July 1924, pp. 112-128, 8 figs. on supp. plate. Article by W. E. Hudson describes A. T. M. Co.'s director system and article by F. I. Ray describes Mechanical Tandem exchange.

Brussels. Equipment of the Telephone Lines of Brussels on the Automatic System (L'équipement du réseau téléphonique de Bruxelles d'après le système automatique), A. Bocquet. Assn. des Ingénieurs Electriciens sortis de l'Institut Electrotechnique Montefiore—Bul., vol. 2, series 7, nos. 3 and 5, Mar. and May 1924, pp. 74-97 and 176-192, 20 figs. Discusses development of Brussels telephone system; details of MacBerty system installed by Antwerp Bell Co., automatic system, dialing arrangements, Western Electric rotary system; comparison of manual, semi-automatic, and automatic systems.

Cable Distribution. Economical Cable Plant, E. K. Goss. Telephone Engr., vol. 28, no. 7, July 1924, pp. 17-18. Some engineering features involved in laying out economical system of cable distribution for small and moderate-sized exchanges; methods of relief and multipling.

Cables. See CABLES, ELECTRIC, Telephone.

Carrier-Current. Carrier Telephony on Power Lines, N. H. Slaughter and W. V. Wolfe. Am. Inst. Elec. Engrs.—Jl., vol. 43, no. 4, Apr. 1924, pp. 377-381, 7 figs. Review of development and problems. See (discussion) in vol. 44, no. 1, Jan. 1925, pp. 65-69, 7 figs.

Carrier-Current Telephony on the High-Voltage Transmission Lines of the Great Western Power Company, J. A. Koontz, Jr. Am. Inst. Elec. Engrs. —Jl., vol. 43, no. 2, Feb. 1924, pp. 122-123. Describes power circuits and radio equipment used in carrier-current system; method of calling employed, and use of system as trouble detector and recorder of switch operation.

Carrier-Wave. Carrier Wave Telephony, W. Hilarius. S. African Inst. Elec. Engrs.—Trans., vol. 15, part 10, Oct. 1924, pp. 474-480 and (discussion) 480-484, 15 figs. Deals with method of producing carrier wave and of superimposing speech frequency upon former; studio microphones and methods of amplification.

Circuit Unbalances. Telephone Circuit Unbalances, L. P. Ferris and R. G. McCurdy. Am. Inst. Elec. Engrs.—Jl., vol. 43, no. 12, Dec. 1924, pp. 1133-1141, 14 figs. Determination of magnitude and locating; discusses different types of unbalance, and their effects under different conditions of energization of unbalanced circuit and neighboring conductors. (Abridgment.)

Circuits, Reflection Losses in. Reflection Losses in Telephone Circuits, K. Ogawa. Denki Gakkwai Zasshi (Jl. Inst. Elec. Engrs. Japan), no. 435, Oct. 1924, pp. 920-928, 2 figs. Proposes that reflection loss should be expressed by ratio of electric power in circuit, and derives formula for reflection loss from this standpoint; gives diagram which shows how reflection loss varies for various impedances of circuit; investigates coefficient of reflection by a diagram. (In Japanese.)

Circuits, Transmission Efficiency. Measuring Methods for Maintaining the Transmission Efficiency of Telephone Circuits, F. H. Best. Am. Inst. Elec. Engrs.—Jl., vol. 43, no. 2, Feb. 1924, pp. 136-144, 14 figs.; and (discussion) in vol. 43, no. 12, Dec. 1924, pp. 1199-1201. Transmission characteristics of common types of telephone circuits; general method for measuring their transmission efficiency; describes modern types of transmission measuring sets, together with brief mention of oscillators which supply power for testing.

Clock-Controlled Tuning Fork. A Clock-Controlled Tuning Fork as a Source of Constant Frequency, J. C. Ferguson. Bell System Tech. Jl., vol. 3, no. 1, Jan. 1924, pp. 145-157, 5 figs. Methods recently developed in Bell System Laboratory for obtaining source of practically constant frequency with which other frequencies may be compared; study has been made for improving constancy of control clock and new type of clock mechanism, consisting of electrically actuated pendulum, impulse of which is controlled by photo-electric cell, is suggested.

Coils. See COILS, Pupin; Telephone.

Developments. Developments in Manual Operation, J. P. Boylan. Telephony, vol. 87, no. 3, July 19, 1924, pp. 21-23, 2 figs. Recent improvements in manual switchboard practice; straightforward trunking system developed for Rochester Co.; innovations of new board.

Economics in Telephony (Wirtschaftliches im Fernsprechwesen), F. J. Dommerque. Zeit. für Fernmeldetechnik, vol. 5, no. 10, Oct. 16, 1924, pp. 93-95. Discusses introduction of automatic systems; use of electron tubes as amplifiers; telephone cables; combined use of lines and conduits for telephone, lighting and power transmission; reduced diameter of conductors; and operation economics.

Electrostatic Telephone. The Electrostatic Telephone (Le téléphone electrostatique), K. Dobrski. Revue Générale de l'Electricité, vol. 15, no. 14, Apr. 5, 1924, pp. 571-577, 5 figs. Mathematical study of electrostatic telephone which is simply an air condenser, armatures of which are mica plates fitted with tin; in order to successfully employ electrostatic in place of electromagnetic telephone, it is necessary to adapt transformer to new conditions; gives formula of efficiency.

Europe. The Telephone in Europe (La téléphonie en Europe). Industrie Electrique, vol. 33, no. 771, Aug. 10, 1924, pp. 508-511. Discusses situation of long-distance telephony, whether overhead or underground lines, opinions in various countries, principal long distance lines, financial and economic aspects.

European Long-Distance. European Long-Distance Telephony. P. O. Elec. Engrs.' Jl., vol. 17, part 3, Oct. 1924, pp. 198-208. Results of meeting at Paris of telephone experts from Belgium, France, Great Britain, Italy, Spain and Switzerland; recommendation on administration; transmission and engineering construction; engineering maintenance, including removal of faults; traffic; program of immediate additional construction work; preliminary program of further construction work.

Exchanges. Modern Developments in Telephone Exchanges for Local and Long-Distance Traffic (Die neuzeitliche deutsche Entwicklung des Fernsprechämterbaus für den Orts- und Fernverkehr), A. Kruckow. Elektrotechnische Zeit., vol. 45, nos. 46 and 47, Nov. 13 and 20, 1924, pp. 1233-1238 and 1273-1278, 37 figs. Describes an example of an exchange with 20,000 connections; influence of automatic calling; details of connecting system in Berlin for long distance; amplifier office and equipment; etc.

Exchanges, Current for. Current-Consumption in Large Telephone Centrals (Die Stromversorgung grosser Telephonzentralen), K. Schmidt. Elektrotechnische Zeit., vol. 45, no. 27, July 3, 1924, pp. 708-710, 5 figs. Shows that storage batteries may be effectively eliminated without reducing safety in operation.

Recent Development in Current Supply Plants for the Larger Centrals (Die neuere Entwicklung der Stromversorgungsanlagen bei grösseren Fernsprechämtern), M. Clausen. Telegraphen u. Fernsprech- Technik, vol. 13, no. 6, June 1924, pp. 71-80, 8 figs. Discusses current supply at German telephone centrals, batteries and charging, parallel connection of dynamo and battery, current consumption, use of one battery in place of two, etc.

Future Expansion, Preparing for. Telephone Engineering With Special Reference to Preparing for Future Expansion, A. P. Allen. Armour Engr., vol. 15, no. 3, Mar. 1924, pp. 87-90 and 114, 4 figs. Brief description of steps usually followed by engineers in preparing a long term commercial survey of a telephone exchange area like Chicago.

Induction from High-Power Parallel. Induction from High Power Parallel, F. A. Puchstein. Telephony, vol. 86, no. 22, May 31, 1924, pp. 16-19, 10 figs. An analytical method of making an estimate of voltage induced in an open-wire telephone circuit of an Ohio company over a 7-mile exposure by a 66,000-volt 3-phase power line having no transpositions.

Inductive Interference in Cables. Inductive Interference in Telephone Cables (Abgleichverfahren zur Beseitigung der Induktionsstörungen), K. Dohmen and K. Küpfmüller. Elektrotechnische Zeit., vol. 45, no. 13, Mar. 27, 1924, pp. 266-289, 10 figs. Points out six disadvantages of transposition method used by American concerns to reduce inductive interference between individual pairs of conductors within telephone cable; compares system with principle of German origin whereby properly dimensioned small condensers are introduced into cable, placed conveniently within cable junction boxes; advantages of this method; curves showing damping values of such cable for various frequencies.

Long-Distance. Arrangement of Railway Long-Distance Lines Along A. C. Railway Lines (Die Einrichtungen für Bahnfernmeldeleitungen längs Wechselstrombahnen), I. Oefverholm. Elektrische Nachrichten-Technik, vol. 1, no. 4, Oct. 1924, pp. 107-114, 8 figs. Experience in Sweden on Svartön-Riksgränsen, Nordmark-Klarälven, and Stockholm-Göteborg lines, showing that overhead lines at a distance of 100 m. or more from line are not satisfactory. Advocates use of suction transformers and insulated return line.

Long-Distance Telephony (Das Fernsprechen auf weite Entfernung), K. W. Wagner. Elektrotechnische Zeit., vol. 45, nos. 1 and 2, Jan. 3 and 10, 1924, pp. 1-6 and 25-29, 15 figs. General review of subject; principles on which long-distance connection is based, and application of these principles in German telephone lines and system; according to present status of development it is possible to establish telephonic communication between all parts of Europe.

Long Distance Transmission, K. W. Wagner and J. F. Dommerque. Telephone Engr., vol. 28, nos. 5 and 6, May and June 1924, pp. 26-28 and 21-23, 7 figs. Discussion of transmission theory and practice as applied in modern long distance telephone plant. Some technical and economic features of application of repeaters to long distance lines. Cross-talk and balancing of cable pairs.

Loud Speakers. New Type of Loud Speaker (Présentation des haut parleurs "S.E.G." de la Société des Etablissements Gaumont), M. Bonneau. Société Française des Electriciens—Bul., vol. 4, no. 32, Feb. 1924, pp. 157-182, 15 figs. Gaumont Establishment has developed loud speaker along entirely new lines, which, it is claimed, has clearness of reproduction heretofore unknown; instead of reproducing sounds by more or less pronounced vibration of steel membrane before electrically controlled permanent magnet, new loud speaker has very strong, closed electromagnetic d.c. field with fine conically shaped air gap, within which is placed vibrating cone, which vibrates in perfect accordance with frequency of telephone current. See also description in Génie Civil, vol. 84, no. 22, May 21, 1924, pp. 526-528, 4 figs.

The Public Address System at the British Empire Exhibition. Engineering, vol. 117, no. 3043, Apr. 24, 1924, pp. 560-561, 5 figs. Account of apparatus employed for rendering speech audible over entire stadium.

See also RADIOTELEGRAPHY, Loud Speakers.

Meters and Coin-Collecting Boxes. Telephone Meters and Coin Collecting Boxes, W. Cruickshank & F. McClarence. Instn. Post Office Elec. Engrs., no. 92, Mar. 13, 1923, 61 pp. 19 figs. Methods of counting number of calls made by telephone users, and modern types of coin-collecting boxes. Considers methods adopted by other public utility administrations for purpose of measuring consumption by individual renters and compares relative accuracy of various systems.

Microphones. See MICROPHONES.

Multiplex. See TELEGRAPHY, Multiplex.

Norway. Modern Telephony. The Connection of Norway to a European Telephone System (Moderne Telefoni. Og norges tilknytning til et Europaeisk telefonnet), M. Abild. Teknisk Ukeblad, vol. 71, nos. 25 and 26, Aug. 6 and 12, 1924, pp. 216-219 and 227-229, 4 figs. Theory of damping of different types of telephone conductors is explained. Discusses existing European long-distance telephone lines and connection of Norway by cable to Denmark, Germany, and England.

Probability Calculation. Applying Probability Calculation to Telephone Operations (Application du calcul des probabilités à l'exploitation téléphonique), A.-E. Vaulot. Revue Générale de l'Electricité, vol. 16, no. 11, Sept. 13, 1924, pp. 411-418. Applies probability to number of connections made at automatic central; discusses formula of Erlang, determines number of unsuccessful calls, etc.

Pupin Coils. See COILS, Pupin.

Railway. See TELEGRAPHY, Railway.

Receivers. Motional Mutual Impedance of Telephone Receivers, H. Nukiyama and M. Matulaira. Denki Gakkwai Zasshi (Jl. Inst. Elec. Engrs. Japan), no. 431, June 1924, pp. 564-574, 5 figs. Theory of motional mutual impedance of receiver, and theory and experimental results of determination of mechanical constants of vibrating system. (In Japanese.)

Relays, Electromagnets for. See ELECTROMAGNETS, Telephone Relays.

Research Laboratories. See LABORATORIES, Bell-System Research.

Signals, Ocular. Ocular Signals for Telephone Exchanges (Städte-Lichtrufeinrichtung für Fernsprechanlagen), G. Schmidt. Siemens-Zeit., vol. 4, no. 10, Oct. 1924, pp. 333-336, 11 figs. Describes light signals used at Hamburg, Berlin, Frankfurt, etc., and their management.

Strowger System. See Automatic.

Transformers. See TRANSFORMERS, Telephone.

Transmission Efficiency. Practises in Telephone Transmission Maintenance Work, W. H. Harden. Am. Inst. Elec. Engrs.—Jl., vol. 43, no. 12, Dec. 1924, pp. 1124-1128, 10 figs. Presents general picture of practical applications of methods of measuring transmission efficiency in Bell System which have been developed by study and experience under plant-operating conditions.

Some Factors in Good Transmission, J. D. Taylor. Telephony, vol. 86, no. 11, Mar. 15, 1924, pp. 12-15, 6 figs. Replacing rusty joints, cutting in transpositions to reduce crosstalk or inductive interference, cleaning switchboard plugs and replacing wornout plugs and jacks makes big improvement at small cost.

The Transmission Unit and Telephone Transmission Reference Systems, W. H. Martin. Am. Inst. Elec. Engrs.—Jl. vol. 43, no. 6, June 1924, pp. 504-507, 1 fig. Considers method of determining and expressing transmission efficiencies of

telephone circuits and apparatus, and of desirable qualifications for unit in which to express these efficiencies; "transmission unit" described has been selected as being much more suitable for this purpose under present conditions than "mile of standard cable" which has been generally used in past.

Transmission Maintenance. Transmission Maintenance of Telephone Systems, P. E. Erikson and R. A. Mack. Instn. Elec. Engrs.—Jl., vol. 62, no. 332, Aug. 1924, pp. 653-679 and (discussion) 679-687, 19 figs. Deals with broad aspects of modern telephone transmission maintenance, economic justification for good maintenance, and general lines upon which it should be carried out. Theoretical considerations leading up to development of a series of testing instruments, by means of which transmission losses in any part of telephone system can easily be measured. Brief descriptions of instruments and their use.

Transmission Unit. The Transmission Unit, R. V. L. Hartley. Elec. Communication, vol. 3, no. 1, July 1924, pp. 34-42, 1 fig. "Transmission unit" was found most suitable for present conditions in telephone art; discusses nature of unit, reasons for using power ratio, size of unit, logarithmic base, transmission reference system, and numerical relations.

Transmitter Circuit. Transmitter Circuit Theory, A. F. Puchstein and W. H. Snook. Telephone Engr., vol. 28, no. 9, Sept. 1924, pp. 23-25, 5 figs. Analytical study of transmitter circuit with extension of alternating-current theory and its application in local battery and common battery circuits.

Trunk Development. Post War Trunk Telephone Development, H. G. Trayfoot. Telegraph & Telephone Jl., vol. 10, nos. 110 and 111, May and June 1924, pp. 136-140 and 155-159, 12 figs. Amalgamation of trunk and local exchanges; general arrangement and grouping of long distance circuits; junction, or no delay, services; traffic development and trunk line provision; Anglo-continental telephone service; direct dialling over trunk lines to automatic exchanges; quality of service and circuit loads; transmission; fixed time calls.

Trunking, Manual. Improved Manual Trunking, J. P. Boylan. Telephone Engr., vol. 28, no. 6, June 1924, pp. 17-20. Development of straightforward trunking methods and equipment; elimination of call wire and addition of other features make faster and more accurate service possible.

Wired Wireless. Ruhmer High-Frequency Apparatus for Multiple Telephony on Lines in the State Post Office Museum, Berlin (Die Ruhmerschen Hochfrequenzapparate für Mehrfachfernsprechen auf Leitungen im Reichspostmuseum in Berlin), R. Fiedler. Archiv für Post u. Telegraphie, no. 3, Sept. 1924, pp. 123-128, 6 figs. Detailed description of original wired wireless plant for multiple speaking shown at Brussels exposition, 1909, now on exhibition in Berlin.

Wired-Wireless Telegraphy and Telephony (Drahtfunk), H. Schulz and K. W. Wagner. Elektrotechnische Zeit., vol. 45, no. 20, May 15, 1924, pp. 485-489, 5 figs.; also in special radio number of same journal, 1924, pp. 40-44, 5 figs. Wired wireless for public service, on high-tension lines, and in lighting system for purposes of entertainment and instruction.

Wireless. See RADIOTELEPHONY.

TELESCOPES

Prism Objectives, Calculation. Calculation of Prism Objectives, with Examples of Their Applications (Berechnung von Prismenobjektiven nebst Beispielen ihrer Anwendungen), H. Cranz. Zeit. für Instrumentenkunde, vol. 44, no. 6, June 1924, pp. 237-260, 4 figs. Investigation was prompted by increasing employment of total reflecting prisms in telescopes for purpose of reducing their length through zig-zag path of light in prism and for complete and efficient reversal of image; two fitting spherical surfaces act as one when suitable refracting cement is used, and this method is now adopted for combining prism and objective. Paper is mathematical throughout.

Reflecting. A New 60-In. Telescope for Perkins Observatory, Ohio Wesleyan University. Mech. Eng., vol. 46, no. 3, Mar. 1924, pp. 113-117 and 147, 8 figs. Describes reflecting telescope built by Warner & Swasey Co., Cleveland, and gives details of tube, polar axis, declination axis, driving clock, and electric control.

Reflecting Telescope for Simeis Observatory, Crimea. Nature (Lond.), vol. 113, no. 2841, Apr. 12, 1924, pp. 551-552, 1 fig. 40-in. reflecting telescope made by Sir Howard Grubb & Sons for Russian Government.

TELESTEREOGRAPHY

[See also TELEVISION.]

Electrical Transmission of Pictures. Electrical Transmission of Pictures. Elec. World, vol. 83, no. 24, June 14, 1924, pp. 1223-1224, 5 figs. Combination of high-frequency carrier current, vacuum-tube modulation, telegraphic synchronizing equipment, light-controlled electron stream and newly developed "light" cell makes possible electrical transmission of photographs.

Radio. See PHOTOGRAPHY, Radio Transmission of Photographs.

TELETYPE. See TELEGRAPHY, Printing System.

TELEVISION

Experiments. An Account of Some Experiments in Television, J. L. Baird. Wireless Wld., vol. 14, no. 6, May 7, 1924, pp. 153-155, 3 figs. Description of author's early experiments and apparatus which was one of the first constructed and capable of transmitting only crude outline images.

Mihaly's Telehor. Electric Television and the Telehor (Das elektrische Fernsehen und das Telehor), D. von Mihaly. Elektrotechnischer Anzeiger, vol. 41, nos. 141, 142-143, and 144, Sept. 2, 4, and 6, 1924, pp. 763-764, 769-770, and 777-778, 8 figs. Detailed criticism of Mihaly television process and apparatus, showing that much work remains to be done.

Television, N. Langer. Wireless Wld., vol. 13, nos. 25 and 26, Mar. 19 and 26, 1924, pp. 760-764 and 794-796, 9 figs. Account of work of D. Mihaly.

Swinton System. Television. Engineer, vol. 137, no. 3563, Apr. 11, 1924, pp. 385-386, 3 figs. System developed by Campbell Swinton and described by him in lecture before Radio Soc. of Great Britain.

Voss System. The Problem of Electric Seeing at a Disance (Das Problem des elektrischen Fernsehens), A. Voss. Elektrotechnischer Anzeiger, vol. 41, nos. 104, 105, 106-107, and 108, June 28, July 1, 3, and 5, 1924, pp. 537-538, 545-546, 553-554, and 561-564, 25 figs. Discusses selenium cells and their properties, behavior of selenium at different temperatures, conducting and non-conducting modification of selenium. July 1: Inertia of selenium and how to reduce it. July 5: Details of proposed television apparatus.

See also TELESTEREOGRAPHY.

TELLURIDES

Canada. The Tellurides, E. Thomson. Can. Min. Jl., vol. 45, no. 49, Dec. 5, 1924, pp. 1187-1190, 4 figs. Their characteristics and their occurrences in Canada.

TELPHERS. See CONVEYORS, Overhead.

TEMPERATURE CONTROL

Automatic Apparatus. Automatic Temperature-Control Apparatus. Engineering, vol. 118, no. 3070, Oct. 31, 1924, pp. 628-629, 5 figs. Apparatus for automatically controlling temperature of gas-fired annealing or hardening furnace, exhibited at Empire Exhibition.

"Samson" Automatic Temperature Regulators. Power Engr., vol. 19, no. 216, Mar. 1924, pp. 105-106, 3 figs. Device for maintaining constant temperature of atmosphere or of liquids heated by air, hot water, or steam.

Temperature-Controlling Device of Rugged Design. Chem. & Met. Eng., vol. 30, no. 1, Jan. 7, 1924, pp. 21-22, 2 figs. Controller placed on market by Files Temperature Control Co., Bridgeport, Conn., operates without such auxiliary elements as compressed air or volatile liquids.

Methods. Accurate Temperature Control System, S. R. Winters. Ice & Refrigeration, vol. 67, no. 1, July 1924, pp. 10-13, 4 figs. Methods employed at Bur. of Animal Industry, U. S. Dept. Agriculture, for maintaining temperatures with accuracy of 0.1 deg. cent.; refrigerating equipment and control system.

The Fixed Orifice Method of Temperature Control. Heat. & Vent. Mag., vol. 21, no. 7, July 1924, pp. 55-57, 3 figs. Tests showing practicability of arrangement as used with variable pressures of either water or steam.

Photographic Recorders. A Photographic Recorder for Temperature and Other Physical Quantities, W. H. Stannard and P. E. Klopsteg. Optical Soc. Am.—Jl., vol. 9, no. 5, Nov. 1924, pp. 587-598, 5 figs Describes instrument developed for purpose of obtaining data on a number of variables simultaneously over long periods of time much more completely and accurately than is possible by personal observation. Can be used in study of any problem in which it is possible to obtain galvanometer deflections as known functions of variables in question, as well as for study of temperature control.

Thermostatic. See THERMOSTATS.

TEMPERATURE MEASUREMENT

[See also PYROMETERS; THERMOMETERS.]

Air. Measuring Air Temperatures in Closed Spaces with Thermometers not Protected From Radiation (Die Messung von Lufttemperaturen in geschlossenen Räumen mit nicht strahlungsgeschützten Thermometern), H. Hausen. Zeit. für Technische Physik, vol. 5, no. 5, 1924, pp. 169-186, 19 figs. Discusses errors in measuring due to temperature measuring instruments constantly receiving and delivering heat by radiation to surrounding bodies, and develops formulas for calculation error Δt of measurement due to radiation.

Instruments. Electric Multiple Measuring and Recording Apparatus for Thermal Measurement (Elektrische Vielfach-Fernmess- und Schreibgeräte für die Wärmewirtschaft), J. Cartus. Archiv für Wärmewirtschaft, vol. 5, no. 9, Sept. 1924, pp. 174-176, 12 figs. Discusses measuring devices for pressure, draft, temperature, quantities of gas, etc.; connection of several of same indicator or recording apparatus.

Electric Temperature Indicators, I. M. Stein. Power Plant Eng., vol. 28, no. 21, Nov. 1, 1924, pp. 1103-1105, 7 figs. Principles of potentiometer and resistance types of measuring equipment.

Electric Temperature Measuring Methods (Elektrische Temperaturmessmethoden), O. Feussner. Elektro-Journal, vol. 4, no. 10, Oct. 1924, pp. 275-278, 3 figs. Discusses resistance thermometers, thermo-electric and radiation measuring instruments, their field of application, advantages and disadvantages.

Operation of Electrical Temperature Indicators and Recorders, E. H. Stivender. Power, vol. 60, no. 27, Dec. 30, 1924, pp. 1051-1053, 7 figs. Operation of various methods devised and used commercially for electrically measuring temperatures.

Pyrometers. See PYROMETERS.

Temperature Scales and Heat Unit. Temperature Scales in Theory and Practice (Die Temperaturskala in Theorie und Praxis), F. Henning. Zeit. für Instrumentenkunde, vol. 44, no. 8, Aug. 1924, pp. 349-366, 1 fig. Theoretic basis of temperature scales. Practical temperature scales and their fixed points derived from H, O, N, CO_2, Hg, S, Au, etc., for temperatures up to 1100 deg.

The German Code for Temperature Scale and Heat Unit (Das deutsche Gesetz über die Temperaturskale und die Wärmeeinheit), M. Jakob. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 45, Nov. 8, 1924, pp. 1176-1178. Origin and significance of code developed by Physikalisch-Technische Reichsanstalt for German Government; main points of code; practical fundamentals of temperature scale.

Thermocouples. Temperature Measuring by Means of Thermo Couples (Zur Temperaturmessung mittels Thermoelementen), J. Würschmidt. Zeit. für Metallkunde, vol. 16, no. 7, July 1924, pp. 271-274. Discusses definition of terms, electromotive force and thermoelectric force, average thermo force per degree between 0 deg. and 100 deg. for metals most frequently used.

TEMPLETS

Design. Design of Templets of Precision (Sulla costruzione delle sagome di precisione), S. Donno. Industria, vol. 38, nos. 12 and 15, June 30 and Aug. 15, 1924, pp. 331-336, and 411-414, 41 figs. Discusses classification of templets, determination of tolerances; rectilinear and curvilinear templets, methods of construction.

TEREDOS. See MARINE BORERS.

TERMINALS, FREIGHT. See TERMINALS, RAILWAY.

TERMINALS, LOCOMOTIVE

Design. See RAILWAY SHOPS, Design.

Germany. Locomotive Terminals at Stuttgart and Kornwestheim Switching Yard (Lokomotivheizhäuser Stuttgart-Abstellbahnhof und Kornwestheim-Verschiebebahnhof), K. Schaechterle. Bautechnik, vol. 2, no. 48, Nov. 7, 1924, pp. 543-546, 6 figs. Details of design, construction and equipment; respective capacities 93 and 68 locomotives.

Moncton, N. B. Canadian National Railways Engine Terminal at Moncton, N. B. Ry. Rev., vol. 75, no. 20, Nov. 15, 1924, pp. 785-795, 18 figs. Facilities provided for turning engines and making heavy running repairs.

Peach Creek, W. Va. New Engine Terminal at Peach Creek, W. Va. Ry. Rev., vol. 74, no. 7, Feb. 16, 1924, pp. 279-286, 15 figs. partly on p. 287. Describes engine house, boiler plant and engine room, machine shop, oil room, store department facilities, coaling plant, and water-supply plant and its equipment.

Precast Concrete. See CONCRETE CONSTRUCTION, REINFORCED. Precast.

Richmond, Va. A Notable Engine Terminal, Acca, Virginia. Ry. Rev., vol. 74, no. 10, Mar. 8, 1924, pp. 399-412, 32 figs. partly on p. 413. Complete description of new engine terminal of Richmond, Fredericksburg & Potomac R. R.

Advanced Design in New Engine Terminal. Ry. Age, vol. 76, no. 9, Mar. 1, 1924, pp. 492-499, 17 figs. Layout, outside facilities and buildings of terminal recently completed at Richmond, Va. by R. F. & P.

Schaerbeek, Belgium. The New Engine Shed at Schaerbeek-Formation, J. Van Rijn and A. Chantrell. Int. Ry. Congress Assn.—Bul., vol. 6, no. 12, Dec. 1924, pp. 1091-1121, 16 figs. Describes new enginehouse which Belgian State Rys. Administration opened at Schaerbeek-Formation station, and its installations, including mechanical coaling plant, arrangement for dealing with ashes, Micheli hot water washing-out plant, arrangements for mixing and storage of coal; and plant for dealing with cotton waste used for cleaning engines.

Turntables. See ENGINEHOUSES, Turntables.

Water Supply. Water Supply of the New Genoa-Terralba Enginehouse (Impianti idrici nel nuovo deposito locomotive e locomotori di Genova-Terralba), E. D'Andrea. Rivista Tecnica delle Ferrovie Italiane, vol. 25, no. 3, Mar. 15, 1924, pp. 73-85, 12 figs. partly on supp. plates. Particulars of plant consisting of 7 driven wells, electrically-driven centrifugal pumps, and twin monolithic concrete water tanks each of a capacity of 50,000 gal., and erected over a common pump house.

TERMINALS, MARINE

Drayways and Approaches. Terminal Drayways and Approaches, H. McL. Harding. Ports & Waterways, vol. 1, no. 1, July 1924, pp. 22-24, 1 fig. Notes regarding mechanical facilities, pavements, railway tracks, etc.

Fire Protection. Fire Protection at Marine Terminals, Seattle, G. F. Nicholson. Ports & Waterways, vol. 1, no. 1, July 1924, pp. 21-22, 4 figs. Automatic sprinkler systems, fire alarm systems, fire walls, fire hose, fire extinguishers, Pyrenes, concrete warehouses provided with large roof tank for furnishing secondary source of supply for automatic sprinkler systems and fire hydrants are some features of fire protection for wharves and marine terminals.

Illinois Waterway. Terminals for the Illinois Waterway, R. I. Randolph. Ports & Waterways, vol. 1, no. 1, July 1924, pp. 10-12 and 44, 3 figs. Gives contents of contemplated bill for terminals all along line of waterway.

Origin-Destination Survey. An Origin-Destination Survey of the Port of New Orleans. Ports & Waterways, vol. 1, no. 2, Aug. 1924, pp. 72-78, 10 figs. Discusses traffic growth and future, situation within terminal district, organization of terminal survey and practical results of terminal survey.

Origin-Destination Survey of a Large Port—What Goes on Within the Port-Terminal and the Important Function of the Terminal Railroad System, J. R. Bibbins. Wld. Ports, vol. 12, no. 4, Feb. 1924, pp. 33-53 and (discussion) 53-72, 5 figs. Shows actual distribution of all traffic by rail and water, relatively large volume of intra-terminal movements, best locations for clearing and classification facilities, lines along which improvements and future development may be carried out, real functions and belt-line system, close relation between marine and rail operations and facilities, and emphasizes value of foresight in planning or replanning large port-terminal systems to meet oncoming burden of future growth.

Passenger. Ocean Passenger Terminals, R. S. MacElwee. Ports & Waterways, vol. 1, no. 2, Aug. 1924, pp. 54-61, 11 figs. Discusses fixed level landings, passenger traffic arrangements, floating landing places, accessories, and steerage passenger accommodations.

San Francisco, Cal. China Basin Terminal, C. W. Geiger. Public Wks., vol. 55, no. 1, Jan. 1924, pp. 26-28, 3 figs. Methods used in connection with project of Cal. State Harbor Commission; pre-cast concrete caissons connected by curved curtain walls, foundation excavated by use of dynamite and supported on piles, form combined sea wall and wharf.

Wilmington, Del. Wilmington Completes One Unit of Port Development, Chas. H. Gant. Eng. News-Rec., vol. 92, no. 4, Jan. 24, 1924, pp. 152-154, 1 fig. Modern marine terminal with combined railroad car and truck loading facilities; covered and open storage.

TERMINALS, RAILWAY

Ferry Terminal. New Ferry Terminal Includes Advanced Designs, F. Jasperson. Ry. Age, vol. 76, no. 25, May 24, 1924, pp. 1249-1252, 8 figs. See also Ry. Rev., vol. 74, no. 20, May 17, 1924, pp. 871-876, 11 figs. Reading Co. completes installation at Camden, N. J., to handle heavy seashore traffic.

Freight. Cartage Practice at Intra-Terminal and Off Track Freight Stations, J. F. Murphy. Wld. Ports, vol. 12, no. 9, July 1924, pp. 81-94 and (discussion) 94-120. Cartage of freight at St. Louis where Columbia Terminals Co. has developed by use of tractor and semi-trailer automotive equipment, supplemented by off-track stations, a system of freight handling that has been means of providing adequate freight terminals in that city.

Clifton Forge (Va.) Terminal Involves Heavy Work. Ry. Age, vol. 76, no. 6, Feb. 9, 1924, pp. 365-367, 4 figs. See also Ry. Rev., vol. 74, no. 6, Feb. 9, 1924, pp. 241-248, 16 figs. Progress made in construction of new facilities by Chesapeake & Ohio; involve construction of enlarged and modern freight terminal, including total of 66 mi. of tracks over area of 636 acres.

Indianapolis Has Largest Electric Railway Freight Terminal in World. Elec. Ry. Jl., vol. 64, no. 5, Aug. 2, 1924, pp. 153-156, 8 figs. Four interurban roads entering city have joined in this large terminal development to meet need of expanding freight business; design facilities quick loading and unloading both of cars and vehicles; further extensions are planned.

Layout and Design of Large Modern Freight Terminal. Eng. News-Rec., vol. 93, no. 6, Aug. 7, 1924, pp. 227-230, 7 figs. Terminals of Pennsylvania-Detroit Ry. have steel freight-house with tracks on upper deck; team yard at street level, but future elevation planned; outlying gravity yard with "mechanical hump."

Pennsylvania Completes New Freight Station. Ry. Age, vol. 76, no. 18, Apr. 5, 1924, pp. 875-878, 10 figs. Capacious two-level structure latest feature of Pennsylvania's entrance into Detroit; building has concrete roof and expansion joints; 25-ton gantry crane for team tracks.

Some Things Which the Erie Railroad is Doing. Ry. Rev., vol. 75, no. 12, Sept. 20, 1924, pp. 423-430, 14 figs. Discusses freight terminals of Erie Ry. in New York and Chicago districts, with special reference to certain recent extension of its less-than-carload facilities which afford service distinct from that offered by any other railroad. In New York facilities have been augmented by inland freight stations which are operated by trucking service which is also available to shipper as substitute for store-door delivery. In Chicago car-float service on Chicago River operates two freight stations in heart of important industrial districts.

Haulage in. Successful Tractor and Trailer Haulage, J. F. Murphy. Port & Terminal, vol. 4, no. 1, Feb. 1924, pp. 16-19, 6 figs. Intra-

city automotive hauling and intra-terminal haulage; off-track versus on-track railway depots; tractor and semi-trailer movement control.

Passenger. Foundation Tests by Chicago Union Station Company, J. D'Esposito. West. Soc. Engrs.—Jl., vol. 29, no. 2, Feb. 1924, pp. 33-44, 10 figs. Describes tests made on caissons, concrete pier with belled base, and straight concrete pier, in connection with construction of Chicago Union Station.

Progress on the Chicago Union Station. Ry. Rev., vol. 74, no. 10, Mar. 8, 1924, pp. 416-422, 10 figs. Description of important passenger tunnel; will be in service late in 1924 and will be completed in 1925.

Ports. Study of a Large Terminal Develops Basic Data, J. R. Bibbins. Ry. Age, vol. 76, no. 8, Feb. 23, 1924, pp. 463-465, 2 figs. Origin-destination survey made at New Orleans may be applied to other large railway centers.

River-and-Rail Freight. River-and-Rail Freight Terminal at Memphis, Tenn., Geo. W. Foster. Eng. News-Rec., vol. 93, no. 18, Oct. 30, 1924, pp. 696-698, 4 figs. Car and truck inclines from concrete wharf boats to buildings on bluff; tractors haul trailer trucks in warehouses.

Smoke-Removal System. Fans to Avoid Smoke Nuisance in Chicago Union Station. Eng. News-Rec., vol. 92, no. 22, May 29, 1924, pp. 929-931, 3 figs. Low-level viaducts crossing trainshed have smoke chambers in floor with exhaust fans discharging into open air.

Train Shed, Cologne, Germany. The Train Shed of the Cologne-Deutz Railway Station (Die Bahnhofshalle von Cöln-Deutz), M. Foerster. Bauingenieur, vol. 5, no. 3, Feb. 15, 1924, pp. 43-55, 26 figs. Three-sectional shed has middle span of 27.50 m. and side spans of 18.72 m. each; whole system is statically determined and consists of three 3-hinged arches.

TESTING MACHINES

Building Materials, Damping Capacity of. See BUILDING MATERIALS, Testing Machine for.

50-Ton. Comparative Tests with 50-Ton Material Testing Machines (Vergleichende Versuche mit 50-t-Baustoffprüfern), H. Hecht. Tonindustrie, vol. 48, no. 24, Mar. 22, 1924, pp. 251-252, 1 fig. Results of comparative tests with other testing machines demonstrate advantages of described machine for testing porcelain insulators and for testing bending strength of cement, concrete, and reinforced-concrete beams.

Hydraulic. Testing Machine for Materials. Eng. Progress, vol. 5, no. 7, July 1924, pp. 131-132, 2 figs. Details of hydraulic testing machine suitable for making all current tests occurring in a works, such as tension, compression, bending, punching, sheaving, ball pressure and ring tests, made by Krause & Co. A.-G., Berlin.

Knife Switches. Testing Machine for Knife Switches (Von der Untersuchungsstelle für Isoliermaterialien), O. Edelmann. Elektrotechnische Zeit., vol. 45, no. 43, Oct. 23, 1924, pp. 1148-1149, 2 figs. Describes ingeniously designed testing machine to determine mechanical qualities of knife switches, eliminating entirely unaccountable variable of human irregularities; consists essentially of two weighted pendulums which are swung out, one at a time, by a motor, and, after having been lifted to adjustable extent, are released.

Metal Strip. Notes on the Testing of Metal Strip, L. Aitchison and L. W. Johnson. Iron & Steel Inst.—Advance paper no. 1, for meeting May 1924, 15 pp., 13 figs. Bend-testing machine; proof stress testing; simple proof stress extensometer. See (abstract) in Iron Trade Rev., vol. 74, no. 21, May 22, 1924, pp. 1361-1364, 5 figs.

Tensile-Strength. Calibration of Tensile Strength Testing Machines by Means of Test Bars (Tarage des machines de traction au moyen d'éprouvettes), M. P. Nicolau. Revue de Métallurgie, vol. 21, no. 6, June 1924, pp. 342-346. Describes new method and shows its advantages compared with older methods.

Inauguration of 100-Ton Tensile Testing Machine at Birmingham. Gas Jl., vol. 165, no. 3173, Mar. 5, 1924, pp. 563-565, 2 figs. Machine is of vertical single-lever type, operated by four straining screws driven through suitable reduction gearing by 15-hp. 440-volt motor; installed at Research Laboratories of Birmingham Gas Dept.

Wood. See WOOD, Testing Machines.

TESTS AND TESTING

Magnetic. The Value of Commercial Magnetic Testing, T. Spooner. Elec. Jl., vol. 21, no. 8, Aug. 1924, pp. 374-377, 3 figs. Discusses methods of magnetic testing of electric sheet metal material including methods of Epstein; magnetic test to indicate faulty annealing, etc.

Shop Methods. Test Methods for the Shop, D. A. Hampson. Am. Mach., vol. 60, no. 9, Feb. 28, 1924, pp. 325-328, 7 figs. Usual shop tests; use of revolution counter, spring balance, platform scale, and Bourdon gage; checking instruments.

Test Bars. New Forms of Test Bars for Tensile Strength Test and Holding Devices (Neue Zugprobestabformen und Einspannvorrichtungen), F. Rinagl. Maschinenbau, vol. 3, no. 21, Aug. 14, 1924, pp. 770-773, 4 figs. Discusses defects of present production of test bars and holding devices and describes improvements for short bars, new bar forms for brittle and elastic material, comparative cost of production.

TETRAETHYL LEAD. See INTERNAL-COMBUSTION ENGINES, Fuels.

TETRALIN. See AUTOMOBILE FUELS, Tetralin.

TETRYL

Specific Heat. See EXPLOSIVES, Specific Heats.

TEXTILE INDUSTRY

British. Empire Textile Conference. Textile Inst.—Jl., vol. 15, nos. 6, 7, 8, and 9, June, July, Aug., and Sept. 1924 (Proc. Sec.). Papers read at conference, held June 10-12, 1924, at British Empire Exhibition, Wembley, Lond., and account of discussions. June: Wool Supplies and Consumption, Requirements of a British Empire Industry, pp. 152-169; Part Played by Our Empire in Production of Raw Cotton, W. H. Himbury, pp. 170-181; Present Position of Textile Industries in India and Trade With Britain, K. S. Rao, pp. 182-189. July: Research in Relation to Cotton Industry, A. W. Crossley, pp. 209-213; Research in Relation to Woollen and Worsted Industries; H. J. W. Bliss, pp. 214-218; Research in Relation to Linen Industry, J. V. Eyre, pp. 219-223; "Futures" Contract, A. B. Muir, pp. 226-234; Export Trade and Employment in Woollen and Worsted Industry, A. N. Shimmin, pp. 235-249, 3 figs. Aug.: Manufacture of Textile Fabrics—Fibres to Yarns, A. B. Shearer, pp. 287-291; Manufacture of Textile Fabrics—Yarns to Fabrics, J. Crompton, pp. 291-321, 40 figs.; British Empire as a Producer of Flax and Hemp Group of Fibres, A. Wigglesworth, pp. 321-332; Flax and Its Products, F. Bradbury, pp. 333-347; Some Aspects of Linen Weaving, Ancient and Modern, F. Anderson, pp. 348-374, 13 figs; Silk Production in Empire, H. M. Lefroy, pp. 374-391; British Silk Trade

and Its Possibilities, P. M. Elton, pp. 391-404. Sept.: Processes in Spinning of Worsted Yarns, J. H. C. Hodgson, pp. 429-438; Machine-Made Lace Industry With Particular Reference to Empire Trade, J. L. Litchfield, pp. 438-443; Retail Distribution of Textiles, S. M. Skinner, pp. 444-452; Textile Export Trade, With Special Reference to Countries Within Empire, E. F. Hitchcock, pp. 453-483.

France. Progress Made Since the War in French Textile Manufacture (Les progrès effectués depuis la guerre dans la construction textile française), A. Renouard. Société d'Encouragement pour l'Industrie Nationale—Bul., vol. 136, no. 5, May 1924, pp. 426, 494, 41 figs. Discusses wool, combing, carding, spinning and other processes and products and machinery used; similarly cotton, hemp, silk, and the advance especially in textile machinery.

TEXTILE MACHINERY

British Empire Exhibition. The Machinery of the Cotton Mill at the British Empire Exhibition. Engineering, vol. 118, nos. 3053, 3055, and 3060, July 4, 18 and Aug. 22, 1924, pp. 11-13, 89-91, and 247-251, 34 figs. partly on supp. plates. See also Engineer, vol. 138, no. 3582, Aug. 22, 1924, pp. 202-207, 28 figs. partly on pp. 208 and 212. Descriptions of textile machinery exhibited, including gins, bale breakers and openers, feeding machines, carding engines, drawing frames, spinning machines, weaving machines, folding and measuring machines, etc.

Calico Printing Machine Drive. See ELECTRIC MOTORS, A. C., Variable-Speed.

Gas-Fired Hot-Air Furnace for. Hot-Air Furnaces with Gas Firing (Heissluftofen mit Gasfeuerung), Riemer. Gas- u. Wasserfach, vol. 67, no. 14, Apr. 5, 1924, pp. 182-184, 3 figs. Describes gas-fired hot-air furnace for heating of textile machines; results of preliminary tests; economy and efficiency.

Looms. Textile Machinery. Engineering, vol. 117, no. 3043, Apr. 24, 1924, pp. 549-550, 4 figs. Describes exhibits of Rob. Hall & Sons at Brit. Empire Exhibition, including automatic loom, belt loom for production of cotton, camel hair or hemp driving belts, loom for making horse-hair cloth, and cloth-folding and measuring machine.

Spinning Frames. The Development of the Spinning Frame, Rob. E. Naumburg. Mech. Eng., vol. 46, no. 11a, mid-Nov. issue, 1924, pp. 825-840, 51 figs. Information based upon facts taken largely from Patent Office records; chronological record of development of spinning frame from earliest periods of history to present; future possibilities.

Spinning Machines. New Krupp Spinning Machines (Neue Spinnereimaschinen der Fried. Krupp Aktiengesellschaft, Essen), J. Bogel. Kruppsche Monatshefte, vol. 5, Oct. 1924, pp. 214-220, 13 figs. Details of new spinning machines, needle stick and porcupine, for production of combed wool yarn.

TEXTILE MILLS

Cotton Mills. See COTTON MILLS.

Drying Apparatus. Drying in the Textile Industry (Trocknung in der Textilindustrie), Eickhoff. Sparwirtschaft, nos. 17-18 and 19-20, Sept. and Oct. 1924, pp. 80-85 and 89-92 (GW), 6 figs. Discusses economies of drying process and possibilities of improvements. Describes drying apparatus used in textile mills.

Electric Drive. Electricity in Textile Mills. Electrician, vol. 92, no. 2389, Feb. 29, 1924, pp. 252-260, 17 figs. Six articles, discussing advantages of electric drive for textile mills, use of electricity for driving flax spinning mills, selecting motors for cotton mills, replacing steam with electric drive without cessation of production in carpet mill, special points in converting equipment to electric drive in fabric printing works, and a Swiss spinning mill fitted with Oerlikon drives.

Individual Drive of Ring Spinning Frames in Wool Mills, J. Elmer. Brown Boveri Rev., vol. 11, no. 6, June 1924, pp. 107-109, 4 figs. Use of commutator motors, 3-phase or single-phase, adaptable to any 3-phase low voltage supply, and their advantages for individual drive of ring spinning frames.

Engineering Principles Applied to. The Engineer's Field in Industrial Economics, E. Szepesi. Mech. Eng., vol. 46, no. 11a, mid-Nov. issue, 1924, pp. 841-848, 12 figs. Illustrations of practical applications of engineering principles to economic problems in textile industry.

Humidity Control. Electric Distance-Humidity Control in Textile Mills (Elektrische Fern-Feuchtigkeitsmessung in den Betrieben der Textilindustrie), H. Bongards. Zeit. für Fernmeldetechnik, vol. 5, no. 9, Sept. 16, 1924, pp. 83-84. Determination of water vapor content of a gas, on basis of temperature difference between a dry and a wet thermometer (psychrometer), or on basis of effect of air moisture on some organic substance, such as a hair (hair hygrometer).

Lighting. Some Notes on Gas Lighting in the Textile Industry, E. L. Oughton. Illuminating Engr., vol. 17, no. 5, May 1924, pp. 66-75 and (discussion) 75-78, 9 figs. Describes typical systems of modern gas lighting and explains how varied requirements of different textile processes could best be met.

See also LIGHTING, Textile Mills.

Management in. See INDUSTRIAL MANAGEMENT, Textile Mills.

Mechanical Department. The Textile Mill Mechanical Department. Textile Wld., vol. 66, no. 5, Aug. 2, 1924, pp. 79-85, 2 figs. Relation to wet finishing, dyeing, and dry finishing departments; power transmission system; care of motors and shafting; preventing oil and rust stains; keeping down depreciation on idle machinery; washing machine and fulling mill rolls; temperature control.

Power Plant. See STEAM POWER PLANTS, Textile Mills.

Process Steam. See STEAM POWER PLANTS, Process Steam.

Temperature Control. Central Temperature Control at Hamilton Co., E. D. Fowle. Textile Wld., vol. 66, no. 22, Nov. 29, 1924, pp. 39 and 41, 2 figs. How a system of centralized automatic temperature control has been tried out in dyehouse of Hamilton Woolen Co., Southbridge, Mass., and proved successful; steam saving.

Woolen Mills. Organization and Construction of Woolen Mills, A. W. Benoit. Mech. Eng., vol. 46, no. 4, Apr. 1924, pp. 208-210 and (discussion) 210-211, 4 figs. Ideal woolen-mill location allows for expansion, has good railroad facilities, ample soft-water supply and near-by mill help; type of building; arrangement of departments; steam, hot water, and power problems.

TEXTILES

Bleaching. See BLEACHING.

Cotton. See COTTON.

Dyeing. See DYE INDUSTRY; DYEING; DYES.

Fabrics. See FABRICS.

Fibers, Elasticity of. An Investigation of the Nature of the Elasticity of Fibres, S. A. Shorter. Textile Inst.—Jl., vol. 15, no. 4, Apr. 1924, pp.

T207-T229, 14 figs. Experimental investigation of fiber elasticity. Formulates theory of fiber elasticity, basis of which is a dynamical model, which imitates behavior of a fiber. Properties of actual fibers studied in light of this theory. Relation between behavior of fibers and that of yarns. Possible future development of work.

Jute. See JUTE.

Mule Yarns. The Effect of Roller Delivery Motion on the Regularity of Mule Yarns, F. Charnley. Textile Inst.—Jl., vol. 15, no. 5, May 1924, pp. T273-T280, 3 figs. Results of investigation; twist, breaking-load, and photographic tests.

Silk. See SILK.

Water Absorption. The Thermodynamics of Water Absorption by Textile Materials, S. A. Shorter. Textile Inst.—Jl., vol. 15, no. 6, June 1924, pp. T328-T336, 3 figs. Discusses evolution of heat by absorption of water in liquid form by textile materials and criticises some papers on subject.

Wool. See WOOL.

Yarns. Wearing Tests for Yarns and Some Observations on Reeds, G. F. New. Textile Inst.—Jl., vol. 15, no. 4, Apr. 1924, pp. T230-T236, 13 figs. Instruments developed with which to obtain, both easily and quickly, knowledge of probable behavior of any particular yarn or dressing under working conditions.

THALLIUM

Structure. See LEAD, Structure.

THEATERS

Air Conditioning in. See AIR CONDITIONING, Theaters.

Fire Protection. Safety Devices at the Wiesbaden Theaters (Die Sicherheitseinrichtungen der Wiesbadener Theater), D. Berlit. Siemens-Zeit., vol. 4, no. 10, Oct. 1924, pp. 358-361, 3 figs. Details of new Siemens & Halske automatic system comprising 300 automatic alarms and 40 press-buttons, also automatic sprinklers for metal safety curtains.

Heating and Ventilating. See HEATING AND VENTILATION, Theaters.

Seating Area, Design of. See GRANDSTANDS, Seating Area, Design of.

THEODOLITES. See SURVEYING, Theodolites.

THERMIONIC EMISSION. See ELECTRIC CONDUCTORS, Free Electron Concentration within.

THERMIONIC VALVES. See VACUUM TUBES, Thermionic Valves; RECTIFIERS, Thermionic-Valve.

THERMIONICS

Theory. The Theory of Thermionics, H. A. Wilson. Physical Rev., vol. 24, no. 1, July 1924, pp. 38-48. Discusses thermodynamic theory of electron emission from metals at high temperature.

THERMIT

Bearing Metal. See BEARING METALS, Thermit.

Foundry Uses. See IRON FOUNDING, Thermit, Application of.

THERMIT WELDING

Rails. See RAILS, Welding.

THERMOCOUPLES

Base-Metal, Materials for. Characteristics of Some Materials for Base-Metal Thermocouples, F. E. Bash. Am. Soc. for Testing Matls.—Preprint of paper for meeting June 24-27, 1924, no. 19n, 7 pp., 1 fig. See also Forging-Stamping-Heat Treating, vol. 10, no. 8, Aug. 1924, pp. 307-309, 1 fig. Important considerations in choosing elements of thermocouples, and results of tests in which thermoelectric properties of a number of alloys are determined against copper used as a standard material.

Lagless. Use of Thermoelectric Couples (Ueber den Gebrauch von Thermoelementen), W. Redenbacher. Archiv für Wärmewirtschaft, vol. 5, no. 11, Nov. 1924, pp. 209-211, 2 figs. Discusses lagging behind of thermocouples in indicating temperature, and describes a new thermocouple, using copper and constantan wire, which eliminates lag, and its application in measuring flue-gas temperature.

THERMODYNAMICS

Diagrams, Application of. The Change of Curves of State Between Any Given Limit Curves and Applications to Water, Carbonic Acid and Air (Ueber die Veränderung von Zustandskurven zwischen beliebigen Grenzkurven nebst Anwendungen auf Wasser, Kohlensäure und Luft), V. Fischer. Zeit. für technische Physik, vol. 5, nos. 1, 2, and 3, 1924, pp. 17-21, 39-44, and 83-88, 10 figs. The c_p and T diagrams are used for establishing general thermodynamic relations and numerous applications of these are shown; new diagram of specific heat is also drawn upon.

Entropy. See ENTROPY.

Nernst Theorem. The Nernst Heat Theorem (Zur Prüfung des Nernstschen Wärmetheorems), W. H. van de Sande Bakhuyzen. Zeit. für physikalische Chemie, vol. 111, no. 1-2, July 15, 1924, pp. 39-56, 2 figs. In all instances of investigation discrepancies between measured values of decrease of thermodynamic potential and those calculated on basis of Nernst theorem are of no greater magnitude than would result from inaccuracy of data employed.

Refrigerating Fluids. See REFRIGERANTS, Thermodynamics of.

Third Law. A Statement of the Third Law of Thermodynamics, E. D. Eastman. Am. Chem. Soc.—Jl., vol. 46, no. 1, Jan. 1924, pp. 39-43. Argument is made that there is in ideal case no sharp dividing line between crystalline and (supercooled) liquid states; statement of third law is proposed which is in harmony with ideas expressed.

Water-Vapor Diagram. Straight-Line Water-Vapor Diagram for the Standard and High-Pressure Ranges (Geradliniges Wasserdampf-Diagramm für Normal- und Hochdruckgebiet, M. Seiliger. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 2, Jan. 12, 1924, pp. 25-27, 2 figs. See also (translation in abstract) Mech. Eng., vol. 46, no. 4, Apr. 1924, pp. 212-213, 1 fig. Based on the Callendar-Mollier formulas for water vapor, author develops a new diagram, and claims to show that nearly all changes of state of water vapor can be expressed by straight lines.

THERMOMETERS

[See also TEMPERATURE MEASUREMENT, Instruments.]

Distance. Mechanically-Operated Distance Thermometers. Power Engr., vol. 19, no. 214, Jan. 1924, p. 12, 4 figs. Application of well-known principle by which depth of liquid in tank can be measured pneumatically has been applied to distance thermometry by Fox Instrument Co.

Katathermometers. The Kata Thermometer—Its Value and Defects, W. J. McConnell and C. P. Yaglaglou. U. S. Bur. Mines—Reports of Investigations, no. 2565, Jan. 1924, 12 pp., 3 figs. on supp. plates. Its history and development;

description of instrument proper; fundamentals; its practical use as an anemometer and as an index to human comfort; other types of similar instruments. Bibliography of katathermometer.

Value of the Kata Thermometer in Effective Temperature Studies, M. Ingels. Am. Soc. Heating & Vent. Engrs.—Jl., vol. 30, no. 6, June 1924, pp. 453-456, 1 fig Deals with work of adopting this instrument for measuring effective temperatures.

Platinum-Resistance. Formulation of a Temperature Scale Between 0 and —193 deg. by Means of a Platinum Resistance Thermometer (Darstellung der Temperaturskale zwischen 0 und —193 deg. durch das Platinwiderstandsthermometer), F. Henning and W. Heuse. Zeit. für Psysik, vol. 23, no. 1-2, Apr. 12, 1924, pp. 95-104. Describes platinum resistance thermometer calibrated to melting point of ice and normal boiling points of oxygen and CO_2 and gives table for interpolations.

THERMOS BOTTLES

Efficiency of. See GLASS MANUFACTURE, Thermos Bottles.

THERMOSTATS

Automobile. Value of the Thermostat, W. G. Aston. Autocar, vol. 53, no. 1499, July 11, 1924, pp. 50-51, 4 figs. Permits engine to attain and maintain effective working temperature and guarantees freedom from boiling under strenuous working.

Bimetallic Disk-Type. The Bimetallic Disc Type Thermostat, V. C. Vaughan. Elec. Jl., vol. 21, no. 11, Nov 1924, pp. 532-534, 5 figs. Thermal characteristics; construction and operation.

Electric-Furnace. Thermostats for Very High Temperatures, L. H. Adams. Optical Soc. Am.—Jl., vol. 9, no. 5, Nov. 1924, pp. 599-603, 2 figs. Describes what is without question best method for automatic regulation of electric furnaces at high temperatures.

Types. Modern Thermostats and Their Range of Application (Neuartige Thermostaten und ihr Anwendungsgebiet), B. Klaften. Gesundheits-Ingenieur, vol. 47, no. 34, Aug. 23, 1924, pp. 370-373, 8 figs. Describes apparatus depending on expansion of metals instead of liquids and explains their action and regulation.

THRESHING MACHINES. See FARM MACHINERY, Threshing Machines.

TIDAL POWER

Hydrocompressor Installations. Tidal Power Installations, J. O. Boving. Elec. Rev., vol. 95, no. 2454, Dec. 5, 1924, pp. 844-845, 1 fig. Discusses advantages of hydrocompressors and possibilities of development of low-head hydrocompressor.

Tidal Power Installations, A. J. V. Underwood. Elec. Rev., vol. 95, no. 2451, Nov. 14, 1924, pp. 725-727, 1 fig. Discusses method of utilizing energy of tides by use of hydraulic compressors, and compares this system with water-turbine system.

Utilization. Utilization of Tidal Power at the Aber Vrac'h Plants (L'utilisation des marées aux installations de l'Aber Vrac'h), G. Trautner. Technique Moderne, vol. 16, no. 22, Nov. 15, 1924, pp. 782-785, 7 figs. Discusses various methods proposed for utilizing tidal power in view of fact that French government has voted to participate in Aber Vrac'h undertaking to solve practicability of question. Bibliography.

TIDES

Calculation. German Tides Calculating Machine (Die deutsche Gezeitenrechenmaschine), H. Rauschelbach. Zeit. für Instrumentenkunde, vol. 44, no. 7, July 1924, pp. 285-303, 4 figs. Detailed description of new machine built in 1915-1916 for observatory at Wilhelmshaven for manual or electric operation.

Investigation of Currents and. The Tidal and Current Work of the Coast and Geodetic Survey, G. T. Rude. Franklin Inst.—Jl., vol. 197, nos. 1 and 2, Jan. and Feb. 1924, pp. 73-97 and 217-251, 25 figs. Brief, non-mathematical explanation of tides and currents from engineering, or rather, physical viewpoint; outline of activities of Coast and Geodetic Survey in tidal and current work, with reference to recent investigations in subject of wind-driven currents; relation and importance of tides and currents to work of engineer, mariner, and scientist, and description of instruments and methods employed in observation and prediction of tides and currents.

Measurements. Measurement of Tides at New York, J. M. Buckley. Military Engr., vol. 16, no. 90, Nov.-Dec. 1924, pp. 511-514, 2 figs. Special features of New York harbor tides; methods of tidal observations; cost of work; applicability to other ports.

Power from. See TIDAL POWER.

Secondary Undulations of. On Secondary Undulations of Tides, S. Yamaguti. Japanese Jl. Astronomy & Geophysics, vol. 2, no. 2, 1924, pp. 115-131, 12 figs. Results of investigation made with intention of studying variation of period of undulation caused by change of depth due to tides, and to find some relation between frequency of occurrence of indulations and depth of water. Influence of winds and position of center of cyclone upon excitement of undulation.

TILE

Concrete Roofing. Concrete Roofing Tile Successful in Chicago. Cement & Eng. News, vol. 36, no. 8, Aug. 1924, pp. 35-36 and 44, 3 figs. Describes tile machine, type and color and method of laying tile as made by Hawthorne Roofing Tile Co., Chicago, Ill.

Drain. Curing Conditions of Concrete Drain Tile, Dalton G. Miller.. Concrete, vol. 24, no. 6, June 1924, pp. 235-238, 11 figs. Factor of resistance to sulphate waters.

Glazed, Manufacture. The Manufacture of Glazed Tiles, A. Simon. Eng. Progress, vol. 5, no. 10, Oct. 1924, pp. 214-219, 11 figs. Manufacturing process in modern tile factory; crushers; mass mill; further treatment; glazing; treatment of fireclay mass for capsules.

Hollow Building Tile. See BUILDING MATERIALS, Hollow Tile.

TIMBER

Creosoted. Creosoted Timber in Southern Highway Improvements, P. R. Hicks. Mfrs. Rec., vol. 85, no. 2, Jan. 10, 1924, pp. 78-80, 4 figs. Progress in 1923; problems to be considered; advantages of creosoted-timber structures; life and strength of creosoted timber

The Fire Hazard of Treated Timber, C. S. Heritage. Railroad Herald, vol. 28, no. 12, Nov. 1924, pp. 19-21. Discusses fire hazards of creosoted timber.

Estimation. The Partial Count Method of Timber Estimating, H. R. Wickenden. Jl. of Forestry, vol. 22, no. 5, May 1924, pp. 518-524, 6 figs. Discusses principles and procedure, advantages of partial count method, which may also be used for scaling logs and for determining true cubic volume of logs.

North America, Supply. See FORESTRY, North America.

Preservation. See WOOD PRESERVATION.

Softwood, United States. Our Softwood Timber, W. B. Greeley. Military Engr., vol. 16, no. 86, Mar.-Apr. 1924, pp. 89-94, 9 figs. Extent of softwood forests in the United States; consumption of softwood timber; paper-making woods; exports and imports of softwoods.

Southern United States Resources. Southern Timber Resources in Relation to Paper Making, A. Carey. Paper Trade Jl., vol. 78, no. 19, May 8, 1924, pp. 57-60, 7 figs. Notes on vast area of pine land in southern section of United States, and account of its resident resources and growing power; production of wood by design.

Treatment. See also FORESTRY, India.

TIME STUDY

Bicycle Assembling. Time Study and Belt Conveying (Zeitstudien und Bandarbeit), E. Sachsenberg. Maschinenbau, vol. 3, no. 13, Apr. 10, 1924, pp. 433-439, 22 figs. Discusses connection between time study and synchronized conveying and gives example of assembling bicycles in 118 operations with aid of belt conveyor.

Compiled Form of. Making and Using Time Studies, H. K. Reed. Indus. Mgmt. (N. Y.), vol. 68, no. 1, July 1924, pp. 29-34, 5 figs. Deals with compiled form of time study.

Forge Shops. Determination of Working Time for Forge Shops (Arbeitszeitbestimmung in der mittleren Freiformschmiede), M. Zscheile. Werkstattstechnik, vol. 18, no. 21, Nov. 1, 1924, pp. 597-614, 29 figs. Discusses application of time study to forge-shop practice on lines of its application to machine tools, and develops formulas and graphs.

Foundries. Uniform Piece Work Rates in the Foundry (Wie kommen wir zu einer einheitlichen Akkordbestimmung in der Giesserei?), H. Resow. Stahl u. Eisen, vol. 44, no. 44, Oct. 30, 1924, pp. 1363-1370, 1 fig. Discusses analysis of detailed foundry jobs and gives detailed list of processes with time added to each item, also time-study cards.

Function of. Making and Using Time Studies, H. K. Reed. Indus. Mgmt. (N. Y.), vol. 67, nos. 3, 4, 5, and 6, Mar., Apr., May, and June, 1924, pp. 145-149, 231-234, 272-278, and 375-382, 12 figs. Mar.: Formulation of policy. Apr. and May: Planning time-study installation. June: Production time-study installation.

Mining. Interpreting Time-Study Data of Mining Operations, W. F. Dietrich. Eng. & Min. Jl.-Press, vol. 118, no. 8, Aug. 23, 1924, pp. 297-300, 4 figs. Necessary preliminary to establishment of scientific method of paying by bonus or piece work.

Motion-Picture Films and. See MOTION PICTURES, Films.

Rolling Mills. See ROLLING MILLS, Power Consumption.

Time-Motion Charts. Some Studies of Handling Time, A. Whitehead. Machy. (Lond.), vol. 25, no. 636, Dec. 4, 1924, pp. 289-294, 10 figs. Time-motion charts applied to analysis of tooling and assembly operations.

Usefulness of. Making and Using Time Studies, H. K. Reed. Indus. Mgmt. (N. Y.), vol. 68, no. 3, Sept. 1924, pp. 165-169, 2 figs. Problems of "maintenance" of time study, discussing those factors which, in final analysis, determine degree of concrete usefulness of time study in modern management.

TIN

Deposits. See TIN DEPOSITS.

Electrolytic Refining. Addition Agents in Tin Refining Electrolytes, E. F. Kern and E. A. Capillon. Am. Electrochem. Soc.—Advance paper no. 27, for meeting Apr. 24-26, 1924, pp. 353-369, 1 fig. Investigation of effect of various addition agents on cathode deposit of tin; major portion of tests was confined to acid tin sulphate and acid tin-sodium sulphate electrolytes.

Electrolytic Refining of Tin, J. R. Stack. Am. Electrochem. Soc.—Advance paper no. 20, for meeting Apr. 24-26, 1924, pp. 279-287, 2 figs. Only commercial electrolytic tin refinery is located at Perth Amboy plant of Am. Smelting & Refining Co.; to date, only practical solution of problem of separating from tin impurities such as antimony, arsenic, lead, and bismuth lies in electrolysis; discusses various electrolytes tried out commercially; treatment of anode slimes.

Electrolytic Tin, Chas. L. Mantell. Am. Electrochem. Soc.—Advance paper no. 19, for meeting Apr. 24-26, 1924, pp. 269-278. Discusses various electrolytic baths for refining tin, from viewpoint of their application on commercial scale, giving advantages, disadvantages and special applications.

Mines. See TIN MINES.

Passivity. See METALS, Passivity.

Production, 1923. Tin in 1923, B. L. Johnson. U. S. Geol. Survey (Mineral Resources of U. S.), no. I:7, Sept. 26, 1924, pp. 101-103. Production and development; melting industry; imports and exports; consumption; prices.

Reduction and Refining, U. S. The Reduction and Refining of Tin in the United States, H. H. Alexander and J. R. Stack. Am. Inst. Min. & Met. Engrs.—Trans., no. 1331-M, Mar. 1924, 37 pp., 5 figs First attempts at smelting; Bolivian-tin concentrates; assays and analysis; practical tests for tin; processes and purification; smelting process; cleaning slags and alloy treatment; by-products; American modifications in tin smelting; roasting and sintering; blast furnaces; partial, or selective, reduction process. Blast furnace vs. reverberatory; electrolytic refining; production statistics; status of industry in America.

TIN ALLOYS

Copper-Tin. See COPPER ALLOYS, Copper-Tin.

Heat of Formation. Heat of Formation of Inter-metallic Compounds. Tin Alloys. (Ueber die Bildungswärmen intermetallischer Verbindungen. Zinnlegierungen.), W. Biltz and W. Holverscheit. Zeit. für anorganische u. allgemeine Chemie, vol. 140, no. 3, Nov. 3, 1924, pp. 261-276, 2 figs. Particulars of experiments with $CaSn_3$, Mg_2Sn, $NaSn_2$, NaSn, and other compounds; their heats of solution and formation.

TIN DEPOSITS

Bolivia. The Tin Deposits of Chacaltaya, Bolivia, W. Lindgren. Economic Geology, vol. 19, no. 3, Apr.-May 1924, pp. 223-228. Geology, and description of ore.

Perak, Malay States. The Deep Leads of Kinta Valley, W. E. Cameron. Min. Mag., vol. 31, no. 5, Nov. 1924, pp. 276-285, 2 figs. Discusses theories relating to occurrence of alluvial tin deposits of varying geological age in Kinta Valley, Perak, and gives author's own explanation of facts as at present known.

Rocky Creek, Australia. Rocky Creek Syndicate's Prospecting Areas, Rocky Creek, C. C. Morton. Queensland Govt. Min. Jl., vol. 25, no. 292, Sept. 1924, pp. 325-329, 1 fig. History and geology; nature of tin occurrence; nature of prospecting; sampling; etc.

Tasmania. The Blue Tier Tin Field of North-East Tasmania, J. B. Lewis. Chem. Eng. & Min. Rev., vol. 16, no. 183, Dec. 5, 1923, pp. 90-94, 7 figs. Description of deposits; geology.

TIN MINES

Australia. Report on St. Patrick Tin Mine, Herberton, L. C. Ball. Queensland Govt. Min. Jl., vol. 24, no. 283, Dec. 15, 1923, pp. 451-456, 7 figs. Location, history, workings, geology.

Tasmania. Notes on the Lindsay Reward Tin Mine, Western Tasmania, D. V. Allen. Australasian Inst. Min. & Metallurgy—Proc., no. 51, Sept. 30, 1923, pp. 47-51. Geology, and occurrences of the varied minerals.

TIN MINING

California. Early Tin Mining in California, H. E. West. Eng. & Min. Jl.-Press, vol. 117, no. 2, Jan. 12, 1924, pp. 55-57, 3 figs. Reminiscenses of first commercial production of block tin in United States.

Tasmania. Exploitation of a Large Low-Grade Tin Deposit, J. B. Lewis. Chem. Eng. & Min. Rev., vol. 16, no. 192, Sept. 5, 1924, pp. 462-467, 6 figs. Methods and equipment of Anchor tin mine at Lottah, N. E. Tasmania.

TIN PLATE

Lithographing. See LITHOGRAPHING, Steel Sheets and Tin Plate.

Machinery for. Tin-Plate Machinery (Ueber Verzinnmaschinen), W. Krämer. Stahl u. Eisen, vol. 44, no. 25, June 19, 1924, pp. 713-715, 4 figs. Discusses Abercarn and Thomas & Davies types of tin-plate machinery and their advantages.

Manufacture. New System for Manufacture of Tin Plates (Nuovo sistema di fabbricazione per lamiere stagnate), G. R. Brasioli. Metallurgia Italiana, vol. 16, no. 9, Sept. 1924, pp. 388-393, 7 figs. Details of Schlötter process of producing tin plate by electrolytic means, and its successful application in Germany. Cost data.

The Manufacture of Tin Plate in India, F. L. Estep. Iron Age, vol. 114, nos. 18 and 19, Oct. 30 and Nov. 6, 1924, pp. 1122-1128 and 1197-1198 and 1261, 11 figs. Problems met in introducing manufacture into India; modifications made by American engineers to meet climatic conditions.

Tin-Plate Manufacture. Travelers Standard, vol. 12, no. 5, May 1924, pp. 105-110. Describes modern method of manufacture and gives precautions to be taken for protection of workmen.

TINNING

Thickening of Molten Tin. Origin and Prevention of the Formation of Undesirable Thickening of Molten Tin (Entstehung und Verhütung schädlicher Verdickungen bezw. Legierungen feuerflüssiger Zinnbäder), B. Haas. Zeit. für die Gesamte Giessereipraxis, vol. 45, no. 15, Apr. 12, 1924, pp. 33-34. Molten tin combines with iron, forming an alloy that thickens tin bath, impairs process of tinning, and wastes metal. It is recommended to tin vessels containing tin bath and to pickle and preheat articles to be tinned.

TIRES

Locomotive. See LOCOMOTIVES, Tires and Forgings, Manufacture.

TIRES, RUBBER

Anti-Creep Rims for. A New Principle in Tyre Fitting. Motor Transport (Lond.), vol. 39, no. 1035, Dec. 29, 1924, pp. 799-800, 6 figs. Expansion rim construction safeguarding against "creeping;" possibility of eliminating tire press for fitting solids.

Balloon. Automotive Industry Accepts Balloon Tires—with Many Reservations, H. Chase. Automotive Industries, vol. 51, no. 1, July 3, 1924, pp. 22-29. Summary of replies received to questionnaire concerning balloon tires and rim equipment intended for their use. Four-ply type favored; many see need for wider rims and are disposed to give drop-base variety careful consideration.

Balloon and "Balloon Type" Tires. India Rubber Wld., vol. no. 69, no. 6, Mar. 1, 1924, pp. 371-372, 2 figs. Confusion caused by two distinct developments; standard sizes; need of approved inflation pressures; changeovers from regular to balloon-tire equipment; the case for "balloon type" tires.

Building Balloon Tires. India Rubber World, vol. 69, no. 4, Jan. 1, 1924, pp. 217-218, 5 figs. Reason for balloon tires; production operations similar to high-pressure tires; Thropp system; band building; applying fabric bands.

Dunlop Cord Balloon Tyres. Auto-Motor Jl., vol. 29, no. 35, Aug. 28, 1924, p. 722, 1 fig. Describes new Dunlop balloon tire; shows how wired edge of cover at one part of rim is depressed into well in center of rim, allowing edge of cover to be lifted over rim edge at opposite diameter.

Bicycle. Manufacture of Cycle Tires. India Rubber World, vol. 69, no. 4, Jan. 1, 1924, pp. 227-228, 4 figs. Healey-Shaw process; describes fabric slitting, wire covering, spool wrapping, foundation building, vulcanizing.

Curing, Temperature Measurement. The Measurement of Temperature in Pneumatic and Solid Tyres During Cure, A. A. Perks and R. W. Griffiths. India-Rubber Jl., vol. 67, no. 1, Jan. 5, 1924, pp. 13-16 and 19-21, 11 figs. Use of a calibrated thermo-junction, inserted in required position, for obtaining record of temperature during cure at any part of a tire; details of methods which have proved successful, and some results obtained.

Design Problems. The Tyre as Part of the Suspension System, A. Healey. Automobile Engr., vol. 14, no. 197, Dec. 1924, pp. 406-414, 29 figs. Notes on area of contact between tire and road; non-skid properties of tires; stiffness; deflection under load; maximum size of tires for particular load; lateral stability of tires; actual value of damping coefficients; springs; behavior of car traveling over bad roads; balloon tires; solid tires.

Low-Pressure. See Balloon.

Manufacturing Costs. Tire Factory Manufacturing Costs, J. J. Dawson. India Rubber Wld., vol. 70, nos. 1, 2, 3 and 4, Apr. 1, May 1, June 1, and July 1, 1924, pp. 436-438, 503-505, 576-578 and 653-654, 8 figs. Continuous process system; purchases and material accounts; purchase register and material ledger; payroll and payroll analysis; production reports; chart of accounts; purchase and contract, accumulation, departmental, and "in process" accounts.

Molds and Forms for. How Automobile Tire Molds Are Made, Chas. O. Herb. Machy. (N. Y.), vol. 30, no. 7, Mar. 1924, pp. 497-500, 9 figs. Turning and boring mold and form, and engraving tread design in mold.

Machine Shops Problems in Making Tire Molds, H. P. Armson. Can. Machy., vol. 32, no. 2, July 10, 1924, pp. 19-21 and 39, 5 figs. Also Can. Foundryman, vol. 15, no. 7, July 1924, pp. 22-24 and 34, 4 figs. Turning molds to shape; engraving tread designs. Features of production at Toronto plant of Potts Pattern and Machine Co.

Non-Skid. Two Notable Tyre Developments. Motor Transport (Lond.), vol. 39, no. 1017, Aug. 25, 1924, pp. 243-244, 6 figs. Low pressure pneumatic and new design of solid tire that show phenomenal non-skid capacity.

Standardization. Is Any Progress Being Made on Balloon Tire Standardization, H. Chase. Automotive Industries, vol. 51, no. 24, Dec. 11, 1924, pp. 996-1000, 3 figs. Trend is toward fewer sizes, wider rims and treads designed to equalize wear over entire width; requirements of 28 of 55 manufacturers limited to five tire sizes.

TITANIUM

Effect in Iron Castings. See IRON CASTINGS, Titanium Additions.

Spectrum. See SPECTRA, Vanadium.

White. See PIGMENT, Titanium White.

TOLERANCES

[See also MEASUREMENTS, Length.]

Cylindrical Machine Parts. Tolerances (Toleranser), H. Törnebohm. Teknisk Tidskrift, vol. 54, nos. 42 and 46, Oct. 18 and Nov. 15, 1924, pp. 109-113 and 121-125, 19 figs. System of fits and tolerances of cylindrical machine parts, as devised by Swedish Engineering Standards Committee and proposed for acceptance as national Swedish standard. Comparison with similar systems developed by other countries show that each country seems to prefer a slightly different system.

Limits. Requirements of a System of Limits, M. E. Steczynski. Sibley Jl. Eng., vol. 38, no. 6, June 1924, pp. 139-146 and 155-156, 5 figs. Fundamental principles involved in logical development of satisfactory system.

Tap Threads. See TAPS, Standard Tolerances for.

Taps, Standardization for. Standardizing Tolerances for Taps, W. Daley. Am. Mach., vol. 60, no. 6, Feb. 7, 1924, pp. 217-219. Analysis of limits and tolerances adopted by Tap and Die Inst.; table showing progression of tolerances for all practical diameters and pitches.

TOLUENE

Vapor, Specific Volume. See VAPORS, Specific Volumes.

TOOL ROOMS

Bonus System for. See BONUS SYSTEMS, Tool-Room Application.

TOOL STEEL

Annealing. New Annealing Practice for Tool Steels, A. T. Clarage. Iron Age, vol. 113, no. 14, Apr. 3, 1924, pp. 1019-1020, 2 figs. Preliminary heat treatment by electricity instead of fuel; large-scale commercial operation found practical.

Hardness and Cutting Trials. Hardness and Cutting Trials of a Tool Steel, Dempster Smith and Israel Hey. Engineer, vol. 137, no. 3562, Apr. 4, 1924, pp. 366-368, 8 figs. See also Machy. (Lond.), vol. 24, nos. 602, 603, and 604, Apr. 10, 17, and 24, 1924, pp. 51-53, 92 and 113-116, 11 figs.; and Mech. World, vol. 75, nos. 1947 and 1948, Apr. 25, and May 2, 1924, pp. 255-258 and 272-274, 9 figs. Hardness observations on tool steel; cutting tests in Herbert tool-steel testing machine; cutting trials with tools held in turret of ordinary lathe; variation in vertical force with speed of cutting; durability trials with hardened tools subjected to different subsequent heat treatments.

Hardness Tests. Comparative Tests of Hardness of Various Steel Tools at High Temperatures (Essais comparatifs de dureté à chaud sur divers aciers à outils), J. Cohade. Revue Universelle des Mines, vol. 1, no. 2, Jan. 15, 1924, pp. 75-104, 16 figs. See also (abstracted translation), Mech. Eng., vol. 46, no. 4, Apr. 1924, p. 214. Brief review of previous work on subject and discussion of author's own tests, carried out at works of Schneider & Co. at Creusot, France; describes heat treatment to which steels were subjected previous to tests and method of testing, and gives results obtained.

Testing. Chemical and Metallographic Testing of Tool Steel (Werkzeugstahl, seine chemische und metallographische Prüfung), H. Graefe. Werkstattstechnik, vol. 18, no. 23, Dec. 1, 1924, pp. 682-689, 27 figs. Taking of samples; classifying commercial tool steels according to their composition; application of metallography; practical examples.

Time and Temperature, Effects on. The Effects of Time and Temperature on Certain Special Steels, W. E. Woodward. West of Scotland Iron & Steel Inst.—Jl., vol. 31, part 2, Nov., Session 1923-24, pp. 32-34 and (discussion) 35-39, 23 figs. on supp. plates. Describes work undertaken to see if some modern steels said to be suitable for high-speed steel tools would exhibit some phenomena which might afford clue as to their reputed properties; use of Landon dilatometer for measuring expansion and contraction of moderately sized specimens.

TOOLS

Counterbores. See COUNTERBORES.

Cross-Slide Facing. Cross Slide Facing Tools for Automatics, F. O. Hickling. Machy. (Lond.), vol. 23, no. 589, Jan. 10, 1924, pp. 483-484, 3 figs. Discusses troubles that are encountered and gives examples of how difficulties have been overcome.

Cutting. See CUTTING TOOLS.

Designing for Production Manufacturing. Tool Designing for Production Manufacturing, P. V. Miller. Soc. Automotive Engrs.—Jl., vol. 15, no. 5, Nov. 1924, pp. 445-448, 5 figs. See (abstract) in Am. Mach., vol. 61, no. 19, Nov. 6, 1924, pp. 739-740. Discusses most important points to be considered in designing and building of tools, with special reference to more common types of drill jigs and milling fixtures.

Drills. See DRILLS.

Files. See FILES.

Flexible-Shaft-Driven. Power Tools with Flexible-Shaft Drive (Kraftwerkzeuge mit Drahtwellenantrieb), W. Schwarz. Maschinenbau, vol. 3, no. 9, Feb. 14, 1924, pp. 237-240, 9 figs. Points out advantages of power transmission by means of a flexible wire shaft.

Heat Treatment. See STEEL, HEAT TREATMENT OF, Carbon and High-Speed Tools.

High-Speed, Heat Treating. See ELECTRIC FURNACES, Heat-Treating.

High-Speed Steel. See STEEL, HIGH-SPEED, Cast Tools.

Locating Holes in Angular Face. Tool-room Formulæ for Locating Holes in Work with Angular Faces. Machy. (Lond.), vol. 24, no. 607, May 15, 1924, pp. 201-203, 4 figs. Formulas developed for use of toolmaker when work requires accurate location of hole in angular face.

Pneumatic. Testing Device for Pneumatic Tools with Motion To and Fro (Versuchstand für Presstuftwerkzeuge mit hin-und hergehender Bewegung), H. Wallot. Zeit. für komprimierte u. flüssige Gase, vol. 23, nos. 7, 8, and 10, 1923-1924, pp. 73-78, 85-88, and 109-112, 10 figs. Details of design and construction of apparatus for measuring and recording internal conditions in pneumatic tools with piston movement.

See also FOUNDRIES, Pneumatic Tools; PNEUMATIC TOOLS.

Salvage. Tool Salvage, L. A. Churgay. Soc. Automotive Engrs.—Jl., vol. 15, no. 5, Nov. 1924, pp. 456-460, 7 figs. Points out that all worn,

broken, and obsolete tools should be kept in separate containers; standard forms of purchase and inter-department requisitions are described and their usage specified.

Sheet-Metal Work. Comparative Methods of Tool Design, D. H. Chason. Mech. Eng., vol. 46, no. 9, Sept. 1924, pp. 531-534 and 538, 9 figs. Discussion in relation to quantity production of sheet-metal parts.

Stellite. Recent Results Obtained with Stellite Tools (Neue Ergebnisse mit Stellitwerkzeugen), H. Märkle. Maschinenbau, vol. 3, no. 9, Feb. 14, 1924, pp. 235-237. Favorable results of recent tests.

Storage. A Practical System of Tool Storage and Control, F. A. Pope. Factory, vol. 33, nos. 2 and 3, Aug. and Sept., 1924, pp. 208-211 and 346-347, 420, 422, and 424, 10 figs. Shows how centralized storage, flexible shelving, mechanical handling equipment, and systematic grouping of tools have in one shop given clean-cut but economical control over tools. Methods of Worthington Pump & Machy. Co.

TORPEDO BOATS. See WARSHIPS, Torpedo Boats.

TORQUE

Measurement. See MEASURING INSTRUMENTS, Torsion Meter.

TORSIOGRAMS. See OIL ENGINES, Torsiograms of.

TORSION

Steel Rods. Some Effects Due to Permanent Torsion of Steel Rods of Circular Section (Quelques effets dus à des torsions permanentes de barreaux d'acier à section circulaire), J. Seigle. Revue de l'Industrie Minérale, no. 96, Dec. 15, 1924, pp. 568-574, 15 figs. Results of experiments with rods of 2-8 mm. diameter as to state of the various cylindrical layers of rod after permanent torsion, effect of annealing, apparent elongation and contraction.

Tests. See METALS, Deformation.

TORSION BALANCE

Eötvös. See PROSPECTING, Electrical.

TORSION METER. See MEASURING INSTRUMENTS, Torsion Meter.

TOWERS

Transmission-Line. See ELECTRIC TRANSMISSION LINES, Construction.

Water. See WATER TOWERS.

TOWING

Elastic. Elastic Towing, S. Miller. Mar. Eng., vol. 29, no. 11, Nov. 1924, pp. 657-662, 6 figs. Investigation of deep sea towing; model experiments at Washington; details of new automatic tension towing engine.

Electric. Electric Haulage on the Marne-Rhine Canal (Nouvelle installation de halage électrique sur le canal de la Marne au Rhin). Bul. Technique du Bureau Veritas, vol. 6, no. 7, July 1924, pp. 121-123, 3 figs. Particulars of Cheneau system; speed of towing is 1.6-3.5 kg. per hour.

TOWN PLANNING. See CITY PLANNING.

TRACTORS

Applications. Industrial and Commercial Applications of the Tractor, G. D. Babcock. Soc. Automotive Engrs.—Jl., vol. 15, no. 3, Sept. 1924, pp. 199-205, 16 figs. Heat treating of track shoes; lubrication of track; variation of size of calks; use, with tractors, of various accessories, such as rotary snow plows, timber-cutting machines, road graders and scrapers, and operations such as scarifying of old asphalt, Southern logging and swabbing of oil wells, are described. See (discussion) in no. 6, Dec. 1924, pp. 536-538.

Building. See INDUSTRIAL MANAGEMENT, Tractor Plant.

Caterpillar. Caterpillar Tractor in the Lumber Industry. (Der WD-Raupenschlepper in der Holzindustrie). Hanomag-Nachrichten, vol. 11, no. 126, Apr. 1924, pp. 49-68, 23 figs. Description of a type of caterpillar tractor combined with a hoist, which is used to fell trees and to haul them away. Calculations proving its economical superiority to use of animal power; testimonials; list of users.

Caterpillar Tractors in Road Making. Motor Transport (Lond.), vol. 39, no. 1010, July 7, 1924, pp. 25-27, 5 figs. How their employment in conjunction with mechanical excavating equipment economises time and labor.

The M.T.W. Caterpillar Tractors (Der "M.T.W."-Raupenschlepper). Wirtschaftsmotor, vol. 6, no. 3, Mar. 25, 1924, pp. 7-8, 3 figs. Type of small tractor developed by firm of Poehl, Berlin, Germany.

Cross-Country. Traction Across Rough and Roadless Country, L. A. Legros. Engineering, vol. 117, nos. 3035, 3036, and 3037, Feb. 29, Mar. 7 and 14, 1924, pp. 282-286, 316-319, and 347-350, 63 figs. General consideration of problem; examination of qualities that cross-country tractor possess, and general features of such tractors.

Farm. The General Purpose Farm Tractor, F. A. Wirt. Agricultural Eng., vol. 5, no. 5, May 1924, pp. 102-104, 1 fig. An efficient source of mechanical power that can be used not only for customary tractor drawbar and belt operations, but also, when properly equipped and adjusted, for efficient cultivating, and other light drawbar work now more commonly done with horses. Why next big development in tractor industry is expected to be a general purpose tractor.

Farm, Specifications for. British and American Agricultural Tractor Specifications. Automotive Industries, vol. 50, no. 8, Feb. 21, 1924, pp. 453-457. Tabular data.

German. German Power Tractors for Agricultural Purposes, G. Fischer. Eng. Progress, vol. 5, no. 8, Aug. 1924, pp. 141-147, 14 figs. Discusses small motor plows, traveling speed, grippers for motor plows, tractor plows, and fuels for power plows.

Military. British Four-Wheel Drive Military Tractor Has Six Forward and Two Reverse Speeds, M. W. Bourdon. Automotive Industries, vol. 51, no. 24, Dec. 11, 1924, pp. 1002-1004, 6 figs. Six-cylinder engine has dry sump lubrication, worm drive, pneumatic tires; transmission brakes act on four wheels.

The New Corps Tractor. Army Ordnance, vol. 5, no. 25, July-Aug. 1924, pp. 443-445, 5 figs. Experimental corps tractor delivered to Aberdeen Proving Ground for test was designed and built to meet requirements of Caliber Board; track-laying vehicle, using conventional type of track; gives general specifications.

See also TRANSPORTATION, Military.

Roadless Transport. Four Different Tractor Types Developed for Use in Roadless Areas, L. A. Legros. Automotive Industries, vol. 50, nos. 15 and 16, Apr. 10 and 17, 1924, pp. 820-826 and 868-872, 41 figs. Armstead snow-motor, Pavesi jointed tractor, Kegresse chain track and Renault multi-wheeled vehicle are typical of devices built for rough country work. (Abstract.) Paper read

before Brit. section of Société des Ingenieurs Civils de France.

Roadless Traction Progress. Motor Transport (Lond.), vol. 38, no. 1002, May 12, 1924, pp. 591-592, 3 figs. Details of new half-track creeper machine adapted to 1-ton chassis made by Roadless Traction, Ltd., Hounslow.

Traction Away from Roads (La traction hors route), M. L.-A. Legros. Société des Ingénieurs Civils de France—Mémoires et Compte Rendu des Travaux, vol. 77, no. 1-2-3, Jan.-Mar. 1924, pp. 7-32, 25 figs. Describes American snow motor for snow and ice; Pavesi tractor for very uneven ground; Kegresse tractor for all kinds of ground; gives details of their design and construction.

Thornycroft. Thornycroft's Latest Development. Motor Transport (Lond.), vol. 39, no. 1028, Nov. 10, 1924, pp. 553-556, 8 figs. Particulars of a new 4-wheel-driven pneumatic-tired tractor; 6-cylinder engine, developing 90 b.hp. at 1200 r.p.m.

Tracklayer Type. The "Sentinel-Roadless" Tractor. Engineering, vol. 118, no. 3073, Nov. 21, 1924, p. 717, 2 figs. See also Engineer, vol. 138, no. 3595, Nov. 21, 1924, p. 592, 3 figs. Describes steam tractor with track-laying equipment; results of tests.

Trailers. See TRAILERS.

TRADE UNIONS

Nova Scotia. The Beginning of Trade Unions in Nova Scotia, Rob. Drummond. Can. Inst. Min. & Metallurgy—Bul., no. 152, Dec. 1924, pp. 914-932. Events leading up to organization of provinicial workmen's association; and beneficial measures secured in interests of workers by organization.

Roumania. See LABOR, Organizations, Roumania.

TRAFFIC

Automobile, Improvement of. Private Auto Traffic, Z. C. Elkins. West. Soc. Engrs.—Jl., vol. 29, no. 3, Mar. 1924, pp. 102-106 and (discussion) 106-108. Constructive suggestions for improvement of automobile traffic conditions; emphasizes need for more through streets and reduction of parking privileges in congested section of Chicago; strict regulation of pedestrian traffic and increased use of signals at intersections recommended.

Bus. Studying London's 'Bus Traffic. Motor Transport (Lond.), vol. 39, no. 1016, Aug. 18, 1924, pp. 199-202, 6 figs. How London General Omnibus Co. check their traffic, and what they deduce therefrom.

City Planning and. See CITY PLANNING, Traffic in Relation to.

City Problems. Elements of the City Traffic Problem Reviewed, J. R. Bibbins. Eng. News-Rec., vol. 92, no. 1, Jan. 3, 1924, pp. 12-13. Examples of representative examples; technical elements; what to do about it.

City Streets and. See CITY PLANNING, Highways and Traffic.

Congestion Relief. Alleviation and Remedy of Street Congestion, H. Bartholomew. Eng. News-Rec., vol. 92, no. 18, May 1, 1924, pp. 766-767. Misuse of street space; improper routing; unscientific street plans; increasing street space; decentralizing business, centralized traffic control.

City Planning and Traffic Congestion. Elec. Traction, vol. 20, no. 7, July 1924, pp. 303-307. Discusses relation which building construction and street layout bear to problem of traffic congestion; economic causes and cures for modern bedlam in city streets.

Decentralization a Real Answer to Street Congestion, H. Bartholomobew. Elec. Ry. Jl., vol. 63, no. 10, Mar. 8, 1924, pp. 366-369. Suggestions for reducing street congestion and for traffic relief. Abstract of paper read at Am. Elec. Ry. Assn. midyear meeting.

Projects for Relief of Traffic Congestion in New York and Its Environs, E. P. Goodrich and H. M. Lewis. Am. City Mag., vol. 31, no. 1, July 1924, pp. 29-31, 2 figs. Summary of causes of congestion and of important specific suggestions for relief.

Control. Important Points in Traffic Control, J. R. Bibbins. Elec. Ry. Jl., vol. 63, no. 9, Mar. 1, 1924, pp. 325-328, 3 figs. Analysis of four important points in traffic control with their effect on street congestion; suggestions made for practical relief.

Signal Systems for Speeding Traffic and Avoiding Accidents. Safety Eng., vol. 46, no. 6, Dec. 1923, pp. 268-276, 11 figs. Methods of dealing with traffic problems in congested districts; use of flashing signals.

The Rotary Traffic Control System, G. T. Seabury. Good Roads, vol. 67, no. 1, July 1924, pp. 10-11 and 14, 3 figs. Two systems of rotary control have been installed in city of Providence at suggestion of Providence Safety Council and have met with universal approbation of driving public. Element principle of rotary control is that all vehicles proceed around square in same direction.

Estimation of Future. Methods of Estimating Future Street Traffic, E. P. Goodrich. Eng. & Contracting (Roads & Streets), vol. 62, no. 5, Nov. 5, 1924, pp. 1031-1033. Steps for determining future population, its distribution and activities.

High Buildings, Effect of. Effect of High Buildings on Traffic and Light, T. Adams and H. L. Seymour. Contract Rec., vol. 38, no. 45, Nov. 5, 1924, pp. 1102-1106, 3 figs. Study of development of a city block in Toronto which includes highest building in Empire. Tall structures preferable on north and south streets.

Highway Safety. Traffic Control and Safety, E. W. James. Public Roads, vol. 5, no. 6, Aug. 1924, pp. 1-9 and 19, 14 figs. Review of existing methods and devices for promoting highway safety.

Improvement of. Relation of Transportation to the Chicago Plan, E. S. Taylor. West. Soc. Engrs. —Jl., vol. 29, no. 3, Mar. 1924, pp. 116-122 and (discussion) 122-126, 4 figs. Outline of some of the more important improvement projects which are now under consideration by Chicago Plan Commission; more through-streets is one of its principal recommendations.

See also SIDEWALKS.

New York City. Improvement of Traffic Routes, H. W. Levy. Engrs. & Eng., vol. 41, no. 11, Nov. 1924, pp. 297-299. Traffic problems of Borough of Manhattan and plans for solving it.

Pedestrian, Improvement of. Pedestrian Traffic, H. E. Young. West. Soc. Engrs.—Jl., vol. 29, no. 3, Mar. 1924, pp. 65-86, 19 figs. Points out that since greatest numbers of persons on our streets are within pedestrian class, street improvements should be considered from standpoint of benefit to come to them. Advantages and disadvantages to be gained from different schemes that have been proposed from improvemetn of pedestrian traffic in Chicago, particularly in downtown districts.

Regulation and Street Plans. Traffic Problems and Suggested Remedies. Pub. Works, vol. 55, no. 6, June 1924, pp. 177-180, 2 figs. Providing parking for automobiles, increase of traffic beyond street capacity, and poor street planning are chief

problems reported; 200 city engineers suggest remedies.

Signals. See SIGNALING, Street.

Surveys. Results of Traffic Surveys, J. G. McKay. Eng. & Contracting (Roads & Streets), vol. 62, no. 1, July 2, 1924, pp. 26-30. Gives findings and deductions and their lessons for road engineer. From paper read at Am. Roadbldrs. Assn. convention.

Zoning. See ZONING.

TRAILERS.

[See also AUTOMOBILES, Trailers.]

Motor-Transport. Details of the H. I. C. Motor Transport Trailer. Engineering, vol. 117, no. 3032, Feb. 8, 1924, p. 186, 13 figs. partly on p. 178. Has advantage of shock reduction through exceptional springing.

TRAIN HEATING. See CAR HEATING.

TRANSFORMERS

Abnormal-Current, Secondary Voltages in. Abnormal Current Transformer Secondary Voltages, R. Brown. Power, vol. 60, no. 4, July 22, 1924, p. 130, 2 figs. Results of recent tests made at Univ. of Cal. to visualize wave form of secondary voltage of a 60- to 5-ampere current transformer having 14 turns on primary and 164 turns on secondary.

Capacity. The Theory of Capacity Transformers (Zur Theorie des Kapazitätstransformators), G. Probst. Elektrotechnische Zeit., vol. 45, no. 28, July 10, 1924, pp. 750-751, 4 figs. Discusses drawbacks in construction of inductivity machines and shows advantages of capacity machines for small power, advantages of capacity transformers over inductivity transformers.

Cars for Shipping. See CARS, FREIGHT, Transformer Transportation.

Castings. See IRON CASTINGS, Transformer-Box-Production.

Connections. Transformers Connected for Operation on a Three-Phase Circuit, B. A. Briggs. Power, vol. 59, no. 17, Apr. 22, 1924, pp. 639-641, 6 figs. Describes different connections for three single-phase transformers.

Cooling. Transformer Cooling, E. R. Stauffacher. Jl. of Elec., vol. 52, no. 11, June 1, 1924, pp. 451-463, 25 figs. A new development of A. B. O. type transformer; description of some cooling systems; experiments on cooling transformer oil in automobile type radiators; automatic reclosing circuit breaker; status of automatic a.c. substations; relays and relay application; calculating tables for calculating short-circuit currents on system; proposed change in transformer polarity, etc.

Core. Calculation of Core Transformers (Berechnung von Kernstransformatoren), P. Andronescu. Elektrotechnische Zeit., vol. 45, nos. 32 and 33, Aug. 7 and 14, 1924, pp. 845-848 and 870-876, 13 figs. Deduces new relations which with data given enables making proper assumption for seven special magnitudes on which precalculation must be based.

Cores, Aging. See IRON AND STEEL, Magnetic Aging.

Dry vs. Oil. Dry and Oil Transformers (Trockentransformator und Oeltransformator), M. Vidmar. Elektrotechnik u. Maschinenbau, vol. 42, no. 6, Feb. 10, 1924, pp. 78-82. Result of investigations shows that oil transformer is more expensive than dry transformer, and has greater losses; advantages of latter type are pointed out, but it is claimed that older types of dry transformers should be discarded in favor of more modern type, in which air is utilized simultaneously as cooling and insulating medium.

Efficiency Calculation. A Simplified Slide Rule Method for Calculating Transformer Efficiencies, N. Lee. Am. Inst. Elec. Engrs.—Jl., vol. 43, no. 11, Nov. 1924, pp. 1040-1042. Outlines method developed by author.

Harmonics. See HARMONICS, Transformers.

High-Reactance. The Design of Small High-reactance Transformers, R. H. Chadwick and D. W. Merchant. Gen. Elec. Rev., vol. 27, no. 10, Oct. 1924, pp. 682-685, 3 figs. In small transformers it is frequently more economical to obtain high leakage reactance by use of magnetic shunts, or stacks of steel punchings between coils. Description of this departure from conventional transformer design, together with explanation and example of its method of calculation.

High-Voltage. High-Voltage Transformer Designe (Ueber die Anwendung der Theorie der konformen Abbildung zur Berechnung der Durchschlags- und Ueberschlagsspannung zwischen kantigen Konstruktionsteilen unter Oel), L. Dreyfus. Archiv für Elektrotechnik, vol. 13, no. 2, May 31, 1924, pp. 123-145, 34 figs. Determines relation connecting breakdown voltage with distance apart of two angular electrodes, and in particular considers following cases of discharge: (1) between two plates; (2) between right-angled angular electrode and a plate; (3) between infinitely thin plate and plate set at right angles to it; application of theoretical results to problems arising in connection with oil-insulated transformers.

High-Voltage Testing. Transformers for Very High Voltage Tests. Elec. Rev., vol. 94, no. 2407, Jan. 11, 1924, pp. 61-62, 6 figs. Describes high-voltage testing transformers manufactured by Ferranti, Ltd., aggregating two million volts.

Inspection. Transformer Inspections. Elec. Wld., vol. 84, no. 9, Aug. 30, 1924, pp. 412-414, 2 figs. Methods employed by People's Light Co. of Davenport, Iowa. Demand determinations made yearly. Five-year results.

Insulation Tests. Effects of Time and Frequency on Insulation Test of Transformers, V. M. Montsinger. Am. Inst. Elec. Engrs.—Jl., vol. 43, no. 2, Feb. 1924, pp. 145-155, 24 figs. Investigation to determine proper and fair length of time to make induced-voltage test when frequency is higher than normal, and main points brought out in investigation.

Insulation Tests of Transformers as Influenced by Time and Frequency, F. J. Vogel. Am. Inst. Elec. Engrs.—Jl., vol. 43, no. 7, July 1924, pp. 627-633, 26 figs. Types of insulation failure and methods of testing. Application of data to tests on apparatus.

Large-Capacity. Some High Points on Modern Transformers, A. Palme. Power, vol. 59, no. 11, Mar. 11, 1924, pp. 402-403, 7 figs. Few examples of recently built large-capacity transformers, together with short description of their salient features.

Oil-Cooled. Permissible Overloads of Oil-Cooled Transformers (Zulässige Ueberlastungen von ölgekühlten Transformatoren), F. Sieber. Elektrotechnische Zeit., vol. 45, no. 29, July 17, 1924, pp. 769-771, 5 figs. Determines values for overloads and their duration, assuming that overload was preceded by permanent load less than full load.

Oils. A New Sludging Test for Transformer Oils, W. H. Nuttall. World Power, vol. 2, no. 8, Aug. 1924, pp. 92-96, 4 figs. Discusses interfacial tension between oil and water as bearing a definite relation to sludging properties of oil, and develops a method of determining sludge by means of it.

Action of Metals and Combinations of Metals on Transformer Oils (Einwirkung von Metallen und Metallkombinationen auf Transformatorenöl), H. von der Heyden and K. Typke. Petroleum,

vol. 20, no. 9, Mar. 20, 1924, pp. 320-325. Determination of changes produced in oils when sludge is formed; sludge formed consisted in most cases of metallic soaps; experiments with single metals and also with combinations of metals, and tables of results; results may be applied to explain behavior of turbine oils.

Conductivity and Dielectric Strength of Transformer Oil (Ueber die Leitfähigkeit und die dielektrische Festigkeit von Transformatorenöl), K. Draeger. Archiv. für Elektrotechnik, vol. 13, no. 5, Aug. 22, 1924, pp. 366-391, 10 figs. Shows that conductivity is mainly caused by electrolytic admixture; water in most minute form greatly affects conductivity; conductivity increases more rapidly with temperature than viscosity decreases. Bibliography.

Dehydration and Testing Transformer Oils and Transformer, W. R. Bowker. Southern Engineer, vol. 41, no. 2, Apr. 1924, pp. 54-56, 4 figs. Method for treatment of oils to eliminate moisture; identification of oils; insulation resistance test for transformers.

Disruptive Strength of Used Transformer Oils (Durchschlagsfestigkeit gebrauchter Transformatorenöle), Heyden and Typke. Elektrotechnische Zeit., vol. 45, no. 40, Oct. 2, 1924, p. 1059. Shows that even poor oils from used transformers, after filtering and dehydrating, have a regular disruptive strength of over 35 kv. per 5 mm.

Filtering Transformer Oil in the Field, F. C. De Weese. Power, vol. 60, no. 26, Dec. 23, 1924, pp. 1016-1017. Necessary equipment; order of procedure.

Measuring Dielectric Strength of Insulating Oils (Zur Messung der dielektrischen Festigkeit von Isolierölen), V. Engelhardt. Archiv für Elektrotechnik, vol. 13, no. 3, July 7, 1924, pp. 181-186, 2 figs. Details of experiments to establish influence of purification and drying of electrodes in puncture test, purified and dried oil being used.

Progress in Insulating Oil Purification (Fortschritte in der Reinigung von Isolierölen), H. Stäger. Schweiz. Elektrotechnischer Verein Bul., vol. 15, no. 8, Aug. 1924, pp. 377-384, 4 figs. Discusses disruptive strength of oil and shows that by centrifugal treatment not all water can be separated and that centrifuging at 50 deg. cent. increases hygroscopicity of oil.

The Dielectric Strength of High-Pressure Transformer and Switch Oils, H. D. Jukes. Elec. Rev., vol. 95, no. 2454, Dec. 5, 1924, pp. 845-847. Results of tests with a De Laval Chadburn centrifugal machine.

Transformer Oil-Testing Equipments. World Power, vol. 1, no. 4, Apr. 1924, pp. 249-251, 3 figs. Describes self-contained complete portable equipment for use with standard gap, produced by Johnson & Philips.

Transformer Oil (Transformatorenöle), M. v. d. Heyden and M. Typke. Elektrotechnische Zeit., vol. 45, no. 35, Aug. 28, 1924, pp. 931-935. Discusses purpose of oil and corresponding requirements; kinds and treatment of oils, refining, drying and preventing ageing, testing of new and used oils.

1875-Kva. Single-Phase. See ELECTRICAL MACHINERY, British Empire Exhibition.

Open-Delta Operation. Open-Delta Transformer Operation, A. Boyajian. Elec. World, vol. 83, no. 9, Mar. 1, 1924, pp. 417-418, 5 figs. Advantages and disadvantages of this connection from operating and commercial standpoints; method for computing regulation and capacity; correction for voltage unbalances.

Overloads. Hot Spots and Overload Indicators, H. Cole. Elec. Wld., vol. 84, nos. 7 and 8, Aug. 16 and 23, 1924, pp. 314-317 and 360-362, 6 figs. Results of studies made by Detroit Edison Co. to permit utilizing transformers more effectively without incurring serious overheating of insulation. Tests conducted to determine accuracy, time-lag, correct setting, etc.; limitation of overload indicators in practical operation.

Parallel Operation. The Parallel Operation of Three Phase Connected Transformers, W. H. Gregory. Elec. Engr., vol. 1, no. 7, Oct. 15, 1924, pp. 256-259, 7 figs. Discusses polarity, phase rotation, and angular displacement; voltage ratio; effect of impedance, resistance, and reactance on parallel operation; use of paralleling reactors for securing satisfactory parallel operation.

Radiotelephonic. See RADIOTELEPHONY, Transformers.

Rotary. Parallel Operation of Rotary Transformers (Parallelbetrieb von Drehtransformatoren), M. Bucov. Elektrotechnische Zeit., vol. 45, no. 26, June 26, 1924, pp. 674-677, 5 figs. Discusses connection of several rotary transformers to busbar; difficulties in parallel operation; arrangements and connections for parallel working.

Secondaries, Grounding. Grounding Transformers Secondaries, J. B. Gibbs. Power, vol. 60, no. 9, Aug. 26, 1924, pp. 323-324, 5 figs. Some of the principal rules concerning grounding of transformer secondaries.

Short-Circuit-Proof. Short-Circuit-Proof Current Transformers (Kurzschlusssichere Stromwandler), E. Zopf. Elektrischer Betrieb, vol. 22, no. 4, Feb. 24, 1924, pp. 27-28, 4 figs. Describes type of single- and multi-core short-circuit-proof transformers which have operated without disturbances wherever employed, often under most difficult working conditions; employed in industrial power plants, central stations and power plants of electric railways.

Silicon Steel in. The Magnetic Properties of Silicon Steel in a Large Transformer, Guerney H. Cole. Elec. Jl., vol. 21, no. 1, Jan. 1924, pp. 17-24, 43 figs. Study of magnetic properties of four-per-cent silicon steel in large transformer over wide range of flux densities; presents data in curve form giving magnitude of harmonic components of exciting current required to produce sinusoidal flux in silicon sheet steel for high, low, or intermediate densities.

Single- and Three-Phase. Characteristics and Shop Testing of Single- and Three-phase Power Transformers, J. W. Rogers. Mech. Wld., vol. 75, nos. 1946, 1951, and 1954, and vol. 76, no. 1957, Apr. 18, May 23, June 13, and July 4, 1924, pp. 242-243, 324-325, 370-372, and 8-9, 11 figs. General description of tests for copper loss and impedance, core loss, magnetic leakage, ratio and polarity, regulation, efficiency, ratio of core to copper losses, rating and temperature rise, insulation, and methods of calculating the various characteristics of a transformer from data obtained in shops.

Special Applications. Special Applications of Standard Transformers, J. B. Gibbs. Power, vol. 60, no. 22, Nov. 25, 1924, pp. 841-843, 5 figs. Factors to be considered when transformers are to be operated under other than rated conditions; amount of overload that can be safely carried; operating on other than normal voltage or frequency.

Static. Changing the Frequency by Means of Static Transformers, A. M. Taylor. Colliery Eng., vol. 1, no. 10, Dec. 1924, pp. 476-478, 3 figs. Results of experiments made by author; power-factor correction from secondary side; selectivity of transformer.

Mechanical Forces in Power Transformers. Power, vol. 60, no. 5, July 29, 1924, pp. 166-167, 11 figs. Elementary explanation of how mechan-

ical forces are set up in static transformers due to short-circuits or faulty switching, that have resulted in failure of windings.

Telephone. Telephone Transformers, W. L. Casper. Am. Inst. Elec. Engrs.—Jl., vol. 43, no. 3, Mar. 1924, pp. 197-209, 22 figs.; and (discussion) in vol. 43, no. 12, Dec. 1924, pp. 1201-1202. Discusses frequency range over which telephone transformers must operate efficiently in transferring energy between two circuits and three most common limiting impedance combinations of these circuits; shows mechanical construction of various transformers made to give desired accuracy of speech transmission under their particular circuit conditions.

Testing. Methods for Testing Current Transformers, F. B. Silsbee. Am. Inst. Elec. Engrs.—Jl., vol. 43, no. 3, Mar. 1924, pp. 239-249, 6 figs.; and (discussion) in vol. 43, no. 12, Dec. 1924, pp. 1173-1175, 2 figs. Critical discussion of various possible methods with data as to advantages and disadvantages of each; eleven distinct methods are described and supplementary suggestions are made concerning various types of detecting instruments, etc.

The Million-volt Testing Plant at Ivry, R. Borlase Matthews. Elec. Rev., vol. 94, no. 2409, Jan. 25, 1924, pp. 124-126, 4 figs. Details and equipment of laboratory designed by Cie Générale d'Electro-Céramique, in order to provide adequate plant for making electrical tests on insulators for transmission lines operating at 220,000 volts.

Three-Circuit. Theory of Three-Circuit Transformers, A. Boyajian. Am. Inst. Elec. Engrs.—Jl., vol. 43, no. 4, Apr. 1924, pp. 345-355, 10 figs. Discusses characteristics of 3-circuit transformers; scope and general aspects of problems; peculiar phenomena of theoretical interest; electrical network equivalent to magnetically interlinked circuits of 3-circuit transformer is developed; formulas for calculation.

Three-Phase. Polarity, Phase Rotation and Angular Displacement of Three Phase Transformers, W. H. Gregory. Elec. Engr., vol. 1, no. 4, July 15, 1924, pp. 119-121, 8 figs. Deals with several points regarding polarity, phase rotation and angular displacement of three-phase transformers and methods of obtaining same. Bibliography.

See also ELECTRICAL MACHINERY. British Empire Exhibition.

Transient Currents in. Transient Currents in Transformers, C. A. Melhuish. Ry. Signaling, vol. 17, no. 12, Dec. 1924, pp. 467-468, 5 figs. Explanation of cause of transient currents; how they affect signal operation.

Transverters. See TRANSVERTERS.

22,000-Kva. 22,000-kv-a. Transformers for Niagara Falls Development, F. F. Brand. Am. Inst. Elec. Engrs.—Jl., vol. 43, no. 6, June 1924, pp. 514-518, 4 figs. Spacing arrangements; insulation; cooling arrangements.

Two-Phase System. Transformers Connected for Operation on a Two-Phase Circuit, B. A. Briggs. Power, vol. 59, no. 3, Jan. 15, 1924, pp. 87-88, 4 figs. Transformers used on two-phased system must be of single-phase type, irrespective of whether single-phase or two-phase power transformation is to be accomplished.

Unbalanced-Load. The Current Conditions in Transformers Working on Unbalanced Load, F. Grieb. Brown Boveri Rev., vol. 11, no. 1, Jan. 1924, pp. 15-19, 8 figs. Discusses compensation of unbalanced loading of secondary of 3-phase transformers on primary side.

TRANSPORTATION

Aerial. See AVIATION, Aerial Transportation.

Automotive. Motor Transportation of the Future, E. Church. Automotive Mfr., vol. 66, nos. 7 and 8, Oct. and Nov. 1924, pp. 8-9 and 29, and 8-9. The problem as a whole; various agencies and part each will play; passenger and commercial cars, railroads, buses, terminals, road surfaces.

Barge Line. Federal Barge Line Proving Costly Experiment. Ry. Age, vol. 76, no. 6, Feb. 9, 1924, pp. 381-383, 3 figs. Mississippi-Warrior service and unprofitable venture, although handling capacity traffic.

Coördination of National Systems. Declarations of the Transportation Conference. Ry. Age, vol. 76, no. 3, Jan. 19, 1924, pp. 237-243. Findings and conclusions of Nat. Transportation Conference called by U. S. Chamber of Commerce in regard to governmental relations to railroad transportation, railroad consolidations, readjustment of relative freight rate schedules, relation of highways and motor transport to other transportation agencies, development of waterways and coordination of rail and waterway service, and taxation of transportation agencies. See also Ry. Rev., vol. 74, no. 3, Jan. 19, 1924, pp. 154-156.

Delivering Systems. The Problem of Delivery Equipment, W. Eldred. Mgmt. & Administration, vol. 8, no. 6, Dec. 1924, pp. 599-604. Investigation of delivery vehicles used by bakers; comparison of cost and efficiency of horse-drawn, gasoline, and electric vehicles in service.

Factory. See MATERIALS HANDLING, Factory.

Great Lakes System. The Transportation System of the Great Lakes, Geo. A. Marr. Mich. Technic, vol. 37, no. 3, Mar. 1924, pp. 5-9, 22 and 32, 5 figs. Types of vessels employed; loading and unloading facilities; freight and passenger traffic.

Highway. Commission Defines Its Authority Over Motor Trucks. Ry. Rev., vol. 75, no. 8, Aug. 23, 1924, pp. 285-286. Report of Interstate Commerce Commission discusses jurisdiction over various classes of highway transportation.

Findings and Deductions from Highway Traffic Surveys, J. G. McKay. Eng. News-Rec., vol. 92, no. 13, Mar. 27, 1924, pp. 526-530, 19 figs. Practical uses of transportation surveys enumerated; Connecticut and California surveys summarized in 19 original graphs; economic fields of truck transportation.

The Connecticut Highway Transportation Survey, J. G. McKay. Good Roads, vol. 66, nos. 5 and 6, May and June 1924, pp. 125-129, and 161-164, 184 and 186, 13 figs. Preliminary report on first three months of survey conducted by U. S. Bur. Pub. Roads and Connecticut State Highway Commission. Reprinted from Public Roads.

Theory and Calculation of Highway Transportation Cost, T. R. Agg. Eng. News-Rec., vol. 92, no. 2, Jan. 10, 1924, pp. 54-58, 2 figs. Economic life of road analyzed; annual cost formula developed; relation between vehicle and road; formula for vehicle costs.

Metropolitan Planning for Future Requirements. Metropolitan Planning for Future Transportation Requirements, J. R. Bibbins. Engrs. & Eng., vol. 41, no. 5, May 1924, pp. 119-135, 22 figs. General survey and growth, trends, and conditions; what some cities have done and have not done; the transportation plan.

Military. Military Transportation, L. B. Moody. Mich. Technic, vol. 37, no. 3, Mar. 1924, pp. 11-15 and 32, 11 figs. Outline of general principles, with special consideration of cross-country motor transport; types of military tractors and trucks.

Paris. Road Transportation in the Paris Region (Les transports en commun de la region

parisienne), Ch. Dantin. Génie Civil, vol. 85, nos. 15 and 16, Oct. 11 and 18, 1924, pp. 310-315 and 344-345, 11 figs. Particulars regarding motor-bus lines operating in this district, rolling stock, electric distribution systems of tramways, operating problems, etc.

Railway. Some Problems of Railroad Transportation, H. W. Thornton. Ry. Age, vol. 77, no. 18, Nov. 1, 1924, pp. 779-782. Reasons for state ownership; difficulties at large terminals; situation in Canada; points out that consolidations may make systems too large; fundamental principles essential to existence of railway as private enterprise. (Abstract.) Address before Inst. Am. Meat Packers and Univ. of Chicago.

The Place of Railway Transportation in the American Industrial Structure. Inst. Transport—Jl., vol. 5, no. 5, Mar. 1924, pp. 230-237. Report of Research Council of Nat. Transportation Inst. setting forth place of railway transportation in economic structure of America.

Railway, Motor-Truck and Bus. Relation of Railroad, Motor Truck and Bus. Ry. Age, vol. 77, no. 24, Dec. 13, 1924, pp. 1067-1070. Recommendations formulated at conference held in Boston, Mass., and sponsored by Nat. Automobile Chamber of Commerce: includes following contributions: Motor Vehicles Should Be Subject to Regulation, A. H. Swayne; The Railroads and Highway Transport, C. L. Bardo; Motorized Passenger Service Is Here to Stay, Jas. M. Swift; The Railroad's Relation to Motor Trucks, G. C. Woodruff.

Rapid Transit. See RAPID TRANSIT.

River. River Transportation, A. F. Crockett. Engrs.' Soc. West. Pa.—Proc., vol. 40, no. 1, Feb. 1924, pp. 1-12 and (discussion) 13-26, 5 figs. Discusses possible future of river transportation, development of waterways and terminals, and designing of barges to carry freight; motive power on rivers.

See also RIVERS, Mississippi, Transportation on.

Road. Road Transport in Relation to the General Transport Problem of the Country, R. J. Howley. Inst. Transport—Jl., vol. 5, no. 5, Mar. 1924, pp. 192-200 and (discussion), 201-207. Historical survey of transport; limits of competition, scope for road transport, the road question, transport legislation, organization of road transport, etc.

See also Highway.

Road, Horse vs. Mechanical Power for. Relative Efficiency of Horse and Mechanical Power for Road Transport, E. Falconer. Inst. Transport—Jl., vol. 5, no. 6, Apr. 1924, pp. 262-275, 9 figs. Scientific and mathematically sound facts which help owner or transport officer to decide whether for any given work motor or horse traction is more economical.

St. Lawrence and Hudson Bay Projects. The St. Lawrence River and Hudson Bay Projects. Eng. Jl., vol. 7, no. 6, June 1924. Discussion on Canada's water-transportation problems, including following contributions: Economic Examination of the Hudson Bay Projects, W. Nelson Smith, pp. 269-278, 1 fig.; The Hudson Bay Railway and Port Nelson, L. C. Nesham, pp. 278-282; The Hudson Bay Railway, J. L. Busfield, pp. 282-289, 4 figs.; The St. Lawrence River Waterway—Discussion, pp. 289-290.

Steam Railway Suburban. Steam Railroad Suburban Transportation in Chicago, F. E. Morrow, R. H. Ford, G. W. Hand, C. H. Mottier and A. W. Newton. West. Soc. Engrs.—Jl., vol. 29, no. 3, Mar. 1924, pp. 127-132 and (discussion) 132-141. Amount of this business, its function in relation to transportation requirements of community, and plans for future development.

Street Car-Bus System. How Saginaw Has Co-ordinated Railway and Bus. Elec. Ry. Jl., vol. 63, no. 14, Apr. 5, 1924, pp. 531-534, 4 figs. Unified system of transportation result of people's referendum; 25 modern buses operate on three routes specified in 15-yr. franchise; control of system in hands of public; railway equipment rebuilt and painted.

Surface-Line. Surface Lines Transportation in Chicago, C. V. Weston. West. Soc. Engrs.—Jl., vol. 29, no. 3, Mar. 1924, pp. 155-165, 4 figs. Suggestions for relief of congestion of roadways in downtown district; seven-eighths of all people using transportation in Chicago ride on surface lines.

TRANSPORTERS

Temperley. See COAL HANDLING, Power Plants.

TRANSVERTERS

Highfield-Calverley. The Highfield-Calverley Transverter. Elec. Rev., vol. 94, no. 2431, June 27, 1924, pp. 1047-1048, 6 figs. Describes apparatus exhibited at British Empire Exhibition by English Elec. Co. Named by combining words "transformer" and "rotary converter" so as to indicate part it plays, primary function for which it was designed being conversion of alternating current into direct current at exceedingly high voltage.

Principle of. The Transverter. Engineering, vol. 117, no. 3044, May 2, 1924, pp. 563-566, 17 figs. partly on supp. plate. Primary function of apparatus is to convert ordinary alternating into direct current at exceedingly high voltage for purposes of transmission, and to reproduce alternating current by converse operation at point where power is to be distributed or used; name is combination of words transformer and rotary converter; principle upon which design is based and its useful field.

2000-Kw. See ELECTRICAL MACHINERY, British Empire Exhibition.

TRENCHING

Machinery for. See CONSTRUCTION WORK, Machinery for.

TRENCHING MACHINES. See GAS MAINS, Trenching Equipment.

TRESTLES

Renewal Under Traffic. Deck on Lucin Cutoff Trestle Renewed Under Traffic. Eng. News-Rec., vol. 92, no. 2, Jan. 10, 1924, pp. 61-62, 4 figs. Rot caused by rainwater necessitates renewal; new deck has watertight cover; timbers "treated" in lake water.

Timber Detour. Baltimore & Ohio Builds Detour Trestle to Aid Bridge Renewal, P. G. Lang, Jr. Ry. Eng. & Maintenance, vol. 20, no. 3, Mar. 1924, pp. 103-104, 3 figs. Construction of temporary timber structure simplifies problem; later dismantled and reclaimed.

TRINITROTOLUENE (T.N.T.). See EXPLOSIVES, T.N.T., Purification of; Specific Heats.

TRIPOLI

Mining and Preparation. Tripoli Mining and Preparation, R. B. Ladoo. Abrasive Industry, vol. 5, no. 3, Mar. 1, 1924, pp. 71-73, 2 figs. Explains difference between tripoli and diatomaceous earth; mining and preparation methods.

TROLLEY BUSES. See BUSES, Trolley.

TRUCKS

Industrial. See INDUSTRIAL TRUCKS.

Motor. See MOTOR TRUCKS.

TRUSTS

Vertical. See INDUSTRIAL ORGANIZATION, Vertical Trusts.

TUBES

Bending Stresses. Bending Stresses in Thin-Walled Tubes, J. Case. Lond., Edinburgh & Dublin Philosophical Mag. & Jl. Sci., vol. 47, no. 277, Jan. 1924, pp. 197-208, 6 figs. Investigation of stresses in thin tubular beam, such as steel factory chimneys, monocoque fuselages of airplanes, hulls of submarine vessels, and the like.

Brass, Annealing of. Annealing of Brass Tubing in the Electric Furnace, R. M. Keeney. Am. Electrochem. Soc.—Advance Paper no. 9, for meeting Oct. 2-4, 1924, pp. 137-147, 3 figs. Methods and equipment at plant of French Mfg. Co., of Waterbury, Conn. Electric brass annealing proved to be more economical than annealing with wood fuel.

Brass, Internal Stress Measurement. A Method for Measuring Internal Stress in Brass Tubes, R. J. Anderson and E. G. Fahlman. Inst. of Metals—Advance Paper no. 1, for meeting Sept. 8-11, 1924, 13 pp., 7 figs. partly on supp. plates. Nature of stress in drawn tubing. Strip method, developed by authors, for measurement of stress in drawn tubes.

Brass, Manufacture of. The Manufacture of Brass and Copper Tubes, G. Evans. Metal Industry (Lond.), vol. 25, nos. 10, 13, 14, 18, 19, 24, and 25, Sept. 5, 26, Oct. 3, 24, Nov. 7, Dec. 12 and 19, 1924, pp. 217-219, 297-299, 321-325, 395-396, 443-446, 565-566, and 589-592, 36 figs. Refinery or foundry for copper-billet casting. Development of piercing machines; present types of machines in use, their operation and adjustment. Suitable heating furnace and plan of typical modern piercing-mill layout. Coremaking for brass tube castings. Casting the shells in brass foundry. Hydraulic benches and chain benches.

Capillary, Calibration of. The Accurate Calibration of Capillary Tubes, K. J. Isaac and I. Masson. Jl. Physical Chem., vol. 28, no. 2, Feb. 1924, pp. 166-169, 1 fig. Describes method of ascertaining bore or volume of capillary glass tubes closed at one end, which enables one to know volume of any length of a 50-cm. capillary of about 1-mm. bore with an accuracy of one part in several thousand.

Charcoal-Iron, Manufacture. Producing Charcoal Iron Tubes, G. H. Woodroffe. Iron Trade Rev., vol. 74, no. 7, Feb. 14, 1924, pp. 482-487, 10 figs. Methods employed by Parkesburg Iron Co., Parkesburg, Pa., in manufacture of charcoal iron tubes.

Copper, Manufacture of. Manufacture of Brass and Copper Sheets and Seamless Drawn Tubes, A. Spittle. Metal Industry (Lond.), vol. 24, nos. 16, 17, and 18, Apr. 18, 25, and May 2, 1924, pp. 375-376, 399-402, and 427-430, 13 figs. In its broad outlines deals with methods common to the trade in general, and in detail with procedure practised at a particular works. From paper before Bradford Eng. Soc.

See also Brass, Manufacture of; CONDENSERS, STEAM, Tubes.

Cutting-Off Machine for. Designs New Cutting Off Machine, E. W. Mikaelson. Iron Trade Rev., vol. 74, no. 2, Jan. 10, 1924, pp. 173-176, 6 figs. Limited floor space is required for new unit which cuts off and reams tubing up to 14-in. diam. at rate of one a minute; automatic feeding mechanism provided.

Drawing. Drawing Small Tubes of Precious Metals, J. Williams. Am. Mach., vol. 61, no. 8, Aug. 21, 1924, pp. 307-308, 3 figs. Tools and methods used in laboratory production.

Secondary Failure. On the Secondary Failure of Thin Tubes of Circular Section Subjected to Terminal Couples, M. S. Ahmed. Lond., Edinburgh & Dublin Philosophical Mag. & Jl. Sci., vol. 47, no. 278, Feb. 1924, pp. 319-323, 3 figs. Investigation to determine under what conditions secondary stresses due to deformation of cross-section into oval shape exceed primary stresses found on ordinary theory of pure bending.

Solid-Wall, Manufacture of. Making Solid Wall Tubes of Strip Steel. Iron Age, vol. 113, no. 19, May 1, 1924, pp. 1293-1294, 2 figs. New method of manufacturing brass, copper and steel tubing by continuous process developed by Bundy Tubing Co., Detroit; material wide enough to give double thickness of wall; tinned before rolling; walls soldered together by heat.

Steel. Making Steel Tubes for Roller Bearings, F. L. Prentiss. Iron Age, vol. 114, no. 23, Dec. 4, 1924, pp. 1463-1469, 8 figs. Electric-furnace plant for alloy steel; from ingot to seamless tube in series of mills; piercing mill used.

Steel, Seamless. Manufacture of Seamless Steel Tubes and Cylinders, A. R. Chaytor. Mech. World, vol. 75, no. 1932, Jan. 11, 1924, pp. 27-29. Historical review; difficulties encountered in early processes; material for manufacture; process and plant employed in manufacture; cold drawing.

Manufacture of Seamless Steel Tubing, W. C. Chancellor. Engrs.' Soc. West. Pa.—Proc., vol. 40, no. 6, July 1924, pp. 217-248, 36 figs. Details of rotary piercing process as distinct from cupping process and hydraulic piercing of solid slugs, and equipment used at Ellwood City Works of Nat. Tube Co.

TUBING

Steel and Duralumin. See AIRCRAFT CONSTRUCTION MATERIALS, Steel and Duralumin Tubing.

TUGS

Diesel-Electric. A Diesel Electric Tug, F. L. DuBosque. Soc. Nav. Architects & Mar. Engrs.—Advance Paper, no. 12, for meeting Nov. 13-14, 1924, 8 pp., 13 figs. on supp. plates. See also Mar. Eng., vol. 29, no. 12, Dec. 1924, pp. 703-709, 15 figs. Comparative tests of Diesel-electric, direct Diesel and steam-driven tugs.

Another Diesel-Electric Tug Demonstrated. Motorship, vol. 9, no. 10, Oct. 1924, pp. 727-730, 8 figs. Particulars of Van Dyke III, of Atlantic Refining Co.; built entirely of steel; two 3-cylinder Ingersoll-Rand 4-cycle oil engines operating on Price-Rathbun Ingersoll-Rand direct-injection system; overall length, 97 ft.; beam, 21 ft.; depth, molded, 11 ft. 6 in.

Railroad Builds Diesel Electric Tug. Mar. Rev., vol. 54, no. 9, Sept. 1924, pp. 354-355, 4 figs. Design and construction of P. R. R. no. 16; length, overall, 105 ft.; beam, molded, 24 ft.; draft, 12 ft.; displacement, 340 tons; motive power is furnished by two Winton type full Diesel engines, 4-cycle, each having six cylinders, 13¼ in. in diameter and 18-in. stroke. See also Motorship, vol. 9, no. 8, Aug. 1924, pp. 576-578, 5 figs.; Mar. Eng. & Shipping Age, vol. 29, no. 9, Sept. 1924, pp. 522-523, 9 figs., and Mar. News, vol. 11, no. 4, Sept. 1924, pp. 116-118, 9 figs.

Diesel Engine vs. Steam. Oil-Engined versus Steam-Driven Tugs. Engineering, vol. 118, no. 3067, Oct. 10, 1924, pp. 517-518, 7 figs. partly on p. 520. Describes two motor tugs, Hurghada and Safaja, constructed for Egyptian Ports & Lighthouses Administration, which are provided with 6-cylinder Vickers-Petter heavy oil engines.

Diesel-Engined. Direct Drive Diesel in Ocean-Going Tug Jumbo. Motorship, vol. 9, no. 4, Apr. 1924, pp. 256-257, 2 figs. Equipped with single Nelseco Diesel engine which develops 600 b.hp. in six cylinders at 200 r.p.m. with stroke and bore dimensions of 16½ by 24 in.; length, 100 ft.; beam, 26 ft.

Reversible Diesel Engine Drives Stern Wheel Towboat. Mar. Eng., vol. 29, no. 4, Apr. 1924, pp. 241-242, 3 figs. Reliable, efficient and economical propulsion secured with reversible two-cycle solid-injection Diesel engines driving split stern wheel through chain sprocket and bevel gears.

Stern-Wheeler Reduces Fuel-Bill to One-Fourth. Motorship, vol. 9, no. 4, Apr. 1924, pp. 263-265, 5 figs. Harvey, a 113-ft. Mississippi River towboat, with pair of Worthington Diesel engines, runs successful trial, showing great savings over steamer.

Towing. See TOWING.

Towing Power. Measuring the Towing Power of Tugs, G. Kempf. Mar. Eng., vol. 29, no. 10, Oct. 1924, pp. 602-604, 2 figs. Pull determined by raising towing hawser definite amount at some point and weighing resulting vertical forces. Translated from Werft Reederei Hafen, May 7, 1924.

TUNGSTEN

Aluminum-Copper Alloy of. See ALUMINUM ALLOYS, Tungsten Alloyed to.

Chinese Deposits. Mining Tungsten Ore at Outposts of Steel, G. F. Creveling. Iron Trade Rev., vol. 74, no. 17, Apr. 24, 1924, pp. 1112-1115, 9 figs. Chinese deposits and industry; mining methods.

Metallic, Preparation of. The Preparation of Metallic Tungsten and Some of Its Alloys, L. Kahlenberg and H. H. Kahlenberg. Am. Electrochem. Soc.—Advance Paper no. 4, for meeting Oct. 2-4, 1924, pp. 51-61. Particulars of research based upon new discovery that tungsten trioxide and tungstic acid are soluble in fused alkali chlorides, and that from such fusions metallic tungsten and also alloys of tungsten may be prepared by electrolysis.

Plating Iron with. See ELECTROPLATING, Tungsten on Iron.

Sodium Tungstate from Wolframite. Continuous Process for Manufacture of Sodium Tungstate and Tungstic Acid from Wolframite, N. T. Gordon and A. F. Spring. Indus. & Eng. Chem., vol. 16, no. 6, June 1924, pp. 555-562, 6 figs. Presents unified view of various operations emphasizing continuous production principle; fusion mixture is prepared from wolframite ore, conveyed automatically to rotary fusion furnace, and fused mass discharged continuously into lixiviating tank; sodium tungstate thus formed is separated from residue by rotary filter and used either for continuous precipitation of tungstic acid or preparation of sodium tungstate crystals.

Specific Heat. See METALS, Specific Heat.

Wire. See WIRE, Tungsten.

TUNGSTEN STEEL

Line of Solubility. See CHROME STEEL, Line of Solubility.

TUNING FORKS

Electrically Maintained. Electrically-Maintained Tuning Forks. Some Factors Affecting Frequency, A. B. Wood. Jl. Sci. Instruments, vol. 1, no. 11, Aug. 1924, pp. 330-339, 6 figs. Outline of various factors affecting frequency of electrically maintained tuning forks; importance of damping; effect of amplitude on frequency and influence of spring contacts; other factors. See also following contribution, entitled, Note on Electrically-Maintained Tuning-Forks, D. W. Dye, pp. 340-341.

TUNNELING

Big Creek, Cal. Tunneling Operations at Big Creek, Calif., E. D. Gardner. Eng. & Min. Jl.-Press, vol. 118, no. 23, Dec. 6, 1924, pp. 885-889, 10 figs. Describes tunneling operations which are being conducted by South. Cal. Edison Co. in developing hydroelectric power in Big Creek project on San Joaquin River in Sierra Nevada Mountains.

Coal-Mine. See COAL MINING, Tunneling.

Colorado Rockies. Country's Longest Tunnel Project Well Under Way. Ry. Rev., vol. 74, no. 4, Jan. 26, 1924, pp. 174-181, 16 figs. Construction details of Moffat tunnel, 6.09 miles long, through Colorado Rockies.

Hollywood-Glendale-San Fernando Valley. Tunnel Digging Is Begun in Los Angeles, C. A. Elliott. Elec. Ry. Jl., vol. 64, no. 10, Sept. 6, 1924, pp. 349-351, 5 figs. Describes proposed Hollywood-Glendale-San Fernando Valley tunnel in Los Angeles; will eliminate 1000 daily car movements from streets in congested district; approximate length 5025 ft.

Methods. Advantageous Practices in Tunneling, C. S. Hurter. Du Pont Explosives Service Bul., no. 10, Apr. 1924, 8 pp., 11 figs. Some practical ways of securing greater progress in tunnel operations and lower costs.

Moffat Tunnel, Colo. Driving the Moffat Tunnel, D. C. Deringer, Jr. Eng. & Min. Jl.-Press, vol. 118, no. 20, Nov. 15, 1924, pp. 765-769, 11 figs. Good organization and equipment expedite work in driving tunnel from Denver, Col., to Salt Lake City, Utah. Description of methods and equipment.

Work on Moffat Tunnel Now in Full Progress. Ry. Age, vol. 77, no. 20, Nov. 15, 1924, pp. 889-894, 11 figs. Completion of headings for nearly one-third of its total length of 6.1 mi.; how east headings are being driven; power equipment for mucking; problems presented by headings at west end.

Pipe Tunnel. Building a Pipe Tunnel Under the Indiana Harbor Canal. Contractors' & Engrs.' Monthly, vol. 7, no. 6, Dec. 1923, pp. 66-68, 2 figs. Describes new type of construction used in recently completed tunnel built for Sinclair Pipe Line Co. at East Chicago, Ind.; avoids earlier crossing difficulties.

Pit River, Cal. Tunneling in Volcanic Formations on Pit River Project. Eng. News-Rec., vol. 93, no. 5, July 31, 1924, pp. 168-171, 8 figs. Particulars of tunneling work in Pit River No. 3 tunnel now under construction by Pacific Gas & Elec. Co. in northern California. Wall plate drifts and top center headings used as rock varies from friable tuff to hard lava; air shovel with ½-cu. yd. bucket is preferred mucking method; bonus system increases progress.

Progress in. Progress in the Art of Tunneling, J. V. Davies. Eng. News-Rec., vol. 92, no. 16, Apr. 17, 1924, pp. 674-679, 14 figs. Review of development in art of tunnel construction during past 50 years.

Shandaken, N. Y. Shandaken—Longest Tunnel in World, F. Byrne. Am. Industries, vol. 24, no. 10, May 1924, pp. 11-13, 4 figs. Notes on boring of latest addition to great water system of New York. Accomplished by some of the speediest driving with explosives on record.

Steam-Shovel. See STEAM SHOVELS, Tunnel Mucking by.

Wet-Rock Tunnel. Driving a Long Small-Section Wet Rock Tunnel. Eng. News-Rec., vol. 93, no. 19, Nov. 6, 1924, pp. 744-747, 7 figs. Use of mucking machine enabled two 8-hour drilling shifts to be worked each day; Diesel-engine power for tunneling operations.

TUNNELS

Arthur's Pass, New Zealand. Arthur's Pass Tunnel in New Zealand Completed, F. W. Furkert. Eng. News-Rec., vol. 92, no. 10, Mar. 6, 1924,

pp. 395-396, 3 figs. Tunnel 5.3 mi. long to connect east and west coasts of South Island; 3½-ft. gage; single track.

Blasting. See BLASTING, Tunnels.

Concrete Lining. Concrete Lining Methods in the Skagit Tunnel. Eng. News-Rec., vol. 93, no. 18, Oct. 30, 1924, pp. 700-701, 4 figs. Air gun built on job places 300 cu. yd. of concrete in 24 hours; traveler for trimming and setting forms.

Drainage. Drainage Tunnels Overcome Great Landslides. Ry. Age, vol. 77, no. 22, Nov. 29, 1924, pp. 975-978, 6 figs. See also Ry. Eng. & Maintenance, vol. 20, no. 12, Dec. 1924, pp. 476-479, 6 figs. Ore.-Wash. R. R. & Navigation Co. solves problem of moving mountain side on Columbia River line, 42 mi. east of Portland, Ore.; in all 8 tunnels have been constructed with aggregate length, including laterals, of 4674 ft.; results of work are quite satisfactory.

Earth Pressures. Earth Pressure on Linings of Galleries and Tunnels (Erdruck auf die Auskleidung in Stollen und Tunneln), H. Dörr. Bautechnik, vol. 2, no. 50, Nov. 21, 1924, pp. 563-567, 5 figs. Mathematical-geometric examination of most important stresses in ground with horizontal surface, assuming that ground above tunnel consists of loose rock without cohesion.

English Channel Project. The Channel Tunnel. Ry. Gaz., vol. 40, no. 12, Mar. 21, 1924, pp. 417-422. Particulars of project for construction of tunnel under Channel to connect England and France, given at meeting of House of Commons Committee; engineering details; proposed tunnel and existing railways; pilot heatings; safety of tunnel against bombs.

Enlargement, London Tube. Tunnel Enlargement on a London Tube Railway. Eng. News-Rec., vol. 93, no. 24, Dec. 11, 1924, p. 953, 1 fig. Annular shield takes slice around bore; lining reused with new segments; wet ground causes caving.

Intake, Mississippi River Levee. Intake Tunnel Through New Orleans Levee in Sheetpile Cofferdam, R. H. Chambers. Eng. News-Rec., vol. 92, no. 14, Apr. 3, 1924, pp. 560-562, 4 figs. Excavation in soft ground under hydrostatic heads up to 33 ft. in short sections within steel sheeting; close bracing required to prevent bulging; sheeting deflected by logs.

Lighting. See LIGHTING, Tunnels.

Lining under Traffic. Relining a Tunnel Without Interrupting Traffic, W. B. Snow. Tech. Eng. News, vol. 4, no. 7, Jan. 1924, pp. 253 and 288, 1 fig. Describes construction of an interior concrete lining in Coulter tunnel, northeast of Pittsburgh.

Submarine Oil-Pipe. Building a Small Submarine Oil Pipe Tunnel. Eng. News-Rec., vol. 92, no. 14, Apr. 3, 1924, pp. 574-576, 5 figs. Siphon pipe lines under canal by tunnel in stiff clay; construction methods; welded pipes rest on precast blocks.

Vehicular. Building the Hudson River Vehicle Tunnel. Eng. News-Rec., vol. 92, no. 19, May 8, 1924, pp. 798-803, 8 figs. Seven shafts formed by sinking steel pneumatic caissons; five 29½-ft. shields drive twin tubes through silt and rock; work free from serious mishap.

Ventilation. Carbon Monoxide Under Traffic in Liberty Tunnels (Pittsburgh), A. C. Fieldner, W. P. Yant and L. L. Satler, Jr. Eng. News-Rec., vol. 93, no. 26, Dec. 25, 1924, pp. 1022-1024, 1 fig. Composition of tunnel air found to agree with that calculated from road test data obtained before construction; marked effect of air current induced by motion of vehicles.

Natural Ventilation in the Liberty Tunnels, A. C. Fieldner and W. P. Yant and L. L. Satler, Jr. Eng. News-Rec., vol. 93, no. 8, Aug. 21, 1924, pp. 290-291, 2 figs. Systematic observations of six months' use of one-mile vehicle tunnels without forced ventilation show normal condition satisfactory. Dangerous carbon monoxide concentration during traffic jam. Pub. by permission U. S. Bur. Mines.

Temperatures and Locomotive Gases in Tunnels, S. H. Katz and E. G. Meiter. Ry. Rev., vol. 75, no. 11, Sept. 13, 1924, pp. 391-396, 6 figs. Bur. of Mines investigates temperatures and composition of atmosphere in engine cabs while passing through tunnels.

Ventilating an 8,000-ft. Tunnel, W. R. Lindsay. Eng. & Min. Jl.-Press, vol. 118, no. 4, July 26, 1924, pp. 139-140, 1 fig. Describes method of ventilating no. 10 level adit of Engels mine of Engels Copper Mining Co.

Ventilation Progress on New York-New Jersey Vehicular Tunnel. Am. Soc. Heat. & Vent. Engrs.—Jl., vol. 30, no. 4, Apr. 1924, pp. 327-334, 4 figs. Describes tests conducted to determine several problems that have developed during work.

TURBINES

Gas. See GAS TURBINES.

Hydraulic. See HYDRAULIC TURBINES.

Mercury. See BOILERS, Mercury-Vapor; STEAM, Binary Cycles Using Mercury and Steam.

Oil. See GAS TURBINES.

Steam. See STEAM TURBINES.

TURBO-ALTERNATORS

Design. Alternating-Current Turbo-Generators (Wechselstrom-Turbogeneratoren), A. Zehrung. Praktische Maschinen-Konstrukteur, vol. 57, no. 25, July 8, 1924, pp. 352-357, 12 figs. Design and construction of S S W type.

Hungarian Practice in High Speed Turbo-Alternator Design, E. Wilczek. Engineering, vol. 118, no. 3058, Aug. 8, 1924, pp. 206-207, 10 figs. Details of methods adopted in high-speed design, by O. T. Blathy, including two and four pole rotors, stator-winding and bracing arrangement, ventilation and efficiency. Abstract of paper read before World Power Conference.

Heat Dissipation in. The Dissipation of Heat in Turbo-Generators, C. Sylvester. Elec. Times, vol. 66, no. 1723, Oct. 23, 1924, pp. 475-476, 5 figs. Describes tests carried out by author on 6000-kw. turbo-generator in large central station, using method of decreasing alternator rotor temperature by passing oil through main turbo-generator bearings at lower temperature than would exist when machine is running under normal conditions.

Iron Losses. Iron Losses Through Simultaneous Magnetization at Two Different Frequencies (Eisenverluste durch gleichzeitige Magnetisierung bei zwei verschiedenen Frequenzen), F. Schröter. Archiv für Elektrotechnik, vol. 13, no. 1, Mar. 31, 1924, pp. 30-34, 7 figs. See also Wissenschaftliche Abhandlungen der Physikalisch-Technischen Reichsanstalt, vol. 7, no. 2, 1924, pp. 210-214, 7 figs. Measurement of iron losses occurring with simultaneous magnetization through two alternating currents of different frequency; it is shown that entire iron loss is many times greater than losses with purely sinusoidal magnetization with basic frequency and uniform maximum induction; herewith an idea is obtained of magnitude of iron losses in generator teeth.

Large. Large Alternators. A. B. Field. Engineering, vol. 118, no. 3068, Oct. 17, 1924, pp. 565-566. Deals with reliability, operating cost, and operating convenience. (Abridgement.) Paper read before World Power Conference.

Large Steam Turbine Generators, W. J. Foster, E. H. Freiburghouse and M. A. Savage. Am. Inst. Elec. Engrs.—Jl., vol. 43, no. 10, Oct. 1924,

pp. 923-931, 13 figs. Discusses manufacture, touching on what is considered best practices of present day; describes 62,500-kva. 60-cycle generator and gives test data; losses and ventilation problems; probable sizes at given speeds which may be expected in future.

Niagara Falls. World's Largest Hydro Unit, M. C. Olson and E. B. Plenge. Elec. Wld., vol. 83, no. 4, Jan. 26, 1924, pp. 174-177, 6 figs. Describes Niagara Falls Power Co.'s new turbo-generator, rated at 65,000 kva.; weight is 1,500,000 lb.; driven by a 70,000-hp. hydraulic turbine under an effective head of 213.5 ft.

Standardization. Standardization of Turbo-Alternators of 50 Periods per Second and 1500 to 3000 R.P.M. with Direct Drive (Normalisation des groupes turboalternateurs à 50 périodes par seconde à 1500 et 3000 tours par minute à commande directe). Revue Générale de l'Electricité, vol. 15, no. 6, Feb. 9, 1924, pp. 226-229. Revised text of code adopted by Comité de l'Union des Syndicats de l'Electricité; definitions and standard specifications; standard rules for operation and testing of generators and their exciters coupled with steam turbines.

Tests. Turbo-Alternator Tests, John Bruce. Elec. Rev., vol. 94, no. 2406, Jan. 4, 1924, pp. 4-6, 7 figs. Résumé of methods of making principal measurements and apparatus used in official and routine testing of turbo-alternator units, in case of large electricity supply undertaking.

Ventilation. An Experimental Study of Ventilation of Turbo Alternators, C. J. Fechheimer. Am. Inst. Elec. Engrs.—Jl., vol. 43, no. 5, May 1924, pp. 416-423, 11 figs.; and (discussion) in vol. 43, no. 12, Dec. 1924, pp. 1202-1206, 3 figs. End bell and pressure measurements; diverging intake to end bells; volume measurement and distribution; systems of ventilation; construction of turbo models; test results. (Abridged.)

The Multiple-Path Radial Ventilation of Large Turbo-Alternators, M. D. Ross. Elec. Jl., vol. 21, no. 12, Dec. 1924, p. 540-545, 10 figs. Description of multiple-radial system and its advantages; limitations of other ventilating schemes.

TURBO-GENERATORS

[See also TURBO-ALTERNATORS.]

Air Coolers for. Practical Results with Air Coolers for Turbo-Generators (Betriebsergebnisse mit Luftkühlern für Turbodynamos), W. Bedur and E. Stach. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 7, Feb. 16, 1924, pp. 155-157, 11 figs. Based on tests, authors point out advantages of closed air-cooling method over open air cooling heretofore used for current generators and closed electric motors; safety measures in case of interruption of fresh-water supply; the GEA air cooler and its advantages; American types.

British Empire Exhibition. Turbo-Generators at Wembley, M. Walker. Electrician, vol. 93, no. 2422, Oct. 17, 1924, pp. 432-435, 10 figs. Increase in size of high-speed units; English Electric features; British Thompson-Houston improvements.

Brush-Ljungström. Heavy Current Turbo-Generators. Electrician, vol. 92, no. 2399, May 9, 1924, pp. 570 and 573, 2 figs. Description of a new Brush-Ljungström machine.

See also CENTRAL STATIONS, St. Pancras, London.

Cooling. The Multiple-Radial System of Cooling Large Turbo-Generators, D. Brass. Am. Inst. Elec. Engrs.—Jl., vol. 43, no. 3, Mar. 1924, pp. 185-193, 7 figs.; and (discussion) in vol. 43, no. 12, Dec. 1924, pp. 1202-1206, 3 figs. Discusses theoretical basis of special turbo-generator ventilation system, in which cooling air divides into several branches, and passes through stator core radially in and out; analysis of fundamental questions in regard to flow of air in any ventilation system; numerical example is worked out to show application of derived formulas.

Economical Loading. Economical Loading of Turbo-Generator Units, M. K. Drewry. Power Plant Eng., vol. 28, no. 17, Sept. 1, 1924, pp. 887-888, 3 figs. Pronounced turbine characteristics definitely determine most efficient operation of several units.

Manufacture. Extreme Variety Versus Standardization, J. H. Van Deventer. Indus. Mgmt. (N. Y.), vol. 67, no. 1, Jan. 1924, pp. 36-46, 11 figs. Turbine-generator production at Gen. Electric Co.'s plant at Schenectady.

Rotors, Shrinking on Shaft. See RINGS, Steel, Shrinking on.

Testing. The Testing of Turbo-Generating and Turbo-Compressing Plant, W. H. Badger. S. African Inst. Elec Engrs.—Trans., vol. 14, part 2, Nov. 1923, pp. 200-237, 20 figs. Measurement of head, rate of flow, and electrical output; turbines on system and precautions necessary when testing; Willans' line; application of nozzle discharge calculations, vacuum temperature; superheat and pressure corrections; aberration of turbines; supersaturation of steam; turbine maintenance; etc.

30,000-Kw. 30,000-K.W. Steam Turbo-Generator at Rothernam. Engineering, vol. 117, nos. 3029 and 3031, Jan. 18 and Feb. 1, 1924, pp. 65-67 and 134-136, 49 figs. partly on supp. plates. Machine is largest yet constructed in England, and one of largest in world to develop its power in single casing; built by Brit. Thomson-Houston Co. and is of their multi-stage impulse type.

1200-Lb.-Pressure. Operation of 1200-Lb. Pressure Generating Unit at the Weymouth Power Station, Edison Electric Illuminating Co., Boston, E. W. Norris. Gen. Elec. Rev., vol. 27, no. 11, Nov. 1924, pp. 714-718, 3 figs. Describes turbine generator which will be first of so high a pressure to be placed in commercial service in United States; its unique thermodynamic features and its operation under both normal and emergency conditions.

12,000-Kw. 12,000-KW. Steam Turbo-Generator at the British Empire Exhibition. Engineering, vol. 117, no. 3049, June 6, 1924, pp. 721-723, 22 figs. partly on supp. plate. Type of machine built for Colenso power station of S. African Railways and Harbors Administration, by C. A. Parsons & Co., Newcastle.

See also ELECTRICAL MACHINERY, British Empire Exhibition.

Westport Station, Baltimore. Turbine Packing, Bleeding Arrangements and Other Features of Westport Station Addition. Power, vol. 60, no. 16, Oct. 14, 1924, pp. 605-608, 3 figs. Describes special type of high-pressure packing gland, use of vertical hairpin tube heaters with special check valves and d.c. ball-bearing electrical auxiliaries, which are features of two newly installed 20,000-kw. turbo-generators ordered from Gen. Elec. Co. to replace four engine-driven 2000-kw. generators.

TURNTABLES. See ENGINEHOUSES, Turntables; RAILWAY TRACK, Turntables.

TYPEWRITERS

Heat Treating of Parts. Typewriter Parts Carefully Heat Treated and Colored. Fuels & Furnaces, vol. 2, no. 5, May 1924, pp. 461-464, 3 figs. Method of treating machined parts, such as type bars, slide rail on which carriage rides, small pins, springs, etc., at Royal Typewriter Co., Hartford, Conn.

U

UMBRASCOPE. See GLASS, Surface Irregularities.

UNEMPLOYMENT

Business Cycles and. Business Cycles and Unemployment, W. E. Hotchkiss. Taylor Soc.—Bul., vol. 9, no. 2, Apr. 1924, pp. 86-89. Study of cycle and of measures taken by various firms to avoid its influence.

Insurance. Industrial Unemployment Insurance, S. B. Ackerman. Mgmt. & Administration, vol. 8, no. 6, Dec. 1924, pp. 647-649. Problems affecting its operation.

Prevention. Prevention of Unemployment with Special Reference to Great Britain. Int. Labour Rev., vol. 10, no. 4, Oct. 1924, pp. 653-664. Study of efforts of statemen, industrialists, and financiers in Britain to cope with evil which has afflicted their country for four years.

Problems. The Unemployment Problem, E. D. Sebring. Taylor Soc.—Bul., vol. 9, no. 4, Aug. 1924, pp. 177-185. Discusses causes, extent, and remedies; unemployment relief schemes and legislation.

Seasonal. The Problem of Seasonal Unemployment in the Building Industry, Wm. S. Parker. Int. Labour Rev., vol. 9, no. 3, Mar. 1924, pp. 361-371. Indicates economic and civic waste involved in leaving building labor idle for several months in year and considers chief causes of seasonal unemployment.

UNLOADING MACHINERY

[See also CRANES, Bridges; ORE HANDLING, Unloaders.]

Modern Types. Modern Construction of Grabs for Unloading (Neuzeitige Bauarten von Verladegreifern), R. Hänchen. Praktische Maschinen-Konstrukteur, vol. 57, no. 31, Aug. 19, 1924, pp. 429-434, 16 figs. Discusses new types of automatic grabs for bulk goods with regard to form, operation, and efficiency.

U. S. BUREAU OF STANDARDS

Division of Simplified Practice. How the Division of Simplified Practice Plans Conferences with Organized Trade Bodies, C. L. Barnum. Taylor Soc.—Bul., vol. 9, no. 5, Oct. 1924, pp. 203-224. Instructions of procedure of Division of Simplified Practice, Bur. of Standards, object of which is to secure reduction in variety of forms, sizes, etc., of products of an industry through voluntary agreement by those in the industry; instructions as printed reproduce so far as possible form of typewritten instructions, and is that part of procedure which has to do with meetings and conferences.

URANIUM

Carnotite. See CARNOTITE, Uranium Determination in.

V

VACUUM

High, Research in. The Vacuum—There's Something in It, W. R. Whitney. Gen. Elec. Rev., vol. 27, no. 7, July 1924, pp. 430-439, 11 figs. Summary of results of research in field of high vacuum. From address before Am. Assn. for Advancement of Sci.

VACUUM CLEANERS

Gas-Operated. See GAS, Vacuum Cleaning Machines, Use for.

VACUUM PUMPS. See PUMPS, Vacuum.

VACUUM TUBES

Amplifiers. On the Voltage Amplification Ratio of the Triode Valve Resistance Amplifier, H. Nukiyama and T. Kuwashima. Denki Gakkwai Zasshi (Jl. Inst. Elec. Engrs. of Japan), no. 424, Nov. 1923, pp. 859-869, 14 figs. Voltage amplification ratio of triode valve resistance amplifier is measured in audio frequency range by means of an a. c. potentiometer. Relation between amplification ratio and resistance in plate circuit and amplitude of impressed alternating voltage at grid is studied experimentally. (In Japanese.)

Automobile-Engine Ignition. See IGNITION, Automobile-Engine.

Canal Rays. Photographic Action of Canal Rays (Ueber die photographische Wirkung der Kanalstrahlen), M. Jakobson. Annalen der Physik, vol. 73, no. 5-6, Feb. 1924, pp. 326-338, 6 figs. Apparatus employed, with diagram showing most important part of final research arrangements; photographic material and its method of action; separation of direct action of canal rays from influence of light sent out by them; character of photographic influence of canal rays.

Cathode Rays, Velocity of. Experimental Determination of the Velocity of Cathode Rays (Détermination expérimentale de la vitesse des rayons cathodiques), F. Dacos. Assn. des Ingénieurs Electriciens Sortis de l'Institut Electrotechnique Montefiore—Bul., vol. 2, no. 3, Mar. 1924, pp. 105-115, 6 figs. Principle and modification of method; calculation of error; verification of method.

Electron Tubes. See ELECTRON TUBES.

Four-Electrode. The Marconi Four-Electrode Tube and Its Circuit, H. de A. Donisthorpe. Inst. of Radio Engrs.—Proc., vol. 12, no. 4, Aug. 1924, pp. 411-421, 9 figs. Divides quadrodes into (1) tubes with two grids in addition to filament and anode, (2) tubes with two anodes in addition to filament and grid, (3) tubes with three anodes in addition to filament, two of electrodes in every case functioning as controlling elements.

Holweck Valve. The Holweck Valve. Wireless World, vol. 13, no. 15, Jan. 9, 1924, pp. 458-461, 5 figs. Construction of this valve, which is a new departure in high-power transmitting triodes; brief description of operation of special apparatus used in conjunction with it.

Manufacture. Making Wireless Valves. Eng. Production, vol. 7, no. 140, May 1924, pp. 130-133, 16 figs. Interesting operations on intricate work at Cossor Co.'s plant in London, Eng.

Overvoltages, Measurement of. Electric Valve Tubes for the Measurement fo Overvoltages (Die elektrische Ventilröhre als Gerät zur Messung von Ueberspannungen), M. Schenkel. Elektrotechnische Zeit., vol. 45, no. 20, May 15, 1924, pp. 490-492, 4 figs. Investigation of adaptability of modern high-vacuum valve tubes with glow cathode and pure electronic discharge for measurement of overvoltages of lines or windings.

Push-Pull Circuit. A High Efficiency Vacuum Tube Oscillating Circuit, D. C. Prince and F. B. Vogdes. Inst. Radio Engrs.—Proc., vol. 12, no. 5,

Oct. 1924, pp. 623-650, 17 figs. Describes modified push-pull circuit in which approximately square waves of current are passed through two tubes alternately; high efficiency is obtained by superimposing upon grid circuit a voltage porportional to current variations in plate circuit.

Regenerative Effect. The Limit of Regeneration, N. C. Little. Inst. Radio Engrs.—Proc., vol. 12, no. 4, Aug. 1924, pp. 479-483. Shows that at limit of regeneration relative magnitude of received signal in plate circuit to that impressed on grid is universely proportional to latter.

Thermionic Currents in. Thermionic Currents in Vacuum Tubes and How to Affect Them Electrically and Magnetically (Ueber die in Vakuumlampen auftretenden Thermionenströme und deren elektrische und magnetische Beeinflussung), P. Selényi. Zeit. für technische Physik, vol. 5, no. 9, 1924, pp. 412-418, 1 fig. Results of experiments.

Thermionic Valves. Marconi-Osram Thermionic Valves. Elec. Rev., vol. 95, no. 2445, Oct. 3, 1924, pp. 498-499, 5 figs. Methods of manufacture. See also description in Elecn., vol. 93, no. 2419, Sept. 26, 1924, pp. 350-351, 5 figs.

Some Applications of the Thermionic Electric Triode to Purposes Other Than Radio Communication, H. A. Thomas. Experimental Wireless, vol. 1, no. 11, Aug. 1924, pp. 636-642, 15 figs. Describes numerous applications of thermionic triode for electrical measurements. Gives results of experiments demonstrating that scope of instrument is not limited to radio communication.

The Principles Underlying the Operation of the Thermionic Valve, S. Barrell. Wireless World, vol. 13, nos. 16 and 17, Jan. 16 and 23, 1924, pp. 491-493 and 528-530, 7 figs. Discusses operating features and phenomena associated with thermionic valve, with view to indicating some of its constants and how they are controlled.

The Utility of Thermionic Valve Characteristics, H. J. B. Chapple. Experimental Wireless, vol. 1, no. 9, June 1924, pp. 503-507, 6 figs. Gives methods for determination of valve characteristics and explanation of various constants and their use.

Thermionic Valves With Dull-Emitting Filaments. Instn. Elec. Engrs.—Jl., vol. 62, no. 332, Aug. 1924, pp. 689-696 and (discussion) 696-700, 6 figs. History of dull-emitting thoriated tungsten filament and development of thermionic valves containing these filaments. Describes and discusses intrinsic properties.

Valve Manufacture, W. J. Jones. Experimental Wireless, vol. 1, no. 9, June 1924, pp. 508-512, 7 figs. Describes British methods employed in manufacture of valves; considers construction of bright-filament valve with tungsten filament as is used in manufacture of incandescent lamps.

Three-Electrode. Alkali Vapor Detector Tubes, Hugh A. Brown and Chas. T. Knipp. Am. Inst. Elec. Engrs.—Jl., vol. 43, no. 1, Jan. 1924, pp. 26-32, 17 figs. Describes unusual and very desirable results obtained on priming tungsten filament three-electrode vacuum tubes with alloy of potassium and sodium when such tubes are used as detectors of radio-frequency currents in receiving circuits.

Ballistic Measurements on Triodes (Misure balistiche sui triodi), B. Del Nunzio. Elettrotecnica, vol. 11, no. 18, June 25, 1924, pp. 413-418, 14 figs. Describes method for measuring coefficient of internal amplification.

Contribution to the Study of Thermionic Valves (Contribution à l'étude des valves thermoioniques), H. Pècheux. Revue Générale de l'Electricité, vol. 16, no. 4, July 26, 1924, pp. 139-142, 3 figs. Compares types of triode lamps used in radio industry, characteristics of filaments and grids; shows superiority of new type of valve with low consumption as detector and amplifier.

Phenomenon of Spatial Charging of Oxide Cathode Lamps (Ueber Raumladungserscheinungen an Oxydkathoden-Lampen), A. Katsch. Zeit. für technische Physik, vol. 5, no. 11, 1924, pp. 505-511, 11 figs. Results of experiments to explain different behavior of triode lamps with normal tungsten cathodes and of those with oxide cathodes.

See also Triode.

Transmitting and Rectifying Valves. High-Tension Rectifying and Transmitting Valves. Engineering, vol. 118, no. 3066, Oct. 3, 1924, pp. 492-494, 8 figs. Deals with latest developments in application of thermionic valve as transmitting valve and high-tension rectifying valve.

Triode. An Analysis of Two Triode Circuits, J. H. Morecroft. Inst. Radio Engrs.—Proc., vol. 12, no. 5, Oct. 1924, pp. 579-603 and (discussion) 604-607, 19 figs. Two typical triode circuits, used for obtaining regeneration by mutual induction, are examined analytically, with idea of testing results of analysis by experiments; measurements made on circuits, by using a.c. bridge, confirm theoretically derived relations to remarkable degree of precision, showing that triode circuits are susceptible of accurate analysis.

Experimental Determination of the Fundamental Dynamic Characteristics of a Triode, E. Takagishi. Inst. Radio Engrs.—Proc., vol. 12, no. 5, Oct. 1924, pp. 609-622, 10 figs. By picking out fundamental component only from distorted current in triode while functioning, writer has found first new forms of dynamic characteristics for a triode, which are utilizable for solving various problems not hitherto satisfactorily solved (for example, modulation in radiotelephony, phenomenon of "ziehen" or "pulling," etc.); experiments relative to voltage amplification factor for which new expression has been found.

The Characteristic Surface of the Triode, J. R. Tolmie. Inst. Radio Engrs.—Proc., vol. 12, no. 2, Apr. 1924, pp. 177-191, 8 figs. Method of representing triode characteristics by means of surfaces rather than by families of characteristic curves; describes physical features of surfaces and derives fundamental equation for alternating component of plate current for ideal surface; action of triode both as simple and as regenerative amplifier, with reference to its characteristic surface, is described.

See also Three-Electrode.

VALUATION

Coal Mines. See COAL MINES, Valuation.

Gas Works. See GAS, Rate Making.

Mines. See MINES, Valuation.

Public Utilities. See PUBLIC UTILITIES, Properties Valuation.

Railway. See RAILWAYS, Valuation.

VALVE GEARS

Lentz. Curve of Normal Path of the Lentz Oscillating Cam Gear (Eine Normal-Wegkurve zur Lentz-Schwingdaumensteuerung), H. Faik. Hanomag-Nachrichten, vol. 11, no. 129-130, July-Aug. 1924, pp. 126-133, 4 figs. Graphic determination of curve of path, effect on acceleration curve, valve dimensions in relation to curve of path, determination of spring power required.

Steam Distribution by Means of Lentz Valve Gear (Stoomverdeeling door middel van Lentzkleppen), F. Muller. Ingenieur, vol. 39, no. 32, Aug. 9, 1924, pp. 595-602, 16 figs. Describes Lentz system of steam valve gear and governor, and their application to compound locomobiles and ship-propulsion machinery.

Locomotive. See LOCOMOTIVES, Valve Gears.

Proell Slide-Valve. Positive Piston Slide-Valve Gear, Proell Patent (Zwangläufige Kolbenventilsteuerung Patent Proell), F. Lehmann. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 24, June 14, 1924, pp. 625-628, 16 figs. Detailed description; results of steam consumption tests with 1000-hp steam engine fitted with new gear.

Transmission Effects. Transmission Effects of a Multiple-Link Valve Gear (Uebersetzungswirkungen eines mehrgliedrigen Getriebes), R. Doerfel. Maschinenbau, vol. 3, no. 8, Jan. 24, 1924, pp. 193-197, 9 figs. Investigation of admission valve gear of uniflow engine and determination of dimensions of valve-gear rods.

VALVES

Automatic-Machinery. Valve Mechanisms in Automatic Machinery, A. A. Dowd. Machy. (N. Y.), vol. 31, no. 2, Oct. 1924, pp. 126-129, 5 figs. Describes devices for handling semi-fluid, heavy-liquid, heavy-pasty, and heavy-sticky materials.

Butterfly. New Type of Butterfly Valves Used on Davis Bridge Hydro-Electric Project. Power, vol. 60, no. 10, Sept. 2, 1924, pp. 358-359, 3 figs. Describes improved type of butterfly valve, known as Dow disk-arm pivot valve, which has been extensively used on New England Power Co.'s Davis Bridge project. Represents an attempt to retain simplicity and moderate cost of usual type of butterfly valve and at same time provide an operating mechanism of such type and rigidness as to increase reliability and reduce leakage.

Gas-Fired-Apparatus Control. A New Thermostatic Gas-Valve for High Temperatures from 500° Fahr. Upwards. Gas. Jl., vol. 166, no. 3185, May 28, 1924, pp. 598-599, 3 figs. Description of a thermostatic gas-valve especially applicable to control of melting pots for printers' metal, including monotype, linotype, and stereotype, die-casters' metals, lead presses, tinning baths, tempering and annealing furnaces, aluminum and brass furnaces, etc.

Materials, Tests of. Tests on Valve Materials Made Under Working Conditions. Automotive Industries, vol. 51, no. 2, July 10, 1924, pp. 110-112, 1 fig. Results of tests of poppet-type valves for airdraft engines, made of different materials, described in paper presented to Am. Soc. for Testing Matls. at Atlantic City by J. B. Johnson and S. A. Christianson.

Pressure-Reducing. Selection of Reducing Valves (Ueber die Auswahl der Reduzierventile), A. Eigenmann. Gesundheits-Ingenieur, vol. 47, no. 38, Sept. 16, 1924, pp. 448-450, 4 figs. Discusses kinds of valves available, and calculation of reducing valves; gives table for graphic determination, and examples.

See also HEATING, STEAM, Pressure Regulators.

Remote Control. See LOCKS, Remote Control of Valves and Gates.

Steel-Casting. See STEEL CASTINGS, Valves.

Superheated-Steam and High-Pressure. Modern Superheated-Steam and High-Pressure Valves (Neuere Heissdampf- und Hochdruckschieber), G. W. Koehler. Zeit. des Vereines deutscher Ingenieure, vol. 68, nos. 5 and 19, Feb. 2 and May 10, 1924, pp. 95-100 and 468, 25 figs. Feb. 2: Deals with valves with simple and with two parallel seats and emphasizes advantage of auxiliary valve, which is automatically set in action by tightening of valve stem; deals also with flap valves, and points out their advantages. May 10: Improved designs.

Zeuner Valve Diagram. See STEAM ENGINES, Admission and Exhaust in.

VANADIUM

Extraction from Vanadiferous Sandstones. Extraction of Vanadium From Vanadiferous Sandstones, H. A. Doerner. Chem. & Met. Eng., vol. 31, no. 11, Sept. 15, 1924, p. 429. Preliminary results of attempts to treat sandstone ores of Garfield County, Colorado. Pub. with permission U. S. Bur. Mines.

Iron Ore. See IRON ORE, Vanadium in.

Mineral. See MINERALS, Sincosite.

Spectrum. See SPECTRA, Vanadium.

Structure of. The Structure of Vanadium, H. Collins. Chem. News, vol. 128, no. 3331, Feb. 15, 1924, pp. 100-102. Facts and experimental results demonstrating that an atom of vanadium has been formed by union of an atom of magnesium with one of aluminum.

Uses. Vanadium and Its Uses. Chem. Trade Jl., vol. 74, no. 1916, Feb. 8, 1924, pp. 158-159. Preparation and properties, principal ores, metallurgy, chemical and metallurgical uses; Peru chief source of supply.

VAPORS

Adsorption by Charcoal. The Adsorption of Vapors by Charcoal, A. S. Coolidge. Am. Chem. Soc.—Jl., vol. 46, no. 3, Mar. 1924, pp. 596-627, 22 figs. Discusses conditions under which reliable adsorption measurements can be made; standard adsorbent is defined, and adsorption of 9 vapors determined over range of temperatures from 0 to 300 deg. and of pressures from 0.0002 mm. to 1000 mm.

Metal. Critical Temperature in the Condensation of Metal Vapors (Ueber die kritische Temperatur bei der Kondensation von Metalldämpfen), J. Chariton and N. Semenoff. Zeit für Physik, vol. 25, no. 4-6, Aug. 4, 1924, pp. 287-291, 4 figs. Works out method for measuring critical temperature in condensation of metal vapors on various surfaces, shows that critical temperature depends on kind of surface and on vapor density.

Pressures. Equations of Tensions of Liquid-Vapor Mixtures of Several Elements and Their Application to Air (Die Spannungsgleichungen von mehrstoffigen Flüssigkeits-Dampfgemischen und ihre Anwendung auf Luft), V. Fischer. Zeit. für technische Physik, vol. 5, no. 10, 1924, pp. 458-468, 3 figs. Determination of composition of liquid and vapor from vapor pressure equations; formulates vapor pressure equations for a mixture of any number of elements.

Graphical Vapor Pressure and Specific Gravity Tables, H. G. Deming. Indus. & Eng. Chem., vol. 16, no. 6, June 1924, pp. 614-615, 3 figs. Tables present information commonly given in 40 or 50 pages of print in very much condensed form, and offer advantage of instant visual interpolation between values given in ordinary tables.

Vapor Pressure Curves for Systems Containing Alcohol, Ether, and Water, E. A. Louder, T. R. Briggs and A. W. Browne. Indus. & Eng. Chem., vol. 16, no. 9, Sept. 1924, pp. 932-935, 4 figs. Apparatus for determining vapor pressure; determination of vapor pressures of certain mixtures; from data obtained pressure-temperature curves have been constructed.

Salt Solutions, Temperature of. Temperature of the Vapor Above Boiling Salt Solutions, K. Schreber. Chem. & Met. Eng., vol. 31, no. 8, Aug. 25, 1924, pp. 297-299, 1 fig. An abstracted translation of article in Chemische Apparatur, 1923, dealing with experiments on temperature of evolved vapors.

Specific Volumes. Vapor Densities of Benzol, Toluene, Phenol, and the Creosols (Spezifische Gewichte von Benzol-, Toluol-, Phenol- und

Kresoldämpfen), Fr. Bürk. Gas- u. Wasserfach, vol. 67, no. 35, Aug. 30, 1924, pp. 523-524. Values of vapor density and corresponding specific volume over wide range of temperatures and pressures are tabulated; they are of sufficient accuracy to be of service in design of chemical plant.

Superheated, Specific Heat of. Specific Heat of Superheated Vapors (Ueber die spezifische Wärme von überhitzten Dämpfen), R. Plank. Zent. für technische Physik, vol. 5, no. 9, 1924, pp. 397-404. Critical examination of empirical equations for specific heat of superheated vapors. Proposes new equation in their place.

Water, Discharge Tension in. Discharge Tension in Water Vapor (Entladungsspannungen in Wasserdampf), I. Strohhäcker. Zeit. für Physik, vol. 27, no. 1, Aug. 28, 1924, pp. 83-88, 4 figs. Describes experimental arrangement in which spark path between ball terminals is shielded from disturbing influences, and by its means spark tension in pure unsaturated water vapor and in very dry air is determined; in order that phenomena may be easily reproducible it is essential that electrode surfaces shall be absolutely free from oil.

Water, Formulas for. New Water-Vapor Formulas (Neue Wasserdampfformeln), M. Seiliger. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 49, Dec. 6, 1924, pp. 1263-1270, 8 figs. In the investigation of polytropic curves it is shown that neither the adiabates of semi-ideal gases nor the adbiabates of superheated water vapor can be represented by polytropes; the Callender polytrope is therefore only an approximate adiabate; for calculation of correct water-vapor adiabates, new equations for specific heat with constant pressure and for heat content are derived, and new formulas of the adiabates, entropy, etc.

Water, Viscosity. An Experimental Study of the Viscous Properties of Water Vapour, C. J. Smith. Roy. Soc.—Proc., vol. 106, no. A735, July 1, 1924, pp. 83-96, 4 figs. Experiments with water vapor at comparatively low pressure and temperatures of 100 to 260 deg. cent. show that viscosity is independent of pressure.

VARNISHES

Automobile. Some Attempts to Obtain More Durable Automobile Finishes, H. C. Mougey. Paint Manufacturers' Assn. of U. S., Sci. Sec., circular no. 207, July 1924, 36-46, 5 figs. Discusses black baking enamel system and color-rubbing and finishing varnish system, cellulose nitrate materials, and tests carried out.

The New Pyroxylin Automobile Finish, S. D. Kirkpatrick. Chem. & Met. Eng., vol. 31, no. 5, Aug. 4, 1924, pp. 178-182, 11 figs. Describes air-drying finish as durable as enamel and of sufficiently low viscosity to be applied with pneumatic spray; a hard, glass-like surface applied at minimum cost of labor, time and equipment.

Cellulose. See AIRCRAFT CONSTRUCTION MATERIALS, Cellulose Varnish.

Gums, Examination of. Microscopic Examination of Varnish Gums (Examen microscopique des gommes à vernis), P. Nicolardot and Ch. Coffignier. Chimie & Industrie, vol. 11, no. 3, Mar. 1924, pp. 456-468, 55 figs. Through microscopic study of gums it was possible to explain difference of hardness between the different groups and to ascertain why certain gums are friable.

Varnishes in the Electrical Industry, R. T. Fleming and A. F. Steel. Wld. Power, vol. 1, nos. 3 and 4, Mar. and Apr. 1924, pp. 149-157 and 234-240, 6 figs. Mar.: Classification of varnishes; raw materials employed in manufacture of insulating varnishes; manufacture of varnishes; processes. Apr.: Finishing and bonding varnishes; tests on insulating varnishes.

See also Synthetic; INSULATING MATERIALS, ELECTRIC, Varnishes and Compounds.

Photomicroscopic Record of Exposures. Photomicroscopic Record of Varnish Exposures, H. A. Gardner. Paint Mfrs.' Assn. of U. S.—Sci. Section, no. 204, June 1924, 11 pp., 17 figs. Presents photomicrographs that illustrate permanent records that may be made from month to month as deterioration proceeds.

Synthetic. Characteristics of Synthetic Varnishes (Caractéristiques des laques synthétiques), R. van Muyden. Revue Industrielle, vol. 54, no. 3184, Nov. 1924, pp. 353-361, 11 figs. General notes on synthetic rubbers; manufacture; properties; applications, particularly in electrical insulation; advantages of electrical material impregnated with synthetic varnish known as "Isolemail," and mechanical advantages of synthetic varnishes.

Tests. Physical Tests on Some Commercial Varnishes, H. A. Gardner and H. C. Parks. Paint Mfr.'s Assn. of U. S., Sci. Sec.—circular no. 210, Aug. 1924, pp. 69-77. Discusses method of examination, color, viscosity, drying time, hot and cold water tests, alkali and gas tests, kauri reduction test and permeability.

Varnish Studies Relationships of Physical Tests and Chemical Composition to Durability, W. T. Pearce. Paint Mfr.'s Assn. of U. S., Sci. Sec.—Special Circular, July 1924, 11 pp. 2 figs. Results of laboratory and exposure tests showing relationship of kauri reduction values to durability; composition to durability; and dauri reduction values to composition, etc.

Tung-Oil. The Alkali Increase Test for Tung Oil Varnishes, H. A. Gardner and C. P. Holdt. Paint Manufacturers' Assn. of U. S., Sci. Sec.—circular no. 206, June 1924, pp. 25-34. Discusses application of alkali increase test to commercial varnishes, and accuracy of these tests.

VENTILATION

Air Cleaning. See AIR, Dustiness Measurement.

Air-Duct Calculations. Cold Air Ventilating Ducts, H. J. Macintire. Southern Engr., vol. 41, no. 3, May 1924, pp. 4749, 3 figs. Determining friction heat due to flow of air in ducts, and methods of designing air-duct systems.

Duct Work in Connection with Ventilation, C. W. Kimball. Architectural Forum, vol. 41, no. 1, July 1924, pp. 33-35. Describes duct system and different materials used.

Air Leakage in Buildings. Air Leakage Through the Openings in Buildings, F. C. Houghten. Am. Soc. Heat. & Vent. Engrs.—Jl., vol. 30, no. 2, Feb. 1924, pp. 121-134, 11 figs. Method employed in investigation of double hung windows, 2 ft. 8 in. by 5 ft. 2 in. by 1⅝ in., in a 13-in. brick wall, plastered on inside with cement plaster; results are given for leakage through such a window without weatherstripping and with two types of weather stripping, around frame and through brick wall itself.

Buildings. Ventilating Buildings on the Economizer Plan, T. N. Thomson. Plumbers Trade Jl., vol. 77, no. 2, July 15, 1924, pp. 140-144, 3 figs. Study of new method of ventilating buildings both winter and summer, using heat economies to cut down cost of ventilation.

Cars, Passenger. See CARS, PASSENGER, Ventilation.

Coal Mines. See COAL MINES, Ventilation.

Code. See HEATING AND VENTILATION, Code.

Cooling Effect on Human Beings. See HEALTH, Physiological Reactions to Air Cooling.

Department Stores. Problems in Ventilation of Department Stores, A. M. Feldman. Am. Soc. Heat. & Vent. Engrs.—Jl., vol. 30, no. 1, Jan. 1924, pp. 24-28, 2 figs. System designed by author for ventilating ground floor of a large department store so as not only to provide an ample supply of fresh air large enough for an unlimited number of customers and sales force, but also to eliminate all danger of drafts.

Electrical Machinery. See ELECTRICAL MACHINERY, Ventilation.

Farm Buildings. Recent Tests of Ventilation Systems in Farm Buildings, M. A. R. Kelley. Agricultural Eng., vol. 5, no. 1, Jan. 1924, pp. 7-8. Tests planned so as to study effect of temperature, humidity and animal heat to make observations of several construction factors.

Foundries. Ventilation of Foundries (L'Aération des Fonderies), A. Chanard. Fondrie Moderne, vol. 18, July 1924, pp. 178-184, 17 figs. Details of Chanard-Etoile skylight ventilator system, its construction and application.

Heating and. See HEATING AND VENTILATION.

Industrial, Effective Temperature Applied to. Effective Temperature Applied to Industrial Ventilation Problems, C. P. Yagloglou and W. E. Miller. Am. Soc. Heating & Vent. Engrs.—Jl., vol. 30, no. 7, July 1924, pp. 515-539, 8 figs. Concise report of investigation of effective temperature with moving air as conducted by Society's Research Laboratory in coöperation with Bur. of Mines. Industrial applications of experimental facts for improving working conditions.

Mines. See also FANS, Mine.

Office Buildings. Summer Ventilation and Cooling of Office Building, P. H. Bryce. Heat. & Vent. Mag., vol. 21, no. 8, Aug. 1924, pp. 56-57. How small refrigerating machine was used to reduce indoor temperature from 80 deg. to 70 deg. fahr. and to maintain relative humidity of 70 per cent.

Ozone, Uses in. See OZONE, Ventilation, Use in.

Schools. See HEATING AND VENTILATION, School Buildings.

Ships. See SHIPS, Ventilation.

Standards of. Modern Trend in the Science of Ventilation, Perry West. Am. Soc. Heating & Vent. Engrs.—Jl., vol. 30, no. 6, June 1924, pp. 421-438, 2 figs. 20 years of evolution in ventilation; theoretical and practical standards of ventilation.

Still-Air Conditions, Temperatures for. Effective Temperatures for Still Air Conditions and Their Application to Mining, F. C. Houghten, C. P. Yaglaglou and R. R. Sayers. U. S. Bur. Mines—Reports of Investigations, no. 2563, Jan. 1924, 10 pp., 8 figs. on supp. plates. Results of experiments made under carefully controlled conditions to determine relative feeling of warmth experienced by men in atmospheres of various degrees of temperature and humidity.

Theaters. See HEATING AND VENTILATION, Theaters.

Theory. Scientific Bases of Ventilation (Die wissenschaftlichen Grundlagen der Lüftungslehre), H. Selter. Gesundheits-Ingenieur, vol. 47, no. 38, Sept. 16, 1924, pp. 428-430. Development of scientific ventilation; results of experiments at two schools showing effect of air conditions on mental capacity, etc.; endorses Flügge's view that ventilating question must be viewed from standpoint of heat accumulation.

Tunnels. See TUNNELS, Ventilation.

Windows. See WINDOWS.

VENTURI METERS

Pulsating Flow. Venturi Meter for Pulsating Flow. Engineering, vol. 137, no. 3027, Jan. 4, 1924, pp. 7-9, 14 figs. Describes new type of instrument known as 1922 Venturi Recorder, which appears to have overcome serious objection to venturi meter when working with pulsating flow.

VIADUCTS

Concrete-Arch. Big Four Cutoff Involves Monumental Bridge. Ry. Age, vol. 77, no. 3, July 19, 1924, pp. 99-103, 8 figs. Cleveland, Cincinnati, Chicago & St. Louis constructing 13.7 miles of grade revision and double track work on its Indianapolis-Cleveland line which embraces a seven-mile relocation involving some very heavy and spectacular construction of which most important feature is a reinforced-concrete arch viaduct at Sidney, Ohio. Details of construction of bridge.

Construction Methods and Plant for Conneaut Viaduct. Eng. News-Rec., vol. 92, no. 25, June 19, 1924, pp. 1046-1049, 5 figs. Seven-span, open-spandrel, arch-rib, 12,000-cu. yd. concrete road bridge at Conneaut, Ohio; length 1317 ft., width, overall, 46 ft. Portable concreting units each consisting of a 7-cu. ft. mixer, and mast hoists used.

Reinforced-Concrete Viaduct of Plougastel on the Elorn Estuary near Brest (Le viaduc en beton armé de Plougastel sur l'estuaire de l'Elorn, près de Brest). Génie Civil, vol. 84, no. 2169, Mar. 8, 1924, pp. 221-222, 4 figs. Project designed by M. Freyssinet has three large arches entirely of reinforced concrete, resting on two piers, with double-level roadway, street-car rails being on lower level.

Conversion of Truss Spans into. Through-Truss Spans Converted to Deck Girder Viaduct. Eng. News-Rec., vol. 92, no. 4, Jan. 24, 1924, pp. 150-152, 3 figs. Without halting traffic Chicago elevated railroad places columns and girders to carry floor of two truss spans over Union Station; four large derricks handle new steel and old trusses.

Double-Decked Street Improvement, Chicago. The Double Decked, South Water Street Improvement in Chicago. Mun. & County Eng., vol. 66, no. 1, Jan. 1924, pp. 4-6. Describes plan for great marginal double-decked distributing viaduct and street along north and west sides of central business district.

Jamaica Bay Boulevard. Building the Concrete Viaduct on Jamaica Bay Boulevard, F. W. Skinner. Contractors' & Engrs.' Monthly, vol. 8, no. 6, June 1924, pp. 47-52, 4 figs. See also Good Roads, vol. 67, no. 2, Aug. 1924, pp. 49-53 and 55, 5 figs. $3,000,000 causeway for heavy automobile traffic has roadway from 36 to 72 ft. wide; discusses causeway, viaduct and bulkhead, concrete cast piles, floor platform, beach channel abutment, causeway construction, pile driving, handling and transporting piles and concreting superstructure.

Piers. See BRIDGE PIERS, Bracing.

Plate-Girder. Construction Features of the Spring Street Viaduct, Atlanta, J. H. Reed. Contractors' & Engrs.' Monthly, vol. 8, no. 5, May 1924, pp. 47-49, 3 figs. Plate-girder structure coated with gunite has eliminated grade crossings and expedited vehicular traffic.

VIBRATIONS

Bridges. See BRIDGES, RAILWAY, Vibrations.

Buildings. Study of Vibrations Produced in Buildings by Passing Vehicles (Etude des vibrations produites dans les édifices par la circulation des véhicules), P. Prache. Société d'Encouragement pour l'Industrie Nationale—Bul., vol. 136, no. 6, June 1924, pp. 548-559, 5 figs. Details of

instruments for measuring vibrations and their application in measuring vibrations by street cars on macadam roads, asphalted roads, etc.

Framed Structures. Elastic Vibrations of Framed Structures, K. Mise. Kyushu Imperial Univ. College of Eng.—Memoirs, vol. 3, no. 1, 1923, 50 pp., 15 figs. partly on supp. plates. Investigates general vibration of a framed structure and derives general formula expressing natural frequency of vibration; extending theory of loaded structure, effect of additional load on frequency of vibration of framed structure is considered.

Machinery. The Vibration Problem in Engineering, C. R. Soderberg. Elec. Jl., vol. 21, nos. 1, 2, 3, 4, 6, 7, and 12, Jan., Feb., Mar., Apr., June, July, and Dec. 1924, pp. 39-43, 53-55, 89-97, 160-165, 295-299, 330-334, and 579-582, 46 figs. Fundamental facts underlying problem of vibration, its general effects and methods usually employed in preventing and curing vibration troubles; review of theory; mechanical balancing. Theoretical considerations and practical arrangement of vibration absorbers. Discussion of most important phases of analytical work which should be applied to every design of high-speed rotating machinery with a view of eliminating vibrations. Influence of stationary parts of electric machines upon critical speeds of rotating members.

Vibration and Noise, R. B. Grey. Electrician, vol. 92, no. 2392, Mar. 21, 1924, pp. 354-355, 4 figs. Their isolation as affecting erection of machinery; methods by which it has been successfully accomplished during last few years.

Vibration and Structural Damage, E. Latham. Engineering, vol. 117, no. 3032, Feb. 8, 1924, pp. 163-164, 4 figs. Describes physical results which may arise as result of vibration transmitted by operation of machinery in industrial plant.

Recorders. See MEASURING INSTRUMENTS, Vibration Recorders.

Recording. A New Process for Recording Small Vibrations (Ueber ein neues Verfahren zur Registrierung kleiner Schwingungen), G. Schmaltz. Maschinenbau, vol. 3, no. 18, June 26, 1924, pp. 639-641, 7 figs. Describes highly sensitive apparatus for recording small vibrations and gives examples of application; can be fixed to any part of machine.

A Vibration Recorder and Some of Its Applications, C. G. Beall and C. I. Hall. Gen. Elec. Rev., vol. 27, no. 5, May 1924, pp. 297-303, 19 figs. Describes device for detecting and recording characteristics of vibrations and tremors. One of the principal uses for this apparatus is found in study of muscle tremors, a knowledge of which is becoming of increasing interest to medical profession.

VIBROGRAMS

See OIL ENGINES, Torsiograms of.

VISCOSIMETERS

Capillary-Tube. Capillary Tube Viscometers, G. Barr. Jl. of Sci. Instruments, vol. 1, nos. 3 and 4, Dec. 1923 and Jan. 1924, pp. 81-86 and 111-116, 2 figs. Principles underlying construction and use of viscometers in which viscosity of a liquid relative to that of some standard is estimated from resistance offered by a tube to flow of liquid through it.

Fischer-Bauer. Measuring Viscosity in Ceramics (Viskositätsmessungen in der Keramik), E. P. Bauer. Berichte der Deutschen Keramischen Gesellschaft, vol. 5, no. 2, Aug. 1924, pp. 27-35, 2 figs. Discusses various methods, and describes Fischer-Bauer apparatus, constructed on drop-ball principle with a counterweight added to decelerate time of drop. Examples of application.

Gallo. A New Type of Viscosimeter (Un nuovo tipo di viscosimetro), G. Gallo and M. Tenani. Giornale di Chimica Industriale ed Applicata, vol. 6, no. 6, June 1924, pp. 280-283, 2 figs. Describes viscosimeter consisting of two parallel metal disks, very close together, rotating on same axis at different speeds, immersed in oil to be tested; develops formulas for calculation.

Gases, for. A Simple Viscometer for Gases, A. O. Rankine. Jl. of Sci. Instruments, vol. 1, no. 4, Jan. 1924, pp. 105-111, 4 figs. Describes instrument of a type which has been used for measuring viscosities of a large number of gases at two different temperatures. Details of mode of preparing apparatus and of its practical use, more particularly in relation to comparison of viscosities.

Klever. Relation Between Time of Flow of Klever Rapid Viscosimeter and the Engler Viscosimeter (Ueber die Beziehung zwischen den Ausflusszeiten des Kleverschen Schnellviscosimeters und des Englerschen Viscosimeters), H. W. Klever, R. Bilfinger and K. Mauch. Zeit. für angewandte Chemie, vol. 37, no. 36, Sept. 4, 1924, pp. 693-695. Experiments show that there is only a rough regularity in Klever apparatus and this cannot be reduced to a law.

Lidstone. Notes on the Lidstone Viscosimeter, Guy Barr. Chem. & Industry, vol. 43, no. 7, Feb. 15, 1924, pp. 29T-30T. Discusses design of mercurial viscosimeter and interpretation of results obtained with it.

Mercurial. A Mercurial Viscosimeter Compensated for Density, F. M. Lidstone. Chem. & Industry, vol. 43, no. 14, Apr. 4, 1924, pp. 87T-88T, 1 fig. Describes apparatus which is modified form of viscosimeter described in previous issues of same journal.

VISCOSITY

Kinetic Theory. Some Notes on the Kinetic Theory of Viscosity, Conduction, and Diffusion, S. Chapman and W. Hainsworth. Lond., Edinburgh, & Dublin Philosophical Mag. & Jl. Sci., vol. 48, no. 284, Sept. 1924, pp. 593-607. Theory of viscosity and thermal conduction in gases possessed of rotatory as well as translatory energy; definition of temperature in non-steady state of a polyatomic gas; formula for coefficient of diffusion appropriate to a polyatomic gas; etc.

Liquids. Determining Viscosity of Highly Viscous Substances (Bestimmung der Zähflüssigkeit hochviscoser Körper), E. Berl, M. Isler and A. Lange. Zeit. für angewandte Chemie, vol. 37, no. 10, Mar. 6, 1924, pp. 128-132. Describes viscosity balance which gives relative values for viscosity and enables determination of viscosity at various temperatures.

See also LIQUIDS, Viscosities.

Magnetic. Magnetic Viscosity (Viscosité magnétique), Cr. Lapp. Journal de Physique et le Radium, vol. 4, no. 10, Oct. 1923, pp. 349-369, 10 figs. See also Industrie Electrique, vol. 33, no. 767, June 10, 1924, pp. 212-215, 4 figs. Discusses time as a factor in magnetization and in aging of magnets. Describes experiments and establishes curves for viscosity.

VISIBILITY

Measurement. Measuring Vertical Visibility (Ueber die Messung der vertikalen Sicht), A. Wigand and K. Genthe. Physikalische Zeit., vol. 25, no. 11, June 1, 1924, pp. 263-270, 5 figs. Discusses measuring of vertical visibility by means of pilot balloon and theodolite, distribution of cloudiness in connection with wind, temperature, moisture and clouds.

Measuring Visibility (Zur Präzisierung der Sichtmessung), A. Wigand and K. Genthe. Physikalische Zeit., vol. 25, no. 9, May 1, 1924,

pp. 212-223. Discusses method of measuring visibility of objects and its application to foggy and steamy atmospheres.

VISION

Speed of. See LIGHT, Time of Visual Impression.

VOCATIONAL TRAINING

Coöperative Vocational Guidance. Coöperative Vocational Guidance, G. L. Swiggett. U. S. Bur. Education—Commercial Education Leaflet, no. 8, Nov. 1924, 12 pp. Consideration of following problems: How can public high school and private vocational school best coöperate in effort to impress parents and children with importance of high-school education before undertaking vocational training; how can private vocational school assist high-school instructor in his vocational guidance work.

France. Vocational Education in the Metallurgical, Engineering, and Electrical Industries in France. Int. Labour Rev., vol. 10, no. 4, Oct. 1924, pp. 685-690. Collective and individual organization.

Germany. Training of Future Labor (Die Ausbildung des Arbeiternachwuchses), P. Setzermann. Technik u. Wirtschaft, vol. 17, no. 7, July 1924, pp. 149-155. Report of session of German Government Committee on Economics of Industry and Labor giving various opinions as to training of coming generation of workmen in various industries.

Guidance Office, Germany. Workers' Education and Vocational Guidance. Monthly Labor Rev., vol. 19, no. 6, Dec. 1924, pp. 171-172. Work of vocational guidance office in Harburg, Germany.

Vocational Guidance and Selection. The Use of Vocational Tests in the Selection of a Vocation, C. S. Myers. Roy. Soc. Arts—Jl., vol. 72, no. 3722, Mar. 21, 1924, pp. 291-298 and (discussion) 298-302. Vocational selection is defined as the process of choosing, by systematic examination of worker's mental and physical condition, those workers best fitted for vacancies in any one occupation. Work being done on the subject; methods of vocational testing.

VOLCANOES

Steam from, Utilization of. See STEAM, Volcanic, Utilization of.

VOLTAGE REGULATION

Effect of. The Live Question of Voltage Regulation, F. F. Ambuhl. Elec. News, vol. 33, no. 13, July 1, 1924, pp. 48-52, 5 figs. Discusses effect of voltage variation, regulation of feeders, selection of regulation, effect of regulators on feeder voltage, and regulation of branch feeders.

Regulators. Generator Automatic Voltage Regulators—Care and Adjustment, J. H. Ashbaugh. Power, vol. 59, no. 8, Feb. 19, 1924, pp. 290-292, 3 figs. Conditions that must prevail for proper voltage regulation; adjustment of field rheostats and regulator for rate of building voltage up or down; putting regulator into service.

The Application of the Saturated-Core Reactor and Regulator, D. K. Blake. Am. Inst. Elec. Engrs.—Jl., vol. 43, no. 7, July 1924, pp. 604-607, 4 figs. States briefly use of voltage regulators and reactors in transmission and distribution systems and mentions operating requirements which might be best met by use of saturated-core type regulators or reactors.

VOLTAGES

High. See HIGH VOLTAGES.

Induced, Hazards of. Hazards of Induced Voltages in Excitation Systems, Ralph Brown. Power, vol. 59, no. 5, Jan. 29, 1924, pp. 164-165, 3 figs. Describes use of field-discharge resistance to limit voltage that may be induced in field winding.

Overvoltages, Protection against. See ELECTRIC TRANSMISSION LINES, Protection.

Peak, Measurement of. A Scheme for Measuring Voltage Peaks, R. D. Mershon. Am. Inst. Elec. Engrs.—Jl., vol. 43, no. 2, Feb. 1924, pp. 156-158, 2 figs Scheme devised by author that requires only standard apparatus that is easily portable and that can be carried to any degree of accuracy desired, without especially skillful handling.

Peak Voltage Measurement by Means of a Neon Glow Lamp, L. E. Ryall. World Power, vol. 1, no. 5, May 1924, pp. 288-291, 6 figs. General theory; experiments and tests; striking voltage at various frequencies and with various wave forms; peak voltmeter for 3000-30,000 volts.

Surges in, Measurement. See ELECTRIC MEASURING INSTRUMENTS, Voltage Surges.

VOLTMETERS

Alternating-Current. A Novel Alternating-Current Voltmeter, L. T. Wilson. Am. Inst. Elec. Engrs.—Jl., vol. 43, no. 5, May 1924, pp. 446-448, 5 figs. Improved thermovoltmeter, which may be used at all frequencies up to and including 1,000,000 cycles; retains usual high sensitivity of thermovoltmeters so that it requires very small current—for full-scale deflection about 2 milliamperes.

Electrostatic. Electrostatic Voltmeter (Elektrostatische Spannungsmesser mit vollkommen abgeschirmtem Luftkondensator), A. Imhof. Schweiz. Elektrotechnischer Verein—Bul., vol. 15, no. 2, Feb. 1924, pp. 62-64, 4 figs. For direct measurements of very high voltages author recommends ordinary static voltmeter of quadrant type connected to specially arranged air condenser; coaxial to vertical metallic rod, which carries high potential, is placed at proper distance a small metallic collar; a second cylindrically formed metal piece surrounds both rod and collar; these two concentric cylinders are fully insulated from each other and from ground; it is claimed that instrument fulfills all theoretical requirements to highest degree.

Electrostatic Voltmeter (Ein statisches Messgerät für sehr hohe Wechselspannungen), K. A. Sterzel. Elektrotechnische Zeit., vol. 45, no. 7, Feb. 14, 1924, pp. 117-119, 7 figs. Simple and directly indicating voltmeter devised by author for direct measurement of a. c. voltages between 40 and 250 kv., which is to high degree independent of frequency, of its particular location in room, and of position of connecting lines; voltmeter is designed for about 2000-volt end deflection.

Kilovolt. Electrostatic Kilovolt Meter for High and Maximum Tensions (Chilovoltmetro elettrostatico di cresta per alte ed altissime tensioni), E. P. Vanoni. Elettrotecnica, vol. 11, no. 31, Nov. 5, 1924, pp. 766-768, 6 figs. Describes apparatus based on an oscillograph, maximum tension being measured by a light organ which under electrostatic repulsion and attraction indicates momentary variations of tension.

Uses in Railway Signal Maintenance. Some Uses of the Volt-Ammeter in D. C. Signal Maintenance, F. B. Weigel. Ry. Signaling, vol. 17, no. 1, Jan. 1924, pp. 14-16. Uses of a combination volt ammeter which has scales as follows: Voltage 0 to 1.5, 0 to 15, and 0 to 150, and ammeter scales 0 to 0.150, 0 to 1.5 and 0 to 15. For testing track circuits, switch circuit controller contacts, relay contacts, motor operating circuits, line relays, indicators, and hold clear coils, detecting and locating grounds on signal circuits, etc.

W

WAGES

Bonus Systems. See BONUS SYSTEMS.

Cost of Living and. Wages and the Cost of Living, Rob. J. Andersen. Indus. Mgmt. (N. Y.), vol. 68, no. 5, Nov. 1924, pp. 260-265. Author states that any industry that either willingly or unwillingly allows its wage scale to be based upon cost of living is proceeding upon an economically unsound principle.

Family-Wage System. "Family-Wage" System in Germany and Certain Other European Countries, Mary T. Waggaman. Monthly Labor Rev., vol. 18, no. 1, Jan. 1924, pp. 20-29. Methods of payment; labor's attitude on family wages.

Great Britain. Changes in Representative Wages in British Industry, H. B. Allin-Smith. Trade Information Circular (Supp. to Commerce Reports), no. 247, June 30, 1924, 25 pp. Details of present levels of full-time wage earnings currently recognized in particular trades.

Group Wage-Payment Plan. The Group Wage-Payment Plan, H. G. Perkins. Soc. Automotive Engrs.—Jl., vol. 15, no. 5, Nov. 1924, pp. 464-466. Fundamental requirements for success of system; outstanding results; reduction of labor cost and after effect; influence of employment situation; executives are kept better informed.

Incentive Systems. Installing Wage Incentive Systems that Work, E. Beck. Factory, vol. 32, no. 6, June 1924, pp. 826-829, 940, 941, 942, and 943, 4 figs. Describes system installed 10 years ago in an Indianapolis pharmaceutical plant which, it is claimed, has raised hourly wage of employees, reduced unit cost in factory, and materially bettered working conditions in laboratories.

See also BONUS SYSTEMS.

Legislation, Australia and New Zealand. The Development of State Wage Regulation in Australia and New Zealand, D. M. Sells. Int. Labour Rev., vol. 10, nos. 4, 5, and 6, Oct., Nov., and Dec., pp. 607-629, 779-799, and 962-1004. Traces growth of concept which inspired origination and alteration of legislation. Oct.: Different types of wage-regulating machinery in various Australian states and New Zealand; summary of Commonwealth and State laws on subject. Nov.: Evolution of this legislation and account of principles underlying wage regulation. Dec.: Economic effects and present status of wage regulation.

"Manit" System. "Manit" System for Measuring and Stimulating Labor Effort, H. Haynes. Mech. Eng., vol. 46, no. 12, Dec. 1924, pp. 896-897, 2 figs. Describes system of wage payment and production incentive based on unit of labor effort known as "Manit" (man-minute) in which worker receives bonus for his production in excess of 60 manits per hr.; system also includes incentives for minimizing spoiled work and bonus for supervisors.

Minimum-Wage Laws. Minimum Wage Legislation in Canada and its Economic Effects, J. W. MacMillan. Int. Labour Rev., vol. 9, no. 4, Apr. 1924, pp. 507-537. Applies almost exclusively to women and girls and is administered by independent boards or commissions; its main effect on wages has been to reduce inequalities previously existing within single industry, while it has not tended to reduce higher wages; it has had marked effect in reducing hours of work and making them more uniform, and no deleterious effect on employment has been noted; relations between employers and workers have been improved.

Premium Systems. A Comparison of Premium Wage Plans, Rob. F. Miller. Mgmt. & Administration, vol. 7, no. 6, June 1924, pp. 699-704, 2 figs. Job costs, amounts of wages and relative advantages under different systems.

Setting Premium Rates, P. J. Rees. Machy. (N. Y.), vol. 31, no. 4, Dec. 1924, pp. 286-288, 5 figs. How premium rates can be determined in plants not engaged in quantity production.

Systems of Payment, A. Rothert. Eng. Production, vol. 7, no. 147, Dec. 1924, pp. 354-356, 6 figs. Emphasizes importance of time saving or increasing rate of production per unit of time, and of overhead charges; examination of Halsey and Rowan premium plans; system with 100 per cent premium introduced by author in 1918 at large work of Russian Gen. Elec. Co.

Rate Setting in Coal Mining. Day Wage Versus Tonnage Rates for Operating Labor Saving Machinery in Coal Mining, Jer. C. White. Coal Mine Mgmt., vol. 3, no. 11, Nov. 1924, pp. 23-27. Points out that day rate is faulty; application of piece-work rates; premium system eliminates unfairness of other systems.

U. S. Industries, 1914-1924. Wages, Hours and Employment in American Manufacturing Industries, July 1914-January 1924. Nat. Indus. Conference Board—Research Report no. 69, 1924, 104 pp., 33 figs. Data showing trends in wages from June 1920 through Jan. 1924, with relation to base figures for prewar month of July 1914. Composite trends in hours and employment for all industries covered are traced and figures showing total employment and average week per wage earner for plants furnishing data in each industry are given in tables for individual industries; report covers 23 major industries.

WALLS

Heat Transmission Through. See HEAT TRANSMISSION, Walls.

WAREHOUSES

Cement-Storage. See CEMENT, Storage Warehouses.

Cincinnati, Ohio. Cold-Storage and Terminal Warehouse at Cincinnati. Eng. News-Rec., vol. 93, no. 4, July 24, 1924, pp. 138-142, 6 figs. Design and layout of seven-story reinforced-concrete structure of Cincinnati Terminal Warehouse Co. Used for general storage, has accommodation for handling of perishable freight and extensive cold-storage facilities for perishable freight, furs and other goods. Flat-slab type; twin columns and girders for isolating cold-storage section; cement floor finish; cork insulation; dry pipe sprinklers; tracks on first floor.

Concrete. See CONCRETE CONSTRUCTION, REINFORCED, Warehouse.

Iron and Steel. Builds Warehouse at Los Angeles, D. Partridge. Iron Trade Rev., vol. 75, no. 16, Oct. 16, 1924, pp. 1011-1015, 10 figs. Details of largest and most modern steel warehouse on Pacific Coast, built by U. S. Steel Products Co.

Washington, D. C. A Modern Ice Making, Cold, Dry and Ice Storage Building, S. T. Smith. Am. Architect & Architectural Rev., vol. 125, no. 2443, Apr. 9, 1924, pp. 341-346, 16 figs. Design of cold and dry storage warehouse of Terminal Refrig. & Warehousing Co., Washington, D. C.

WARSHIPS

British Empire Exhibition. The Navy at the British Empire Exhibition. Engineering, vol. 117, nos. 3047 and 3051, vol. 118, nos. 3058, 3064, and 3065, May 23, June 20, Aug. 8, Sept. 19 and

26, 1924, pp. 675-676, 801-804, 185-189, 420-422, and 458-460, 32 figs. Detailed description of exhibits covering artillery, warships, submarines, airships, submarine mines, etc., and their equipment, including engines, boilers, superheaters, etc.

Cruisers. New Italian Warships. Engineer, vol. 128, no. 3596, Nov. 28, 1924, pp. 605-606, 1 fig. Details of new cruisers Trento and Trieste; length, 640 ft. 9 in.; speed, 35 knots; armament, eight 8-in. guns, twelve 4-in. guns, and 8 torpedo tubes in pairs.

Propelling Machinery of the New Light Cruisers, A. M. Charlton. Mar. Eng. & Shipg. Age, vol. 29, no. 3, Mar. 1924, pp. 177-181, 5 figs. Machinery arrangement details of 10 light cruisers constructed at Todd, Bethlehem and Cramp yards.

U. S. S. Omaha, J. G. B. Gromer. Am. Soc. Naval Engrs.—Jl., vol. 36, no. 2, May 1924, pp. 143-180, 10 figs. partly on supp. plates. See also Mar. Engr. & Motorship Bldr., vol. 47, no. 562, July 1924, pp. 254-258, 4 figs. Describes machinery installation. Each of four propelling units consist of high-pressure and low-pressure turbine, placed side by side and connected to line shafting and propeller by Westinghouse-McAlpine reduction gear placed directly astern of turbines.

Design. Strategical and Tactical Considerations Governing Warship Design, D. Sturdee. Shipbldg. & Shipg. Rec., vol. 23, no. 15, Apr. 10, 1924, pp. 417-419, 2 figs. See also Engineering, vol. 117, no. 3041, Apr. 11, 1924, pp. 475-476. Deals with oil engines; 10,000-ton cruisers; aircraft carriers; destroyers and small craft; strategical considerations. (Abstract.) Paper read before Instn. Nav. Architects.

Diesel-Engined. See DIESEL ENGINES, Warship.

Dismantling. Putting Metals of Fighting Ships to Peacetime Purposes, R. G. Skerrett. Compressed Air Mag., vol. 29, no. 4, Apr. 1924, pp. 823-827, 12 figs. Describes demolishing and dismantling of battlecraft for recovery of scrap metal.

Engineering Performances. Engineering Performances and the Rules for Engineering Competition, U. S. Navy, C. H. J. Keppler. Am. Soc. Naval Engrs.—Jl., vol. 36, no. 2, May 1924, pp. 181-207. Explains why the rules exist, why they contain provisions they do, features of efficient engineering operation each provision intends to bring out, and why they are modified from time to time in order to keep pace with new ideas and latest installations.

Floating Repair Shop. The "Dobbin"—A Repair Shop Afloat. Mech. Eng., vol. 46, no. 4, Apr. 1924, pp. 173-178, 7 figs. Purpose of which is to provide facilities ample for carrying out any work required on instruments or machinery aboard destroyers of U. S. Navy.

U. S. S. Medusa, D. F. Ducey. Am. Soc. Nav. Engrs.—Jl., vol. 36, no. 3, Aug. 1924, pp 377-433, 6 figs. Description of vessel designed and built for fleet repair work.

Foundries on. See FOUNDRIES, Ship.

Salvaging Hulls of. See SCRAP, Warship Hulls, Salvaging.

Scout Cruisers. U. S. S. Milwaukee, J. T. Alexander. Am. Soc. Nav. Engrs.—Jl., vol. 36, no 3, Aug. 1924, pp. 513-521, 2 figs. Description and official trials of one of ten scout cruisers authorized by Act of Congress, Aug. 29, 1916.

U. S. S. Raleigh, H. R. Keller. Am. Soc. Nav. Engrs.—Jl., vol. 36, no. 3, Aug. 1924, pp. 466-493, 5 figs. Description and trials of cruiser.

Scrapping. See SHIP WRECKING.

Submarines. See SUBMARINES.

Torpedo Boats. The French Torpedo-Boat "Enseigne Gabolde." Engineering, vol. 117, nos. 3042 and 3044, Apr. 18 and May 2, 1924, pp. 483-486 and 571-572, 26 figs. partly supp. plates. Details of seagoing boat built by Augustin Normand Co. for French Navy; propelling machinery consists of two independent sets of geared Parsons' turbines, each set being in separate engine room; satisfactory results of trails.

U. S. S. Colorado. The U. S. Battleship Colorado. Engineer, vol. 137, no. 3552, Jan. 25, 1924, pp. 90-92, 6 figs. partly on p. 96. Construction details and characteristics of battleship launched in March, 1921, at Camden, N. J., yard of N. Y. Shipbldg. Co.

WASTE ELIMINATION

Methods. Organizing to Prevent Materials Waste, C. B. Auel. Mgmt. & Administration, vol. 7, nos. 6, 7, and 8, June, July, and Aug. 1924, pp. 669-674, 65-70, and 185-190, 13 figs. Prevention and salvage of waste at Westinghouse plant. Standardization of parts; preparation of standards; purchasing specifications; manufacturing allowances and specifications; stores stocks control; quarterly "clean-up"; storing, boxing, and shipping; use of obsolete copper wire; etc.

WASTE HEAT

Boilers. See BOILERS, Waste-Heat.

Drying With. Waste Heat Driers for Whiteware, T. C. Walker, Jr. Am. Ceramic Soc.—Jl., vol. 7, no. 8, Aug. 1924, pp. 630-633, 1 fig. Fan produces change of air 4 to 6 times per min., drying 10 tons of filter-pressed clay in 24 hr.

Industrial Furnaces, Recovery from. Production and Recovery of Waste Heat from Industrial Furnaces (Entstehung und Gewinnung der Abhitze von Industrieöfen), P. Beck. Gesundheits-Ingenieur, vol. 47, no. 12, Mar. 22, 1924, pp. 90-95. Based on practical experiences important aspects of waste-heat installations are discussed; results of tests on high- and low-pressure waste-heat boilers; suggestions for further developments in design of such boilers.

Recovery. On the Recovery of Waste Heat from Open-Hearth Furnaces by the Use of Waste Heat Boilers, T. B. Mackenzie. West of Scotland Iron & Steel Inst.—Jl., vol. 31, parts 6 & 7, Mar.-Apr. 1923-1924, pp. 90-109. Discusses heat losses in open-hearth furnaces, application of waste-heat boilers, experience in operating, savings from waste-heat boilers; discussion; bibliography.

Waste Heat Recovery Pays Fuel-Oil Bill. Oil Engine Power, vol. 2, no. 11, Nov. 1924, pp. 579-583, 4 figs. At plant of Am. Chocolate Almond Co., which is powered with 65-hp. oil engine, jacket water from engine passes through exhaust heater on its way to feed pump of heating boiler; heat thus reclaimed is equivalent to 20 tons of coal per month.

Utilization. Economic Considerations in the Design of Waste-Heat Plants (Wirtschaftlichkeitsbetrachtungen bei der Bemessung von Abhitzeverwertungsanlagen), A. Konejung. Wärme, vol. 47, no. 30, July 25, 1924, pp. 345-348, 8 figs. Develops formulas and makes calculations for determining most suitable end temperature of heat-exchanging liquids and their velocity.

New Aims of Heat Utilization (Neuere Aufgaben der Wärmetechnik), M. Berner. Brennstoff- und Wärmewirtschaft, vol. 6, nos. 2 and 3, Feb. and Mar., 1924, pp. 21-28 and 41-48, 16 figs. Advantages of high-pressure steam for power generation and of steam accumulators, Ruths system, for equalization of boiler load with varying steam consumption are discussed. Lignite firing, mechanical stoking, pulverization.

The Greenock Corporation Waste Heat Installation, W. Hall. Elec. Rev., vol. 95, no. 2439, Aug. 22, 1924, pp. 282-284, 5 figs. Design and con-

struction of steam plant at Glebe Sugar Refinery, Greenock; boiler house contains four Stirling water-tube boilers, each of capacity of 35,000 lb. per hr. at pressure of 220 lb. per sq. in.; two 750-kw. machines coupled together are driven by one engine; hp. switchboard controls 750-kw. hp. generator and comprises weak-field relay, synchroscope.

The Reciprocal Utilisation of Waste Energy, B. M. Gerbel. Engineering, vol. 118, no. 3054, July 11, 1924, pp. 75-76. Discusses coöperation of different plants for purpose of utmost joint utilization of their fuel, besides combination between works of different power and steam requirements. Abstract of paper read before World Power Conference.

The Utilization of Exhaust Steam (A propos de l'utilisation de la vapeur d'échappement), F. D'Espine. Chaleur & Industrie, vol. 5, no. 46, Feb. 1924, pp. 53-61, 8 figs. Calls attention to fuel economy which can be effected by rational utilization of waste heat, and gives numerical values showing profits which can be realized by installations for this purpose; examples of waste-heat installations.

Using Condenser Cooling Water of Municipal Refuse Incinerator at Barmen for Operation of Two Public Baths (Ausnutzung des Kondensatorkühlwassers der Städtischen Müllverbrennungsanstalt in Barmen für den Betrieb zweier Badeanstalten), K. Rheineck. Wärme, vol. 47, no. 32, Aug. 8, 1924, pp. 371-373, 1 fig. Utilization of waste heat results in saving nearly all coal formerly used for baths.

Using Heat in Waste Gases for Economizers (Die Ausnutzung der Abgaswärme durch Economiser), C. Rühl. Wärme- u. Kälte-Technik, vol. 26, no. 22, Nov. 15, 1924, pp. 203-205, 5 figs. Discusses advantages of economizers, their construction and application.

Using Waste Heat From Annealing Furnaces in Cold-Rolling Mills (Die Verwertung der Abwärme von Topfglühöfen in einem Kaltwalzwerk), H. Frank. Wärme, vol. 47, no. 41, Oct. 10, 1924, pp. 479-483, 14 figs. Describes plant which enables whole works to be heated from annealing furnaces, and gives cost data.

See also CEMENT MILLS, Mexico; CERAMIC PLANTS, Waste-Heat Utilization; COKE OVENS, Waste-Heat and Gas Utilization; HEATING, HOT-AIR, Waste-Heat Utilization; OPEN-HEARTH FURNACES, Waste-Heat Recovery; PAPER MILLS, Waste-Heat Utilization.

WASTE STEAM

Utilization. Bases of Economic Use of Waste Steam and Mixed Steam (Die Grundlagen wirtschaftlicher Verwertung von Abdampf und Zwischendampf), M. Pauer. Wärme, vol. 47, nos. 27 and 28, July 4 and 11, 1924, pp. 313-315 and 328-332, 8 figs. Discusses thermodynamic bases for plants with power and heating requirements, plants with steam power only and throttled life steam for heating and others. July 11: Savings due to heating with waste steam, reconstruction of plants.

Present State of Waste-Steam Technology and Economics in Germany (Gegenwärtiger Stand der Abdampftechnik und Abdampfwirtschaft in Deutschland), H. Treitel. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 35, Aug. 30, 1924, pp. 896-901, 11 figs. Discusses types of machinery and processes for turning to account all heads of heat and avoiding losses by condensation, including back-pressure machines, mixed steam, exhaust steam, etc.

Waste Steam Utilization Plants for Shafts I, II, III, IV and V of the Rombach Iron Works [Die Abdampfverwertungsanlagen auf den Schachtanlagen I, II, III, IV and V der Rombacher Hüttenwerke, Abt. Oberhausen (Rhld)], Fr. W. Netke. Gesundheits-Ingenieur, vol. 47, no. 38, Sept. 16, 1924, pp. 434-439, 12 figs. Use of waste steam for hot water and heating purposes; storage boilers; conveying to distance in cork-insulated overhead pipe lines; etc.

WASTE UTILIZATION

Foundry Wastes. See CUPOLAS, Waste Utilization.

Methods. Making the Most of Waste Materials, R. S. Emmet. Factory, vol. 33, no. 3, Sept. 1924, pp. 340-342 and 386, 7 figs. Scrap handling and disposal methods of salvage and scrap department of Schenectady, N. Y., works of Gen. Elec. Co.

Utilization and Prevention of Waste, C. B. Auel. Soc. Automotive Engrs.—Jl., vol. 15, no. 5, Nov. 1924, pp. 407-411. Duties of salvaging engineer should be studying of plant for purpose of (1) preventing or minimizing waste items, (2) reclaiming as much of unavoidable waste as possible; (3) disposing of waste to best advantage, and (4) applying wastes of other manufacturers to one's own products; describes how problem is handled by Westinghouse Co. See (abstract) in Am. Mach., vol. 61, no. 18, Oct. 30, 1924, pp. 681-684.

WATER

Analysis. Standard Methods of Water Analysis, J. J. Hinman, Jr. Can. Engr., vol. 47, no. 2, July 7, 1924, pp. 131-133. Report of Committee no. 1 presented at annual convention of Am. Water Works Assn., giving results of experiments by various members of committee.

The Bacteriological Examination of Water, C. T. Butterfield, Eng. & Contracting (Water Wks.), vol. 62, no. 6, Dec. 10, 1924, pp. 1283-1285. Discusses what constitutes good laboratory technique.

Boiler Feedwater. See BOILER FEEDWATER.

Dielectric Properties of. The Dielectric Properties of Water for Continuous Waves, G. D. Southworth. Physical Rev., vol. 23, no. 5, May 1924, pp. 631-640, 5 figs. Direct measurement of refractive index of water for continuous waves of length about 2 meters. Describes an oscillating circuit for producing short continuous Hertzian waves of length varying from 1 meter up, in which tube capacity is used as a means of coupling.

Filtration. See WATER FILTRATION.

Flow of. See FLOW OF WATER.

Hardness. Water Analysis (Beiträge zur Wasseranalyse), J. Zink and F. Hollandt. Zeit. für angewandte Chemie, vol. 37, no. 35, Aug. 28, 1924, pp. 672-675. Discusses determination of hardness by Blacher method, changes in water on standing, determination of magnesium chloride.

Heat Transmission to Pipes. See HEAT TRANSMISSION, Water Flowing Inside Pipes.

Heaters. See WATER HEATERS.

Measurement of. Bulk Measurement of Water. Power Engr., vol. 19, no. 221, Aug. 1924, pp. 302-303, 6 figs. Gives notes on modern weir records and electric level records.

See also FLOW OF WATER; WATER METERS.

Purification. See WATER TREATMENT, Purification.

Softening. See WATER TREATMENT, Softening.

Thermodynamic Surface. The Characteristic Surface (Thermodynamic Model) for Water (Die thermodynamische Fläche des Wassers), A. Brandt. Annalen der Physik, vol. 73, no. 5-6, Feb. 1924, pp. 409-411, 3 figs. Points out that thermodynamic surface for water has much more

complicated appearance than that of normal substances; it is shown perspectively in figure; diagram shows that water at atmospheric pressure has its greatest density at 4 deg. cent., but at higher pressures greatest density corresponds to lower temperature than this; at pressures above 2200 atmos., ordinary ice assumes allotropic form which is denser than water at same pressure and temperature.

Viscosity in Passage through Sand. Tests on the Viscosity of Water in Very Narrow Passage Sections (Versuche über die Viskosität des Wassers in sehr engen Durchgangsquerschnitten), K. v. Terzaghi. Zeit. für angewandte Mathematik u. Mechanik, vol. 4, no. 2, Apr. 1924, pp. 107-113, 2 figs. Equations are given for expressing relation between pore volume and coefficient of permeability of granular material; for sand, equation agrees well with observed results, whereas with clays, differences are evident, which leads to conclusions on increase of viscosity of water in very narrow capillary tubes.

WATER ELEVATORS

Boulton. A Deep Well Water Elevator. Engineer, vol. 138, no. 3592, Oct. 31, 1924, p. 506, 2 figs. New Boulton water elevator, with which water is raised from depth of over 400 ft., recently put down at Citadel Barracks, Dover.

WATER FILTRATION

Filters. See FILTERS; FILTERS, SAND.

Flocculation. Study of Flocculation Phenomenon with Microscope, J. R. Baylis. Eng. News-Rec., vol. 92, no. 18, May 1, 1924, pp. 768-769, 4 figs. Excess coagulation, toughness of floc, and results of rapid mixing explained largely on physical basis.

Moving Sand Filters. The Problem of Filtering Water and Its Modern Solution by Means of Moving Sand Filters (Il problema della filtrazione dell'acqua e la sua moderna soluzione con il filtro a sabbia mobile), C. Pétot. Ingegneria, vol. 3, no. 8, Aug. 1, 1924, pp. 279-283, 9 figs. Discusses filtering methods by freezing, boiling, chemical treatment, microbicide action, ultraviolet rays, and sand; describes moving sand pressure filter as installed at Turin.

Plants. Mechanical Filtration Plant at Putnam, Connecticut, F. O. Stevens. New England Water Works Assn.—Jl., vol. 38, no. 2, June 1924, pp. 103-110, 4 figs. partly on supp. plates. Details of modernized plant capable of furnishing 3,000,000 gal. at cost of $41,000, making use of old structure in new design and substituting mechanical for slow sand plant.

Mechanical Filtration Plant, Lauzon, Que., H. G. Hunter. Can. Engr., vol. 46, no. 9, Feb. 26, 1924, pp. 279-280, 3 figs. Description of plant having capacity of 1,000,000 gal. per day; comprises low- and high-lift De Laval pumps, coagulating and clear water basins, and mechanical gravity filters; supply from St. Lawrence River.

New Filtration Plant for Border Cities, W. Storrie. Can. Engr., vol. 46, no. 12, Mar. 11, 1924, pp. 315-316, 1 fig. Layout of water purification plant now under construction at Ford, Ont., which will serve seven municipalities and will have a capacity of 20,000,000 gal. per day, and notes on reinforced-concrete reservoir.

Sacramento's Filtration Plant. Pub. Wks., vol. 55, no. 2, Feb. 1924, pp. 51-54, 3 figs. See also Eng. World, vol. 24, no. 2, Feb. 1924, pp. 69-73, 5 figs., and Southern Engr., vol. 41, no. 1, Mar. 1924, pp. 35-38, 6 figs. Capacity of 48,000,000 gal. a day; manufactures its own alum and chlorine; pumping plant all operated by electricity and is in duplicate, including two companies furnishing current.

The New $3,000,000 Filtration Plant of Sacramento, Cal., A. Givan. Eng. & Contracting (Water Works), vol. 61, no. 1, Jan. 9, 1924, pp. 89-91. Describes water supply portion of filtration plant which comprises an intake pier located in Sacramento River ¼ mile below confluence of Sacramento and American rivers, and two siphon intake conduits from intake pier leading easterly to pumping station about 1000 ft. distant.

What Accurate Control of an Old Filter Has Accomplished, E. G. McConnell. Fire & Water Eng., vol. 75, no. 13, Mar. 26, 1924, pp. 587-588 and 614-616, 6 figs. Methods adopted to obtain accurate control of dosage and flow of solutions to old filter plant in Charlotte, N. C., which was soon to be superseded by an entirely new unit. Excerpts from paper read before annual convention of North Carolina Sec., Am. Water Wks. Assn.

See also FILTRATION PLANTS.

Standard of Clarity. Sensitive Detection of Suspended Matter and a Proposed Standard of Clarity in Filtered Water, J. R. Baylis. Am. Water Works Assn.—Jl., vol. 11, no. 4, July 1924, pp. 824-832, 2 figs. Discusses determination of turbidity of filtered water, new turbidimeter, determining suspended matter in filtered water and proposed standards.

Swimming Pools. See SWIMMING POOLS, Water Filtration.

WATER GAS

Backrun Process. Backrun Method of Water Gas Set Operation, F. W. Steere. Gas Age-Rec., vol. 53, no. 25, June 21, 1924, pp. 861-865, 5 figs. Text of paper read before Wisc. Gas Assn. on advantage of installing backrun gas apparatus.

Backrun Process Tests and Results at Moline, Ill., H. A. Kleinman. Gas Age-Rec., vol. 53, no. 18, May 3, 1924, pp. 597-600 and 602, 1 fig. Operating results obtained with backrun process, both with 100 per cent coke as generator fuel and with coke and coal mixtures of about 50 per cent each, as compared with results obtained by standard operation when using similar generator fuels.

Bituminous Coal as Generator Fuel. Bituminous Coal in Large Water-Gas Generators, W. J. Murdock. Gas Age-Rec., vol. 53, no. 17, Apr. 26, 1924, pp. 555-561, 4 figs. Experience of Coal Products Mfg. Co., at Joliet, Ill., with 11-ft. generators.

Central District Bituminous Coals as Water-Gas Generator Fuel, W. E. Odell and W. A. Dunkley. U. S. Bur. Mines Bul. 203, 1924, 92 pp., 11 figs. Results of investigation made which consisted of study of practice already developed and difficulties encountered, development of operating methods that would obviate these difficulties, testing various coals of Central District to determine which might be considered for this purpose, and study of technical conditions involved in manufacture of water gas from bituminous coals.

Eastern Bituminous Gas Coal as Water Gas Fuel, Geo. H. Smith. Gas Age-Rec., vol. 54, no. 1, July 5, 1924, pp. 3-6 and 14, 3 figs. Gives results of test in operating plant.

Blue. Blue Water Gas Offers Industrial Fuel Economies, D. J. Demorest. Chem. & Met. Eng., vol. 31, no. 23, Dec. 8, 1924, pp. 887-890, 5 figs. Discusses economy and its applications particularly for small furnaces operating at high temperatures and processes like welding, where high temperatures must be obtained without regeneration.

CO Removal. See GAS MANUFACTURE, CO Removal.

Detarring by Electrical Precipitation. Detarring Gases by Electrical Precipitation, N. H. Gellert. Am. Gas Jl., vol. 121, no. 22, Nov. 1, 1924, pp. 1129-1130 and 1134. Principle of process and its application to water-gas purification.

Gas Coal as Generator Fuel. Superheating Steam and Blast in Water Gas Sets, W. H. Gartley. Gas Age-Rec., vol. 53, no. 16, Apr. 19, 1924, pp. 521-522 and 528, 1 fig. Discussion of gas coal as generator fuel with use of steam and air superheated in a separate vessel.

Lignite as Generator Fuel. The Use of Earthy Crude Lignite for Gas Making, K. Bunte. Am. Gas Jl., vol. 121, no. 21, Oct. 25, 1924, pp. 1107-1108 and 1120-1123, 2 figs. Describes a number of practical experiments which were conducted on a large scale in Frankfort gas works in Germany with this very low grade fuel. Translated from Gas u. Wasserfach.

Manufacture. Superheated Steam and Air Blast in Water Gas Manufacture. Am. Gas. Jl., vol. 121, no. 6, Aug. 9, 1924, pp. 736-738. Description of results obtained. Abstract of paper read before Annual Convention of Ill. Gas Assn.

Water Gas and Hydrogen (Wassergas und Wasserstoff). Zeit. für Sauerstoff- u. Stickstoff-Industrie, vol. 16, nos. 7 and 9, July and Sept. 1924, pp. 49-53 and 65-70, 6 figs. Discusses production of water gas, its composition, properties and uses, and describes Dellwik-Fleischer water gas plant. Describes Bamag-Meguin hydrogen plant. Storage and conveying of hydrogen under pressure.

Plant Operation. Rochester's Water Gas Plant Has a Checkerless Carburetter, W. N. Whitney. Gas Age-Rec., vol. 54, no. 3, July 19, 1924, pp. 75-79, 13 figs. Details of construction and equipment features of new water gas plant of Rochester Gas & Elec. Corpn.

Plant Tests. A Critical Study of the Published Results of Tests of Water Gas Plant, M. W. Travers. Gas Jl., vol. 168, nos. 3210 and 3211, Nov. 19 and 26, 1924, pp. 510-513 and 580-582, 1 fig. See also Gas World, vol. 81, no. 2103, Nov. 8, 1924, pp. 472-474 and Chem. & Industry, vol. 43, no. 51, Dec. 19, 1924, pp. 355T-361T, 1 fig. Relationship between three sub-processes into which water-gas process may be analyzed, usually referred to as blow, run, and clinkering processes; balance sheets of tests; test methods.

WATER HAMMER

Calculation. Calculating Water Hammer (Die Berechnung des Wasserschlages), Bundschu. Bauingenieur, vol. 5, no. 21, Nov. 10, 1924, pp. 697-702, 7 figs. A summary of Allievi's theory and treatment of the question, for pipe lines completely shut off, for those partly shut off, and calculation of pressure drop on opening lines.

Moderating Effects of. Water Hammer (Il colpo d'ariete), G. B. Ugolini. Annali dei Lavori Pubblici, vol. 62, nos. 1 and 2, Jan. and Feb. 1924, pp. 7-57 and 101-130, 51 figs. partly on supp. plates. Extended study describing methods for lessening its harmful effects in pipe lines and means for utilizing it in form of sonic waves for power transmission.

WATER HEATERS

Gas. Automatic Gas Water Heater Discussed from All Angles, O. L. Maddux. Gas Age-Rec., vol. 53, no. 9, Mar. 1, 1924, pp. 245-250, 3 figs. Types of automatic heaters, construction details, amount of gas it should burn monthly, and automatic storage systems.

Instantaneous. Instantaneous Electric Water Heaters (Elektrische Durchlauferhitzer), F. Berger. Siemens-Zeit., vol. 4, no. 2, Feb. 1924, pp. 38-40, 7 figs. Describes and recommends small instantaneous water heaters requiring only 1 kw. of energy; three main types have been developed, namely, immersion unit heater, transformer type, and electrode type.

WATER-LEVEL INDICATORS

Types. Water Level Indicators (Über Wasserstandsfernmelder), H. Goetsch. Zeit. für Fernmeldetechnik Werk- u. Gerätebau, vol. 5, no. 3, Mar. 17, 1924, pp. 17-19, 14 figs. Discusses indicators both full and empty for water levels of water towers, reservoirs, etc.; continuous level recorders; automatic pump connection and disconnection; addition of telephone to indicator lines.

WATER MAINS

Cleaning. Cleaning Apparatus for Water Mains at the British Empire Exhibition. Engineering, vol. 117, no. 3044, May 2, 1924, p. 587, 7 figs. Describes types exhibited at Brit. Empire Exhibition.

Water Main Cleaning at New Albany, Indiana, J. O. Endris. Mun. & County Eng., vol. 66, no. 6, June 1924, pp. 271-274. Method of cleaning 12-in. and 16-in mains; results from cleaning and incidental advantages.

Damages from Stray Current. An Example of Damages of Water Mains through Stray Currents and Their Measurement (Ein Beispiel über die Zerstörung von Wasserleitungsröhren durch vagabundierende Ströme und deren Messung), A. Rauche. Elektrischer Betrieb, vol. 22, no. 8, Apr. 24, 1924, pp. 61-62, 4 figs. Results of voltage measurements, current-density and voltage-loss measurements to investigate clause of damages and to determine means of prevention.

Extensions, Financing of. Financing Municipal Water Supply Extensions, C. M. Saville. Am. Water Wks. Assn.—Jl., vol. 11, no. 1, Jan. 1924, pp. 38-64 and (discussion) 64-71, 1 fig. Practical method of financing municipal water main extensions. Discusses several methods in use, commenting upon their advantages and drawbacks, giving particular attention to "guarantee" and "assessment" methods; citations from public utility commissions and some legal opinions. Principles of assessment method as employed at Hartford, Conn., and results of its workings.

Laying. How to Determine the True Cost of Main Laying, E. E. Bankson. Fire & Water Eng., vol. 75, no. 20, May 14, 1924, pp. 991-992 and 1014, 3 figs. Analytical article comparing costs of distribution system work at various periods and elements which control them.

Laying Water Main Across Grand River (Ont.), J. Taylor. Can. Engr., vol. 46, no. 2, Jan. 8, 1924, pp. 121-123, 4 figs. Shore sections laid in open cofferdams and box cofferdams employed for center section; lead joints made in dry and crane used for laying pipe; piles not used owing to rock bottom.

See also PIPE LAYING, Water Mains.

Submarine Laying. Submarine Pipe Laying for the Narrows Siphon, New York. Eng. & Contracting (Water Works), vol. 62, no. 4, Oct. 8, 1924, pp. 779-782, 1 fig. Method of placing about 8800 ft. of 42-in. flexible joint cast-iron main across Narrows of New York harbor at a depth of about 56 ft. below mean sea level.

Types. Large Supply Mains, D. H. Maury. Am. Water Wks Assn.—Jl., vol. 12, no. 1, Sept. 1924, pp. 1-41 and (discussion) 41-60, 19 figs. See also Eng. News-Rec., vol. 92, no. 25, June 19, 1924, pp. 1052-1054, 1 fig. Principal types of pipe available for large supply mains, including cast iron, steel, concrete and wood-stave pipe, and process of manufacture; approximate estimates of first costs for various diameters and pressures.

WATER METERS

Attachment for Fixed Liquid Quantities. Meter Attachment for Delivering Fixed Quantities of Liquids. Engineering, vol. 117, no. 3049, June

6, 1924, p. 749, 2 figs. Fitting exhibited at British Empire Exhibition enables water meter automatically to supply given quantity of liquids and then to cut off flow.

Open-End Flume. Open-End Flume Water Meter Based on Exponential Equation, J. W. Ledoux. Eng. News-Rec., vol. 93, no. 13, Sept. 25, 1924, pp. 505-506, 4 figs. Universally applicable within practical limits. Equipped with indicating, recording, and totalizing meter.

Rates and Consumption, Effect on. How Meters Affect Rates and Consumption, E. I. Roberts. Fire & Water Eng., vol. 75, no. 2, Jan. 9, 1924, pp. 61-62 and 69-70, 5 figs. Study of rates and meter installation of cities and towns of Ohio; comparison between metered and unmetered municipalities.

Types. Water Measuring Devices, R. L. Daugherty. Am. Water Works Assn.—Jl., vol. 11, no. 4, July 1924, pp. 808-818. Discusses direct and indirect types; weirs, current motors, pitot tubes, venturi meters, their accuracy, etc.

Volumetric. Volumetric Water Meters (Ueber Volumen-Wassermesser), Bamberger. Gas- u. Wasserfach, vol. 67, no. 45, Nov. 8, 1924, pp. 674-678. Discusses German and American waterworks practice; use of volumetric meters for determining exactly quantity at works and supplied to consumers.

WATER PIPES

Action of Water on. The Action of Water on Service Pipes, W. Donaldson. Am. Water Wks. Assn.—Jl., vol. 11, no. 3, May 1924, pp. 649-662. Problem of delivery of water from street mains to faucets of consumers without impairment of quality of water or without deterioration of service pipe itself. Extent of use of various kinds of service pipe; life of service pipe. References.

Cast-Iron. Iron Deposit in Cast-Iron Pipes, J. R. Fox. Surveyor & Mun. & County Engr., vol. 66, nos. 1716, 1717, and 1718, Dec. 5, 12, and 19, 1924, pp. 465-466 and (discussion) 491-492 and 509-510. Deals with incrustation in pipes carrying certain of the soft waters from Pennine range, England. Discusses how pipes are affected, rate of incrustation, scraping process, prevention of incrustation, use of concrete-lined pipes. From paper read before Instn. Water Engrs.

Cleaning. An Effective Method of Cleaning Clogged Service Pipes, T. L. Amiss. Fire & Water Eng., vol. 75, no. 20, May 14, 1924, pp. 993-994, 2 figs. Description of process using oxygen gas, and explanation of equipment required.

The Cleaning of Cast Iron Water Pipe Lines, C. Haydock. Am. Water Wks. Assn.—Jl., vol. 11, no. 3, May 1924, pp. 533-541. Discusses losses due to corrosion and tuberculation, and results obtained by cleaning such lines.

Two Railroads Find Water Pipe Cleaning Profitable. Ry. Eng. & Maintenance, vol. 20, no. 2, Feb. 1924, pp. 64-66, 8 figs. Describes work done by Northern Pacific and Chicago, Rock Island & Pacific railways in removing from water-supply lines incrusted material which had accumulated to such a depth as seriously to impair or destroy their serviceability.

Corrosion. Film Protection as a Factor in Corrosion, F. N. Speller. Am. Electrochem. Soc.—Advance paper no. 22, for meeting Oct. 2-4, 1924, pp. 313-325, 3 figs. Factors influencing corrosion; natural protective coatings; factors influencing character and deposition of protective films; artificial protective coatings formed in water; limitation of scale protection on water pipe.

Reinforced-Concrete. Reinforced Concrete Pipe for Water Supply Lines Under Pressure, F. F. Longley. New Eng. Water Wks. Assn.—Jl., vol. 38, no. 3, Sept. 1924, pp. 257-286, 12 figs. See also Eng. & Contracting (Water Wks.), vol. 62, no. 5, Nov. 12, 1924, pp. 1071-1076, 9 figs. Methods of constructing lock joint pipe for pressure water supply. Discusses hydraulic qualities, water-tightness, durability, cost, and justification for its use.

Thawing of Frozen. Thawing Frozen Water Pipes with Electric Current, D. D. Ewing and C. F. Bowman. Eng. & Contracting (Water Wks.), vol. 62, no. 6, Dec. 10, 1924, pp. 1271-1276, 5 figs. Summary of present practices. From bulletin of Eng. Extension Service of Purdue Univ.

Types. Types of Pipe for Water Main Construction, S. B. Morris. Am. Water Wks. Assn.—Jl., vol. 11, no. 3, May 1924, pp. 564-571. Discusses the various types of pipe being manufactured for water works distribution purposes.

WATER POLLUTION

Oil. Pollution by Oil of the Coast Waters of the United States, F. W. Lane, C. P. Bowie and J. S. Desmond. World Ports, vol. 13, no. 2, Dec. 1924, pp. 33-53. Pollution by oil of Atlantic and Gulf coasts; pollution form oil-burning ships and from cargo vessels; methods and devices of disposing of oil wastes from vessels; handling by barge methods; oil-water separators on ship; fire hazard. Pollution by oil of Pacific coast; operation of tank ships; pollution by oil fields, city sewage, etc.

The Control of Oil Pollution in Rhode Island, S. DeM. Gage. Boston Soc. Civil Engrs.—Jl., vol. 11, no. 6, June 1924, pp. 237-279, 7 figs. Discusses causes and effects of pollution by oil and describes methods of successful control in Rhode Island.

WATER POWER

Applications. Applications of Hydro-Electric Power, T. J. Mirchandani. World Power, vol. 2, no. 11, Nov. 1924, pp. 289-292, and vol. 3, no. 13, Jan. 1925, pp. 36-39. Nov. 1924. Comparison between hydroelectric and steam-electric powers; application of hydroelectric power to railway electrification. Jan. 1925: Electrochemical industries.

Canada. Utilization of Water Power in Canada. Can. Engr., vol. 46, no. 24, June 10, 1924, pp. 601-604, 1 fig. Review of water-power development in relation to coal production, importation, and consumption in Canada. Water-power development has relieved situation, particularly in acute fuel area by saving in coal consumption. See also Eng. Wld., vol. 24, no. 5, May 1924, pp. 287-289.

Water Power Development in Canada, J. B. Challies. Can. Engr., vol. 47, no. 8, Aug. 19, 1924, pp. 257-263, 3 figs. Also Engineering, vol. 118, no. 3061, Aug. 29, 1924, pp. 301-302. Outline of extent, utilization, and administration of water powers in Canada. Abstract of paper read before British Assn. for Advancement of Science.

Water Powers of Canada, J. B. Challies. Eng. Jl., vol. 7, no. 7, July 1924, pp. 323-358, 44 figs. partly on supp. plate. Their nature, extent and administration, a national review.

Cost of. The Cost of Hydro-Electric Power, C. V. Christie. Eng. Jl., vol. 7, no. 4, Apr. 1924, pp. 177-180 and (discussion) 180-183, 1 fig. Effect of power factor, load factor, and diversity factor on cost of power.

Flathead River. Power Possibilities of the South Fork, Flathead River, B. E. Jones and E. E. Jones. Eng. News-Rec., vol. 93, no. 3, July 17, 1924, pp. 96-98, 4 figs. Large reservoir site makes economic development of power possible. Increased height of Flathead Lake objectionable.

Hydraulic Turbines. See HYDRAULIC TURBINES.

Norway. The White Coal of Norway. Electrician, vol. 93, no. 2407, July 4, 1924, pp. 8-11, 6 figs. Surveys Norway's water power, relation of state to its utilization, and gives details of power stations.

Pulp and Paper Industry, Canada. Water Power in the Pulp and Paper Industry in Canada. Canada Dominion Water Power Branch, no. 731, Mar. 1, 1924, 17 pp. See also Power House, vol. 17, no. 20, Oct. 20, 1924, pp. 77 and 80-81, 1 fig. Gives complete list of pulp and paper mills operated by water power showing principal features in connection with motive power installation, and discusses power problems.

See also PAPER INDUSTRY, Water Power.

Steam and, Relative Costs of. Relative Cost of Water and Steam Power. Power, vol. 59, no. 21, May 20, 1924, pp. 827-828. Construction costs and fixed charges for water plant are as rule twice as great as for steam plant and overbalance smaller operating expense; steam plant has greater reserve capacity and is in position to render better and safer service.

Sweden. Sweden's Water Power. Electrician, vol. 93, no. 2408, July 11, 1924, pp. 39-42, 4 figs. Deals with general electricity supply in Sweden and steps which have been taken by State to control and employ large amount of power that is available; describes various hydroelectric stations owned and operated by state and gives general power situation.

Swedish Water-Power Resources and Their Utilization (Schwedens Wasserkräfte und deren Ausnutzung), F. V. Hansen. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 14, Apr. 5, 1924, pp. 321-327, 13 figs. Water-power resources are estimated at 10,000,000 hp. for six months of year; present status of utilization and estimated power requirements; technical details of more important hydroelectric plants.

World Resources. What the World Power Conference Showed About the World's Natural Power Resources. Elec. Wld., vol. 84, no. 11, Sept. 13, 1924, pp. 511-514, 2 figs. Data on water powers and coal reserves gleaned from reports of London gathering showing relative position of various nations. United States leads in potential wealth of natural resources.

World Power (Welt-Kraft), van Heys. Technik u. Wirtschaft, vol. 17, nos. 10 and 11, Oct. and Nov. 1924, pp. 229-240 and 257-261, 6 figs. A graphico-statistical summary of total water power, developed and undeveloped, total coal in sight, etc., compiled from combined World Power Conference papers.

WATER SUPPLY

Argo, Ill. Corn Products Water Supply and Underground Pumps. Eng. News-Rec., vol. 93, no. 13, Sept. 25, 1924, pp. 501-503, 6 figs. Recession of groundwater levels in Chicago district necessitated building of underground pumping station 357 ft. below surface connected by pipe lines in tunnels to a system of 10 wells 1200 to 1500 ft. deep, formerly pumped by air lift from surface to a storage reservoir, to provide for well supply required by Corn Products Refining Co., at Argo. Features of construction of shaft, pump chambers, tunnels and well connections.

Arid Regions. See Arizona; California.

Arizona. The Lower Gila Region, Arizona, C. P. Ross. U. S. Geol. Surv.—Water Supply Paper no. 498, 1923, 230 pp., 54 figs., partly on supp. plates. Geographic, geologic, and hydrologic reconnaissance with a guide to desert watering places.

California. The $39,000,000 Water Project of the East Bay Cities (Cal.). Eng. News-Rec., vol. 93, no. 24, Dec. 11, 1924, pp. 960-961, 1 fig. Mokelumne River project includes dam 340 ft. high, 81 mi. of pipe line, 9.5 mi. of tunnel.

The Salton Sea Region, California, J. S. Brown. U. S. Geol. Sur.—Water Supply Paper no. 497, 1923, 283 pp., 48 figs. partly on supp. plates. A geographic, geologic, and hydrologic reconnaissance with a guide to desert watering places.

The Use of Balancing Reservoirs in Water Distributing Systems, J. E. Phillips. Am. Water Works Assn.—Jl., vol. 11, no. 4, July 1924, pp. 793-796. Discusses advantage of balancing reservoirs or kickback tanks used to meet peak load requirements.

Conservation of Resources. State and National Duty in Conservation of Water Resources, O. E. Grunsky. Eng. News-Rec., vol. 92, no. 1, Jan. 3, 1924, pp. 11-12. New stream policy: government planning and control of water storage.

Corrosive Effect of. Determining Corrosive Effect of Water Supplies, J. W. Ledoux. Fire & Water Eng., vol. 76, no. 18, Oct. 29, 1924, pp. 969-970, 997 and 999-1000, 2 figs. Suggestions as to neutralization of corrosion arising from qualities in water supply, and methods of determining relative corrosibility of these supplies. Excerpts from paper read before Pa. Water Wks. Assn.

Distribution Systems. Design and Maintenance of Distribution Systems, W. E. MacDonald. Fire & Water Eng., vol. 75, no. 11, Mar. 12, 1924, pp. 491-492, 514 and 516-517, 1 fig. See also Concrete Rec. & Eng. Rev., vol. 38, nos. 14 and 15, Apr. 2 and 9, 1924, pp. 329-331 and 360-362, 1 fig. Fire protection must be considered in planning system; location of gate valves and fire hydrants; detection of water waste. Excerpts from paper read before Can. Sec. Am. Water Wks. Assn.

Fire-Protection. The Relation of Fire Protection Requirements to the Distribution System of Small Towns, C. Goldsmith. Am. Water Wks. Assn.—Jl., vol. 12, no. 2, Oct. 1924, pp. 168-178 and (discussion) 186-190, 4 figs. Discusses plans for distributing systems for towns of 1000 to 1500 to have available adequate water in case of fire.

Groundwater. Determining Quantity of Ground Water (Die Mengenbestimmung bei Grundwasser), H. Winterer. Gas- u. Wasserfach, vol. 67, nos. 38 and 39, Sept. 20 and 27, 1924, pp. 563-566 and 581-583, 1 fig. Discusses hydrologic investigations, application of Darcy and Smreker laws, and develops fundamental equations for calculation and gives practical examples of application.

Producing Artificial Ground Water at Frankfort, Germany, Scheelhaase and G. M. Fair. Eng. News-Rec., vol. 93, no. 5, July 31, 1924, pp. 174-176, 3 figs. Highly polluted river water after filtration percolates through sandy soil to increase ground water supply.

The Occurrence of Ground Water in the United States, With a Discussion of Principles, O. E. Meinzer. U. S. Geol. Surv.—Water Supply Paper no. 489, 1923, 314 pp., 166 figs., partly on supp. plates. Deals with occurrence; origin, discharge, and quantity; movement and head; quality; recovery and use; and groundwater provinces.

Hardness vs. Public Health. The Relation of Hardness in Water Supply to Public Health, E. S. Chase. Am. Water Works Assn.-Jl., vol. 11, no. 4, July 1924, pp. 873-880. Discusses effect of hardness of drinking water on health, using mortality statistics.

Idaho. Geology and Water Resources of the Goose Creek Basin, Cassia County, Idaho, A. M. Piper. Idaho Bur. Mines & Geol., Bul. no. 6,

1923, 74 pp., 6 figs. on supp. plates. Survey was made to determine feasibility of developing additional water supply from flowing wells.

Ilion, N. Y. City of 10,000 Builds $500,000 Water System, Chas. M. Niles. Am. City, vol. 30, no. 1, Jan. 1924, pp. 21-23, 4 figs. Large storage reservoir under construction at Ilion, N. Y.; dam will form lake holding 150,000,000 gal. of water, which insures 5 months' supply.

Leaks, House-to-House Inspection. The Control of Waste from Water Fixtures by House-to-House Inspection in New York City, E. Nuebling. Mun. Engrs.—Jl., vol. 10, no. 1, 1924, pp. 37-51 and (discussion) 51-58. Account of inspection work done and results accomplished thereby; describes method of conducting work and gives account of studies made as to amount and nature of fixture leakage and reduction in consumption that can be effected by house-to-house inspection.

Maryland State Institution. Water and Sewerage Construction at State Institutions by Maryland Department of Health, G. L. Hall. Eng. News-Rec., vol. 93, no. 13, Sept. 25, 1924, pp. 490-495, 4 figs. State Bureau of Sanitary Engineering designs and builds water supply and purification plants and sewerage systems and sewage-works. Institutions pay for service. Features of design, construction, and operation of works installed.

Metering. An Improved Water Supply for Chicago and the Relation of Metering to Service, J. Ericson. West. Soc. Engrs.—Jl., vol. 29, no. 10, Oct. 1924, pp. 371-378. Summary of efforts made to improve water supply of Chicago; urges adoption of universal metering as sensible means of overcoming these conditions. See also article entitled, Metering the Water Supply of the City of Chicago, H. A. Allen, pp. 379-400, 13 figs.; and discussion, pp. 400-404.

Pollution. See STREAM POLLUTION.

Railway. Construction of Gravel Wall Wells Solves Water Supply Problem, C. R. Knowles. Ry. Eng. & Maintenance, vol. 20, no. 4, Apr. 1924, pp. 143-144, 3 figs. Describes novel installation which greatly increased supply and reduced operating cost; facilities include two deep wells with motor-driven pumps of vertical-turbine type, brick pump houses, 100,000-gal. water tank and 12-in. water columns.

Rainfall. See RAINFALL.

Seattle, Wash. Looking Forward to a Future Water Supply, J. H. Quense, Jr. Fire & Water Eng., vol. 76, no. 5, July 30, 1924, pp. 205-206 and 213-215, 12 figs. Description of proposed extension of water supply of city of Seattle, Wash.

Surface, Canada. Surface Water Supply of Canada—St. Lawrence and Southern Hudson Bay Drainage, Ontario, S. S. Scovil. Canada, Dominion Water Power Branch—Water Resources Paper no. 42, 1924, 90 pp., 2 maps. Hydrometric data covering climatic year 1922-23.

Surface, United States. Surface Water Supply of the United States, 1919-1920, N. C. Grover. U. S. Geol. Survey—Water Supply Paper, no. 514, 1924, 204 pp., 5 figs. North Pacific slope drainage basins.

Surface Water Supply of the United States, 1919 and 1920. Pacific Slope Basins in California, N. C. Grover. U. S. Geol. Surv.—Water Supply Paper no. 511, 1923, 449 pp., 5 figs. on supp. plates. Records of measurements of flow made on streams.

Surface, Washington. Summary of Hydrometric Data in Washington, 1878-1919, G. L. Parker and L. Lee. U. S. Geol. Surv.—Water Supply Paper no. 492, 1923, 357 pp., 16 figs. on supp. plates. Gaging-station records of stage and monthly and yearly discharge measurements. Bibliography.

Tastes, Offensive. Offensive Tastes in Public Water Supplies, Chas. F. Dalton. Am. Jl. Pub. Health, vol. 14, no. 10, Oct. 1924, pp. 845-847. Report of Committee on Sanitary Engineering on causes and occurrences of offensive tastes.

Tulsa, Okla. Spavinaw Water Supply Project for Tulsa, Oklahoma. Eng. News-Rec., vol. 92, no. 19, May 8, 1924, pp. 816-818, 2 figs. 55-mi. gravity conduit brings Ozark supply to reservoir lower than city; pumps lift to high-service reservoir.

Tulsa's New Water-Supply Project, A. Chesser. Explosives Engr., vol. 2, no. 12, Dec. 1924, pp. 411-414, 8 figs. Notes on work in construction of tunnels and laying of pipe lines in connection with Spavinaw project for supplying this city with water from Ozark Mountains, 60 miles away.

Waste Detection. Locating Leaks in the Distribution System, C. C. Behney. Fire & Water Eng., vol. 76, no. 12, Sept. 17, 1924, pp. 637-638, 648, 657-661, 5 figs. Discusses how to determine cause of waste; use of pitot tube.

Underground Water Waste Detection Work in New York City, F. B. Nelson. Mun. Engrs.—Jl., vol. 10, no. 1, 1924, pp. 23-36. See also Eng. & Contracting (Water Works), vol. 61, no. 6, June 11, 1924, pp. 1289-1296. Notes on subsurface conditions; organization and methods employed; equipment; results; cost and value.

Wells. See WELLS.

WATER TOWERS

Domed. A Domed Water Tower, S. A. Bunting. Concrete & Constructional Eng., vol. 19, no. 8, Aug. 1924, pp. 496-499, 2 figs. Design and construction of 18,000-gal. water tank with base 35 ft. from ground level supplying salt colony and works at Sambhar, Rajputana with fresh water.

WATER TREATMENT

Aeration. See Purification.

Alum Feeding Device. Simple Alum Feeding Device for Water Treatment Saves in Cost and Space. Contract Rec. & Eng. Rev., vol. 38, no. 16, Apr. 16, 1924, pp. 376-377, 4 figs. Details apparatus designed as emergency; results have indicated its economy and reliability for every-day use.

Alum Floc Composition. Composition of Alum Floc in Mixing Basin, E. S. Hopkins. Am. Water Wks. Assn.—Jl., vol. 12, no. 4, Dec. 1924, pp. 405-409, 4 figs. Applicability to plant operation of principles of mixing basin floc presented in paper by L. B. Miller. Proves that floc precipitated from dilute solutions necessary in water purification processes and under stimulated plant conditions has same chemical composition as stated by Miller to be true for that precipitated from concentrated solutions.

Bathing Beaches. See WATER TREATMENT, Chlorination.

Biochemical Factors in. Biochemical Factors in Modern Methods of Water Purification, G. J. Fowler. Mysore Engrs.' Assn.—Bul., vol. 1, no. 1, July-Sept. 1923, pp. 1-10. See also Surveyor & Mun. & County Engr., vol. 64, no. 1667, Dec. 28, 1923, pp. 523-524. Typical impurities to be met with in the different sources of water supply, viz., lake or reservoir, stream or river, and spring or well, and methods of purification.

Boiler Feedwater. See BOILER FEEDWATER, Treatment.

Chlorination. Chlorinating Bathing Water, W. P. Baker and P. E. McNabb. Can. Engr., vol. 47, no. 20, Nov. 11, 1924, pp. 507-508, 2 figs.

A practical method for treating water at bathing beaches which has been employed with success at Washington, D. C. Results of chlorination.

Report on Experimental Use of Chlorine Gas in the Chlorination Plant at Köpenick, I. Reichle and M. Weldert. Gesundheits-Ingenieur, vol. 47, no. 24, June 14, 1924, pp. 237-243. Addition of small quantities of chlorine gas has given good results.

Taste and Odor in Chlorinated Water, R. M. Warren and E. Bartow. Am. Water Works Assn.-Jl., vol. 11, no. 4, July 1924, pp. 881-886. Discusses methods for removing chlorine taste and odor.

The Chlorination of Small Water Supplies, M. F. Tiernan. Am. Water Wks. Assn.—Jl., vol. 12, no. 3, Nov. 1924, pp. 272-278 and (discussion) 278-281. Discusses reasons why small supplies have more operating difficulty than large supplies, viz., personnel, location of apparatus, kind of operation—continuous as against intermittent, and geographical location.

The Paterson Chloronome for Sterilising Water. Engineering, vol. 117, no. 3031, Feb. 1, 1924, pp. 142-143, 3 figs. Apparatus embodies means for delivering high-pressure gas from steel cylinders in which it arrives, in measured quantities at constant and lower pressure to water to be treated, and ensuring its distribution through body of water; two types are described, the Pulser and the manometer type.

Coagulation. Alum Agitation Studies at Reading, Pennsylvania, C. R. Cox. Eng. News-Rec., vol. 93, no. 3, July 17, 1924, pp. 101-104, 4 figs. Importance of thorough mixing in coagulation of turbid waters with alum. Fifteen minutes at a little over 0.5 ft. per second meets Reading conditions.

Colored Water. See Purification.

Cooling Water. Treatment of Cooling Water. Times Trade & Eng. Supp., vol. 15, no. 330, Nov. 1, 1924, p. 154. Describes process for reducing steam consumption of turbines which is treatment of cooling water, continually and automatically, with trace or chlorine gas, so as to give what may be termed semi-sterilization and prevent growth of living organisms.

Degasification. The Degasification of Water, J. R. McDermet. Am. Water Wks. Assn.—Jl., vol. 11, no. 1, Jan. 1924, pp. 118-127. Describes methods

Dosage Control. Venturi Speed Controller for Dry Chemical Feed Devices, E. S. Smith, Jr., and C. G. Richardson. Eng. News-Rec., vol. 92, no. 20, May 15, 1924, pp. 844-845, 2 figs. Installation at mechanical filter plant, Parsons, Kan., varies chemical dose according to rate of flow of raw water.

Hydrogen-Ion Concentration. Optimum Hydrogen Ion Concentrations for Coagulation of Various Waters, G. F. Catlett. Am. Water Works Assn.—Jl., vol. 11, no. 4, July 1924, pp. 887-895. Discusses method of determination of pH and optimum pH, use of pH in plant control; optimum pH for No. Carolina waters.

Iron Removal. De-ironing Plant of the German Maizena Company in Barby (Die Enteisenungsanlage der Fabrik der Deutschen Maizena-Gesellschaft in Barby), G. Thiem. Gas- u. Wasserfach, vol. 67, no. 36, Sept. 6, 1924, pp. 531-533, 3 figs. Describes plant on Thiem system, for treating groundwater having an iron content of 16.3-34.7 lmg and free CO_2 of 63-74 lmg, with a daily capacity of 10,000 cu. m.

Removal of Iron from Drinking Water (Untersuchungen über Enteisenung), Kisskalt. Gas- u. Wasserfach, vol. 67, no. 1, Jan. 5, 1924, pp. 3-4. Describes number of processes in which iron is removed from water by aeration effected by allowing water to flow down towers packed with coke, or by spraying it through nozzles; in this way iron is oxidized to hydroxide, which remains in colloidal solution until it is coagulated and removed by action of material forming filter bed.

Lime-Soda Process. See Purification.

Lime, Use of. Purification of Water Supplies, A. Houston. Eng. & Contracting (Water Works), vol. 62, no. 4, Oct. 8, 1924, pp. 821-823. English experiences in use of lime and chlorination.

Use of Lime in Water Purification, F. M. Veatch. Rock Products, vol. 27, no. 10, May 17, 1924, pp. 32-34, 1 fig. Extent of water purification; treatment for gases and odors, solids in suspension, bacterial contamination, and hardness; disadvantages of impure water.

Methods. Bad Water Made Suitable for Domestic and Power-Plant Use by Treatment and Purification, F. L. Serviss. Coal Age, vol. 26, no. 12, Sept. 18, 1924, pp. 398-402, 5 figs. Methods of analysis and treatment. Water usually requires less treatment for domestic use than for steam power-plant supply; accumulation of scale in boilers often greatest operating difficulty; any water can be made suitable.

Development of Mechanical Methods of Water Purification in Germany (Entwicklung der mechanischen Abwasserklärung in Deutschland), M. Kusch. Gesundheits-Ingenieur, vol. 47, no. 20, May 17, 1924, pp. 183-187, 8 figs. Modern types of basins, systems "Cöthen," "Neustadt" and "Kremer" for purification of sewage waters from cities.

Permutit Process. See Purification; Softening.

Plants. Intake and Purification of Surface Water (Entnahme und Reinigung von Oberflächenwasser für industrielle Anlagen), A. Vogt. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 24, June 14, 1924, pp. 632-634, 6 figs. Describes new plant for economic intake and purification of river water for factory purposes.

The Water Treatment Plant in Theory and Practice, P. Hansen. Fire & Water Eng., vol. 75, no. 17, Apr. 23, 1924, pp. 779-780 and 808. Necessity for coöperation between engineer who designs plant and its operator. Four points for engineer to remember.

Problems. Some Ontario Water Treatment Problems, A. V. Delaporte. Can. Engr., vol. 46, no. 11, Mar. 11, 1924, pp. 316-318. Few new recent developments in pre-treatment. Characteristics of water at Chatham, Richmond Hill, Forest and in Lake Ontario. Paper read before Canadian Sec. Am. Water Wks. Assn. See also account of discussion on chlorination, sedimentation, filtration and allied subjects, which followed presentation of this paper, Can. Engr., vol. 46, no. 20, May 13, 1924, pp. 509-513 and 528.

Purification. Present Methods of Water Purification in Providence, Rhode Island, J. W. Bugbee. New Eng. Water Wks. Assn.—Jl., vol. 38, no. 3, Sept. 1924, pp. 244-249. Present treatment consists of filtration at rate of 2.5 million gallons per acre per day, addition of hydrated lime in amounts varying between 50 and 100 lb. per million gallons, chlorination, using between 3 and 8 lb. per million gallons, and copper sulphate dosing for reservoirs whenever required.

The Function of Aeration in Water Purification, M. Pirnie. Mun. & County Eng., vol. 67, no. 1, July 1924, pp. 22-25. Discusses surface concentration, electrification, and gives brief review of conditions at some purification plants where aeration is important part of process.

The Purification of Colored Water at Wilmington, N. C., G. D. Norcom. Am. Water Wks. Assn.

—Jl., vol. 11, no. 1, Jan. 1924, pp. 96-117, 5 figs. Purification of water of Cape Fear River. Describes purification plant; description of raw water, including nature of color, its characteristics, and coagulation and decolorization; character of treated water.

Water Purification by Aeration. Public Works, vol. 55, no. 8, Aug. 1924, pp. 251-252. Discusses conditions resulting from aeration and probable causes; promotes chemical activity; electrification of drops by spraying; aids in coagulation and in iron removal.

Water Purification for Industrial Purposes, J. P. O'Callaghan. Engineering, vol. 117, no. 3035, Feb. 29, 1924, pp. 286-287. Sedimentation and filtration of water; softening by lime-soda process, and by permutit-zeolite process.

Purification Plants. Data on Which Design of a Purification Plant Should be Based, C. A. Brown. Fire & Water Eng., vol. 75, no. 8, Feb. 20, 1924, pp. 349-350 and 374-377. Intelligent design of a purification plant; helpful curves and data suggested.

Early Results from Memphis Water Purification Plant, W. Donaldson. Eng. News-Rec., vol. 93, no. 25, Dec. 18, 1924, pp. 992-994, 3 figs. Air-lift, aerators, mechanical filters and chlorinators remove iron, CO_2, hydrogen sulphide and bacteria from new well supply meeting initial demand of 15 million gal. daily.

Second Water Purification Works for Oklohoma City. Eng. News-Rec., vol. 93, no. 6, Aug. 7, 1924, pp. 216-219, 4 figs. Describes new combined clarification softening, double aeration and carbonization plant.

The Purification of Water Supplies, A. Houston. Surveyor & Mun. & County Engr., vol. 16, no. 1695, July 11, 1924, pp. 27-28. Discusses water filtration and sterilization methods, chlorination, super-chlorination and dechlorination. Abstract of paper read before British Waterworks Assn.

Railways. How the Chemical Engineer Tackles the Water Problems of a Railroad, W. M. Barr. Chem. & Met. Eng., vol. 31, no. 9, Sept. 1, 1924, pp. 348-351, 6 figs. Points out some of the many problems of water supply on a railroad and emphasizes necessity of solving them with aid of a chemical engineer rather than a laboratory chemist. Elimination of scale-forming solids and simultaneous production of non-foaming water all over a railroad system is a major technical problem.

Raw River Water. Water Treatment at Cahokia, E. H. Tenney. Power, vol. 59, no. 17, Apr. 22, 1924, pp. 647-648, 3 figs. Describes treating system, giving arrangement of chemical mixing and dilution tanks.

Settling Basins. Principles of Four Kinds of Flow in Settling Basins, W. Kiersted. Eng. News-Rec., vol. 93, no. 9, Aug. 28, 1924, pp. 346-347, 3 figs. Effect on sedimentation in straight-line, radial, rotary, and spiral inward-flow basins with evaluation of each.

Sodium Iodide. Sodium Iodide Treatment of Rochester's Water Supply, B. C. Little. Am. Water Wks. Assn.—Jl., vol. 12, no. 1, Sept. 1924, pp. 68-73 and (discussion) 73-86. Notes on experiment started in Apr. 1923 which so far shows no ill effects, and pros and cons on sodium iodide treatment of water in goitre districts.

Softening. Note on a Permutit Water Purification Plant (Note sur une installation d'épuration d'eau à la "Permutite" au siège de Victor 3-4, à Rauxel), M. Stoeffler. Chaleur & Industrie, vol. 5, no. 52, Aug. 1924, pp. 383-385, 1 fig. Details of permutite tests and comparative cost of apparatus and operations.

Water Softening by Base Exchange, G. C. Baker. Am. Water Wks. Assn.—Jl., vol. 11, no. 1, Jan. 1924, pp. 128-149. Nature of reaction of base exchange; history of development of process; advantages and disadvantages of zeolitic treatment over other methods of water softening; describes investigations undertaken to study problems dealing with zeolitic softeners; general properties of zeolitic softeners; tests on solubility of calcium carbonate in 10 per cent salt solution.

Water-Softening by Means of Doucil, T. P. Hilditch and H. J. Wheaton. Engineering, vol. 117, no. 3035, Feb. 29, 1924, pp. 287-288. Describes comparatively new base-exchange material manufactured under name of doucil.

Water-softening Plant at Erith. Engineer, vol. 138, no. 3593, Nov. 7, 1924, pp. 522-523, 6 figs. Describes Becco-Legg plant which has capacity of 160,000 lb. of water per hr.; softening is effected by addition of lime-soda mixture.

Sterilization. Economic Sterilizing Process of River Water for City Water Supply (Sur un procédé économique de stérilisation des eaux de rivières pour l'alimentation des villes), M. N. Adam. Revue Universelle des Mines, vol. 1, (series 7), no. 4, Feb. 15, 1924, pp. 249-255. Discusses sand filters, ozone, ferro-chlorine; tests in Middlekerke, Letoure, Paris.

Zeolitic. See Purification; Softening.

WATER WORKS

American vs. British Practice. A Comparison Between British and American Waterworks Practice, G. Mitchell. Surveyor & Mun. & County Engr., vol. 64, no. 1667, Dec. 28, 1923, pp. 525-529 (includes discussion). See also Fire & Water Eng., vol. 75, no. 7, Feb. 13, 1924, pp. 299-300, 318, 320, and 327-329. Main differences between the two countries in water works matters; discussion of practice in rainfall and stream gaging, sources of supply, reservoir dams, purification works, aqueducts, service reservoirs, distribution, etc.

Appliances. British Empire Exhibition; Waterworks Appliances. Engineering, vol. 117, nos. 3051 and 3052, June 20, and 27, 1924, pp. 783-786 and 814-816, 23 figs. Descriptions of exhibits, including water and other meters, valves, electrical controllers for valves, filter-sand washing machines, etc.

Brockville, Ont. Extension to Water Works, Brockville, Ont. Can. Engr., vol. 46, no. 12, Mar. 18, 1924, pp. 349-350, 3 figs. Two gasoline-engine-driven centrifugal pumps installed for standby service to reduce coal bill; total capacity, 2,500,000 gal. per day when pumping against a total head of 90 ft.

Condensers. See CONDENSERS, STEAM, Surface.

Cost System. A Cost System for Water Works in Large Towns and Small Cities, E. E. Peacock. Am. Water Works Assn.—Jl., vol. 11, no. 4, July 1924, pp. 797-807. Details of classification and subdivisions of unit cost system, covering collection, purification and distribution.

Diesel-Engined. See DIESEL ENGINES, Water Works.

Electrical Equipment. Modernizing Electrical Equipment in Water Plants, F. C. Bolton. Fire & Water Eng., vol. 75, no. 9, Feb. 27, 1924, pp. 399-400, 402-403 and 416-417, 1 fig. See also Eng. & Contracting (Water Works), vol. 62, no. 1, July 9, 1924, pp. 68-73. Connection between source of power and motors; emergency equipment; elements of cost; motors; etc.

Filtration Plants. See WATER FILTRATION, Plants.

Geophones, Use of. The Geophone in the Water Works Department, D. R. Taylor. Eng. & Contracting (Water Works), vol. 62, no. 1, July 9,

1924, pp. 59-60. How to use it and results obtained. Geophone is used to locate leaks in business section of city under paved streets and railway tracks where traffic is heavy; and to locate knock or hammer in machinery or engines especially internal-combustion type of engines in which there is piston slap or wrist pin knock.

Infiltration Galleries. Infiltration Galleries at the Des Moines, Iowa, Water, C. B. Burdick. New Eng. Water Wks. Assn.—Jl., vol. 38, no. 3, Sept. 1924, pp. 203-218, 8 figs. partly on supp. plates. Water is obtained through a system of collecting galleries, which constitute a horizontal well two miles in length, tapping a coarse sand stratum 15 to 20 ft. in thickness, and is derived almost entirely from infiltration from Raccoon River, which roughly parallels gallery system at a distance from 150 to 200 ft. Fundamental principles of this supply, conditions that make it possible, and quantity and quality of water obtained.

Memphis, Tenn. Why and How Memphis Water System is Being Replaced, F. G. Cunningham. Fire & Water Eng., vol. 75, no. 13, Mar. 26, 1924, pp. 591-592, 610 and 612-614, 7 figs. Description of new and up-to-date water supply and pumping facilities replacing entire old well system; considerations governing new project. Excerpts from paper read before annual mtg. of Indiana Sanitary & Water Supply Assn.

Oil Engines for. See OIL ENGINES, Water-Works.

Planning. Planning Municipal Water Works System. Can. Engr., vol. 46, no. 26, June 24, 1924, pp. 636-638. Points that have to be considered when town contemplates establishing water works system; services of competent engineer must be secured; pumping plant and distributing system must be large enough for increase in population.

Preliminary Investigations. The Value of Comprehensive Water Supply Investigations, A. Van Praag, Jr. Am. Water Wks. Assn.—Jl., vol. 11, no. 2, Mar. 1924, pp. 451-457 (including discussion). Discusses value of a comprehensive and systematic study of community's water resources prior to construction of water-works system, in so far as they apply to shallow groundwater sources.

Pumping Engines. See PUMPING ENGINES.

Pumping Plants. See PUMPING PLANTS, Water-Works.

Pumping Stations. See PUMPING STATIONS.

Quebec, Can. New Water Works System, Batiscan, Que., R. Morrissette. Can. Engr., vol. 46, no. 16, Apr. 15, 1924, pp. 425-427, 3 figs. Notes on original woodpipe line; difficulties in financing new plant; wells sunk, pumps installed and concrete reservoir constructed.

Rochester, N. Y. Sources of Supply, Conduits and Reservoirs, of the Rochester, N. Y., Water-works System, J. F. Skinner. New Eng. Water Wks. Assn.—Jl., vol. 38, no. 3, Sept. 1924, pp. 219-225, 4 figs.

St. Louis, Mo. St. Louis' Model Water Works to Supply 200,000,000 Gallons. Eng. Wld., vol. 25, no. 5, Nov. 1924, pp. 285-291, 15 figs. Account of work of St. Louis water department giving brief résumé of what has been accomplished by this city's engineers, together with a sketch of its early history and difficulties encountered.

Statistics. Water Works Statistics. Pub. Wks. vol. 55, no. 5, May 1924, pp. 161-174. Tabulated from questionnaires filled out by nearly 700 water-works officials. Mains laid in 1923; pressures in mains, both regular and for fire service; and pumping plants, with recent changes made in type of plant.

Unaccounted-For Water. Leakage and Unaccounted for Water, J. N. Chester and E. E. Bankson. Am. Water Wks. Assn.—Jl., vol. 11, no. 2, Mar. 1924, pp. 381-388 and (discussion) 388-392, 3 figs. Recalls conclusions from other discussions and relates experiences. Losses as percentage of pumpage; sources of unaccounted-for water; under registration or slippage of meters.

Wheeling, W. Va. Water-Works Improvements at Wheeling, West Virginia, J. F. Laboon. Eng. News-Rec., vol. 92, no. 20, May 15, 1924, pp. 848-850, 4 figs. New intake, pumping station with low- and high-service electric-driven pumps, filter plant with chemical dust arrester and dry-feed machines, and group of steel storage tanks.

WATERPROOFING

Asphalt for. United States Government Master Specification for Asphalt for Waterproofing and Damp Proofing. U. S. Bur. Standards—Circular no. 160, Master Specification no. 85, Apr. 8, 1924, 9 pp., 3 figs. Specification officially adopted by Federal Specifications Board on Dec. 29, 1923, for use of Departments and Independent Establishments of the Government in purchase of asphalt for waterproofing and damp proofing.

See also ROOFS, Asphalt.

Asphalt Blocks for. Asphalt Blocks Make Satisfactory Protection for Waterproofing, M. Hirschthal. Eng. News-Rec., vol. 92, no. 10, Mar. 6, 1924, p. 397, 1 fig. Lackawanna R. R. uses asphalt blocks in preference to concrete or mastic; can be laid quickly; give better results.

Coal-Tar Pitch for. United States Government Master Specification for Coal-Tar Pitch for Waterproofing and Damp Proofing. U. S. Bur. Standards—Circular no. 155, Master Specification no. 83, Apr. 8, 1924, 11 pp., 3 figs. Specification officially adopted by Federal Specifications Board on Dec. 29, 1923, for use of Departments and Independent Establishments of the Government in purchase of coal-tar pitch for waterproofing and damp proofing.

Materials for. Exposure Tests on Colorless Waterproofing Materials, D. W. Kessler. U. S. Bur. Standards—Technologic Papers, no. 248, Jan. 7, 1924, 33 pp., 13 figs. partly on supp. plates. Description of tests on materials applied to surface of such porous materials as stone, brick, and concrete in order to render them impervious to moisture without materially changing natural appearance of surface, to compare effectiveness of the various waterproofing materials or methods in preventing absorption, and to determine their lasting qualities or period of effectiveness, relative effectiveness of materials on stones of various textures, and their effect on appearance of stone.

WATERSHEDS

Protection. Progress Report of Committee No. 5 on Watershed Protection. Am. Water Wks. Assn.—Jl., vol. 11, no. 3, May 1924, pp. 613-627. Five reports of observation and procedure which cover typical or unique problems in Pennsylvania, ranging from protection of practically uninhabited watersheds to the more extensive and complicated problems on watersheds where sewage and industrial wastes from densely populated districts are distinctly prejudicial to sources of public water supplies.

WATERWAYS

[See also CANALS; RIVERS.]

France. National Congress for Inland Navigation (Le congrès national de navigation intérieure), A. Pawlowski. Génie Civil, vol. 85, nos. 5 and 6, Aug. 2 and 9, 1924, pp. 116-118 and 133-137, 5 figs. Details of navigable rivers and canals, and their management, traffic and transportation, river Meuse, North-East Canal, fluvial ports, fluvial traction, etc.

Great Britain. Inland Waterways, S. E. M. Lewis. Inst. of Transport—Jl., vol. 5, no. 4, Feb. 1924, pp. 148-167. Discusses canal traffic, need for water transport, development of waterways.

Great Lakes. Great Lakes Engineering Problems, H. J. Lamb. Can. Engr., vol. 47, nos. 10 and 11, Sept. 2 and 9, 1924, pp. 289-292 and 315-318, 10 figs. Discusses charting of Lakes system; establishment of aids to navigation; harbor, canal and lock construction; improvement of connecting channels; character of structures employed; effect of works on traffic. Abstract of paper read before Eng. Sec., British Assn. for Advancement of Sci.

Illinois. The Illinois Waterway: Critical Link in Lakes to Gulf Waterway, L. D. Cornish. Ports & Waterways, vol. 1, no. 1, July 1924, pp. 6-9 and 44, 7 figs. Description of new waterway now under construction.

Railways and. Waterway and Railway Equivalents, W. M. Black. Am. Soc. Civil Engrs.—Proc., vol. 50, no. 6, Aug. 1924, pp. 837-851; and (discussion) vol. 51, no. 2, Feb. 1925, pp. 306-328. Discusses considerations that should guide establishment of new waterway lines of transportation, replacing destructive competition by coöperation.

St. Lawrence. St. Lawrence Deep Waterway to the Sea, F. C. Shenehon. Can. Engr., vol. 47, nos. 19 and 20, Nov. 4 and 11, 1924, pp. 481-487 and 501-506, 7 figs. Vital principles which should obtain in engineering ways of securing ultimate benefits from St. Lawrence waterway. From paper read before A. S. C. E. See also discussion of above paper by H. C. Sadler, pp. 477-478; by T. H. Hogg, pp. 479-480; by H. DeB. Parsons, Nov. 18, 1924, pp. 519-521, and by L. C. Sabin, Dec. 16, 1924, pp. 603-606.

WATT-HOUR METERS

Induction-Type. On the Creeping of Induction-Type Watt-Hour Meter, M. Oyama. Denki Gakkwai Zasshi (Jl. Inst. Elec. Engrs. Japan), no. 432, July 1924, pp. 679-682, 4 figs. Describes error caused by creeping to be taken into account when load is intermittent service of short period or light load. (In Japanese.)

Testing. Testing Single-Phase Induction Watt-Hour Meters, W. F. Walsh. Power, vol. 60, no. 18, Oct. 28, 1924, pp. 687-689, 5 figs. Problems worked out showing how to test meters, both when using indicating wattmeter and rotating standard.

WATTMETERS

Dynamometer. The Dynamometer Wattmeter, B. Hague. Electrician, vol. 92, no. 2384, Jan. 25, 1924, pp. 96-97, 2 figs. Notes on its theory; application of corrections.

Fawsett. New Precision Wattmeter. Electrician, vol. 92, no. 2390, Mar. 7, 1924, pp. 292 and 295, 3 figs. Details of Fawsett's design for high accuracy polyphase measurement.

High-Voltage. The High-Voltage Wattmeter, Phil. C. Clark and Chas. E. Miller. Am. Inst. Elec. Engrs.—Jl., vol. 43, no. 11, Nov. 1924, pp. 1009-1013, 6 figs. Structural details of wattmeter aggregation and loss-loading equipment and operating procedure for conducting atmospheric and insulator-loss measurements.

Low-Power Factor, High-Voltage. Power Measurements at High Voltages and Low Power Factors, Jos. S. Carroll, Thos. F. Peterson and Geo. R. Stray. Am. Inst. Elec. Engrs.—Jl., vol. 43, no. 10, Oct. 1924, pp. 941-949, 17 figs. Describes apparatus for measurement of power as low as fraction of watt at power factors approaching zero and voltages as high as 175 kv. to neutral.

Norma. Norma Wattmeter with New Device for Changing Current Range (Norma-Wattmeter mit neuen Umschaltevorrichtungen der Strommessbereiche), J. Schalkhammer. Elektrotechnik u. Maschinenbau, vol. 42, no. 27, July 6, 1924, pp. 428-430, 6 figs. Describes apparatus made by Norma Instruments Co. in Vienna.

Three-Phase. Three-Phase Balanced Load Wattmeters, G. W. Stubbings. Electrician, vol. 92, no. 2403, June 6, 1924, pp. 692-693, 3 figs. Inquires into probable amount of inaccuracy involved in use of single element wattmeter when unbalance of circuit is small, and compares performances of the various types of such instruments as are available.

Three-Phase Wattmeter Connections, Phil. C. Jones. Am. Inst. Elec. Engrs.—Jl., vol. 43, no. 4, Apr. 1924, pp. 356-360, 3 figs. Describes method from which may be determined three possible groups of connections existing in 6 zones from power factor of 0 per cent lagging to 0 per cent leading, and also actual power factor possible within each zone.

WAVE FILTERS

Electric. Electric Wave Filters, D. E. Richmond. Sibley Jl. of Eng., vol. 38, no. 3, Mar. 1924, pp. 61-63 and 76, 4 figs. Device which, when placed in an electrical system between a receiving instrument and a source of alternating e.m.f. of different frequencies, attenuates undesirable frequencies to a point where they do not effect instrument. Calculations.

Transmission Characteristics of Electric Wave-Filters, O. J. Zobel. Bell System Technical Jl., vol. 3, no. 4, Oct. 1924, pp. 567-620, 23 figs. Describes simple and rapid method of calculating steady-state transmission losses of wave-filter networks over both transmitting and attenuating frequency bands, including effects of dissipation and wave-filter terminal conditions, giving its theory, necessary charts, and an application of its use.

WAVE METERS. See RADIOTELEGRAPHY, Wave Meters.

WAVES

Ship-Produced. See SHIPS, Waves Produced by.

WEIGHING

Methods and Equipment. Process of Weighing in Factory Operations (Der Wägevorgang im Förderwesen der Betriebe), E. Volkhardt. Maschinenbau, vol. 3, no. 22, Aug. 28, 1924, pp. 810-813, 2 figs. Discusses characteristics of kinds of weighing, methods of working, time and cost, new ways of weighing.

WEIGHING MACHINES

Automatic. Weighing in Bulk, S. H. Johnson. Indus. Mgmt. (Lond.), vol. 10, no. 13, Dec. 27, 1923, and vol. 11, nos. 1 and 2, Jan. 10 and 24, 1924, pp. 366-370, 22-26, and 54-55, 9 figs. Historical review of automatic weighing machines; principles of automatic weighing machine, and description of different types; methods of compensation; dust protection; etc.

WEIGHTS AND MEASURES

Dynamic Theory, Evolution of. Evolution of the Dynamic Theory in the Laws of Weights and Measures (L'évolution de la notion dynamique dans les lois sur les poids et mesures), C. E. Guillaume. Revue Générale de l'Electricité, vol. 15, no. 18, May 3, 1924, pp. 779-780. Explains how distinction has gradually been defined between mass and weight and how this distinction has been introduced in legislative acts.

Inch and Millimeter, Relation between. The Relation Between Inches and Millimeters, C. C. Stutz. Am. Mach., vol. 60, no. 4, Jan. 24, 1924,

pp. 145-146. Discusses article by H. W. Bearce published in previous issue of same journal.

WEIRS

Flow Over. Trials with Triangular, Trapezium, Rectangular and Circular Weirs (Ueberfallversuche. Dreieckiger, trapezförmiger, rechteckiger und kreisrunder Ueberfall), A. Staus. Gas- u. Wasserfach, vol. 67, no. 26, June 28, 1924, pp. 371-375, 9 figs. For water meters with proportional recording instrument, triangular overfall is most unfavorable, circular overfall is to be preferred.

Movable. The Development of Movable Weirs (Die Entwicklung der beweglichen Wehre), Mangold. Bautechnik, vol. 2, nos. 7, 9, and 16, Feb. 8, 29, and Apr. 11, 1924, pp. 49-51, 68-72, and 164-167, 30 figs. Deals with different types of movable weirs, namely, sluice, pin, roller, drum, and segmental weirs.

Overflow. Recent Types of Overflow Weirs with Siphon [Su alcuni recenti tipi di sfioratori a sifone (Sifoni autolivellatori)], G. Ferro. Annali dei Lavori Pubblici, vol. 62, no. 4, Apr. 1924, pp. 293-308. Discusses construction of overflow weir with siphon of barrage dam at Wittersheim, Germany, on the principle of which many others are based, construction and application of automatic level siphons and their calculation.

Roller. Roller Weirs and Operation in Winter (Walzenwehre mit Winterbetrieb), O. Freystag. Bautechnik, vol. 2, no. 44, Oct. 10, 1924, pp. 507-508, 6 figs. Details of plant at Trollhätten (Sweden), Aarlifos (Norway), and Ensokoski (Finland), showing special heating arrangements to remove ice.

Semi-Circular. Semi-Circular Weirs Calibrated at Purdue University, F. W. Greve. Eng. News-Rec., vol. 93, no. 5, July 31, 1924, pp. 182-183, 2 figs. Extensive experiments dealing with curved weirs, or notches, cut in a vertical wall have been in progress for some time at hydraulic laboratory of Purdue Univ. Particulars of tests made as part of project, on semi-circular openings to determine relation between head and quantity of water discharged.

WELDERS

Arc, Training of. See ELECTRIC WELDING, ARC, Welders, Training of.

WELDING

Aluminum. See ALUMINUM, Welding.

Aluminum Castings. Hints for Welding an Aluminum Casting, E. E. Thum. Am. Welding Soc.—Jl., vol. 3, no. 5, May 1924, pp. 26-30, 3 figs. Details of actual practice.

Autogenous. See AUTOGENOUS WELDING.

Automatic Welding Machines. Automatic Welding of Tank. Welding Engr., vol. 9, no. 9, Sept. 1924, pp. 17-19, 5 figs. Describes new machine which automatically welds circular end seams; revolves around work; flame oscillates; increases production.

Car and Locomotive Parts. Autogenous and Electric Welding. Ry. Age (Daily Edition), vol. 76, no. 36, June 19, 1924, pp. 1718-1723 and (discussion) 1723-1728, 17 figs. Notes on rolled steel wheels; low-carbon-steel; wrought iron; cast iron; torch cutting; recommendations; regulations for welding. Report of committee presented before Am. Ry. Assn.

Cast Iron. The Welding of Cast Iron from a Metallurgical Point of View, J. G. Pearce. Acetylene Jl., vol. 26, nos. 3 and 4, Sept. and Oct. 1924, pp. 136-140, and 184, 186, 188, and 190, 10 figs. Discusses influence of carbon upon iron, influence of rate of cooling on structure, white and grey iron, elements in cast iron, influence of constitution on properties and on welding process, and welding special irons. Lecture delivered to Brit. Acetylene & Welding Assn., Lond. Taken from Acetylene & Welding Jl., Lond.

See also CAST IRON, Welding.

Cast-Iron Pipe. See PIPE, CAST-IRON, Bronze Welding.

Chemical Aspects. Some Chemical Aspects of Welding, J. R. Booer. Engineering, vol. 117, no. 3033, Feb. 15, 1924, pp. 221-223, 2 figs. Theory and practice in ferrous and non-ferrous work; problems in oxidation and reduction. See also Chem. Trade Jl. & Chem. Engr., vol. 74, no. 1917, Feb. 15, 1924, pp. 189-191; Chem. Age (Lond.), vol. 10, no. 244, Feb. 16, 1924, pp. 164-165; and Welding Engr., vol. 9, nos. 4 and 5, Apr. and May 1924, pp. 29, 44, 46 and 29, 32-33.

Electric. See ELECTRIC WELDING; ELECTRIC WELDING, ARC; ELECTRIC WELDING, RESISTANCE.

Equipment. Welding Equipment in Service. Can. Machy., vol. 32, no. 8, Aug. 21, 1924, pp. 26-27 and 46-47, 1 fig. Describes proper methods for setting up tank outfit, crank open valves, averting trouble, release adjusting screws, regulators carefully made, disconnecting equipment, etc.

Flexible and Rigid. Flexible and Rigid Welding, J. C. Lincoln. Can. Machy, vol. 32, no. 31, July 31, 1924, pp. 26-27, 3 figs. Discusses kind of metal in weld after passing through arc; structure; flexible and rigid methods; cooling strain.

Fluxes and Slags in. Fluxes and Slags in Welding, W. Spraragen. Foundry Trade Jl., vol. 29, no. 405, May 22, 1924, pp. 414-416. Deals with fluxes in electric-arc and gas welding, and welding of monel metal and cast iron. Abridged from paper read at symposium arranged by Faraday Soc., Inst. Metals, Inst. British Foundrymen, and Non-Ferrous Research Assn. See also Am. Welding Soc.—Jl., vol. 3, no. 4, Apr. 1924, pp. 36-47.

Fusion, Methods and Problems. Fusion Welding, C. B. Bellis. Chem. & Met. Eng., vol. 30, no. 1, Jan. 7, 1924, p. 17. Varieties of fusion welding; problems still to be solved.

Iron Castings. See IRON CASTINGS, Welding.

Locomotive Practice. See LOCOMOTIVES, Welding Practice; RAILWAY REPAIR SHOPS, Locomotive.

Locomotive Tire Flanges. See LOCOMOTIVES, Tire-Flange Welding.

Manganese Steel. See MANGANESE STEEL, Welding.

Methods. Welding Methods. Werkstattstechnik, vol. 18, no. 22, Nov. 15, 1924, pp. 633-676, 155 figs. A series of articles by different authors on autogenous welding, welding in forge shop, welding of castings, arc welding and electrode material, electric spot welding, autogenous aluminum welding, copper welding, etc.

Monel Metal. See MONEL METAL, Welding.

Multi-Throw Crank. Butt-welding Multi-throw Cranks, A. M. Lount. Machy. (Lond.), vol. 25, no. 631, Oct. 30, 1924, pp. 143-144, 2 figs. Difficulties involved in production; sequence of operations; welding section together; method of inspection.

Oil Refineries. Welding Practice in an Oil Refinery, C. R. Price. Am. Welding Soc.—Jl., vol. 3, no. 7, July 1924, pp. 20-30, 13 figs. Discusses application of welding to pipe, boiler and tank work, structural iron and general repairs, and gives examples of practical work.

Oxy-Acetylene. See OXY-ACETYLENE WELDING.

Pipe. See PIPE, Welding; PIPE, CAST IRON, Welding.

Pipe Lines. See PIPE LINES, Welding

Properties of Steel in. Properties of Steel in

Welding, F. C. Thompson. Welding Engr., vol. 9, no. 7, July 1924, pp. 17-20, 5 figs. Effect of heat treatment on ductility and toughness; tensile properties of deposited metals; effect of different elements. Abstract of paper read before Instn. Welding Engrs.

Rail Joints. See RAILS, Joints.

Rails. See RAILS, Welding.

Railway Crossings. See RAILWAY TRACK, Welding.

Thermit. See THERMIT WELDING.

Welding Metal, High-Carbon. High Carbon Welding Metal, C. A. McCune. Am. Welding Soc.—Jl., vol. 3, no. 3, Mar. 1924, pp. 22-33, 16 figs. Results of experiments made in connection with high-carbon welding materials.

Worn Machinery Parts Reclamation. Reclaiming Worn and Broken Parts of Machinery, T. T. Copeland. Am. Welding Soc.—Jl., vol. 3, no. 12, Dec. 1924, pp. 27-35, 6 figs. Suggestions as to maintenance and safety operation of equipment used in welding; different grades of welding wire; phosphorus and sulphur as impurities; results of experiments; pipe welding; preheating annealing; etc.

WELDS

Flexibility vs. Rigidity. Design of Welds—Flexibility Versus Rigidity. Am. Welding Soc.—Jl., vol. 3, no. 4, Apr. 1924, pp. 15-27, 3 figs. Contains five short papers giving views of experts in each of the welding fields as to whether a weld in a structure should be designed more rigid or flexible than parts which it joins: Carbon Arc Welding, J. C. Lincoln; Gas Welding, S. W. Miller; Metal Arc Welding, C. J. Holslag; Resistance Welding, H. A. Woofter; and Thermit Welding, J. H. Deppeler.

Welded Joints, Efficiency of. How Efficient Are Welded Joints?, E. E. Michaels. Contract Rec. & Eng. Rev., vol. 38, no. 14, Apr. 2, 1924, pp. 327-329, 4 figs. Tests conducted by Chicago Bridge & Iron Works to determine efficiencies of various types of joints; results obtained provide excellent design data.

Welded Joints, Testing. A Cheap, Reliable and Exhaustive Method of Testing Welded Joints, A. Menetrier. Am. Welding Soc.—Jl., vol. 3, no. 1, Jan. 1924, pp. 13-17, 6 figs. Results of series of shock bending tests which have proved of great value for investigation of relative strength of mild steel welded joints performed with three different types of electrodes.

WELFARE WORK

International. The International Development of the Industrial Welfare or Personnel Movement. Int. Labour Rev., vol. 10, no. 1, July 1924, pp. 48-58. Main lines of development in countries represented at international conference and principles involved.

Mines. See MINES, Welfare Work.

National Cash Register Co. Plant. Human Factors at Cash Register Plant. Iron Age, vol. 113, no. 12, Mar. 20, 1924, pp. 843-847, 10 figs. Evolution of welfare work of Nat. Cash Register Co. at Dayton, Ohio; division of profits with resultant low labor turnover; apprenticeship in cooperation with engineering schools.

Shop Hospitals. See HEALTH, Industrial Health-Service Plan.

WELLS

Artesian. The "Artesian Well" as a Potential Source of Danger, F. D. Leach. Am. Jl. Pub. Health, vol. 14, no. 10, Oct. 1924, pp. 827-831, 5 figs. Results of study to determine causative factors of high incidence of typhoid fever and other water-borne diseases prevalent in Manila, P. I.

Drilling and Operation. Drilling and Operation of Deep Wells, C. F. Cole. Can. Engr., vol. 46, no. 14, Apr. 1, 1924, pp. 397-398. Factors to be considered when locating deep wells; mechanical features of drilling and development; air-lift and centrifugal pumps. From paper read before Am. Water Wks. Assn., North Carolina Sec.

WHARVES

Creosoted Timber Construction. Creosoted Timber in Wharf Construction, C. M. Taylor. World Ports, vol. 12, no. 4, Feb. 1924, pp. 73-86 and (discussion) 86-89, 8 figs. Reduction of fire risk; protection for concrete structures; comparison with steel construction; creosoted wood-block floors; framing timbers before treatment; etc.

Reinforced-Concrete. Reinforced Concrete Wharf at Newcastle. Concrete & Constructional Eng., vol. 19, no. 8, Aug. 1924, pp. 506-511, 7 figs. Wharf is carried on reinforced concrete piles, spaced 12 ft. longitudinally and 10 ft. transversely; wharf forms extension of Norway Wharf used by Bergen and Newcastle steamers; feature of construction was large amount of pre-cast work introduced in form of wallings and braces.

Steel-Pile. Steel Sheetpiling in Salt Water at Havana, Cuba. Eng. News-Rec., vol. 92, no. 26, June 26, 1924, pp. 1086-1088, 4 figs. Particulars of new bulkhead for wharf consisting of steel sheetpiling topped with a concrete wall which extends 2 ft. below water line; steel piling given two coats of red oxide paint; rock is channeled to receive piles. Notes on construction methods and plant.

Tropical Countries. Some Tropical Wharf Construction, T. H. Barnes. Boston Soc. Civil Engrs.—Jl., vol. 11, no. 9, Nov. 1924, pp. 385-416 and (discussion) 426-442, 6 figs. Particulars of construction and maintenance of some wharves in Central and South America.

Wing-Pile Construction System. Wingpiles for Wharves and Retaining Walls, L. Besnard. Contract Rec. & Eng. Rev., vol. 38, no. 16, Apr. 16, 1924, pp. 379-383, 5 figs. Coignet-Ravier system of construction employing reinforced-concrete piles of T-section with pin-jointed ties anchored to ground.

WHITE METALS. See LEAD ALLOYS, White Metals.

WINCHES

Motorship-Cargo. The Electric Cargo Winch for Shipboard Service, A. O. Loomis. Elec. Jl., vol. 21, no. 12, Dec. 1924, pp. 568-573, 8 figs. See also Pac. Mar. Rev., vol. 21, no. 12, Dec. 1924, pp. 638-641, 7 figs. Design of winch; methods of handling cargo; personnel; winch motors; brakes; manually operated cam controllers; winches on motorships William Penn, Californian, Seekonk and Challenger; electric vs. steam-driven auxiliaries.

WIND

Conditions, Study of. Study of Wind Conditions (Die Erforschung der Windverhältnisse), M. Rosenmüller. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 8, Feb. 23, 1924, pp. 177-179, 5 figs. Study of constancy of wind based on meteorological data; suggestions for seeking good exposures; choice of favorable site for erection of wind motor and the requisite measuring instruments.

Effect on Structures. See STRUCTURES, Effect of Wind on.

German Statistics. Critical Notes on Wind Statistics in Germany and the Study of Weather from a Technical Standpoint (Kritische Bemerkungen zur Windstatistik in Deutschland und zur Kenntnis

vom Wetter bei Technikern), C. Kassner. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 8, Feb. 23, 1924, pp. 179-180. Deals with numerous relations between meteorology and technology and points out that weather statistics should not be employed without some knowledge of meteorology.

WIND POWER

Electricity and. See ELECTRIC GENERATORS, Wind-Driven.

WIND TUNNELS

Motive Power for. Determination of the Motive Power Necessary for the Operation of a Wind Tunnel (Expériences sur la détermination de la puissance motrice nécessaire au fonctionnement d'une souffierie), S. Ziembinski. Aérophile, vol. 32, no. 15-16, Aug. 1-15, 1924, pp. 246-250, 4 figs. Discusses operations at Eiffel laboratory tunnel; experiments with flow of air through nozzles, velocity of tunnel air.

Motors for. See ELECTRIC MOTORS, A.C., Model Air Propellers.

Resistance of Spheres. The Resistance of Spheres in Wind Tunnels and in Air, D. L. Bacon and E. G. Reid. U. S. Nat. Advisory Committee for Aeronautics—Report, no. 185, 1924, 21 pp., 18 figs. Satisfactory confirmation of Reynolds law has been accomplished, effect of means of support determined, range of experiment greatly extended by work in new variable-density tunnel, and effects of turbulence investigated by work in tunnels and by towing and dropping tests in free air.

Toronto, Canada. Aeronautical Research. Can. Engr., vol. 46, no. 8, Feb. 19, 1924, pp. 255-256, 2 figs. Describes wind channel opened in Aerodynamics Laboratory, Univ. of Toronto, for testing airplane models; first plant in Canada.

WINDING ENGINES

Calculation. Design, Calculation and Dimensioning of Skip Hoisting Plants (Ueber den Aufbau, die Berechnung und die Bemessung von Gefässförderungen), C. M. Roeren. Siemens-Zeit., vol. 4, nos. 7 and 8, July and Aug. 1924, pp. 222-228 and 268-273, 16 figs. Discusses types of skips and their weight; cables, their selection, calculation, and operation; arrangement of pulleys; design of mechanical part of series of winding engines.

Drum. Winding Engines with Conical Bicylindric Drums (Les machines d'extraction à tambours bicylindroconiques), M. Lahoussay. Revue de l'Industrie Minérale, nos. 83, 84, and 85, June 1, 15, and July 1, 1924, pp. 271-288, 303-313, and 327-340, 36 figs. Discusses types of winding engines and their calculation; design and construction of new winding engine for 500 to 600 m. depth of Compagnies Houillieres du Nord and advantages of conical bicylindrical drums; other types of conical engines, with two layers of cable, drums in two parts, management of cables.

Electric. A New Type of Electric Winder. Power Engr., vol. 19, no. 223, Oct. 1924, pp. 386-388, 4 figs. Stubbs-Perry winding plant at Harworth main coal mine is first of its kind; geared steam-turbine plant drives tandem generators and flywheel, while winding drum is also driven through gearing by two motors.

Electric Winder Calculations, A. Russell. Colliery Engr., vol. 1, no. 3, May 1924, pp. 149-151, 1 fig. Determination of power and size of electric winding engine.

Electric Winders, D. Weir. Colliery Guardian, vol. 127, no. 3298, Mar. 14, 1924, pp. 677-678, 1 fig. Advantages; size of drums; the Lancashire and Wembley installations; controllers, brake gear, load equalization. Abstract of paper read before Manchester Geol. & Min. Soc.

Electric Winding Engines for Medium Depths (Les machines d'extraction électriques pour profondeurs moyennes), M. Lahoussay. Revue de l'Industrie Minérale, nos. 88 and 89, Aug. 15 and Sept. 1, 1924, pp. 402-422 and 428-444, 24 figs. Discusses electric equipment of winding engines, including Ward-Leonard, comparative cost per year of operating various types, construction and operation. Details of winding engines in mines of Nord and Pas-de-Calais.

420-H.P. Electric Winder. Engineering, vol. 117, no. 3046, May 16, 1924, pp. 633-635, 3 figs. Single-drum colliery winder exhibited at the Brit. Empire Exhibition, by Vickers, Ltd.

Electric, Controller for. See ELECTRIC LOCOMOTIVES, Direct-Current.

Mines. Electric Winding-Engines, D. Weir. Instn. Min. Engrs.—Trans., vol. 67, part 2, May 1924, pp. 129-143 and (discussion) 143-148, 11 figs. Advantages of electric drive for winders; description of different types of winders; controllers; etc. Winding diagrams.

WINDMILLS

Control Methods. A New Control Method for Windmills (Ein neues Regelverfahren für Windkraftwerke), R. Bosselmann. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 3, Jan. 19, 1924, pp. 48-52, 10 figs. Describes two methods of control: one indicating most favorable vane speed for prevailing velocity of wind and making possible the use of dynamos for uniform number of revolutions; the other automatically regulates voltage of system, and does away with battery switch operation and all switchboard attendance.

Design. Wind Power (Windkraft), P. v. d. Sterr. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 5, Feb. 2, 1924, pp. 106-108, 7 figs. Method is suggested of calculating coefficient of variability; attention is called to fact that efficiency of most important parts of windmill installation plays an entirely different rôle than is otherwise the case, and other types of machinery are required.

Electricity Supply by. Modern Installations for the Generation of Electricity by Wind Power (Neuere Anlagen zur Erzeugung von Elektrizität durch Windkraft), L. Riefstahl. Praktischer Maschinen-Konstrukteur, vol. 57, no. 6, Feb. 15, 1924, pp. 49-51, 4 figs. Useful field of wind-electric plants; AEG (German Gen. Elec.) system and other plants carried according to this system; economic aspects.

Turning of Windmills Into the Wind (Die Einstellung der Windräder), H. Baudisch. Elektrotechnik u. Maschinenbau, vol. 42, no. 42, Oct. 19, 1924, pp. 617-620, 3 figs. To utilize windmills to best advantage, as is desirable for generation of electric energy, it is necessary to place wheel always directly into wind; this is being accomplished on small wheels with a simple rudder vane and on large wheels by a small auxiliary wheel; simple formulas for designing this rudder or auxiliary wheel of a size adequate to size of wheel.

Farm Electric Plants. Wind Power for Farm Electric Plants, F. J. Pancratz. Mech. Eng., vol. 46, no. 11, Nov. 1924, pp. 675-680 and (discussion) 680-682, 10 figs. Test data on 15-ft. wheel; losses due to air drag; best size of wheel for farm electric-light plants; combination plant for generating electric power and pumping.

WINDOWS

Air Leakage Around Openings. Air Leakage Around Window Openings, C. C. Schrader. Am. Soc. Heating & Vent. Engrs.—Jl., vol. 30, no. 6, June 1924, pp. 465-474, 8 figs. Deals with effect of increasing width of stile, that is, increasing clearance.

WIRE

Annealing. See ELECTRIC FURNACES, Annealing; FURNACES, ANNEALING, Steel Wire.

Copper. Copper Wire Production, S. Cowper-Coles. Electrician, vol. 92, no. 2402, May 30, 1924, pp. 658-660, 9 figs. Notes on electrolytic methods of manufacture.

Relation between the Tensile Strength and the Electrical Resistivity of Commercially Pure Copper, W. E. Alkins. Inst. Metals—Advance Paper, no. 1, for meeting Mar. 12-13, 1924, 5 pp., 1 fig. Investigation of relationship between tensile strength and increase in resistivity of commercially pure copper in form of wire; results.

The Manufacture of Copper Wire, W. J. Pettis. Metal Industry (N. Y.), vol. 22, no. 8, Aug. 1924, pp. 309-310, 4 figs. Describes operations from wire bar to finished wire.

See also Trolley.

Drawing. See WIRE DRAWING.

Forming Machine. Making Wrench Handles From Wire. Machy. (N. Y.), vol. 30, no. 9, May 1924, pp. 696-699, 6 figs. Practice followed in bending large-diameter stock to variety of shapes in four-slide wire-forming machine.

Hoisting Cable, Testing. Bending Test of Wire for Winding-Engine Cable (Die Hin- und Her-Biegeprobe für Förderseildrähte), H. Herbst. Glückauf, vol. 60, no. 48, Nov. 29, 1924, pp. 1111-1120, 8 figs. Determination of new bending numbers for wires, which take into account tensile strengths and zinc coating.

Insulation of. Insulation of Coil-Wound Wires (Die Isolation spulengewickelter Drähte), U. Retzow. Elektrotechnik u. Maschinenbau, vol. 42, no. 28, July 13, 1924, pp. 442-446, 2 figs. Discusses effect of temperature and moisture on insulation, enamelled wire, impregnating processes and impregnating in vacuo.

Steel. Tensile Properties of Some Steel Wires at Liquid Air Temperatures, W. P. Sykes. Am. Soc. for Steel Treating—Trans., vol. 6, no. 2, Aug. 1924, pp. 138-144, 2 figs. Compares tensile properties of low-carbon, nickel, and chrome-molybdenum steels at room temperature and that of liquid air (— 180 deg. cent.).

Steel, Heat-Treating. See ELECTRIC FURNACES, Heat-Treating.

Stretched, Torsion Modulus of. Changes of the Torsion Modulus of Eureka Wire when Stretched (Ueber die Aenderungen des Torsionsmoduls eines Eurekadrahtes durch Ziehen), G. B. Deodhar. Zeit. für Physik, vol. 21, no. 4, Feb. 16, 1924, pp. 247-251, 4 figs. Torsion modulus of this metal in wire form was determined according to known methods; since stretching influences torsion modulus in various ways, study was made to find how far different factors alter elasticity of wire, and whether any relationship exists between them.

Telephone. Iron Wire in Telephone Work, P. K. Higgins. Telephone Engr., vol. 28, no. 11, Nov. 1924, pp. 21-24. Properties of iron wire for telephone service, manufacturing methods, specifications for galvanizing tests, grades of iron wire, proper sag for line wires, and proper clearance from trees and foreign wires.

Trolley, Manufacture of. Trolley Wire in the Making, J. Williams. Am. Mach., vol. 61, no. 1, July 3, 1924, pp. 21-22, 5 figs. Describes making of trolley wire, from cast ingot into a length of one mile.

Tungsten, Rigidity at Incandescent Temperatures. The Simple Rigidity of a Drawn Tungsten Wire at Incandescent Temperatures, W. Schriever. Jl. Optical Soc. Am. & Rev. of Sci. Instruments, vol. 8, no. 2, Feb. 1924, pp. 255-265, 4 figs. Describes apparatus used and procedure in determination of rigidity of a 10-mil drawn tungsten wire to 2000 deg. K.

WIRE DRAWING

Effect on Steel Properties. Wire Drawing and Properties of the Steel, G. F. Comstock. Iron Age, vol. 114, nos. 11 and 12; Sept. 11 and 18, 1924, pp. 621-624 and 705-707, 24 figs. Some of the changes due to progressive cold drawing. Static and structural effects. Analogy with copper. Changes due to progressive drawing traced by photomicrographic analysis. Study of grain size.

Filaments. A Method of Drawing Metallic Filaments and a Discussion of Their Properties and Uses, G. F. Taylor. Physical Rev., vol. 23, no. 5, May 1924, pp. 655-660, 1 fig. Description of process of drawing wire of extreme fineness. Metallic filaments made by this process have been used for resistance thermometers, thermocouples, galvanometer suspensions, and hair lines for eye pieces of telescopes, and their use in micropiles, bolometers and moving coil of both direct and alternating current galvanometers is suggested.

Machines for. British Wire-drawing and Wire-working Machinery. Serial article in Engineer, vol. 138, nos. 3577-3599, July 18-Dec. 19, 1924, 158 figs. July 18: Manufacture of wire rods. July 25: Layout of factories; wire drawing. Aug. 1: Design and production of dies. Aug. 8: Wire-drawing blocks. Aug. 15: Continuous wire-drawing machines. Aug. 22: Safety-pin making. Aug. 29: Wire-netting machinery. Sept. 5, 19 and 26: Wire factories. Oct. 3: Barbed-wire machines. Oct. 10: Electric cable-making. Oct. 17: High-speed stranding machines. Oct. 31: Straightening and cutting-off machines. Nov. 7: Pin-making machines. Nov. 21: Nail and rivet-making machines. Nov. 28: Needle making. Dec. 5: Wire-weaving looms. Dec. 12: Miscellaneous machines. Dec. 19: Large wire-drawing bench.

WIRE ROPE

Care of. The Wear and the Care of Wire Rope, W. Constable. Am. Contractor, vol. 45, no. 25, June 21, 1924, pp. 25-27, 9 figs. Explains right and wrong uses of wire rope and practices conducive to longevity are suggested.

Economical Application of. Wire Ropes, T. A. Taylor. Can. Min. Jl., vol. 45, no. 27, July 4, 1924, pp. 643-647, 8 figs. See also Colliery Engr., vol. 1, no. 2, Apr. 1924, pp. 71-74, 9 figs. Principles governing economical application of steel-wire mining ropes both for winding and haulage purposes. Various types of ropes available and state of development to which each of these have been brought; reason for choice of most suitable rope under given circumstances; safety factor obtainable.

Hoisting. Wire Hoisting Ropes for Lifts, G. H. Roberts. Mech. Wld., vol. 75, no. 1940, Mar. 7, 1924, pp. 145-146, 3 figs. Discusses features of primary importance for efficient and economical working of lift ropes; rope life, and conditions of a rope's deterioration.

Manufacture. How Wire Rope Is Manufactured and Used and How Its Life May Be Prolonged in Mine Service, L. W. Bevan. Coal Age, vol. 25, no. 24, June 12, 1924, pp. 872-875, 5 figs. Physical and chemical tests constantly check wire-drawing process; saturated core acts as cushion and lubricant; care of ropes and their application to mine-hoist problems.

Testing. Testing Wire and Wire Ropes, R. G. Batson. Testing, vol. 1, no. 1, Jan. 1924, pp. 7-22, 6 figs. Notes on fatigue testing and fatigue tests on stranded cables, results of which are given in tabular form.

WIRELESS TELEGRAPHY AND TELEPHONY.

See RADIOTELEGRAPHY; RADIOTELEPHONY.

WOOD

Automobile Bodies. See AUTOMOBILES, Wood for Bodies.

Balsa. See BALSA WOOD.

Cellulose Determination. Modified Method for Determining Cellulose in Wood, G. J. Ritter. Indus. & Eng. Chem., vol. 16, no. 9, Sept. 1924, pp. 947-948. Modification of present method of preparing cellulose, so as to minimize, if possible, troublesome features.

Distillation. How the Wood Distiller Dodges Corrosion. Chem. & Met. Eng., vol. 31, no. 2, July 14, 1924, pp. 52-53. Outline of general processes involved in destructive distillation of wood, showing points at which corrosion problems occur. Action of hot acetic acid solutions and vapors makes it necessary to use copper and wood for many of the operations.

Drying. Wood and Drying Processes (Das Holz und seine Trocknung), M. Wimplinger. Praktische Maschinen-Konstrukteur, vol. 57, no. 28, July 29, 1924, pp. 401-403 and 447-450, 15 figs. Discusses structure, composition, and properties of wood; production and use in various countries; causes of shrinkage, warping and crack formation in drying; advantages of drying; drying plants; cost of drying.

See also DRYING, Vacuum; DRYING PLANTS.

Durability and Composition. The Relation between Durability and Chemical Composition in Wood, L. F. Hawley, L. C. Fleck and C. A. Richards. Indus. & Eng. Chem., vol. 16, no. 7, July 1924, pp. 699-700. Discusses connection between durability and chemical composition and applies toxicity tests to determine it.

Fungi in. Effect of Kiln Drying, Steaming, and Air Seasoning on Certain Fungi in Wood, E. E. Hubert. U. S. Dept. Agriculture—Bul. no. 1262, Aug. 1924, 20 pp., 13 figs. partly on supp. plates. Details of study to determine whether fungi in lumber are killed under ordinary commercial kiln conditions and steaming processes and to gain some idea of minimum time and temperature limits necessary to kill these organisms. Results of tests.

Plywood. See AIRCRAFT CONSTRUCTION MATERIALS, Plywood.

Preservation. See WOOD PRESERVATION.

Pulp. See PAPER MANUFACTURE, Wood-Pulp Production; WOOD PULP.

Soft, Microscopic Structure. Microscopic Structure of Softwood. Eng. News-Rec., vol. 92, no. 20, May 15, 1924, p. 861, 1 fig. Presents drawing of cell structure of minute block of softwood.

Testing Machine for. A Universal Static and Kinetic Wood Testing Machine, Developed to Meet the Requirements of the French Aeronautical Standardization Committee, B. C. Anderson. Testing, vol. 1, no. 1, Jan. 1924, pp. 72-79, 7 figs. New machine is used first for static tests of wood in bending, in compression, in tension, by splitting and for hardness, and secondly, for carrying out kinetic tests in transverse shock application.

Varnish-Drying Troubles. Causes of Surface Checks in Wood in Varnish-Drying Rooms, H. D. Tiemann. Soc. Automotive Engrs.—Jl., vol. 15, no. 5, Nov. 1924, pp. 431-436, 11 figs. Description of how water is contained in wood, including details of wood structure, and action of moisture in causing swelling and subsequent shrinkage; describes how wood dries and explains "set" and "casehardening"; causes of varnish-drying trouble.

WOOD PRESERVATION

A. R. E. A. Report. Wood Preservation. Am. Ry. Eng. Assn.—Bul., vol. 26, no. 270, Oct. 1924, pp. 65-129, 44 figs. Describes float test of residue, service test records, fence post tests, treatment with mixture of creosote and petroleum, treatment with mixture of zinc chloride and petroleum, and effect of preservatives on inflammability of wood.

Creosote, Specifications for. See RAILWAY TIES, Preservative Treatment.

Death-Watch Beetle, Protection Against. The Treatment of the Death-Watch Beetle in Timber Roofs, H. Maxwell-Leroy. Roy. Soc. Arts—Jl., vol. 72, no. 3720, Mar. 7, 1924, pp. 260-266 and (discussion) 266-270. Essential facts of insect's life and habits, and precautions that can be taken.

Freight-Car Timber. See CARS, FREIGHT, Timber Preservation for.

Marine Borers. National Research Council Reports Enormous Damage to Marine Structures by Borers. Wood Preserving News, vol. 2, no. 5, May 1924, pp. 66-71, 5 figs. Expert evidence that important marine structures must be protected against attack of borers whose presence has been detected by test boards and whose activities may be checked by timber preservation. Extracted from report of A. R. E. A. sub-committee which has coöperated with and assisted Nat. Research Council.

Mine Timber. Wood Preservation and Reforestation Advances Reviewed by American Mine Institute. Coal Age, vol. 25, no. 14, Apr. 3, 1924, pp. 491-492, 4 figs. Discusses three methods whereby present situation may be at least partially relieved, namely, (1) use of less timber in mining; (2) preservation through chemical treatment of timber used; and (3) employment of various substitutes for timber. Based on round-table discussion at Am. Inst. Min. & Met. Engrs.

See also MINE TIMBERING, Preservation.

Paint as Preservative. Does Paint Preserve Wood?, H. D. Tiemann. Sci. Am., vol. 130, no. 5, May 1924, pp. 314-315, 6 figs. Points out that paint is not proof against gradual absorption of moisture and will not prevent swelling or shrinkage, but it retards rate of absorption or loss of moisture through surface, thus giving time for partial equalization of moisture and reduction of moisture gradient within piece.

Poles. See POLES, WOODEN, Preservation.

Preservatives. Preservation of Wood (Ueber die Konservierung des Holzes), M. Sedlaczek. Kunststoffe, vol. 14, nos. 4, 5, 6, 7, and 9, Apr., May, June, July, and Sept. 1924, pp. 49-50, 68-71, 84-86, 103-105, and 134-135. Discusses colloidal impregnation agents, mineral coatings, inorganic compounds, including mercury and arsenic compounds, magnesium-zinc salts. Organic compounds, including tar oils, phenols, nitrocompounds. Dyeing and staining of wood. Processes of further manufacture of wood, cork, etc.

Puncturing Method. Improvement of Wood Treatment by Puncturing Method (Verbesserung der Holztränkung durch Anstechverfahren), Rob. Novotny. Zeit. des Vereines deutscher Ingenieure, vol. 68, no. 49, Dec. 6, 1924, pp. 1273-1275, 7 figs. Discusses different types of German and American incising machines; successful results with incising machines in practice; points out that there is only slight loss in strength of wood by use of process.

Railway Ties. See RAILWAY TIES, Preservative Treatment.

South Africa. Experimental Timber Preservation in South Africa, H. B. Stephens. S. African Jl. Industries, vol. 7, nos. 10 and 11, Oct. and Nov. 1924, pp. 651-656 and 736-744, 16 figs. Principal timber-destroying agencies, types of timbers to be treated, preservatives, methods of preservative treatment, preservative plant at Forest Dept. Experimental Station at Pretoria, extra service yielded by treated timbers, importance of service tests, special experiments, etc.

Tie-Treating Plant. See RAILWAY TIES, Preservative Treatment.

Treatment. Wood Preservation. Am. Ry. Eng. Assn.—Bul., vol. 25, no. 265, Mar. 1924, pp. 845-1066, 67 figs. Report of committee giving creosote specifications, service test records, marine piling research, preservative treatment for signal trunking and capping, creosote mixture with other oils, zinc-petroleum mixture; also report of subcommittee on marine piling investigations.

WOOD PULP

[See also PAPER MANUFACTURE, Pulp Manufacture, etc.]

Grinders. Modern Wood Grinding Machines, F. Hoyer. Eng. Progress, vol. 5, no. 1, Jan. 1924, pp. 12-17, 14 figs. Wood-dressing machines; magazine grinders; large press grinders, assorting and refining machines; dehydrating machines; recovery of waste water.

Manufacture, Corrosion Problems in. Corrosion Problems in the Pulp Plant. Chem. & Met. Eng., vol. 31, no. 2, July 14, 1924, pp. 54-56, 2 figs. Survey of corrosion problems in production of chemical wood pulp, and the various materials used in combating them.

WOODWORKING MACHINERY

Boring Machines. See BORING MACHINES, multiple-Spindle; Semi-Automatic Chain Cutter.

British Empire Exhibition. Wood-Working Machinery. Engineer, vol. 137, no. 3569, May 23, 1924, pp. 560-563, 10 figs. Describes automatic hand-hole boring machine, automatic two-color box printing machine, hand-feed planer, saws and saw benches, etc.

See also MACHINE TOOLS, British Empire Exhibition.

Electric Drive. Electric Drive of Wood Working Machines (Elektrischer Antrieb von Holzbearbeitungsmaschinen), W. Kraft. Maschinenbau, vol. 3, no. 30, Dec. 24, 1924, pp. 1166-1171, 12 figs. Driving conditions of wood-working machines; group and individual drives; motors.

See also ELECTRIC MOTORS, A.C., High-Speed; Wood and Metal-Working Machinery.

Mortising and Boring Machine. Wood-Working Mortising and Boring Machine. Engineering, vol. 117, no. 3035, Feb. 29, 1924, pp. 268-269, 3 figs. Describes combined chain and hollow-chisel machine for mortising which can also be used for boring, made by Wadkin & Co., Leicester, England.

Planers. High Efficiency Wood Planing Machines (Hochleistungshobelmaschinen), O. Schlegel. Praktische Maschinen-Konstrukteur, vol. 57, no. 24, July 1, 1924, pp. 343-344, 1 fig. Description of construction of machine for planing floor boards on all four sides simultaneously.

High-Speed Wood-Planing Machine. Engineering, vol. 117, no. 3040, Apr. 4, 1924, pp. 445-446, 6 figs. partly on p. 436. Planning machine for production of flooring boards and other repetitive planing work, capable of completely planing timber up to 12 in. by 5 in. in section at rate of 300 ft. per min.

Safety Precautions. Safety Precautions for Woodworking Machines. Foundry Trade Jl., vol. 30, no. 416, Aug. 7, 1924, pp. 121-124, 14 figs. Abstract of precautions published in Safety Pamphlet No. 8, by H. M. Stationery Office, Imperial House, Kingsway, Lond., Eng.

Tenoning Machines. See BORING MACHINES, Multiple-Spindle.

WOODWORKING PLANTS

Lumber Conservation. Ford Upsets Precedents in Interest of Lumber Conservation. Automotive Industries, vol. 50, no. 16, Apr. 17, 1924, pp. 866-867, 4 figs. System employed at saw mills and woodworking plants of Ford Motor Co.; body parts are cut from unedged green slabs and are kiln-dried afterward; crooked logs, swell at butt and even branches 4 in. or more in diam., formerly discarded, are now utilized effectively.

WOOL

Conditioning. Conditioning, C. O. Clark. Textile Inst.—Jl., vol. 15, no. 7, July 1924, pp. 250-257. Discusses chemical and physical properties in relation to conditioning, conditioning during carding, drawing and spinning, conditioning of yarns and pieces.

Dyeing. See DYEING, Wool.

Hygroscopicity. The Hygroscopic Capacity of Wool in Different Forms and Its Dependence on Atmospheric Humidity and Other Factors, S. A. Shorter and W. J. Hall. Textile Inst.—Jl., vol. 15, no. 6, June 1924, pp. T305-T327, 6 figs. Discusses variation and measurement of atmospheric humidity, effect of oil on hygroscopic capacity, etc.

Industry, Progress in. Recent Progress in the Wool Industries, A. F. Barker. Roy. Soc. Arts—Jl., vol. 72, nos. 3755 and 3756, Nov. 7 and 14, 1924, pp. 861-869 and 873-877, 7 figs. Nov. 7: Raw materials. Nov. 14: Manufacturing processes.

Insurance and. See INSURANCE, Workmen's Compensation and.

WORKMEN'S COMPENSATION

Employer's Liability. Workmen's Compensation, G. F. Tyler. Machy. Market, nos. 1222, 1223, and 1224, Apr. 4, 11, and 18, 1924, pp. 29-30, 25-26, and 23-24. Liability of an employer in respect of personal injuries to his workmen.

Family Allowances. Family Allowances in French Industry, R. Picard. Int. Labour Rev., vol. 9, no. 2, Feb. 1924, pp. 161-176. Since 1916 constantly increasing number of industrial undertakings have paid family allowances to their workers; in order to equalize expenditure thus involved they have formed compensation funds, to which they pay contributions in proportion to their staff or wages bill; family allowances are then paid by compensation funds; discusses constitution of funds and manner in which allowances are calculated.

Laws, Mexico. Comparison of Workmen's Compensation Laws of the Mexican States, E. C. Yohe. Monthly Labor Rev., vol. 18, no. 2, Feb. 1924, pp. 1-10. Study and comparison of principal features of workmen's compensation laws of 15 Mexican States.

Length of Service. Compensating Employees for Length of Service. Soc. Indus. Engrs.—Bul, vol. 6, no. 3, Mar. 1924, pp. 6-8. Experience of a number of firms in dealing with the question of what is best method of compensating employees for length of service, especially when they are on piece rates and are engaged in work at which their speed and consequent earning power decreases with age.

Metal Mines, Insurance for. Development of Workmen's Compensation Insurance for Metal Mines, B. O. Pickard. U. S. Bur. Mines—Reports of Investigations, no. 2590, Mar. 1924, 6 pp. Briefly reviews origin of accident compensation, gives digest of State compensation laws, and describes types of insurance carriers.

Ontario System. Compensation for Accidents to Workmen. Contract Rec., vol. 38, no. 42, Oct. 15, 1924, pp. 1021-1024. Synopsis of system in operation in Ontario for recompensing injured employees.

Social Insurance and. Workmen's Compensation and Social Insurance. Monthly Labor Rev., vol. 18, no. 5, May 1924, pp. 198-202. Operations of workmen's sick and death benefit fund of United States, 1923.

WORKS COUNCILS. See EMPLOYEES' REPRESENTATION, Works Councils.

WORLD POWER CONFERENCE. See POWER, World Power Conference.

WROUGHT IRON

[See also IRON, Direct Production from Ore; Wrought.]

Strength at High Temperatures. See IRON AND STEEL, Strength at High-Temperatures.

X

X-RAYS

Absorption Spectra. On Absorption Spectra in the X-Ray Region (Ueber die Absorptionsspektren im Röntgengebiet), D. Coster. Zeit. für Physik, vol. 25, no. 2, July 2, 1924, pp. 83-98, 3 figs. New measurements for Ti, V, Cr and Mn, Sn, Sb, etc., showing dependence of fine structure on chemical state of elements.

Testing Materials by Means of X-Rays (Materialprüfung mittels Röntgenstrahlen), R. Glocker. Zeit. für Metallkunde, vol. 16, no. 5, May 1924, pp. 180-182, 4 figs. Discusses application of interference process giving details of composition of structure, and space lattice; new observations of crystal arrangement in electrolytic sheet metal; objects and limits of X-ray metallography.

Applications. X-Rays and Their Applications (I raggi x e le loro applicazioni), L. G. Calcagni. Rivista Marittima, Suppl. to Mar. 1924, pp. 3-60, 22 figs. Discusses discovery, nature and properties, tubes for production, diffraction and interference, theory and structure of crystals; spectra at high frequency, etc.

Chemical Analysis by Means of. Quantitative Chemical Aanalysis By Means of X-Rays (Quantitative chemische Analyse durch Röntgenstrahlen), H. Stintzing. Zeit. für Physikalische Chemie, vol. 108, no. 102, 1924, pp. 51-69, 3 figs. First and a new method of quantitative analysis through Röntgen emission spectra; possibility of extending chemical anaylsis to elements of low atomic weight; other methods of chemical analysis by means of X-rays. See also succeeding article by same author, entitled High-Vacuum Measuring Instruments (Hochvakuum-Messinstrumente), pp. 70-81, 2 figs.

Coal Analysis. See COAL, X-Ray Analysis.

Condensers. Theory of Condensers for the Production of High D.C. Tension for X-ray Purposes (Beitrag zur Theorie der Kondensatorapparate, zur Erzeugung hoher Gleichspannung für Röntgenzwecke), M. Jona. Zeit. für technische Physik, vol. 5, no. 9, 1924, pp. 405-412, 8 figs. Describes new method to explain and calculate drop in potential always occurring in condenser apparatus, and proves theory by experiment.

Crystal-Structure Analysis. The Analysis of Crystal Structure By X-Rays, W. H. Bragg. Engineering, vol. 138, nos. 3062 and 3064, Sept. 5 and 19, 1924, pp. 349-350 and 428-430, 8 figs. Considers new methods of analyzing structure of materials by means of X-rays, considering especially stages by which they move toward their objective. Abstract of paper before Mathematical and Physical Science Sec. of Brit. Assn.

See also CRYSTALS, X-Ray Analysis; STEEL, Crystal Structure, X-Ray Analysis.

Developments. Recent Advances in X-Ray Technique, M. A. Codd. Elec. Rev., vol. 94, no. 2420, Apr. 11, 1924, pp. 566-569, 7 figs. Outstanding features of coil which render it pre-eminent as a producer of X-rays; use of transformer rectifier sets; tubes; measurement of X-rays; etc.

Intensity Measurement. See LIGHT, Fluorescent.

J-Phenomenon. Some Recent Researches on X-Rays: the J-Phenomenon, C. G. Barkla. Nature (Lond.), vol. 114, no. 2873, Nov. 22, 1924, pp. 753-755. Characteristics of J-phenomenon; experimental evidence; applications to scattering of X-rays. (Abstract.) Sylvanus Thompson lecture delivered before Röntgen Soc.

Medical Apparatus. Advances Made in X-Ray Apparatus (Elektromedizinische und röntgentechnische Fortschritte im letzten Jahrzehnt), Geo. Heber. Elektrotechnik u. Maschinenbau, vol. 42, nos. 10 and 11, Mar. 9 and 16, 1924, pp. 145-150 and 160-169, 16 figs. Advances made in last 10 years in design of X-ray tube; cold cathode tubes with effective water cooling for Roentgen therapy, designed to carry as much as 2.5 milliamperes at 200 kv. for several hours; hot cathode tubes with two heating filaments suitable for 20 and 100 milliamperes respectively, former for treatment, latter for short exposures; changes in design of mechanical interrupters for high-power spark coils.

Experiments with a Modern Plant for X-Ray Therapy (Alcune prove su di un moderno impianto per roentgenterapia), E. Pugno-Vanoni. Elettrotecnica, vol. 11, no. 22, Aug. 5, 1924, pp. 528-535, 15 figs. Description of apparatus with diagram, and photographs of different parts of plant and of spectrograph used; experiments show that addition of thermionic valves as system of rectification is distinct advantage; it suppresses oscillations produced from sparks at contact; it makes working more quiet; and discharge in air is avoided, consequently production of ozone, etc., is greatly reduced.

Metal Examination by. See METALS, X-Ray Examination.

Precision Research Apparatus. An Improved Apparatus for Precision Researches With X-Rays, S. K. Allison and G. L. Clark. Optical Soc. of Am.—Jl., vol. 8, no. 5, May 1924, pp. 681-691, 3 figs. X-ray apparatus which has been in use in laboratory of Wm. Duane at Jefferson Physical Laboratory of Harvard Univ. has been improved so that results may be obtained more accurately and rapidly than before. Describes improved apparatus and mentions some of the technical difficulties which have arisen and been solved, in hope that other workers in the field of X-rays may be benefited.

Scattering. The Scattering of X-Rays, A. H. Compton. Franklin Inst.—Jl., vol. 199, no. 1, July 1924, pp. 57-72, 5 figs. Deals with theories of scattering of X-rays, spectroscopic examination of scattered rays from light elements, intensity of scattered X-rays, etc.

The Scattering of X-Rays, Wm. Bragg. Engineering, vol. 117, no. 3033, Feb. 15, 1924, pp. 204-205, 4 figs. Deals with controversy between corpuscular and undulatory theories of light. (Abstract.) Address before Roy. Instn.

Soft. Soft Röntgen Rays (Ueber weiche Röntgenstrahlen), P. Lukirsky. Zeit. für Physik, vol. 22, no. 6, Apr. 4, 1924, pp. 351-367, 10 figs. The threshold values for X-radiations from carbon and aluminum were determined by measuring total

secondary emission and velocities of secondary electrons.

Soft X-Rays From Tungsten, C. B. Bazzoni and C. T. Chu. Franklin Inst.—Jl., vol. 197, no. 2, Feb. 1924, pp. 183-197, 7 figs. General theory and experimental procedure.

Steel Castings, Examination by. See STEEL CASTINGS, X-Ray Examination.

Steel, Examination by. See STEEL, X-Ray Examination.

Versatility. The Versatility of X-Rays, Geo. L. Clark. Tech. Eng. News, vol. 5, no. 5, Dec. 1924, pp. 174-177, 192 and 194, 1 fig. Direct applications of X-rays; X-rays and crystal structures; X-rays and atomic structure.

Y—Z

YACHTS

Motor. The Diesel Auxiliary Schonner-yacht "Hussar." Shipbldr., vol. 30, no. 161, Jan. 1924, pp. 19-27, 8 figs. Built and engined by Burmeister & Wain, Copenhagen; displacement, 826 tons; power of Diesel auxiliary engine, 900 i.hp.

The Twin-screw Motor Yacht "Princess." Shipbuilder, vol. 31, no. 171, Nov. 1924, pp. 232-240, 5 figs. Particulars of engine built by Furness Shipbldg. Co., Ltd.; length, 198 ft.; beam, 30 ft.; depth, 16 ft.; speed on service, 14 knots; propelling machinery consists of twin 520-b.hp. 2-stroke 4-cylinder Sulzer oil engines.

The Twin-screw Motor Yacht Sea King. Engineer, vol. 137, no. 3558, Mar. 7, 1924, pp. 246-248, 16 figs. partly on supp. plate. and p. 256. Yacht, which is 147 ft. 9 in. long, is equipped with twin Vickers-Petters hot-bulb engines.

Twin-Screw Motor Yacht. Mar. Engr., vol. 47, no. 565, Oct. 1924, pp. 363-366, 4 figs. Describes Vedette, recently completed by Burmeister & Wain, Ltd., Copenhagen, for F. W. Vanderbilt. Length, overall, 158 ft. 6 in., breadth, molded, 33 ft., displacement, 640 tons.

Yacht Construction at the Krupp Germania Shipyard (Der Yachtbau auf der Fried. Krupp Germaniawerft Aktiengesellschaft und der Flussschiffswerft Projensdorf), H. Köppe. Kruppsche Monatshefte, vol. 5, Oct. 1924, pp. 202-208, 8 figs. Design and construction of twin-screw motor yacht "Oceanus"; 600-hp. Diesel engines; speed at trial 12.85 knots.

Radio Equipment. See RADIOTELEGRAPHY, Equipment for Yachts.

ZANTHATE. See FLOTATION, Zanthate.

ZINC

Amalgamated, Corrosion. Effect of Reduced Pressure on Rate of Corrosion of Amalgamated Zinc in Acid and in Alkali Solutions, E. W. Greene and O. P. Water. Am. Electrochem. Soc.—Advance Paper no. 28, for meeting Oct. 2-4, 1924, pp. 435-441. Results of tests.

Corrosion. See CORROSION, Lead and Zinc.

Crystals. See CRYSTALS, Zinc and Cadmium.

Deposits. See ZINC DEPOSITS.

Determination in Ore. Determination of Zinc in Ores by Titration (Dosage du zinc par titrimétrie) E. Beyne. Société Chimique de Belgique —Bul., vol. 3, no. 10, Oct. 1924, pp. 507-516. Discusses various modifications of Schaffner's method of titrating zinc in ammoniacal solution with sodium sulphide, and it is urged that in contracts modification to be used should be precisely specified; to obtain satisfactory results compensatory method is necessary, in which quantities of iron, aluminum and manganese, corresponding with those in ore, are introduced into standard zinc solution.

Electrolytic. Examination of Electrolytic Zinc (Untersuchungen über Elektrolytzink), M. v. Schwarz. Metall u. Erz, vol. 21, no. 21, 1st Nov. no., 1924, pp. 499-504, 11 figs. Details of micrographic investigation of precipitate, its properties and composition, change in volume and resistance during heating and cooling, hardness depending on temperature, etc.

Metallurgy. See ZINC METALLURGY.

Mines. See ZINC MINES.

Ore. See ZINC ORES.

Plating. See ELECTROPLATING, Zinc Plating.

Production, 1923. Zinc in 1923, C. E. Siebenthal and A. Stoll. U. S. Geol. Survey (Mineral Resources of U. S.), no. I:6, Oct. 10, 1924, pp. 79-99. Production; zinc-reduction plants; trade conditions.

Recovery from Scrap. Recovery of Zinc From Galvanized Iron Scrap (Zinkgewinnung aus verzinktem Eisen), D. R. W. Müller. Metall u. Erz., vol. 21, no. 17, Sept. 1, 1924, pp. 404-405. Discusses recovery of zinc in open-hearth furnace in form of zinc oxide.

Recovery in Brass Melting. Zinc Losses in Brass Melting and Their Recovery (Die Zinkverluste beim Messingschmelzen und ihre Zurückgewinnung), D. R. W. Müller. Metall u. Erz, vol. 21, no. 23, 1st Dec. no., 1924, pp. 552-553. Proposes recovery of zinc oxide by managing course of flue gases in such a way that dust particles may settle down.

Specific Heat. See METALS, Specific Heats.

Thermal Expansion. Thermal Expansion of Zinc and Cadmium (Thermische Ausdehnung von Zink und Cadmium), E. Grüneisen and E. Goens. Zeit. für Physik, vol. 29, no. 3-4, 1924, pp. 141-156, 5 figs. Discusses measurement of coefficients of expansion at various temperatures of zinc and cadmium single-crystal bars at between + 100 deg. and — 253 deg. cent.; dependance of coefficient of expansion on temperature.

ZINC ALLOYS

Copper-Zinc. See COPPER ALLOYS, Copper-Zinc.

ZINC DEPOSITS

Canada. Developing Zinc and Lead Deposits in Gaspe Peninsula, J. C. Beidelman. Can. Inst. Min. & Metallurgy—Bul., no. 143, Mar. 1924, pp. 129-147, 8 figs. Ore occurrence and character; development.

Great Britain. See LEAD DEPOSITS, Great Britain.

Tennessee. Mascot, Tenessee Zinc Area, W. A. Nelson. Min. & Metallurgy, vol. 5, no. 214, Oct. 1924, pp. 469-471. Production, general geology and structure; ores and associated minerals; Mascot ore horizon Abstract of A. I. M. E. paper.

Zinc Deposits of East Tennessee, M. H. Secrist. Tenn. Dept. Education, Division Geology—Bul. no. 31, 1924, 165 pp., 41 figs. partly on supp. plates. History, production, geographical and geological distribution, physiography, drainage, stratigraphy, ores and associated minerals; description of districts; chemistry and genesis of ores. Bibliography.

Tri-State District. The World's Greatest Zinc-Mining Field, J. D. Conover. Min. Congress Jl., vol. 10, no. 9, Sept. 1924, pp. 408-411, 3 figs. History of development of area overlapping adjacent corners of Oklahoma, Kansas and Missouri, known as Tri-State district; nature of ores; development of Picher-Miami field; operating conditions; future possibilities.

ZINC METALLURGY

Distillation. Experiments on the Distillation of Zinc From Complex Zinc-Lead-Silver Ores, B. M. O'Harra and E. W. Wheeler. Univ. of Mo., School of Mines & Metallurgy—Bul., vol. 6, no. 4, Aug. 1923, 44 pp., 13 figs. Describes experiments undertaken to show what results might be expected from treatment of complex ores by an electrothermic dry distillation process, and to furnish data from which might be determined best manner of conducting distillation to obtain maximum volatilization of zinc with minimum volatilization of lead and silver.

Electrolytic Zinc from Complex Ores, U. C. Tainton and L. T. Leyson. Am. Inst. Min. & Met. Engrs.—Trans., no. 1301-M, Feb. 1924, 37 pp., 16 figs. Reviews evolution of electrolytic zinc, describing major obstacles that have been encountered and overcome; discusses chief remaining limitations of present-day standard practice; describes high acid process, in which both acid strength and current density are raised to about four times usual figures, and large-scale operation of process.

Electrolytic Zinc Production (Aus der Praxis der elektrolytischen Zinkgewinnung), V. Engelhardt. Zeit. für Elektrochemie, vol. 30, no. 4, Apr. 1924, pp. 157-164, 5 figs. Author's experience. Pure electrolyte said to be first requisite; statement that Anaconda Copper Co. has been using same lead anodes for 3 years is questioned, as anodes would lose too much lead; to avoid strains in deposits cathodes should be uniform and smooth.

Risdon Works of the Electrolytic Zinc Co. of Australasia. Indus. Australian & Min. Standard, vol. 71, no. 1834, Jan. 31, 1924, pp. 162-164, 2 figs. Description of electricity supply plant, mechanical handling at wharf, calcine storage bin, and handling of coal, lime rock, cathode zinc, slab zinc and residues.

Furnaces. See FURNACES, METALLURGICAL, Zinc; FURNACES, ROASTING, Zinc.

Milling. Milling Practice of American Zinc Co. of Tennessee at Mascot, R. Ammon. Am. Inst. Min. & Met. Engrs.—Trans., Advance Paper no. 1372-M, Sept. 1924, 32 pp., 15 figs. Practice at present consists of dry crushing to ⅝ in., jigging, fine grinding, and flotation. Description of methods and equipment.

Redistillation. Redistillation of Zinc, K. Stock. Am. Inst. Min. & Met. Engrs.—Trans., Advance Paper no. 1349-M, July 1924, 22 pp., 10 figs. Description of process used by Oklahoma smelters of Bartlesville Zinc Co. for redistillation of virgin spelter.

Roasting, Enriched-Air in. Effect of Oxygen-enriched Air in Roasting Zinc Ores, B. M. O'Harra, W. Kahlbaum, E. S. Wheeler and W. J. Darby. Am. Inst. Min. & Met. Engrs.—Trans., no. 1302-M, Mar. 1924, 23 pp., 12 figs. Application of enriched air to roasting. Experiments have shown that its use would be of particular benefit in roasting of zinc ores for manufacture of sulphuric acid; increases capacity of furnace, decreases fuel consumption, and increases SO_2 content of roaster gas.

Separation from Ores. The Electrolysis of Ammoniacal Zinc Carbonate Solutions, T. P. Campbell. Am. Electrochem. Soc.—Advance Paper no. 1, for meeting Oct. 2-4, 1924, 8 pp., 9 figs. on supp. plates. Outlines the more important electrochemical properties of solutions of zinc in ammoniacal ammonium carbonate solvents, and considers applications to hydrometallurgical practice.

Smelting. Combining the Retort Process with Electric Smelting of Zinc Ores, E. W. Hale. Eng. & Min. Jl.-Press, vol. 118, no. 10, Sept. 6, 1924, pp. 375-377. Describes Johnson-Hale duplex process for smelting zinc ores, which combines present fire-heated retorting of zinc ores with a final electric smelting, and recovers zinc, lead, copper, gold, and silver in one completed treatment.

ZINC MINES

Canada. See LEAD MINES, Canada.

Gaspe, Quebec, Can. Zinc and Lead in Gaspe. Can. Min. Jl., vol. 45, no. 15, Apr. 11, 1924, pp. 344-345. Notes on operations, present and proposed, of Federal Zinc & Lead Co.

Italy. The Nebidedda Zinc (La Miniera di zinco di Nebidedda), G. Castelli. Rassegna Mineraria Metallurgica e Chimica, vol. 60, no. 6, June 15, 1924, pp. 113-118, 2 figs. Located in Province of Cagliari, Italy; details of geology, metalliferous deposits, analysis of ores, mining operations and equipment, transportation.

Missouri-Oklahoma-Kansas District. The World's Greatest Zinc Field, T. Marvin. Explosives Engr., vol. 2, no. 4, Apr. 1924, pp. 109-114 and 129, 19 figs. Mining, shaft-sinking, and drilling methods in Tri-state district.

New York. Ore Injection at Edwards, New York, J. E. Spurr. Eng. & Min. Jl.-Press, vol. 117, no. 17, Apr. 26, 1924, pp. 684-689, 7 figs. Study of sequence of magmatic events in this zinc-producing district.

Oklahoma. Has the Miami-Picher District Passed the Zenith?, K. L. Keelker. Eng. & Min. Jl.-Press, vol. 117, no. 4, Jan. 26, 1924, pp. 168-170, 1 fig. Facts relative to productivity of Miami-Picher zinc-lead district (in Kansas and Oklahoma).

The Webber: A Famous Zinc Mine, T. Marvin. Explosives Engr., vol. 2, no. 10, Oct. 1924, pp. 349-355, 9 figs. Mining methods at Webber mine, situated just north of Picher, Oklahoma.

Tennessee. Mining Methods at Mascot Mines, Tennessee, H. A. Coy and J. A. Noble. Am. Inst. Min. & Met. Engrs.—Trans., Advance Paper no. 1371-M, Sept., 23 pp., 19 figs. Describes mining methods at Mascot mines of Am. Zinc Co. of Tenn., including loading and haulage, storage, water protection and pumping, ventilation and lighting, distribution of labor and costs, etc.

Mining Zinc at Mascot, A. H. Hubbell. Eng. & Min. Jl.-Press, vol. 118, no. 11, Sept. 13, 1924, pp. 407-418, 15 figs. Sketch of operations of Am. Zinc Co. of Tennessee, including its limestone plant. Gives flow sheets.

United States. Zinc Mining in the United States, R. H. Tingley. Compressed Air Mag., vol. 29, no. 1, Jan. 1924, pp. 754-757, 11 figs. Practice; use of compressed air.

ZINC ORES

Assay of. The Assay of Zinc Ores, E. G. R. Ardagh and G. R. Bongard. Indus. & Eng. Chem., vol. 16, no. 3, Mar. 1924, pp. 300-301. Use of powdered magnesium for removing copper and lead.

Cadmium, Separation of. The Determination of Cadmium in Spelter and Zinc Ores, C. E. Barrs. Chem. & Industry, vol. 43, no. 13, Mar. 28, 1924, pp. 77T-78T. Describes method of separation of cadmium from zinc and gives results.

ZINC OXIDE

Gordon Process. The Gordon Zinc Oxide Process, S. P. Warren. Salt Lake Min. Rev., vol.

26, no. 14, Oct. 30, 1924, p. 14. See also Mineral Age, vol. 9, no. 2, Feb. 1924, pp. 11-12. Notes on Gordon gas-house-liquor process, based upon solubility of zinc oxide, sulphate or carbonate in dilute solutions of ammonia and ammonium carbonate, and precipitation of zinc from this solution as a basic carbonate by driving off free ammonia.

Manufacture from Complex Ores. The Manufacture of Zinc and Zinc-Lead Oxide from the Complex Ores, R. G. Hall. Instn. Min. & Met.—Bul., no. 234, Mar. 1924, 26 pp., 1 fig. Account of older processes, such as Bartlett, which formed foundation of modern methods. Description of author's process, a method of smelting complex ores, employing reverberatory furnace in preference to blast-furnace or Wetherill grate, from which zinc and lead are volatilized as by-products. Composition of suitable slags. See also discussion, in no. 235, Apr. 1924, 10 pp.

Recovery from Brass. Zinc Losses in Melting Brass and Their Recovery (Die Zinkverluste beim Messingschmelzen und ihre Zurückgewinnung, R. W. Müller. Technik u. Kultur, vol. 15, no. 9, Oct. 15, 1924, pp. 97-98. Recovery of large proportion of zinc oxide resulting from oxidation during melting.

ZINC PLATING

Apparatus for. Apparatus for Electro-Zincing Small Articles, S. Cowper-Coles. Metal Industry (Lond.), vol. 25, no. 15, Oct. 10, 1924, pp. 345-348, 18 figs. Discusses various classes of apparatus developed for plating small articles, such as rivets, washers, nails, etc.

Iron and Steel. An Intermittent Immersion Test as an Aid in Evaluating Zinc Coats Plated on Iron and Steel, F. F. Farnsworth and C. D. Hocker. Am. Electrochem. Soc.—Advance Paper, no. 14, for meeting Apr. 24-26, 1924, pp. 189-201, 2 figs. Test for evaluating quality of electrodeposit of zinc on iron and steel.

ZINC WORKS

Materials Handling in. See MATERIALS HANDLING, Zinc Works.

ZONING

Transportation Plan. Influence of Zoning on the Design of Transportation Services, J. R. Bibbins. Eng. Wld., vol. 25, no. 5, Nov. 1924, pp. 313-318, 5 figs. Discusses traffic situation today, what zoning can accomplish, zoning by transportation, points zoners might consider, and what transportation plan can and should do.
